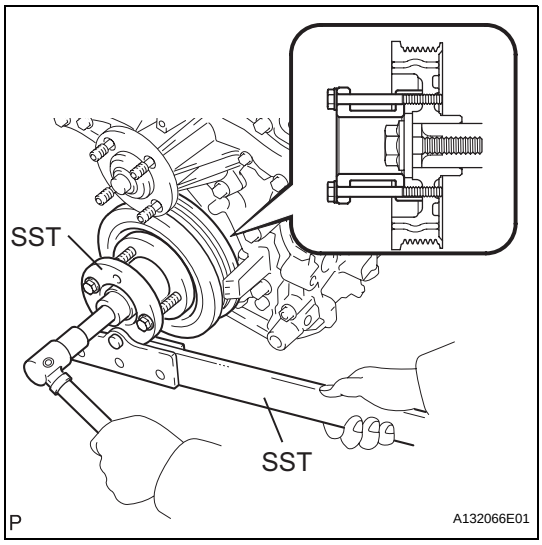
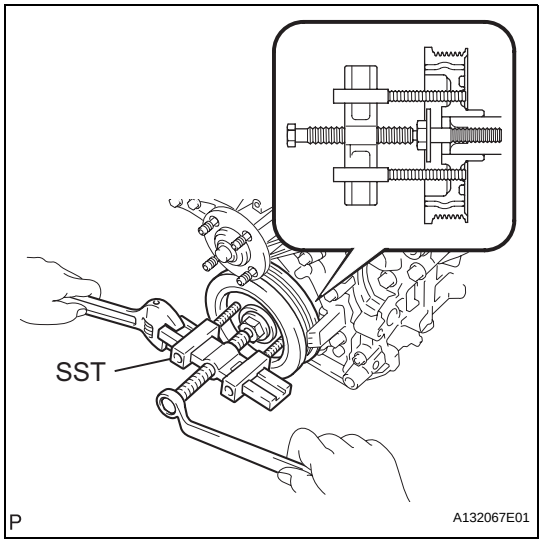
8. **REMOVE NO. 1 OIL PIPE**
   (a) Remove the 2 union bolts and oil pipe.
   (b) Remove the oil control valve filter LH and gaskets.

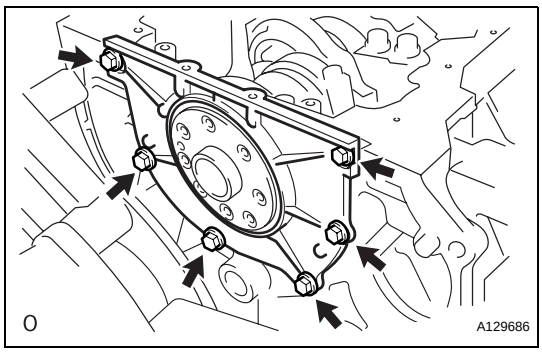


9. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (for Bank 2)**
   (a) Remove the 12 bolts, cylinder head cover and gasket.
   HINT:
   Make sure the removed parts are returned to the same places they were remove a from.

10. **REMOVE FRONT NO. 1 ENGINE MOUNTING BRACKET**
    (a) Remove the 6 bolts and mounting bracket.
11. **REMOVE WATER INLET HOUSING (See page CO-12)**
12. **REMOVE OIL FILTER CAP ASSEMBLY (See page LU-4)**
13. **REMOVE OIL FILTER ELEMENT (See page LU-5)**
14. **REMOVE NO. 2 OIL PAN SUB-ASSEMBLY (See page LU-12)**
15. **REMOVE OIL STRAINER SUB-ASSEMBLY (See page LU-13)**
16. **REMOVE OIL PAN SUB-ASSEMBLY (See page LU-13)**

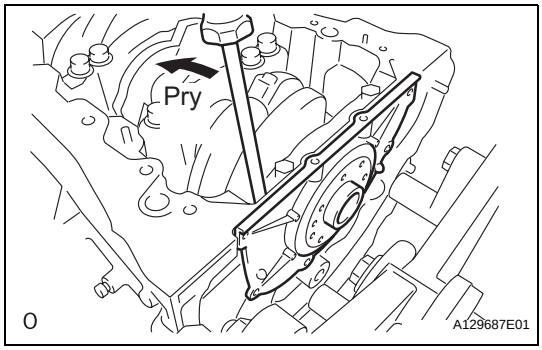


17. **REMOVE OIL PAN BAFFLE PLATE**
    (a) Remove the 7 bolts and baffle plate.



18. REMOVE CRANKSHAFT PULLEY

(a) Using SST, loosen the crankshaft pulley set bolt.
SST 09213-70011 (09213-70020), 09330-00021

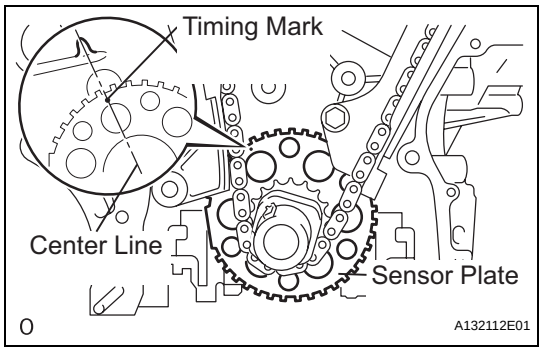


(b) Using the pulley set bolt and SST, remove the crankshaft pulley.
SST 09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05021)

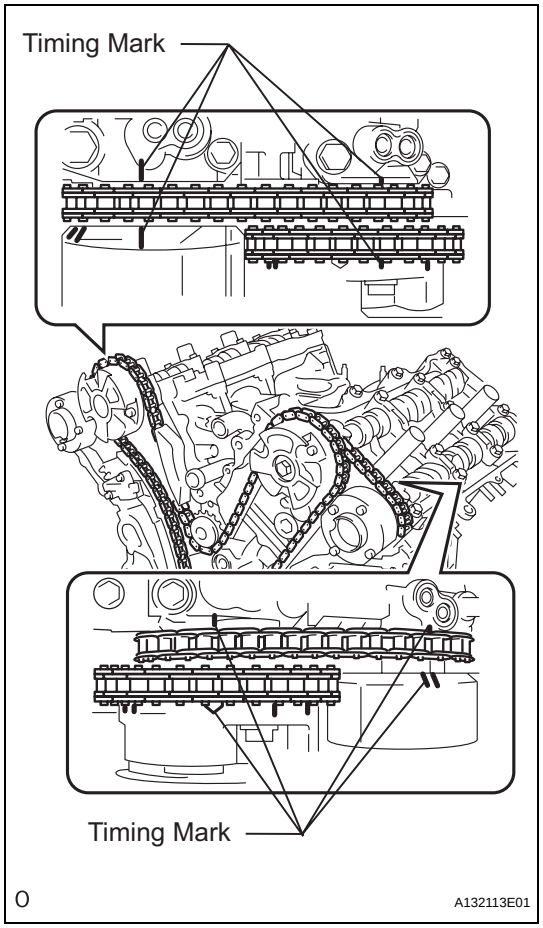
19. REMOVE WATER PUMP ASSEMBLY (See page CO-13)

20. REMOVE ENGINE REAR OIL SEAL RETAINER

(a) Remove the 6 bolts.



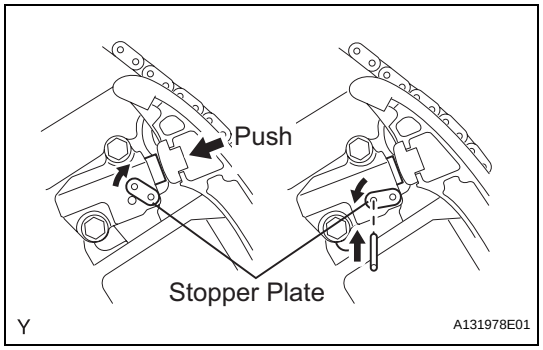
(b) Using a screwdriver, pry out the oil seal retainer.
HINT:
Tape the screwdriver tip before use.



21. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY (w/ Oil Pump) (See page LU-14)

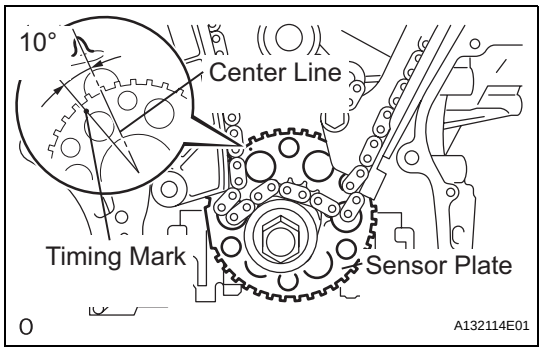
22. SET NO. 1 CYLINDER TO TDC / COMPRESSION

(a) Temporarily tighten the pulley set bolt.



(b) Set the timing mark on the crank angle sensor plate to the RH block bore center line (TDC / compression).

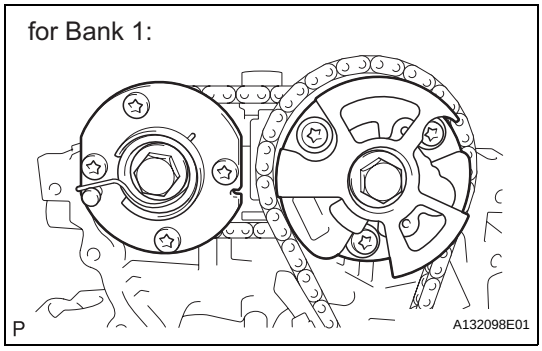
(c) Check that the timing marks of the camshaft timing gears are aligned with the timing marks of the bearing cap as shown in the illustration. If not, turn the crankshaft 1 revolution (360°) and align the timing marks as above.



EM

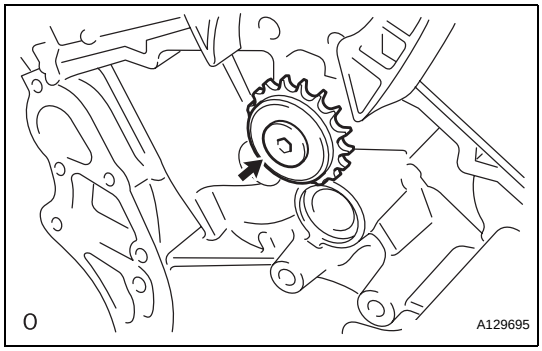
23. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY

(a) Move the stopper plate upward to release the lock, and push the plunger deep into the tensioner.
(b) Move the stopper plate downward to set the lock, and insert a hexagon wrench into the stopper plate hole.
(c) Remove the 2 bolts and chain tensioner.



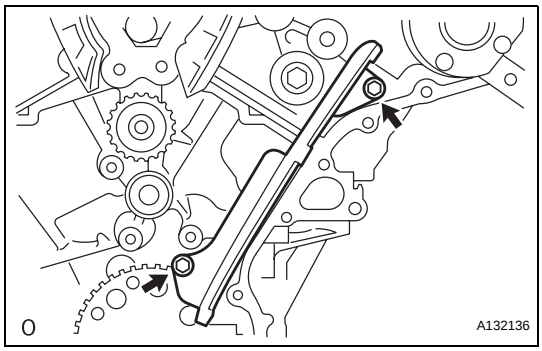
24. REMOVE CHAIN TENSIONER SLIPPER

25. REMOVE NO. 1 CHAIN SUB-ASSEMBLY



(a) Turn the crankshaft counterclockwise 10° to loosen the chain of the crankshaft timing gear.

(b) Remove the chain from the crankshaft timing gear and place it on the crankshaft.



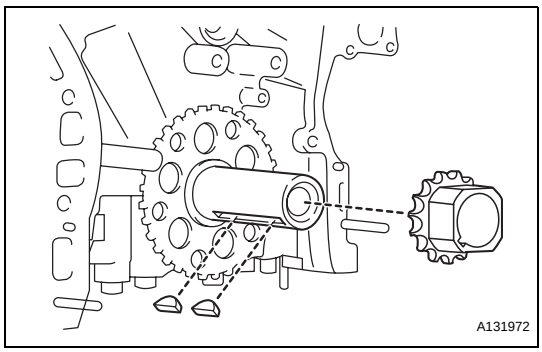
(c) Turn the camshaft timing gear on the RH bank clockwise (approximately 60°) and set it as shown in the illustration. Be sure to loosen the chain between the center banks.

(d) Remove the chain.

26. REMOVE IDLE SPROCKET ASSEMBLY

(a) Using a 10 mm hexagon wrench, remove the No. 2 idle gear shaft, idle sprocket and No. 1 idle gear shaft.

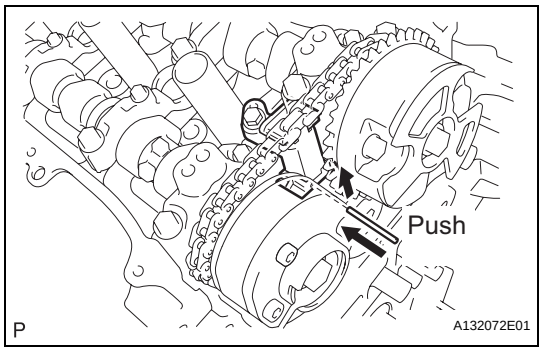
27. REMOVE NO. 1 CHAIN VIBRATION DAMPER



(a) Remove the 2 bolts and vibration damper.

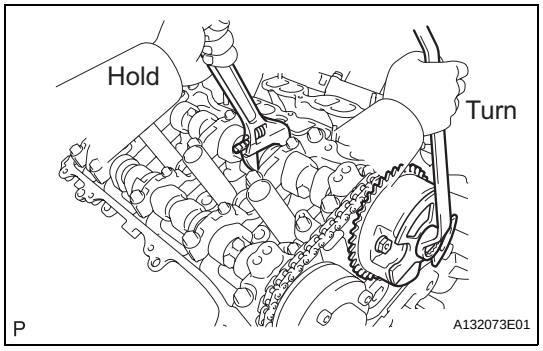
28. REMOVE NO. 2 CHAIN VIBRATION DAMPER

(a) Remove the 2 chain vibration dampers.



29. REMOVE CRANKSHAFT TIMING GEAR OR SPROCKET

(a) Remove the pulley set bolt.

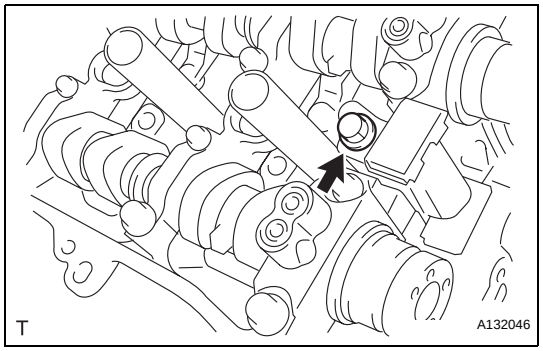


(b) Remove the crankshaft timing gear from the crankshaft.

(c) Remove the 2 pulley set keys from the crankshaft.

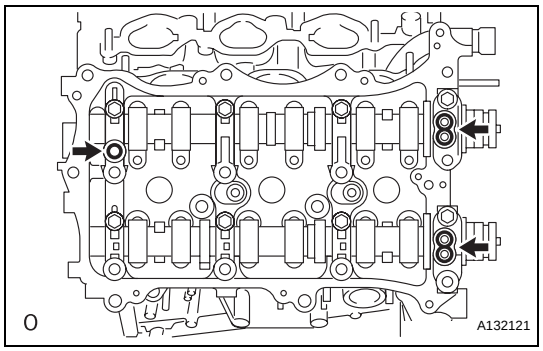
30. REMOVE CAMSHAFT TIMING GEAR ASSEMBLY (for Bank 1)

(a) While raising up the No. 2 chain tensioner, insert a pin of ϕ1.0 mm (0.039 in.) into the hole to fix it in place.



(b) Hold the hexagonal portion of the camshaft with a wrench, and remove the 2 bolts and 2 camshaft timing gears.

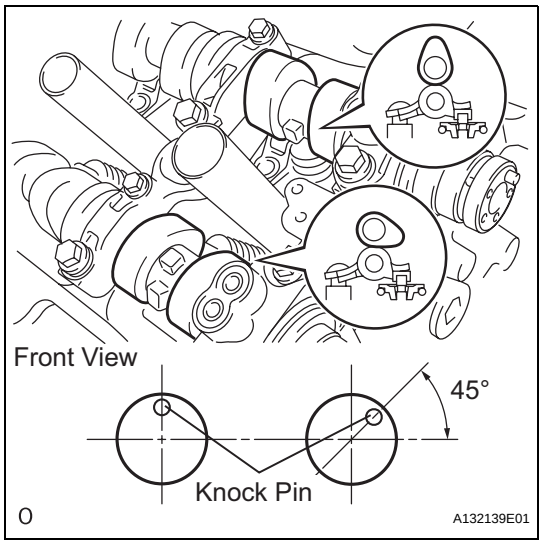
NOTICE:



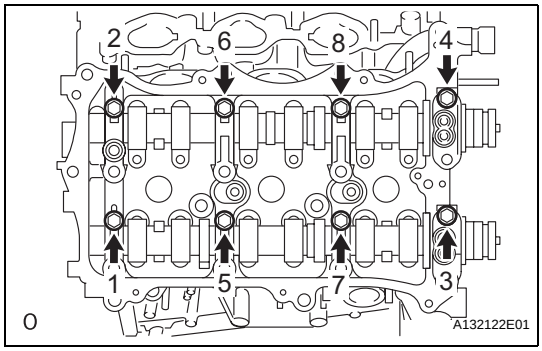
- **Be careful not to damage the cylinder head with the wrench.**
- **Do not disassemble the camshaft timing gear.**

(c) Remove the No. 2 chain.

31. REMOVE NO. 2 CHAIN TENSIONER ASSEMBLY

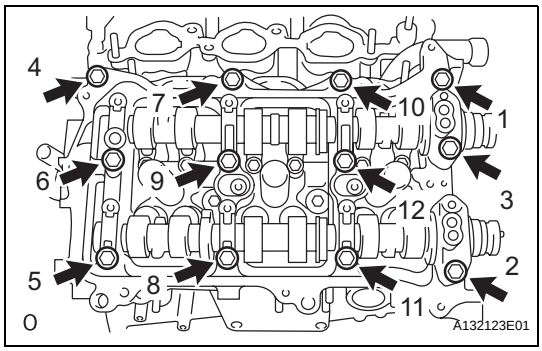


(a) Remove the bolt and chain tensioner.

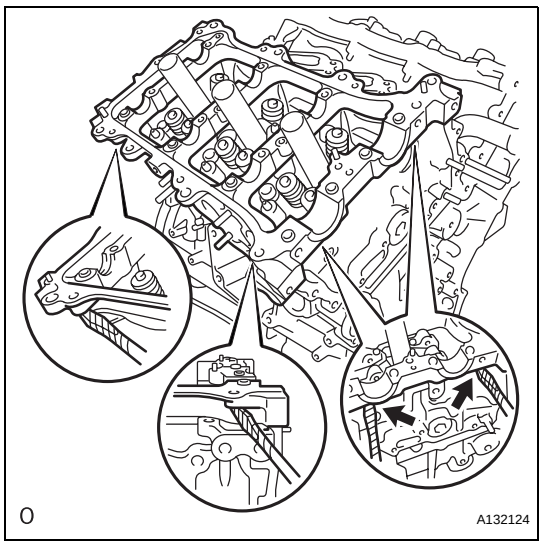


32. REMOVE CAMSHAFT (for Bank 1)

(a) Remove the 3 gaskets.

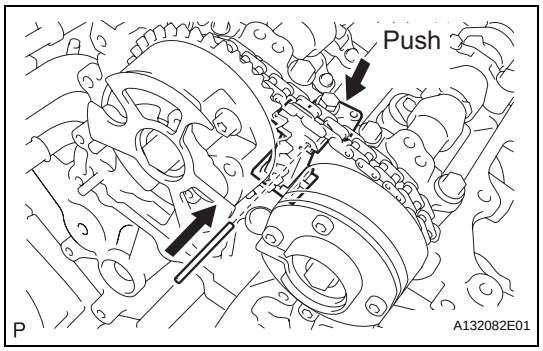


EM

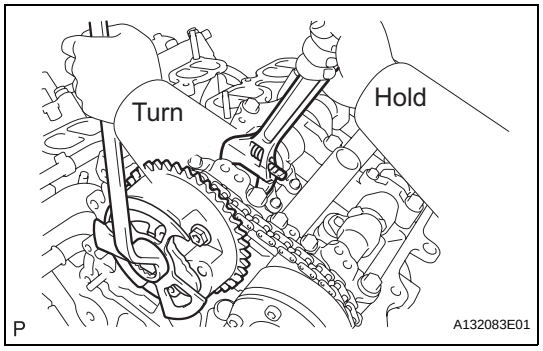


(b) Make sure that the knock pin of the camshaft is positioned as shown in the illustration.

(c) Uniformly loosen and remove the 8 bearing cap bolts in the sequence shown in the illustration.



(d) Uniformly loosen and remove the 12 bearing cap bolts in the sequence shown in the illustration.
NOTICE:
Uniformly loosen the bolts while keeping the camshaft level.
(e) Remove the 5 bearing caps.
(f) Remove the No. 1 and No. 2 camshafts.

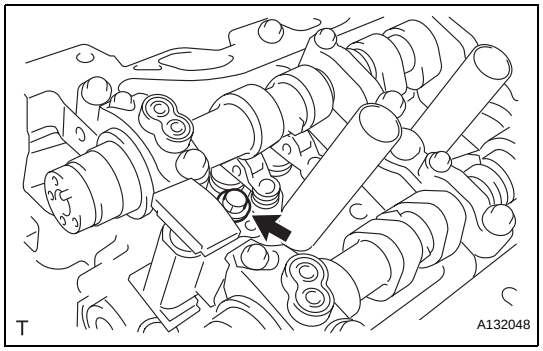


33. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY (for Bank 1)

(a) Remove the camshaft housing by prying between the cylinder head and camshaft housing with a screwdriver.
NOTICE:
Be careful not to damage the contact surfaces of the cylinder head and camshaft housing.
HINT:
Tape the screwdriver tip before use.

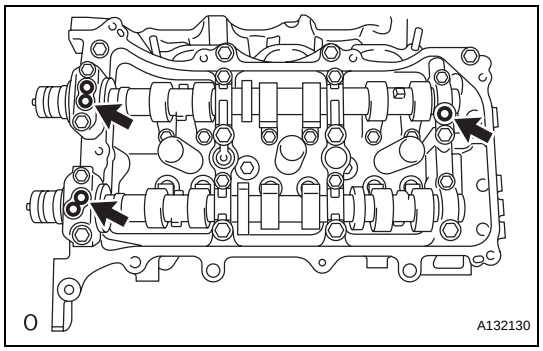
34. REMOVE CAMSHAFT TIMING GEAR ASSEMBLY (for Bank 2)

(a) While pushing down the chain tensioner, insert a pin of ϕ1.0 mm (0.039 in.) into the hole to fix it in place.



(b) Hold the hexagonal portion of the camshaft with a wrench and remove the 2 bolts and 2 camshaft timing gears.

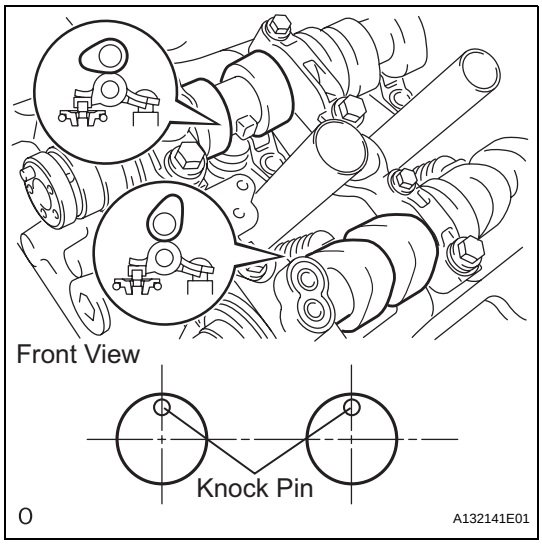
NOTICE:



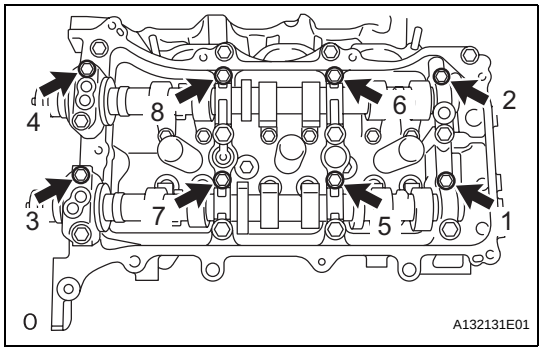
- **Be careful not to damage the cylinder head with the wrench.**
- **Do not disassemble the camshaft timing gear.**

(c) Remove the No. 2 chain.

35. REMOVE NO. 3 CHAIN TENSIONER ASSEMBLY

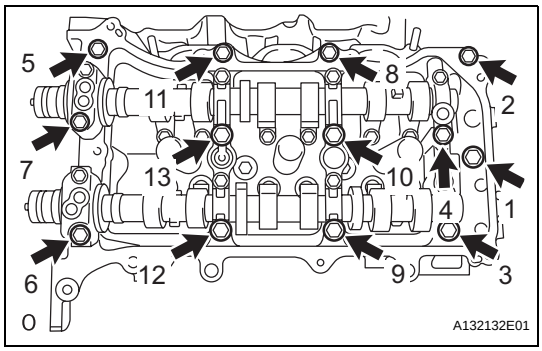


(a) Remove the bolt and chain tensioner.



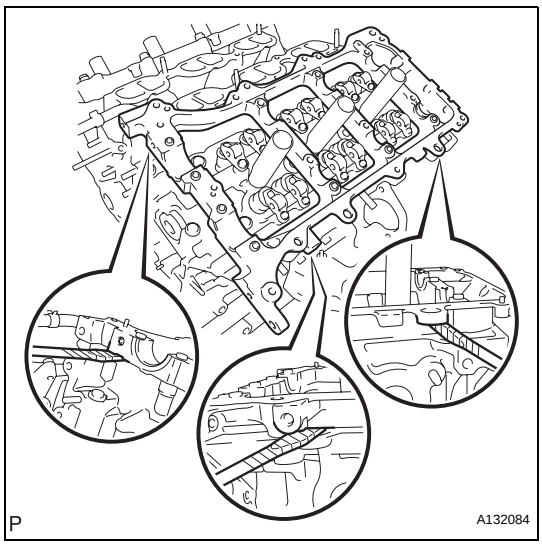
36. REMOVE CAMSHAFT SUB-ASSEMBLY (for Bank 2)

(a) Remove the 3 gaskets.



EM

(b) Make sure that the knock pin of the camshaft is positioned as shown in the illustration.



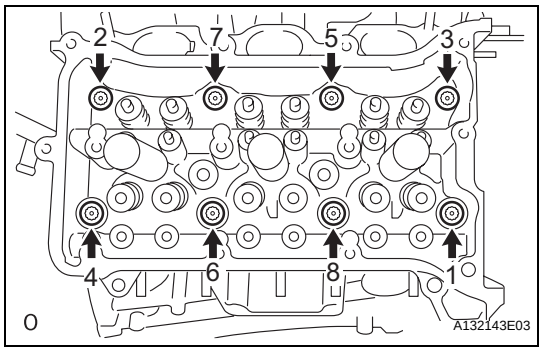
(c) Uniformly loosen and remove the 8 bearing cap bolts in the sequence shown in the illustration.

(d) Uniformly loosen and remove the 13 bearing cap bolts in the sequence shown in the illustration.
NOTICE:
Uniformly loosen the bolts while keeping the camshaft level.

(e) Remove the 5 bearing caps.

(f) Remove the No. 3 and No. 4 camshafts.

37. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY (for Bank 2)



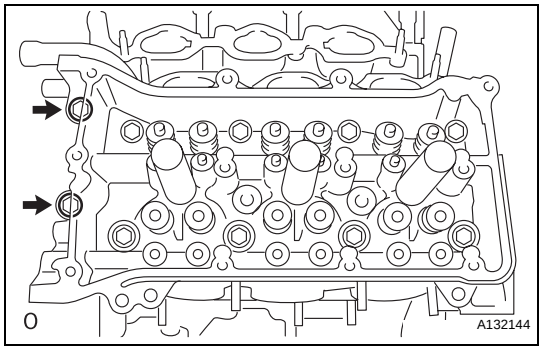
(a) Remove the camshaft housing by prying between the cylinder head and camshaft housing with a screwdriver.
NOTICE:
Be careful not to damage the contact surfaces of the cylinder head and camshaft housing.
HINT:
Tape the screwdriver tip before use.

38. REMOVE NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

(a) Remove the 24 valve rocker arms.
HINT:
Arrange the removed parts in the correct order.

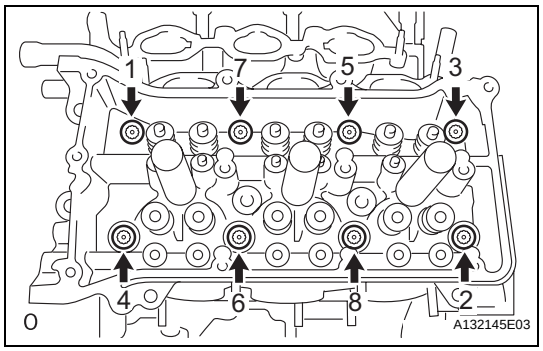
39. REMOVE VALVE LASH ADJUSTER ASSEMBLY

(a) Remove the 24 valve lash adjusters from the cylinder head.
HINT:
Arrange the removed parts in the correct order.



40. REMOVE CYLINDER HEAD SUB-ASSEMBLY (for Bank 1)

(a) Using a 10 mm bi-hexagon wrench, uniformly loosen the 8 bolts in the sequence shown in the illustration. Remove the 8 cylinder head bolts and plate washers.
NOTICE:
- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in an incorrect order.**



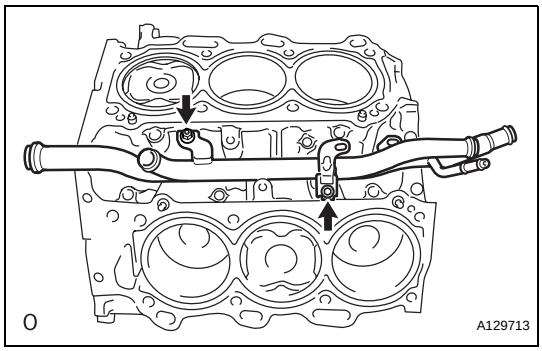
HINT:
Be sure to keep the removed parts separate for each installation position.

(b) Remove the cylinder head and gasket.

41. REMOVE CYLINDER HEAD SUB-ASSEMBLY (for Bank 2)

(a) Uniformly loosen and remove the 2 bolts in the sequence shown in the illustration.

(b) Using a 10 mm bi-hexagon wrench, uniformly loosen the 8 bolts in the sequence shown in the illustration. Remove the 8 cylinder head bolts and plate washers.
NOTICE:
- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in an incorrect order.**

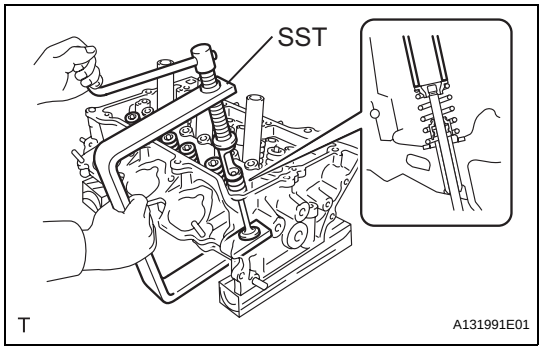


HINT:
Be sure to keep the removed parts separate for each installation position.

(c) Remove the cylinder head and gasket.

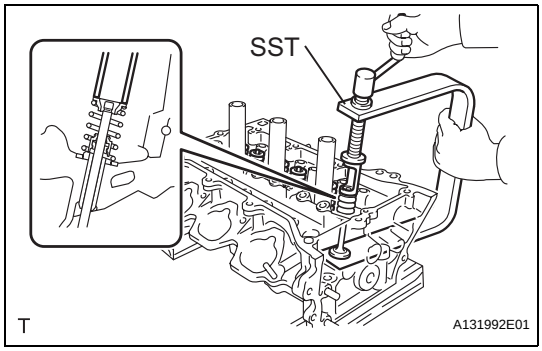
42. REMOVE WATER INLET PIPE

(a) Disconnect the knock sensor wire.



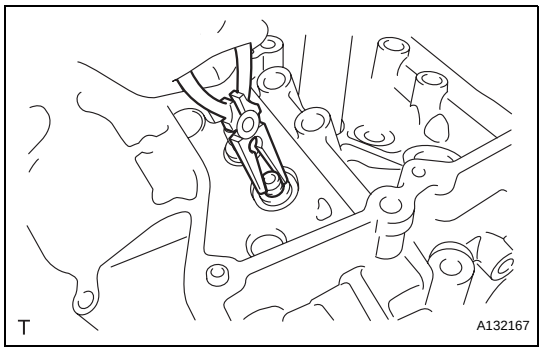
EM

(b) Remove the 2 bolts and water outlet pipe.
(c) Disconnect the water by-pass hose.



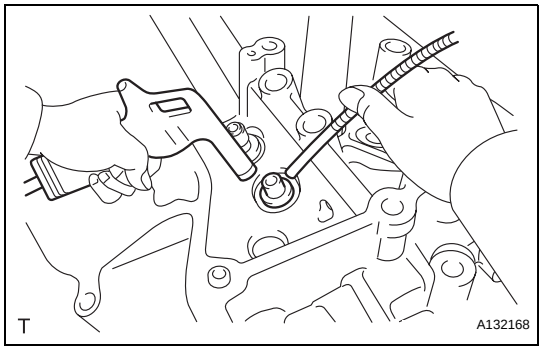
43. REMOVE VALVE STEM CAP

(a) Remove the valve stem caps from the cylinder head.
HINT:
Arrange the removed parts in the correct order.



44. REMOVE INTAKE VALVE

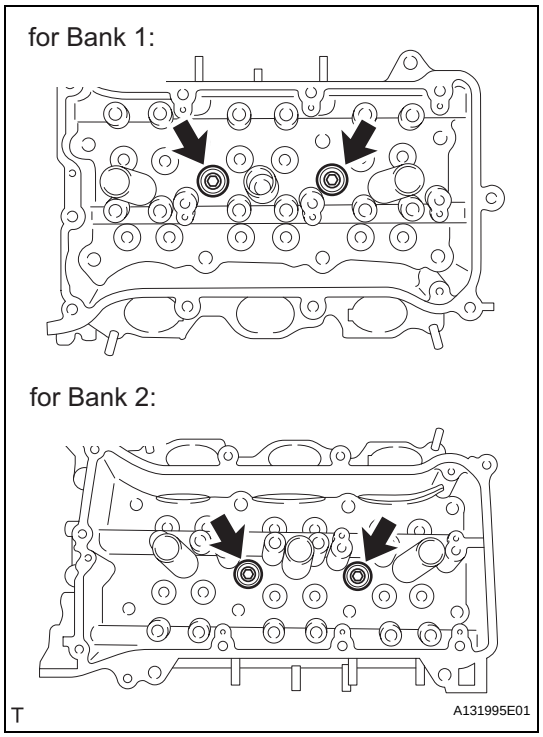
(a) Using SST and wooden blocks, compress the compression spring and remove the valve retainer lock.
SST 09202-70020 (09202-00010)
(b) Remove the retainer, compression spring and valve.
HINT:
Arrange the removed parts in the correct order.



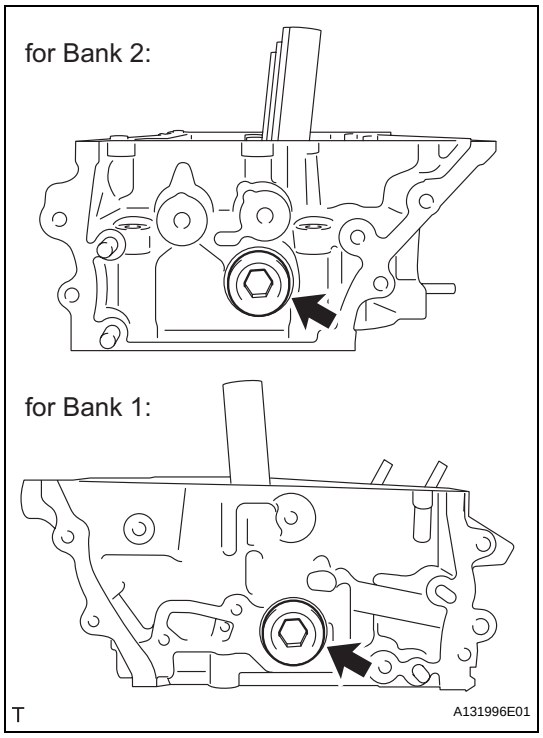
45. REMOVE EXHAUST VALVE

(a) Using SST and wooden blocks, compress the compression spring and remove the valve retainer lock.
SST 09202-70020 (09202-00010)
(b) Remove the retainer, compression spring and valve.
HINT:
Arrange the removed parts in the correct order.

46. REMOVE VALVE STEM OIL SEAL



(a) Using needle-nose pliers, remove the oil seals.

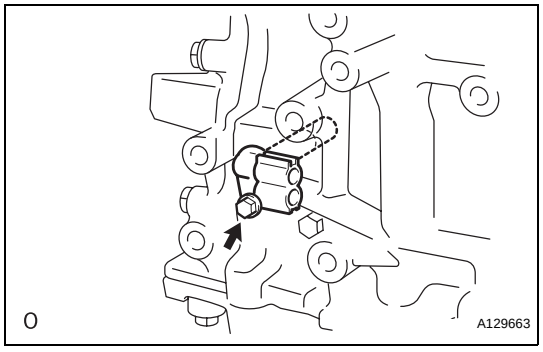


47. REMOVE VALVE SPRING SEAT

(a) Using compressed air and a magnetic finger, remove the valve spring seat by blowing air onto it.

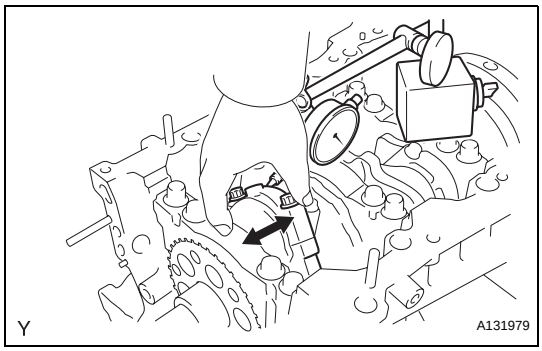
48. REMOVE NO. 1 STRAIGHT SCREW PLUG
NOTICE:
If water leaks from the No. 1 screw plug or the plug is corroded, replace it.

(a) Using a 10 mm hexagon wrench, remove the 4 screw plugs and 4 gaskets.



49. REMOVE NO. 2 STRAIGHT SCREW PLUG

(a) Using a 14 mm hexagon wrench, remove the 2 screw plugs and 2 gaskets.

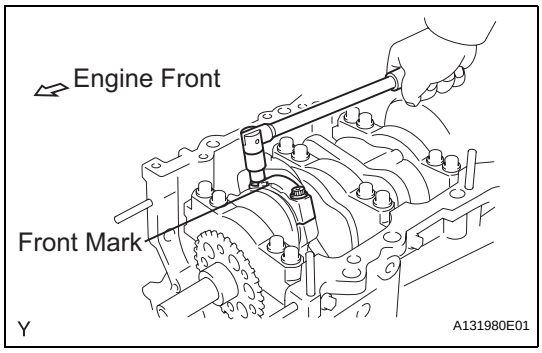


NOTICE:

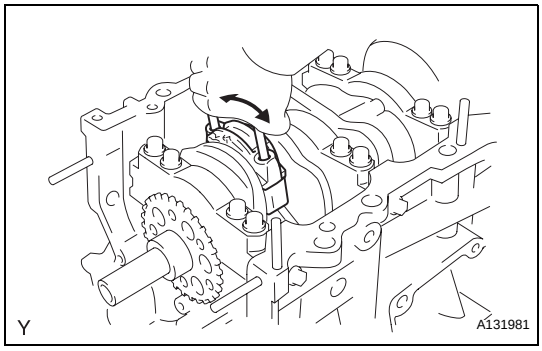
If water leaks from the No. 2 screw plug or the plug is corroded, replace it.

50. REMOVE CRANKSHAFT POSITION SENSOR

(a) Remove the bolt and crankshaft position sensor.

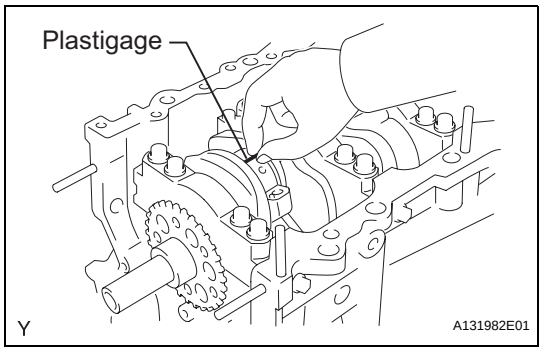


51. INSPECT CONNECTING ROD THRUST CLEARANCE

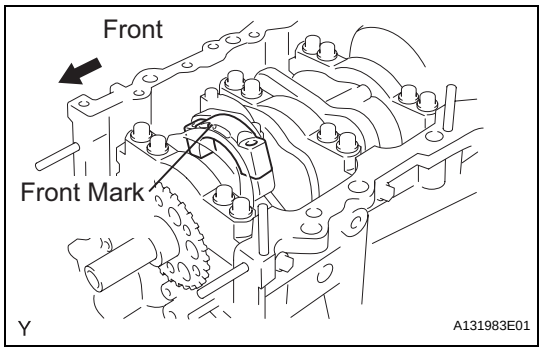


(a) Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.
Standard thrust clearance:
0.15 to 0.40 mm (0.0059 to 0.0157 in.)
Maximum thrust clearance:
0.50 mm (0.0197 in.)
If the thrust clearance is greater than the maximum, replace one or more connecting rods as necessary.
If necessary, replace the crankshaft.

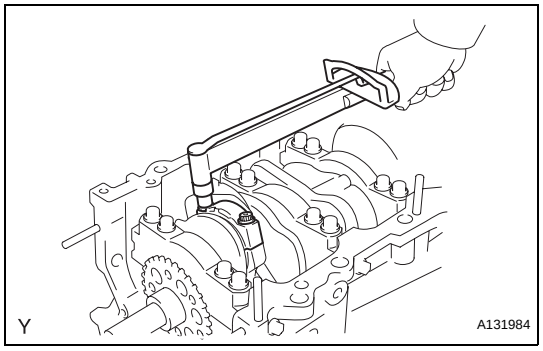
52. INSPECT CONNECTING ROD OIL CLEARANCE



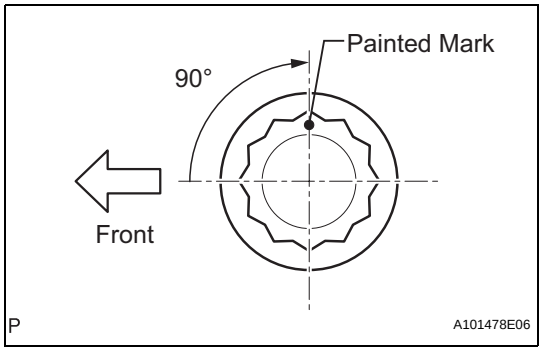
(a) Check that the front mark on the connecting rod and cap are aligned to ensure the correct reassembly.
NOTICE:
The front mark on the connecting rods and caps are for ensuring the correct reassembly.



(b) Remove the 2 connecting rod cap bolts.

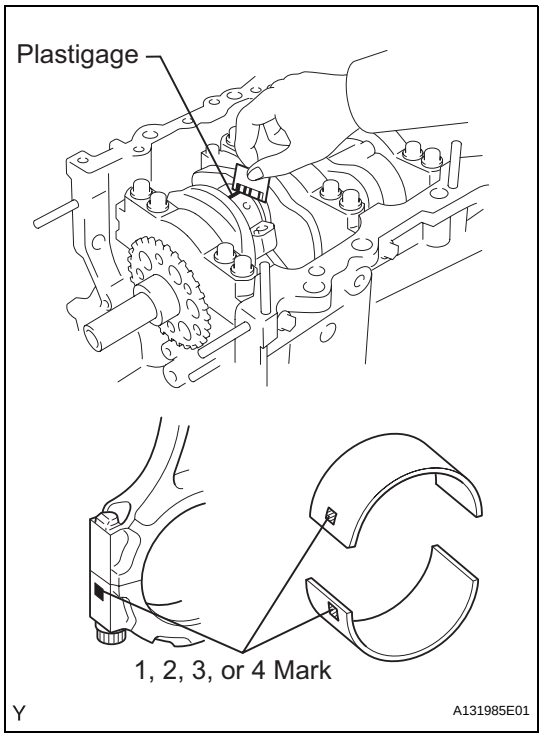


(c) Using the 2 removed connecting rod cap bolts, remove the connecting rod cap and lower bearing by wiggling the connecting rod cap right and left.
HINT:
Keep the lower bearing inserted to the connecting rod cap.
(d) Clean the crank pin and bearing.
(e) Check the crank pin and bearing for pitting and scratches.



(f) Lay a strip of Plastigage on the crank pin.

(g) Check that the front mark of the connecting rod cap is facing forward.

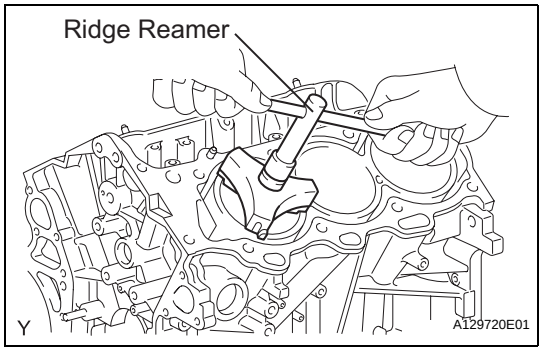


(h) Install and alternately tighten the bolts of the connecting rod cap in several steps.
NOTICE:
Do not turn the crankshaft.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)

(i) Mark the front side of each connecting cap bolt with paint.
(j) Retighten the cap bolts by 90° as shown.
(k) Check that the painted mark is now at a 90° angle to the front.
NOTICE:
Do not turn the crankshaft.
(l) Remove the 2 connecting rod cap bolts.
(m) Using the 2 removed connecting rod cap bolts, remove the connecting rod cap and lower bearing by wiggling the connecting rod cap right and left.
HINT:
Keep the lower bearing inserted to the connecting rod cap.

EM

(n) Measure the Plastigage at its widest point.
Standard oil clearance:
0.045 to 0.067 mm (0.0018 to 0.0026 in.)
Maximum oil clearance:
0.070 mm (0.0028 in.)
If the oil clearance is greater than the maximum, replace the bearings. If necessary, replace the crankshaft.
HINT:
If replacing a bearing, replace it with one that has the same number as its respective connecting rod cap. Each bearing's standard thickness is indicated by a 1, 2, 3 and 4 mark on its surface.
Reference:
Connecting rod big end inside diameter



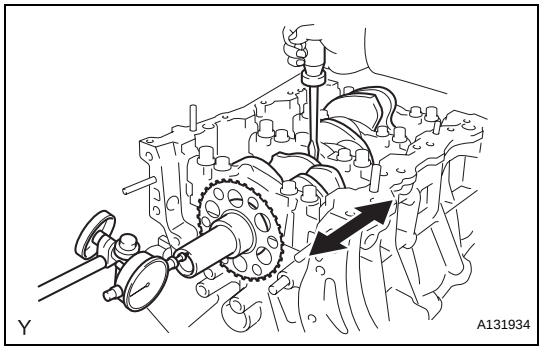
Mark	Thickness
1	56.000 to 56.006 mm (2.2047 to 2.2050 in.)
2	56.007 to 56.012 mm (2.2050 to 2.2052 in.)
3	56.013 to 56.018 mm (2.2052 to 2.2054 in.)
4	56.019 to 56.024 mm (2.2055 to 2.2057 in.)

Standard sized bearing center wall thickness

Mark	Thickness
1	1.481 to 1.484 mm (0.0583 to 0.0584 in.)
2	1.484 to 1.497 mm (0.0584 to 0.0585 in.)
3	1.487 to 1.490 mm (0.0585 to 0.0587 in.)
4	1.490 to 1.493 mm (0.0587 to 0.0588 in.)

Crankshaft pin diameter:
52.992 to 53.000 mm (2.0863 to 2.0866 in.)

(o) Completely remove the Plastigage.

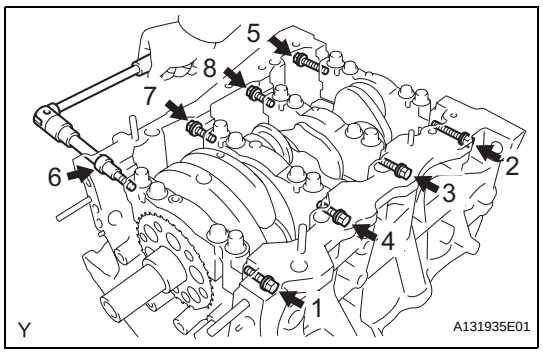


53. REMOVE PISTON SUB-ASSEMBLY WITH CONNECTING ROD

(a) Using a ridge reamer, remove all the carbon from the top of the cylinder.

(b) Push the piston, connecting rod and upper bearing through the top of the cylinder block.
HINT:
- Keep the bearing, connecting rod and cap together.
- Arrange the piston and connecting rod in the correct order.

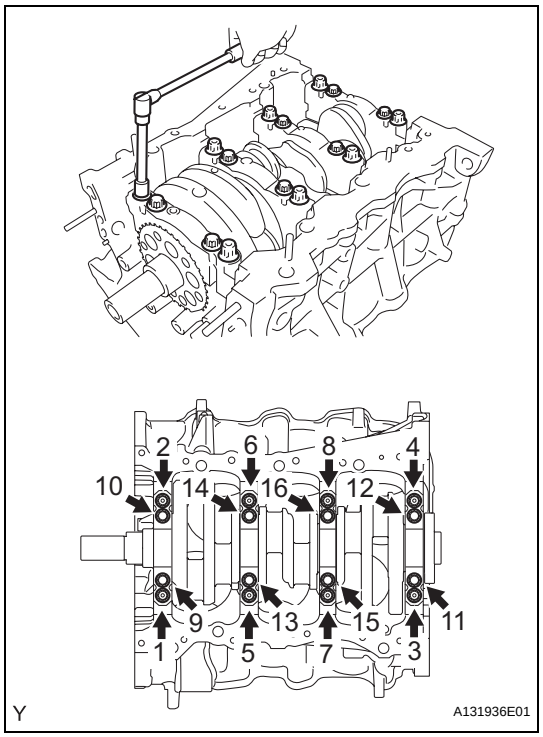
54. REMOVE CONNECTING ROD BEARING
HINT:
Arrange the removed parts in the correct order.



55. INSPECT CRANKSHAFT THRUST CLEARANCE

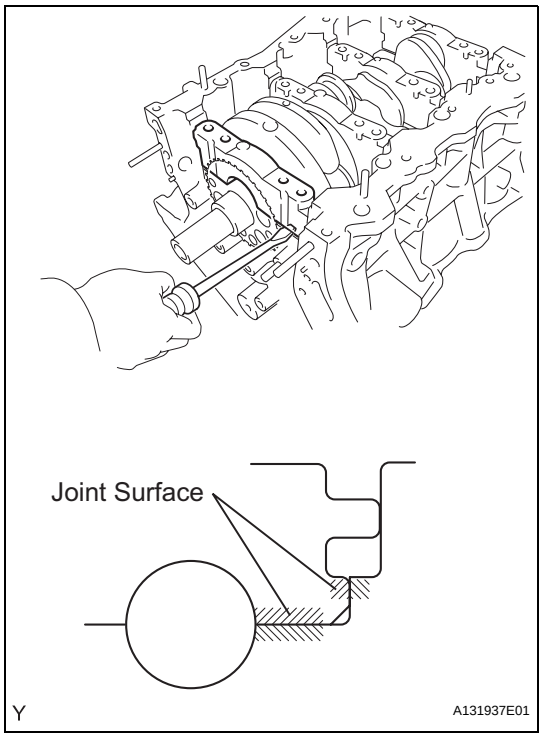
(a) Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.

Standard thrust clearance:
0.04 to 0.24 mm (0.0016 to 0.0094 in.)
Maximum thrust clearance:
0.30 mm (0.0118 in.)



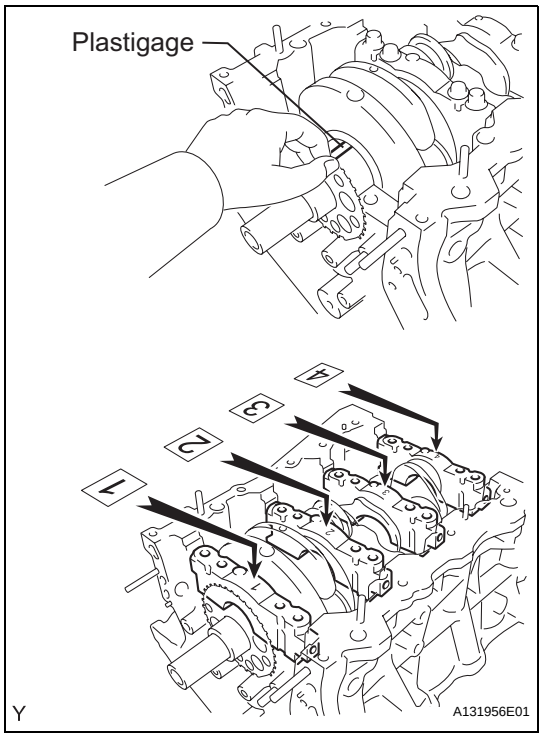
If the thrust clearance is greater than the maximum, replace the thrust washers as a set. If necessary, replace the crankshaft.

Standard thrust washer thickness:
2.43 to 2.48 mm (0.0957 to 0.0976 in.)

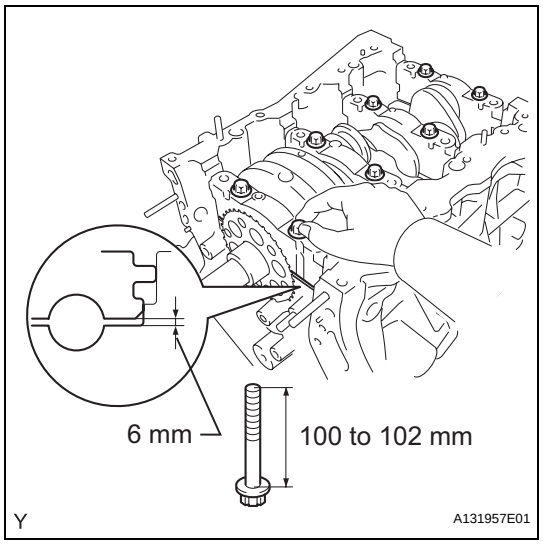


56. REMOVE CRANKSHAFT AND CRANKSHAFT OIL CLEARANCE

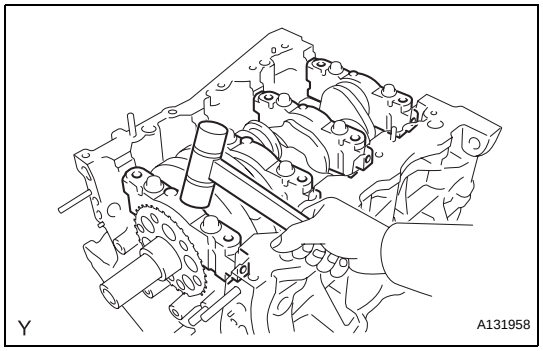
(a) Uniformly loosen and remove the 8 main bearing cap bolts and seal washers in several steps, in the sequence shown in the illustration.



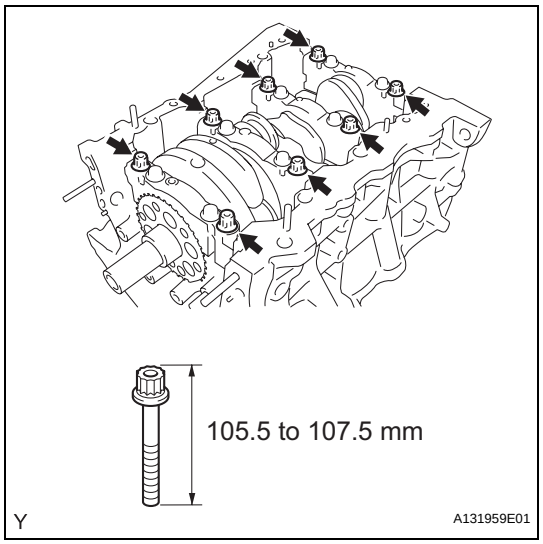
(b) Uniformly loosen the 16 bearing cap bolts in several steps, in the sequence shown in the illustration.



(c) Using a screwdriver, pry out the main bearing caps. Remove the 4 main bearing caps and lower bearings.
NOTICE:
- **Pry up the main cap little by little to the right and left in turns.**
- **Be careful not to damage the joint surface of the cylinder block and main bearing caps.**

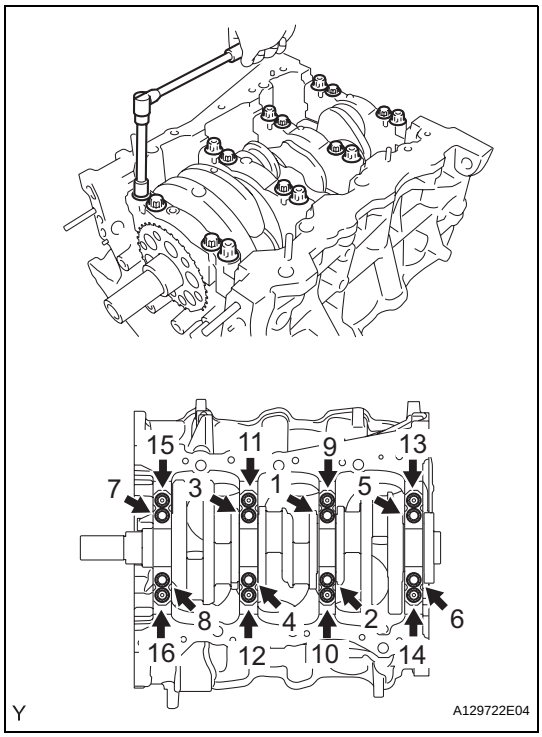


(d) Clean each main journal and bearing.
(e) Check each main journal and bearing for pitting and scratches.
HINT:
If the journal or bearing is damaged, replace the bearing.
(f) Place the crankshaft on the cylinder block.

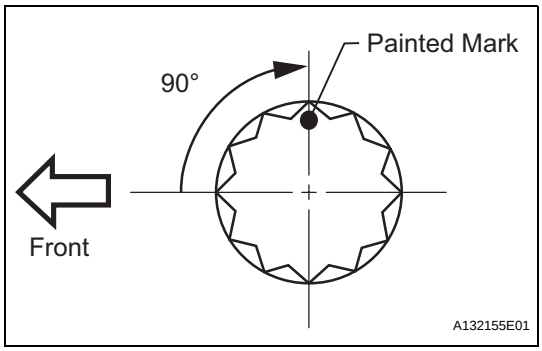


(g) Lay a strip of Plastigage across each journal.
(h) Examine the front marks and numbers and install the bearing caps on the cylinder block.
HINT:
A number is marked on each main bearing cap to indicate the installation position.
(i) Apply a light coat of engine oil on the threads and under the heads of the bearing cap bolts.
(j) Place the crankshaft bearing cap on the cylinder block.

(k) Install the main bearing cap with your hand until the clearance between the main bearing cap and the cylinder block is less than 6 mm (0.23 in.) by marking the 2 internal bearing cap bolts as a guide.
Bolt length:
100 to 102 mm (3.94 to 4.02 in.)

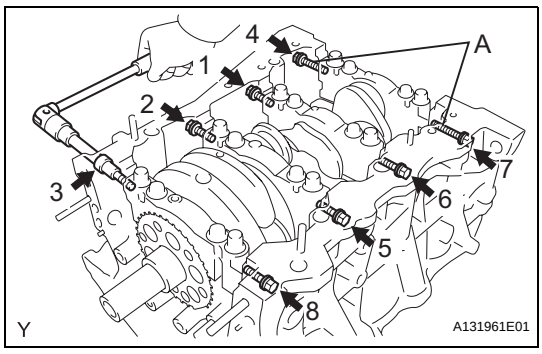


(l) Using a plastic-faced hammer, lightly tap the bearing cap to ensure a proper fit.
(m) Apply a light coat of engine oil on the threads and under the heads of the 8 main bearing cap bolts.



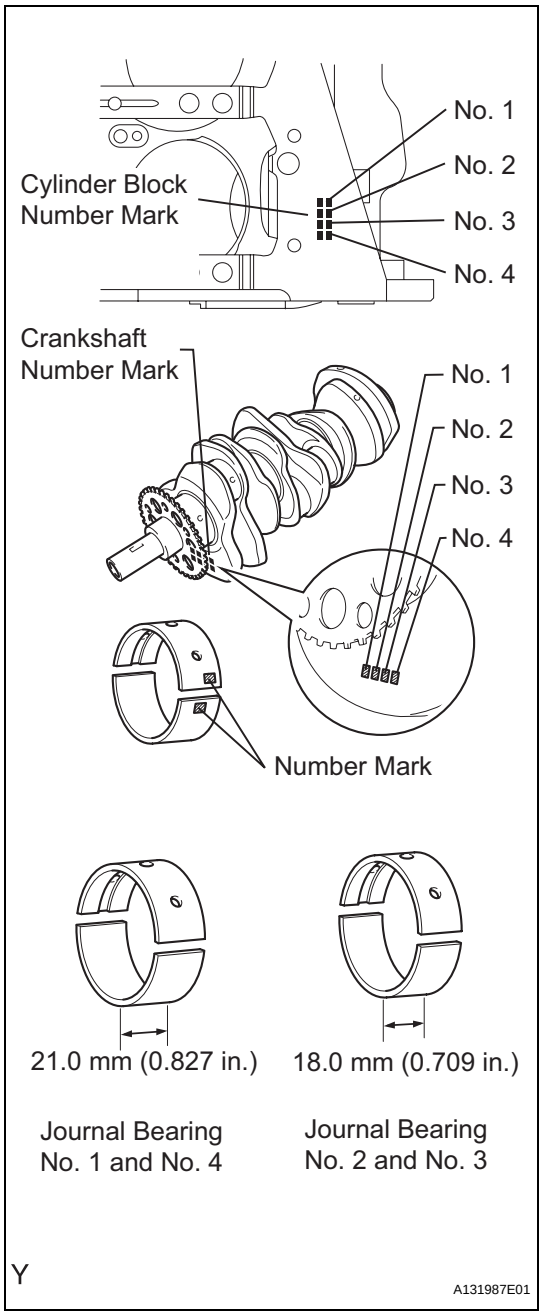
(n) Install the 8 main bearing cap bolts to the outside positions.
Bolt length:
105.5 to 107.5 mm (4.15 to 4.23 in.)
HINT:
The main bearing cap bolts are tightened in 2 progressive steps.

EM



(o) Step 1
(1) Install and uniformly tighten the 16 main bearing cap bolts in the sequence shown in the illustration.
Torque: 61 N*m (622 kgf*cm, 45 ft.*lbf)
HINT:
If any of the main bearing cap bolts does not meet the torque specification, replace the main bearing cap bolt.
NOTICE:
Do not turn the crankshaft.

(p) Step 2
(1) Mark the front of the bearing cap bolts with paint.



(2) Retighten the bearing cap bolts by 90° as shown in the order shown in step 1.
(3) Check that the painted mark is now at a 90° angle to the front.

(q) Install and uniformly tighten the 8 main bearing cap bolts in several steps and in the sequence shown in the illustration.
Torque: 52 N*m (530 kgf*cm, 38 ft.*lbf)
Bolt length:
45 mm (1.77 in.) for bolt A
30 mm (1.18 in.) for except bolt A

(r) Remove the 24 bolts and bearing cap bolts.
(s) Completely remove the Plastigage.

EM

(t) If replacing a bearing, replace it with one having the same number. If the number of the bearing cannot be determined, select the correct bearing by adding together the numbers imprinted on the cylinder block and crankshaft, then refer to the table below for the appropriate bearing number. There are 5 sizes of standard bearings, marked "1", "2", "3", "4" and "5" accordingly.

Journal bearing

Use Bearing	Cylinder Block Number Mark + Crankshaft Number Mark
1	0 - 5
2	6 - 11
3	12 - 17
4	18 - 23
5	24 - 28

EXAMPLE:
Cylinder block "11" + Crankshaft "06" = Total number 17 (Use bearing "3")

EM

Standard crankshaft main journal diameter

Mark	Specified Condition
00	60.999 to 61.000 mm (2.4015 to 2.4016 in.)
01	60.998 to 60.999 mm (2.4015 to 2.4015 in.)
02	60.997 to 60.998 mm (2.4015 to 2.4015 in.)
03	60.996 to 60.997 mm (2.4014 to 2.4015 in.)
04	60.995 to 60.996 mm (2.4014 to 2.4014 in.)
05	60.994 to 60.995 mm (2.4013 to 2.4014 in.)
06	60.93 to 60.994 mm (2.4013 to 2.4013 in.)
07	60.992 to 60.993 mm (2.4013 to 2.4013 in.)
08	60.991 to 60.992 mm (2.4012 to 2.4013 in.)
09	60.990 to 60.991 mm (2.4012 to 2.4012 in.)
10	60.989 to 60.990 mm (2.4011 to 2.4012 in.)
11	60.988 to 60.989 mm (2.4.11 to 2.4011 in.)

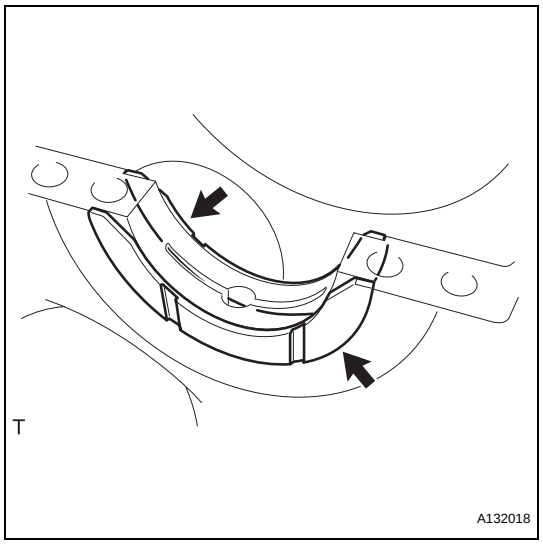
Standard upper bearing center wall thickness No. 1 and No. 4 journal

Mark	Specified Condition
1	2.500 to 2.503 mm (0.0984 to 0.0985 in.)
2	2.503 to 2.506 mm (0.0985 to 0.0987 in.)
3	2.506 to 2.509 mm (0.0987 to 0.0988 in.)

Mark	Specified Condition
4	2.509 to 2.512 mm (0.0988 to 0.0989 in.)
5	2.512 to 2.515 mm (0.0989 to 0.0990 in.)

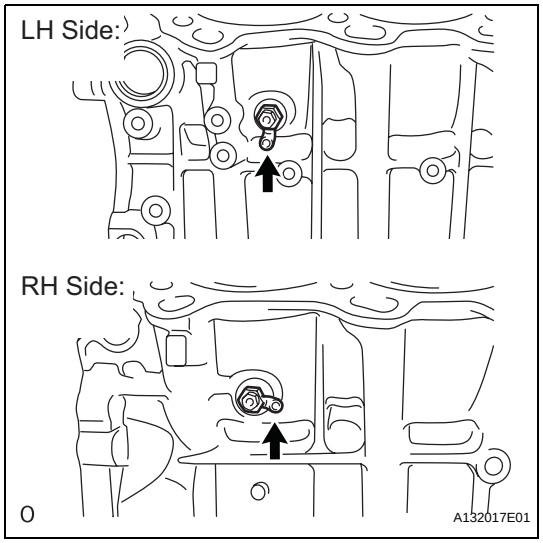
No. 2 and No. 3 journal

Mark	Specified Condition
1	2.478 to 2.481 mm (0.0976 to 0.0977 in.)
2	2.481 to 2.484 mm (0.0977 to 0.0978 in.)
3	2.484 to 2.487 mm (0.0978 to 0.0979 in.)
4	2.487to 2.490 mm (0.0979 to 0.0980 in.)
5	2.490 to 2.493 mm (0.0980 to 0.0981 in.)



Standard lower bearing center wall thickness
No. 1 and No. 4 journal

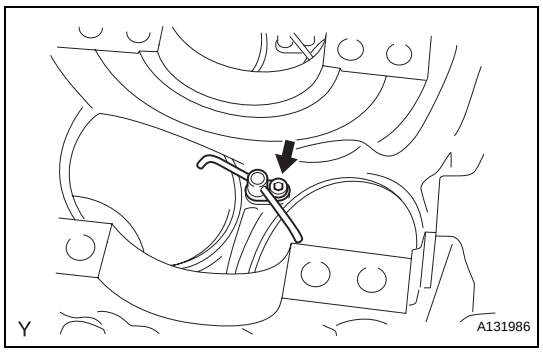
Mark	Specified Condition
1	2.478 to 2.481 mm (0.0976 to 0.0977 in.)
2	2.481 to 2.484 mm (0.0977 to 0.0780 in.)
3	2.484 to 2.487 mm (0.0978 to 0.0979 in.)
4	2.487 to 2.490 mm (0.0979 to 0.0980 in.)
5	2.490 to 2.493 mm (0.0980 to 0.0981 in.)



No. 2 and No. 3 journal

Mark	Specified Condition
1	2.500 to 2.503 mm (0.0984 to 0.0985 in.)
2	2.503 to 2.506 mm (0.0985 to 0.0987 in.)
3	2.506 to 2.509 mm (0.0987 to 0.0988 in.)
4	2.509 to 2.512 mm (0.0988 to 0.0989 in.)
5	2.512 to 2.515 mm (0.0989 to 0.0990 in.)

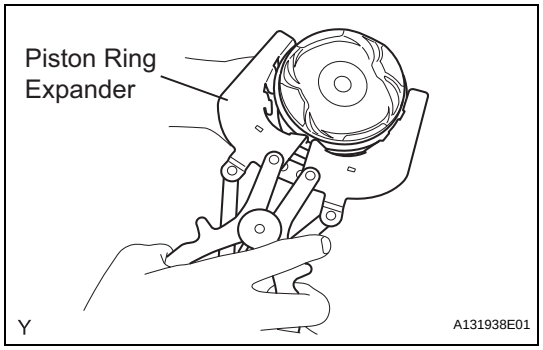
(u) Lift out the crankshaft.



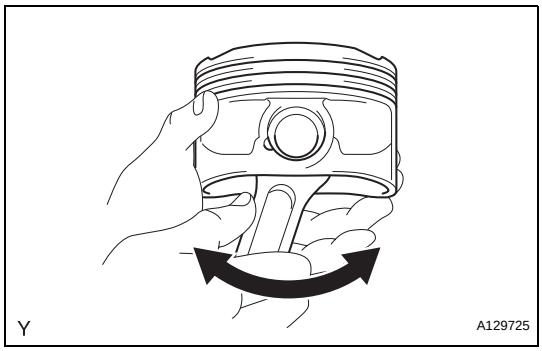
(v) Remove the upper bearings and upper thrust washers from the cylinder block.
HINT:
Arrange the bearings and thrust washers in the correct order.

57. REMOVE CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

(a) Remove the 2 water drain cocks from the cylinder block.
(b) Remove the water drain cock plugs from the water drain cocks.



58. REMOVE NO. 1 OIL NOZZLE SUB-ASSEMBLY

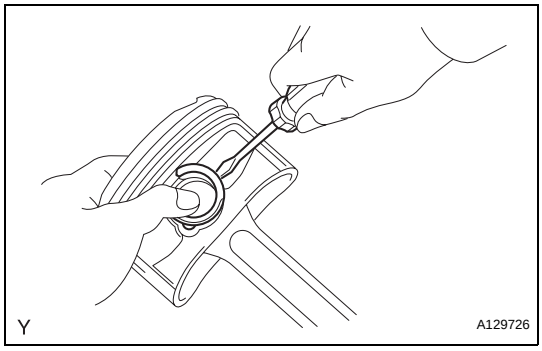


(a) Using a 5 mm hexagon wrench, remove the 3 oil nozzles.
(b) Check the oil nozzles for damage or clogging.
If necessary, replace the oil nozzle.

59. REMOVE PISTON RING SET

HINT:
Arrange the piston rings in the correct order.

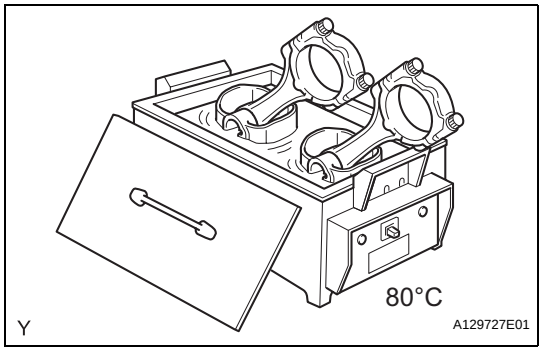
(a) Using a piston ring expander, remove the 2 compression rings.
(b) Using a piston ring expander, remove the 2 side rails.
(c) Remove the oil ring expander by hand.



60. REMOVE PISTON WITH PIN SUB-ASSEMBLY

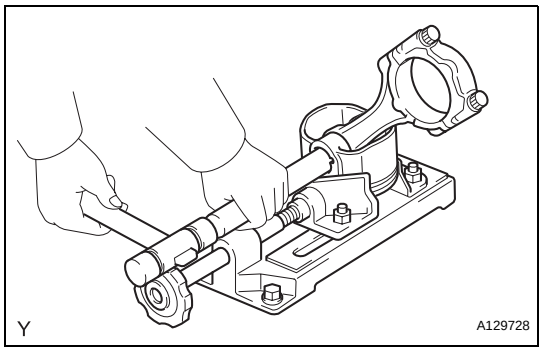
(a) Check the fitting condition between the piston and piston pin.

(1) Try to move the piston back and forth on the piston pin.



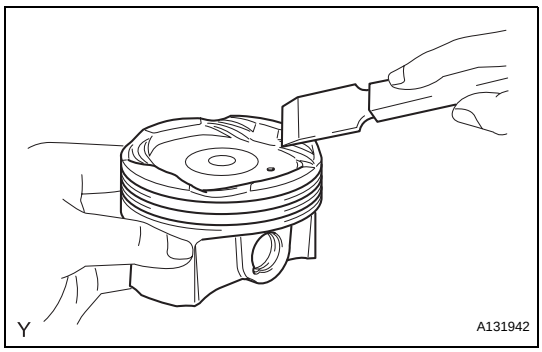
HINT:

If any movement is felt, replace the piston and pin as a set.



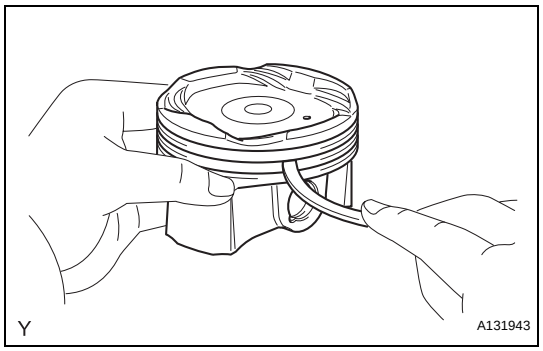
(b) Disconnect the connecting rod from the piston.

(1) Using a screwdriver, pry off the snap rings from the piston.



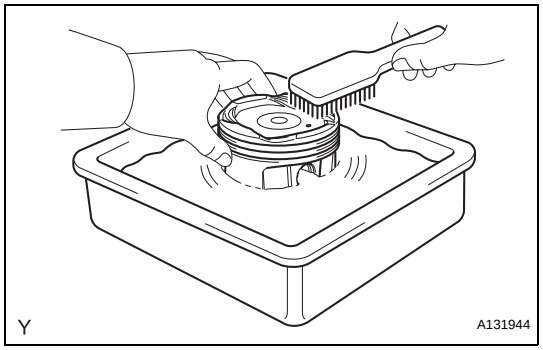
(2) Gradually heat the piston to approximately 80°C (176°F).

(3) Using a brass bar and plastic-faced hammer, lightly tap out the piston pin and remove the connecting rod.



HINT:

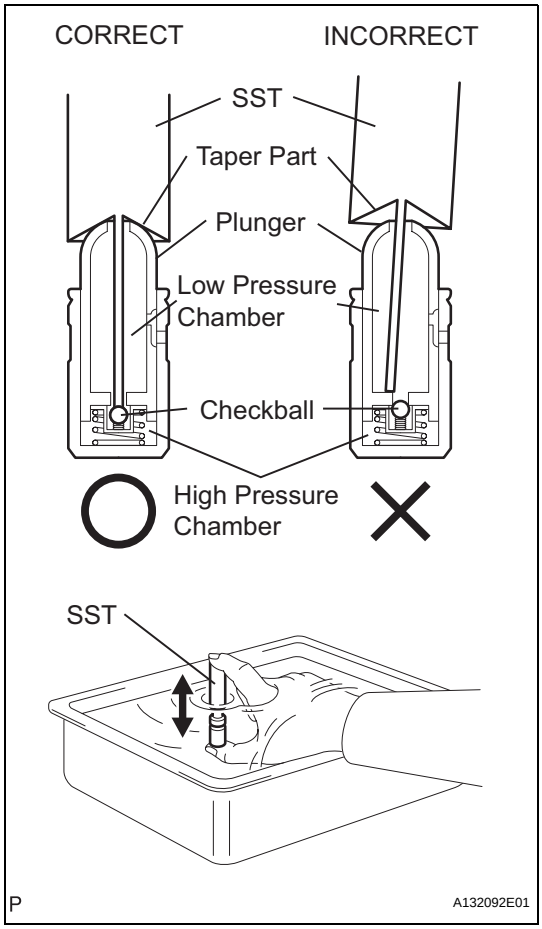
- The piston and pin are a matched set.
- Arrange the pistons, pins, rings, connecting rods and bearings in the correct order.



(c) Clean piston.

(1) Using a gasket scraper, remove the carbon from the piston top.

(2) Using a groove cleaning tool or broken ring, clean the piston ring grooves.



(3) Using solvent and a brush, thoroughly clean the piston.
NOTICE:
Do not use a wire brush.

INSPECTION

1. INSPECT VALVE LASH ADJUSTER ASSEMBLY

NOTICE:

- **Keep the lash adjuster free from dirt and foreign objects.**
- **Only use clean engine oil.**

(a) Place the lash adjuster into a container full of engine oil.

(b) Insert the SST's tip into the lash adjuster's plunger and use the tip to press down on the checkball inside the plunger.

SST 09276-75010

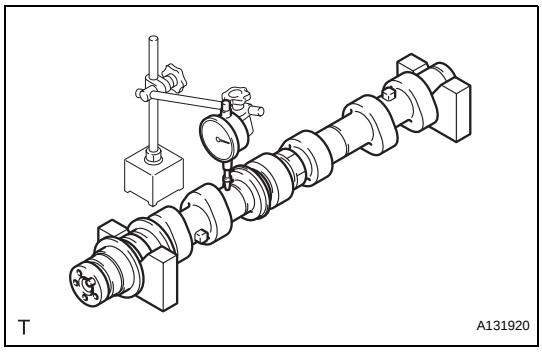
(c) Squeeze the SST and lash adjuster together to move the plunger up and down 5 to 6 times.

(d) Check the movement of the plunger and bleed the air.

OK:

Plunger moves up and down.

NOTICE:



When bleeding high-pressure air from the compression chamber, make sure that the tip of the SST is actually pressing the checkball as shown in the illustration. If the checkball is not pressed, air will not bleed.

(e) After bleeding the air, remove SST. Then try to quickly and firmly press the plunger with a finger.

OK:

Plunger is very difficult to move.

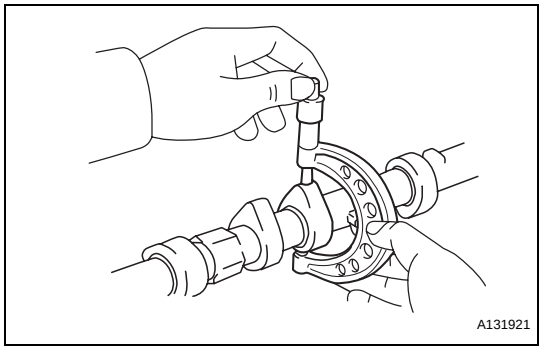
If the result is not as specified, replace the lash adjuster.

2. INSPECT CAMSHAFT

(a) Inspect the camshaft for runout.

(1) Place the camshaft on V-blocks.

(2) Using a dial indicator, measure the circle runout at the center journal.



Maximum circle runout:

0.04 mm (0.0016 in.)

If the circle runout is greater than the maximum, replace the camshaft.

HINT:

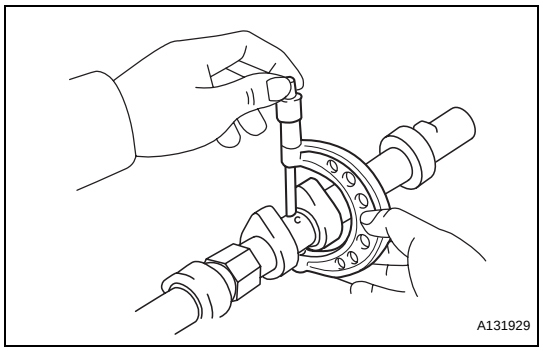
Check the oil clearance after replacing the camshaft.



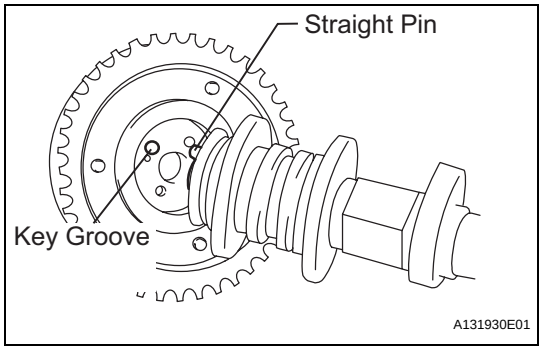
(b) Using a micrometer, measure the cam lobe height.
Standard cam lobe height

Item	Specified Condition
Intake	44.316 to 44.416 mm (1.7447 to 1.7487 in.)
Exhaust	44.262 to 44.362 mm (1.7426 to 1.7465 in.)

Maximum cam lobe height

Item	Specified Condition
Intake	44.166 mm (1.7388 in.)
Exhaust	44.112 mm (1.7367 in.)

If the cam lobe height is less than the minimum, replace the camshaft.

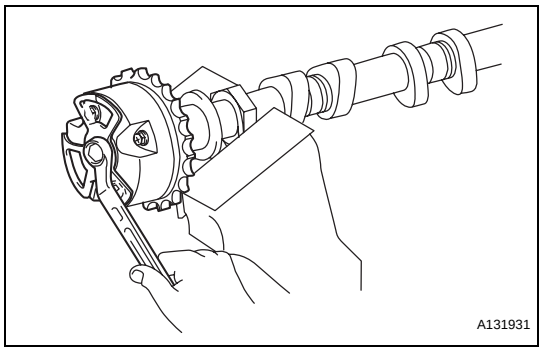


(c) Using a micrometer, measure the journal diameter.
Standard journal diameter

Item	Specified Condition
No. 1 journal	35.946 to 35.960 mm (1.4152 to 1.4157 in.)
Other journal	25.959 to 25.975 mm (1.0220 to 1.0226 in.)

If the journal diameter is not as specified, check the oil clearance.

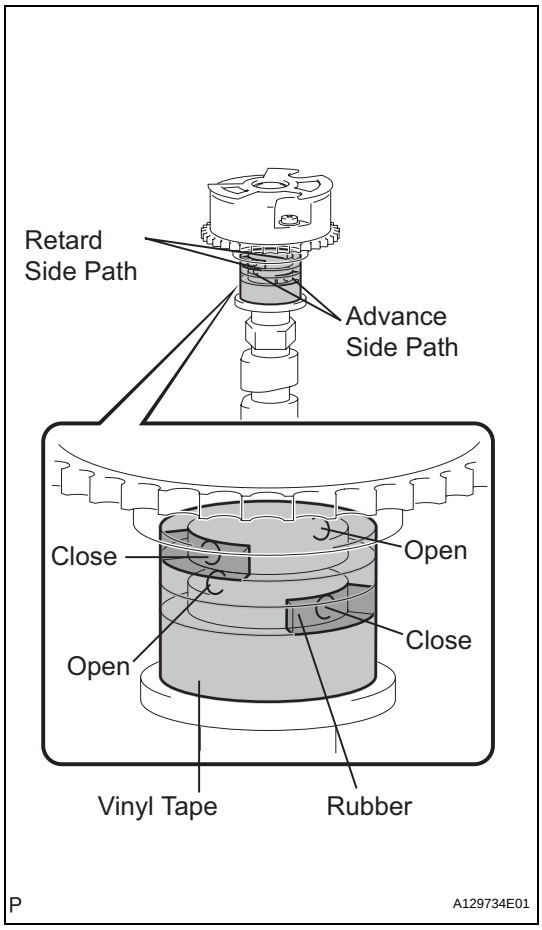
3. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY



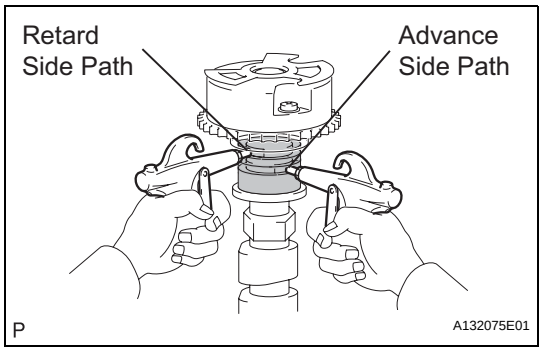
(a) Clamp the camshaft in a vise.
NOTICE:
Be careful not to damage the camshaft in the vise.

(b) Put the camshaft timing gear and camshaft together by aligning the key groove and straight pin.

(c) Lightly press the gear against the camshaft, and turn the gear. Push further at the position where the pin enters the groove.
NOTICE:
Be sure not to turn the camshaft timing gear in the retard direction (the right angle).

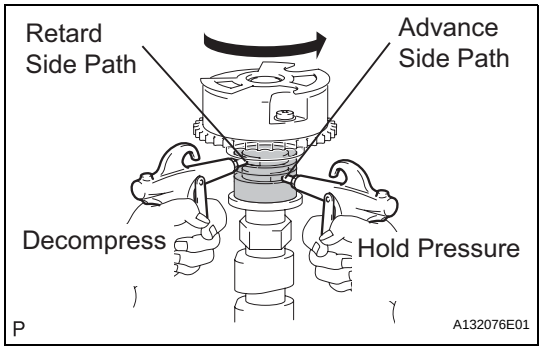


(d) Check that there is no clearance between the gear's fringe and the camshaft.



(e) Tighten the flange bolt with the camshaft timing gear fixed in place.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

(f) Check the lock of the camshaft timing gear.
(1) Clamp the camshaft in a vise, and confirm that the camshaft timing gear is locked.
NOTICE:
Be careful not to damage the camshaft.



EM

(g) Release the lock pin.
(1) Cover the 4 oil paths of the cam journal with vinyl tape as shown in the illustration.
HINT:
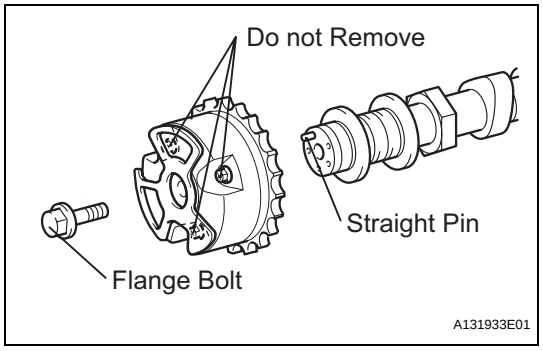
2 advance side paths are provided in the groove of the camshaft. Plug one of the paths with a rubber piece.
(2) Break through the tape of the advance side path and the retard side path on the opposite side to the hole of the advance side path, as shown in the illustration.

(3) Apply approximately 200 kPa (2.0 kgf/cm^2, 28 psi) of air pressure to the two broken paths.
CAUTION:
Cover the paths with a piece of cloth when applying pressure to keep oil from splashing.



(4) Check that the camshaft timing gear revolves in the advance direction when reducing the air pressure applied to the retard side path.
HINT:
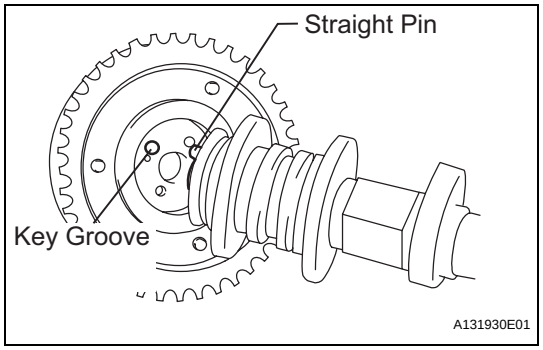
This operation releases the lock pin for the most retarded position.
(5) When the camshaft timing gear reaches the most advanced position, release the air pressure from the retard side path and advance side path, in that order.
NOTICE:
Do not release the air pressure from the advance side path first. The gear may abruptly shift in the retard direction and break the lock pin.

EM

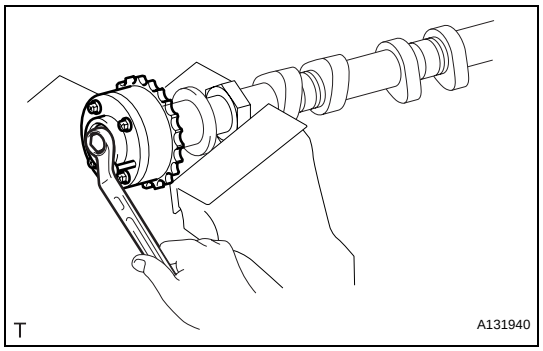
(h) Check for smooth rotation.
(1) Turn the camshaft timing gear within its movable range (21°) 2 or 3 times, but do not turn it to the most retarded position. Make sure that the gear turns smoothly.
NOTICE:
Do not use air pressure to perform the smooth rotation check.



(i) Check the lock in the most retarded position.
(1) Confirm that the camshaft timing gear is locked at the most retarded position.

(j) Remove the flange bolt and camshaft timing gear.
NOTICE:
- **Be sure not to remove the other 3 bolts.**
- **If planning to reuse the gear, be sure to release the straight pin lock before installing the gear.**

4. INSPECT CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY



(a) Clamp the camshaft in a vise.
NOTICE:
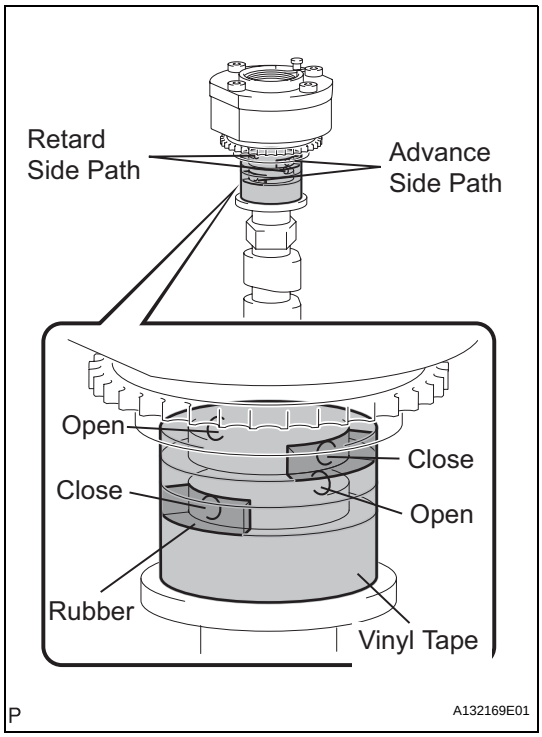
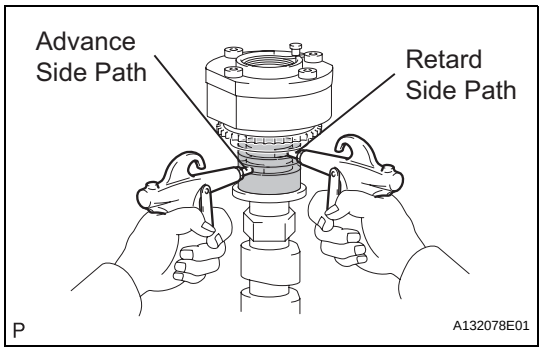
Be careful not to damage the camshaft in the vise.

(b) Put the camshaft timing exhaust gear and camshaft together by aligning the key groove and straight pin.

(c) Lightly press the gear against the camshaft, and turn the gear. Push further at the position where the pin enters the groove.
CAUTION:
Be sure not to turn the camshaft timing exhaust gear in the retard direction (the right angle).

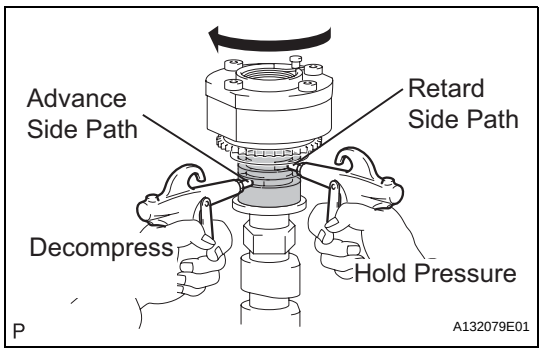


(d) Check that there is no clearance between the gear's fringe and the camshaft.



(e) Tighten the flange bolt with the camshaft timing exhaust gear fixed in place.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

(f) Check the camshaft timing exhaust gear lock.
(1) Make sure that the camshaft timing exhaust gear is locked.



EM

(g) Release the lock pin.
(1) Cover the 4 oil paths of the cam journal with vinyl tape as shown in the illustration.
HINT:
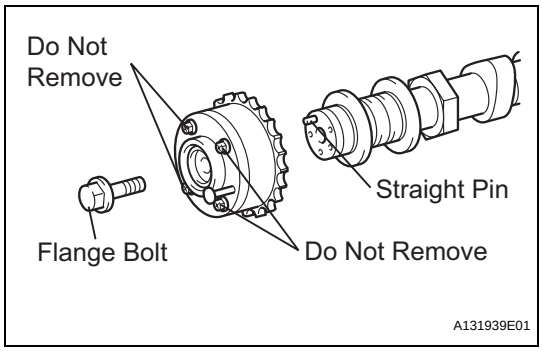
4 oil paths are provided in the groove. Plug 2 paths with rubber pieces.
(2) Prick a hole in the tape placed on the advance side path. Prick a hole in the tape placed on the retard side path on the opposite side to that of the advance side path, as shown in the illustration.

(3) Apply approximately 200 kPa (2.0 kgf/cm^2, 28 psi) of air pressure to the two broken paths (the advance side path and the retard side path).
CAUTION:
Cover the paths with a piece of cloth when applying pressure to keep oil from splashing.



(4) Make sure that the camshaft timing exhaust gear turns in the retard direction when reducing the air pressure applied to the advance side path.
HINT:
The lock pin is released and the camshaft timing exhaust gear turns in the retard direction.
(5) When the camshaft timing exhaust gear moves to the most retarded position, release the air pressure from the advance side path, and then release the air pressure from the retard side path.
NOTICE:
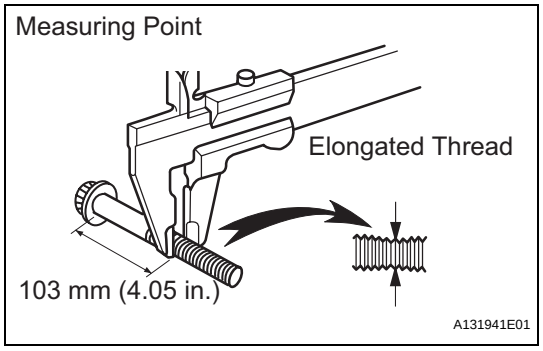
Be sure to release the air pressure from the advance side path first. If the air pressure of the retard side path is released first, the camshaft timing exhaust gear may abruptly shift in the advance direction and break the lock pin or other parts.

EM



(h) Check for smooth rotation.
(1) Turn the camshaft timing exhaust gear within its movable range (18.5°) 2 or 3 times, but do not turn it to the most advanced position. Make sure that the gear turns smoothly.
NOTICE:
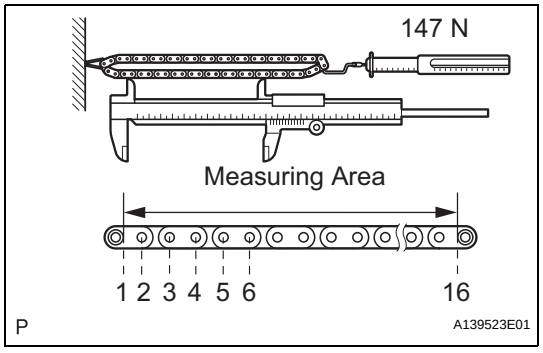
When the air pressure is released from the advance side path and then from the retard side path, the gear automatically returns to the most advanced position due to the advance assist spring operation and locks. Gradually release the air pressure from the retard side path before performing the smooth rotation check.

(i) Check the lock at the most advanced position.
(1) Make sure that the camshaft timing exhaust gear is locked at the most advanced position.



(j) Remove the flange bolt and camshaft timing exhaust gear.
NOTICE:
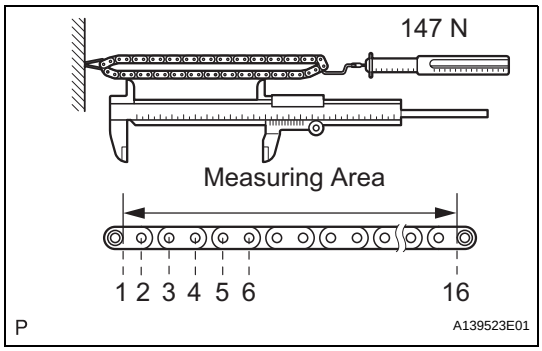
- **Be sure not to remove the other 3 bolts.**
- **If planning to reuse the gear, be sure to release the straight pin lock before installing the gear.**

EM

5. INSPECT CYLINDER HEAD SET BOLT



(a) Using a vernier caliper, measure the minimum diameter of the elongated thread at the measuring point.
Minimum outside diameter:
10.70 mm (0.4213 in.)
HINT:
- If a visual check reveals no excessively thin areas, check the center of the bolt (see illustration) and find the area that has the lowest diameter.
- If the diameter is less than the minimum, replace the cylinder head bolt.

6. INSPECT CHAIN SUB-ASSEMBLY

(a) Using a spring scale, pull the chain with a force of 147 N (15 kgf, 33 lbf) as shown in the illustration.

(b) Using a vernier caliper, measure the length of 16 links.
Maximum chain elongation:
136.9 mm (5.389 in.)
If the elongation is greater than the maximum, replace the chain.
NOTICE:
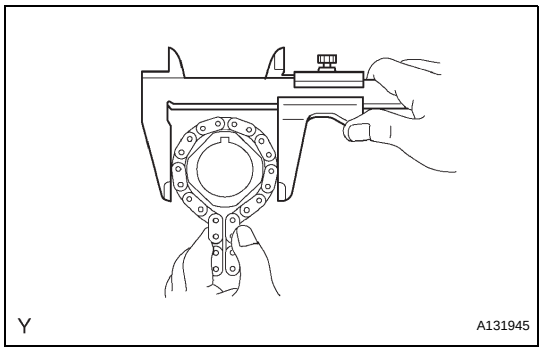
Perform the measurement at 3 random places. Inspect using the average of the measurements.

7. INSPECT NO. 2 CHAIN SUB-ASSEMBLY



(a) Pull the chain with a force of 147 N (15 kgf, 33 lbf) as shown in the illustration.

(b) Using a vernier caliper, measure the length of 16 links.

Maximum chain elongation:
137.6 mm (5.417 in.)

If the elongation is greater than the maximum, replace the chain.

NOTICE:
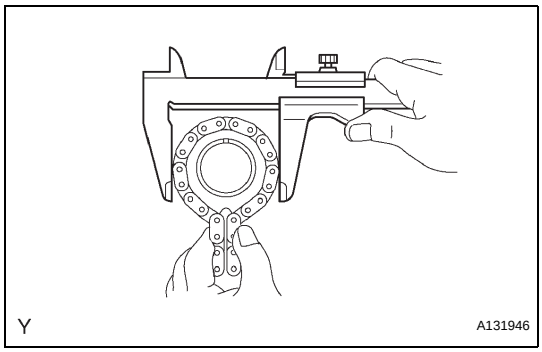
Perform the measurement at 3 random places.
Inspect using the average of the measurements.

8. INSPECT CRANKSHAFT TIMING GEAR OR SPROCKET



(a) Wrap the chain around the sprocket.

(b) Using a vernier caliper, measure the sprocket diameter with the chain.

Minimum sprocket diameter (w/ chain):
61.4 mm (2.417 in.)

HINT:

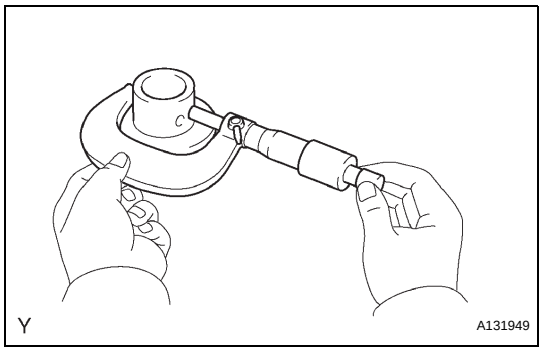
- The vernier caliper must contact the chain rollers for the measurement.
- If the diameter is less than the minimum, replace the chain and sprocket.

9. INSPECT IDLE SPROCKET ASSEMBLY



(a) Wrap the chain around the sprocket.

(b) Using a vernier caliper, measure the sprocket diameter with the chain.

Minimum sprocket diameter (w/ chain):
61.4 mm (2.417 in.)

HINT:

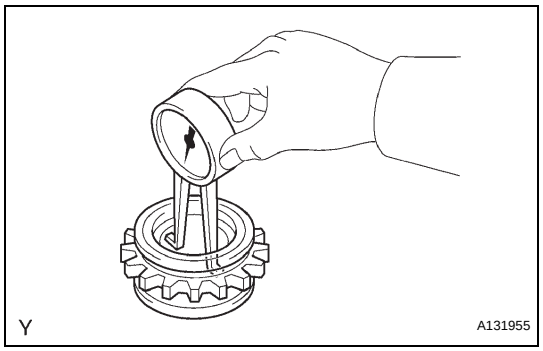
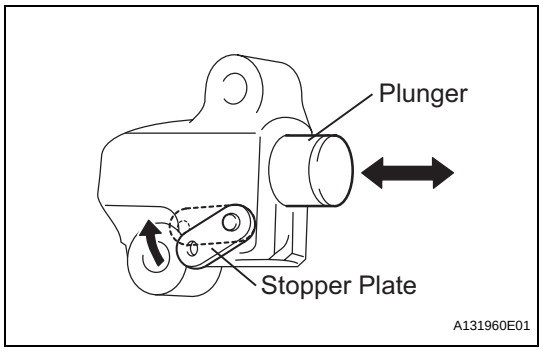
- The vernier caliper must contact the chain rollers for the measurement.
- If the diameter is less than the minimum, replace the chain and sprocket.



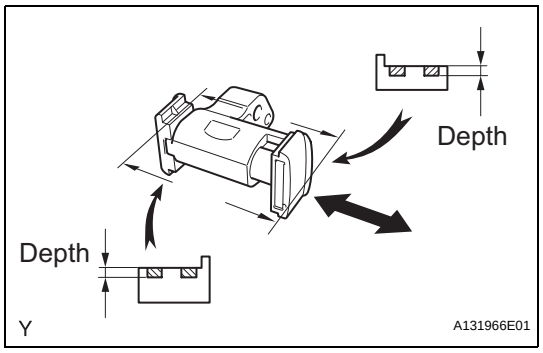
10. INSPECT IDLE GEAR SHAFT OIL CLEARANCE

(a) Using a micrometer, measure the idle gear shaft diameter.



Standard idle gear shaft diameter:
22.987 to 23.000 mm (0.9050 to 0.9055 in.)

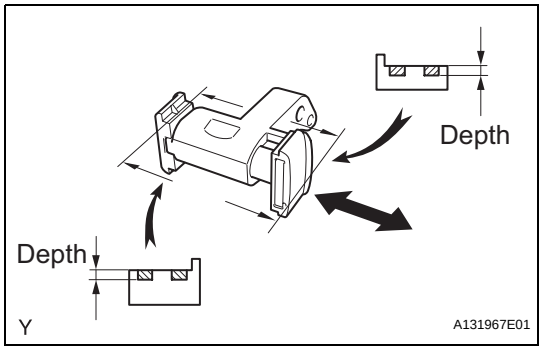
EM



(b) Using a caliper gauge, measure the inside diameter of the idle gear.
Standard idle gear inside diameter:
23.02 to 23.03 mm (0.9062 to 0.9067 in.)

(c) Subtract the idle gear shaft diameter measurement from the idle gear inside diameter measurement.
Standard oil clearance:
0.02 to 0.043 mm (0.0001 to 0.0017 in.)
Maximum oil clearance:
0.043 mm (0.0017 in.)
If the thrust oil clearance is greater than the maximum, replace the idle gear shaft and idle gear.

11. INSPECT NO. 1 CHAIN TENSIONER ASSEMBLY

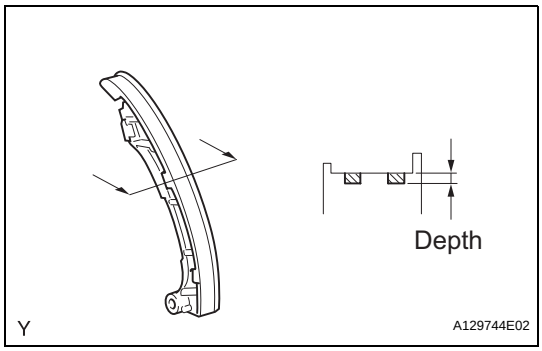


(a) Move the stopper plate upward to release the lock. Push the plunger and check that it moves smoothly. If necessary, replace the chain tensioner.

12. INSPECT NO. 2 CHAIN TENSIONER ASSEMBLY

(a) Check that the plunger moves smoothly.

(b) Measure the worn depth of the chain tensioner.
Maximum depth:
0.9 mm (0.035 in.)
If the depth is greater than the maximum, replace the chain tensioner.

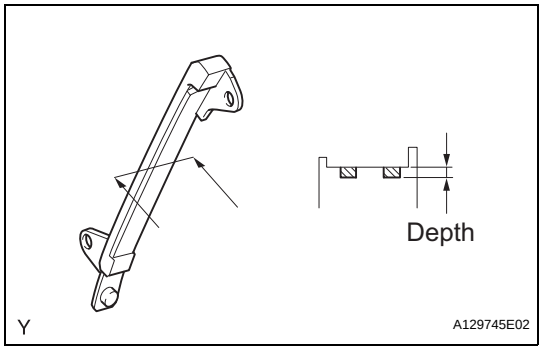


13. INSPECT NO. 3 CHAIN TENSIONER ASSEMBLY

(a) Check that the plunger moves smoothly.

(b) Measure the worn depth of the chain tensioner.
Maximum depth:
0.9 mm (0.035 in.)
If the depth is greater than the maximum, replace the chain tensioner.

EM



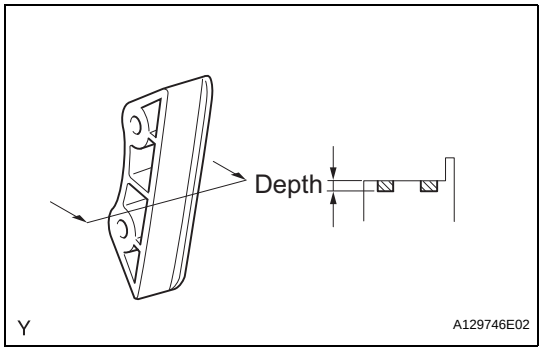
14. INSPECT CHAIN TENSIONER SLIPPER

(a) Measure the worn depth of the chain tensioner slipper.

Maximum depth:

1.0 mm (0.039 in.)

If the depth is greater than the maximum, replace the chain tensioner slipper.



15. INSPECT NO. 1 CHAIN VIBRATION DAMPER

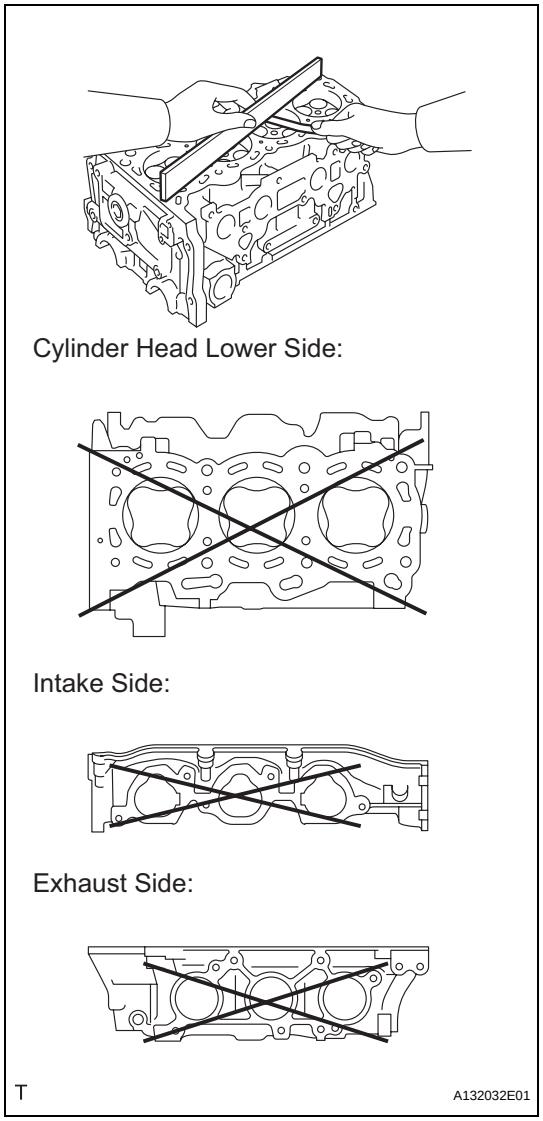
(a) Measure the worn depth of the chain vibration damper.

Maximum depth:

1.0 mm (0.039 in.)

If the depth is greater than the maximum, replace the chain vibration damper.

16. INSPECT NO. 2 CHAIN VIBRATION DAMPER



(a) Measure the worn depth of the chain vibration damper.

Maximum depth:

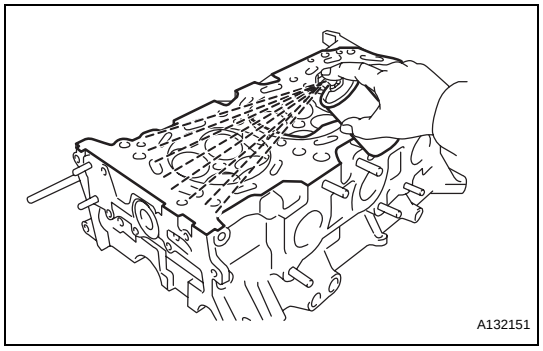
1.0 mm (0.039 in.)

If the depth is greater than the maximum, replace the chain vibration damper.

EM

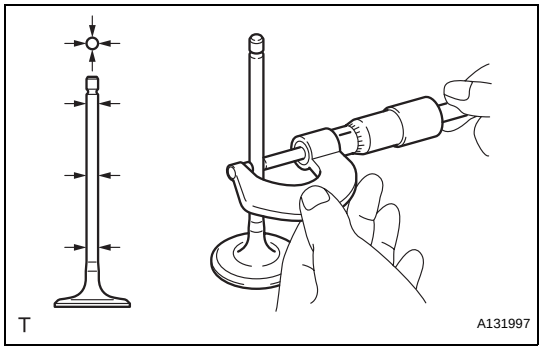
17. INSPECT CYLINDER HEAD SUB-ASSEMBLY

(a) Using a precision straightedge and feeler gauge, measure the warpage of the contact surface of the cylinder block and manifolds.



Standard warpage

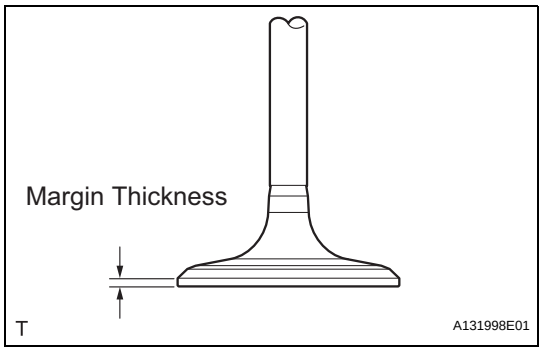
Item	Specified Condition
Cylinder head lower side	0.05 mm (0.0020 in.)
Intake side	0.08 mm (0.0031 in.)
Exhaust side	0.08 mm (0.0031 in.)



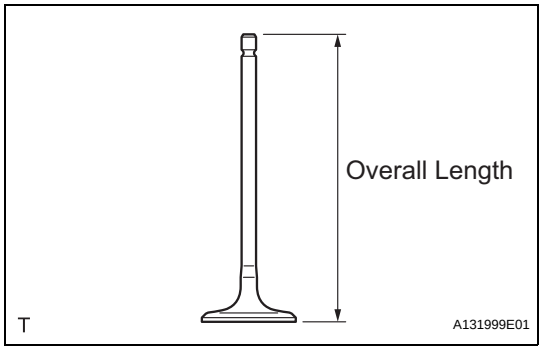
Maximum warpage:
0.10 mm (0.0039 in.)

If the warpage is greater than the maximum, replace the cylinder head.

EM



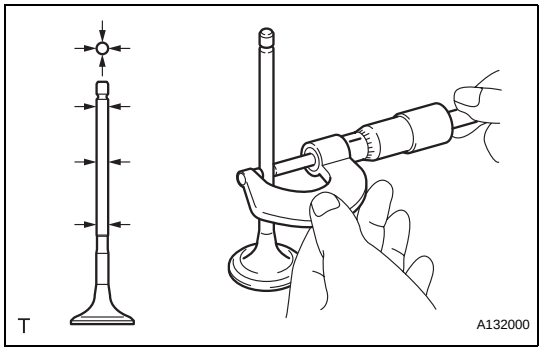
(b) Using a dye penetrate, check the intake ports, exhaust ports and cylinder surface for cracks.
If cracked, replace the cylinder head.



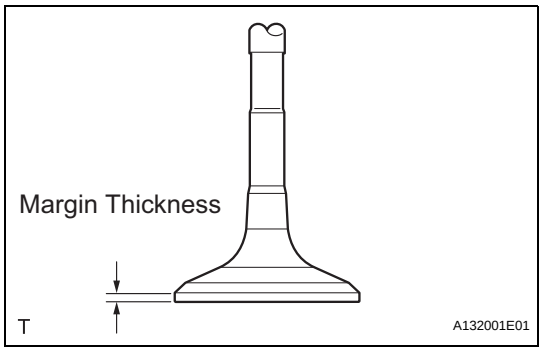
18. INSPECT INTAKE VALVE

(a) Using a micrometer, measure the diameter of the valve stem.

Standard valve stem diameter:
5.470 to 5.485 mm (0.2154 to 0.2159 in.)

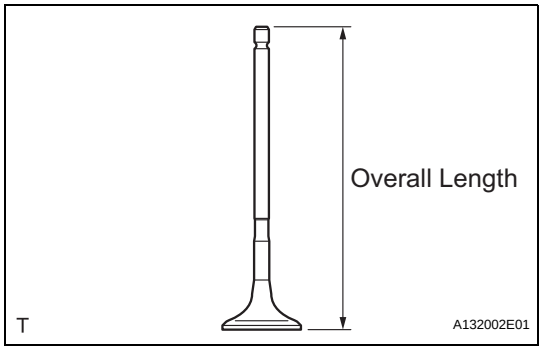


(b) Using a vernier caliper, measure the valve head margin thickness.
Standard margin thickness:
1.0 mm (0.0394 in.)
Minimum margin thickness:
0.50 mm (0.0197 in.)
If the margin thickness is less than the minimum, replace the intake valve.

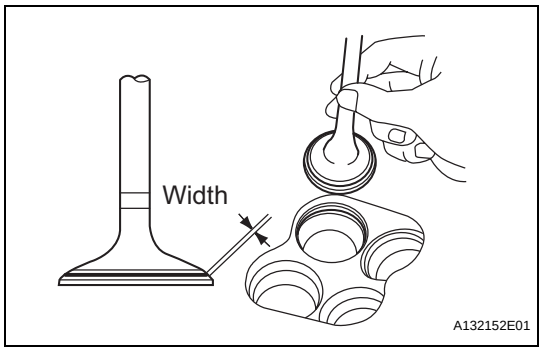


(c) Using a vernier caliper, measure the valve's overall length.
Standard overall length:
105.85 mm (4.1673 in.)
Minimum overall length:
105.35 mm (4.1476 in.)
If the overall length is less than the minimum, replace the intake valve.

EM

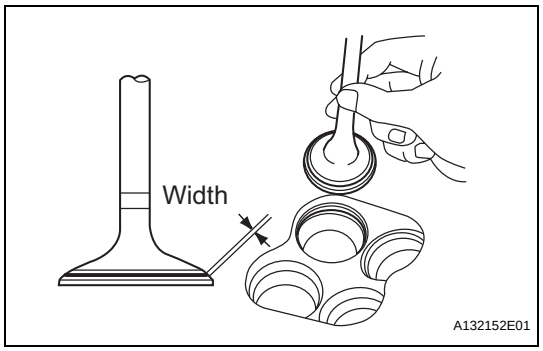


19. INSPECT EXHAUST VALVE



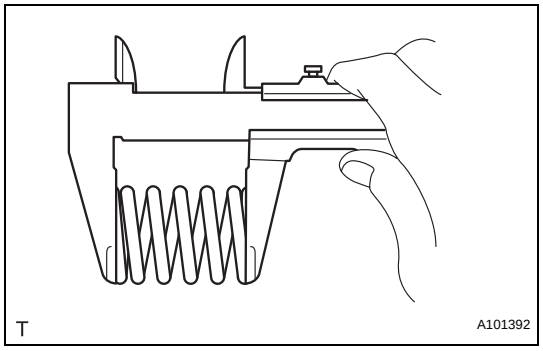
(a) Using a micrometer, measure the diameter of the valve stem.
Standard valve stem diameter:
5.465 to 5.480 mm (0.2151 to 0.2157 in.)

(b) Using a vernier caliper, measure the valve head margin thickness.
Standard margin thickness:
1.0 mm (0.0394 in.)
Minimum margin thickness:
0.50 mm (0.0197 in.)
If the margin thickness is less than the minimum, replace the exhaust valve.



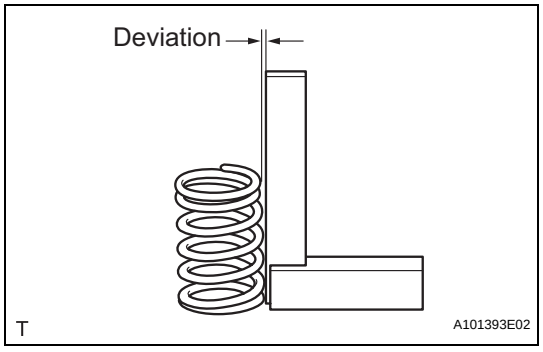
(c) Using a vernier caliper, measure the valve's overall length.
Standard overall length:
110.40 mm (4.3464 in.)
Minimum overall length:
109.90 mm (4.3268 in.)
If the overall length is less than the minimum, replace the exhaust valve.

20. INSPECT INTAKE VALVE SEAT



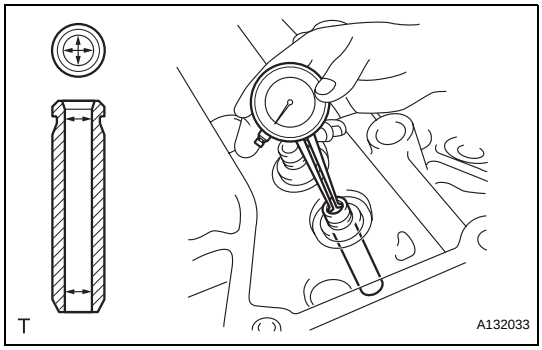
(a) Apply a light coat of Prussian blue to the valve face.
(b) Lightly press the valve face against the valve seat.
(c) Check the valve face and valve seat by using the following procedure.
  (1) If Prussian blue appears around the entire valve face, the valve face is concentric. If not, replace the valve.
  (2) If Prussian blue appears around the entire valve seat, the guide and valve face are concentric. If not, resurface the valve seat.
  (3) Check that the valve seat contacts in the middle of the valve face with the width between 1.1 and 1.5 mm (0.043 and 0.059 in.).

21. INSPECT EXHAUST VALVE SEAT



(a) Apply a light coat of Prussian blue to the valve face.
(b) Lightly press the valve face against the valve seat.
(c) Check the valve face and valve seat by using the following procedure.
  (1) If Prussian blue appears around the entire valve face, the valve face is concentric. If not, replace the valve.
  (2) If Prussian blue appears around the entire valve seat, the guide and valve face are concentric. If not, resurface the valve seat.
  (3) Check that the valve seat contacts in the middle of the valve face with the width between 1.2 and 1.6 mm (0.047 and 0.063 in.).

EM



22. INSPECT INNER COMPRESSION SPRING

(a) Using a vernier caliper, measure the free length of the inner compression spring.
Standard free length:
45.46 mm (1.7898 in.)
If the free length is not as specified, replace the spring.

(b) Using a steel square, measure the deviation of the inner compression spring.
Maximum deviation:
1.0 mm (0.039 in.)
Maximum angle (reference):
2°
If the deviation is greater than the maximum, replace the spring.

23. INSPECT VALVE GUIDE BUSH OIL CLEARANCE

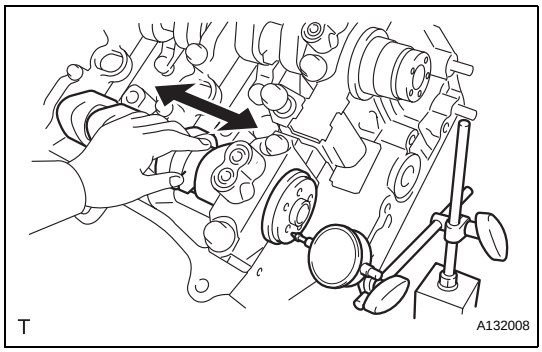
(a) Using a caliper gauge, measure the inside diameter of the guide bush.

Standard bush inside diameter:
5.51 to 5.53 mm (0.2169 to 0.2177 in.)

(b) Subtract the valve stem diameter measurement from the guide bush inside diameter measurement.

Standard clearance

Item	Specified Condition
Intake	0.025 to 0.060 m (0.0010 to 0.0024 in.)
Exhaust	0.030 to 0.065 mm (0.0012 to 0.0026 in.)



Maximum oil clearance

Item	Specified Condition
Intake	0.08 mm (0.0031 in.)
Exhaust	0.10 mm (0.0039 in.)

HINT:

- If the clearance is greater than the maximum, replace the intake valve and intake guide bush.
- If the clearance is greater than the maximum, replace the exhaust valve and exhaust guide bush.

EM

24. INSPECT CAMSHAFT THRUST CLEARANCE

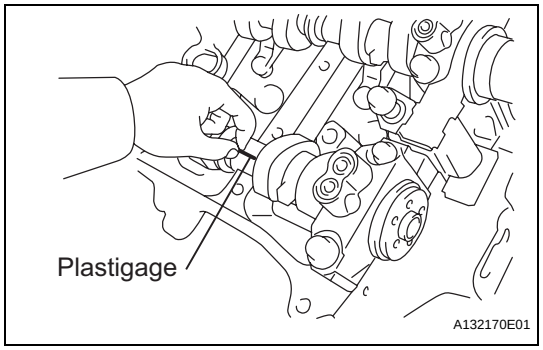
(a) Inspect the bank 1 camshafts.

(1) Install the bank 1 camshafts.

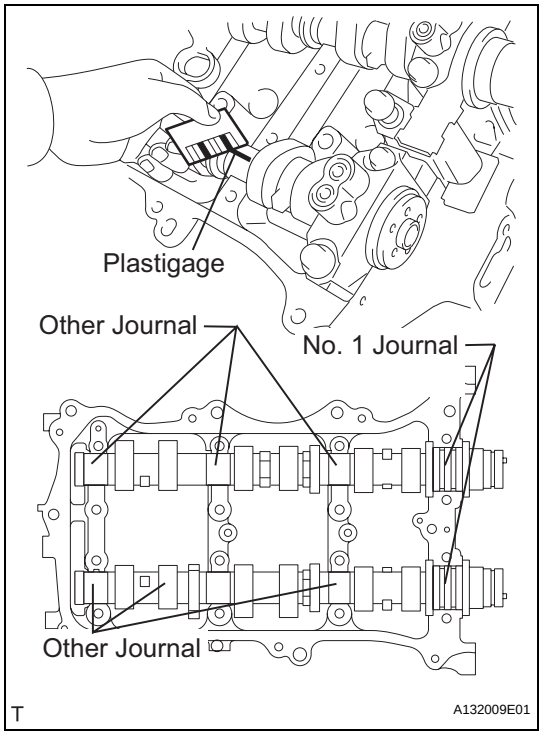
(2) Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard thrust clearance:
0.08 to 0.13 mm (0.0031 to 0.0051 in.)
Maximum thrust clearance:
0.15 mm (0.006 in.)

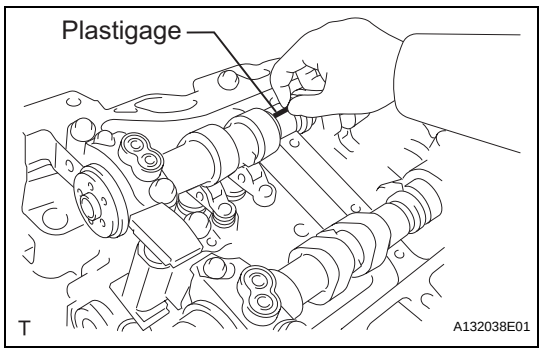
If the thrust clearance is greater than the maximum, replace the cylinder head. If the thrust surface is damaged, replace the camshaft.



(b) Inspect the bank 2 camshafts.



(1) Install the bank 2 camshafts.



(2) Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard thrust clearance:
0.08 to 0.13 mm (0.0031 to 0.0051 in.)
Maximum thrust clearance:
0.15 mm (0.006 in.)

If the thrust clearance is greater than the maximum, replace the cylinder head. If the thrust surface is damaged, replace the camshaft.

25. INSPECT CAMSHAFT OIL CLEARANCE

(a) Clean the bearing caps, camshaft housing and camshaft journals.
(b) Place the camshafts on the camshaft housing.
(c) Lay a strip of Plastigage across each of the camshaft journals.
(d) Install the bearing caps.
NOTICE:
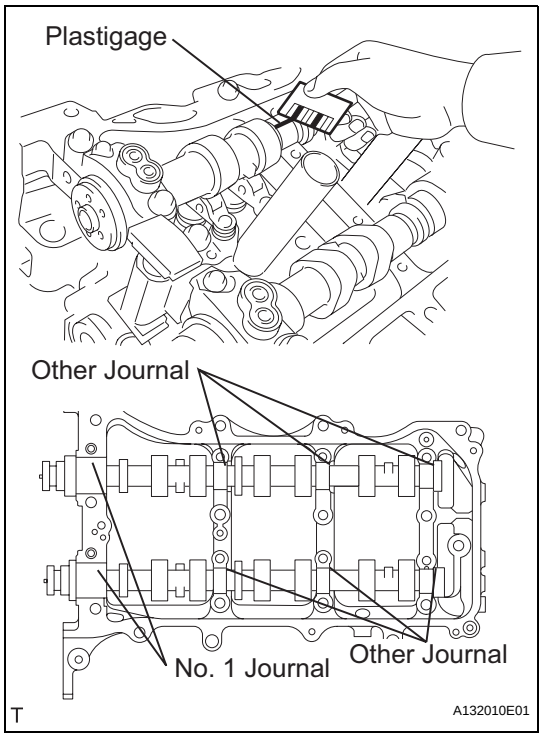
Do not turn the camshaft.
(e) Remove the bearing caps.

(f) Measure the Plastigage at its widest point.
Standard oil clearance

Item	Specified Condition
No. 1 journal	0.040 to 0.079 mm (0.0016 to 0.0031 in.)
Other journal	0.025 to 0.062 mm (0.0010 to 0.0024 in.)



Maximum oil clearance

Item	Specified Condition
No. 1 journal	0.10 mm (0.0039 in.)
Other journal	0.09 mm (0.0035 in.)

If the oil clearance is greater than the maximum, replace the camshaft. If necessary, replace the camshaft housing.
(g) Clean the bearing caps, camshaft housing and camshaft journals.
(h) Place the camshafts on the camshaft housing.

(i) Lay a strip of Plastigage across each of the camshaft journals.
(j) Install the bearing caps.
NOTICE:
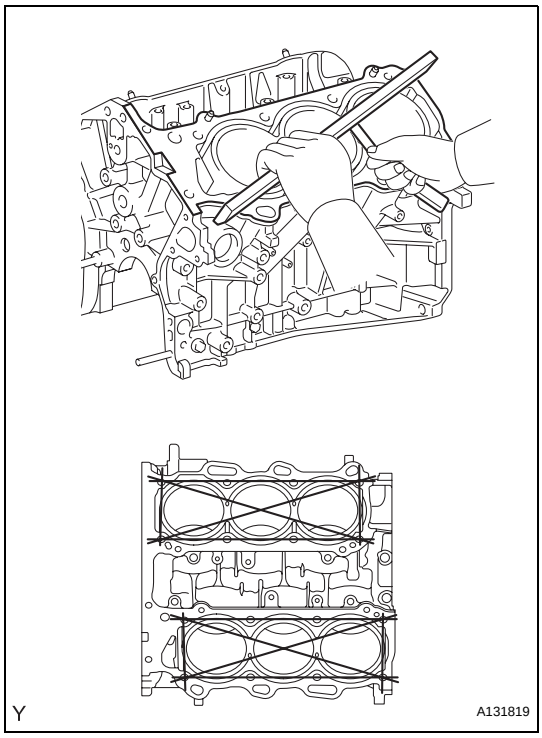
Do not turn the camshaft.
(k) Remove the bearing caps.

EM

(l) Measure the Plastigage at its widest point.

Standard oil clearance



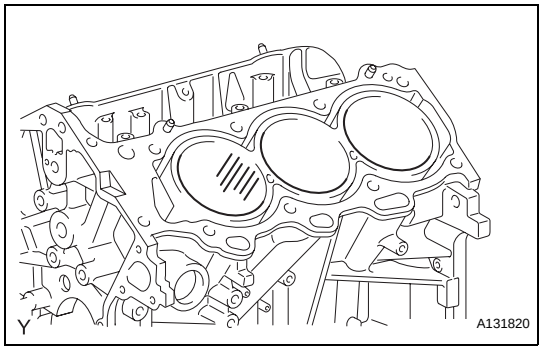
Item	Specified Condition
No. 1 journal	0.040 to 0.079 mm (0.0016 to 0.0031 in.)
Other journal	0.025 to 0.062 mm (0.0010 to 0.0024 in.)

Maximum oil clearance

Item	Specified Condition
No. 1 journal	0.10 mm (0.0039 in.)
Other journal	0.09 mm (0.0035 in.)

If the oil clearance is greater than the maximum, replace the camshaft. If necessary, replace the camshaft housing.

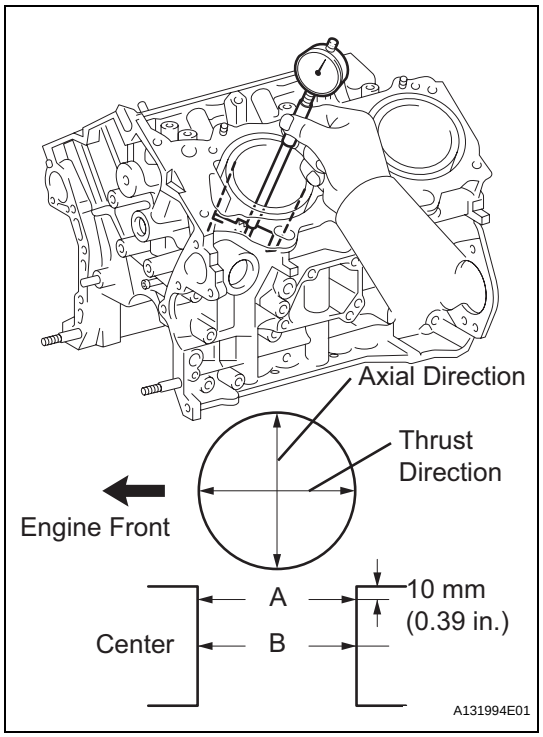
EM



26. INSPECT CYLINDER BLOCK FOR WARPAGE

(a) Using a precision straightedge and feeler gauge, measure the warpage of the contact surface of the cylinder head gasket.

Maximum warpage:

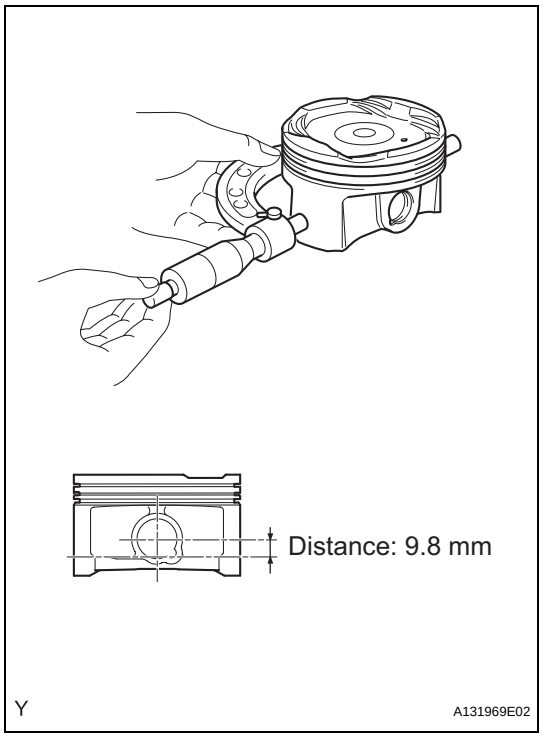


0.07 mm (0.0028 in.)

If the warpage is greater than the maximum, replace the cylinder block.

(b) Visually check the cylinder for vertical scratches.

If deep scratches are present, rebore all 6 cylinders. If necessary, replace the cylinder block.



27. INSPECT CYLINDER BORE

(a) Using a cylinder gauge, measure the cylinder bore diameter at positions A and B in the thrust and axial directions.

Standard diameter:
94.000 to 94.012 mm (3.7008 to 3.7013 in.)
Maximum diameter:
94.200 mm (3.7087 in.)

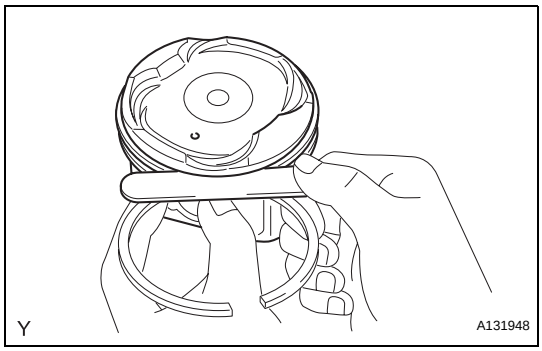
If the diameter is greater than the maximum, replace the cylinder block.

28. INSPECT PISTON SUB-ASSEMBLY WITH PIN

(a) Using a micrometer, measure the piston diameter at right angles to the piston center line where the distance from the bottom edge of the piston is as specified.

Distance:
9.8 mm (0.3858 in.)
Standard diameter:
93.960 to 93.980 mm (3.6992 to 3.6999 in.)
Maximum diameter:
93.830 mm (3.6941 in.)

29. INSPECT PISTON OIL CLEARANCE



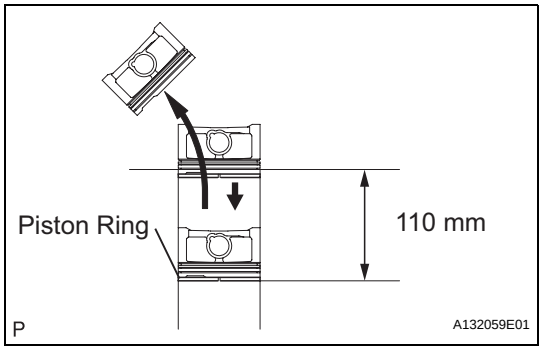
(a) Measure the cylinder bore diameter in the thrust direction.

(b) Subtract the piston diameter measurement from the cylinder bore diameter measurement.

Standard oil clearance:
0.020 to 0.052 mm (0.0007 to 0.0020 in.)
Maximum oil clearance:
0.06 mm (0.0024 in.)

If the oil clearance is greater than the maximum, replace all the pistons. If necessary, replace the cylinder block.

EM

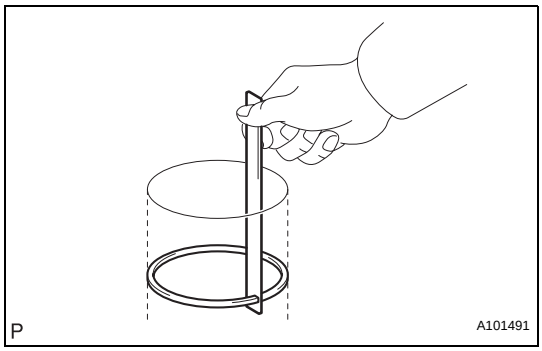


30. INSPECT RING GROOVE CLEARANCE

(a) Using a feeler gauge, measure the clearance between a new piston ring and the wall of the ring groove.

Standard ring groove clearance

Item	Specified Condition
No. 1	0.020 to 0.070 mm (0.0008 to 0.0028 in.)
No. 2	0.020 to 0.060 mm (0.0008 to 0.0024 in.)
Oil	0.070 to 0.150 mm (0.0028 to 0.0059 in.)



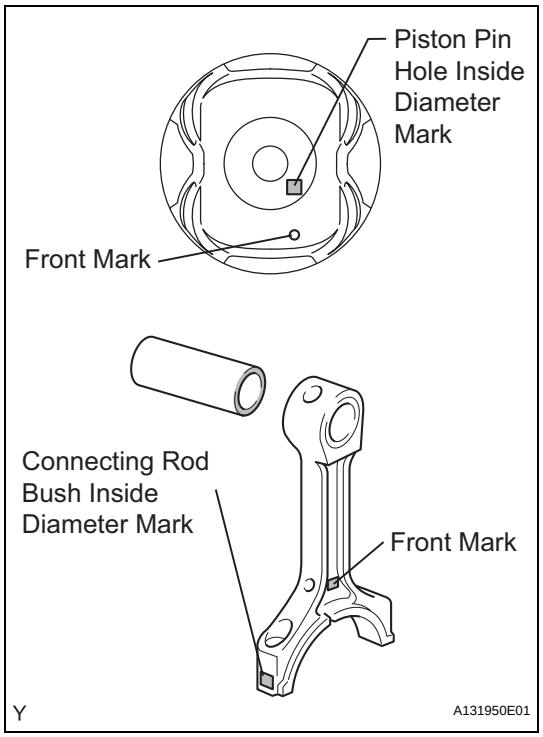
If the clearance is not as specified, replace the piston.

31. INSPECT PISTON RING END GAP

(a) Insert the piston ring into the cylinder bore.

(b) Using a piston, push the piston ring a little beyond the bottom of the ring travel, 110 mm (4.33 in.) from the top of the cylinder block.

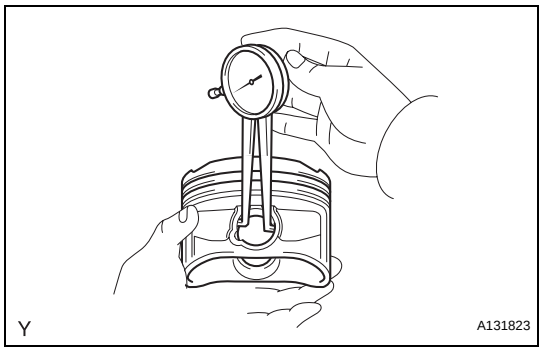
(c) Using a feeler gauge, measure the end gap.



Standard end gap

Item	Specified Condition
No. 1	0.25 to 0.35 mm (0.0098 to 0.0138 in.)
No. 2	0.50 to 0.60 mm (0.0197 to 0.0236 in.)
Oil	0.10 to 0.40 mm (0.0039 to 0.0157 in.)

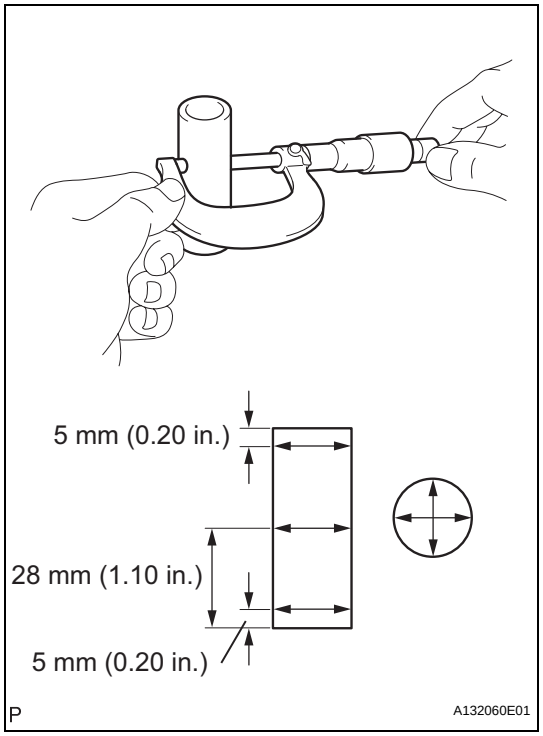
Maximum end gap



Item	Specified Condition
No. 1	0.50 mm (0.0197 in.)
No. 2	0.85 mm (0.0335 in.)
Oil	0.60 mm (0.0236 in.)

If the end gap is greater than the maximum, replace the piston ring. If the end gap is greater than the maximum even with a new piston ring, replace the cylinder block.

32. INSPECT PISTON PIN OIL CLEARANCE



(a) Check each mark on the piston, piston pin and connecting rod.

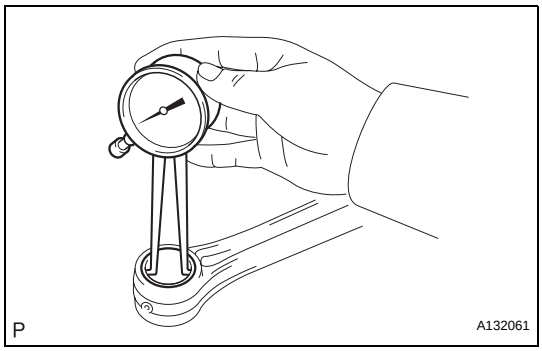
(b) Using a caliper gauge, measure the inside diameter of the piston pin hole.

Standard piston pin hole inside diameter

Mark	Specified Condition
A	22.001 to 22.004 mm (0.8662 to 0.8663 in.)
B	22.005 to 22.007 mm (0.8663 to 0.8664 in.)
C	22.008 to 22.010 mm (0.8665 to 0.8665 in.)

(c) Using a micrometer, measure the piston pin diameter.

Standard piston pin diameter



Mark	Specified Condition
A	21.997 to 22.000 mm (0.8660 to 0.8661 in.)
B	22.001 to 22.003 mm (0.8662 to 0.8663 in.)
C	22.004 to 22.006 mm (0.8663 to 0.8664 in.)

(d) Subtract the piston pin diameter measurement from the piston pin hole diameter measurement.

Standard oil clearance:
0.001 to 0.007 mm (0.00004 to 0.0003 in.)
Maximum oil clearance:
0.015 mm (0.0006 in.)

HINT:
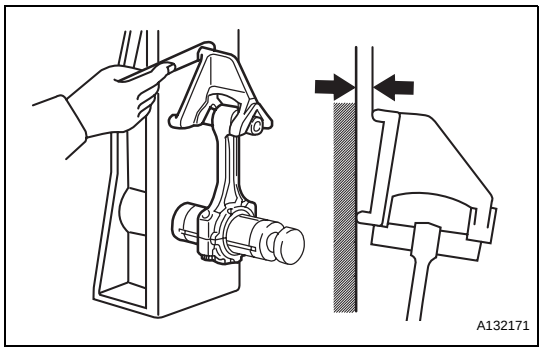
If the oil clearance is greater than the maximum, replace the piston and piston pin as a set.

EM

(e) Using a caliper gauge, measure the inside diameter of the connecting rod bush.

Standard bush inside diameter



Mark	Specified Condition
A	22.005 to 22.008 mm (0.8663 to 0.8665 in.)
B	22.009 to 22.011 mm (0.8665 to 0.8666 in.)
C	22.012 to 22.014 mm (0.8666 to 0.8667 in.)

(f) Subtract the piston pin diameter measurement from the bush inside diameter measurement.

Standard oil clearance:
0.005 to 0.011 mm (0.0002 to 0.0004 in.)
Maximum oil clearance:
0.03 mm (0.0012 in.)

HINT:
If the oil clearance is greater than the maximum, replace the bush. If necessary, replace the connecting rod and piston pin as a set.

EM

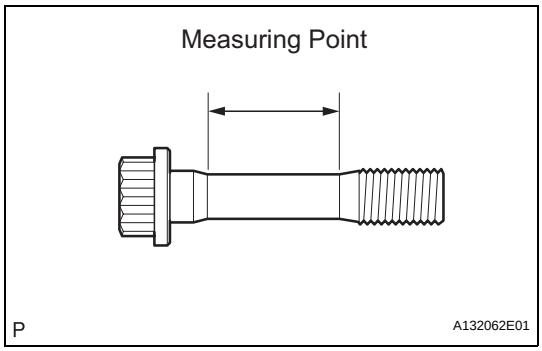
33. INSPECT CONNECTING ROD SUB-ASSEMBLY

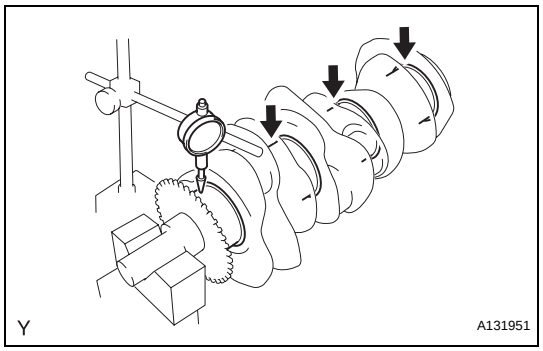
(a) Using a rod aligner and feeler gauge, check the connecting rod alignment.



(1) Check for bend.

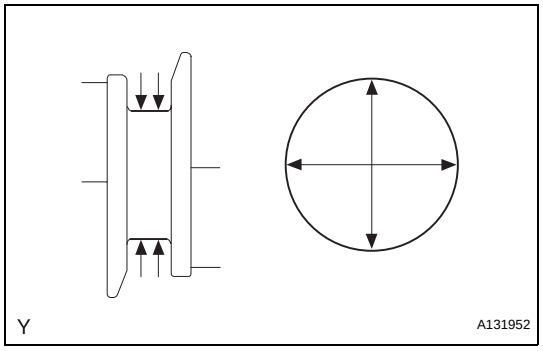
Maximum bend:
0.05 mm (0.0020 in.) per 100 mm (3.94 in.)
If the bend is greater than the maximum, replace the connecting rod.

(2) Check for twist.



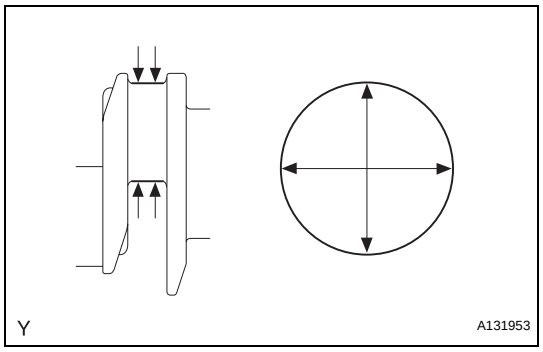
Maximum twist:
0.15 mm (0.0059 in.) per 100 mm (3.94 in.)
If the twist is greater than the maximum, replace the connecting rod.

34. INSPECT CONNECTING ROD BOLT

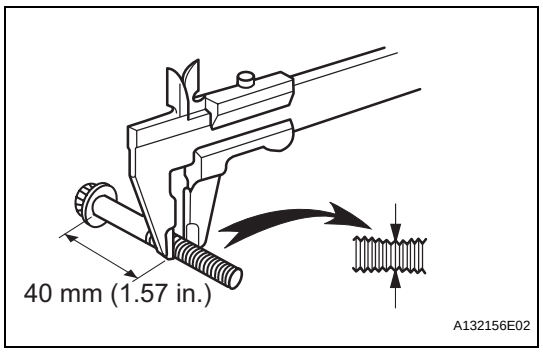


(a) Using a vernier caliper, measure the tension portion diameter of the bolt.

Standard diameter:
7.2 to 7.3 mm (0.283 to 0.287 in.)
Minimum diameter:
7.0 mm (0.276 in.)
If the diameter is less than the minimum, replace the bolt.

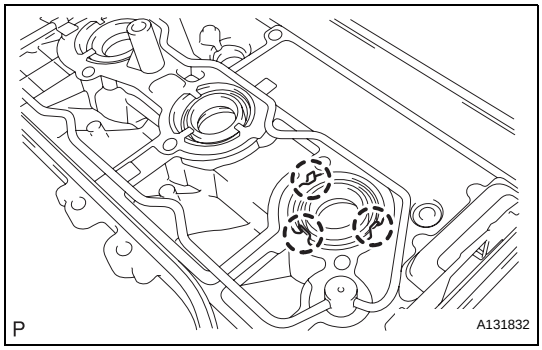


35. INSPECT CRANKSHAFT



(a) Inspect for circle runout.
  (1) Place the crankshaft on the V-blocks.
  (2) Using a dial indicator, measure the circle runout at the center journal.
  Maximum circle runout:
  0.06 mm (0.0024 in.)
  If the circle runout is greater than the maximum, replace the crankshaft.

(b) Inspect the main journals.
  (1) Using a micrometer, measure the diameter of each main journal.
  Standard journal diameter:
  60.988 to 61.00 mm (2.4011 to 2.4016 in.)
  If the diameter is not as specified, check the oil clearance. If necessary, replace the crankshaft.
  (2) Check each main journal for taper and out-of-round as shown in the illustration.
  Maximum taper and out-of-round:
  0.02 mm (0.0008 in.)
  If the taper and out-of-round is greater than the maximum, replace the crankshaft.



(c) Inspect the crank pin.
  (1) Using a micrometer, measure the diameter of each crank pin.
  Standard crank pin diameter:
  52.992 to 53.000 mm (2.0863 to 2.0866 in.)
  If the diameter is not as specified, check the oil clearance. If necessary, replace the crankshaft.
  (2) Check each crank pin for taper and out-of-round as shown in the illustration.
  Maximum taper and out-of-round:
  0.02 mm (0.0008 in.)
  If the taper and out-of-round is greater than the maximum, replace the crankshaft.

36. INSPECT CRANKSHAFT BEARING CAP SET BOLT

(a) Using a vernier caliper, measure the minimum diameter of the compressed thread at the measuring point.
  Standard diameter:
  10.8 to 11.0 mm (0.4252 to 0.4331 in.)
  Minimum diameter:
  10.70 mm (0.4213 in.)
  If the diameter is less than the minimum, replace the bolt.

EM

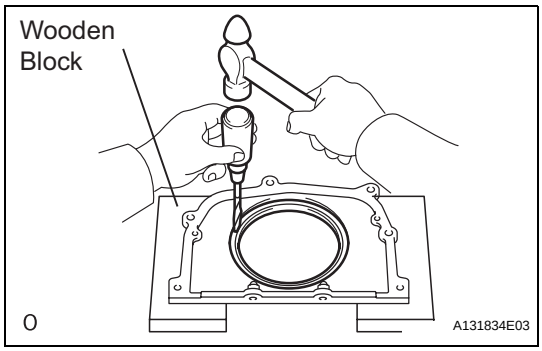
REPLACEMENT

1. REPLACE SPARK PLUG TUBE GASKET

(a) Pry up the claws of the ventilation baffle plate.



(b) Using a screwdriver with its tip taped and a hammer, tap out the 6 spark plug tube gaskets.

(c) Using a 32 mm socket wrench, tap in 6 new spark plug tube gaskets to the head covers.
NOTICE:
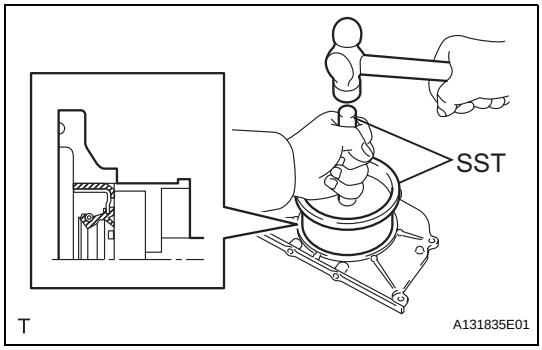
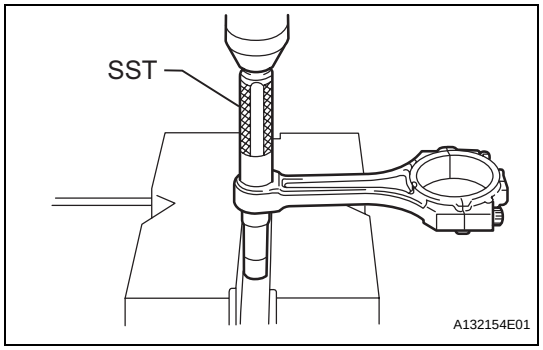
- **Keep the lip free from foreign matter.**
- **Do not tap on the oil seal at an angle.**



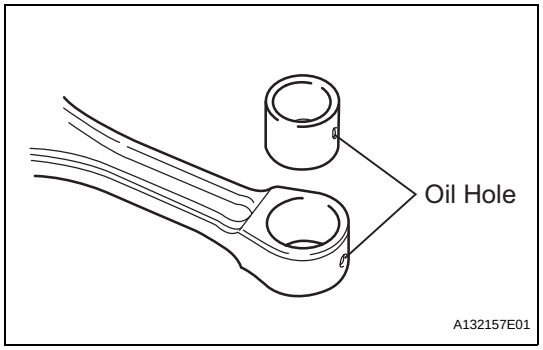
(d) Return the claw of the ventilation baffle plate to its original position.

2. REPLACE ENGINE REAR OIL SEAL



(a) Place the oil seal retainer on wooden blocks.

(b) Using a screwdriver and a hammer, tap out the oil seal.



(c) Using SST, tap in a new oil seal until its surface is flush with the oil seal retainer edge.
SST 09223-15030
NOTICE:
- **Keep the lip free from foreign matter.**
- **Do not tap on the oil seal at an angle.**

EM

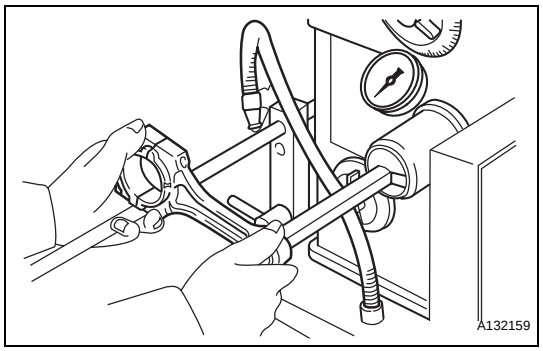
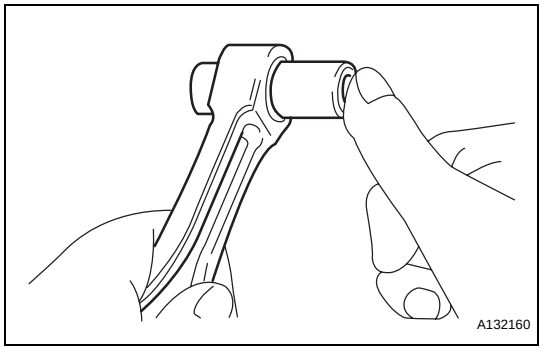
3. REPLACE CONNECTING ROD SMALL END BUSH



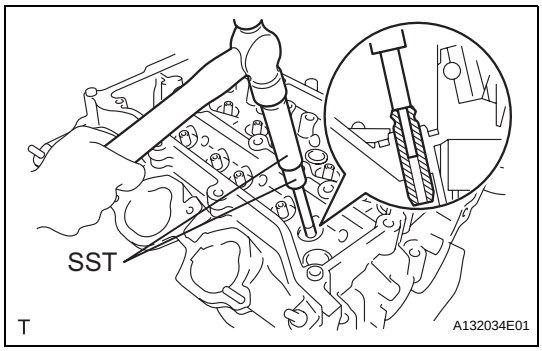
(a) Using SST and a press, push out the bush.
SST 09222-30010



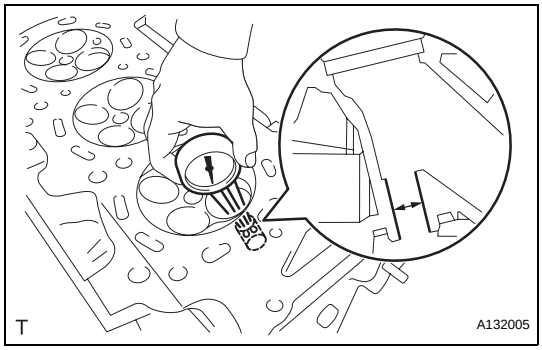
(b) Align the oil holes of the new bush and connecting rod.

(c) Using SST and a press, push in the bush.
SST 09222-30010

(d) Using a pin hole grinder, hone the bush to obtain the standard specified clearance between the bush and piston pin.



(e) Coat the piston pin with engine oil. Push the piston pin into the connecting rod with your thumb to check that the piston pin fits at normal room temperature.



4. REPLACE INTAKE VALVE GUIDE BUSH

(a) Heat the cylinder head to approximately 80 to 100°C (176 to 212°F).
(b) Place the cylinder head on wooden blocks.

EM

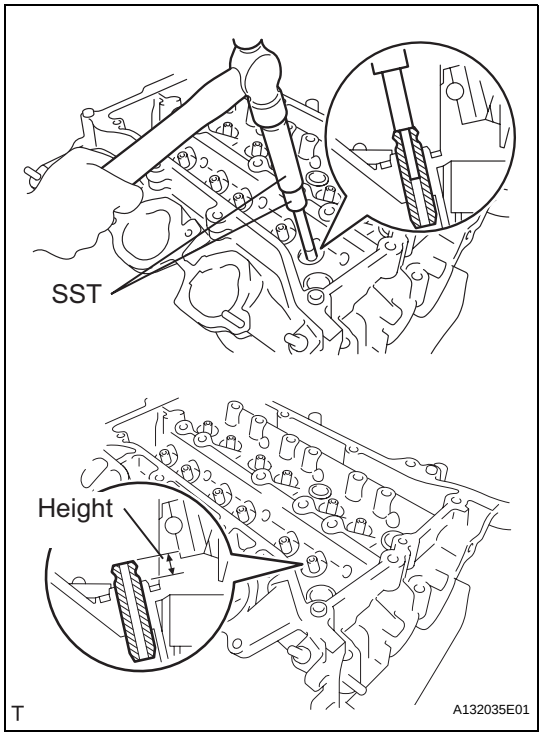
(c) Using SST and a hammer, tap out the valve guide bush.
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)



(d) Using a caliper gauge, measure the bush bore diameter of the cylinder head.
Standard cylinder bore diameter:
10.285 to 10.306 mm (0.4049 to0.4057 in.)

(e) Select a new guide bush (STD or O/S 0.05).
Standard bush bore diameter

Bush Size	Specified Condition
Use STD	10.335 to 10.356 mm (0.4069 to 0.4077 in.)
Use O/S 0.05	10.285 to 10.306 mm (0.4049 to 0.4057 in.)

HINT:
- If the bush bore diameter of the cylinder head is greater than 10.344 mm (0.4072 in.), machine the bush bore diameter to between 10.383 to 10.394 mm (0.4088 to 0.4092 in.).
- If the bush bore diameter of the cylinder head is greater than 10.344 mm (0.4072 in.), replace the cylinder head.

(f) Heat the cylinder head to approximately 80 to 100°C (176 to 212°F).

(g) Using SST and a hammer, tap in a new guide bush to the specified protrusion height.
Standard protrusion height:
9.1 to 9.9 mm (0.3582 to 0.3900 in.)
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)

EM

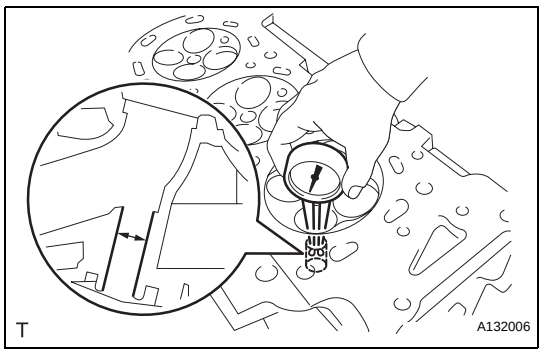
(h) Using a sharp 5.5 mm reamer, ream the guide bush to obtain the standard specified clearance between the guide bush and valve stem.

5. REPLACE EXHAUST VALVE GUIDE BUSH



(a) Heat the cylinder head to approximately 80 to 100°C (176 to 212°F).

(b) Place the cylinder head on wooden blocks.

(c) Using SST and a hammer, tap out the valve guide bush.

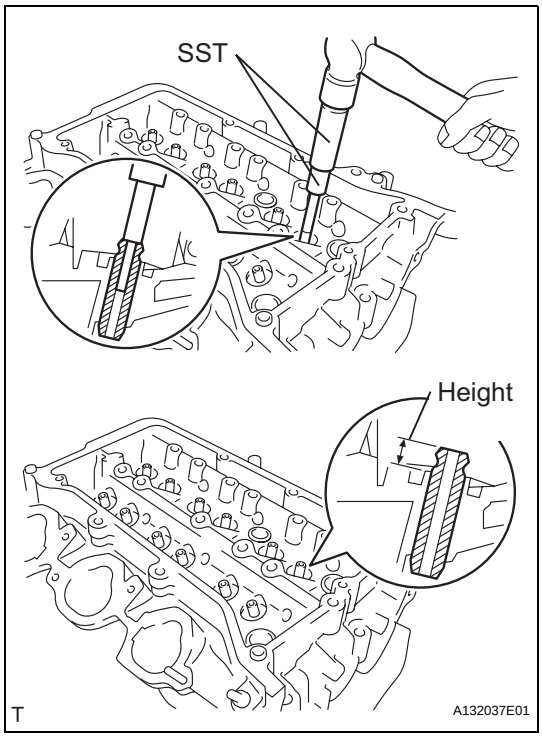
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)

(d) Using a caliper gauge, measure the bush bore diameter of the cylinder head.

Standard cylinder bore diameter:
10.285 to 10.306 mm (0.4049 to 0.4057 in.)

(e) Select a new guide bush (STD or O/S 0.05).

Standard bush bore diameter



Bush Size	Specified Condition
Use STD	10.335 to 10.356 mm (0.4069 to 0.4077 in.)
Use O/S 0.05	10.285 to 10.306 mm (0.4049 to 0.4057 in.)

HINT:

- If the bush bore diameter of the cylinder head is greater than 10.344 mm (0.4072 in.), machine the bush bore diameter to between 10.383 to 10.394 mm (0.4088 to 0.4092 in.).
- If the bush bore diameter of the cylinder head is greater than 10.344 mm (0.4072 in.), replace the cylinder head.

(f) Heat the cylinder head to approximately 80 to 100°C (176 to 212°F).

EM

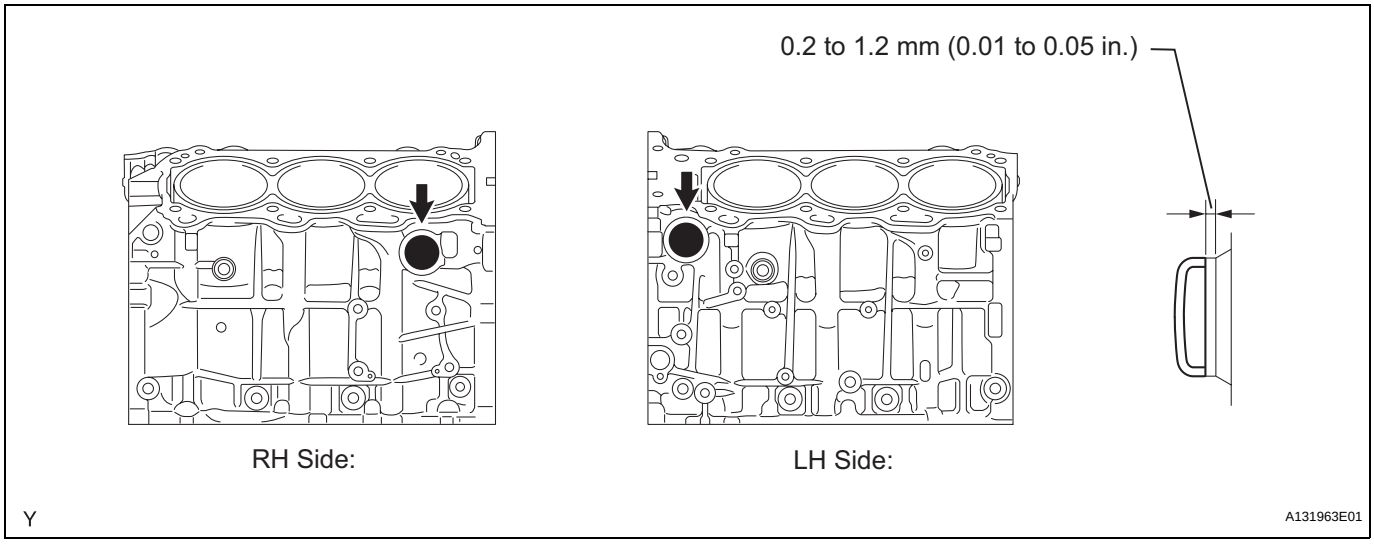
(g) Using SST and a hammer, tap in a new guide bush to the specified protrusion height.
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)
Standard protrusion height:
9.30 to 9.70 mm (0.3661 to 0.3819 in.)



(h) Using a sharp 5.5 mm reamer, ream the guide bush to obtain the standard specified clearance between the guide bush and valve stem.

6. REPLACE CYLINDER BLOCK TIGHT PLUG
NOTICE:
If water leaks from the tight plug or the plug corrodes, replace it.
(a) Remove the tight plugs.

(b) Apply adhesive around the tight plug.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent
(c) Using SST and a hammer, tap in 2 new tight plugs as shown in the illustration.
SST 09950-60010 (09951-00340), 09950-70010 (09951-07100)

7. REPLACE CYLINDER BLOCK STUD BOLT

NOTICE:

If a stud bolt is deformed or the threads are damaged, replace it.

(a) Remove the stud bolts.

(b) Using an E8 "torx" socket wrench, install the stud bolts.

Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

8. REPLACE CYLINDER BLOCK STRAIGHT PIN

NOTICE:

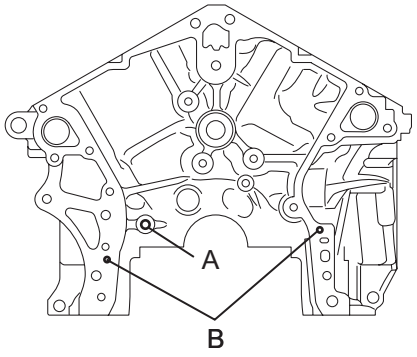
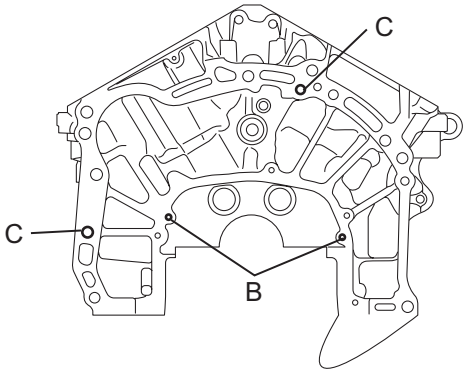
It is not necessary to remove the straight pin unless it is being replaced.



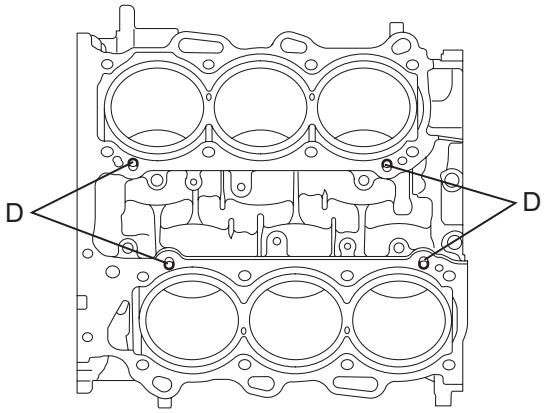
(a) Remove the straight pin.

(b) Using a plastic-faced hammer, tap in new straight pins to the cylinder block.

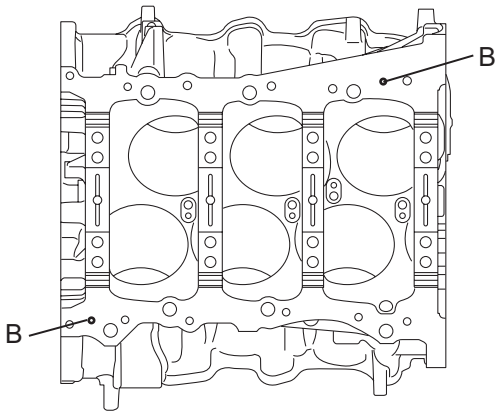


Standard protrusion

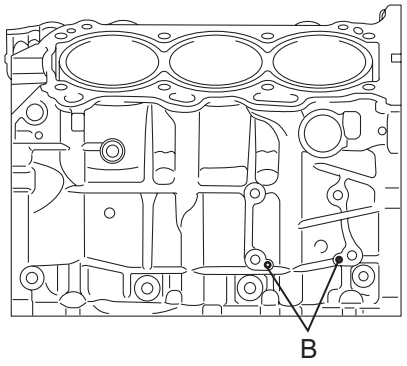
Item	Specified Condition
Pin A	23 mm (0.91 in.)
Pin B	6 mm (0.24 in.)
Pin C	11 mm (0.43 in.)
Pin D	9 mm (0.35 in.)



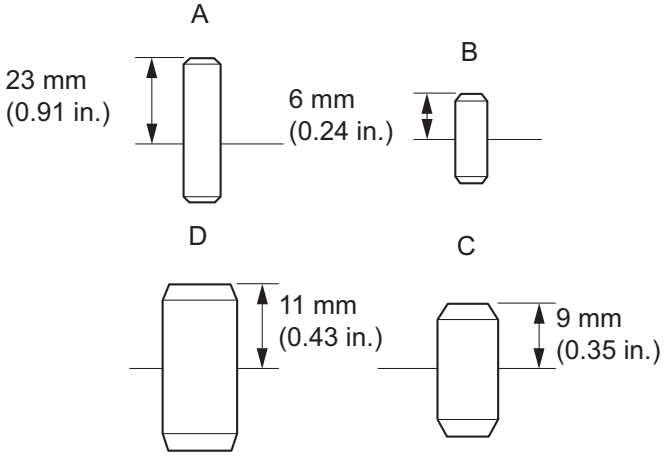
Cylinder Block Front:



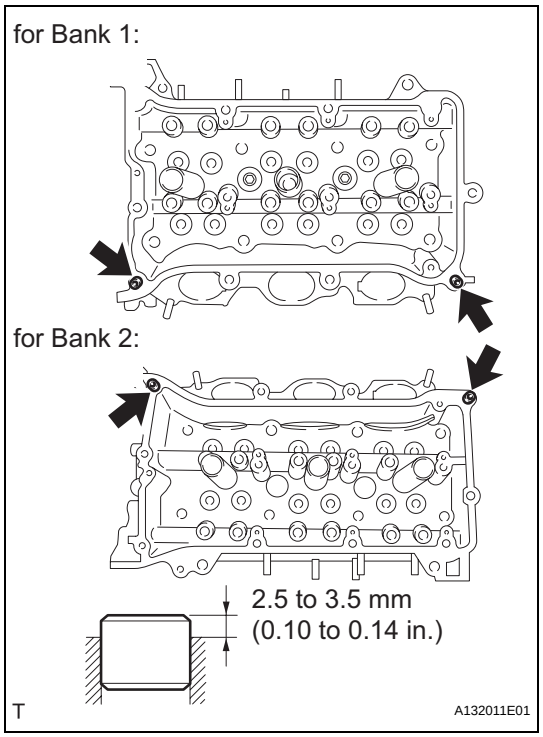
Cylinder Block Rear:



Cylinder Block Upper:



Cylinder Block Lower:



Cylinder Block RH Side:

Y

A131964E01

9. REPLACE CYLINDER HEAD RING PIN

NOTICE:

It is not necessary to remove the ring pin unless it is being replaced.

(a) Remove the ring pins.

(b) Using a plastic-faced hammer, tap in a new ring pin until the pin stops.

10. REPLACE CYLINDER HEAD STUD BOLT

NOTICE:

If a stud bolt is deformed or the threads are damaged, replace it.

(a) Remove the stud bolts.

(b) Using E6 and E8 "torx" socket wrenches, install the stud bolts.

Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf) for stud bolts A and B
4.0 N*m (41 kgf*cm, 35 in.*lbf) for stud bolt C

EM

11. REPLACE CYLINDER HEAD SET STRAIGHT PIN

NOTICE:

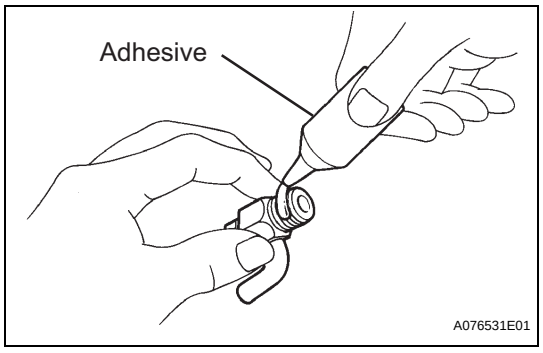
It is not necessary to remove the straight pin unless it is being replaced.

(a) Using a plastic-faced hammer, tap in a new straight pin as shown in the illustration.

Standard protrusion height:

18.0 to 19.0 mm (0.71 to 0.75 in.)



REASSEMBLY

1. INSTALL NO. 1 OIL NOZZLE SUB-ASSEMBLY

(a) Using a 5 mm hexagon wrench, install the 3 oil nozzles with the bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

EM

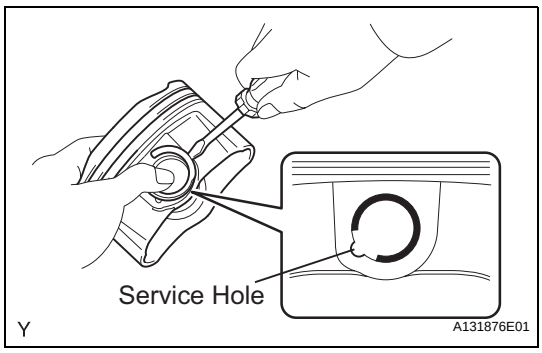
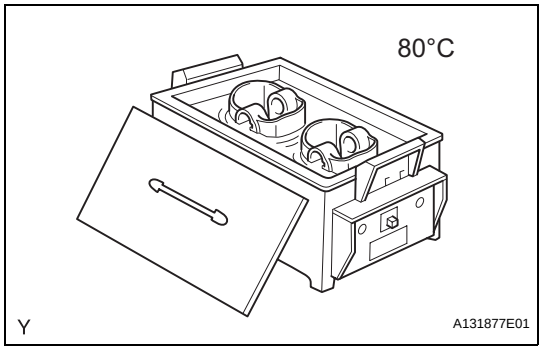
2. INSTALL CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY



(a) Apply adhesive around the drain cocks.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent

(b) Install the cylinder block water drain cocks.
(1) Temporarily install the drain cocks.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)



(2) Within one full rotation, tighten the drain cock to the angle shown in the illustration.
Torque: 45 N*m (459 kgf*cm, 33 ft.*lbf)
NOTICE:
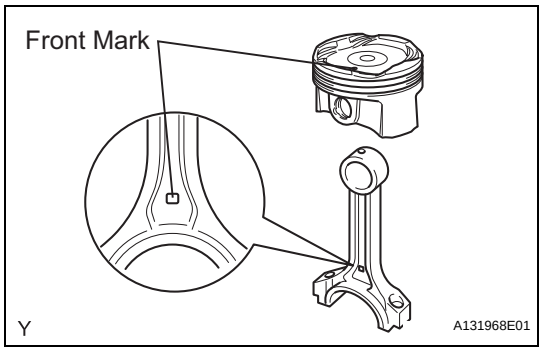
Do not loosen the drain cock to adjust it. If an adjustment is necessary, remove the drain cock and reinstall it.

(c) Install the water drain cock plug to the water drain cocks.
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)



3. INSTALL PISTON WITH PIN SUB-ASSEMBLY

(a) Using a screwdriver, install a new snap ring at one end of the piston pin hole.
HINT:
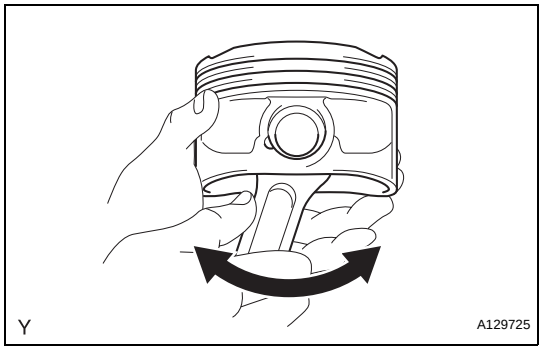
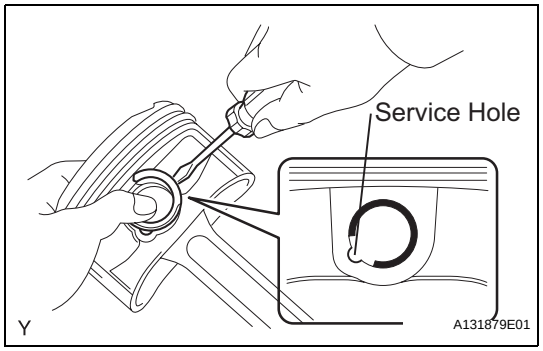
Be sure that the end gap of the snap ring is not aligned with the pin hole cutout portion of the piston.



(b) Gradually heat the piston to approximately 80°C (176°F).



(c) Coat the piston pin with engine oil.

(d) Align the front marks of the piston and connecting rod, and push in the piston pin with your thumb.
HINT:
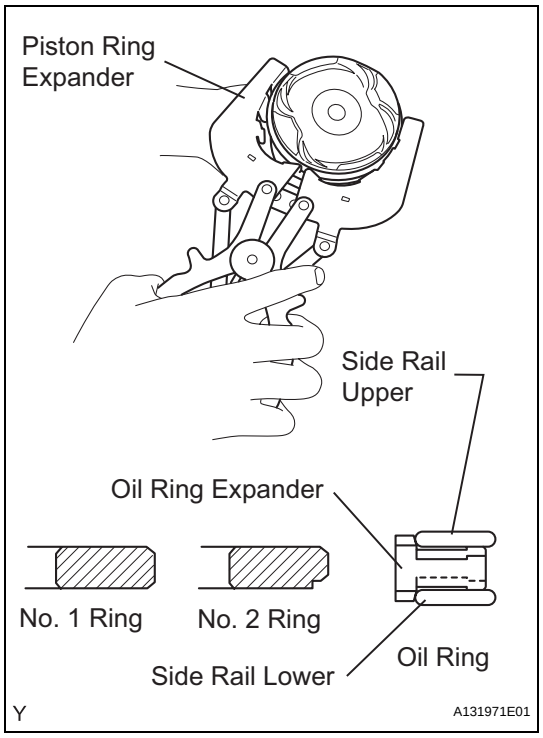
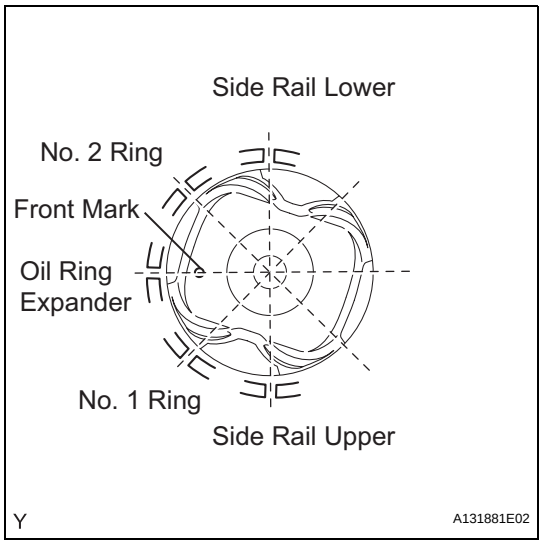
The piston and pin are a matched set.



(e) Check the fitting condition between the piston and piston pin by trying to move the piston back and forth on the piston pin.



(f) Using a screwdriver, install a new snap ring at the other end of the piston pin hole.
HINT:
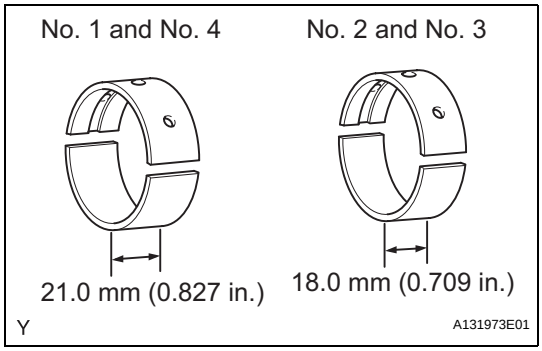
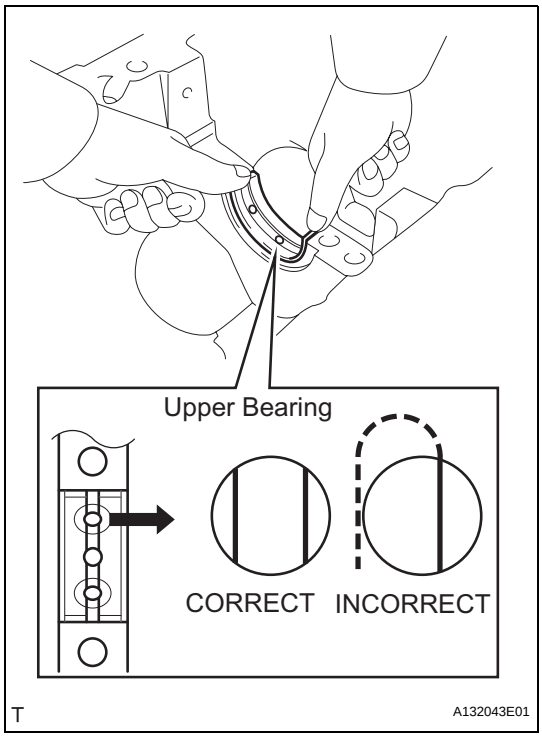
Be sure that the end gap of the snap ring is not aligned with the pin hole cutout portion of the piston.

4. INSTALL PISTON RING SET

(a) Install the oil ring expander and 2 side rails by hand.



(b) Using a piston ring expander, install the 2 compression rings so that the painted marks are positioned as shown in the illustration.



(c) Position the piston rings so that the ring ends are as shown in the illustration.
NOTICE:
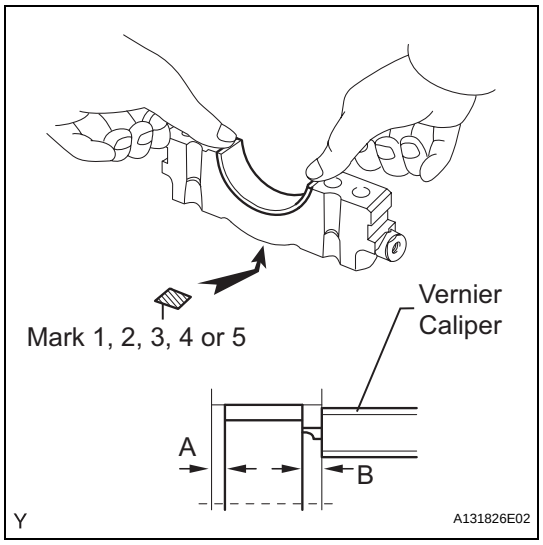
Do not align the ring ends.



5. INSTALL CRANKSHAFT BEARING
NOTICE:
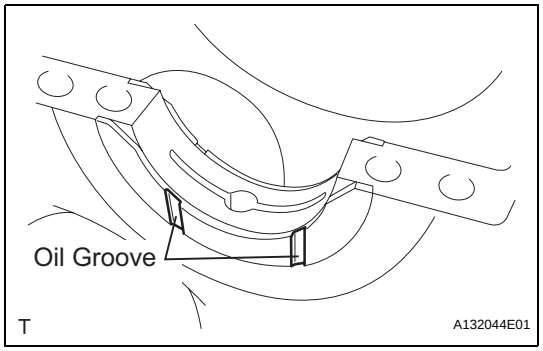
Main bearings come in widths between 18.0 mm (0.709 in.) and 21.0 mm (0.827 in.). Install the 21.0 mm (0.827 in.) bearings in the No. 1 and No. 4 cylinder block journal positions with the main bearing cap. Install the 18.0 mm (0.709 in.) bearings in the No. 2 and No. 3 positions.



(a) Clean the main journal and both surfaces of the bearing.

(b) Install the upper bearing.
(1) Install the upper bearing to the cylinder block as shown in the illustration.
NOTICE:
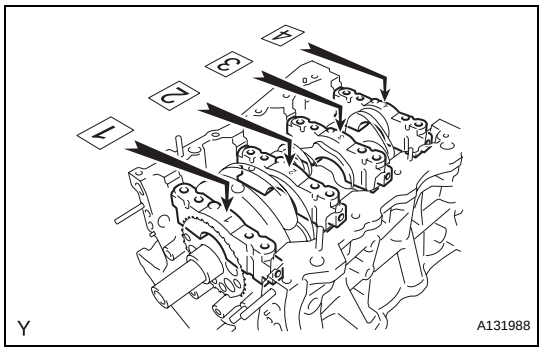
Do not apply engine oil to the bearing and its contact surface.



(c) Install the lower bearing.
(1) Install the lower bearing to the bearing cap.
(2) Using a vernier caliper, measure the distance between the bearing cap's edge and the lower bearing's edge.
Dimension (A - B):
0.7 mm (0.028 in.) or less.
NOTICE:
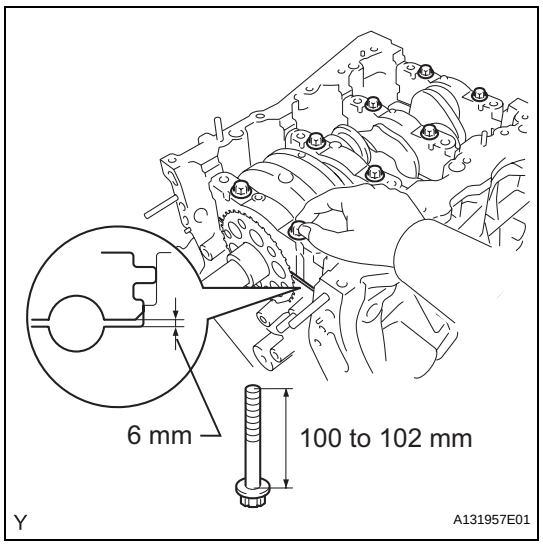
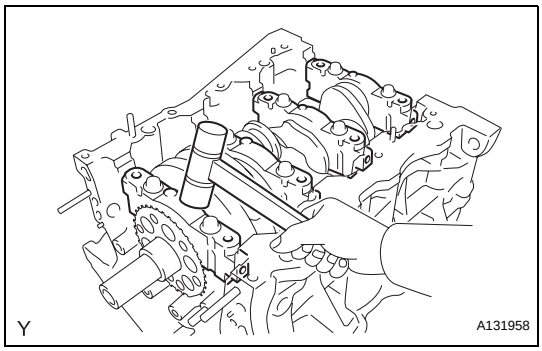
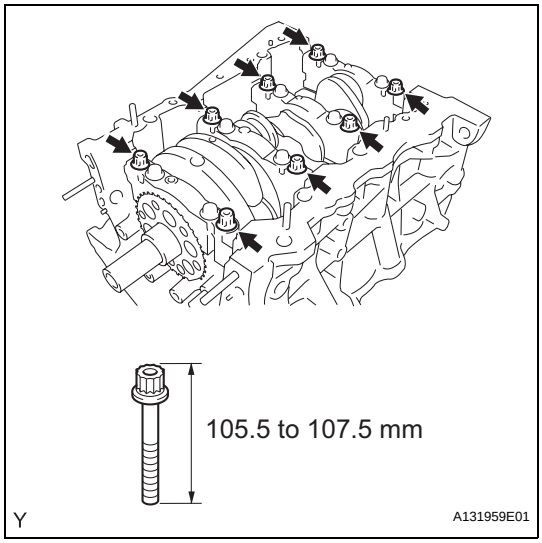
Do not apply engine oil to the bearing's contact area and underside.



6. INSTALL CRANKSHAFT



(a) Install the 2 thrust washers under the No. 2 journal position of the cylinder block with the oil grooves facing outward.
(b) Apply engine oil to the upper bearing, then place the crankshaft on the cylinder block.



(c) Confirm the front marks and numbers of the main bearing caps and install the bearing caps on the cylinder block.
HINT:
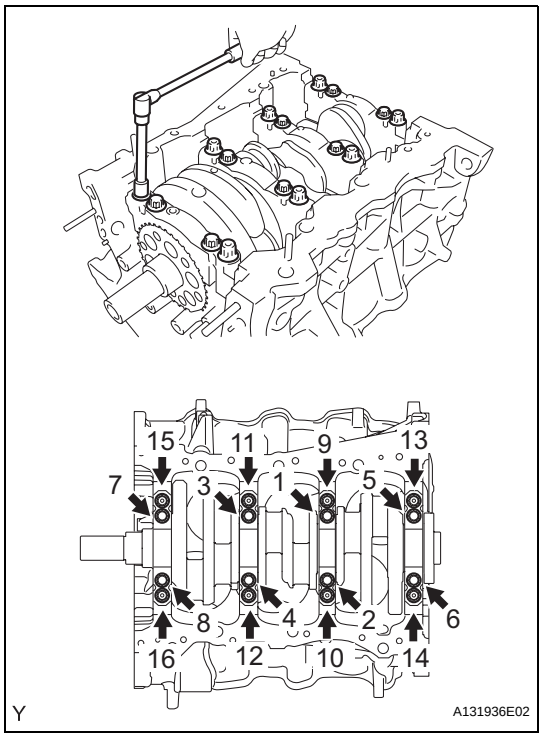
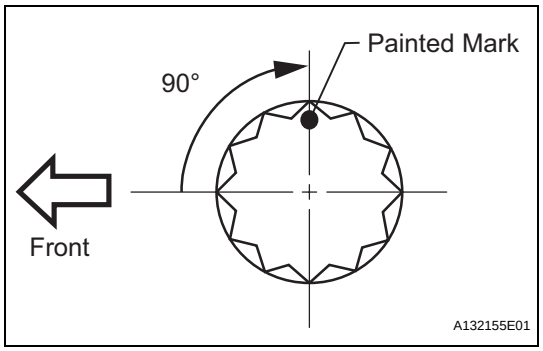
A number is marked on each main bearing cap to indicate the installation position.
(d) Apply a light coat of engine oil on the threads and under the heads of the bearing cap bolts.
(e) Temporarily install the 8 main bearing cap bolts to the inside positions.



(f) Insert the main bearing cap by hand until the clearance between the main bearing cap and the cylinder block is less than 6 mm (0.23 in.) by marking the 2 internal bearing cap bolts as a guide.
Bolt length:
100.0 to 102.0 mm (3.937 to 4.016 in.)



(g) Using a plastic-faced hammer, lightly tap the bearing cap to ensure a proper fit.
(h) Apply a light coat of engine oil to the threads and under the heads of the 8 main bearing cap bolts.

(i) Install the 8 main bearing cap bolts to the outside positions.
Bolt length:
105.5 to 107.5 mm (4.154 to 4.232 in.)
(j) Install the crankshaft bearing cap bolts.
HINT:
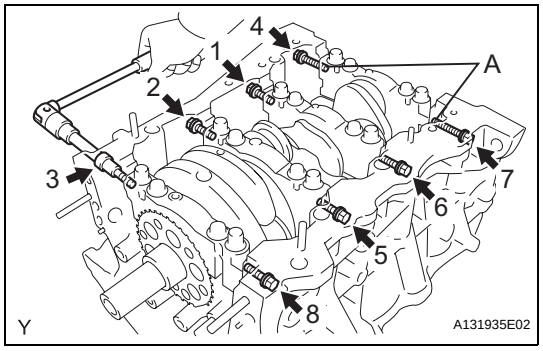
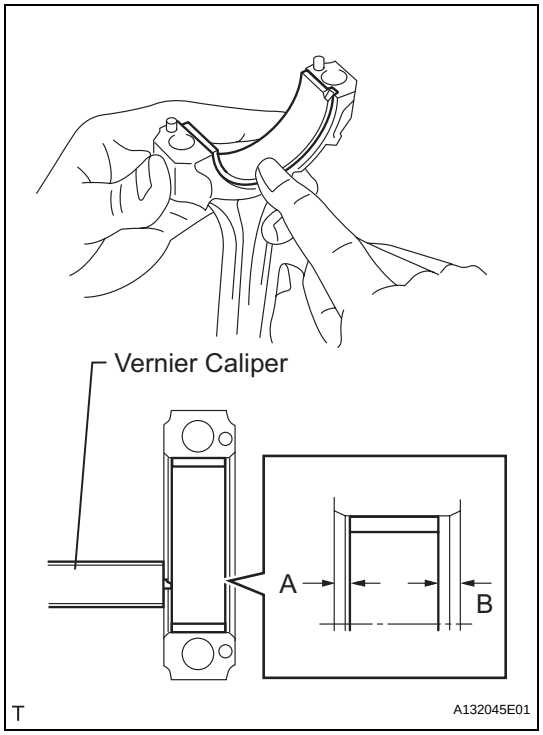
The main bearing cap bolts are tightened in 2 progressive steps.



(k) Step 1
(1) Install and uniformly tighten the 16 main bearing cap bolts in the sequence shown in the illustration.
Torque: 61 N*m (622 kgf*cm, 45 ft.*lbf)
If any of the main bearing cap bolts does not meet the specified torque, replace it.

(l) Step 2
  (1) Mark the front of the bearing cap bolts with paint.
  (2) Tighten the bearing cap bolts another 90° in the order shown in step 1.
  (3) Check that the painted mark is now at a 90° angle to the front.

(m) Check that the crankshaft turns smoothly.

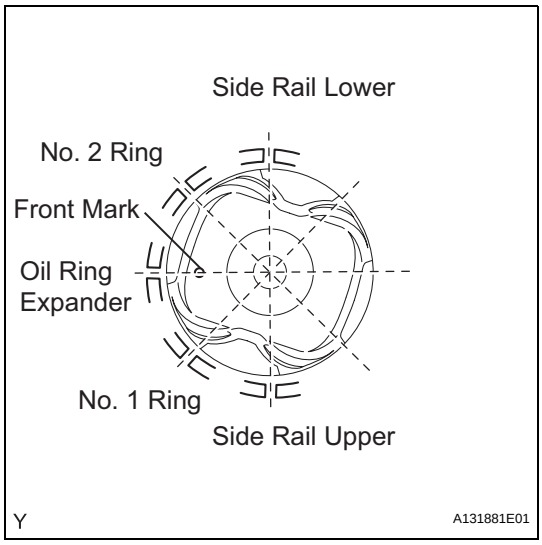


(n) Install and uniformly tighten the 8 main bearing cap bolts in several steps, in the sequence shown in the illustration.
Torque: 52 N*m (530 kgf*cm, 38 ft.*lbf)
Bolt length:
45 mm (1.77 in.) for bolt A
30 mm (1.18 in.) for except bolt A

(o) Check that the crankshaft turns smoothly.

7. INSTALL CONNECTING ROD BEARING

(a) Install the connecting rod bearing to the connecting rod and bearing cap.



(b) Using a vernier caliper, measure the distance between the connecting rod's and bearing cap's edges, and each connecting rod bearing's edge.
Dimension (A - B):
0.7 mm (0.028 in.) or less
NOTICE:
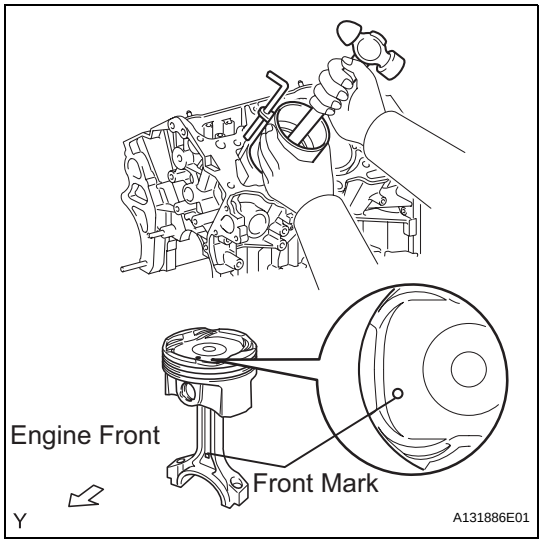
Do not apply engine oil to the bearing's contact area and underside.



8. INSTALL PISTON SUB-ASSEMBLY WITH CONNECTING ROD

(a) Apply engine oil to the cylinder walls, the pistons, and the surfaces of the connecting rod bearings.

EM

(b) Position the piston rings so that the ring ends are as shown in the illustration.
NOTICE:
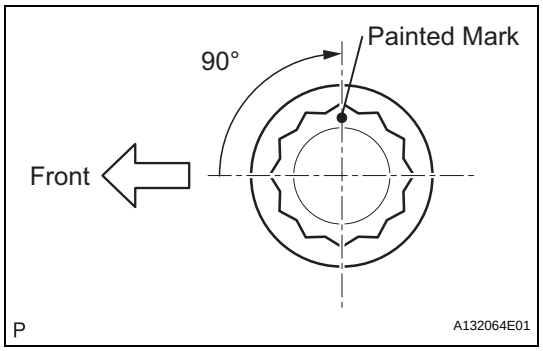
Do not align the ring ends.



(c) Using a piston ring compressor, push the correctly numbered piston and connecting rod into the cylinder with the front mark of the piston facing forward.
NOTICE:
Match the numbered connecting rod cap with the connecting rod.

(d) Check that the front mark of the connecting rod cap is facing forward.
(e) Apply a light coat of engine oil to the threads and under the heads of the connecting rod cap bolts.
(f) Install the connecting cap bolts.
HINT:
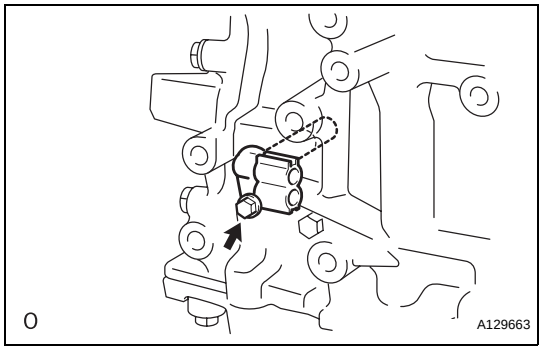
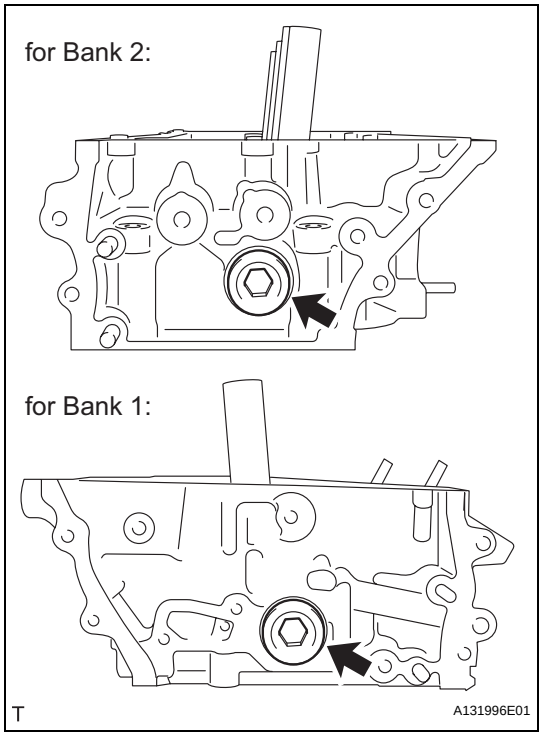
The connecting cap bolts are tightened in 2 progressive steps.



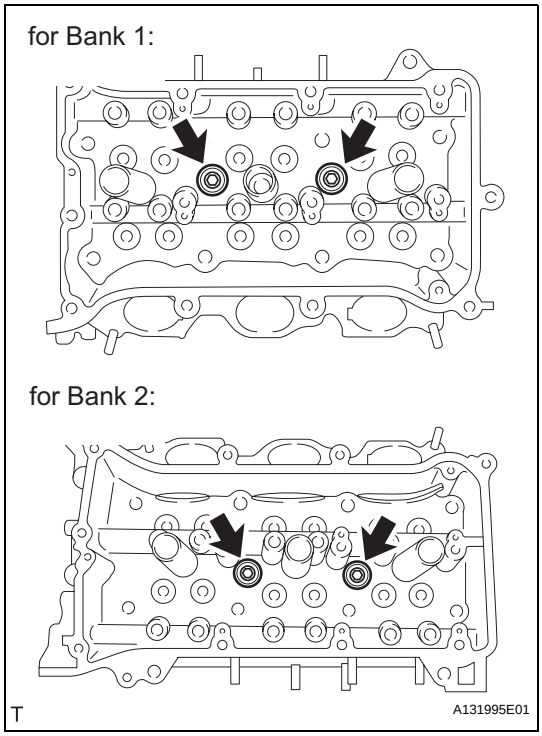
(g) Step 1
(1) Install and alternately tighten the bolts of the connecting rod cap in several steps.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)



(h) Step 2
  (1) Mark the front side of each connecting cap bolt with paint.
  (2) Tighten the cap bolts another 90° as shown in the illustration in the order in step 1.
  (3) Check that the painted mark is now at a 90° angle to the front.

(i) Check that the crankshaft turns smoothly.

9. INSTALL CRANKSHAFT POSITION SENSOR



(a) Install the crankshaft position sensor with the bolt.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

10. INSTALL NO. 2 STRAIGHT SCREW PLUG

(a) Using a 14 mm hexagon wrench, install 2 new gaskets and the 2 straight screw plugs.
Torque: 80 N*m (816 kgf*cm, 59 ft.*lbf)

EM

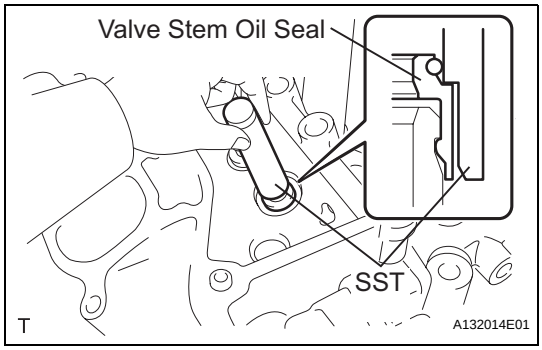
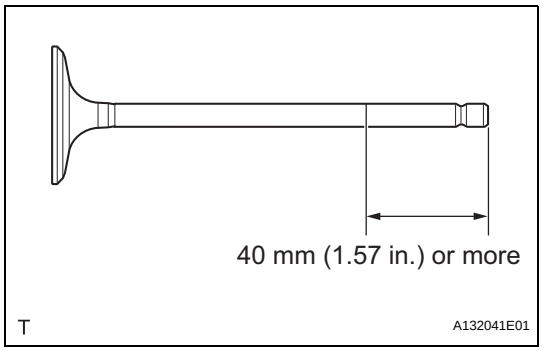
11. INSTALL NO. 1 STRAIGHT SCREW PLUG

(a) Using a 10 mm hexagon wrench, install 4 new gaskets and the straight screw plugs.
Torque: 44 N*m (449 kgf*cm, 32 ft.*lbf)



12. INSTALL VALVE SPRING SEAT

(a) Install the valve spring seats to the cylinder head.



13. INSTALL INTAKE VALVE STEM OIL SEAL

(a) Apply a light coat of engine oil to new oil seals.
NOTICE:
Pay attention when installing the intake and exhaust oil seals. For example, installing the intake oil seal into the exhaust side or installing the exhaust oil seal to the intake side can cause installation problems later.
HINT:
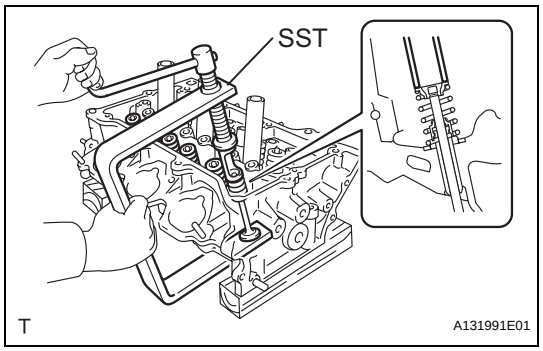
The intake valve oil seals are white and the exhaust valve oil seals are black.



(b) Using SST, push in the oil seals.
SST 09201-41020
NOTICE:
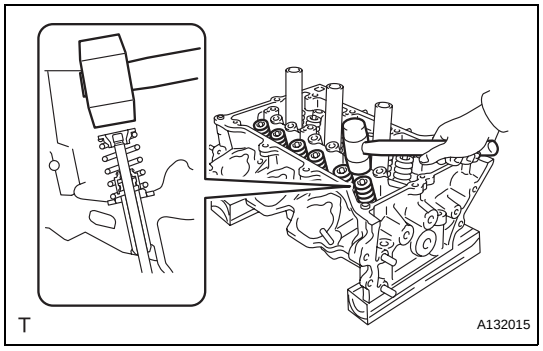
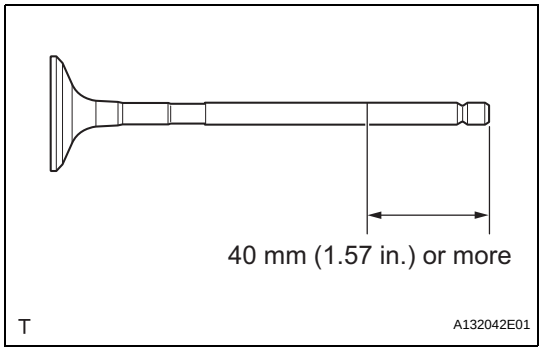
Failure to use SST will cause the seal to be damaged or improperly seated.



14. INSTALL INTAKE VALVE

(a) Apply plenty of engine oil to the tip area of the intake valve shown in the illustration.



(b) Install the valve, compression spring and spring retainer to the cylinder head.
NOTICE:
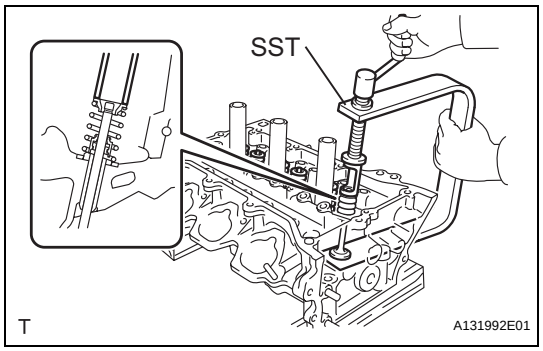
Install the same parts in the same combination to original locations.

(c) Using SST and wooden blocks, compress the spring and install the retainer lock.
SST 09202-70020 (09202-00010)



(d) Using a plastic-faced hammer, lightly tap the valve stem tip to ensure a proper fit.
NOTICE:
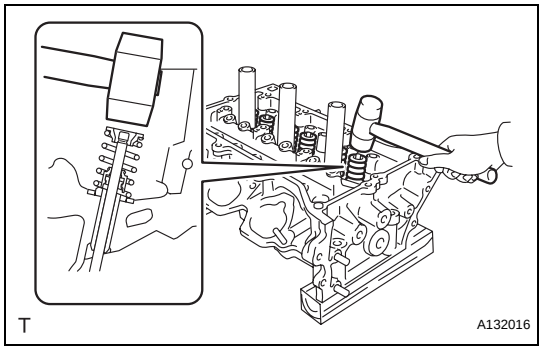
Be careful not to damage the retainer.



15. INSTALL EXHAUST VALVE

(a) Apply plenty of engine oil to the tip area of the exhaust valve shown in the illustration.

(b) Install the valve, compression spring and spring retainer to the cylinder head.
NOTICE:
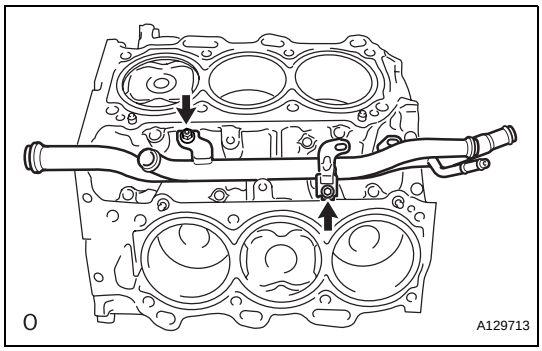
Install the same parts in the same combination to their original locations.

(c) Using SST and wooden blocks, compress the spring and install the retainer lock.
SST 09202-70020 (09202-00010)



(d) Using a plastic-faced hammer, lightly tap the valve stem tip to ensure a proper fit.
NOTICE:
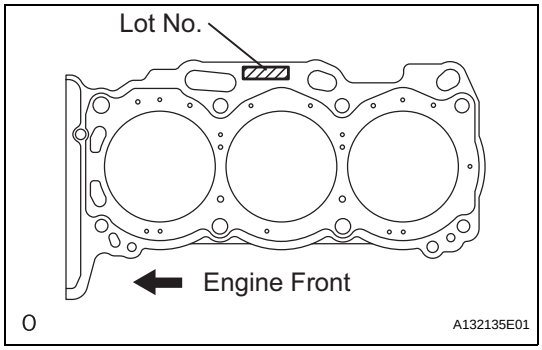
Be careful not to damage the retainer.

16. INSTALL VALVE STEM CAP

(a) Apply a light coat of engine oil to the valve stem caps.

(b) Install the valve stem caps to the cylinder head.

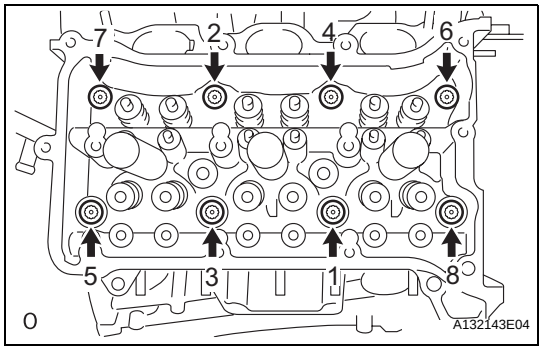


17. INSTALL WATER INLET PIPE

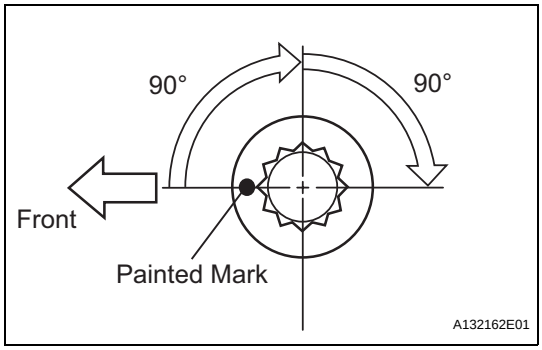
(a) Install the water inlet pipe with the 2 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

(b) Install the water by-pass hose.

18. INSTALL CYLINDER HEAD SUB-ASSEMBLY (for Bank 1)



(a) Check the piston protrusions for each cylinder.
(1) Clean the cylinder block with solvent.
(2) Set the piston of the cylinder to be measured to slightly before TDC.



(b) Place the cylinder head gasket on the cylinder block surface with the front face of the Lot No. stamp upward.
NOTICE:
- **Be careful of the installation direction.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the head.**

(c) Place the cylinder head on the cylinder block.
NOTICE:
Ensure that no oil is on the mounting surface of the cylinder head.
HINT:
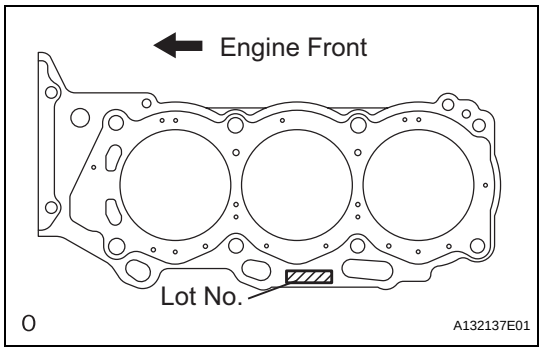
The cylinder head bolts are tightened in 3 progressive steps.

(d) Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

(e) Step 1
(1) Using a 10 mm bi-hexagon wrench, install and uniformly tighten the 8 cylinder head bolts with the plate washers in several steps, in the sequence shown in the illustration.
Torque: 36 N*m (367 kgf*cm, 27 ft.*lbf)

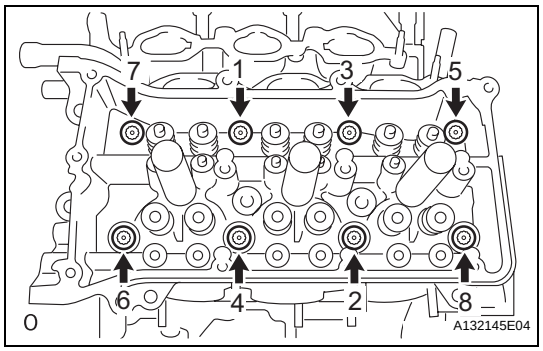


(f) Step 2
(1) Mark the cylinder head bolt head with paint as shown in the illustration.
(2) Tighten the cylinder heads bolts another 90° in the sequence shown in step 1.

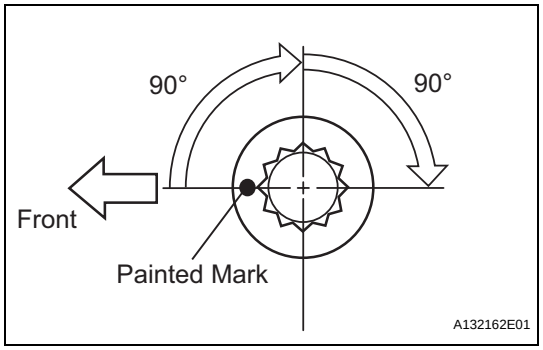
(g) Step 3
(1) Tighten the cylinder head bolts by an additional 90° in the sequence shown in step 1.
(2) Check that the painted mark is now facing rearward.

19. INSTALL CYLINDER HEAD SUB-ASSEMBLY (for Bank 2)

(a) Check the piston protrusions for each cylinder.
(1) Clean the cylinder block with solvent.



(2) Set the piston of the cylinder to be measured to slightly before TDC.



(b) Place the cylinder head gasket on the cylinder block surface with the front face of the Lot No. stamp upward.
NOTICE:
- **Be careful of the installation direction.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the head.**

(c) Place the cylinder head on the cylinder block.
NOTICE:
Ensure that no oil is on the mounting surface of the cylinder head.
HINT:
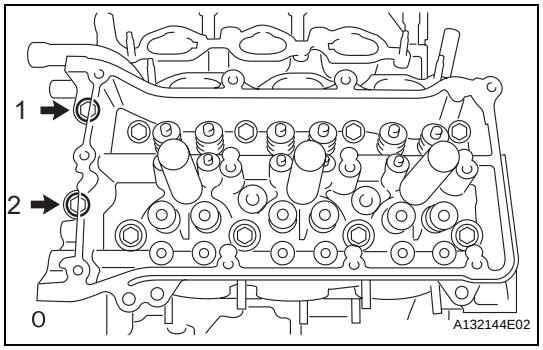
The cylinder head bolts are tightened in 3 progressive steps.

(d) Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.



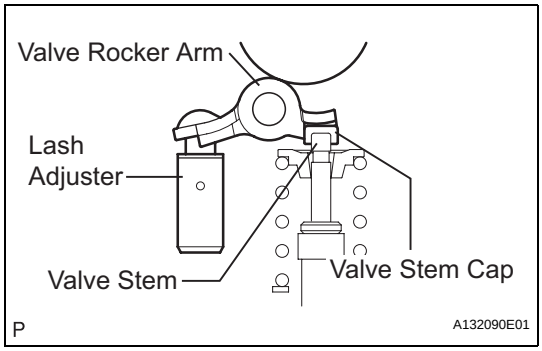
(e) Step 1
(1) Using a 10 mm bi-hexagon wrench, install and uniformly tighten the 8 cylinder head bolts with the plate washers in several steps, in the sequence shown in the illustration.
Torque: 36 N*m (367 kgf*cm, 27 ft.*lbf)

(f) Step 2
(1) Mark the cylinder head bolt heads with paint as shown in the illustration.
(2) Tighten the cylinder head bolts another 90° in the sequence shown in step 1.

(g) Step 3
(1) Tighten the cylinder head bolts by an additional 90° in the sequence shown in step 1.
(2) Check that the painted mark is now facing rearward.

(h) Install the 2 bolts in the order shown in the illustration.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

20. INSTALL VALVE LASH ADJUSTER ASSEMBLY



(a) Be sure to inspect the valve lash adjuster before installing it (see page EM-75).

(b) Install the lash adjusters.
NOTICE:
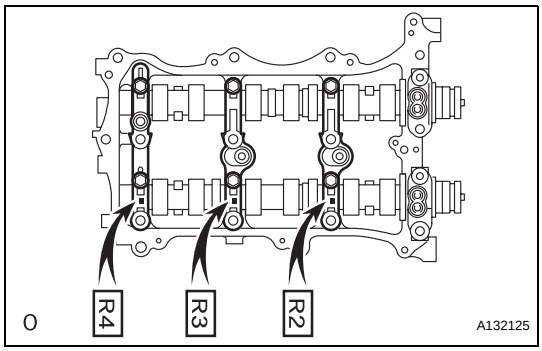
Install the lash adjuster at the same place it was removed from.

21. INSTALL NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

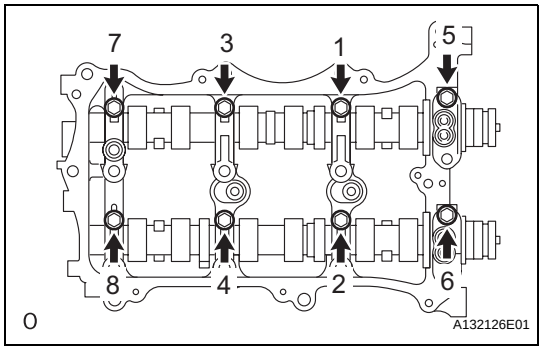
(a) Apply engine oil to the lash adjuster tips and valve stem cap ends.

(b) Make sure that the valve rocker arms are installed as shown in the illustration.



22. INSTALL CAMSHAFT BEARING CAP (for Bank 1)

(a) Apply engine oil to the camshaft journals, camshaft housings and bearing caps.



(b) Install the No. 1 camshaft and No. 2 camshaft to the camshaft housing.

(c) Confirm the marks and numbers on the camshaft bearing caps and place them each in their proper position and direction.

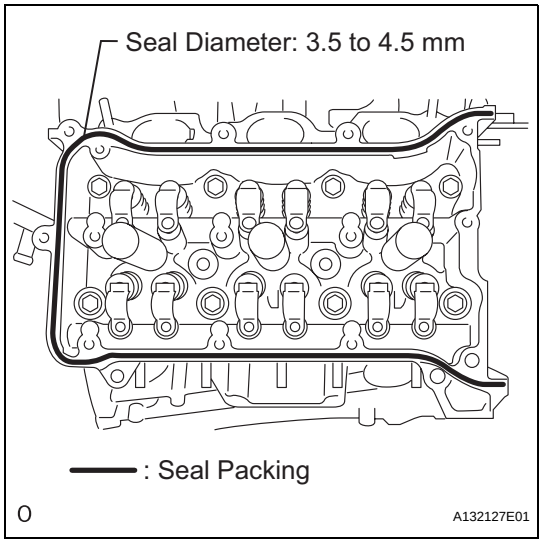
(d) Temporarily install the 8 bolts in the order shown in the illustration.

Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

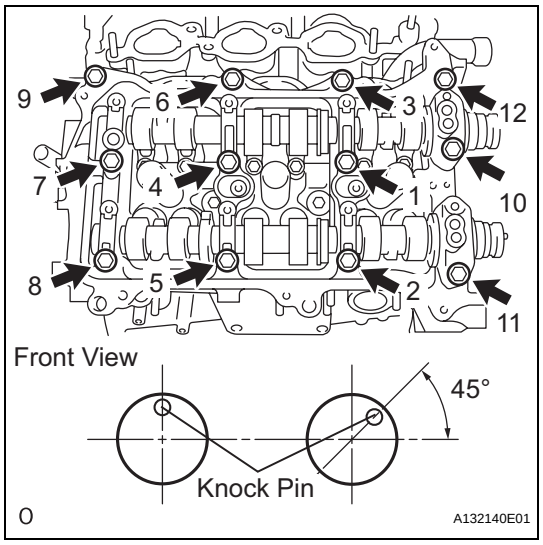
23. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY (for Bank 1)

(a) Apply seal packing in a continuous line as shown in the illustration.

Seal packing:



Toyota Genuine Seal Packing Block, Three Bond 1207B or Equivalent



Standard seal diameter:

3.5 to 4.5 mm (0.138 to 0.177 in.)

NOTICE:

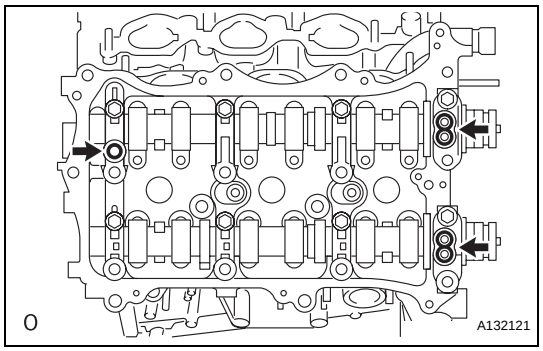
- **Remove any oil from the contact surface.**
- **Install the camshaft housing within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**



(b) Install the camshaft housing, and install the 12 bolts in the order shown in the illustration.
Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)
NOTICE:
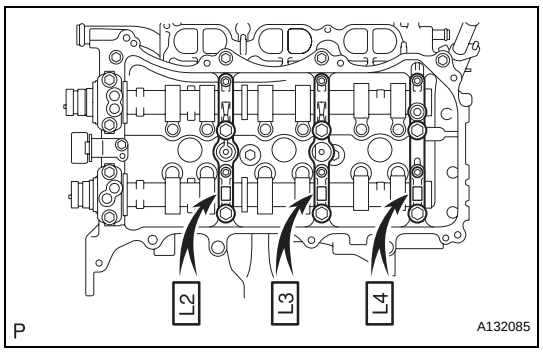
Make sure that the knock pin of the camshaft is positioned as shown in the illustration before installing the camshaft housing.



(c) Tighten the 8 bolts in the order shown in the illustration.
Torque: 16 N*m (163 kgf*cm, 12 ft.*lbf)
NOTICE:
Thoroughly wipe clean any seal packing.

EM

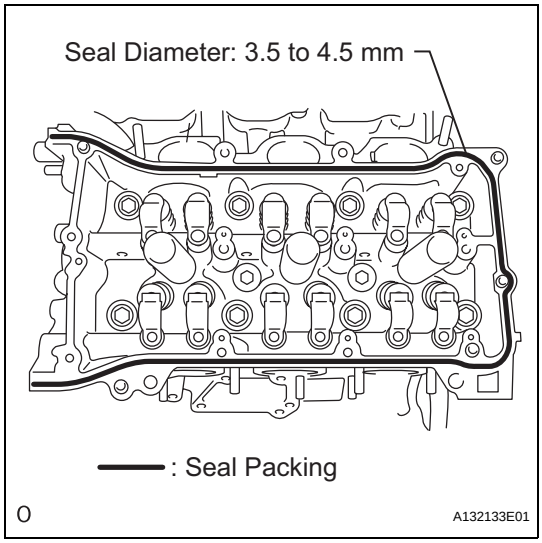
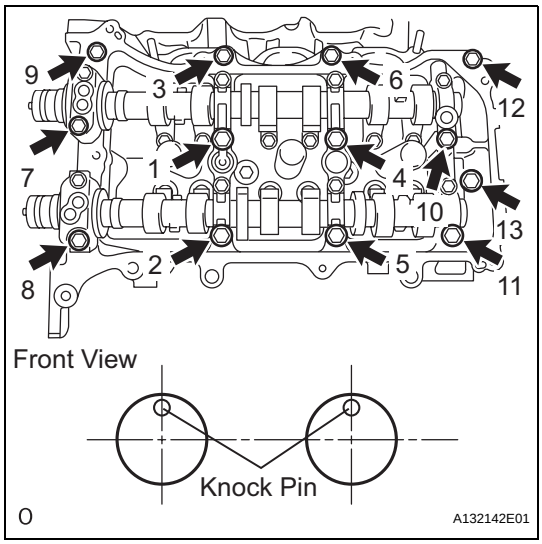
(d) Install 3 new gaskets.

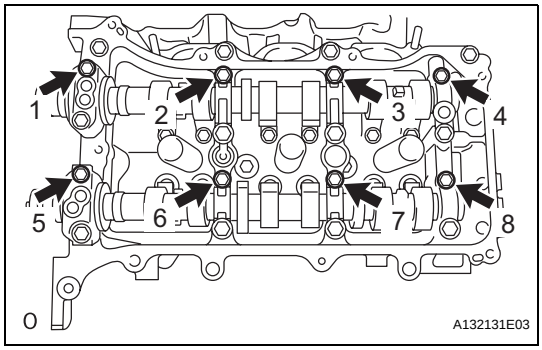


24. INSTALL CAMSHAFT BEARING CAP (for Bank 2)

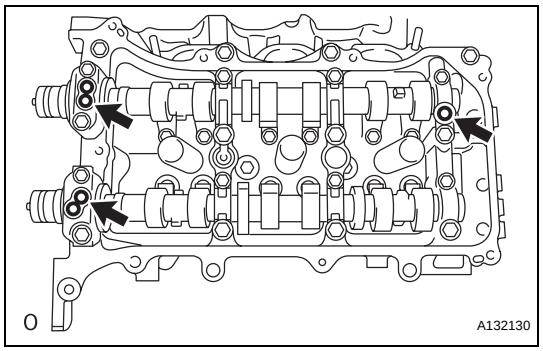
(a) Apply engine oil to the camshaft journals, camshaft housings and bearing caps.
(b) Install the camshaft No. 3 and camshaft No. 4 to the camshaft housing.
(c) Confirm the marks and numbers on the camshaft bearing caps and place them each in their proper position and direction.



(d) Temporarily install the 8 bolts in the order shown in the illustration.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)



25. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY (for Bank 2)



(a) Apply seal packing in a continuous line as shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Block, Three Bond 1207B or Equivalent
Standard seal diameter:
3.5 to 4.5 mm (0.138 to 0.177 in.)
NOTICE:
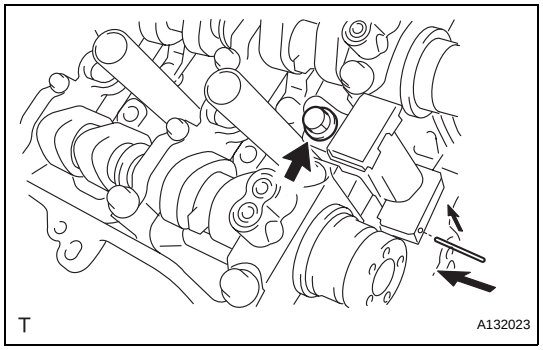
- **Remove any oil from the contact surface.**
- **Install the camshaft housing within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**



(b) Install the camshaft housing and tighten the 13 bolts in the order shown in the illustration.
Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)
NOTICE:
Make sure that the knock pin of the camshaft is positioned as shown in the illustration before installing the camshaft housing.

(c) Tighten the 8 bolts in the order shown in the illustration.
Torque: 16 N*m (163 kgf*cm, 12 ft.*lbf)
NOTICE:
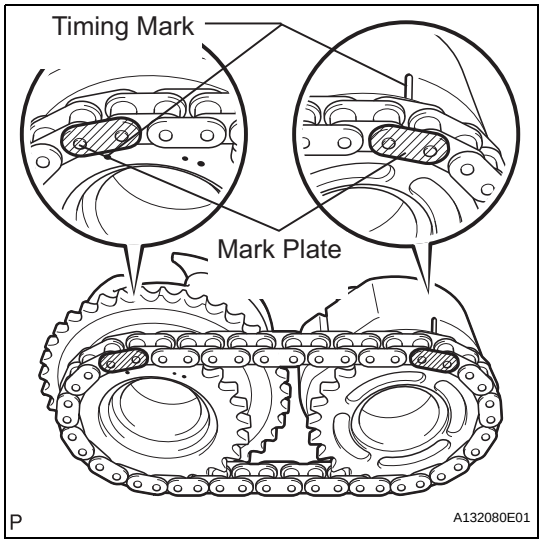
Thoroughly wipe clean any seal packing.

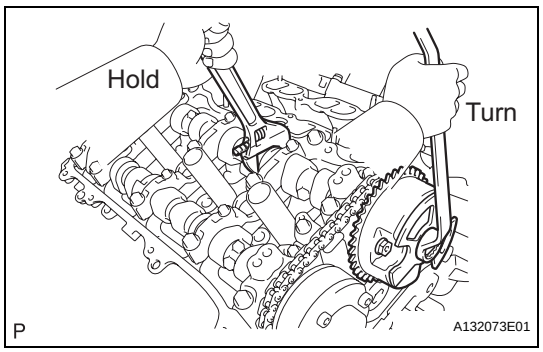


(d) Install 3 new gaskets.

26. INSTALL NO. 2 CHAIN TENSIONER ASSEMBLY

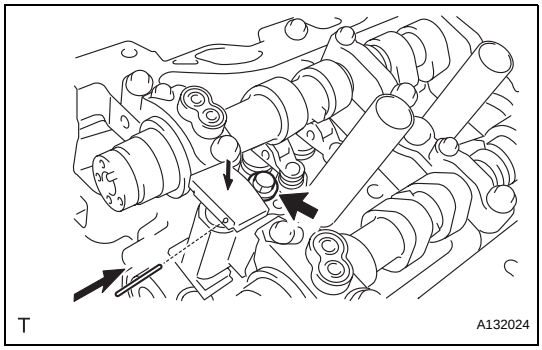
(a) Install the chain tensioner with the bolt.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

(b) While pushing in the tensioner, insert a pin of ϕ1.0 mm (0.039 in.) into the hole to fix it in place.



27. INSTALL CAMSHAFT TIMING GEARS AND NO. 2 CHAIN (for Bank 1)

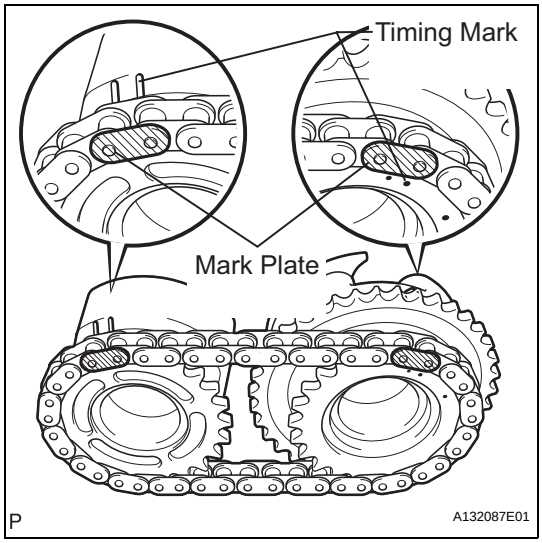
(a) Align the mark plate (yellow) with the timing marks (1 dot mark) of the camshaft timing gears as shown in the illustration.



(b) Apply a small amount of engine oil to the bolt threads and bolt-seating surface.

(c) Align the knock pin of the camshaft with the pin hole of the camshaft timing gear. Install the camshaft timing gear and camshaft timing exhaust gear with the No. 2 chain installed.

(d) Hold the hexagonal portion of the camshaft with a wrench, and tighten the 2 bolts.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

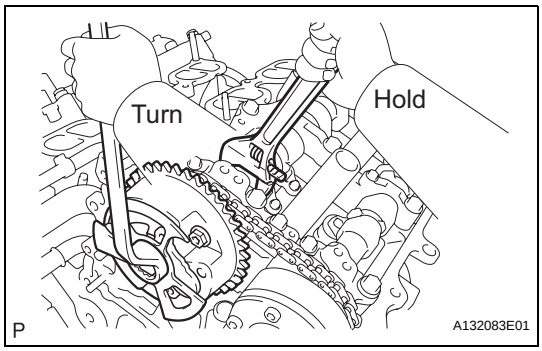


(e) Remove the pin from the No. 2 chain tensioner.

28. INSTALL NO. 3 CHAIN TENSIONER ASSEMBLY

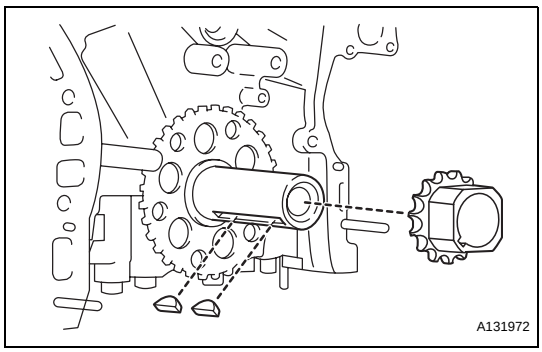
(a) Install the chain tensioner with the bolt.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

(b) While pushing in the tensioner, insert a pin of ϕ1.0 mm (0.039 in.) into the hole to fix it in place.



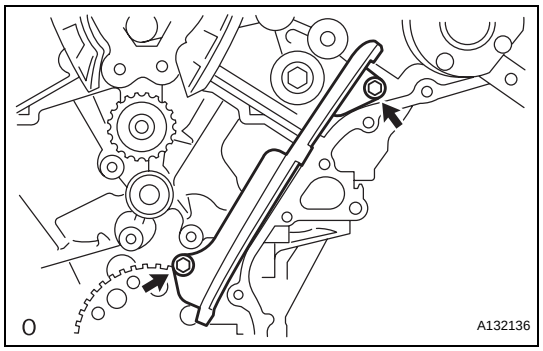
29. INSTALL CAMSHAFT TIMING GEARS AND NO. 2 CHAIN (for Bank 2)

(a) Align the mark plate (yellow) with the timing marks (2 dot mark) of the camshaft timing gears as shown in the illustration.



(b) Apply a small amount of engine oil to the bolt threads and bolt-seating surface.

(c) Align the knock pin of the camshaft with the pin hole of the camshaft timing gear. Install the camshaft timing gear and camshaft timing exhaust gear with the No. 2 chain installed.



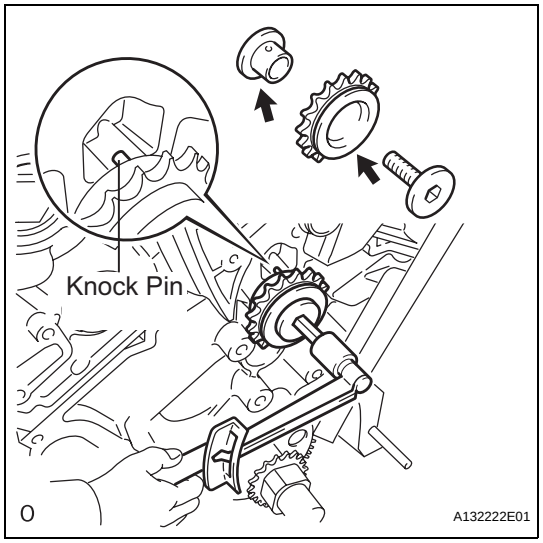
(d) Hold the hexagonal portion of the camshaft with a wrench, and tighten the 2 bolts.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

(e) Remove the pin from the No. 2 chain tensioner.

30. INSTALL CRANKSHAFT TIMING GEAR OR SPROCKET

(a) Install the timing gear set keys and timing gear as shown in the illustration.

31. INSTALL NO. 1 CHAIN VIBRATION DAMPER

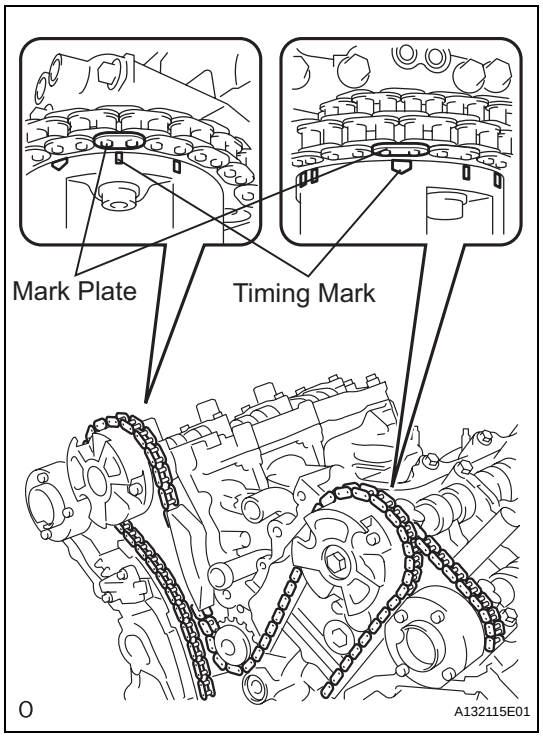


(a) Install the chain vibration damper with the 2 bolts.
Torque: 23 N*m (235 kgf*cm, 17 ft.*lbf)

32. INSTALL NO. 2 CHAIN VIBRATION DAMPER

(a) Install the 2 chain vibration damper.

33. INSTALL IDLE SPROCKET ASSEMBLY



(a) Apply a light coat of engine oil to the rotating surface of the No. 1 idle gear shaft.

(b) Temporarily install the No. 1 idle gear shaft and idle sprocket with the No. 2 idle gear shaft while aligning the knock pin of the No. 1 idle gear shaft with the knock pin groove of the cylinder block.
NOTICE:
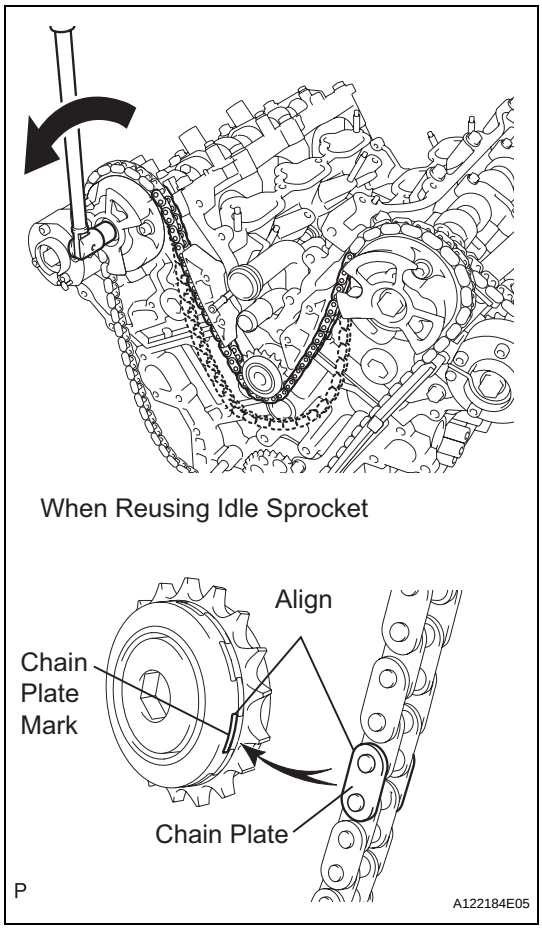
Be careful of the idle gear direction.



(c) Using a 10 mm hexagon wrench, tighten the No. 2 idle gear shaft.
Torque: 60 N*m (612 kgf*cm, 44 ft.*lbf)

EM

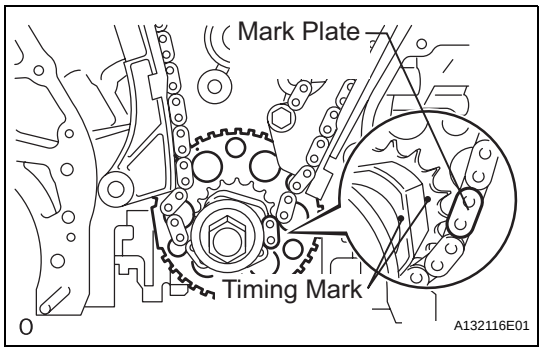
34. INSTALL CHAIN SUB-ASSEMBLY



(a) Align the mark plate and timing mark as shown in the illustration and install the chain.
NOTICE:
Do not pass the chain over the crankshaft, just put it on it.
HINT:
The chain mark plate is orange.

(b) Turn the camshaft timing gear on the bank 1 counterclockwise to tighten the chain between the banks.

NOTICE:

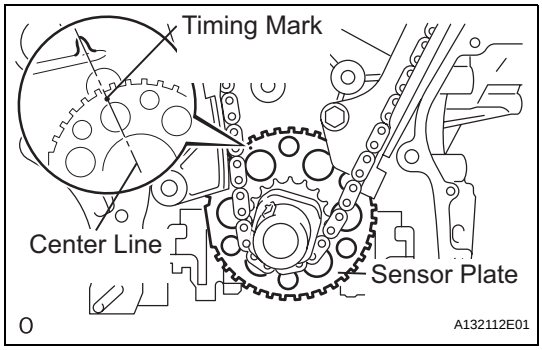
If reusing the idle sprocket, align one of the idle sprocket's chain plate marks with one of the chain's chain plates when installing the idle sprocket.



(c) Align the mark plate and timing mark as shown in the illustration and install the chain onto the crankshaft timing gear.

HINT:

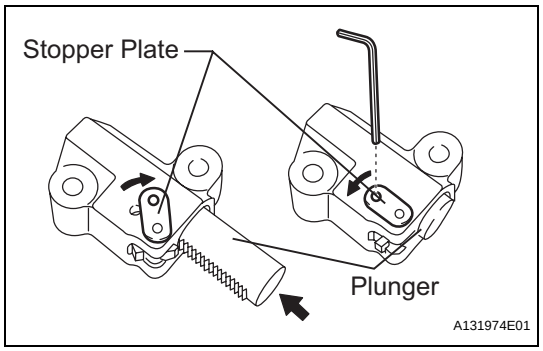
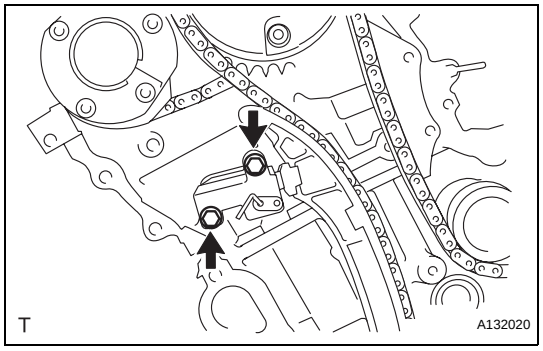
The chain mark plate is yellow.



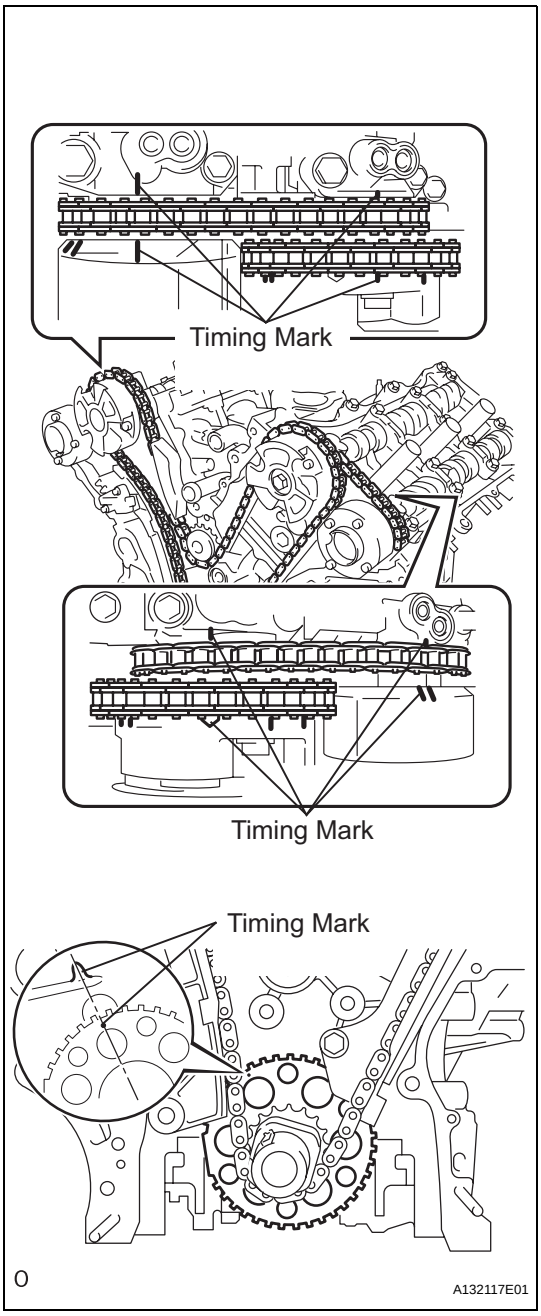
(d) Temporarily tighten the pulley set bolt.

(e) Turn the crankshaft clockwise to set it to the bank 1 block bore center line (TDC / compression).

35. INSTALL CHAIN TENSIONER SLIPPER



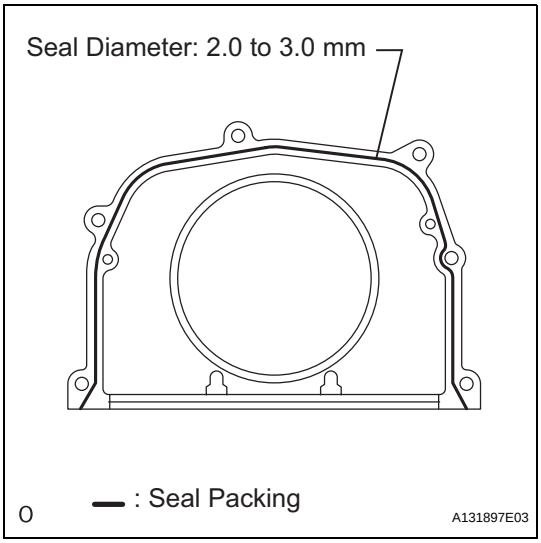
(a) Install the chain tensioner slipper.



36. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY

(a) Move the stopper plate upward to release the lock, and push the plunger deep into the tensioner.

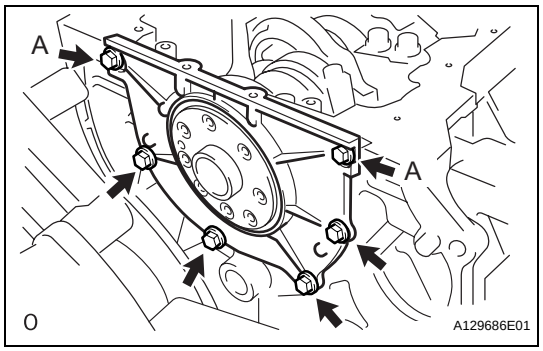
(b) Move the stopper plate downward to set the lock, and insert a hexagon wrench into the hole of the stopper plate.



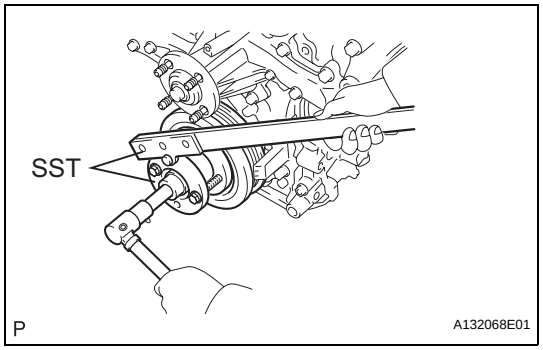
(c) Install the chain tensioner with the 2 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

(d) Remove the lock pin of the chain tensioner. Check that each timing mark is aligned with the crankshaft at the TDC / compression.
(e) Remove the pulley set bolt.

37. INSTALL TIMING CHAIN COVER SUB-ASSEMBLY (w/ Oil Pump) (See page LU-17)



38. INSTALL WATER PUMP ASSEMBLY (See page CO-13)



39. INSTALL ENGINE REAR OIL SEAL RETAINER

(a) Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Block, Three Bond 1207B or Equivalent
Standard seal diameter:
2.0 to 3.0 mm (0.079 to 0.118 in.)
NOTICE:
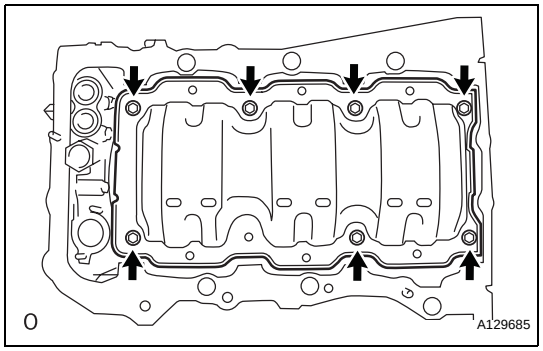
- **Remove any oil from the contact surface.**
- **Install the crankcase within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**



(b) Install the oil seal retainer with the 6 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)
NOTICE:
Apply adhesive 1324 to the 2 bolts labeled A.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent

40. INSTALL CRANKSHAFT PULLEY
(a) Align the pulley set key with the key groove of the pulley, and slide on the pulley.
(b) Using SST, install the pulley bolt.
SST 09213-70011 (09213-70020), 09330-00021
Torque: 250 N*m (2,549 kgf*cm, 184 ft.*lbf)

EM

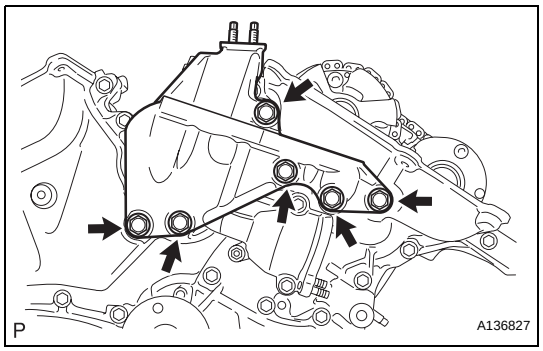
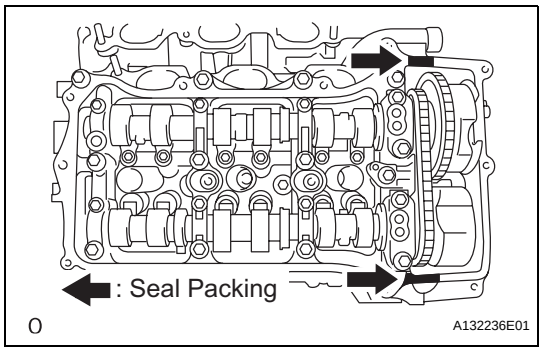
41. INSTALL OIL PAN BAFFLE PLATE
(a) Install the oil pan baffle plate with the 7 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

42. INSTALL OIL PAN SUB-ASSEMBLY (See page LU-21)



43. INSTALL OIL STRAINER SUB-ASSEMBLY (See page LU-22)

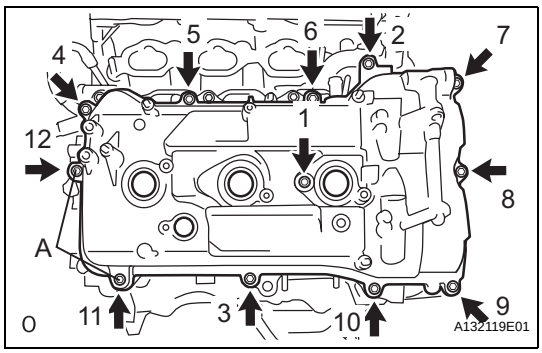
44. INSTALL NO. 2 OIL PAN SUB-ASSEMBLY (See page LU-22)



45. INSTALL OIL FILTER ELEMENT (See page LU-5)

46. INSTALL OIL FILTER CAP SUB-ASSEMBLY (See page LU-5)

47. INSTALL WATER INLET HOUSING (See page CO-14)



48. INSTALL FRONT NO. 1 ENGINE MOUNTING BRACKET
(a) Install the engine mounting bracket with the 6 bolts.
Torque: 54 N*m (551 kgf*cm, 40 ft.*lbf)
NOTICE:
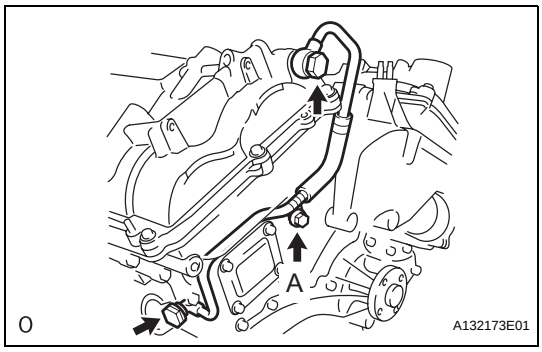
- **Install the water inlet and mounting bracket within 15 minutes after installing the chain cover.**
- **Do not start the engine for at least 2 hours after the installation.**



49. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (for Bank 1)

(a) Apply seal packing as shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Block, Three Bond 1207B or Equivalent
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the crankcase within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

(b) Install the gasket to the head cover.

(c) Install the head cover with the 12 bolts in the order shown in the illustration.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf) for bolt A
10 N*m (102 kgf*cm, 7 ft.*lbf) for except bolt A
HINT:
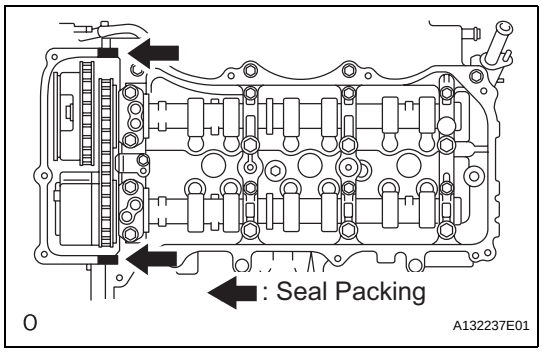
Make sure the tightening torque of bolt 1and 11 in correct.

50. INSTALL OIL PIPE



(a) Make sure that there is no foreign matter on the mesh of the oil control valve filter.

(b) Install the oil control valve filter to the oil pipe union. Install 2 new gaskets and temporarily install the oil pipe (on the head cover side) with the oil pipe union.
NOTICE:
Remove any oil from the contact surface.

(c) Install a new gasket and temporarily install the oil pipe (on the cylinder head side) with the oil pipe union.
NOTICE:
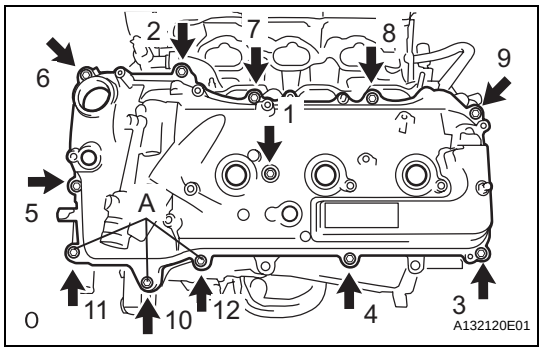
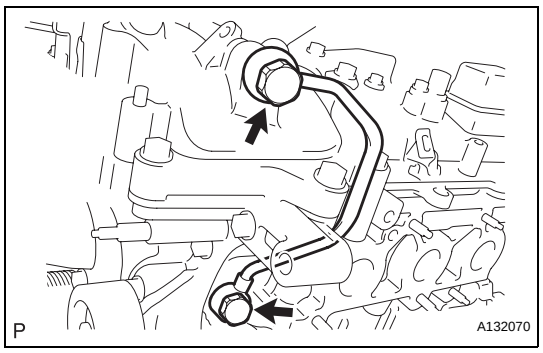
Remove any oil from the contact surface.

(d) Install bolt A to the cylinder head.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

(e) Tighten the 2 oil pipe union bolts.
Torque: 65 N*m (663 kgf*cm, 48 ft.*lbf)



51. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (for Bank 2)



(a) Apply seal packing as shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Block, Three Bond 1207B or Equivalent
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the crankcase within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

(b) Install the gasket to the head cover.

EM

(c) Install the head cover with the 12 bolts in the order in the illastration.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf) for bolt A
10 N*m (102 kgf*cm, 7 ft.*lbf) for except bolt A
HINT:
Make sure the tightening torque of bolts 1 and 10 is correct.

52. INSTALL NO. 1 OIL PIPE
(a) Make sure that there is no foreign matter on the mesh of the oil control valve filter.
(b) Install the oil control valve filter to the oil pipe union. Install 2 new gaskets and temporarily install the oil pipe (on the head cover side) with the oil pipe union.
(c) Install a new gasket and temporarily install the oil pipe (on the cylinder head side) with the oil pipe union.
NOTICE:
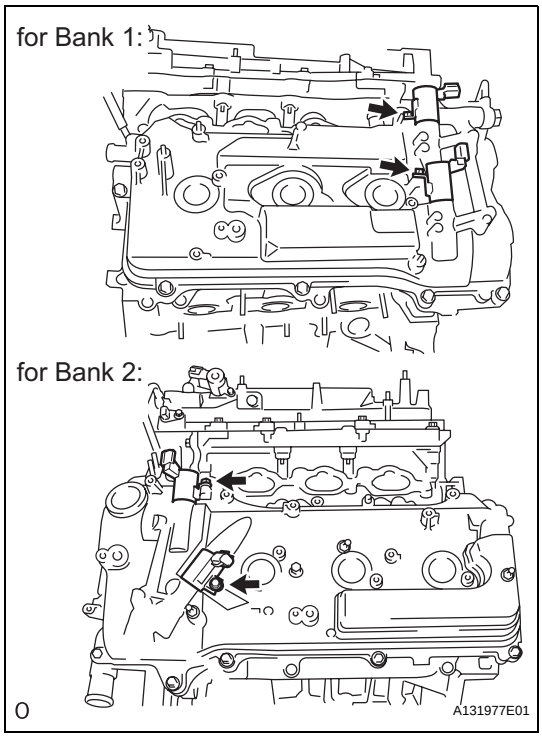
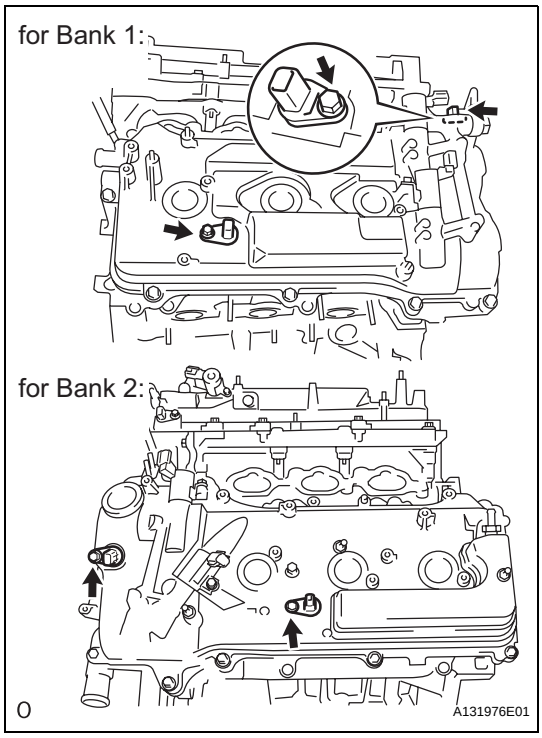
Remove any oil from the contract surface.
(d) Tighten the 2 oil pipe union bolts.
Torque: 65 N*m (663 kgf*cm, 48 ft.*lbf)



53. INSTALL WATER OUTLET
(a) Install 2 new gaskets and a new O-ring.
(b) Apply soapy water to the O-ring.



(c) Install the water outlet with the 2 bolts and 4 nuts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

EM

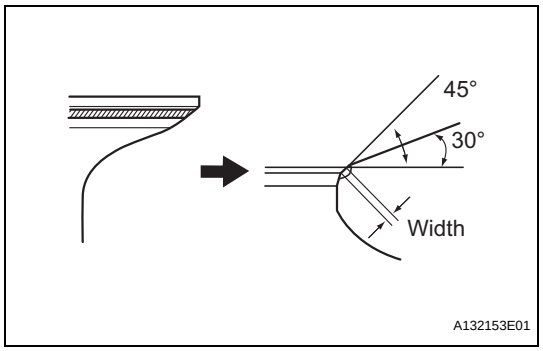
54. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

(a) Install the 4 camshaft timing oil control valves with the 4 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

55. INSTALL VVT SENSOR

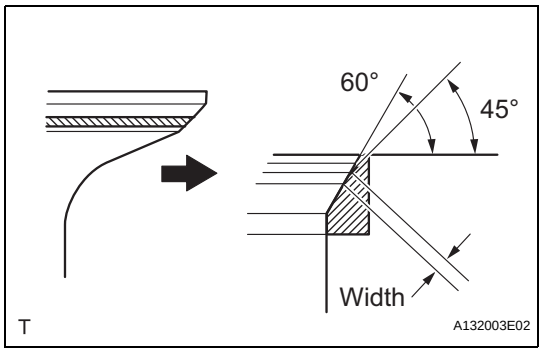
(a) Install the 4 VVT sensors with the 4 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

56. INSTALL SPARK PLUG



(a) Install the 6 spark plugs.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

REPAIR



1. REPAIR INTAKE VALVE SEAT

NOTICE:

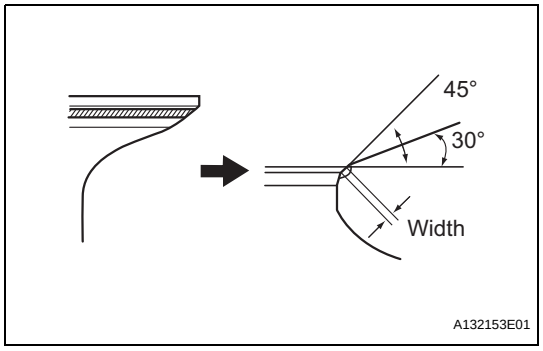
Keep the lip free from foreign matter.

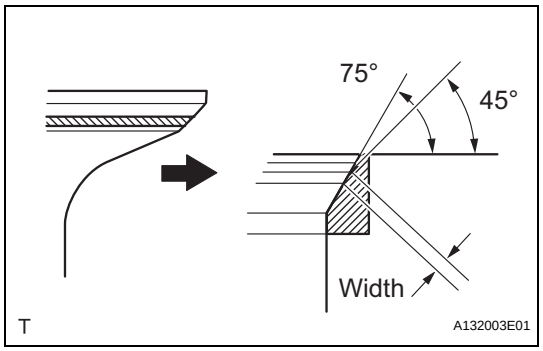
(a) If the seating is too high on the valve face, use 30° and 45° cutters to correct the seat.

(b) If the seating is too low on the valve face, use 60° and 45° cutters to correct the seat.



(c) Hand-lap the valve and valve seat with an abrasive compound.

(d) Check the valve seating position.



2. REPAIR EXHAUST VALVE SEAT

NOTICE:

Keep the lip free from foreign matter.

(a) If the seating is too high on the valve face, use 30° and 45° cutters to correct the seat.

(b) If the seating is too low on the valve face, use 45° and 75° cutters to correct the seat.

(c) Hand-lap the valve and valve seat with an abrasive compound.

(d) Check the valve seating position.

EM

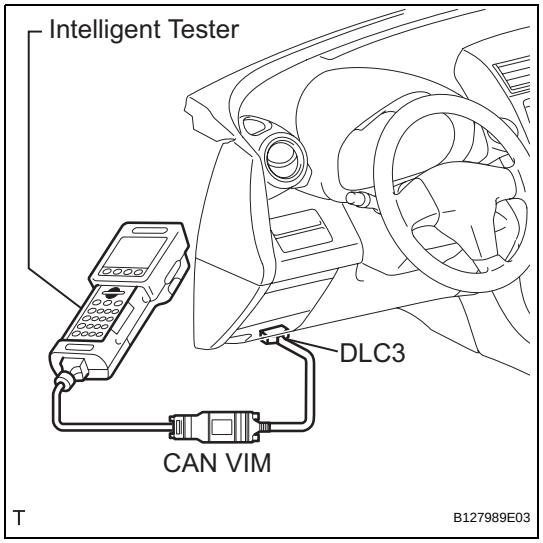
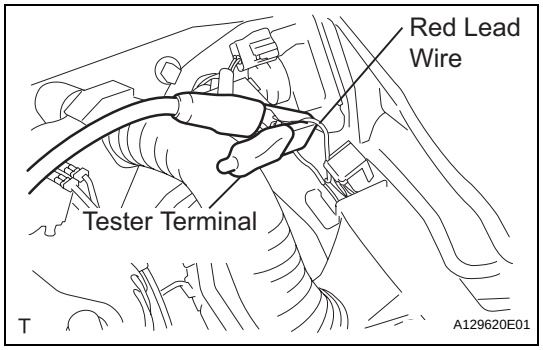
ENGINE



ON-VEHICLE INSPECTION

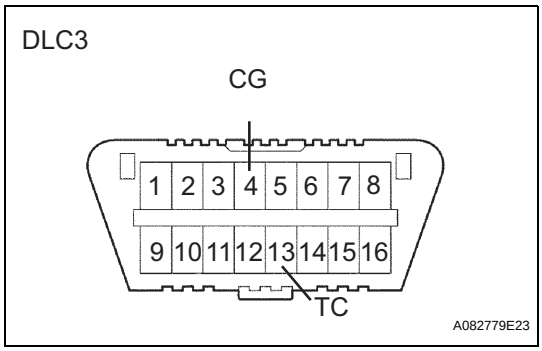
1. INSPECT VALVE LASH ADJUSTER NOISE

(a) Rev up the engine several times. Check that the engine does not emit unusual noises.
If unusual noises occur, warm up the engine and idle it for over 30 minutes. Then perform the inspection above again.
If any defects or problems are found during the inspection above, perform a lash adjuster inspection.



2. INSPECT IGNITION TIMING

(a) Warm up the engine and stop the engine.
NOTICE:
A warmed up engine should have an engine coolant temperature of over 80°C (176°F), have an engine oil temperature of 60°C (140°F), and the engine rpm should be stabilized.



(b) When using the intelligent tester:
(1) Connect the intelligent tester to the DLC3.
(2) Start the engine and idle it.
(3) Push the intelligent tester main switch ON.
(4) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / IGN ADVANCE.
Standard ignition timing:
8 to 12° BTDC @ idle
HINT:
Please refer to the intelligent tester operator's manual for further details.

(c) When not using the intelligent tester:
(1) Remove the V-bank cover (see page EM-21).

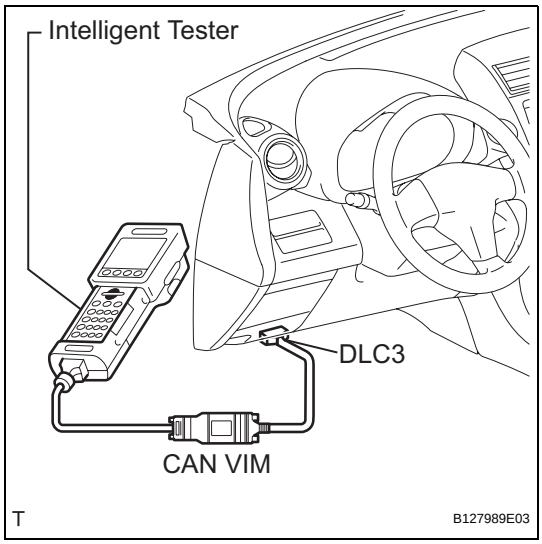
(2) Connect the tester terminal of a timing light to the red lead wire as shown in the illustration.
HINT:
Use a timing light that detects primary signals.

(3) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.
SST 09843-18040
NOTICE:
- **Confirm the terminal numbers before connecting them. Connecting the wrong terminals can damage the engine.**
- **When checking the ignition timing, the transmission should be in the neutral position.**

(4) Using a timing light, check the ignition timing.
Standard ignition timing:
8 to 12° BTDC @ idle
NOTICE:
When checking the ignition timing, the transmission should be in the neutral position.
HINT:
Run the engine at 1,000 to 1,300 rpm for 5 seconds, and then check that the engine rpm returns to idle speed.

(5) Remove the SST from the DLC3.

(6) Check the ignition timing.
Standard ignition timing:
5 to 15° BTDC @ idle



(7) Check that the ignition timing advances immediately when the engine speed is increased.

(8) Disconnect the timing light from the engine.

(9) Install the V-bank cover (see page EM-42).

3. INSPECT ENGINE IDLE SPEED

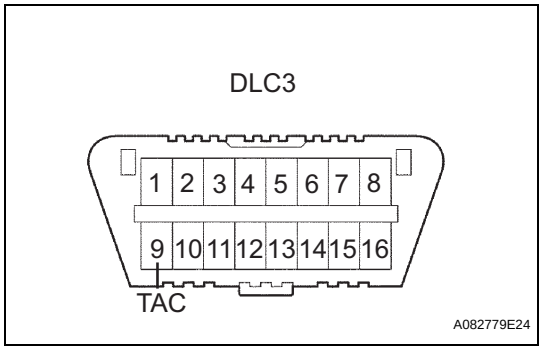
(a) Warm up and stop the engine.
NOTICE:
A warmed up engine should have an engine coolant temperature of over 80°C (176°F) and an engine oil temperature of 60°C (140°F), and the engine rpm should be stabilized.

(b) When using the intelligent tester:

(1) Connect the intelligent tester to the DLC3.
NOTICE:
Switch off all accessories and A/C before connecting the intelligent tester.

(2) Race the engine at 2,500 rpm for approximately 90 seconds.

(3) Push the intelligent tester main switch ON.



(4) Select the tester menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / ENGINE SPD.
Standard idle speed:
600 to 700 rpm
NOTICE:
When checking the idle speed, the transmission should be in the neutral position.

HINT:
Please refer to the intelligent tester operator's manual for further details.
If the idle speed is not as specified, check the air intake system.

(5) Disconnect the intelligent tester from the DLC3.

(c) When not using the intelligent tester:

(1) Using SST, connect the tachometer probe to terminal 9 (TAC) of the DLC3.
SST 09843-18040
NOTICE:
Confirm the terminal numbers before connecting them. Connecting the wrong terminals can damage the engine.

(2) Race the engine at 2,500 rpm for approximately 90 seconds.

(3) Check the idle speed.
Standard idle speed:
600 to 700 rpm (Transmission neutral position)
If the speed is not as specified, check the air intake system.

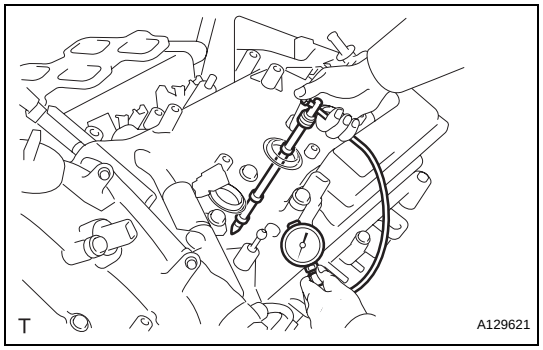
(4) Disconnect the tachometer from the DLC3.

4. INSPECT COMPRESSION

(a) Warm up and stop the engine.
NOTICE:
A warmed up engine should have an engine coolant temperature of over 80°C (176°F) and an engine oil temperature of 60°C (140°F), and the engine rpm should be stabilized.

(b) Disconnect the injector connectors.

(c) Remove the intake air surge tank (see page EM-27).



(d) Remove the 6 ignition coils (see page EM-28).

(e) Remove the 6 spark plugs.

(f) Inspect the cylinder compression pressure.

(1) Insert a compression gauge into the spark plug hole.

(2) While cranking the engine, measure the compression pressure.
HINT:
Always use a fully charged battery to obtain an engine speed of 250 rpm or more.
NOTICE:
The measurement must be done as quickly as possible.
Compression pressure:
1,400 kPa (14 kgf/cm^2, 199 psi) or more
Minimum pressure:
980 kPa (10.0 kgf/cm^2, 142 psi)
Difference between each cylinder:
100 kPa (1.0 kgf/cm^2, 15 psi) or less

(3) Perform the inspection above for each cylinder.

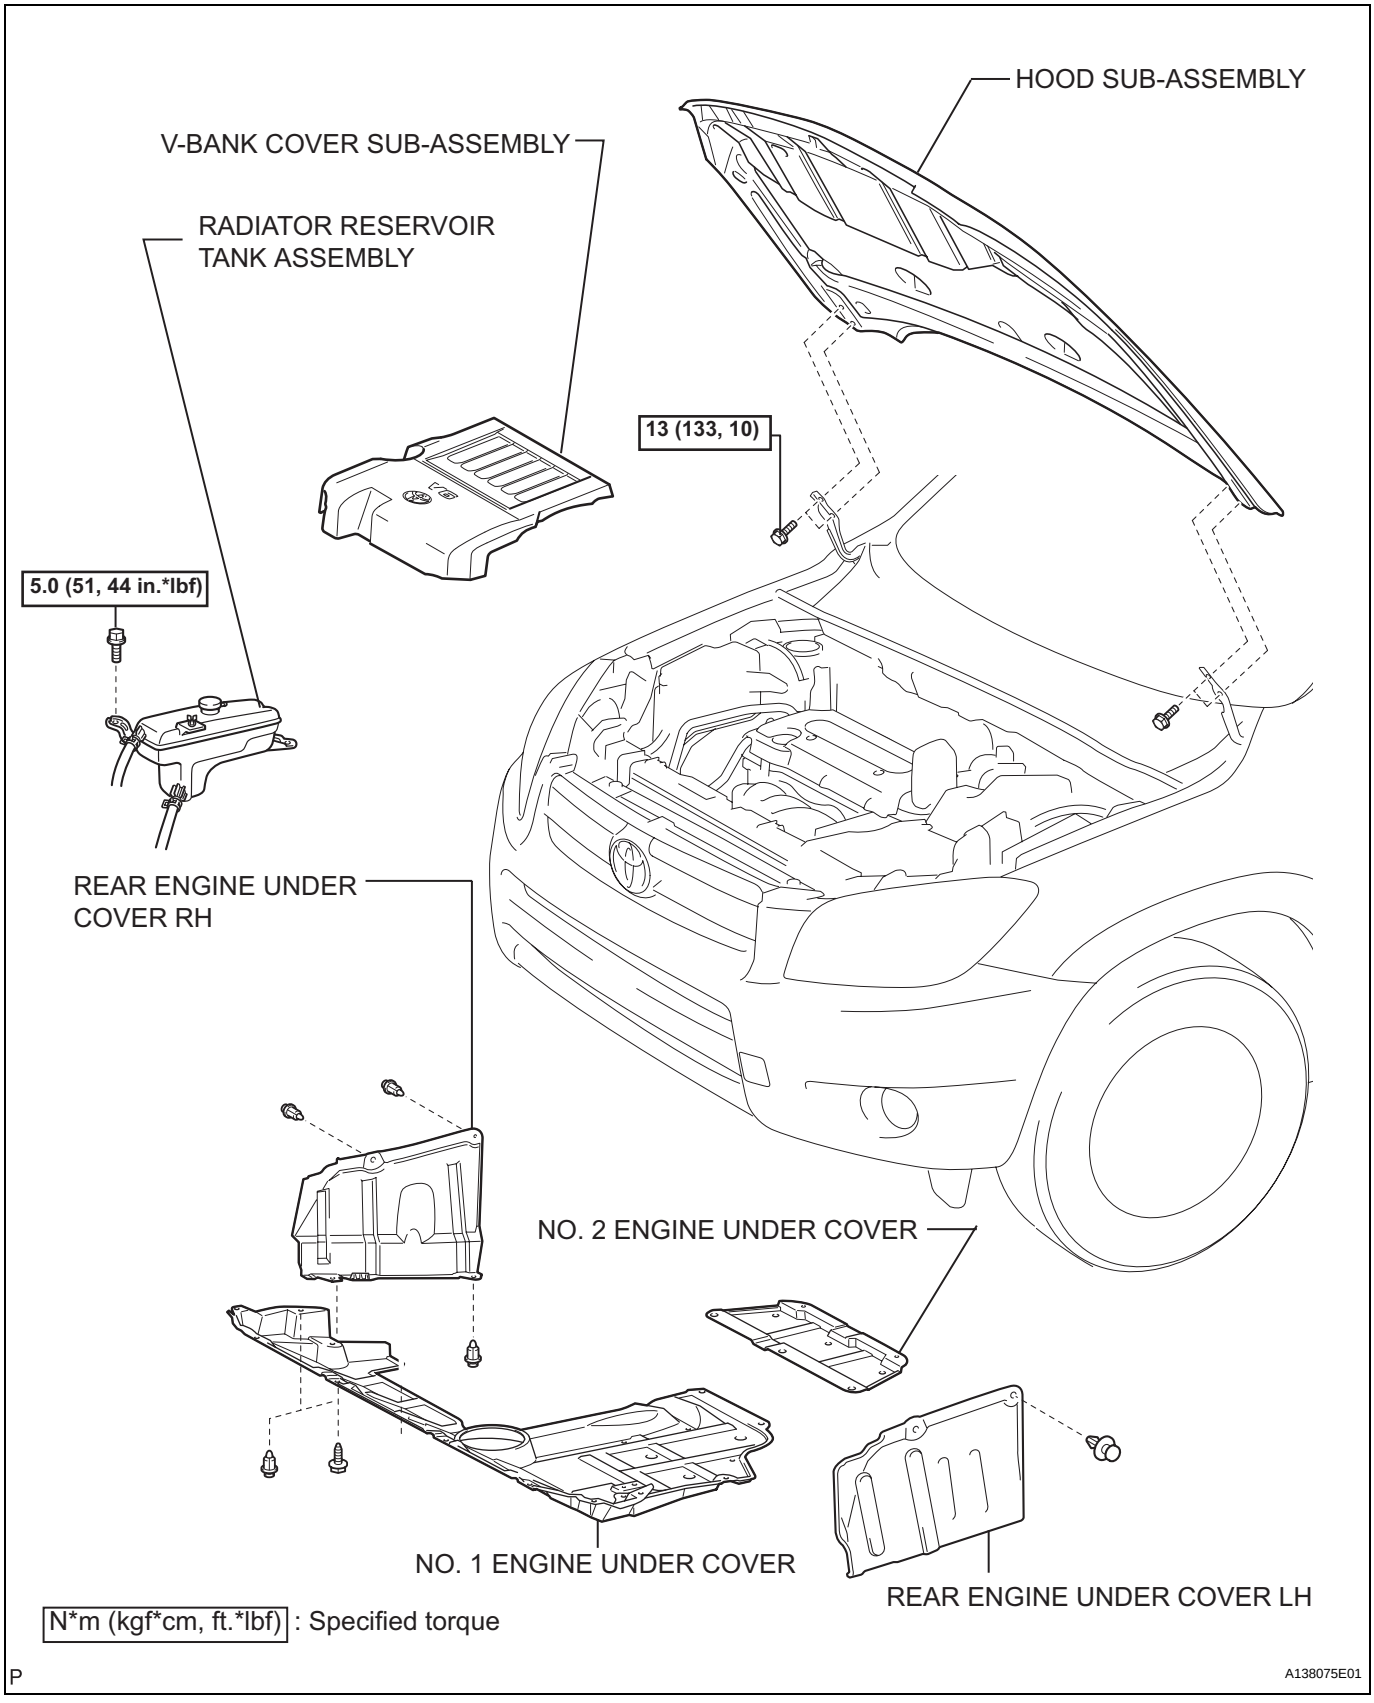
EM

(4) If the cylinder compression in one or more cylinders is low, pour a small amount of engine oil into the cylinder through the spark plug hole. Then perform the first 3 steps under "Inspect the cylinder compression pressure" for the cylinders with low compression.
HINT:
- If adding oil helps the compression, it is likely that the piston rings and / or cylinder bore are worn or damaged.
- If pressure stays low, a valve may be stuck or seated improperly, or there may be leakage in the gasket.

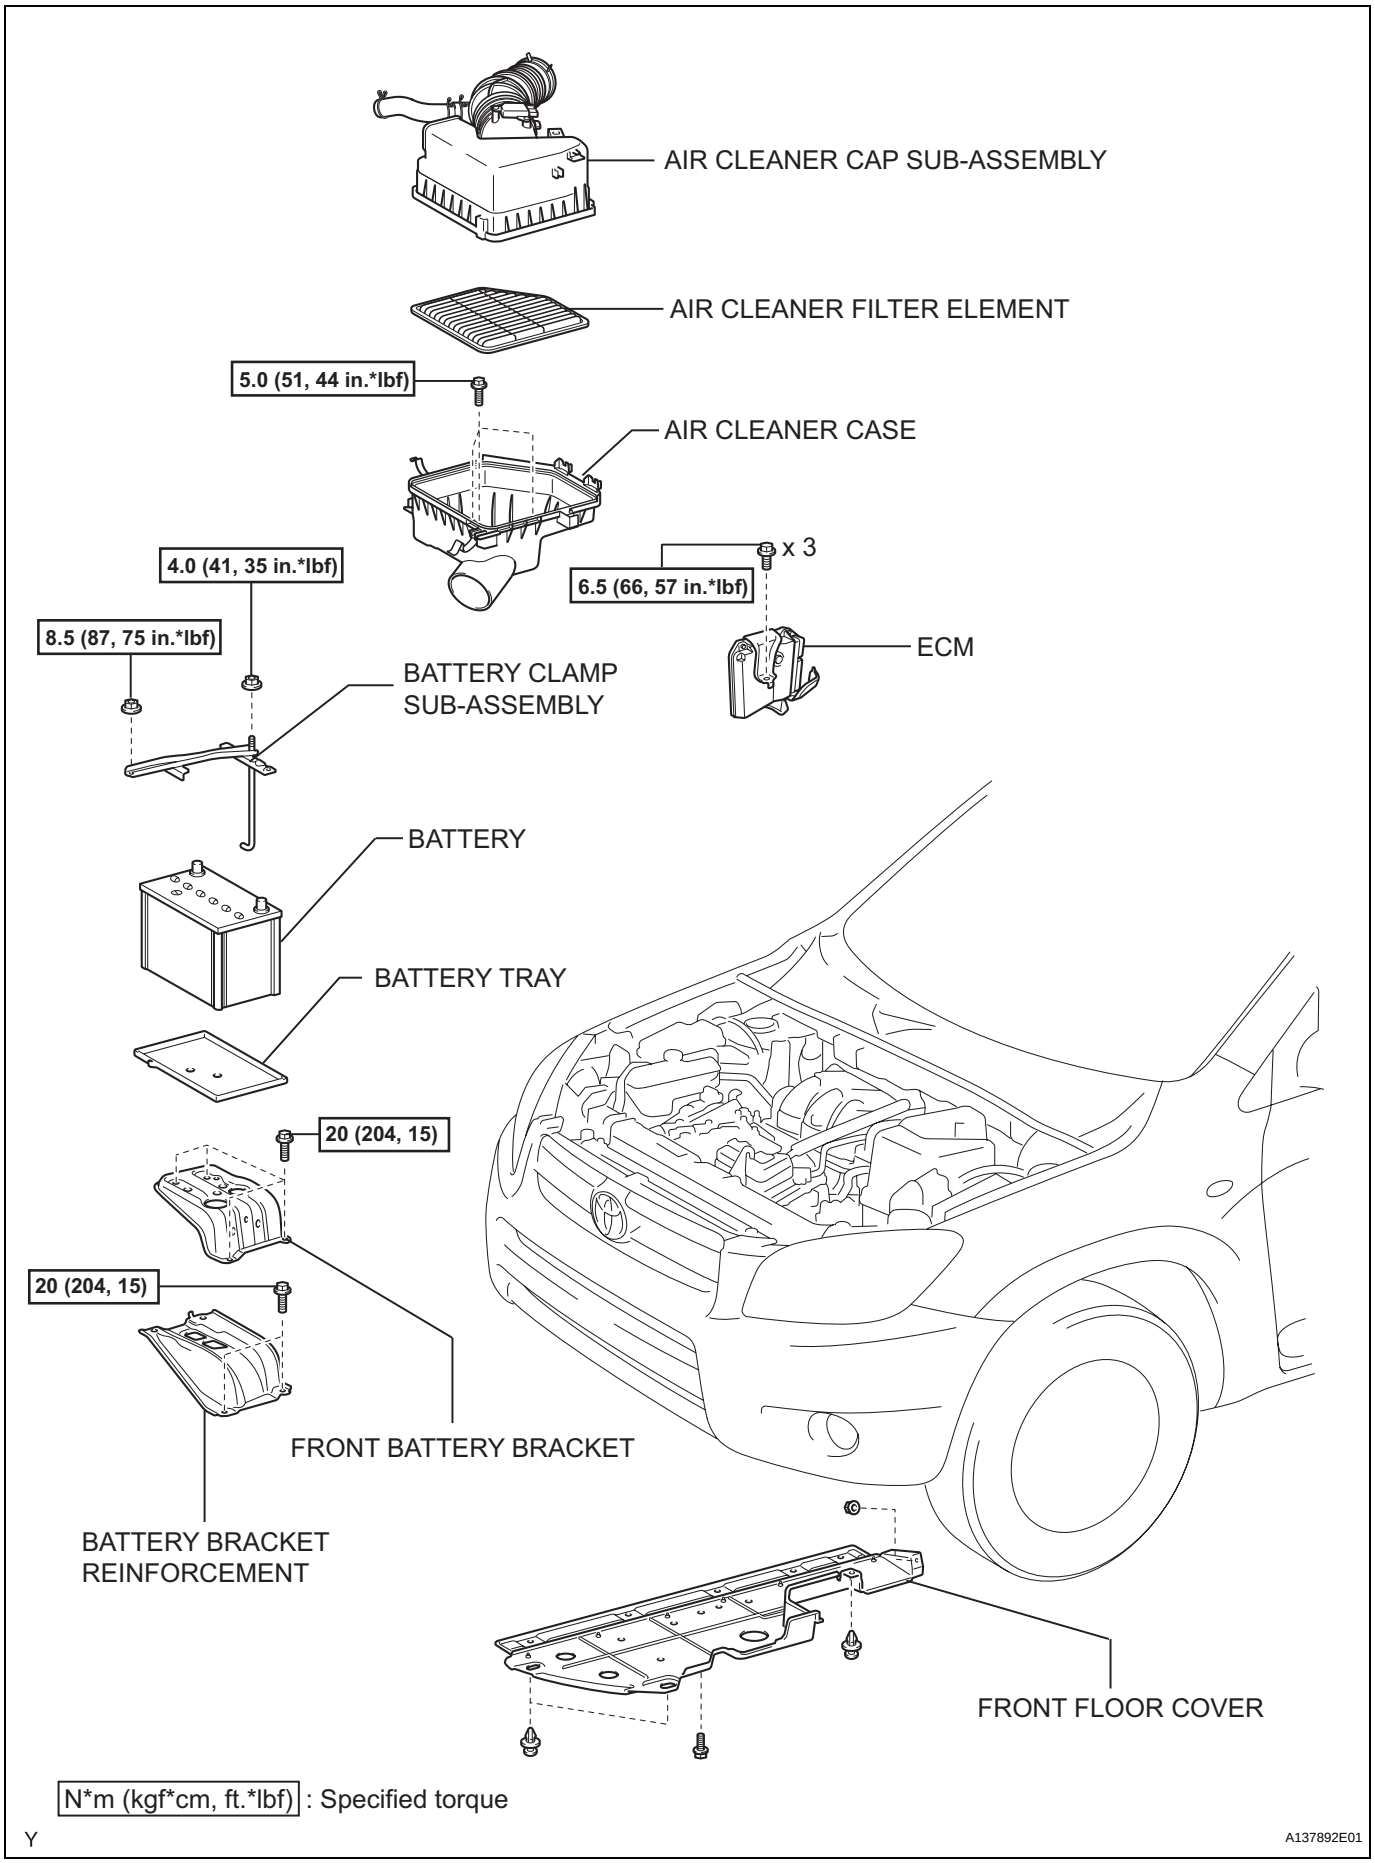
(g) Install the 6 spark plugs.
(h) Install the 6 ignition coils (see page EM-34).
(i) Install the intake air surge tank (see page EM-34).
(j) Connect the injector connectors.

5. INSPECT CO/HC

HINT:
This check is for determining whether or not the idle CO / HC complies with regulations.
(a) Start the engine.
(b) Keep the engine speed at 2,500 rpm for approximately 180 seconds.
(c) Insert a CO / HC meter testing probe at least 40 cm (1.3 ft.) into the tailpipe during idling.
(d) Immediately check the CO / HC concentration at idle and / or 2,500 rpm.
HINT:
- When performing the 2 mode (2,500 rpm and idle) test, follow the measurement order prescribed by the applicable local regulations.
- If the CO / HC concentration does not comply with regulations, troubleshoot in the order given below.



(1) Check the air fuel ratio sensor and heated oxygen sensor operation.
(2) See the table below for the possible cause, then inspect and correct the applicable causes if necessary.



CO	HC	Symptom	Causes
Normal	High	Rough idle	1. Faulty ignitions – Incorrect timing – Fouled, shorted or improperly gapped plugs 2. Leaky intake and exhaust valves 3. Leaky cylinder
Low	High	Rough idle (Fluctuating HC reading)	1. Vacuum leaks – PCV hose – Intake manifold – Throttle body 2. Lean mixture causing misfire

CO	HC	Symptom	Causes
High	High	Rough idle (Black smoke from exhaust)	1. Restricted air filter 2. Faulty fuel SFI system – Faulty pressure – Defective ECT sensor – Faulty ECM – Faulty injector – Faulty throttle position sensor – Faulty MAF sensor

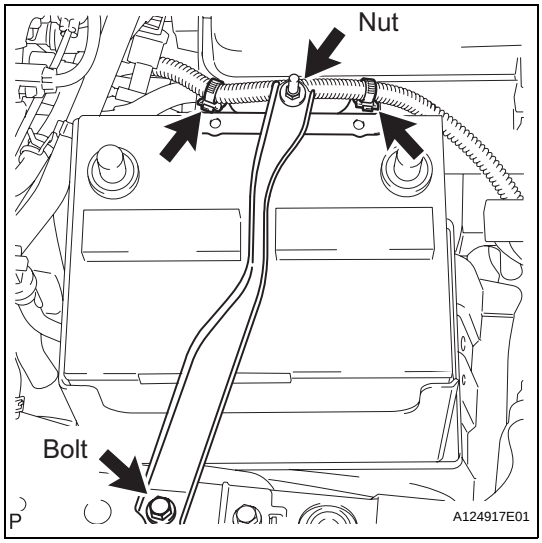
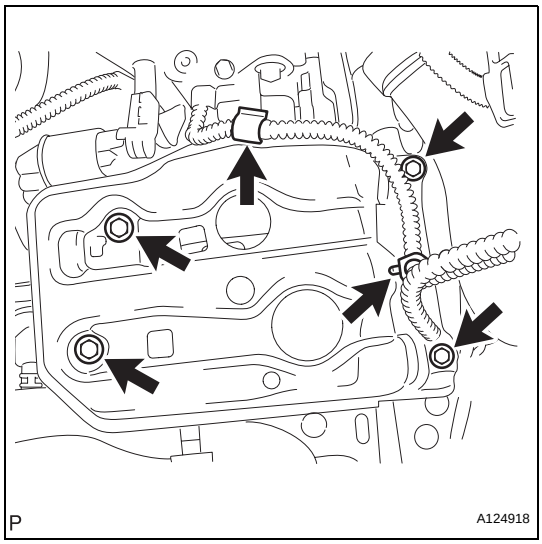
REMOVAL



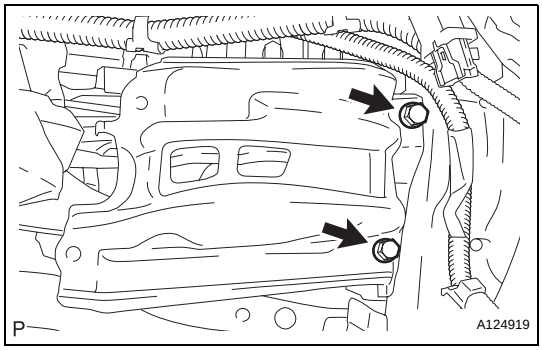
1. **DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM (See page AC-172)**
2. **DISCHARGE FUEL SYSTEM PRESSURE (See page FU-13)**
3. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
4. **REMOVE NO. 1 ENGINE UNDER COVER**
   (a) Remove the 4 bolts, 12 clips and under cover.
5. **REMOVE REAR ENGINE UNDER COVER RH**
   (a) Remove the 2 clips and under cover.
6. **REMOVE REAR ENGINE UNDER COVER LH**
   (a) Remove the 2 clips and under cover.
7. **REMOVE NO. 2 ENGINE UNDER COVER**
   (a) Remove the 2 clips and under cover.
8. **REMOVE FRONT FLOOR COVER (See page FU-34)**
9. **DRAIN ENGINE COOLANT (See page CO-8)**
10. **DRAIN ENGINE OIL (See page LU-4)**
11. **DRAIN AUTOMATIC TRANSAXLE FLUID**
    (a) 2WD:
    Drain automatic transaxle fluid (see page AX-172).
    (b) 4WD:
    Drain automatic transaxle fluid (see page AX-173)
12. **DRAIN TRANSFER OIL (for 4WD)**
13. **REMOVE HOOD SUB-ASSEMBLY (See page ED-4)**
14. **REMOVE V-BANK COVER SUB-ASSEMBLY**
    (a) Detach the 3 clips and remove the V-bank cover.

15. REMOVE RADIATOR SUPPORT OPENING COVER



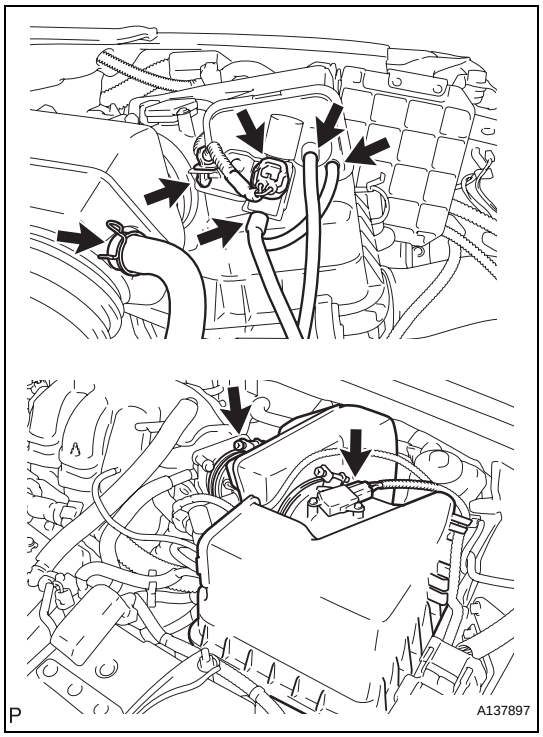
(a) Remove the 9 clips and cover.

16. REMOVE BATTERY CLAMP SUB-ASSEMBLY



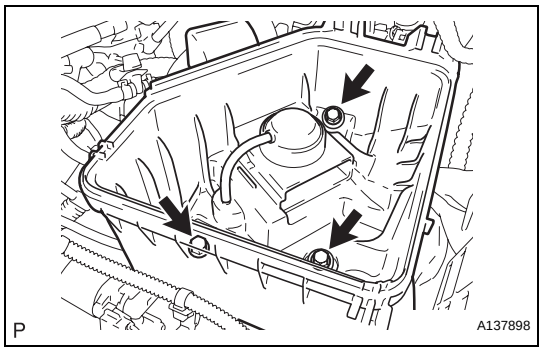
(a) Remove the bolt and loosen the nut.
(b) Detach the 2 wire harness clamps.
(c) Detach the hook of the battery clamp from the battery bracket front, and then remove the battery clamp.

17. REMOVE BATTERY



18. REMOVE FRONT BATTERY BRACKET

(a) Detach the 2 wire harness clamps.
(b) Remove the 4 bolts and front bracket.

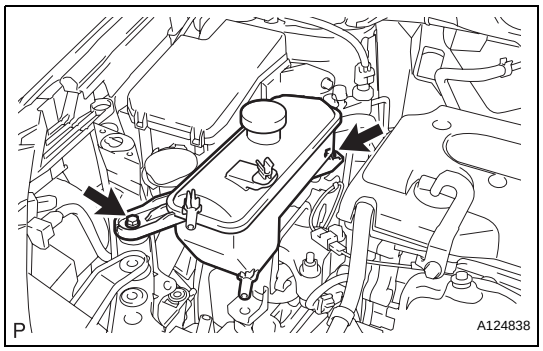


19. REMOVE BATTERY BRACKET REINFORCEMENT

(a) Remove the 2 bolts and bracket reinforcement.

20. REMOVE AIR CLEANER CAP SUB-ASSEMBLY

(a) Disconnect the mass air flow meter connector.
(b) Disconnect the VSV (air intake control) connector.
(c) Disconnect the wire harness clamp and 3 vacuum hoses.
(d) Disconnect the No. 2 ventilation hose from the air cleaner hose.
(e) Loosen the No. 1 air cleaner hose clamp.
(f) Unfasten the 2 hook clamps, and then remove the air cleaner cap.
(g) Remove the air cleaner filter element from the air cleaner case.



21. REMOVE AIR CLEANER CASE

(a) Disconnect the harness clamp.
(b) Remove the 3 bolts and air cleaner case.

22. DISCONNECT HOSES AND CONNECTORS

(a) Remove the engine room junction block cover (upper).
(b) Remove the nut and disconnect the engine room junction block cover (side) with 3 connectors and wire.
(c) Remove the nut and disconnect the starter wire.
(d) Disconnect the fuel hoses.
(e) Disconnect the 2 heater hoses.
(f) Disconnect the 2 ECM connectors.

23. REMOVE ECM (See page ES-470)

24. REMOVE RADIATOR RESERVOIR TANK ASSEMBLY

(a) Remove the 2 bolts, 2 hoses and reservoir tank.

25. REMOVE DISCHARGE HOSE SUB-ASSEMBLY (See page AC-220)

26. DISCONNECT SUCTION HOSE SUB-ASSEMBLY (See page AC-220)

27. DISCONNECT RADIATOR HOSE INLET

28. DISCONNECT RADIATOR HOSE OUTLET

29. DISCONNECT OIL COOLER HOSE

30. DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY

(a) 2WD:
Disconnect the control cable (see page AX-154).

EM

(b) 4WD:
Disconnect the control cable (see page AX-154).

31. REMOVE FRONT EXHAUST PIPE ASSEMBLY (See page EX-3)

32. REMOVE CENTER EXHAUST PIPE ASSEMBLY (See page EX-2)

33. REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-3)

34. REMOVE FRONT WHEELS

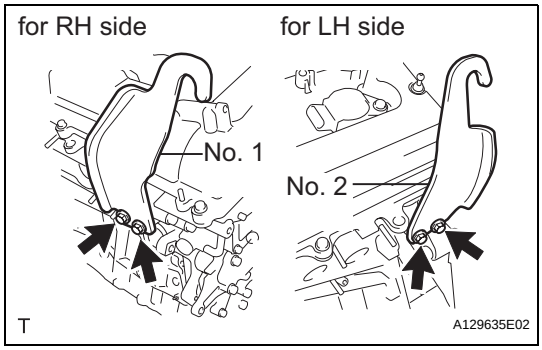
35. REMOVE FRONT AXLE HUB NUT LH
(a) Remove the hub nut (see page AH-8).

36. REMOVE FRONT AXLE HUB NUT RH
(a) Remove the hub nut (see page AH-8).

37. DISCONNECT FRONT STABILIZER LINK ASSEMBLY LH (See page SP-30)

38. DISCONNECT FRONT STABILIZER LINK ASSEMBLY RH (See page SP-30)

39. DISCONNECT STEERING INTERMEDIATE SHAFT (See page PS-44)



40. DISCONNECT TIE ROD END SUB-ASSEMBLY RH (See page PS-42)

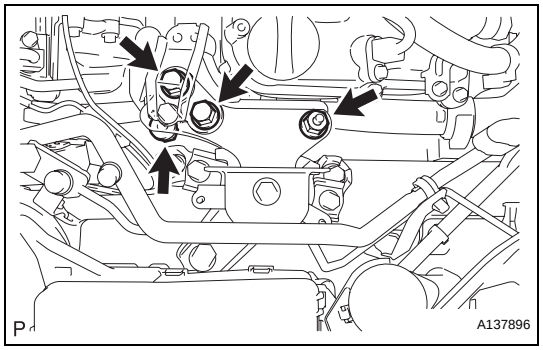
41. DISCONNECT TIE ROD END SUB-ASSEMBLY LH (See page PS-42)

42. REMOVE FRONT DRIVE SHAFT LH
(a) 2WD:
Remove the drive shaft (see page DS-10).
(b) 4WD:
Remove the drive shaft (see page DS-43).

43. REMOVE FRONT DRIVE SHAFT RH
(a) 2WD:
Remove the drive shaft (see page DS-10).
(b) 4WD:
Remove the drive shaft (see page DS-43).

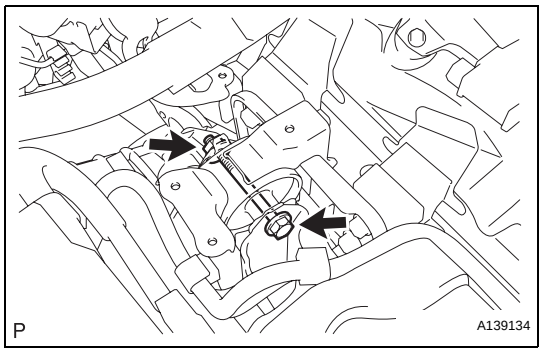
44. REMOVE ENGINE WITH TRANSAXLE
(a) Install the No. 1 and No. 2 engine hangers with the 4 bolts as shown in the illustration.
Torque: 33 N*m (337 kgf*cm, 24 ft.*lbf)

Part Name	Part No.
No. 1 engine hanger	12281-31120
No. 2 engine hanger	12282-31100
Bolt	91671-10825



HINT:
- Insert the claw of the hanger into hole of the cylinder head.
- Fit the fork part of the hanger onto the rib of the cylinder head.

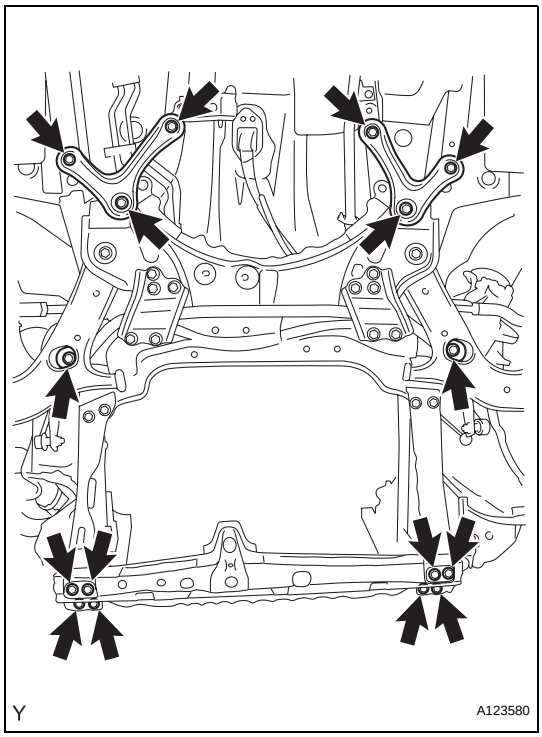
(b) Install an engine sling device to the engine and hold the engine with a chain block.
CAUTION:
Do not raise the engine more than necessary. If the engine is raised excessively, the vehicle may also be lifted up.



(c) Set an engine lifter underneath the engine.

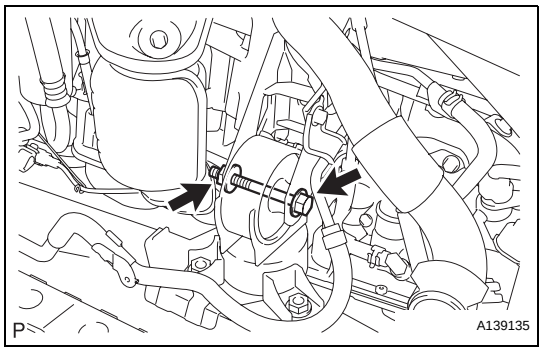
(d) Remove the column hole cover. Loosen the bolt holding the intermediate shaft, and slide the intermediate shaft.

(e) Put matchmarks on the intermediate shaft and pinion.

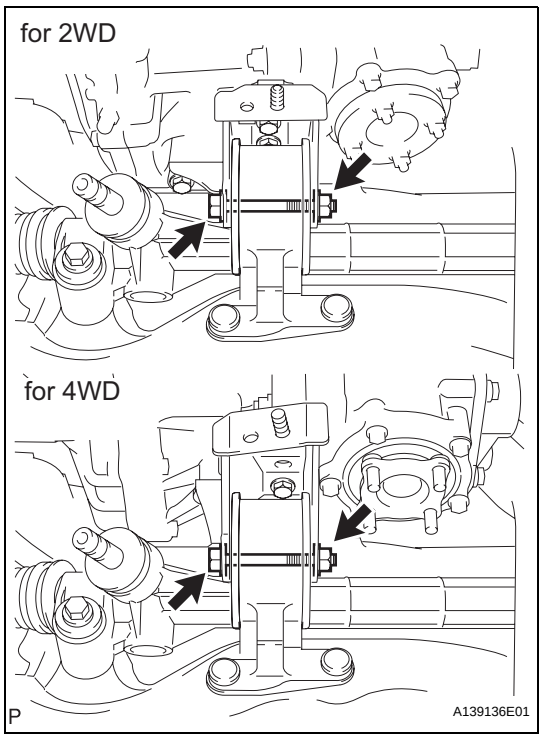


(f) Remove the 2 bolts and 2 nuts, and disconnect the engine mounting insulator RH.

(g) Remove the bolt and nut, and disconnect the engine mounting insulator LH.



EM

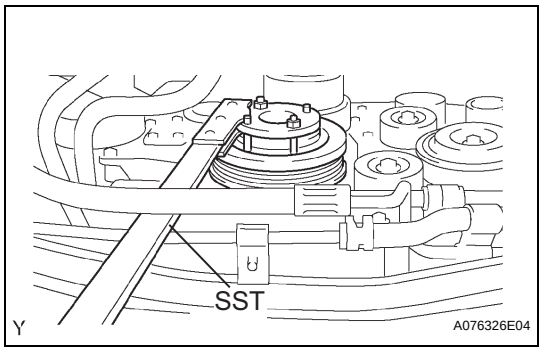


(h) Remove the 6 bolts and front suspension member brace rear RH and LH.
(i) Remove the 6 bolts, crossmember and suspension member.
(j) Using the chain block, slowly remove the engine from the vehicle and the intermediate shaft from the pinion. Then set the engine on the engine lifter.
NOTICE:
- **Make sure that the engine is clear of all wiring and hoses.**
- **While lowering the engine from the vehicle, do not allow it to contact the vehicle.**

HINT:
Place the engine on wooden blocks or an equivalent so that the engine is level.
(k) Remove the sling device from the engine.

45. REMOVE FRONT CROSSMEMBER SUB-ASSEMBLY
(a) Install a chain block.

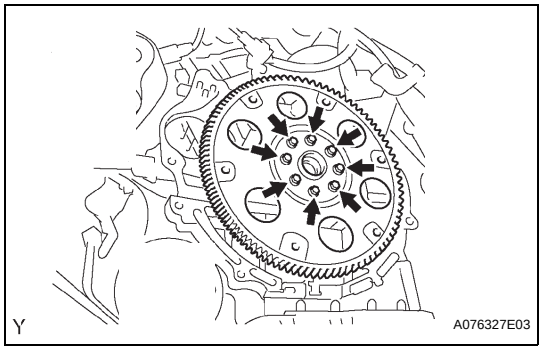
(b) Remove the bolt, nut and crossmember.



46. REMOVE FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY
(a) Remove the bolt and suspension crossmember.

47. REMOVE ENGINE WIRE
(a) Remove the engine wire from the engine.

48. REMOVE STARTER ASSEMBLY (See page ST-6)

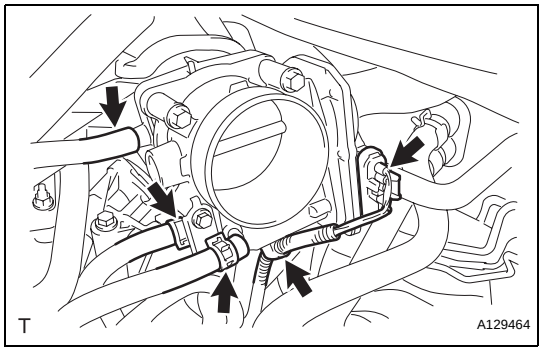


49. REMOVE TRANSFER ASSEMBLY (for 4WD) (See page TF-60)

50. REMOVE AUTOMATIC TRANSAXLE ASSEMBLY
(a) 2WD:
Remove the automatic transaxle (see page AX-172).
(b) 4WD:
Remove the automatic transaxle (see page AX-173).

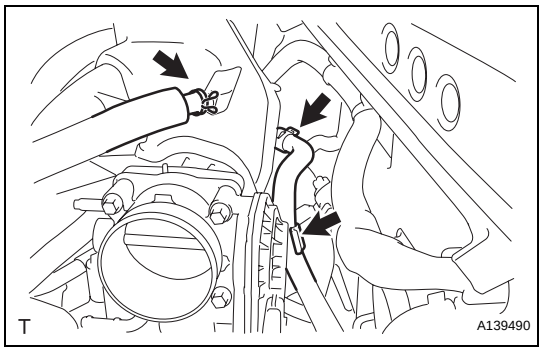
51. REMOVE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY

(a) Using SST, hold the crankshaft.
SST 09213-70011, 09330-00021



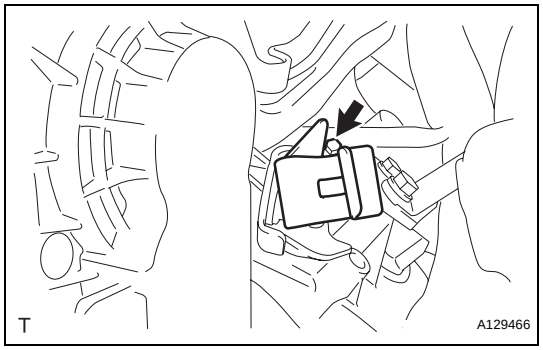
(b) Remove the 8 bolts, front spacer, drive plate and rear spacer.
NOTICE:
Do not reuse the bolts.

52. INSTALL ENGINE TO ENGINE STAND

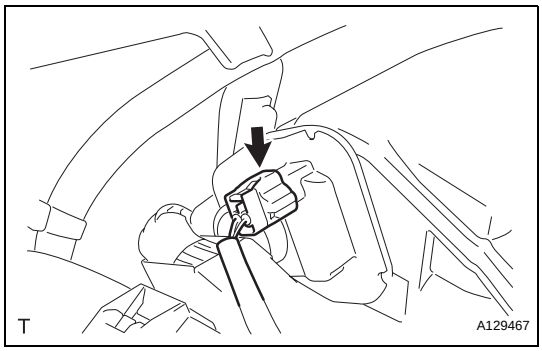


(a) Install the engine to an engine stand. Remove the sling device and chain block from the engine.

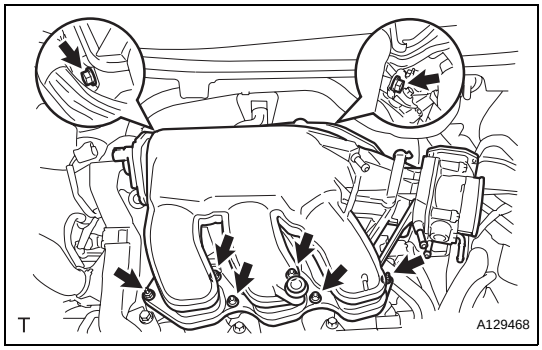
EM



53. REMOVE INTAKE AIR SURGE TANK ASSEMBLY



(a) Disconnect the 2 water by-pass hoses from the throttle body.
(b) Disconnect the vapor feed hose.
(c) Disconnect the throttle body connector and clamp.

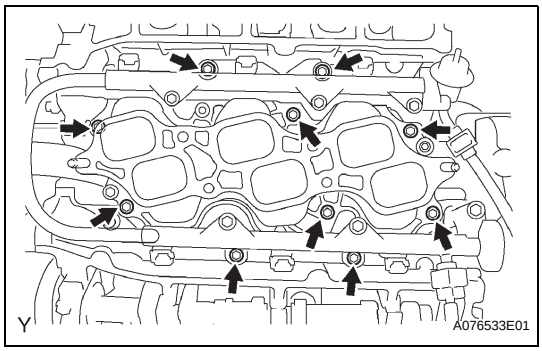


(d) Disconnect the No. 2 ventilation hose.
(e) Disconnect the union to check valve hose.

(f) Remove the bolt and vacuum hose clamp.

(g) Disconnect the connector.

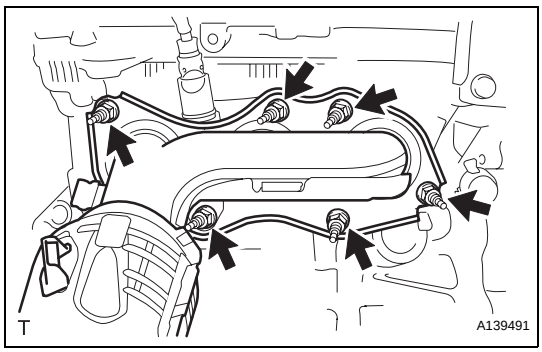
(h) Using a 5 mm socket hexagon wrench, remove the 4 bolts.
(i) Remove the 2 nuts, 2 bolts and surge tank.
(j) Remove the gasket from the surge tank.



54. REMOVE IGNITION COIL ASSEMBLY

(a) Remove the 6 bolts and 6 coils from the cylinder head.

55. REMOVE NO. 2 ENGINE MOUNTING STAY RH

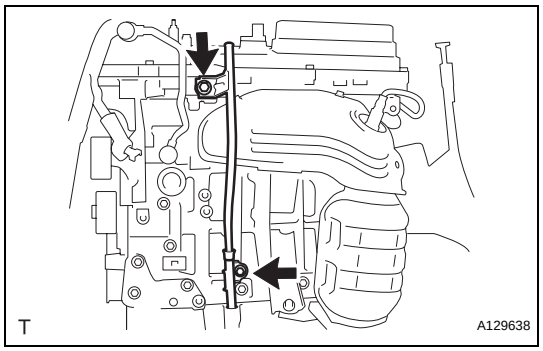


(a) Remove the bolt and mounting stay.

56. REMOVE FUEL INJECTOR ASSEMBLY (See page FU-14)

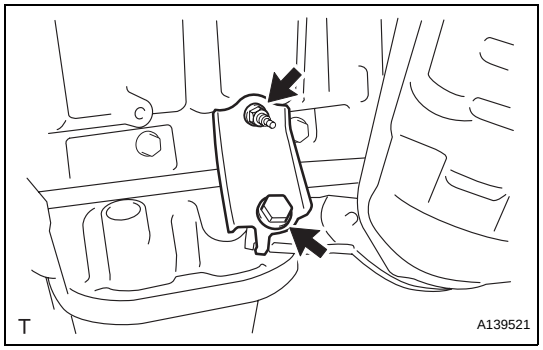
57. REMOVE INTAKE MANIFOLD

(a) Remove the 6 bolts, 4 nuts, intake manifold and 2 gaskets.



58. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY RH

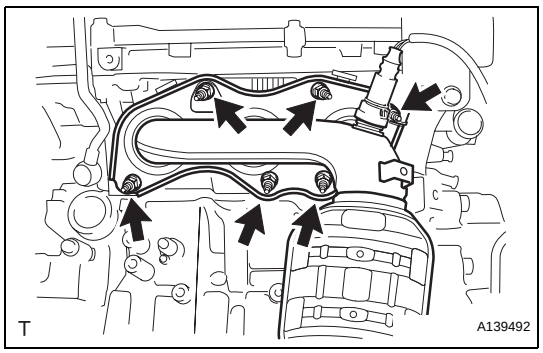
(a) Disconnect the air fuel ratio sensor connector clamp.
(b) Uniformly loosen and remove the 6 nuts.
(c) Remove the manifold and gasket.



59. REMOVE FAN AND GENERATOR V BELT (See page EM-8)

60. REMOVE COMPRESSOR WITH PULLEY ASSEMBLY (See page AC-220)

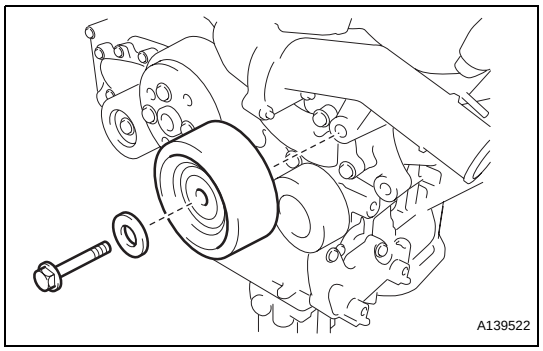
61. REMOVE GENERATOR ASSEMBLY (See page CH-12)



62. REMOVE OIL DIPSTICK GUIDE
(a) Remove the dipstick.
(b) Remove the 2 bolts, and the No. 1 and No. 2 guides.
(c) Remove the O-rings from the guide.

63. REMOVE NO. 2 MANIFOLD STAY
(a) Remove the bolt, nut and manifold stay.

64. REMOVE NO. 2 EXHAUST MANIFOLD HEAT INSULATOR
(a) Remove the 3 bolts and insulator.



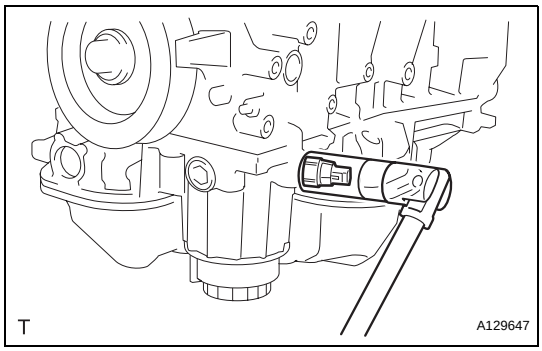
65. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY LH
(a) Uniformly loosen and remove the 6 nuts.
(b) Remove the manifold and gasket.

66. REMOVE ENGINE MOUNTING BRACKET RH
(a) Remove the 3 bolts and bracket.

67. REMOVE DRIVE SHAFT BEARING BRACKET
(a) Remove the 3 bolts and drive shaft bearing bracket.

68. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY
(a) Remove the 5 bolts and V-ribbed belt tensioner assembly.

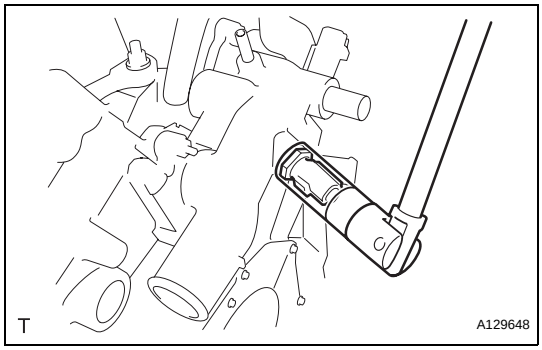
69. REMOVE NO. 2 TIMING GEAR COVER
(a) Remove the 2 bolts and gear cover.



70. REMOVE NO. 2 IDLER PULLEY SUB-ASSEMBLY
(a) Remove the bolt, plate and idler pulley.

71. REMOVE WATER PUMP PULLEY (See page CO-12)

72. REMOVE NO. 1 FRONT ENGINE MOUNTING BRACKET LH
(a) Remove the 6 bolts and bracket.



EM

73. REMOVE ENGINE OIL PRESSURE SWITCH ASSEMBLY

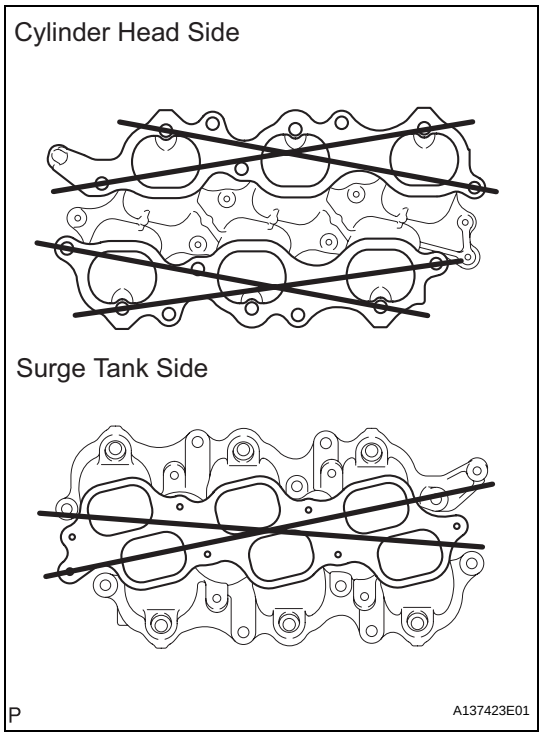
(a) Using a 24 mm deep socket wrench, remove the pressure switch.

74. REMOVE KNOCK SENSOR (See page ES-459)

75. REMOVE ENGINE COOLANT TEMPERATURE SENSOR

(a) Using a 19 mm deep socket wrench, remove the sensor and gasket.

INSPECTION



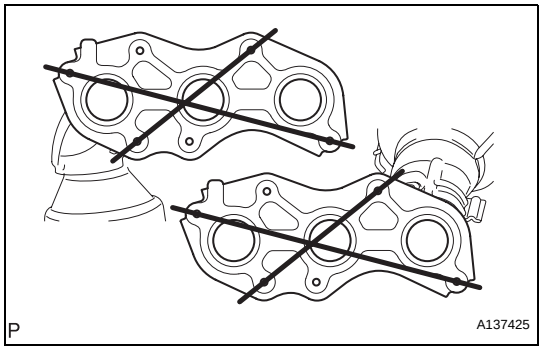
1. INSPECT INTAKE MANIFOLD

(a) Using a precision straightedge and feeler gauge, measure the warpage of the contact surface of the cylinder head and intake air surge tank.

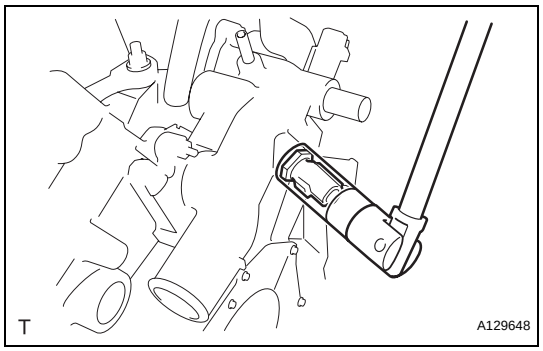
Maximum warpage

Item	Specified Condition
Intake manifold side	0.8 mm (0.031 in.)
Cylinder head side	0.2 mm (0.008 in.)

If the warpage is greater than the maximum, replace the manifold.



2. INSPECT EXHAUST MANIFOLD

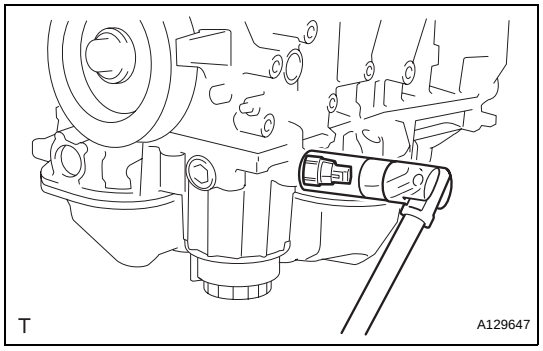


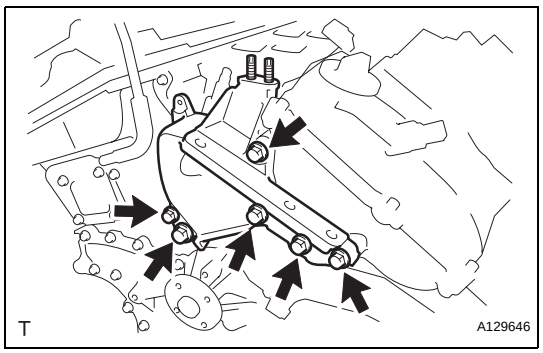
(a) Using a precision straightedge and feeler gauge, measure the surface contacting the cylinder head for warpage.

Maximum warpage:

0.70 mm (0.0028 in.)

If the warpage is greater than the maximum, replace the manifold.

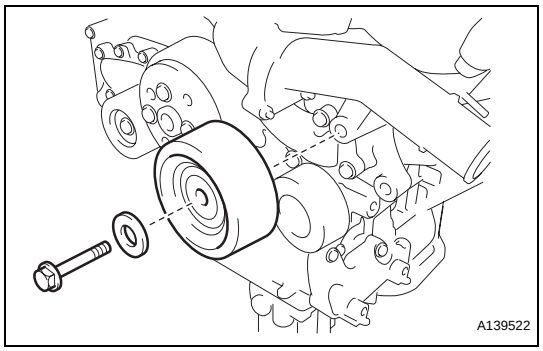




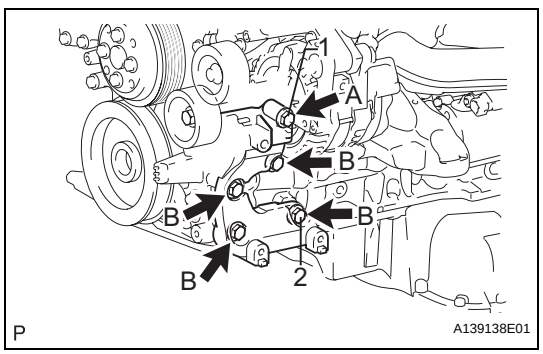
INSTALLATION

1. **INSTALL ENGINE COOLANT TEMPERATURE SENSOR**
   (a) Using a 19 mm deep socket wrench, install the sensor and a new gasket.
   Torque: 20 N*m (204 kgf*cm, 14 ft.*lbf)

2. **INSTALL KNOCK SENSOR (See page ES-459)**



3. **INSTALL ENGINE OIL PRESSURE SWITCH ASSEMBLY**
   (a) Clean the threads of the oil pressure switch. Apply adhesive to 2 or 3 threads of the oil pressure switch.
   Adhesive:
   Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent
   (b) Using a 24 mm deep socket wrench, install the oil pressure switch.
   Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

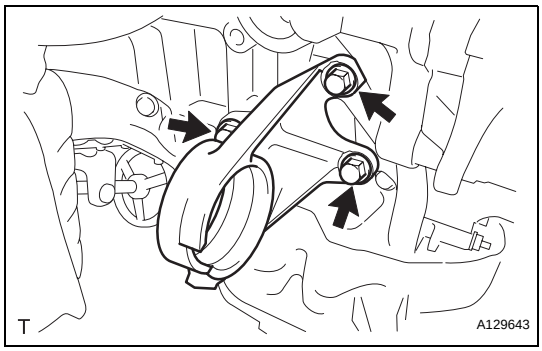


4. **INSTALL NO. 1 FRONT ENGINE MOUNTING BRACKET LH**
   (a) Install the mounting bracket with the 6 bolts.
   Torque: 54 N*m (551 kgf*cm, 40 ft.*lbf)

5. **INSTALL WATER PUMP PULLEY (See page CO-14)**

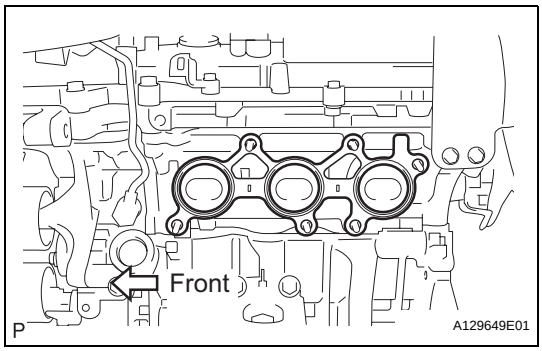
6. **INSTALL NO. 2 IDLER PULLEY SUB-ASSEMBLY**
   (a) Install the idler pulley and cover plate with the bolt.
   Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)

7. **INSTALL NO. 2 TIMING GEAR COVER**
   (a) Install the gear cover with the 2 bolts.
   Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)



8. **INSTALL V-RIBBED BELT TENSIONER ASSEMBLY**
   (a) Temporarily install the V-ribbed belt tensioner with the 5 bolts.
   (b) Install the V-ribbed belt tensioner by tightening the bolt 1 and bolt 2 in the order shown in the illustration.
   Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)
   (c) Tighten the other bolts.
   Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)
   Each bolt length is as follows:

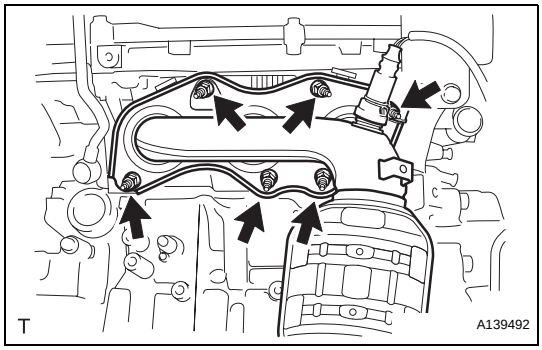
A	70 mm (2.76 in.)



EM

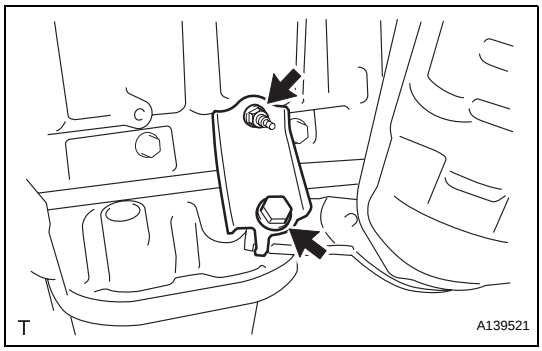
B	35 mm (1.37 in.)

9. INSTALL DRIVE SHAFT BEARING BRACKET



(a) Install the drive shaft bearing bracket with the 3 bolts.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)

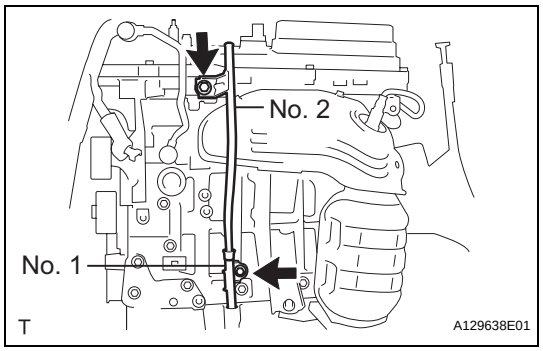
10. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY LH



(a) Install a new gasket as shown in the illustration.

(b) Install the manifold with the 6 nuts.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

11. INSTALL NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

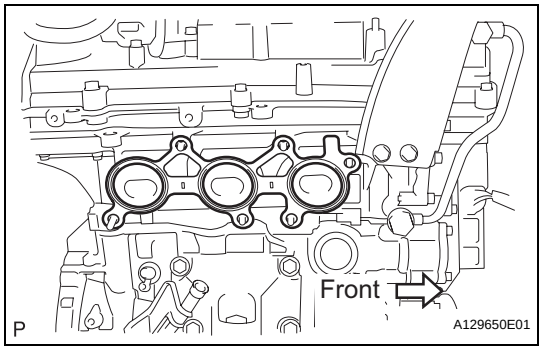


(a) Install the No. 2 heat insulator with the 3 bolts.
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)

12. INSTALL NO. 2 MANIFOLD STAY

(a) Install the No. 2 manifold stay with the bolt and nut.
Torque: 34 N*m (347 kgf*cm, 25 ft.*lbf)

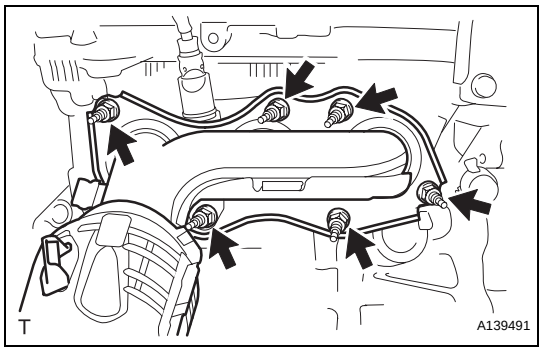
EM



13. INSTALL OIL DIPSTICK GUIDE

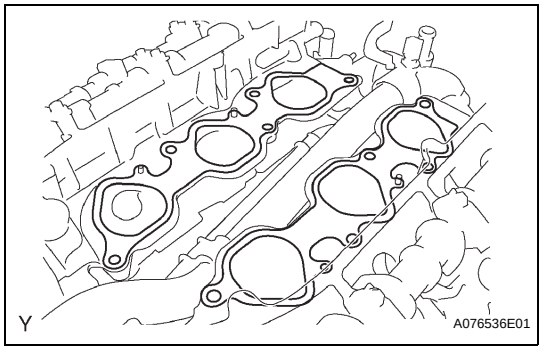
(a) Install 2 new O-rings to the guide.
(b) Apply a light coat of engine oil to the O-rings.
(c) Push in the guide end into the guide hole.
(d) Install the No. 1 guide with the bolt.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)
(e) Install the No. 2 guide with the bolt.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)
(f) Install the dipstick.

14. INSTALL GENERATOR ASSEMBLY (See page CH-19)



15. INSTALL COMPRESSOR WITH PULLEY ASSEMBLY (See page AC-221)

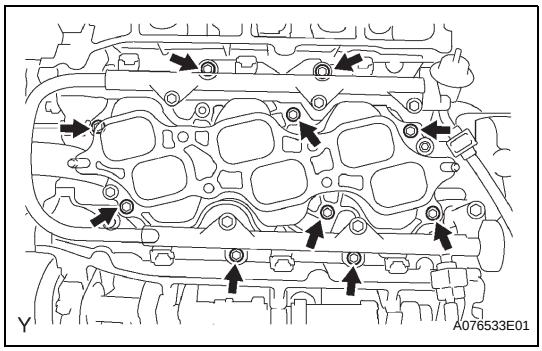
16. INSTALL FAN AND GENERATOR V BELT (See page EM-8)



17. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY RH

(a) Install a new gasket as shown in the illustration.

(b) Install the manifold with the 6 nuts.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

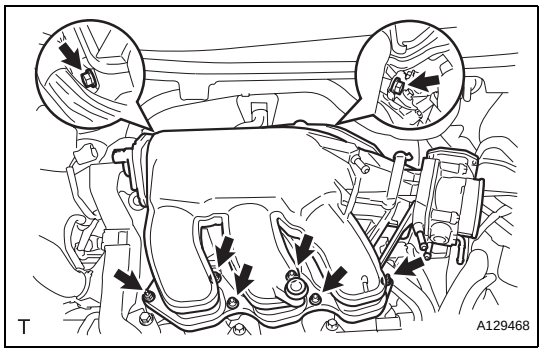


18. INSTALL INTAKE MANIFOLD

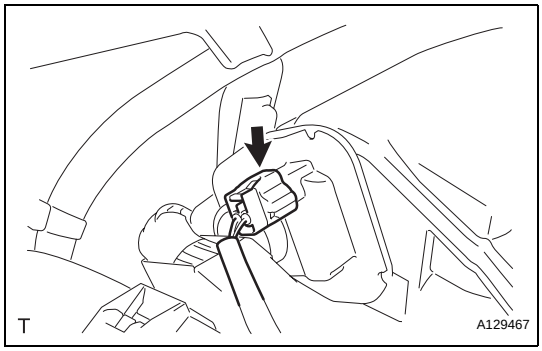
(a) Set a new gasket on each cylinder head.
NOTICE:
- **Align the port holes of the gasket and cylinder head.**
- **Be careful of the installation direction.**

(b) Set the intake manifold on the cylinder heads.

EM

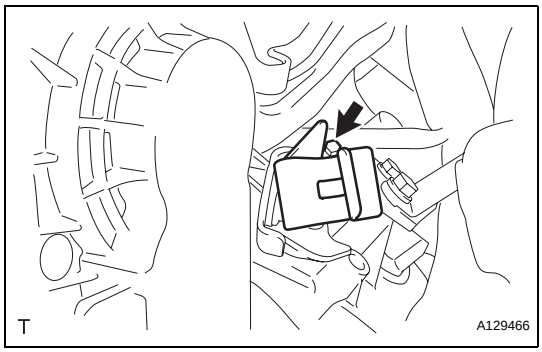


(c) Install and uniformly tighten the 6 bolts and 4 nuts in several passes.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)
(d) Connect the 6 fuel injector connectors.

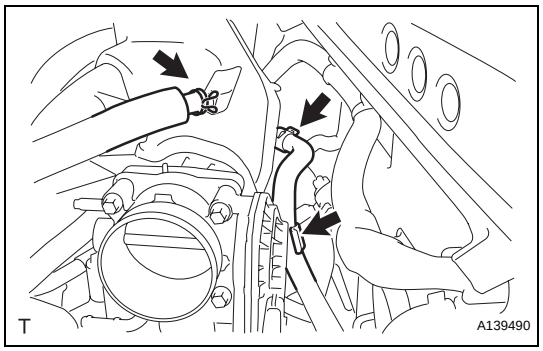


19. INSTALL FUEL INJECTOR ASSEMBLY (See page FU-16)

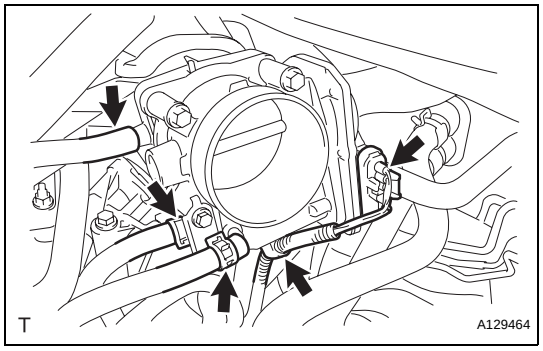
20. INSTALL NO. 2 ENGINE MOUNTING STAY RH
(a) Install the mounting stay with the bolt.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)



21. INSTALL IGNITION COIL ASSEMBLY
(a) Install the 6 ignition coils with the 6 bolts to the cylinder head.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)



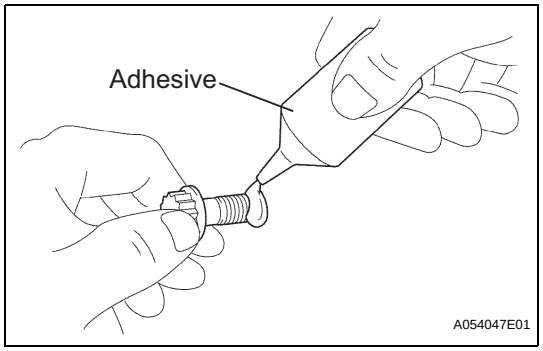
22. INSTALL INTAKE AIR SURGE TANK ASSEMBLY
NOTICE:
Make sure there is no oil on the bolts. If there is oil on the bolts, clean them before installing them.
(a) Install a new gasket to the surge tank.
(b) Using a 5 mm hexagon socket wrench, install the 4 bolts.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)
(c) Install the surge tank with the 2 nuts and 2 bolts.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf) for bolt
16 N*m (163 kgf*cm, 12 ft.*lbf) for nut



(d) Connect the connector.

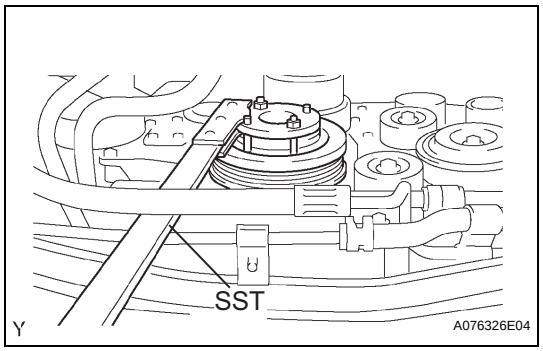
(e) Install the vacuum hose clamp with the bolt.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

(f) Connect the union to check valve hose.
(g) Connect the No. 2 ventilation hose.



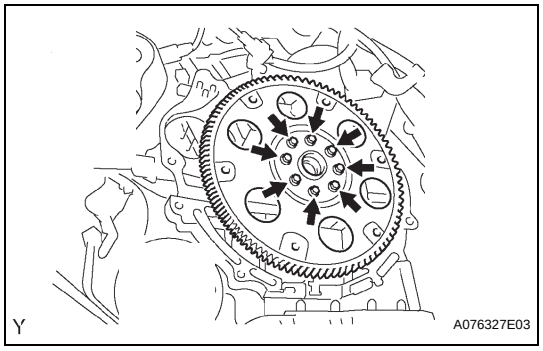
(h) Install the clamp and connect the throttle body connector.
(i) Connect the vapor feed hose.
(j) Connect the 2 water by-pass hoses to the throttle body.

23. REMOVE ENGINE FROM ENGINE STAND



(a) Install a sling device and chain block to the engine.
(b) Remove the engine from the engine stand.

EM



24. INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY

(a) Clean the bolt and its hole.
(b) Apply adhesive to 2 or 3 threads of the bolt end.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent

(c) Using SST, hold the crankshaft.
SST 09213-70011, 09330-00021
(d) Install the flywheel, drive plate and drive plate spacer on the crankshaft.

(e) Uniformly install and tighten the 8 bolts in the sequence shown in the illustration.
Torque: 178 N*m (1,815 kgf*cm, 132 ft.*lbf)
NOTICE:
Do not start the engine for at least 1 hour after the installation.

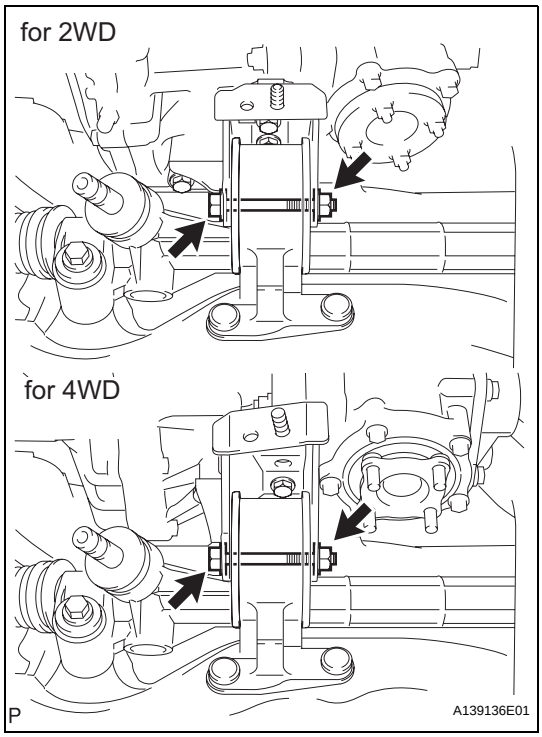
25. INSTALL AUTOMATIC TRANSAXLE ASSEMBLY

(a) 2WD:
Install the automatic transaxle (see page AX-174).

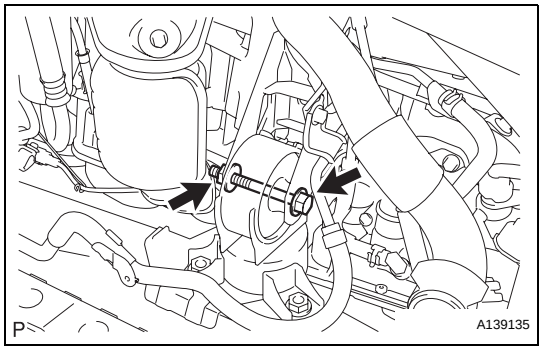
(b) 4WD:
Install the automatic transaxle (see page AX-175).

26. INSTALL TRANSFER ASSEMBLY (for 4WD) (See page TF-75)

27. INSTALL STARTER ASSEMBLY (See page ST-14)



28. INSTALL ENGINE WIRE



(a) Install the engine wire to the engine.

29. INSTALL FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY

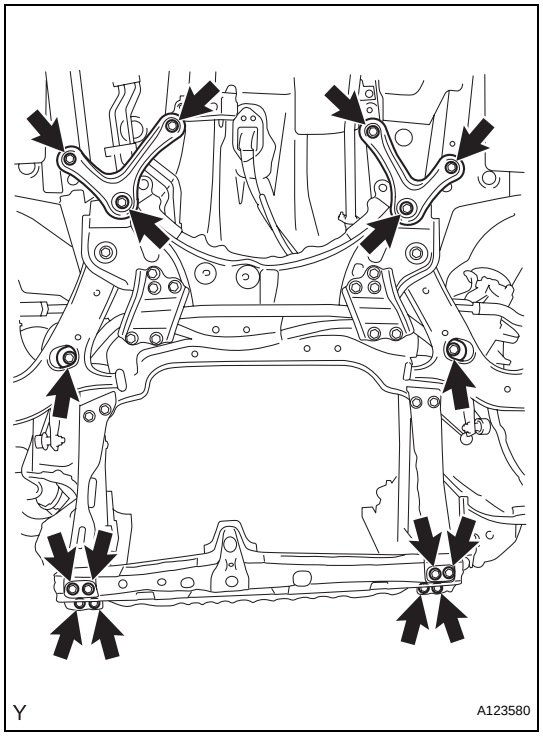
(a) Attach the engine together with the transaxle to the suspension crossmember and mounting.

(b) Install the bolt which secures the engine mounting bracket to the mounting insulator.
Torque: 95 N*m (969 kgf*cm, 70 ft.*lbf)

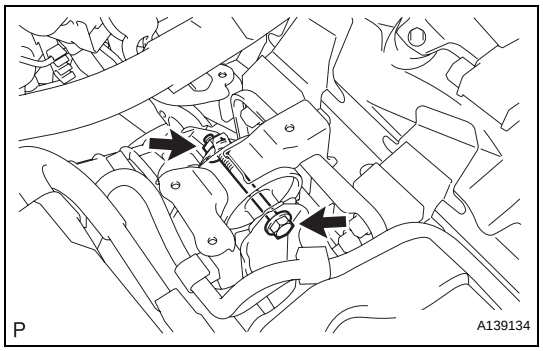
30. INSTALL FRONT CROSSMEMBER SUB-ASSEMBLY

(a) Install the bolt and nut which secures the engine mounting bracket to the mounting insulator.
Torque: 145 N*m (1,479 kgf*cm, 107 ft.*lbf)

31. INSTALL ENGINE WITH TRANSAXLE

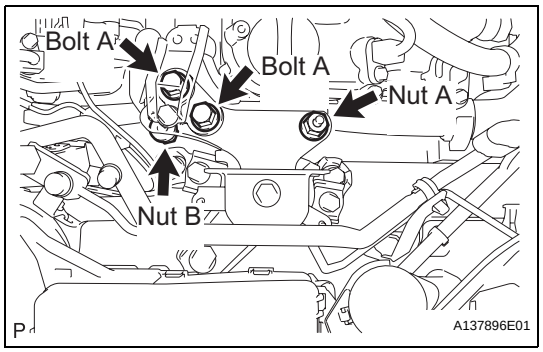


(a) Place the engine on an engine lifter.
HINT:
Place the engine on wooden blocks or an equivalent so that the engine is level.



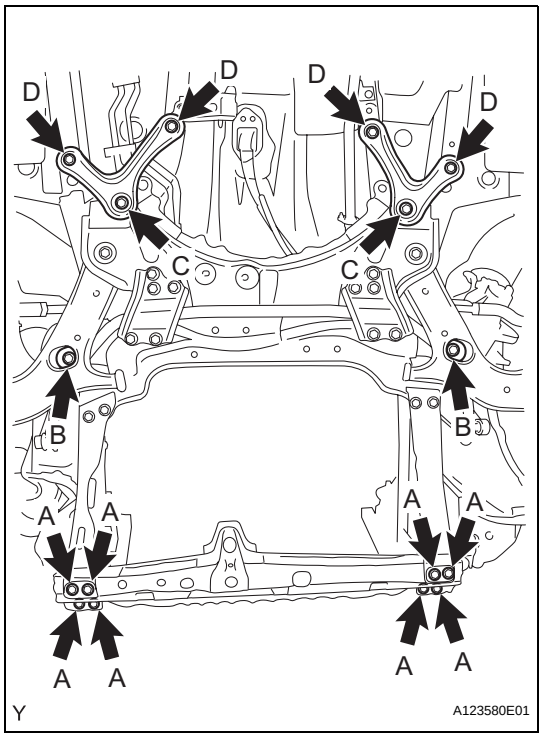
(b) Using the chain block, slowly install the engine to the vehicle and the intermediate shaft to the pinion.
CAUTION:
Do not raise the engine more than necessary. If the engine is raised excessively, the vehicle may also be lifted up.
NOTICE:
- **Make sure that the engine is clear of all wiring and hoses.**

- **While raising the engine into the vehicle, do not allow it to contact the vehicle.**
- **Align the matchmarks on the intermediate shaft and pinion.**



(c) Temporarily install the suspension member and crossmember with the 10 bolts.

(d) Temporarily install the member brace rear RH and LH with the 6 bolts.



(e) Install the engine mounting insulator LH with the bolt and nut.
Torque: 56 N*m (571 kgf*cm, 41 ft.*lbf)
NOTICE:
While holding the bolt in place, tighten the nut.

(f) Install the engine mounting insulator RH with the 2 bolts and 2 nuts.
Torque: 95 N*m (969 kgf*cm, 70 ft.*lbf) for bolt and nut A
52 N*m (530 kgf*cm, 38 ft.*lbf) for nut B

(g) Tighten the suspension member and crossmember's bolts.
Torque: 96 N*m (979 kgf*cm, 71 ft.*lbf) for bolt A
145 N*m (1,478 kgf*cm, 107 ft.*lbf) for bolt B

(h) Tighten the member brace rear's bolts.
Torque: 145 N*m (1,478 kgf*cm, 107 ft.*lbf) for bolt C
93 N*m (948 kgf*cm, 69 ft.*lbf) for bolt D

(i) Remove the sling device and chain block.

(j) Remove the 2 bolts and No. 1 and No. 2 engine hangers.

32. INSTALL FRONT DRIVE SHAFT LH

(a) 2WD:
Install the drive shaft (see page DS-33).

(b) 4WD:
Install the drive shaft (see page DS-66).

33. INSTALL FRONT DRIVE SHAFT RH

(a) 2WD:
Install the drive shaft (see page DS-33).

(b) 4WD:
Install the drive shaft (see page DS-66).

34. CONNECT TIE ROD END SUB-ASSEMBLY LH (See page PS-45)

35. CONNECT TIE ROD END SUB-ASSEMBLY RH (See page PS-45)

36. CONNECT STEERING INTERMEDIATE SHAFT (See page PS-44)

37. CONNECT FRONT STABILIZER LINK ASSEMBLY LH (See page SP-31)

38. CONNECT FRONT STABILIZER LINK ASSEMBLY RH (See page SP-31)

39. INSTALL FRONT AXLE HUB NUT LH

(a) Install the hub nut (see page AH-11).

40. INSTALL FRONT AXLE HUB NUT RH

(a) Install the hub nut (see page AH-11).

41. INSTALL FRONT WHEELS

42. INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-5)

43. INSTALL CENTER EXHAUST PIPE ASSEMBLY (See page EX-4)

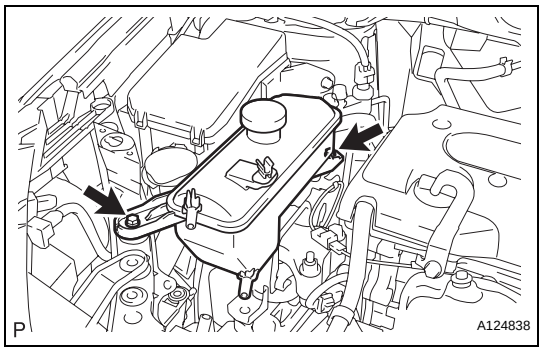
44. INSTALL FRONT EXHAUST PIPE ASSEMBLY (See page EX-4)

45. CONNECT TRANSMISSION CONTROL CABLE ASSEMBLY

(a) 2WD:
Connect the control cable (see page AX-154).

EM

(b) 4WD:
Connect the control cable (see page AX-154).

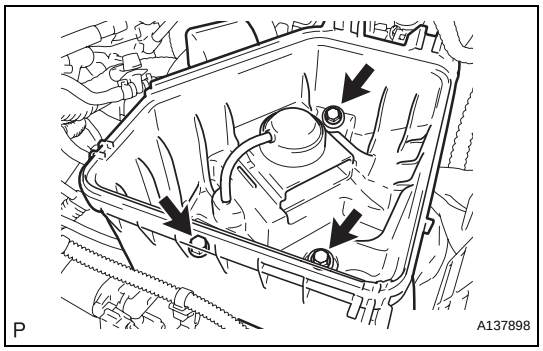


46. CONNECT RADIATOR HOSE INLET

47. CONNECT RADIATOR HOSE OUTLET

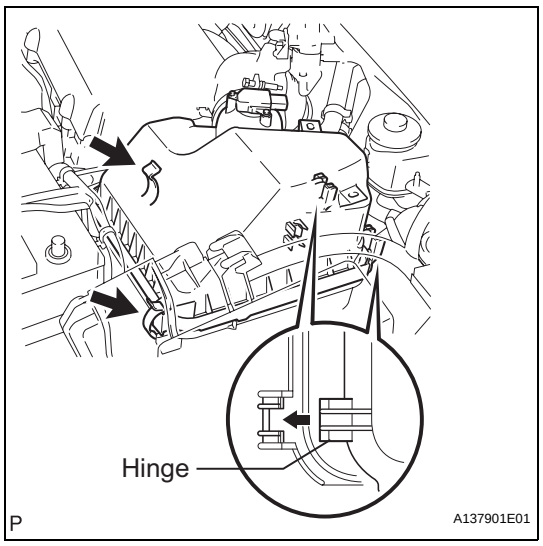
48. CONNECT OIL COOLER HOSE

49. CONNECT SUCTION HOSE SUB-ASSEMBLY (See page AC-221)



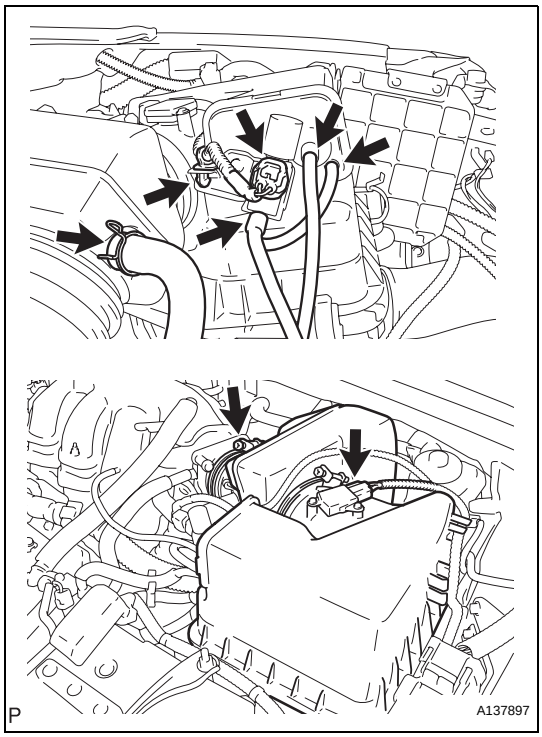
50. INSTALL DISCHARGE HOSE SUB-ASSEMBLY (See page AC-221)

51. INSTALL RADIATOR RESERVOIR TANK ASSEMBLY
(a) Install the reservoir tank with the 2 bolts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
(b) Connect the 2 hoses



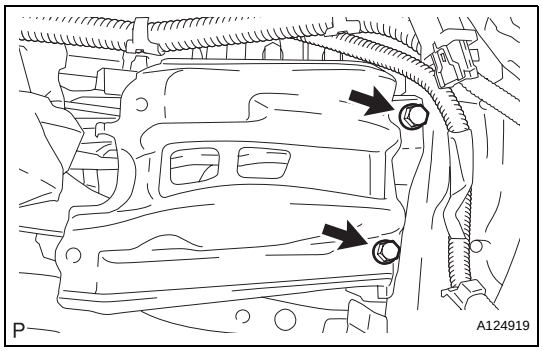
52. INSTALL ECM (See page ES-471)

53. CONNECT HOSES AND CONNECTORS
(a) Connect the 2 ECM connectors.
(b) Connect the 2 heater hoses.
(c) Connect the fuel hoses.
(d) Connect the starter wire with the nut.
Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)
(e) Connect the 3 connectors and wire with the nut.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)
(f) Install the engine room junction block cover (upper).

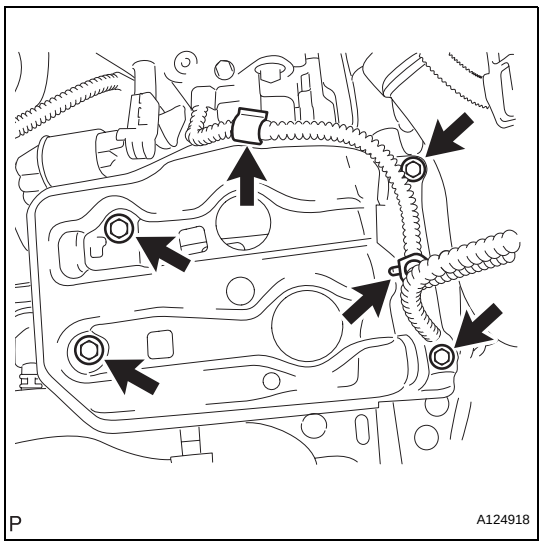


54. INSTALL AIR CLEANER CASE
(a) Install the air cleaner case with the 3 bolts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
(b) Connect the harness clamp.

55. INSTALL AIR CLEANER CAP SUB-ASSEMBLY
(a) Install the air cleaner filter element onto the air cleaner case.



(b) Insert the hinge part of the air cleaner cap into the air cleaner case, then hang the 2 hook clamps.

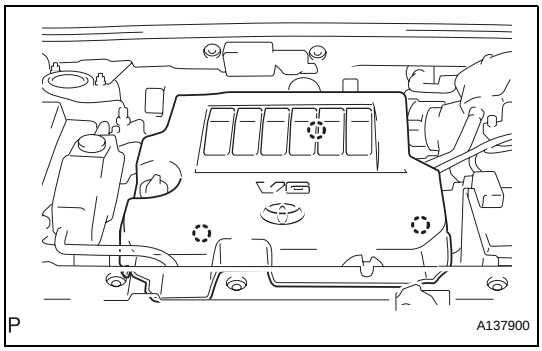


EM

(c) Tighten the No. 1 air cleaner hose clamp.
(d) Connect the No. 2 ventilation hose to the air cleaner hose.
(e) Connect the wire harness clamp and 3 vacuum hoses.
(f) Connect the VSV (intake air control) connector.
(g) Connect the mass air flow meter connector.

56. INSTALL BATTERY BRACKET REINFORCEMENT
(a) Install the bracket reinforcement with the 2 bolts.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)

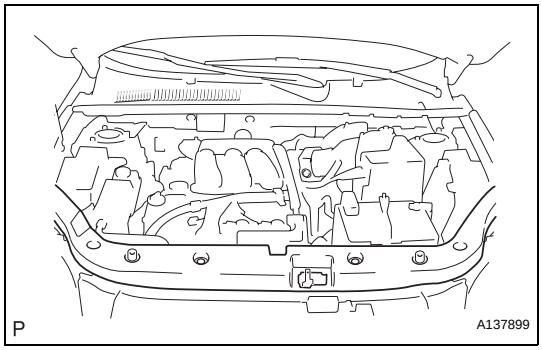
57. INSTALL FRONT BATTERY BRACKET
(a) Install the bracket front with the 4 bolts.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)
(b) Attach the 2 wire harness clamps.



58. INSTALL BATTERY

59. REMOVE BATTERY CLAMP SUB-ASSEMBLY
(a) Attach the hook of the battery clamp to the battery bracket front.
(b) Temporarily tighten the nut and install the bolt.
(c) Adjust the battery clamp's position.
(d) Fully tighten the nut and bolt.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
(e) Attach the 2 wire harness clamps.

60. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



61. INSTALL HOOD SUB-ASSEMBLY
(a) Install the hood (see page ED-7).
(b) Adjust the hood (see page ED-5).

62. **ADD AUTOMATIC TRANSAXLE FLUID**
    (a) 2WD:
    Add automatic transmission fluid (see page AX-177).
    (b) 4WD:
    Add automatic transmission fluid (see page AX-178).
63. **ADD TRANSFER OIL (for 4WD) (See page TF-45)**
64. **ADD ENGINE OIL (See page LU-6)**
65. **ADD ENGINE COOLANT (See page CO-8)**
66. **CHARGE REFRIGERANT (See page AC-172)**
67. **CHECK FOR LEAKAGE OF REFRIGERANT (See page AC-173)**
68. **CHECK FOR ENGINE OIL LEAKS (See page LU-6)**
69. **CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)**
70. **CHECK FOR FUEL LEAKS**
71. **INSPECT EXHAUST GAS LEAKS**
72. **INSPECT SHIFT LEVER POSITION**
    (a) 2WD:
    Inspect the shift lever position (see page AX-159).
    (b) 4WD:
    Inspect the shift lever position (see page AX-158).
73. **ADJUST TRANSMISSION CONTROL CABLE**
    (a) 2WD:
    Adjust the shift lever position (see page AX-159).
    (b) 4WD:
    Adjust the shift lever position (see page AX-159).
74. **INSTALL FRONT FLOOR COVER (See page FU-39)**
75. **INSTALL NO. 2 ENGINE UNDER COVER**
    (a) Install the under cover with the 2 clips.
76. **INSTALL REAR ENGINE UNDER COVER LH**
    (a) Install the under cover with the 2 clips.
77. **INSTALL REAR ENGINE UNDER COVER RH**
    (a) Install the under cover with the 2 clips.
78. **INSTALL NO. 1 ENGINE UNDER COVER**
    (a) Install the under cover with the 4 bolts and 12 clips.

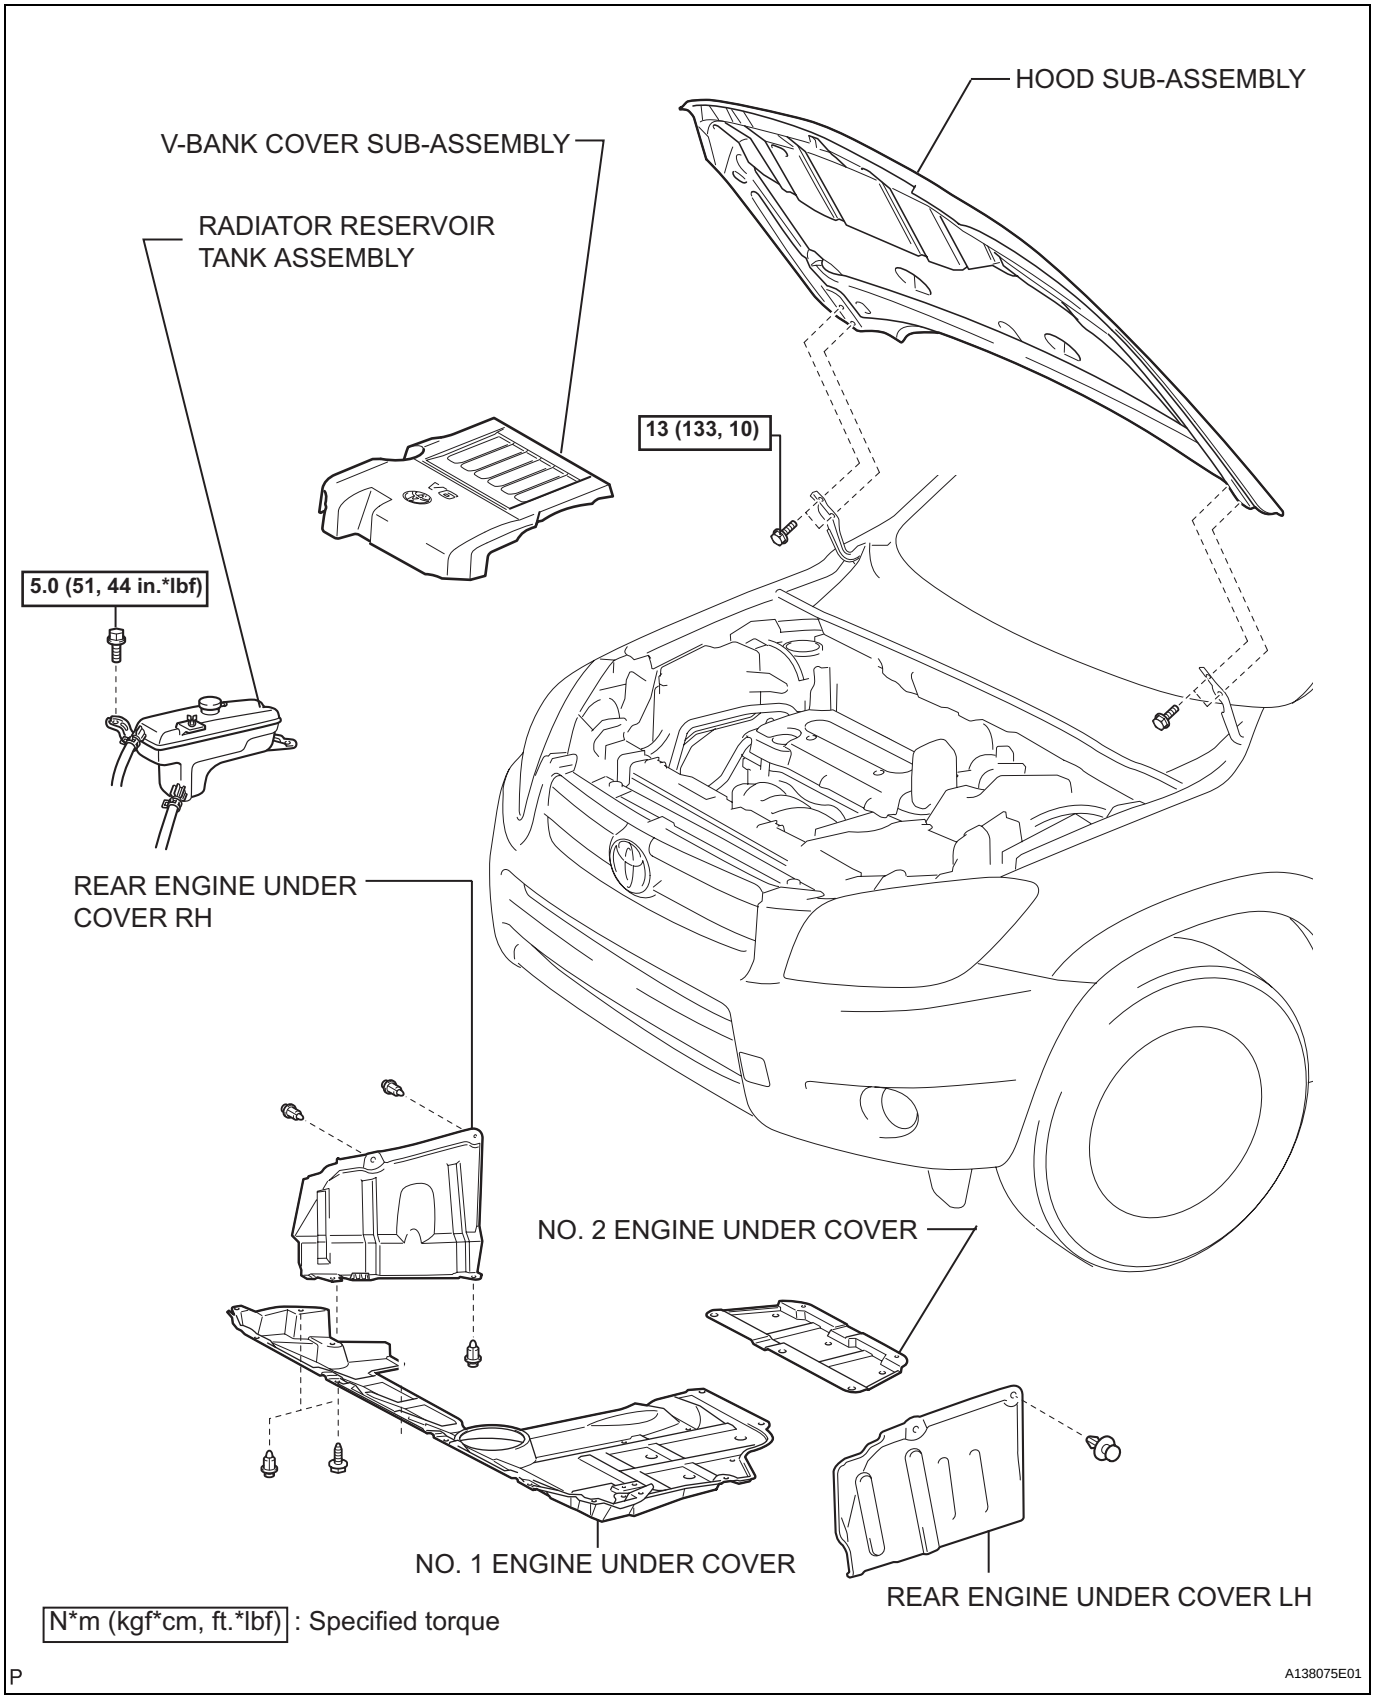
79. INSTALL V-BANK COVER SUB-ASSEMBLY

(a) Attach the 3 clips to install the engine cover.

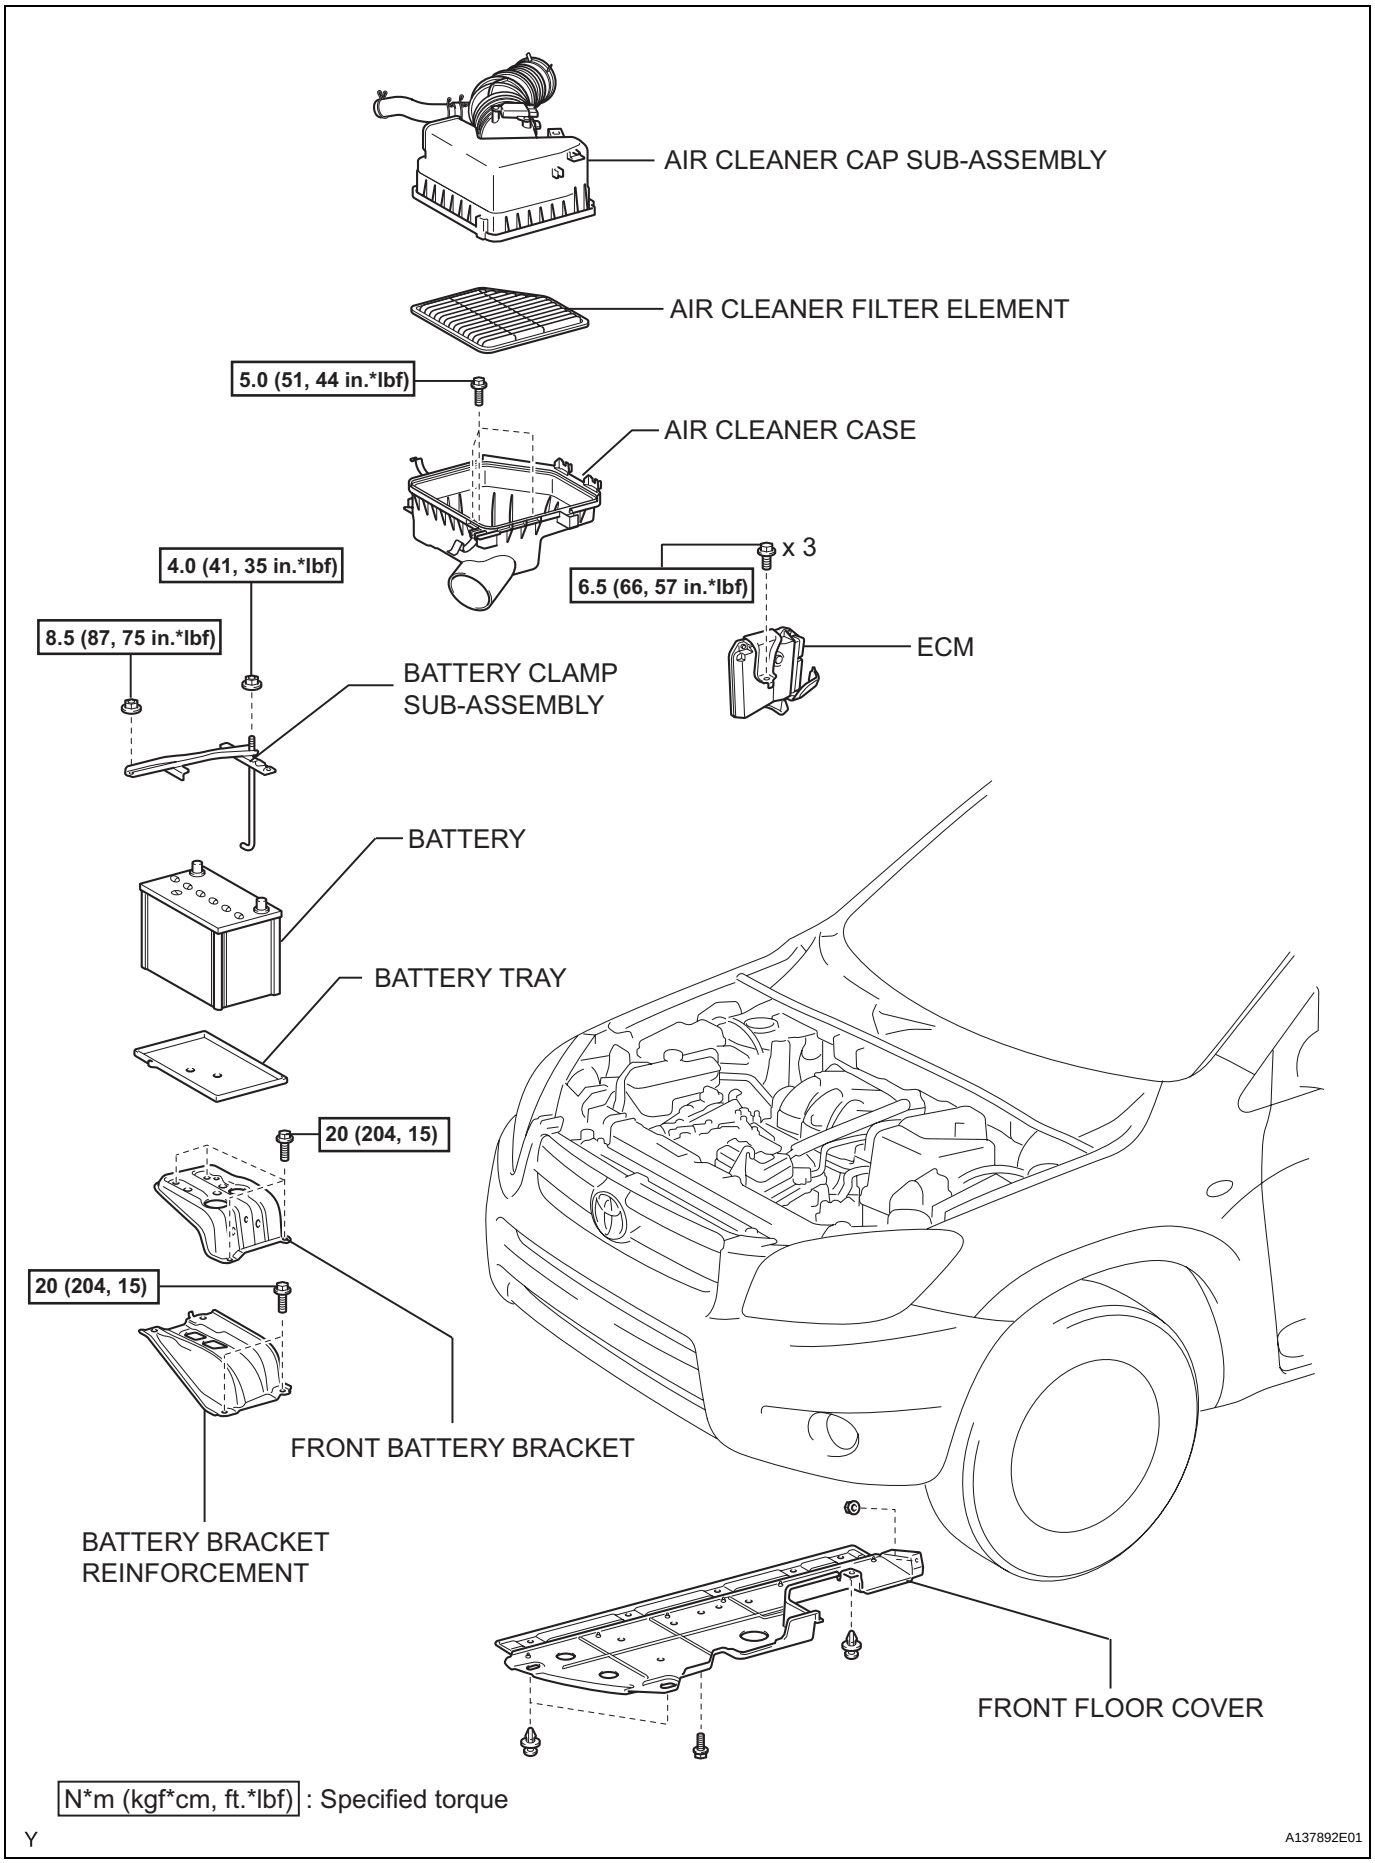
80. INSTALL RADIATOR SUPPORT OPENING COVER

(a) Install the cover with the 9 clips.

81. ADJUST FRONT WHEEL ALIGNMENT



(a) Adjust the front wheel alignment (see page SP-3).



82. INSPECT IDLE SPEED (See page EM-2)

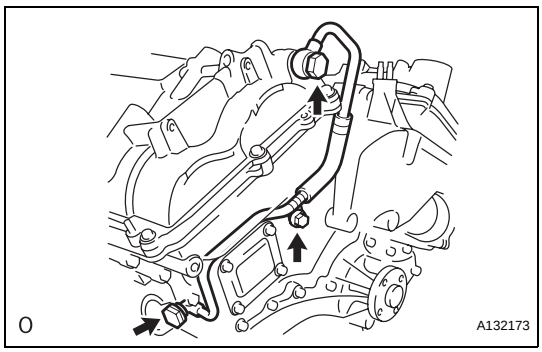
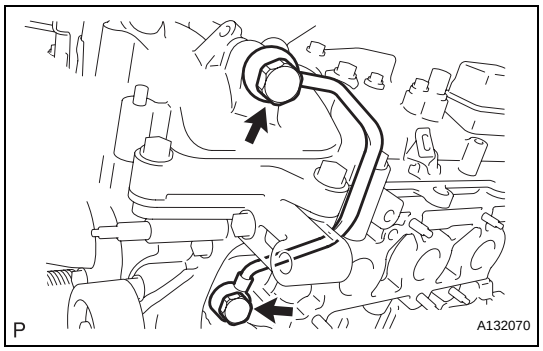
DISASSEMBLY

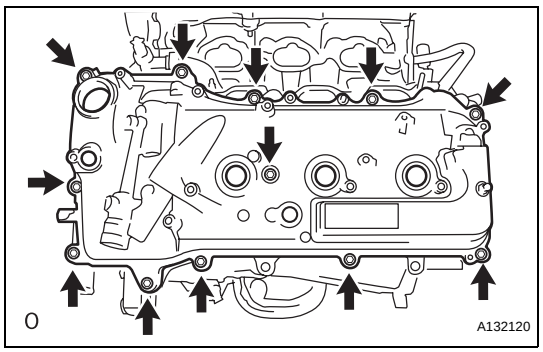


1. **REMOVE OIL FILLER CAP SUB-ASSEMBLY**
2. **REMOVE SPARK PLUG**
3. **REMOVE CAMSHAFT TIMING CONTROL VALVE ASSEMBLY (See page ES-440)**
4. **REMOVE VVT SENSOR (See page ES-443)**
5. **REMOVE WATER OUTLET**
   (a) Remove the 2 bolts, 4 nuts and water outlet.

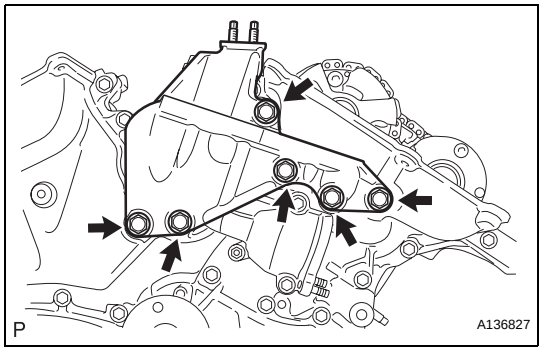
   (b) Remove the 2 gaskets and O-ring.

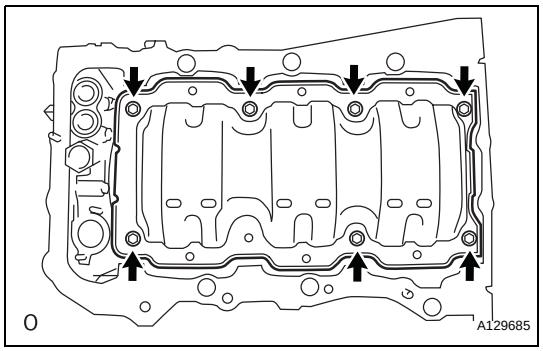


6. **REMOVE OIL PIPE**
   (a) Remove the bolt, 2 union bolts and oil pipe.
   (b) Remove the oil control valve filter RH and gaskets.

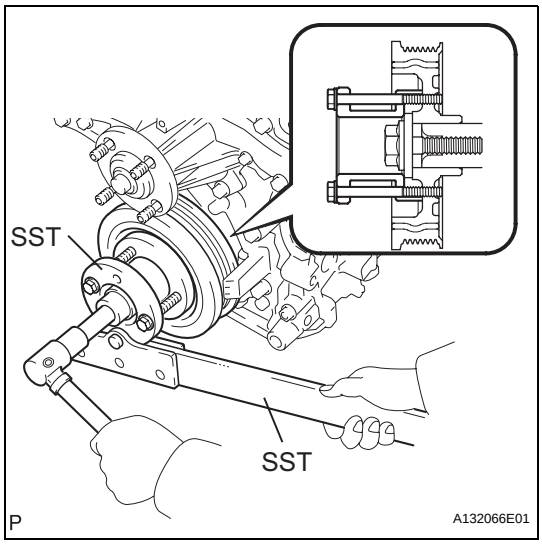


7. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (for Bank 1)**
   (a) Remove the 12 bolts, cylinder head cover and gasket.
   HINT:
   Make sure the removed parts are returned to the same places they were remove a from.



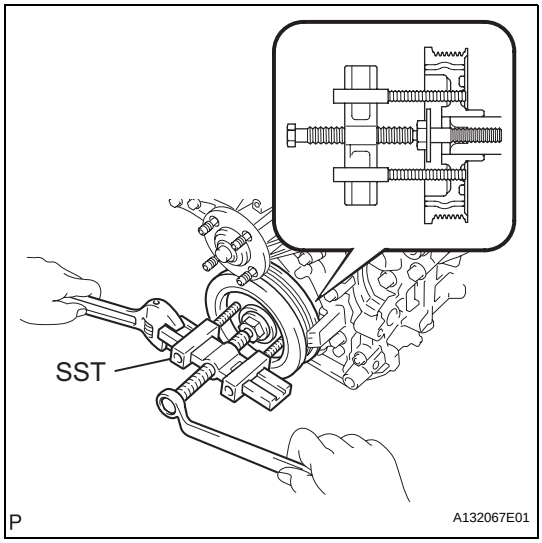


8. **REMOVE NO. 1 OIL PIPE**
   (a) Remove the 2 union bolts and oil pipe.
   (b) Remove the oil control valve filter LH and gaskets.

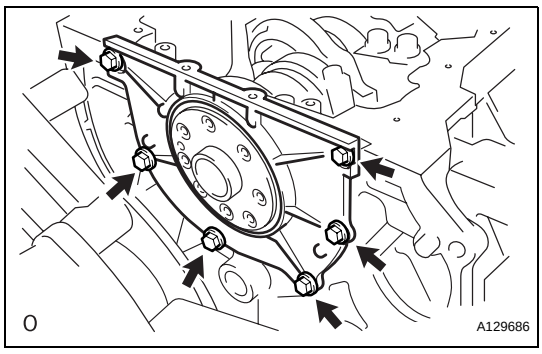


9. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (for Bank 2)**
   (a) Remove the 12 bolts, cylinder head cover and gasket.
   HINT:
   Make sure the removed parts are returned to the same places they were remove a from.

10. **REMOVE FRONT NO. 1 ENGINE MOUNTING BRACKET**
    (a) Remove the 6 bolts and mounting bracket.
11. **REMOVE WATER INLET HOUSING (See page CO-12)**
12. **REMOVE OIL FILTER CAP ASSEMBLY (See page LU-4)**
13. **REMOVE OIL FILTER ELEMENT (See page LU-5)**
14. **REMOVE NO. 2 OIL PAN SUB-ASSEMBLY (See page LU-12)**
15. **REMOVE OIL STRAINER SUB-ASSEMBLY (See page LU-13)**
16. **REMOVE OIL PAN SUB-ASSEMBLY (See page LU-13)**

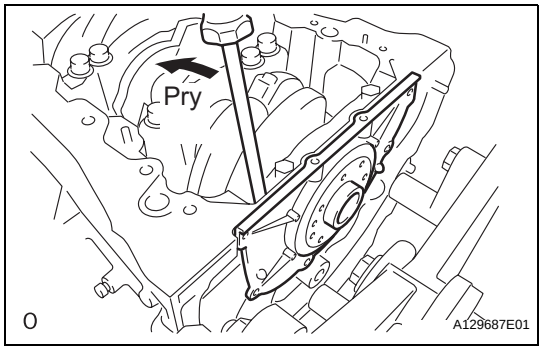


17. **REMOVE OIL PAN BAFFLE PLATE**
    (a) Remove the 7 bolts and baffle plate.



18. REMOVE CRANKSHAFT PULLEY

(a) Using SST, loosen the crankshaft pulley set bolt.
SST 09213-70011 (09213-70020), 09330-00021

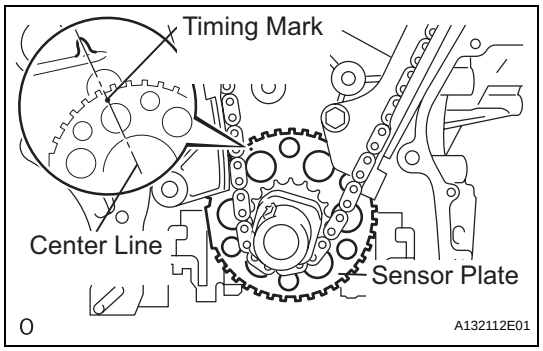


(b) Using the pulley set bolt and SST, remove the crankshaft pulley.
SST 09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05021)

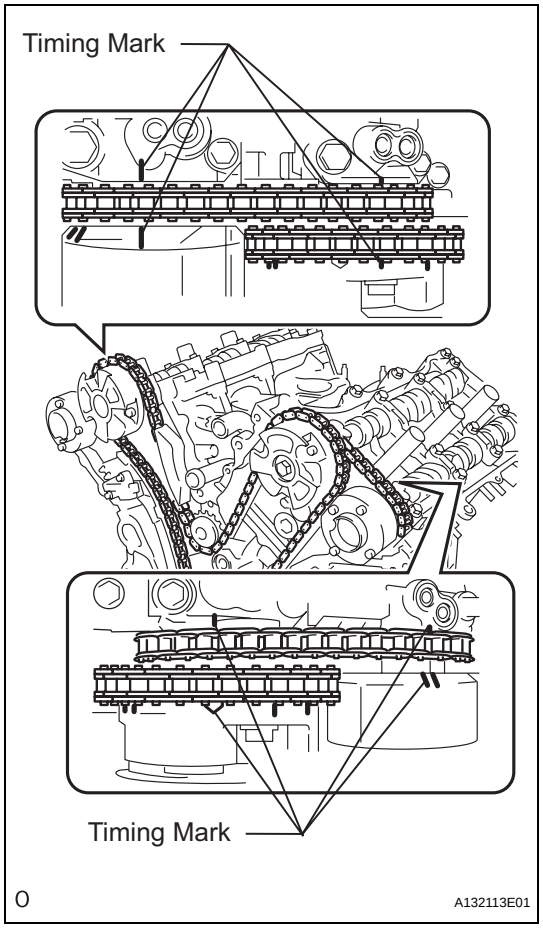
19. REMOVE WATER PUMP ASSEMBLY (See page CO-13)

20. REMOVE ENGINE REAR OIL SEAL RETAINER

(a) Remove the 6 bolts.



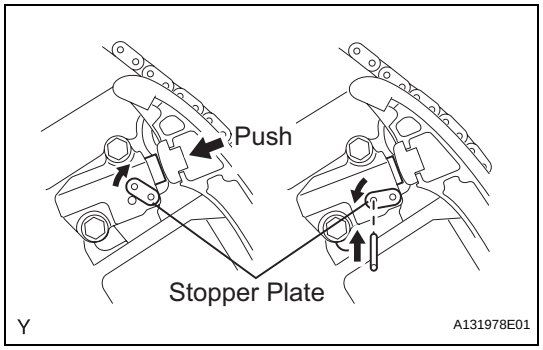
(b) Using a screwdriver, pry out the oil seal retainer.
HINT:
Tape the screwdriver tip before use.



21. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY (w/ Oil Pump) (See page LU-14)

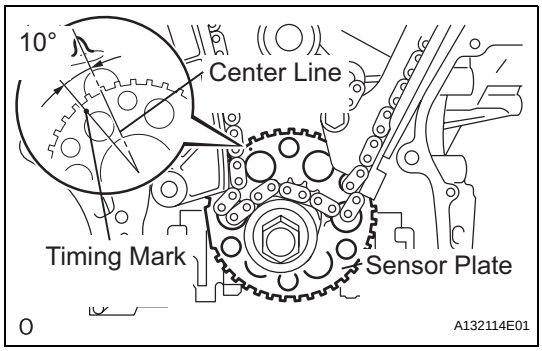
22. SET NO. 1 CYLINDER TO TDC / COMPRESSION

(a) Temporarily tighten the pulley set bolt.



(b) Set the timing mark on the crank angle sensor plate to the RH block bore center line (TDC / compression).

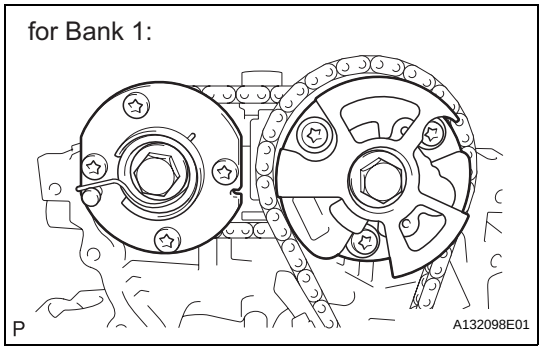
(c) Check that the timing marks of the camshaft timing gears are aligned with the timing marks of the bearing cap as shown in the illustration. If not, turn the crankshaft 1 revolution (360°) and align the timing marks as above.



EM

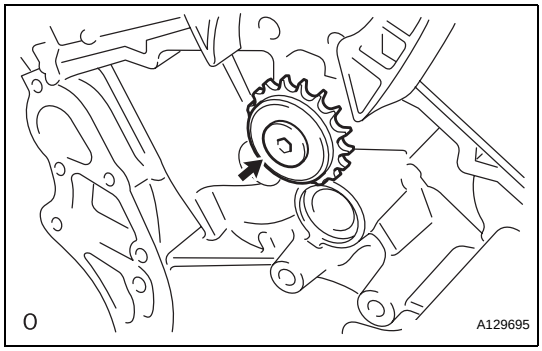
23. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY

(a) Move the stopper plate upward to release the lock, and push the plunger deep into the tensioner.
(b) Move the stopper plate downward to set the lock, and insert a hexagon wrench into the stopper plate hole.
(c) Remove the 2 bolts and chain tensioner.



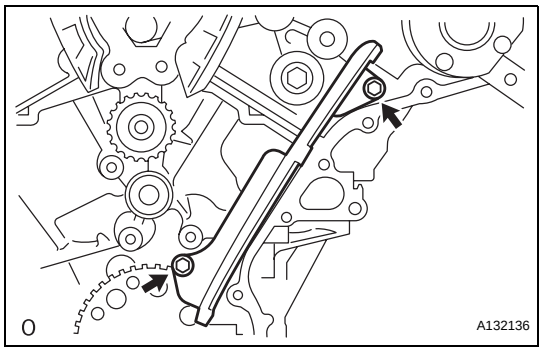
24. REMOVE CHAIN TENSIONER SLIPPER

25. REMOVE NO. 1 CHAIN SUB-ASSEMBLY



(a) Turn the crankshaft counterclockwise 10° to loosen the chain of the crankshaft timing gear.

(b) Remove the chain from the crankshaft timing gear and place it on the crankshaft.



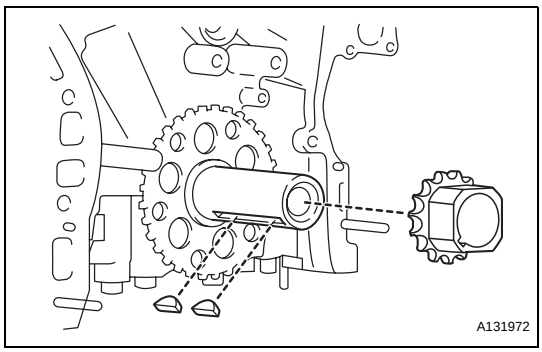
(c) Turn the camshaft timing gear on the RH bank clockwise (approximately 60°) and set it as shown in the illustration. Be sure to loosen the chain between the center banks.

(d) Remove the chain.

26. REMOVE IDLE SPROCKET ASSEMBLY

(a) Using a 10 mm hexagon wrench, remove the No. 2 idle gear shaft, idle sprocket and No. 1 idle gear shaft.

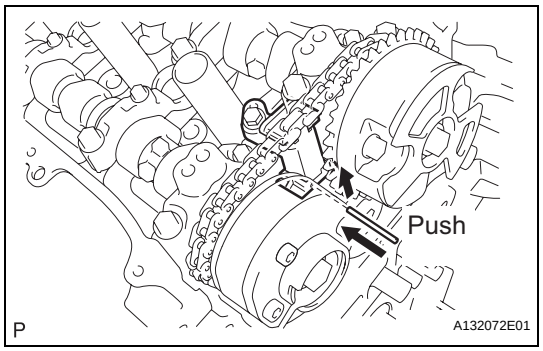
27. REMOVE NO. 1 CHAIN VIBRATION DAMPER



(a) Remove the 2 bolts and vibration damper.

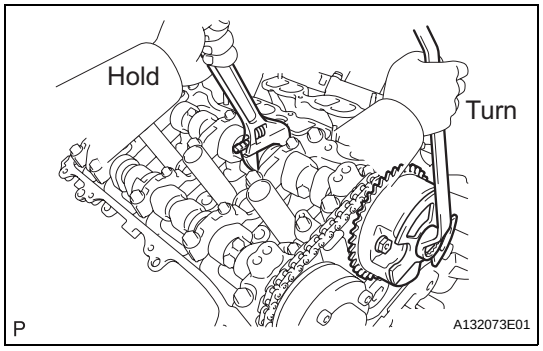
28. REMOVE NO. 2 CHAIN VIBRATION DAMPER

(a) Remove the 2 chain vibration dampers.



29. REMOVE CRANKSHAFT TIMING GEAR OR SPROCKET

(a) Remove the pulley set bolt.

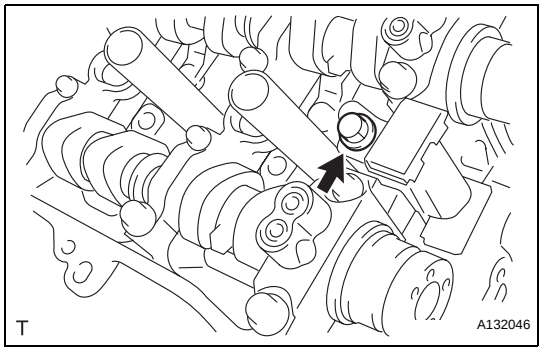


(b) Remove the crankshaft timing gear from the crankshaft.

(c) Remove the 2 pulley set keys from the crankshaft.

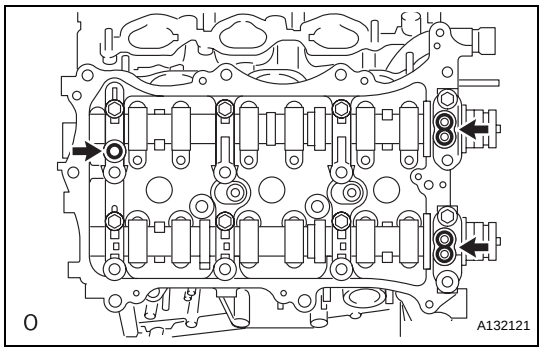
30. REMOVE CAMSHAFT TIMING GEAR ASSEMBLY (for Bank 1)

(a) While raising up the No. 2 chain tensioner, insert a pin of ϕ1.0 mm (0.039 in.) into the hole to fix it in place.



(b) Hold the hexagonal portion of the camshaft with a wrench, and remove the 2 bolts and 2 camshaft timing gears.

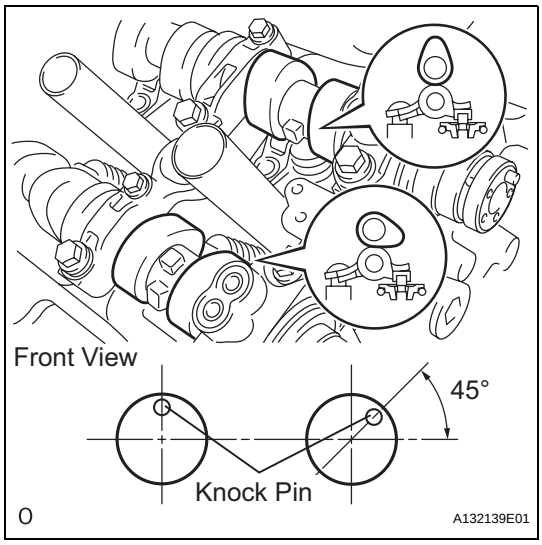
NOTICE:



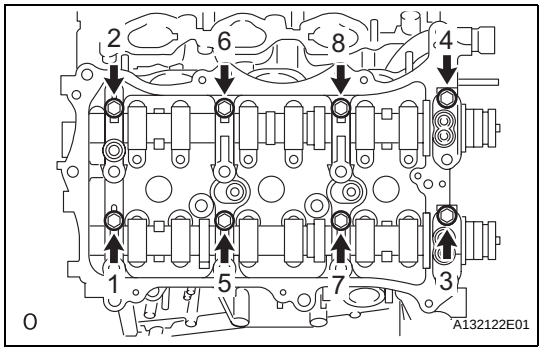
- **Be careful not to damage the cylinder head with the wrench.**
- **Do not disassemble the camshaft timing gear.**

(c) Remove the No. 2 chain.

31. REMOVE NO. 2 CHAIN TENSIONER ASSEMBLY

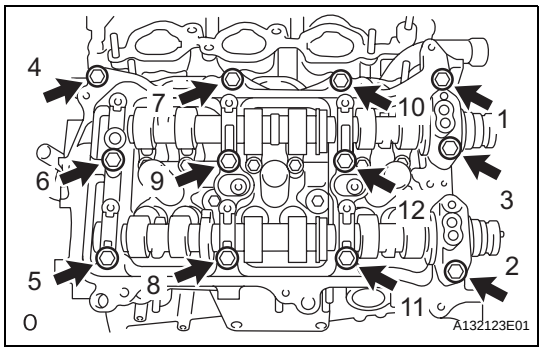


(a) Remove the bolt and chain tensioner.

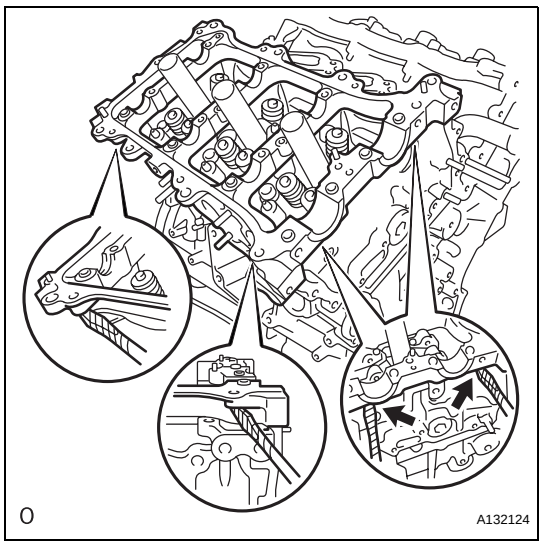


32. REMOVE CAMSHAFT (for Bank 1)

(a) Remove the 3 gaskets.

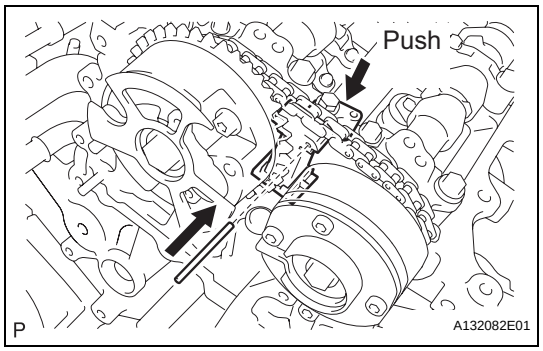


EM

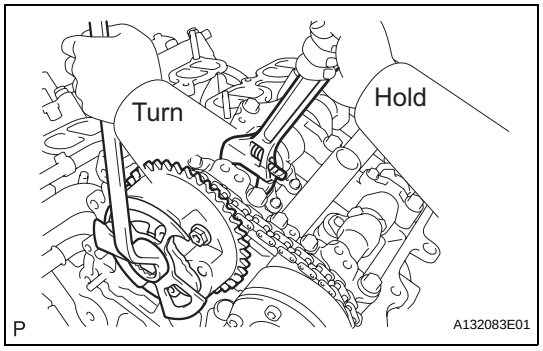


(b) Make sure that the knock pin of the camshaft is positioned as shown in the illustration.

(c) Uniformly loosen and remove the 8 bearing cap bolts in the sequence shown in the illustration.



(d) Uniformly loosen and remove the 12 bearing cap bolts in the sequence shown in the illustration.
NOTICE:
Uniformly loosen the bolts while keeping the camshaft level.
(e) Remove the 5 bearing caps.
(f) Remove the No. 1 and No. 2 camshafts.

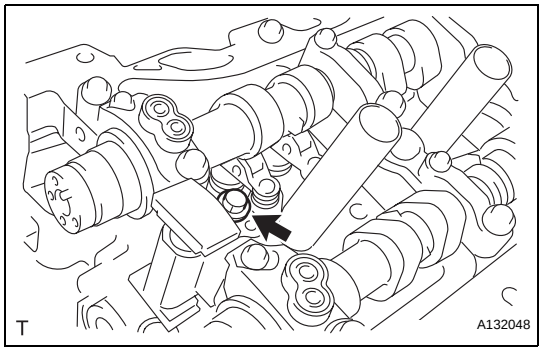


33. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY (for Bank 1)

(a) Remove the camshaft housing by prying between the cylinder head and camshaft housing with a screwdriver.
NOTICE:
Be careful not to damage the contact surfaces of the cylinder head and camshaft housing.
HINT:
Tape the screwdriver tip before use.

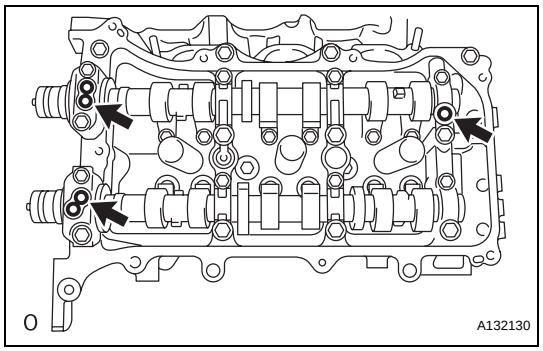
34. REMOVE CAMSHAFT TIMING GEAR ASSEMBLY (for Bank 2)

(a) While pushing down the chain tensioner, insert a pin of ϕ1.0 mm (0.039 in.) into the hole to fix it in place.



(b) Hold the hexagonal portion of the camshaft with a wrench and remove the 2 bolts and 2 camshaft timing gears.

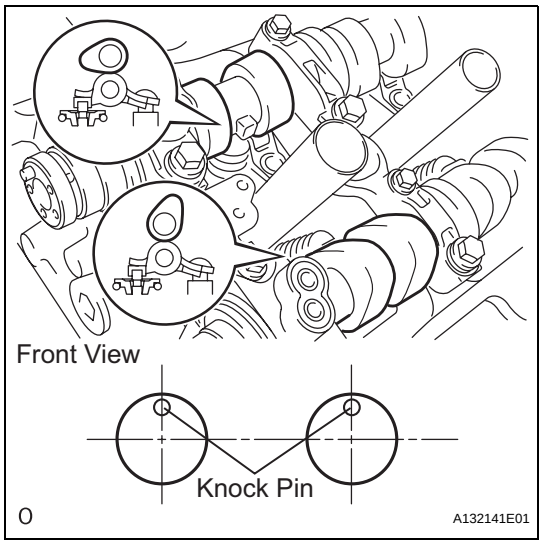
NOTICE:



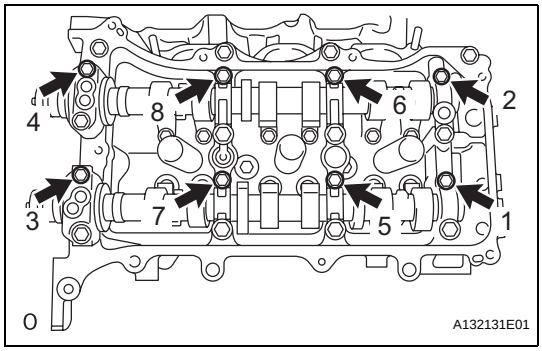
- **Be careful not to damage the cylinder head with the wrench.**
- **Do not disassemble the camshaft timing gear.**

(c) Remove the No. 2 chain.

35. REMOVE NO. 3 CHAIN TENSIONER ASSEMBLY

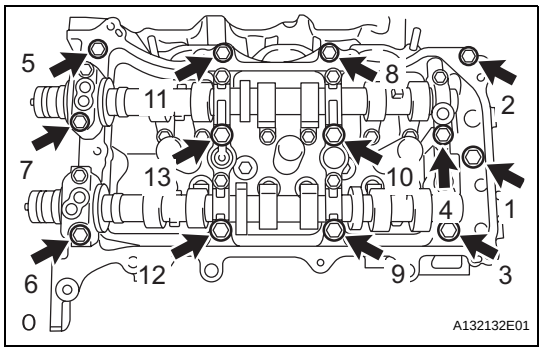


(a) Remove the bolt and chain tensioner.



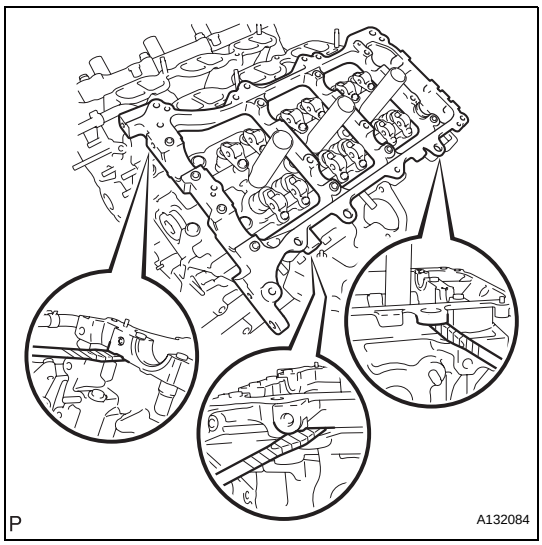
36. REMOVE CAMSHAFT SUB-ASSEMBLY (for Bank 2)

(a) Remove the 3 gaskets.



EM

(b) Make sure that the knock pin of the camshaft is positioned as shown in the illustration.



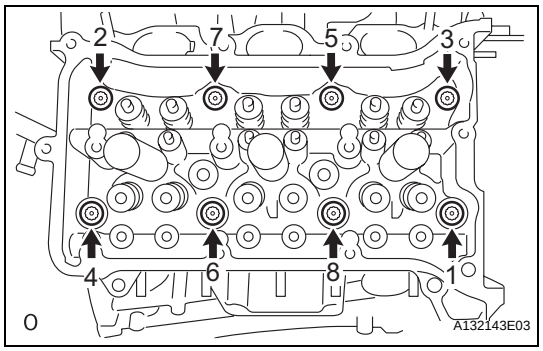
(c) Uniformly loosen and remove the 8 bearing cap bolts in the sequence shown in the illustration.

(d) Uniformly loosen and remove the 13 bearing cap bolts in the sequence shown in the illustration.
NOTICE:
Uniformly loosen the bolts while keeping the camshaft level.

(e) Remove the 5 bearing caps.

(f) Remove the No. 3 and No. 4 camshafts.

37. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY (for Bank 2)



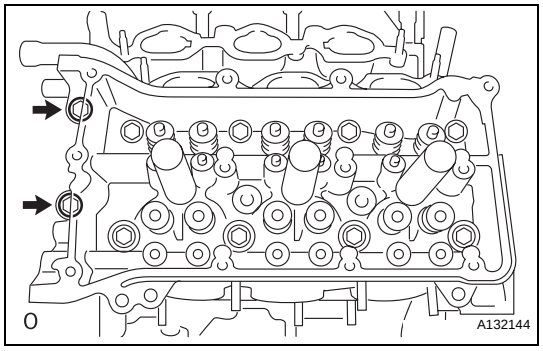
(a) Remove the camshaft housing by prying between the cylinder head and camshaft housing with a screwdriver.
NOTICE:
Be careful not to damage the contact surfaces of the cylinder head and camshaft housing.
HINT:
Tape the screwdriver tip before use.

38. REMOVE NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

(a) Remove the 24 valve rocker arms.
HINT:
Arrange the removed parts in the correct order.

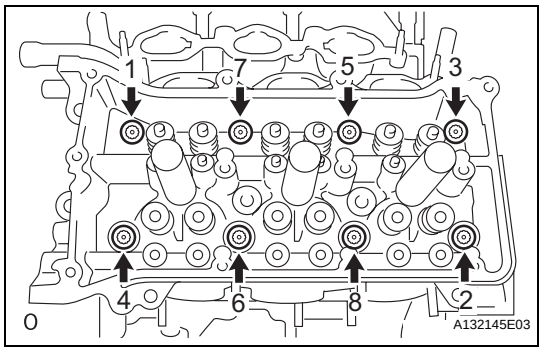
39. REMOVE VALVE LASH ADJUSTER ASSEMBLY

(a) Remove the 24 valve lash adjusters from the cylinder head.
HINT:
Arrange the removed parts in the correct order.



40. REMOVE CYLINDER HEAD SUB-ASSEMBLY (for Bank 1)

(a) Using a 10 mm bi-hexagon wrench, uniformly loosen the 8 bolts in the sequence shown in the illustration. Remove the 8 cylinder head bolts and plate washers.
NOTICE:
- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in an incorrect order.**



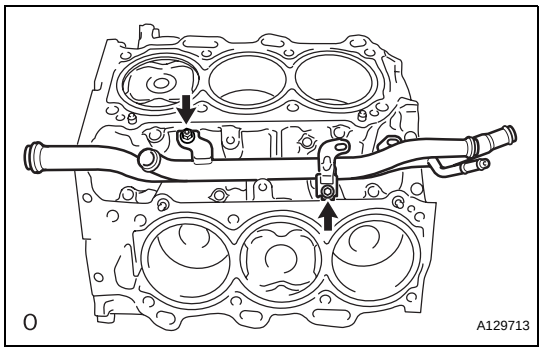
HINT:
Be sure to keep the removed parts separate for each installation position.

(b) Remove the cylinder head and gasket.

41. REMOVE CYLINDER HEAD SUB-ASSEMBLY (for Bank 2)

(a) Uniformly loosen and remove the 2 bolts in the sequence shown in the illustration.

(b) Using a 10 mm bi-hexagon wrench, uniformly loosen the 8 bolts in the sequence shown in the illustration. Remove the 8 cylinder head bolts and plate washers.
NOTICE:
- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in an incorrect order.**

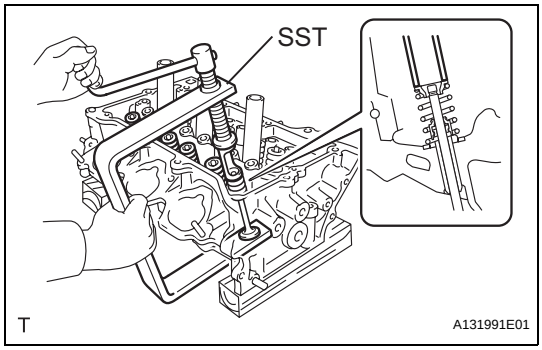


HINT:
Be sure to keep the removed parts separate for each installation position.

(c) Remove the cylinder head and gasket.

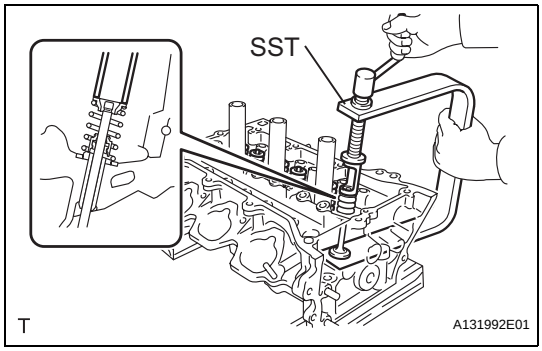
42. REMOVE WATER INLET PIPE

(a) Disconnect the knock sensor wire.



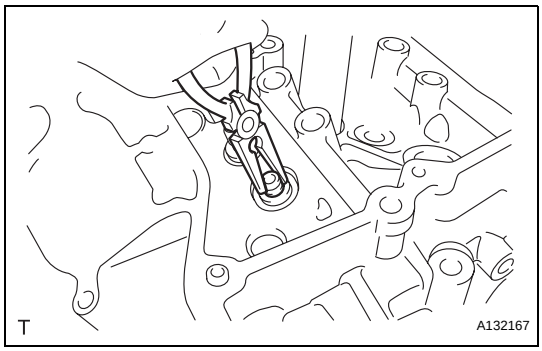
EM

(b) Remove the 2 bolts and water outlet pipe.
(c) Disconnect the water by-pass hose.



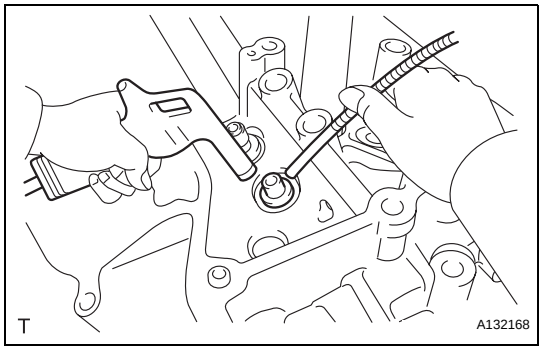
43. REMOVE VALVE STEM CAP

(a) Remove the valve stem caps from the cylinder head.
HINT:
Arrange the removed parts in the correct order.



44. REMOVE INTAKE VALVE

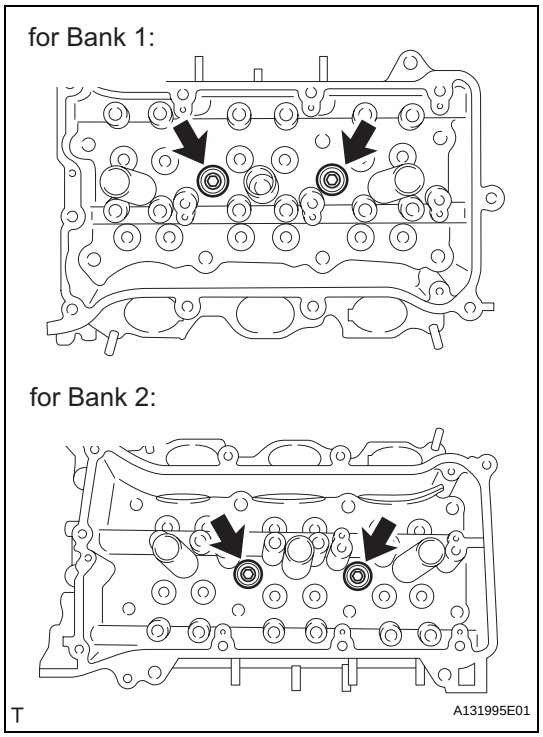
(a) Using SST and wooden blocks, compress the compression spring and remove the valve retainer lock.
SST 09202-70020 (09202-00010)
(b) Remove the retainer, compression spring and valve.
HINT:
Arrange the removed parts in the correct order.



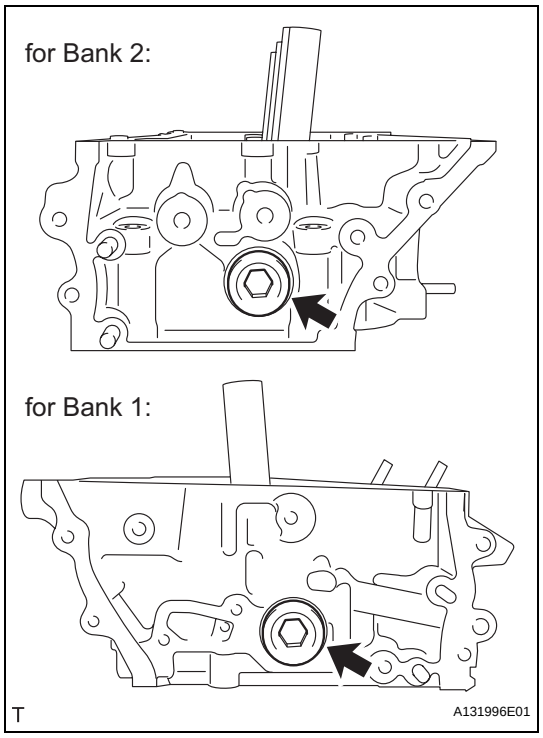
45. REMOVE EXHAUST VALVE

(a) Using SST and wooden blocks, compress the compression spring and remove the valve retainer lock.
SST 09202-70020 (09202-00010)
(b) Remove the retainer, compression spring and valve.
HINT:
Arrange the removed parts in the correct order.

46. REMOVE VALVE STEM OIL SEAL



(a) Using needle-nose pliers, remove the oil seals.

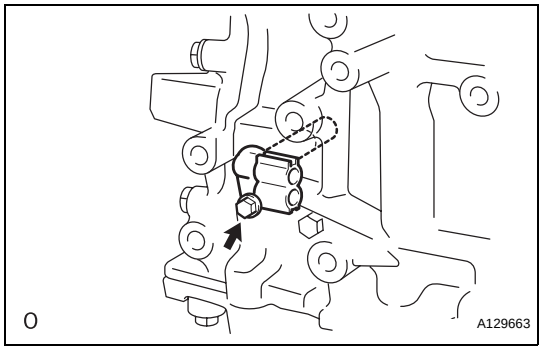


47. REMOVE VALVE SPRING SEAT

(a) Using compressed air and a magnetic finger, remove the valve spring seat by blowing air onto it.

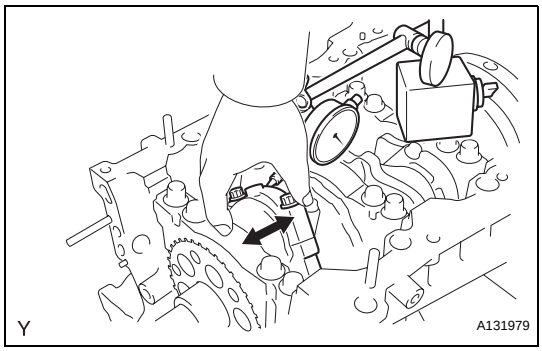
48. REMOVE NO. 1 STRAIGHT SCREW PLUG
NOTICE:
If water leaks from the No. 1 screw plug or the plug is corroded, replace it.

(a) Using a 10 mm hexagon wrench, remove the 4 screw plugs and 4 gaskets.



49. REMOVE NO. 2 STRAIGHT SCREW PLUG

(a) Using a 14 mm hexagon wrench, remove the 2 screw plugs and 2 gaskets.

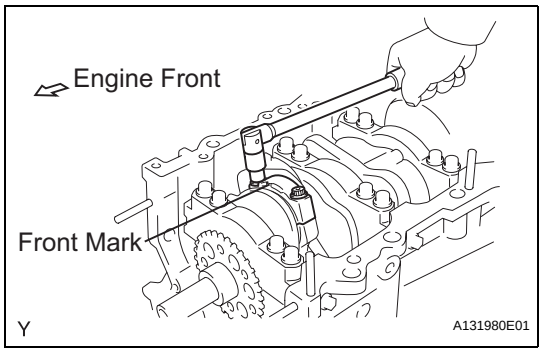


NOTICE:

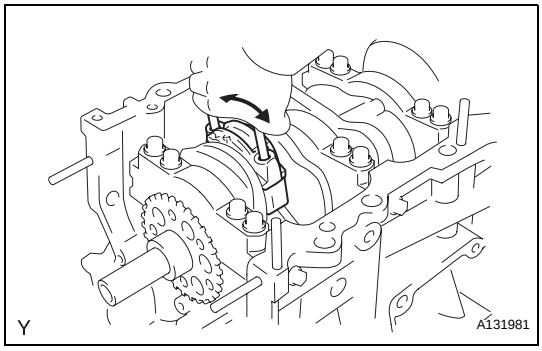
If water leaks from the No. 2 screw plug or the plug is corroded, replace it.

50. REMOVE CRANKSHAFT POSITION SENSOR

(a) Remove the bolt and crankshaft position sensor.

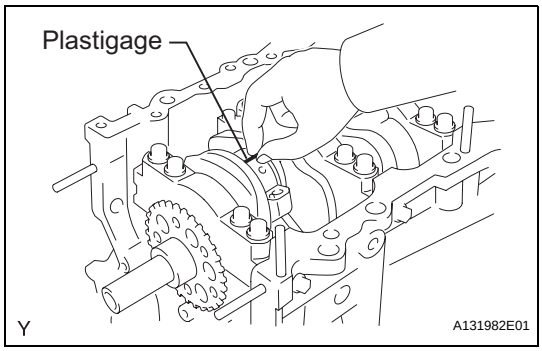


51. INSPECT CONNECTING ROD THRUST CLEARANCE

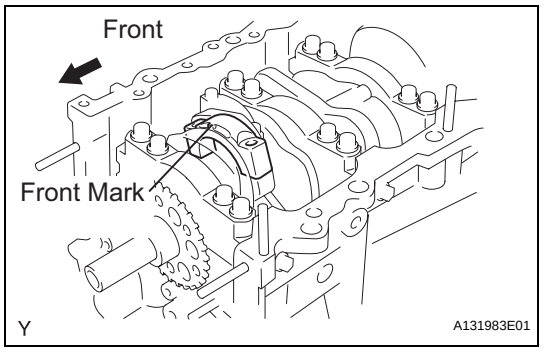


(a) Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.
Standard thrust clearance:
0.15 to 0.40 mm (0.0059 to 0.0157 in.)
Maximum thrust clearance:
0.50 mm (0.0197 in.)
If the thrust clearance is greater than the maximum, replace one or more connecting rods as necessary.
If necessary, replace the crankshaft.

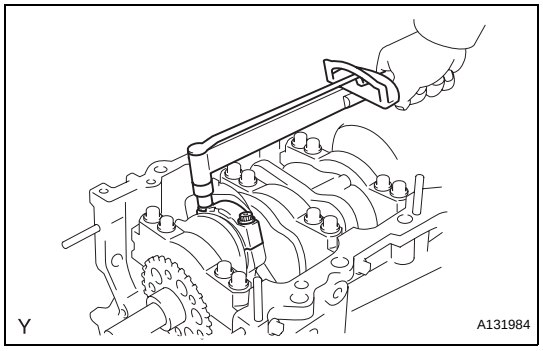
52. INSPECT CONNECTING ROD OIL CLEARANCE



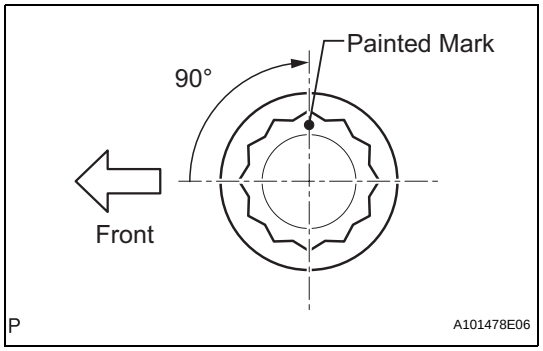
(a) Check that the front mark on the connecting rod and cap are aligned to ensure the correct reassembly.
NOTICE:
The front mark on the connecting rods and caps are for ensuring the correct reassembly.



(b) Remove the 2 connecting rod cap bolts.

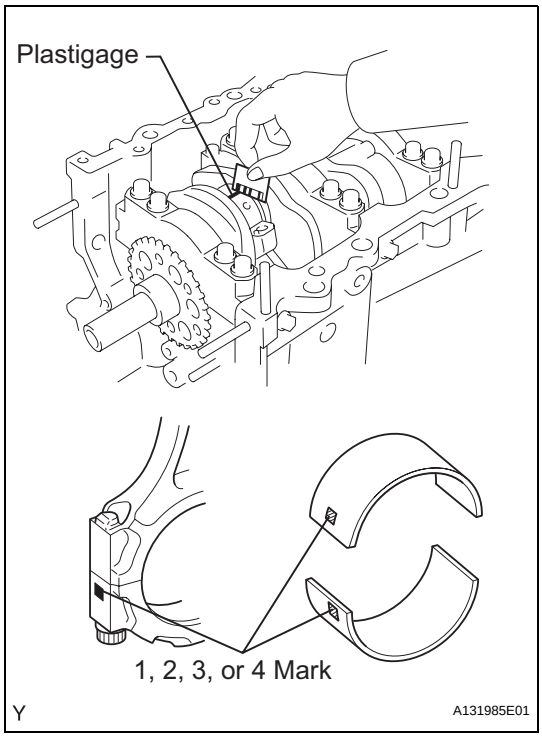


(c) Using the 2 removed connecting rod cap bolts, remove the connecting rod cap and lower bearing by wiggling the connecting rod cap right and left.
HINT:
Keep the lower bearing inserted to the connecting rod cap.
(d) Clean the crank pin and bearing.
(e) Check the crank pin and bearing for pitting and scratches.



(f) Lay a strip of Plastigage on the crank pin.

(g) Check that the front mark of the connecting rod cap is facing forward.

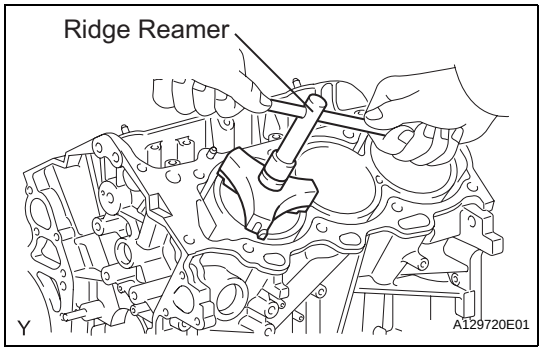


(h) Install and alternately tighten the bolts of the connecting rod cap in several steps.
NOTICE:
Do not turn the crankshaft.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)

(i) Mark the front side of each connecting cap bolt with paint.
(j) Retighten the cap bolts by 90° as shown.
(k) Check that the painted mark is now at a 90° angle to the front.
NOTICE:
Do not turn the crankshaft.
(l) Remove the 2 connecting rod cap bolts.
(m) Using the 2 removed connecting rod cap bolts, remove the connecting rod cap and lower bearing by wiggling the connecting rod cap right and left.
HINT:
Keep the lower bearing inserted to the connecting rod cap.

EM

(n) Measure the Plastigage at its widest point.
Standard oil clearance:
0.045 to 0.067 mm (0.0018 to 0.0026 in.)
Maximum oil clearance:
0.070 mm (0.0028 in.)
If the oil clearance is greater than the maximum, replace the bearings. If necessary, replace the crankshaft.
HINT:
If replacing a bearing, replace it with one that has the same number as its respective connecting rod cap. Each bearing's standard thickness is indicated by a 1, 2, 3 and 4 mark on its surface.
Reference:
Connecting rod big end inside diameter



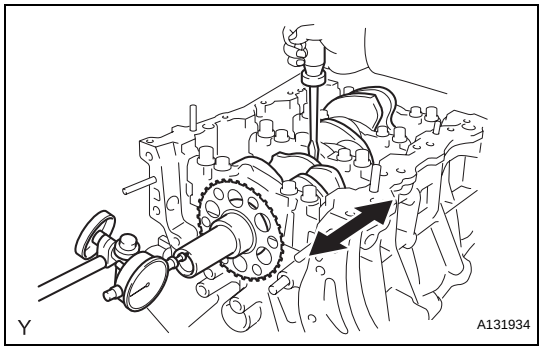
Mark	Thickness
1	56.000 to 56.006 mm (2.2047 to 2.2050 in.)
2	56.007 to 56.012 mm (2.2050 to 2.2052 in.)
3	56.013 to 56.018 mm (2.2052 to 2.2054 in.)
4	56.019 to 56.024 mm (2.2055 to 2.2057 in.)

Standard sized bearing center wall thickness

Mark	Thickness
1	1.481 to 1.484 mm (0.0583 to 0.0584 in.)
2	1.484 to 1.497 mm (0.0584 to 0.0585 in.)
3	1.487 to 1.490 mm (0.0585 to 0.0587 in.)
4	1.490 to 1.493 mm (0.0587 to 0.0588 in.)

Crankshaft pin diameter:
52.992 to 53.000 mm (2.0863 to 2.0866 in.)

(o) Completely remove the Plastigage.

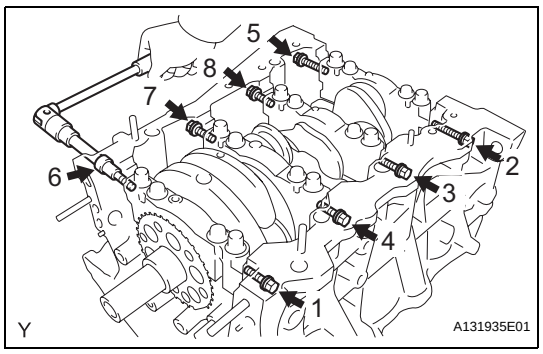


53. REMOVE PISTON SUB-ASSEMBLY WITH CONNECTING ROD

(a) Using a ridge reamer, remove all the carbon from the top of the cylinder.

(b) Push the piston, connecting rod and upper bearing through the top of the cylinder block.
HINT:
- Keep the bearing, connecting rod and cap together.
- Arrange the piston and connecting rod in the correct order.

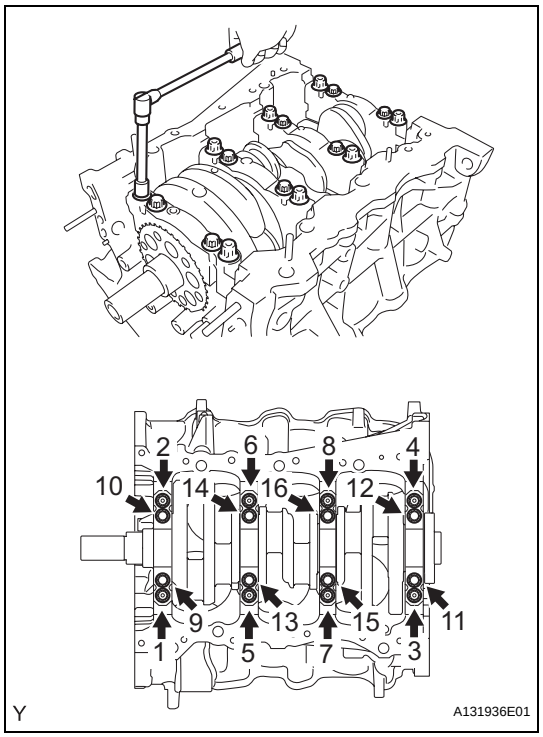
54. REMOVE CONNECTING ROD BEARING
HINT:
Arrange the removed parts in the correct order.



55. INSPECT CRANKSHAFT THRUST CLEARANCE

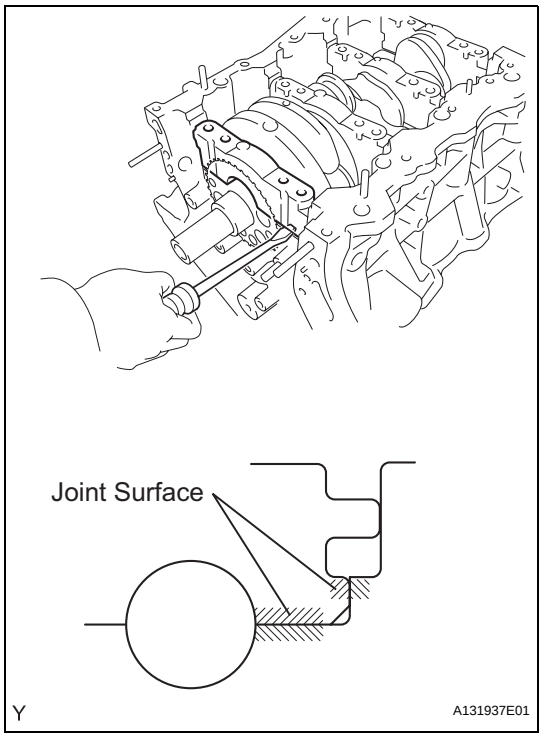
(a) Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.

Standard thrust clearance:
0.04 to 0.24 mm (0.0016 to 0.0094 in.)
Maximum thrust clearance:
0.30 mm (0.0118 in.)



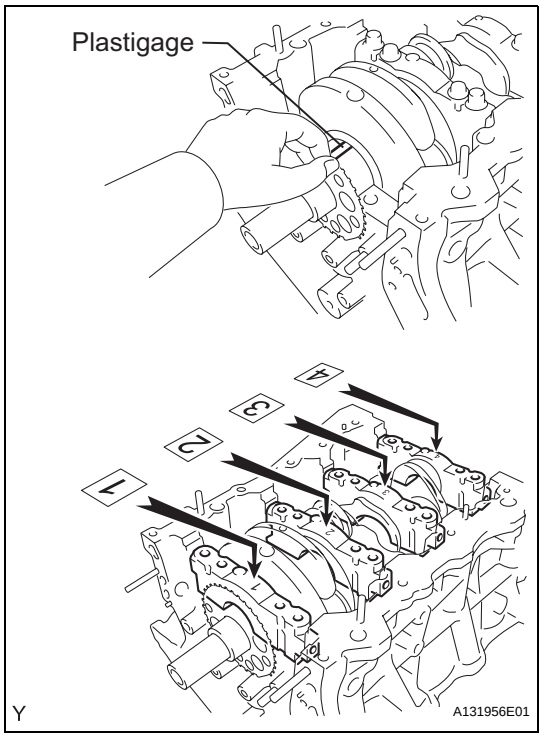
If the thrust clearance is greater than the maximum, replace the thrust washers as a set. If necessary, replace the crankshaft.

Standard thrust washer thickness:
2.43 to 2.48 mm (0.0957 to 0.0976 in.)

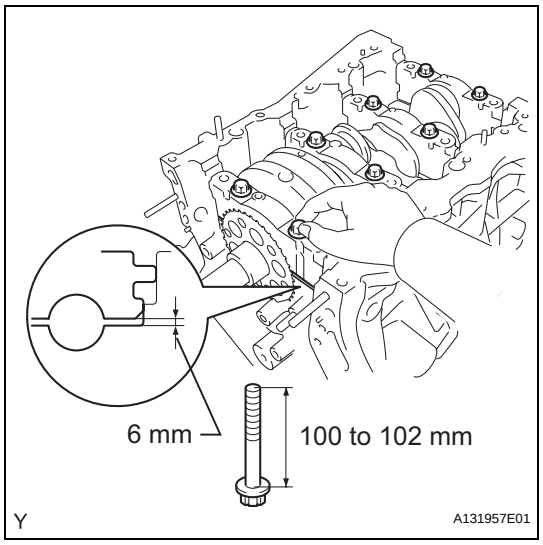


56. REMOVE CRANKSHAFT AND CRANKSHAFT OIL CLEARANCE

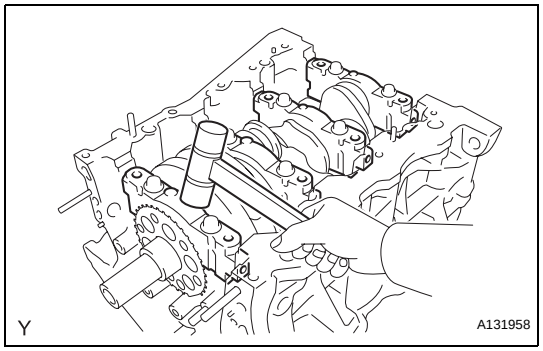
(a) Uniformly loosen and remove the 8 main bearing cap bolts and seal washers in several steps, in the sequence shown in the illustration.



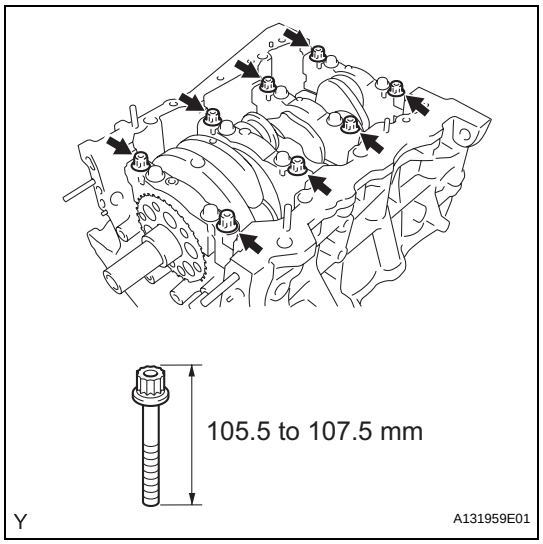
(b) Uniformly loosen the 16 bearing cap bolts in several steps, in the sequence shown in the illustration.



(c) Using a screwdriver, pry out the main bearing caps. Remove the 4 main bearing caps and lower bearings.
NOTICE:
- **Pry up the main cap little by little to the right and left in turns.**
- **Be careful not to damage the joint surface of the cylinder block and main bearing caps.**

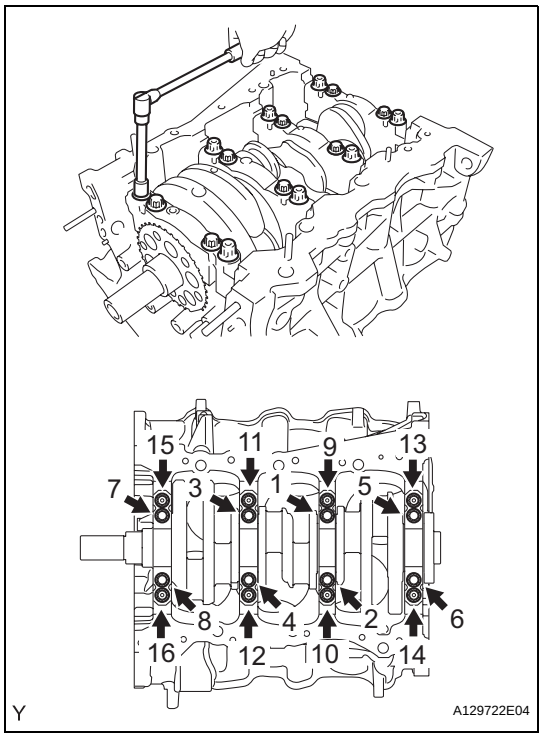


(d) Clean each main journal and bearing.
(e) Check each main journal and bearing for pitting and scratches.
HINT:
If the journal or bearing is damaged, replace the bearing.
(f) Place the crankshaft on the cylinder block.

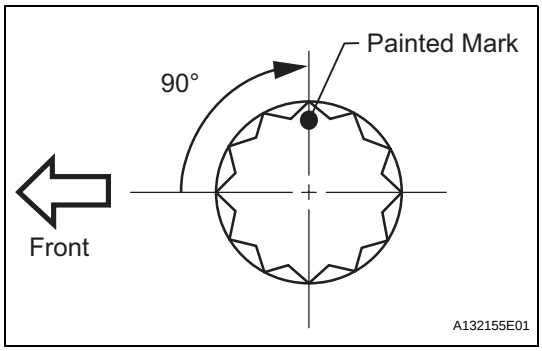


(g) Lay a strip of Plastigage across each journal.
(h) Examine the front marks and numbers and install the bearing caps on the cylinder block.
HINT:
A number is marked on each main bearing cap to indicate the installation position.
(i) Apply a light coat of engine oil on the threads and under the heads of the bearing cap bolts.
(j) Place the crankshaft bearing cap on the cylinder block.

(k) Install the main bearing cap with your hand until the clearance between the main bearing cap and the cylinder block is less than 6 mm (0.23 in.) by marking the 2 internal bearing cap bolts as a guide.
Bolt length:
100 to 102 mm (3.94 to 4.02 in.)

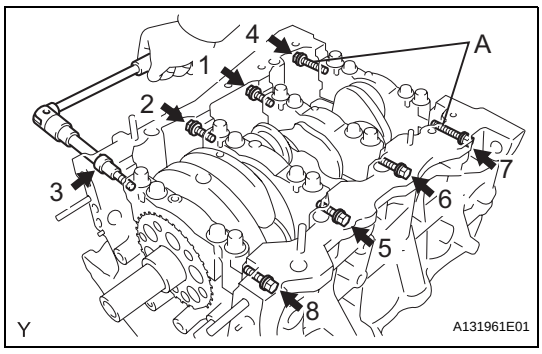


(l) Using a plastic-faced hammer, lightly tap the bearing cap to ensure a proper fit.
(m) Apply a light coat of engine oil on the threads and under the heads of the 8 main bearing cap bolts.



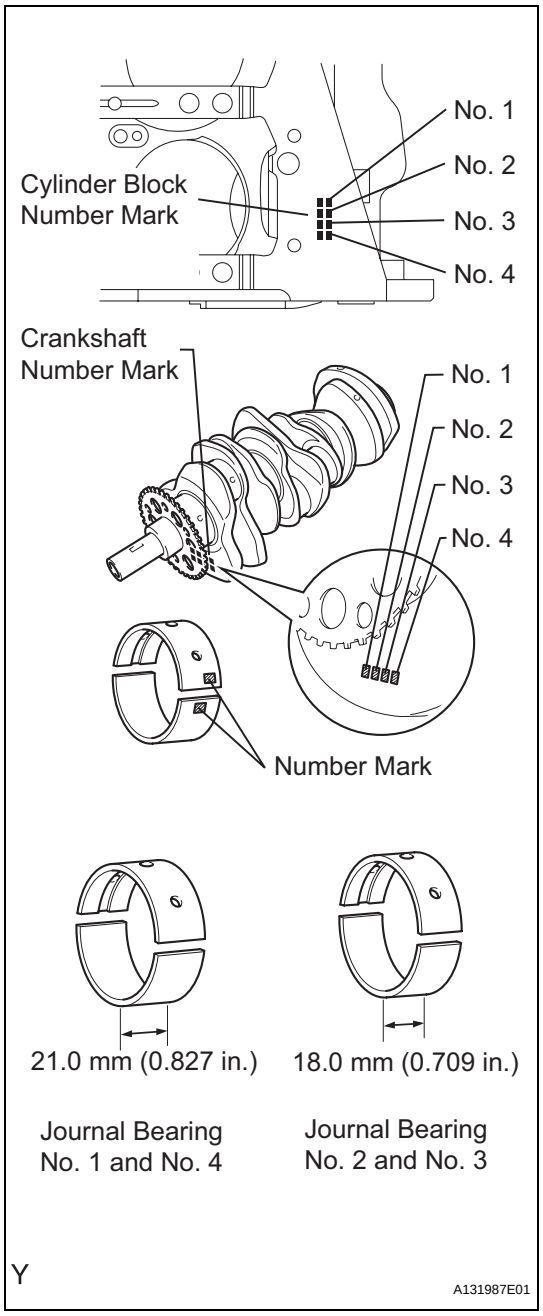
(n) Install the 8 main bearing cap bolts to the outside positions.
Bolt length:
105.5 to 107.5 mm (4.15 to 4.23 in.)
HINT:
The main bearing cap bolts are tightened in 2 progressive steps.

EM



(o) Step 1
(1) Install and uniformly tighten the 16 main bearing cap bolts in the sequence shown in the illustration.
Torque: 61 N*m (622 kgf*cm, 45 ft.*lbf)
HINT:
If any of the main bearing cap bolts does not meet the torque specification, replace the main bearing cap bolt.
NOTICE:
Do not turn the crankshaft.

(p) Step 2
(1) Mark the front of the bearing cap bolts with paint.



(2) Retighten the bearing cap bolts by 90° as shown in the order shown in step 1.
(3) Check that the painted mark is now at a 90° angle to the front.

(q) Install and uniformly tighten the 8 main bearing cap bolts in several steps and in the sequence shown in the illustration.
Torque: 52 N*m (530 kgf*cm, 38 ft.*lbf)
Bolt length:
45 mm (1.77 in.) for bolt A
30 mm (1.18 in.) for except bolt A

(r) Remove the 24 bolts and bearing cap bolts.
(s) Completely remove the Plastigage.

EM

(t) If replacing a bearing, replace it with one having the same number. If the number of the bearing cannot be determined, select the correct bearing by adding together the numbers imprinted on the cylinder block and crankshaft, then refer to the table below for the appropriate bearing number. There are 5 sizes of standard bearings, marked "1", "2", "3", "4" and "5" accordingly.

Journal bearing

Use Bearing	Cylinder Block Number Mark + Crankshaft Number Mark
1	0 - 5
2	6 - 11
3	12 - 17
4	18 - 23
5	24 - 28

EXAMPLE:
Cylinder block "11" + Crankshaft "06" = Total number 17 (Use bearing "3")

EM

Standard crankshaft main journal diameter

Mark	Specified Condition
00	60.999 to 61.000 mm (2.4015 to 2.4016 in.)
01	60.998 to 60.999 mm (2.4015 to 2.4015 in.)
02	60.997 to 60.998 mm (2.4015 to 2.4015 in.)
03	60.996 to 60.997 mm (2.4014 to 2.4015 in.)
04	60.995 to 60.996 mm (2.4014 to 2.4014 in.)
05	60.994 to 60.995 mm (2.4013 to 2.4014 in.)
06	60.93 to 60.994 mm (2.4013 to 2.4013 in.)
07	60.992 to 60.993 mm (2.4013 to 2.4013 in.)
08	60.991 to 60.992 mm (2.4012 to 2.4013 in.)
09	60.990 to 60.991 mm (2.4012 to 2.4012 in.)
10	60.989 to 60.990 mm (2.4011 to 2.4012 in.)
11	60.988 to 60.989 mm (2.4.11 to 2.4011 in.)

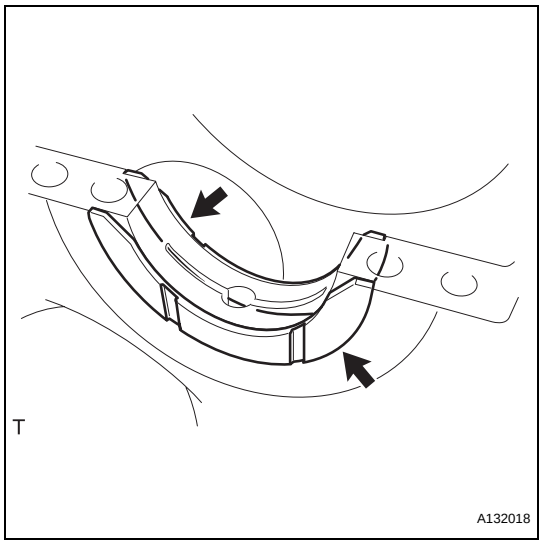
Standard upper bearing center wall thickness No. 1 and No. 4 journal

Mark	Specified Condition
1	2.500 to 2.503 mm (0.0984 to 0.0985 in.)
2	2.503 to 2.506 mm (0.0985 to 0.0987 in.)
3	2.506 to 2.509 mm (0.0987 to 0.0988 in.)

Mark	Specified Condition
4	2.509 to 2.512 mm (0.0988 to 0.0989 in.)
5	2.512 to 2.515 mm (0.0989 to 0.0990 in.)

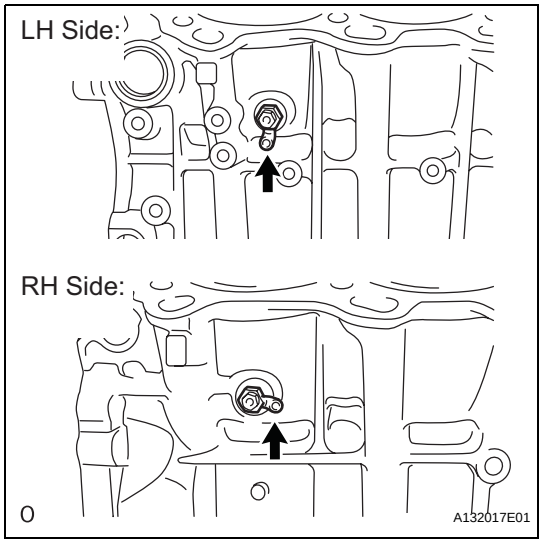
No. 2 and No. 3 journal

Mark	Specified Condition
1	2.478 to 2.481 mm (0.0976 to 0.0977 in.)
2	2.481 to 2.484 mm (0.0977 to 0.0978 in.)
3	2.484 to 2.487 mm (0.0978 to 0.0979 in.)
4	2.487to 2.490 mm (0.0979 to 0.0980 in.)
5	2.490 to 2.493 mm (0.0980 to 0.0981 in.)



Standard lower bearing center wall thickness
No. 1 and No. 4 journal

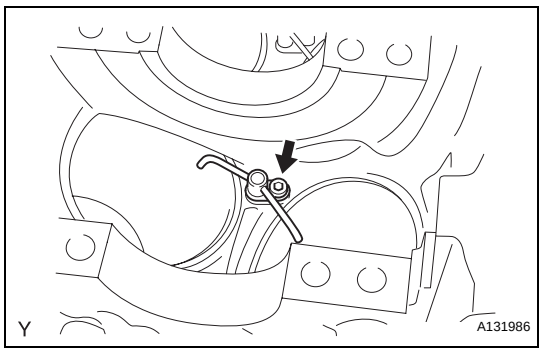
Mark	Specified Condition
1	2.478 to 2.481 mm (0.0976 to 0.0977 in.)
2	2.481 to 2.484 mm (0.0977 to 0.0780 in.)
3	2.484 to 2.487 mm (0.0978 to 0.0979 in.)
4	2.487 to 2.490 mm (0.0979 to 0.0980 in.)
5	2.490 to 2.493 mm (0.0980 to 0.0981 in.)



No. 2 and No. 3 journal

Mark	Specified Condition
1	2.500 to 2.503 mm (0.0984 to 0.0985 in.)
2	2.503 to 2.506 mm (0.0985 to 0.0987 in.)
3	2.506 to 2.509 mm (0.0987 to 0.0988 in.)
4	2.509 to 2.512 mm (0.0988 to 0.0989 in.)
5	2.512 to 2.515 mm (0.0989 to 0.0990 in.)

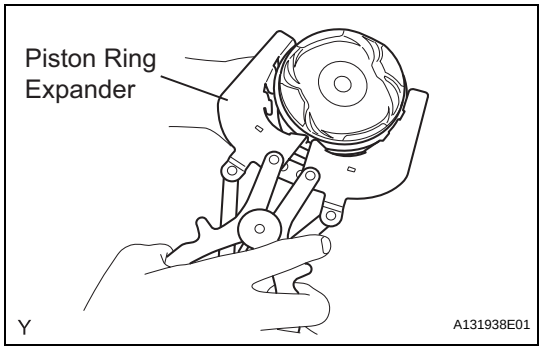
(u) Lift out the crankshaft.



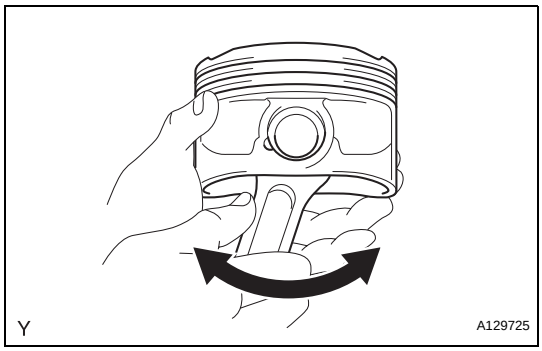
(v) Remove the upper bearings and upper thrust washers from the cylinder block.
HINT:
Arrange the bearings and thrust washers in the correct order.

57. REMOVE CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

(a) Remove the 2 water drain cocks from the cylinder block.
(b) Remove the water drain cock plugs from the water drain cocks.



58. REMOVE NO. 1 OIL NOZZLE SUB-ASSEMBLY

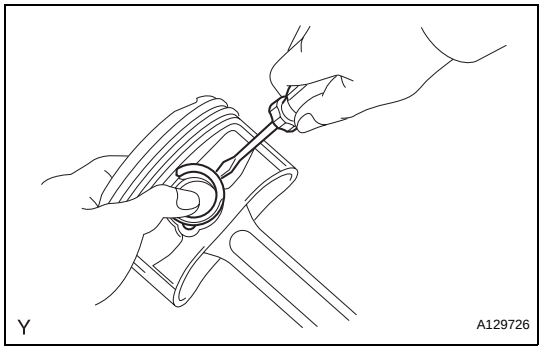


(a) Using a 5 mm hexagon wrench, remove the 3 oil nozzles.
(b) Check the oil nozzles for damage or clogging.
If necessary, replace the oil nozzle.

59. REMOVE PISTON RING SET

HINT:
Arrange the piston rings in the correct order.

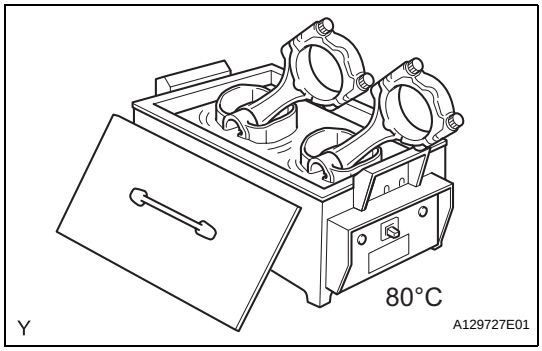
(a) Using a piston ring expander, remove the 2 compression rings.
(b) Using a piston ring expander, remove the 2 side rails.
(c) Remove the oil ring expander by hand.



60. REMOVE PISTON WITH PIN SUB-ASSEMBLY

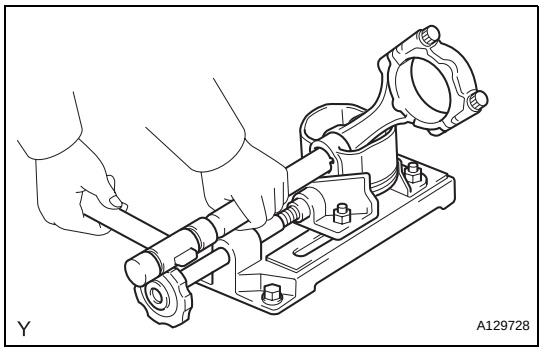
(a) Check the fitting condition between the piston and piston pin.

(1) Try to move the piston back and forth on the piston pin.



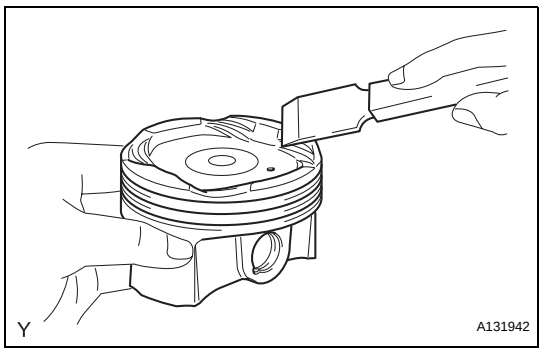
HINT:

If any movement is felt, replace the piston and pin as a set.



(b) Disconnect the connecting rod from the piston.

(1) Using a screwdriver, pry off the snap rings from the piston.



(2) Gradually heat the piston to approximately 80°C (176°F).

(3) Using a brass bar and plastic-faced hammer, lightly tap out the piston pin and remove the connecting rod.

HINT:

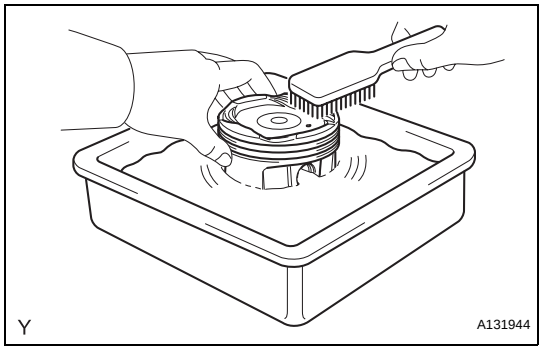
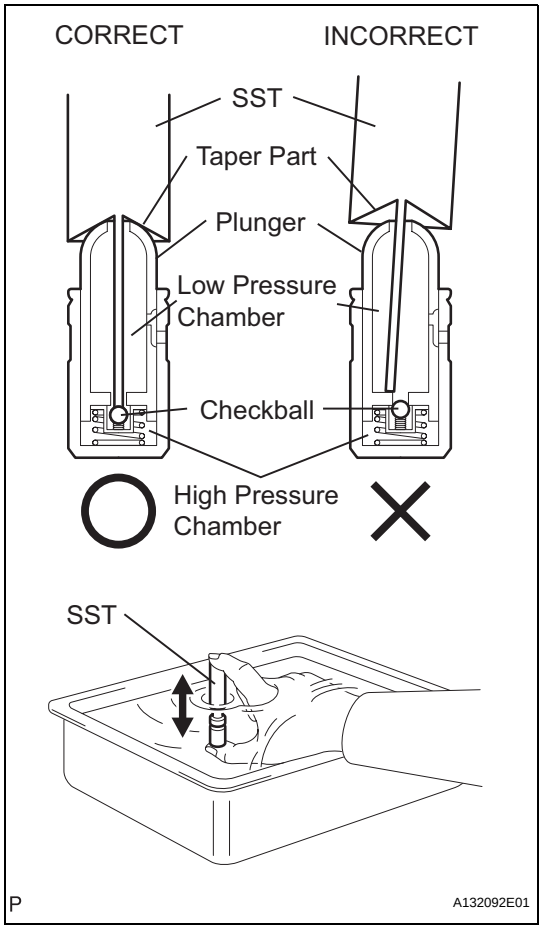
- The piston and pin are a matched set.
- Arrange the pistons, pins, rings, connecting rods and bearings in the correct order.



(c) Clean piston.

(1) Using a gasket scraper, remove the carbon from the piston top.

(2) Using a groove cleaning tool or broken ring, clean the piston ring grooves.



(3) Using solvent and a brush, thoroughly clean the piston.
NOTICE:
Do not use a wire brush.

INSPECTION

1. INSPECT VALVE LASH ADJUSTER ASSEMBLY

NOTICE:

- **Keep the lash adjuster free from dirt and foreign objects.**
- **Only use clean engine oil.**

(a) Place the lash adjuster into a container full of engine oil.

(b) Insert the SST's tip into the lash adjuster's plunger and use the tip to press down on the checkball inside the plunger.

SST 09276-75010

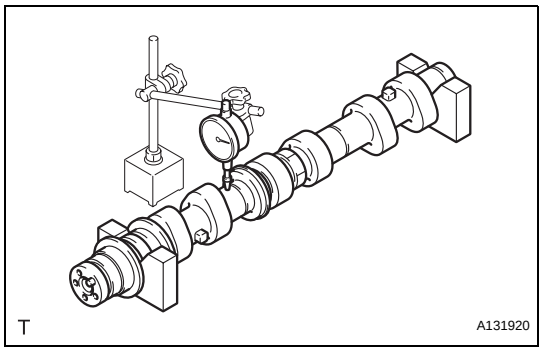
(c) Squeeze the SST and lash adjuster together to move the plunger up and down 5 to 6 times.

(d) Check the movement of the plunger and bleed the air.

OK:

Plunger moves up and down.

NOTICE:



When bleeding high-pressure air from the compression chamber, make sure that the tip of the SST is actually pressing the checkball as shown in the illustration. If the checkball is not pressed, air will not bleed.

(e) After bleeding the air, remove SST. Then try to quickly and firmly press the plunger with a finger.

OK:

Plunger is very difficult to move.

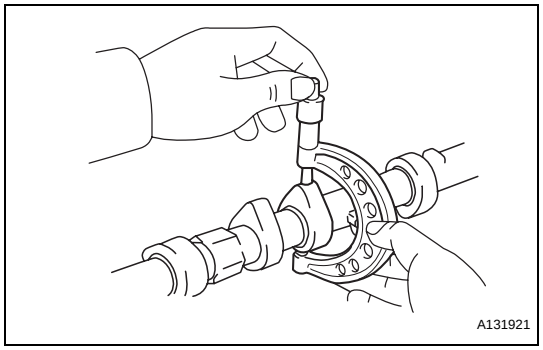
If the result is not as specified, replace the lash adjuster.

2. INSPECT CAMSHAFT

(a) Inspect the camshaft for runout.

(1) Place the camshaft on V-blocks.

(2) Using a dial indicator, measure the circle runout at the center journal.



Maximum circle runout:

0.04 mm (0.0016 in.)

If the circle runout is greater than the maximum, replace the camshaft.

HINT:

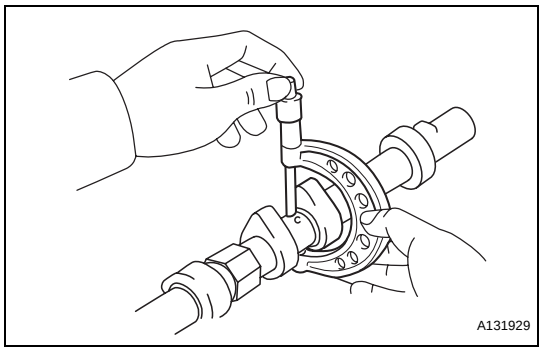
Check the oil clearance after replacing the camshaft.



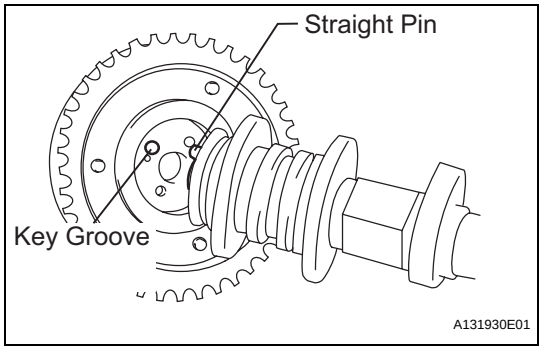
(b) Using a micrometer, measure the cam lobe height.
Standard cam lobe height

Item	Specified Condition
Intake	44.316 to 44.416 mm (1.7447 to 1.7487 in.)
Exhaust	44.262 to 44.362 mm (1.7426 to 1.7465 in.)

Maximum cam lobe height

Item	Specified Condition
Intake	44.166 mm (1.7388 in.)
Exhaust	44.112 mm (1.7367 in.)

If the cam lobe height is less than the minimum, replace the camshaft.

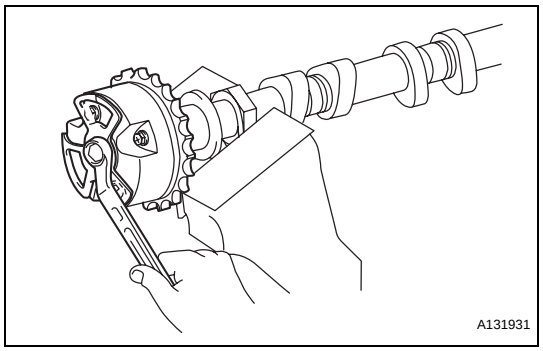


(c) Using a micrometer, measure the journal diameter.
Standard journal diameter

Item	Specified Condition
No. 1 journal	35.946 to 35.960 mm (1.4152 to 1.4157 in.)
Other journal	25.959 to 25.975 mm (1.0220 to 1.0226 in.)

If the journal diameter is not as specified, check the oil clearance.

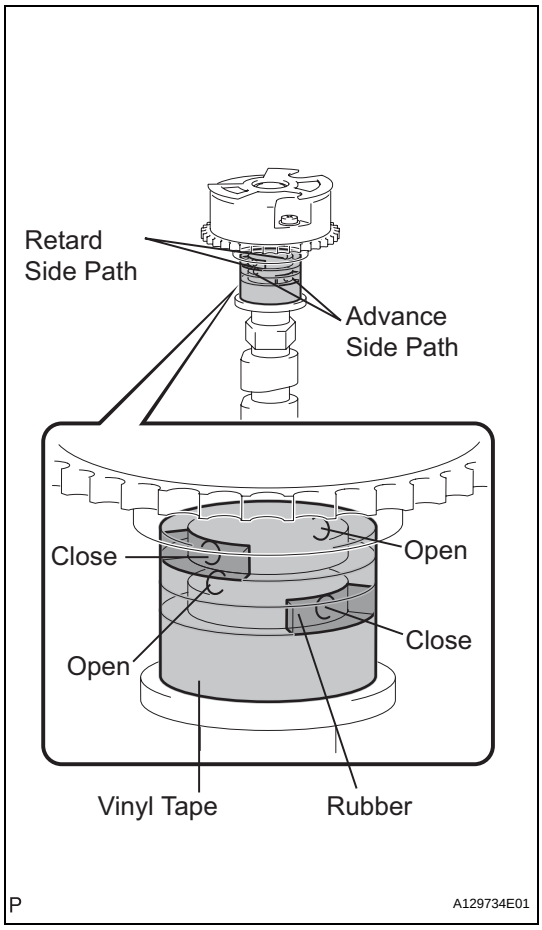
3. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY



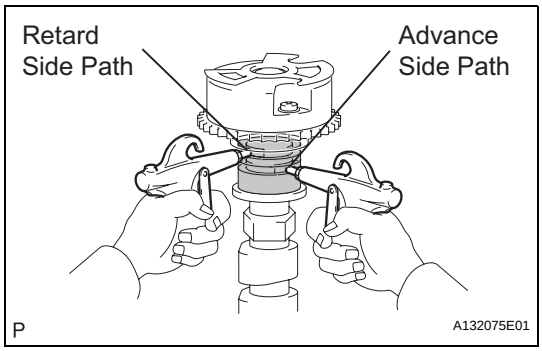
(a) Clamp the camshaft in a vise.
NOTICE:
Be careful not to damage the camshaft in the vise.

(b) Put the camshaft timing gear and camshaft together by aligning the key groove and straight pin.

(c) Lightly press the gear against the camshaft, and turn the gear. Push further at the position where the pin enters the groove.
NOTICE:
Be sure not to turn the camshaft timing gear in the retard direction (the right angle).

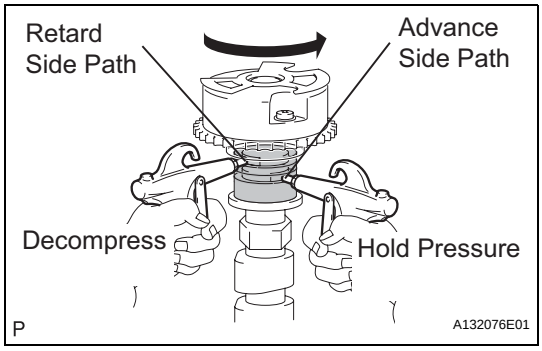


(d) Check that there is no clearance between the gear's fringe and the camshaft.



(e) Tighten the flange bolt with the camshaft timing gear fixed in place.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

(f) Check the lock of the camshaft timing gear.
(1) Clamp the camshaft in a vise, and confirm that the camshaft timing gear is locked.
NOTICE:
Be careful not to damage the camshaft.



EM

(g) Release the lock pin.
(1) Cover the 4 oil paths of the cam journal with vinyl tape as shown in the illustration.
HINT:
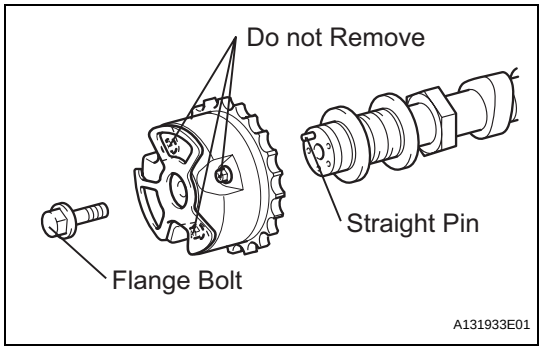
2 advance side paths are provided in the groove of the camshaft. Plug one of the paths with a rubber piece.
(2) Break through the tape of the advance side path and the retard side path on the opposite side to the hole of the advance side path, as shown in the illustration.

(3) Apply approximately 200 kPa (2.0 kgf/cm^2, 28 psi) of air pressure to the two broken paths.
CAUTION:
Cover the paths with a piece of cloth when applying pressure to keep oil from splashing.



(4) Check that the camshaft timing gear revolves in the advance direction when reducing the air pressure applied to the retard side path.
HINT:
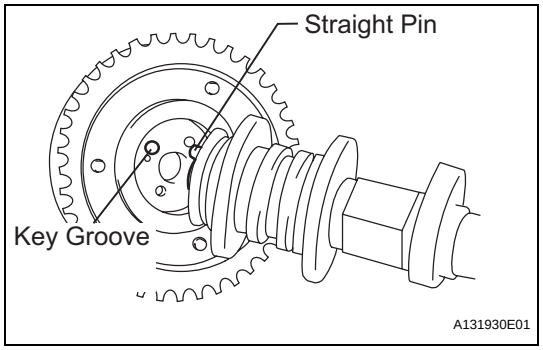
This operation releases the lock pin for the most retarded position.
(5) When the camshaft timing gear reaches the most advanced position, release the air pressure from the retard side path and advance side path, in that order.
NOTICE:
Do not release the air pressure from the advance side path first. The gear may abruptly shift in the retard direction and break the lock pin.

EM

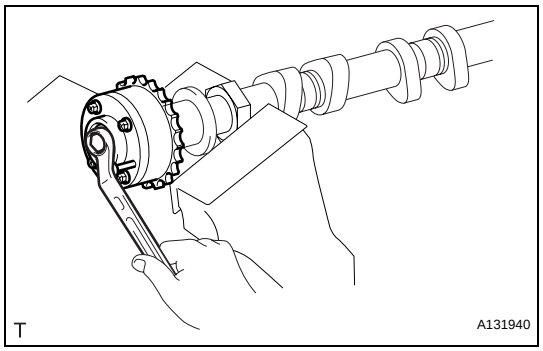
(h) Check for smooth rotation.
(1) Turn the camshaft timing gear within its movable range (21°) 2 or 3 times, but do not turn it to the most retarded position. Make sure that the gear turns smoothly.
NOTICE:
Do not use air pressure to perform the smooth rotation check.



(i) Check the lock in the most retarded position.
(1) Confirm that the camshaft timing gear is locked at the most retarded position.

(j) Remove the flange bolt and camshaft timing gear.
NOTICE:
- **Be sure not to remove the other 3 bolts.**
- **If planning to reuse the gear, be sure to release the straight pin lock before installing the gear.**

4. INSPECT CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY



(a) Clamp the camshaft in a vise.
NOTICE:
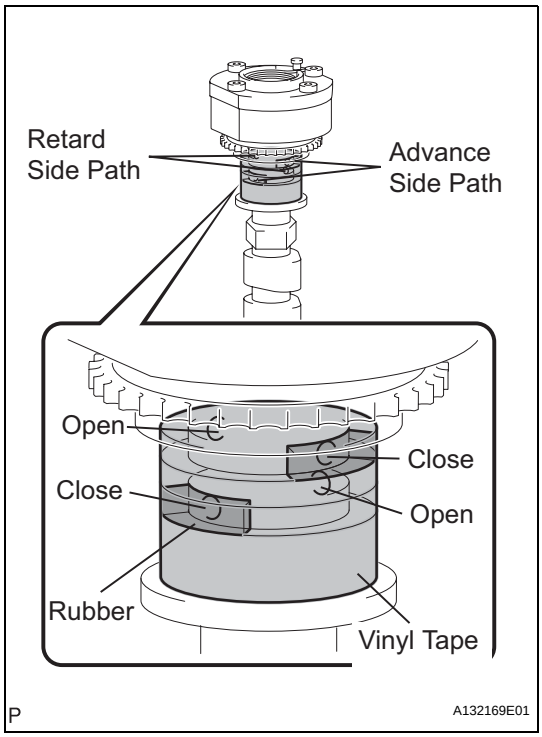
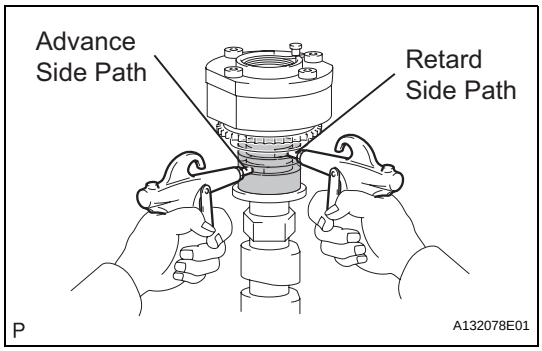
Be careful not to damage the camshaft in the vise.

(b) Put the camshaft timing exhaust gear and camshaft together by aligning the key groove and straight pin.

(c) Lightly press the gear against the camshaft, and turn the gear. Push further at the position where the pin enters the groove.
CAUTION:
Be sure not to turn the camshaft timing exhaust gear in the retard direction (the right angle).

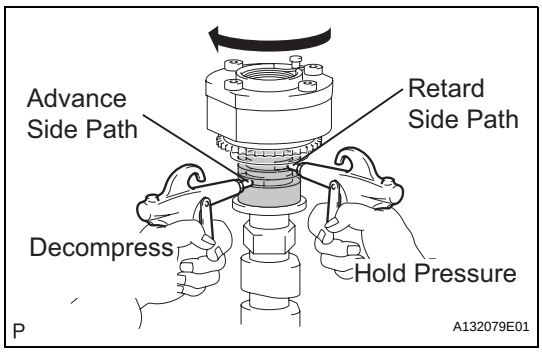


(d) Check that there is no clearance between the gear's fringe and the camshaft.



(e) Tighten the flange bolt with the camshaft timing exhaust gear fixed in place.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

(f) Check the camshaft timing exhaust gear lock.
(1) Make sure that the camshaft timing exhaust gear is locked.



EM

(g) Release the lock pin.
(1) Cover the 4 oil paths of the cam journal with vinyl tape as shown in the illustration.
HINT:
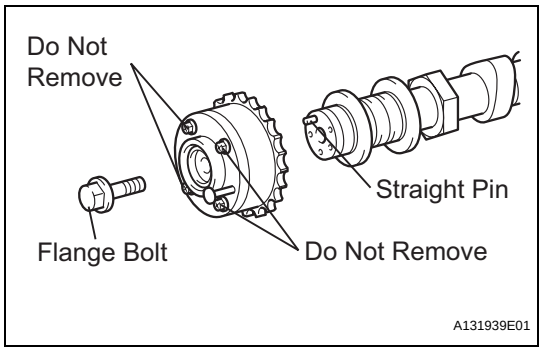
4 oil paths are provided in the groove. Plug 2 paths with rubber pieces.
(2) Prick a hole in the tape placed on the advance side path. Prick a hole in the tape placed on the retard side path on the opposite side to that of the advance side path, as shown in the illustration.

(3) Apply approximately 200 kPa (2.0 kgf/cm^2, 28 psi) of air pressure to the two broken paths (the advance side path and the retard side path).
CAUTION:
Cover the paths with a piece of cloth when applying pressure to keep oil from splashing.



(4) Make sure that the camshaft timing exhaust gear turns in the retard direction when reducing the air pressure applied to the advance side path.
HINT:
The lock pin is released and the camshaft timing exhaust gear turns in the retard direction.
(5) When the camshaft timing exhaust gear moves to the most retarded position, release the air pressure from the advance side path, and then release the air pressure from the retard side path.
NOTICE:
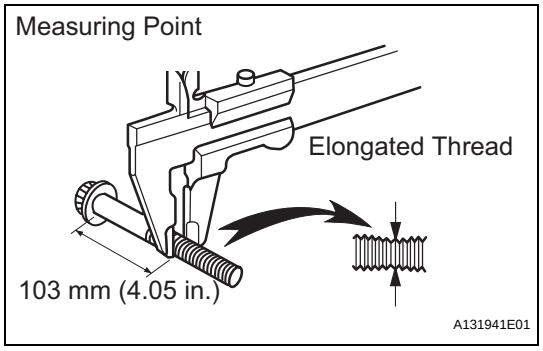
Be sure to release the air pressure from the advance side path first. If the air pressure of the retard side path is released first, the camshaft timing exhaust gear may abruptly shift in the advance direction and break the lock pin or other parts.

EM



(h) Check for smooth rotation.
(1) Turn the camshaft timing exhaust gear within its movable range (18.5°) 2 or 3 times, but do not turn it to the most advanced position. Make sure that the gear turns smoothly.
NOTICE:
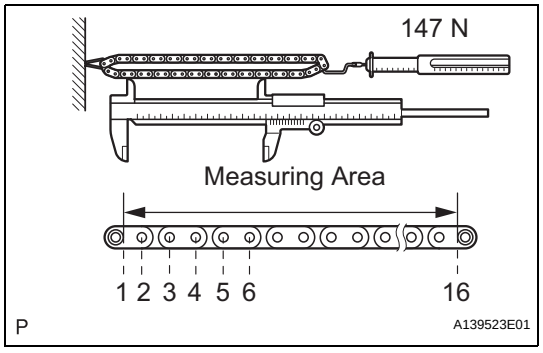
When the air pressure is released from the advance side path and then from the retard side path, the gear automatically returns to the most advanced position due to the advance assist spring operation and locks. Gradually release the air pressure from the retard side path before performing the smooth rotation check.

(i) Check the lock at the most advanced position.
(1) Make sure that the camshaft timing exhaust gear is locked at the most advanced position.



(j) Remove the flange bolt and camshaft timing exhaust gear.
NOTICE:
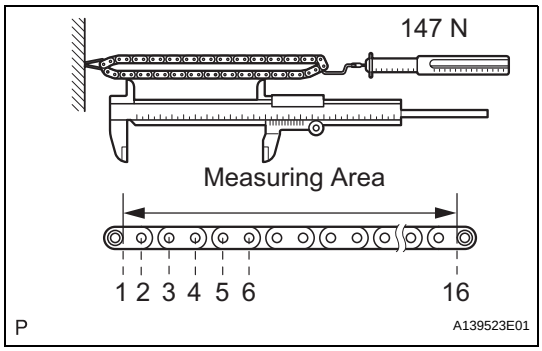
- **Be sure not to remove the other 3 bolts.**
- **If planning to reuse the gear, be sure to release the straight pin lock before installing the gear.**

EM

5. INSPECT CYLINDER HEAD SET BOLT



(a) Using a vernier caliper, measure the minimum diameter of the elongated thread at the measuring point.
Minimum outside diameter:
10.70 mm (0.4213 in.)
HINT:
- If a visual check reveals no excessively thin areas, check the center of the bolt (see illustration) and find the area that has the lowest diameter.
- If the diameter is less than the minimum, replace the cylinder head bolt.

6. INSPECT CHAIN SUB-ASSEMBLY

(a) Using a spring scale, pull the chain with a force of 147 N (15 kgf, 33 lbf) as shown in the illustration.

(b) Using a vernier caliper, measure the length of 16 links.
Maximum chain elongation:
136.9 mm (5.389 in.)
If the elongation is greater than the maximum, replace the chain.
NOTICE:
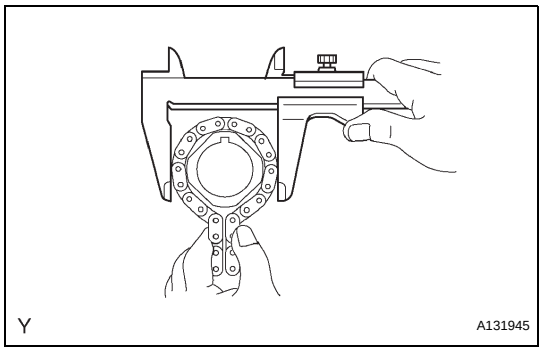
Perform the measurement at 3 random places. Inspect using the average of the measurements.

7. INSPECT NO. 2 CHAIN SUB-ASSEMBLY



(a) Pull the chain with a force of 147 N (15 kgf, 33 lbf) as shown in the illustration.

(b) Using a vernier caliper, measure the length of 16 links.

Maximum chain elongation:
137.6 mm (5.417 in.)

If the elongation is greater than the maximum, replace the chain.

NOTICE:
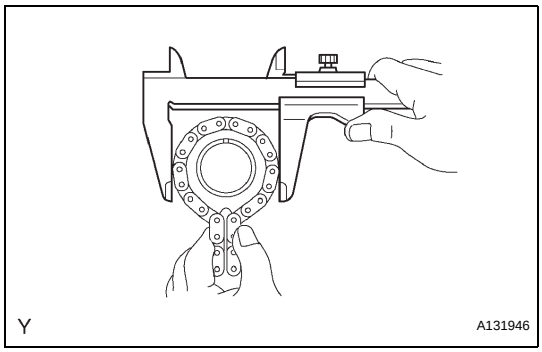
Perform the measurement at 3 random places.
Inspect using the average of the measurements.

8. INSPECT CRANKSHAFT TIMING GEAR OR SPROCKET



(a) Wrap the chain around the sprocket.

(b) Using a vernier caliper, measure the sprocket diameter with the chain.

Minimum sprocket diameter (w/ chain):
61.4 mm (2.417 in.)

HINT:

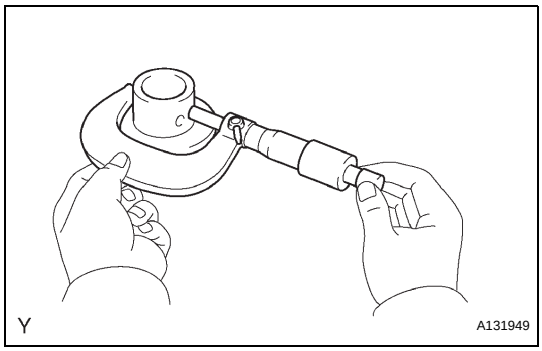
- The vernier caliper must contact the chain rollers for the measurement.
- If the diameter is less than the minimum, replace the chain and sprocket.

9. INSPECT IDLE SPROCKET ASSEMBLY



(a) Wrap the chain around the sprocket.

(b) Using a vernier caliper, measure the sprocket diameter with the chain.

Minimum sprocket diameter (w/ chain):
61.4 mm (2.417 in.)

HINT:

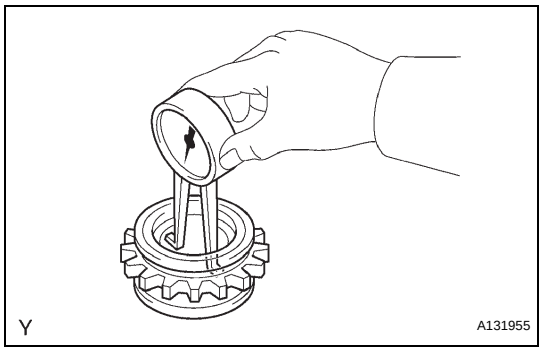
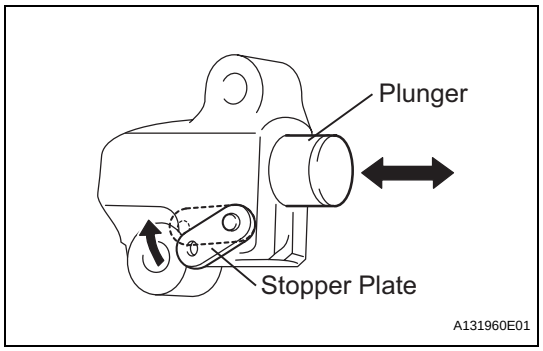
- The vernier caliper must contact the chain rollers for the measurement.
- If the diameter is less than the minimum, replace the chain and sprocket.



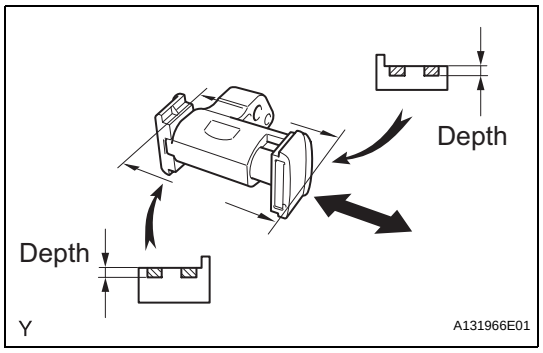
10. INSPECT IDLE GEAR SHAFT OIL CLEARANCE

(a) Using a micrometer, measure the idle gear shaft diameter.



Standard idle gear shaft diameter:
22.987 to 23.000 mm (0.9050 to 0.9055 in.)

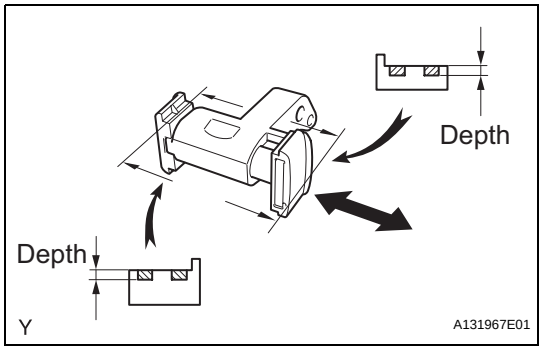
EM



(b) Using a caliper gauge, measure the inside diameter of the idle gear.
Standard idle gear inside diameter:
23.02 to 23.03 mm (0.9062 to 0.9067 in.)

(c) Subtract the idle gear shaft diameter measurement from the idle gear inside diameter measurement.
Standard oil clearance:
0.02 to 0.043 mm (0.0001 to 0.0017 in.)
Maximum oil clearance:
0.043 mm (0.0017 in.)
If the thrust oil clearance is greater than the maximum, replace the idle gear shaft and idle gear.

11. INSPECT NO. 1 CHAIN TENSIONER ASSEMBLY

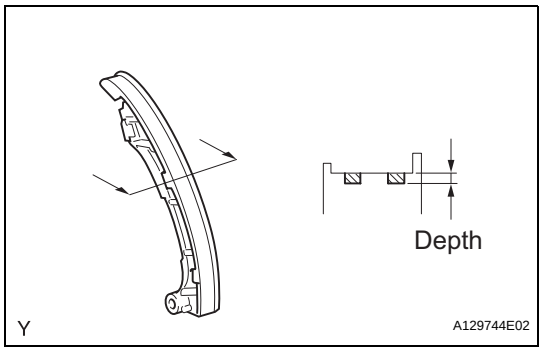


(a) Move the stopper plate upward to release the lock. Push the plunger and check that it moves smoothly. If necessary, replace the chain tensioner.

12. INSPECT NO. 2 CHAIN TENSIONER ASSEMBLY

(a) Check that the plunger moves smoothly.

(b) Measure the worn depth of the chain tensioner.
Maximum depth:
0.9 mm (0.035 in.)
If the depth is greater than the maximum, replace the chain tensioner.

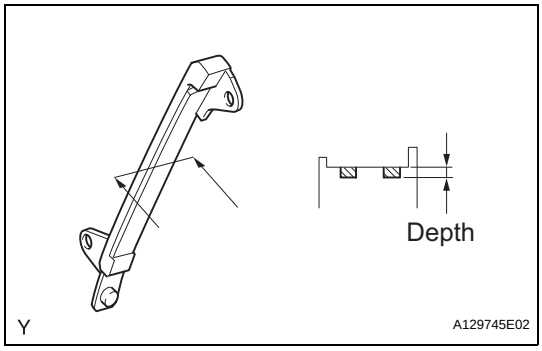


13. INSPECT NO. 3 CHAIN TENSIONER ASSEMBLY

(a) Check that the plunger moves smoothly.

(b) Measure the worn depth of the chain tensioner.
Maximum depth:
0.9 mm (0.035 in.)
If the depth is greater than the maximum, replace the chain tensioner.

EM



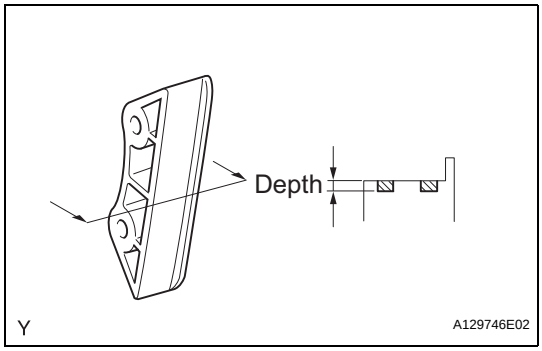
14. INSPECT CHAIN TENSIONER SLIPPER

(a) Measure the worn depth of the chain tensioner slipper.

Maximum depth:

1.0 mm (0.039 in.)

If the depth is greater than the maximum, replace the chain tensioner slipper.



15. INSPECT NO. 1 CHAIN VIBRATION DAMPER

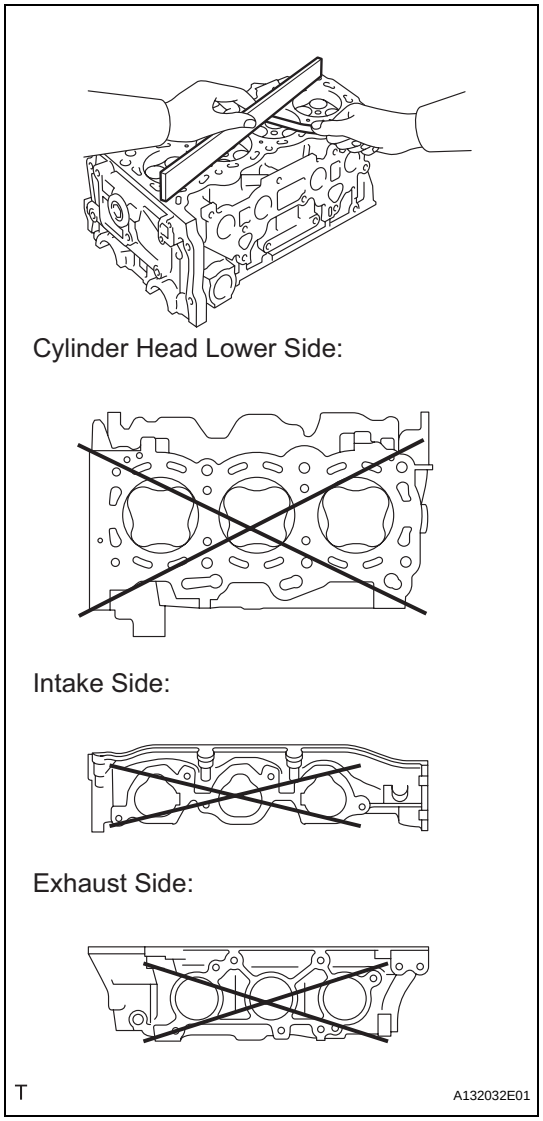
(a) Measure the worn depth of the chain vibration damper.

Maximum depth:

1.0 mm (0.039 in.)

If the depth is greater than the maximum, replace the chain vibration damper.

16. INSPECT NO. 2 CHAIN VIBRATION DAMPER



(a) Measure the worn depth of the chain vibration damper.

Maximum depth:

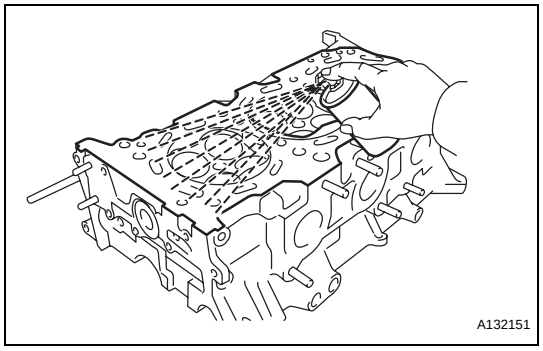
1.0 mm (0.039 in.)

If the depth is greater than the maximum, replace the chain vibration damper.

EM

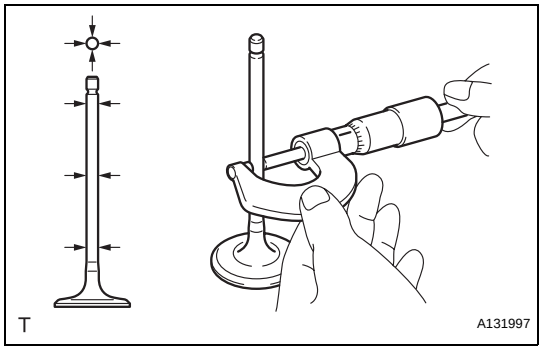
17. INSPECT CYLINDER HEAD SUB-ASSEMBLY

(a) Using a precision straightedge and feeler gauge, measure the warpage of the contact surface of the cylinder block and manifolds.



Standard warpage

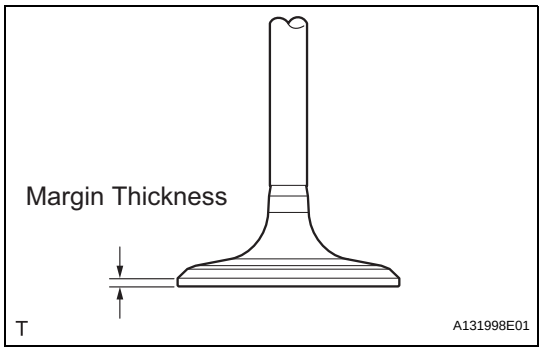
Item	Specified Condition
Cylinder head lower side	0.05 mm (0.0020 in.)
Intake side	0.08 mm (0.0031 in.)
Exhaust side	0.08 mm (0.0031 in.)



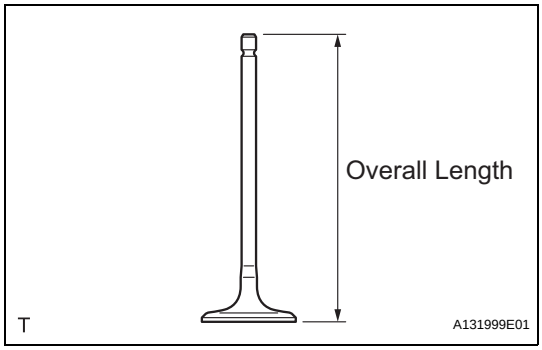
Maximum warpage:
0.10 mm (0.0039 in.)

If the warpage is greater than the maximum, replace the cylinder head.

EM



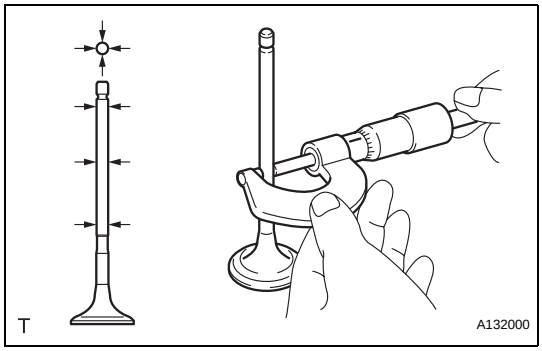
(b) Using a dye penetrate, check the intake ports, exhaust ports and cylinder surface for cracks.
If cracked, replace the cylinder head.



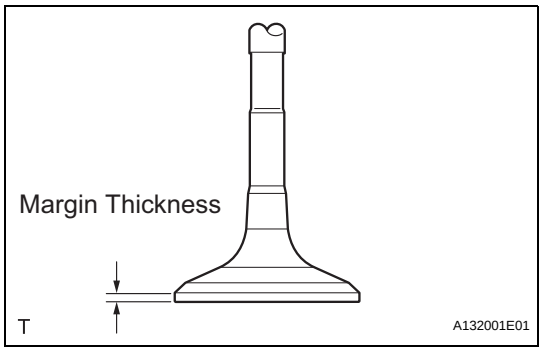
18. INSPECT INTAKE VALVE

(a) Using a micrometer, measure the diameter of the valve stem.

Standard valve stem diameter:
5.470 to 5.485 mm (0.2154 to 0.2159 in.)

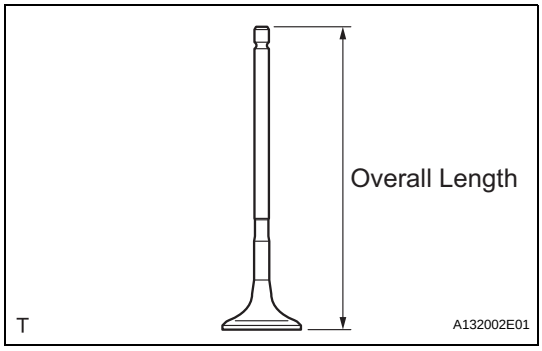


(b) Using a vernier caliper, measure the valve head margin thickness.
Standard margin thickness:
1.0 mm (0.0394 in.)
Minimum margin thickness:
0.50 mm (0.0197 in.)
If the margin thickness is less than the minimum, replace the intake valve.

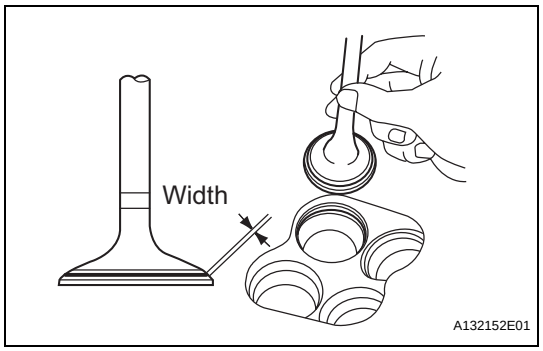


(c) Using a vernier caliper, measure the valve's overall length.
Standard overall length:
105.85 mm (4.1673 in.)
Minimum overall length:
105.35 mm (4.1476 in.)
If the overall length is less than the minimum, replace the intake valve.

EM

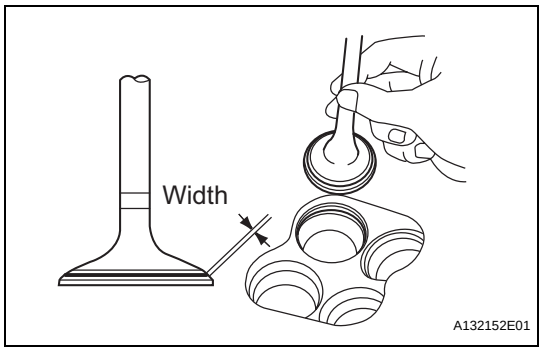


19. INSPECT EXHAUST VALVE



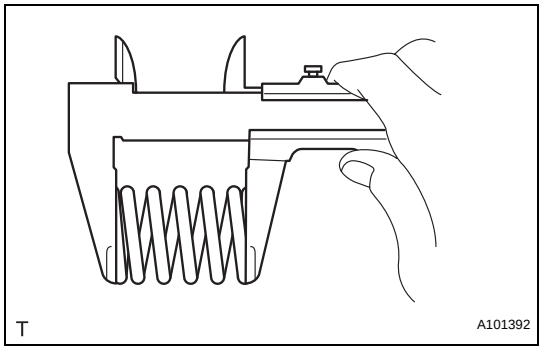
(a) Using a micrometer, measure the diameter of the valve stem.
Standard valve stem diameter:
5.465 to 5.480 mm (0.2151 to 0.2157 in.)

(b) Using a vernier caliper, measure the valve head margin thickness.
Standard margin thickness:
1.0 mm (0.0394 in.)
Minimum margin thickness:
0.50 mm (0.0197 in.)
If the margin thickness is less than the minimum, replace the exhaust valve.



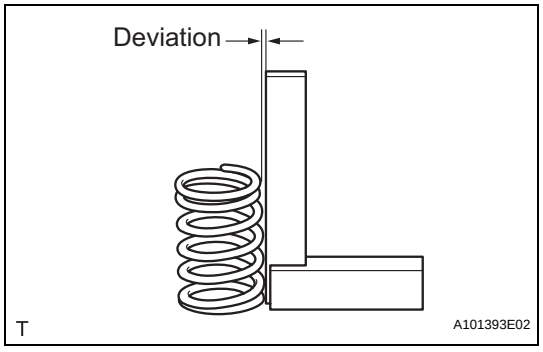
(c) Using a vernier caliper, measure the valve's overall length.
Standard overall length:
110.40 mm (4.3464 in.)
Minimum overall length:
109.90 mm (4.3268 in.)
If the overall length is less than the minimum, replace the exhaust valve.

20. INSPECT INTAKE VALVE SEAT



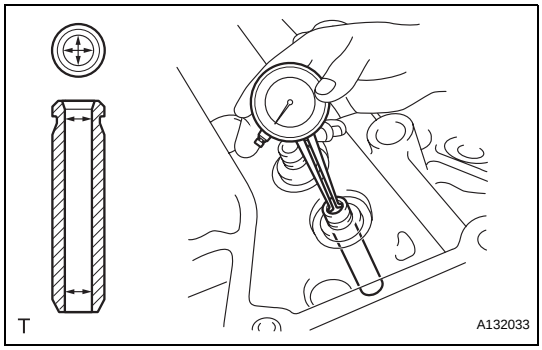
(a) Apply a light coat of Prussian blue to the valve face.
(b) Lightly press the valve face against the valve seat.
(c) Check the valve face and valve seat by using the following procedure.
  (1) If Prussian blue appears around the entire valve face, the valve face is concentric. If not, replace the valve.
  (2) If Prussian blue appears around the entire valve seat, the guide and valve face are concentric. If not, resurface the valve seat.
  (3) Check that the valve seat contacts in the middle of the valve face with the width between 1.1 and 1.5 mm (0.043 and 0.059 in.).

21. INSPECT EXHAUST VALVE SEAT



(a) Apply a light coat of Prussian blue to the valve face.
(b) Lightly press the valve face against the valve seat.
(c) Check the valve face and valve seat by using the following procedure.
  (1) If Prussian blue appears around the entire valve face, the valve face is concentric. If not, replace the valve.
  (2) If Prussian blue appears around the entire valve seat, the guide and valve face are concentric. If not, resurface the valve seat.
  (3) Check that the valve seat contacts in the middle of the valve face with the width between 1.2 and 1.6 mm (0.047 and 0.063 in.).

EM



22. INSPECT INNER COMPRESSION SPRING

(a) Using a vernier caliper, measure the free length of the inner compression spring.
Standard free length:
45.46 mm (1.7898 in.)
If the free length is not as specified, replace the spring.

(b) Using a steel square, measure the deviation of the inner compression spring.
Maximum deviation:
1.0 mm (0.039 in.)
Maximum angle (reference):
2°
If the deviation is greater than the maximum, replace the spring.

23. INSPECT VALVE GUIDE BUSH OIL CLEARANCE

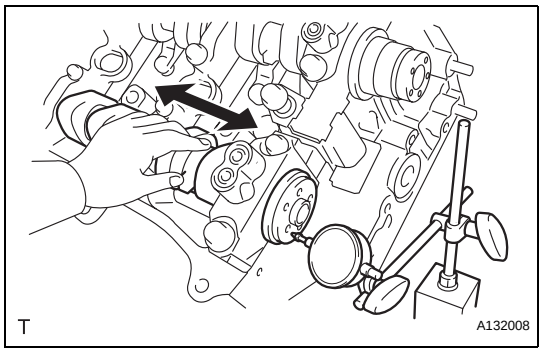
(a) Using a caliper gauge, measure the inside diameter of the guide bush.

Standard bush inside diameter:
5.51 to 5.53 mm (0.2169 to 0.2177 in.)

(b) Subtract the valve stem diameter measurement from the guide bush inside diameter measurement.

Standard clearance

Item	Specified Condition
Intake	0.025 to 0.060 m (0.0010 to 0.0024 in.)
Exhaust	0.030 to 0.065 mm (0.0012 to 0.0026 in.)



Maximum oil clearance

Item	Specified Condition
Intake	0.08 mm (0.0031 in.)
Exhaust	0.10 mm (0.0039 in.)

HINT:

- If the clearance is greater than the maximum, replace the intake valve and intake guide bush.
- If the clearance is greater than the maximum, replace the exhaust valve and exhaust guide bush.

EM

24. INSPECT CAMSHAFT THRUST CLEARANCE

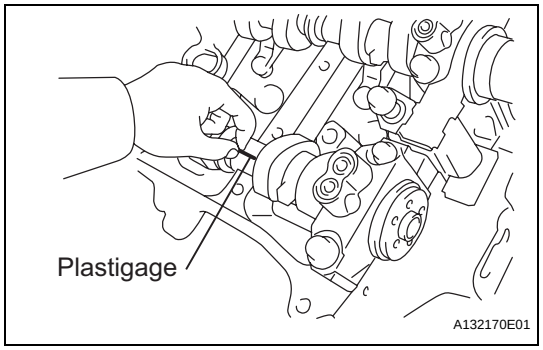
(a) Inspect the bank 1 camshafts.

(1) Install the bank 1 camshafts.

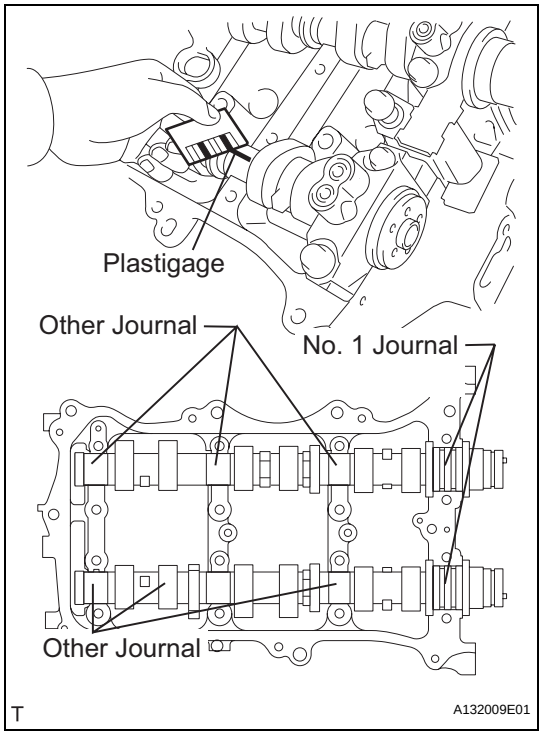
(2) Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard thrust clearance:
0.08 to 0.13 mm (0.0031 to 0.0051 in.)
Maximum thrust clearance:
0.15 mm (0.006 in.)

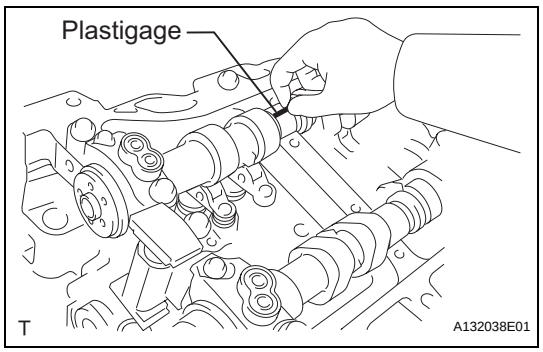
If the thrust clearance is greater than the maximum, replace the cylinder head. If the thrust surface is damaged, replace the camshaft.



(b) Inspect the bank 2 camshafts.



(1) Install the bank 2 camshafts.



(2) Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard thrust clearance:
0.08 to 0.13 mm (0.0031 to 0.0051 in.)
Maximum thrust clearance:
0.15 mm (0.006 in.)

If the thrust clearance is greater than the maximum, replace the cylinder head. If the thrust surface is damaged, replace the camshaft.

25. INSPECT CAMSHAFT OIL CLEARANCE

(a) Clean the bearing caps, camshaft housing and camshaft journals.
(b) Place the camshafts on the camshaft housing.
(c) Lay a strip of Plastigage across each of the camshaft journals.
(d) Install the bearing caps.
NOTICE:
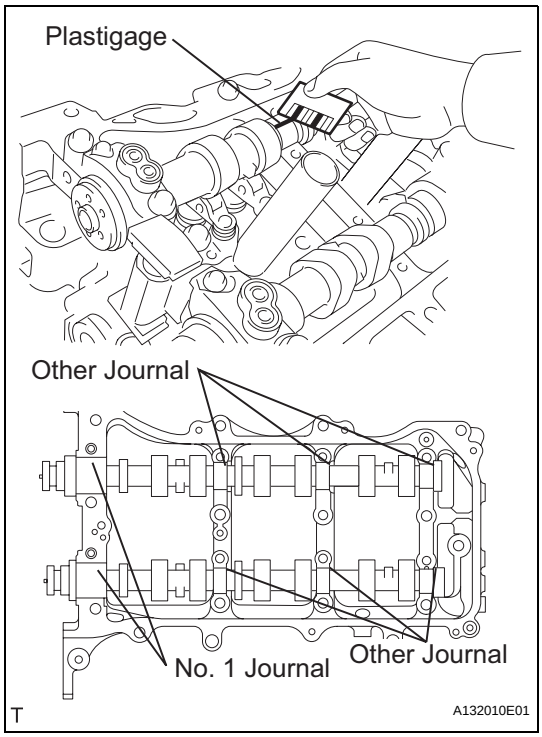
Do not turn the camshaft.
(e) Remove the bearing caps.

(f) Measure the Plastigage at its widest point.
Standard oil clearance

Item	Specified Condition
No. 1 journal	0.040 to 0.079 mm (0.0016 to 0.0031 in.)
Other journal	0.025 to 0.062 mm (0.0010 to 0.0024 in.)



Maximum oil clearance

Item	Specified Condition
No. 1 journal	0.10 mm (0.0039 in.)
Other journal	0.09 mm (0.0035 in.)

If the oil clearance is greater than the maximum, replace the camshaft. If necessary, replace the camshaft housing.
(g) Clean the bearing caps, camshaft housing and camshaft journals.
(h) Place the camshafts on the camshaft housing.

(i) Lay a strip of Plastigage across each of the camshaft journals.
(j) Install the bearing caps.
NOTICE:
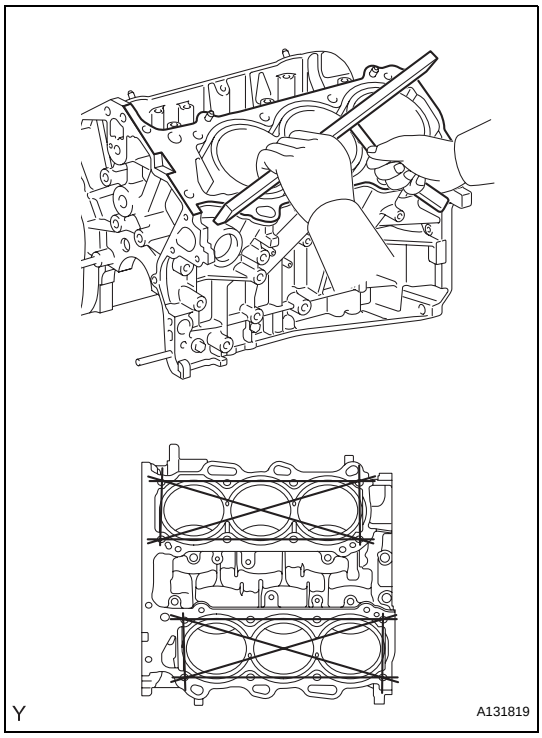
Do not turn the camshaft.
(k) Remove the bearing caps.

EM

(l) Measure the Plastigage at its widest point.

Standard oil clearance



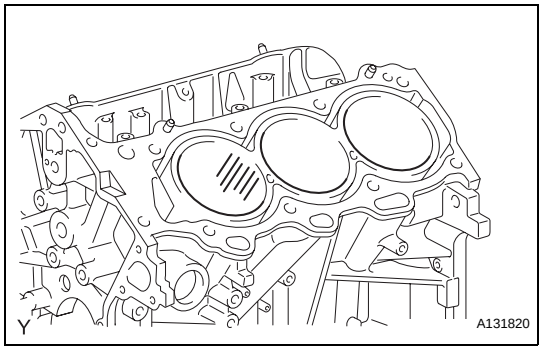
Item	Specified Condition
No. 1 journal	0.040 to 0.079 mm (0.0016 to 0.0031 in.)
Other journal	0.025 to 0.062 mm (0.0010 to 0.0024 in.)

Maximum oil clearance

Item	Specified Condition
No. 1 journal	0.10 mm (0.0039 in.)
Other journal	0.09 mm (0.0035 in.)

If the oil clearance is greater than the maximum, replace the camshaft. If necessary, replace the camshaft housing.

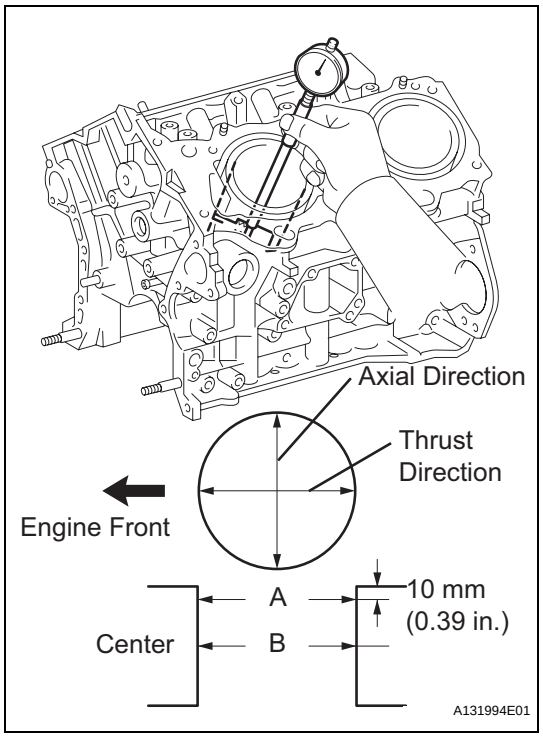
EM



26. INSPECT CYLINDER BLOCK FOR WARPAGE

(a) Using a precision straightedge and feeler gauge, measure the warpage of the contact surface of the cylinder head gasket.

Maximum warpage:

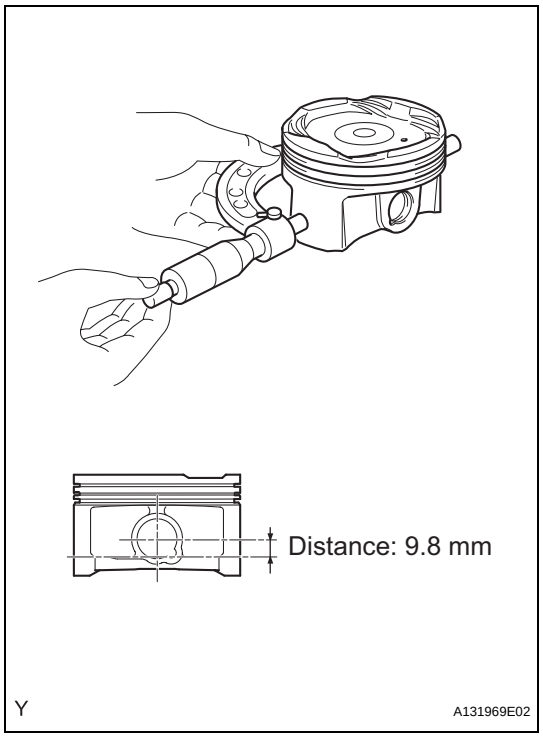


0.07 mm (0.0028 in.)

If the warpage is greater than the maximum, replace the cylinder block.

(b) Visually check the cylinder for vertical scratches.

If deep scratches are present, rebore all 6 cylinders. If necessary, replace the cylinder block.



27. INSPECT CYLINDER BORE

(a) Using a cylinder gauge, measure the cylinder bore diameter at positions A and B in the thrust and axial directions.

Standard diameter:
94.000 to 94.012 mm (3.7008 to 3.7013 in.)
Maximum diameter:
94.200 mm (3.7087 in.)

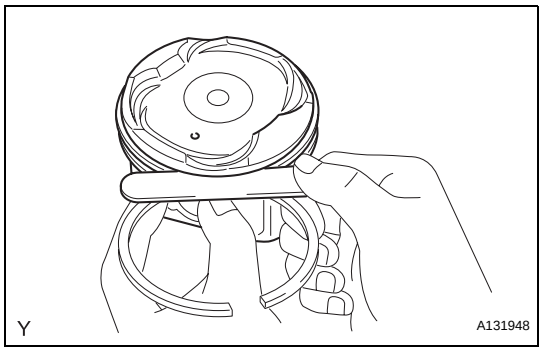
If the diameter is greater than the maximum, replace the cylinder block.

28. INSPECT PISTON SUB-ASSEMBLY WITH PIN

(a) Using a micrometer, measure the piston diameter at right angles to the piston center line where the distance from the bottom edge of the piston is as specified.

Distance:
9.8 mm (0.3858 in.)
Standard diameter:
93.960 to 93.980 mm (3.6992 to 3.6999 in.)
Maximum diameter:
93.830 mm (3.6941 in.)

29. INSPECT PISTON OIL CLEARANCE



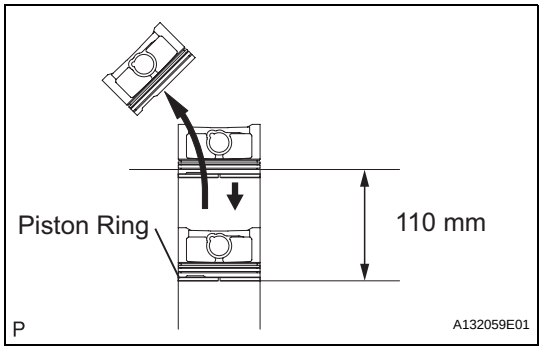
(a) Measure the cylinder bore diameter in the thrust direction.

(b) Subtract the piston diameter measurement from the cylinder bore diameter measurement.

Standard oil clearance:
0.020 to 0.052 mm (0.0007 to 0.0020 in.)
Maximum oil clearance:
0.06 mm (0.0024 in.)

If the oil clearance is greater than the maximum, replace all the pistons. If necessary, replace the cylinder block.

EM

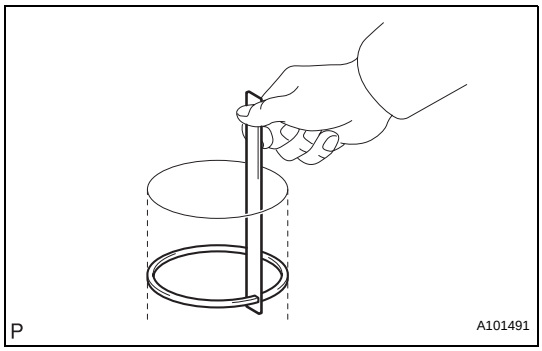


30. INSPECT RING GROOVE CLEARANCE

(a) Using a feeler gauge, measure the clearance between a new piston ring and the wall of the ring groove.

Standard ring groove clearance

Item	Specified Condition
No. 1	0.020 to 0.070 mm (0.0008 to 0.0028 in.)
No. 2	0.020 to 0.060 mm (0.0008 to 0.0024 in.)
Oil	0.070 to 0.150 mm (0.0028 to 0.0059 in.)



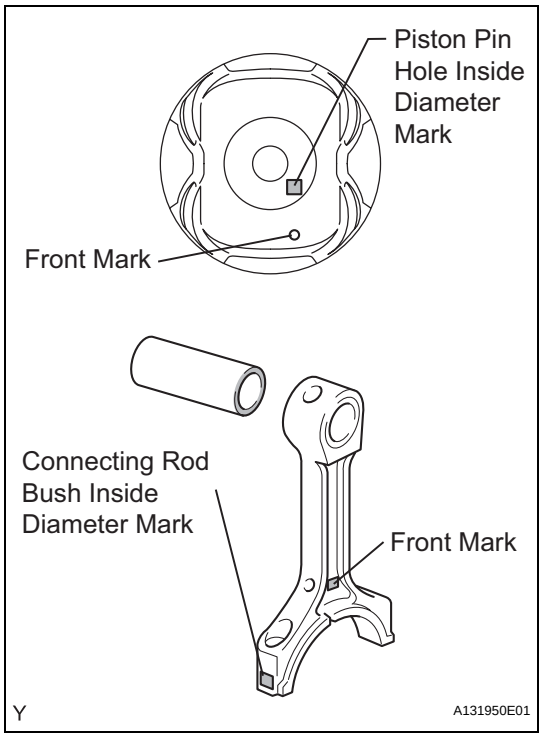
If the clearance is not as specified, replace the piston.

31. INSPECT PISTON RING END GAP

(a) Insert the piston ring into the cylinder bore.

(b) Using a piston, push the piston ring a little beyond the bottom of the ring travel, 110 mm (4.33 in.) from the top of the cylinder block.

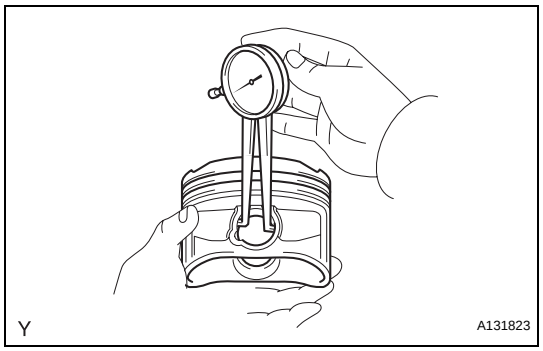
(c) Using a feeler gauge, measure the end gap.



Standard end gap

Item	Specified Condition
No. 1	0.25 to 0.35 mm (0.0098 to 0.0138 in.)
No. 2	0.50 to 0.60 mm (0.0197 to 0.0236 in.)
Oil	0.10 to 0.40 mm (0.0039 to 0.0157 in.)

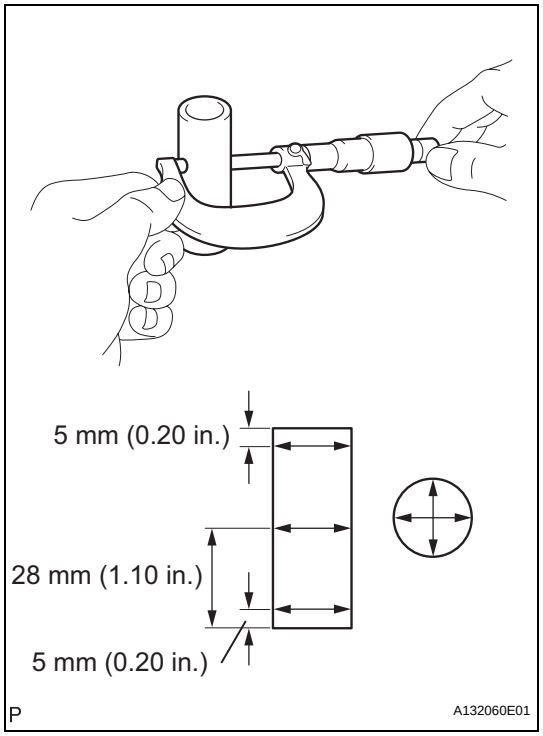
Maximum end gap



Item	Specified Condition
No. 1	0.50 mm (0.0197 in.)
No. 2	0.85 mm (0.0335 in.)
Oil	0.60 mm (0.0236 in.)

If the end gap is greater than the maximum, replace the piston ring. If the end gap is greater than the maximum even with a new piston ring, replace the cylinder block.

32. INSPECT PISTON PIN OIL CLEARANCE



(a) Check each mark on the piston, piston pin and connecting rod.

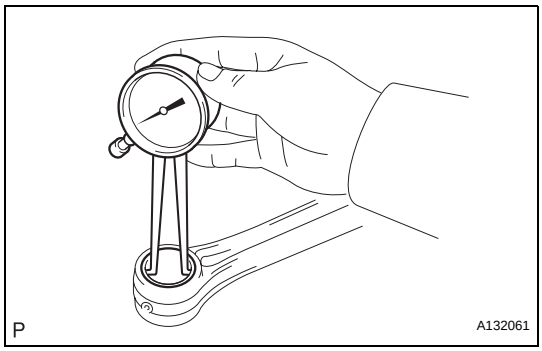
(b) Using a caliper gauge, measure the inside diameter of the piston pin hole.

Standard piston pin hole inside diameter

Mark	Specified Condition
A	22.001 to 22.004 mm (0.8662 to 0.8663 in.)
B	22.005 to 22.007 mm (0.8663 to 0.8664 in.)
C	22.008 to 22.010 mm (0.8665 to 0.8665 in.)

(c) Using a micrometer, measure the piston pin diameter.

Standard piston pin diameter



Mark	Specified Condition
A	21.997 to 22.000 mm (0.8660 to 0.8661 in.)
B	22.001 to 22.003 mm (0.8662 to 0.8663 in.)
C	22.004 to 22.006 mm (0.8663 to 0.8664 in.)

(d) Subtract the piston pin diameter measurement from the piston pin hole diameter measurement.

Standard oil clearance:
0.001 to 0.007 mm (0.00004 to 0.0003 in.)
Maximum oil clearance:
0.015 mm (0.0006 in.)

HINT:
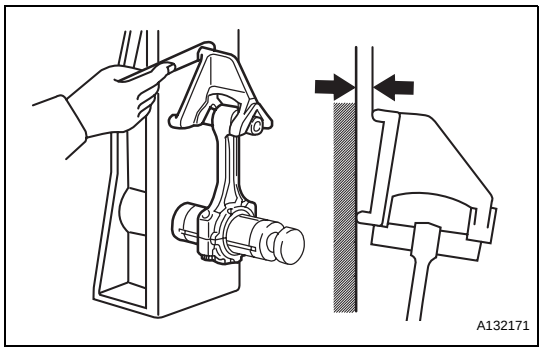
If the oil clearance is greater than the maximum, replace the piston and piston pin as a set.

EM

(e) Using a caliper gauge, measure the inside diameter of the connecting rod bush.

Standard bush inside diameter



Mark	Specified Condition
A	22.005 to 22.008 mm (0.8663 to 0.8665 in.)
B	22.009 to 22.011 mm (0.8665 to 0.8666 in.)
C	22.012 to 22.014 mm (0.8666 to 0.8667 in.)

(f) Subtract the piston pin diameter measurement from the bush inside diameter measurement.

Standard oil clearance:
0.005 to 0.011 mm (0.0002 to 0.0004 in.)
Maximum oil clearance:
0.03 mm (0.0012 in.)

HINT:
If the oil clearance is greater than the maximum, replace the bush. If necessary, replace the connecting rod and piston pin as a set.

EM

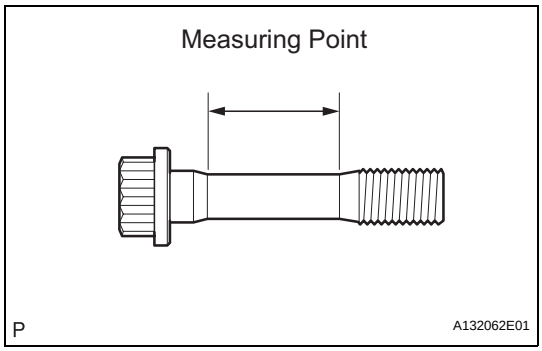
33. INSPECT CONNECTING ROD SUB-ASSEMBLY

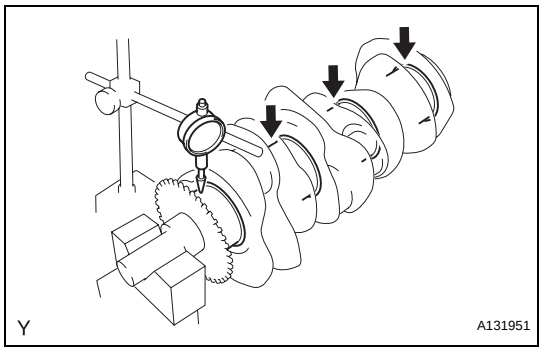
(a) Using a rod aligner and feeler gauge, check the connecting rod alignment.



(1) Check for bend.

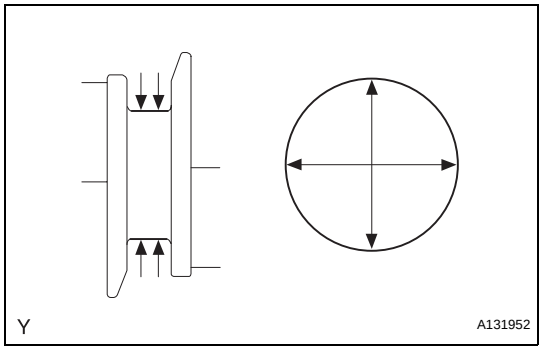
Maximum bend:
0.05 mm (0.0020 in.) per 100 mm (3.94 in.)
If the bend is greater than the maximum, replace the connecting rod.

(2) Check for twist.



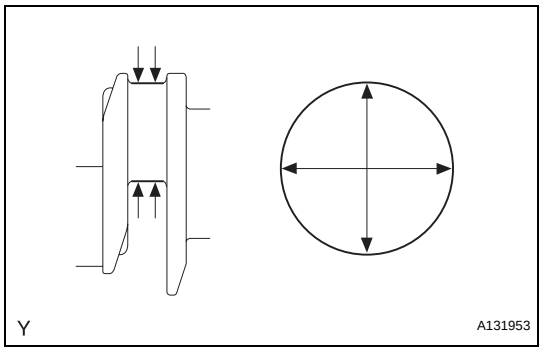
Maximum twist:
0.15 mm (0.0059 in.) per 100 mm (3.94 in.)
If the twist is greater than the maximum, replace the connecting rod.

34. INSPECT CONNECTING ROD BOLT

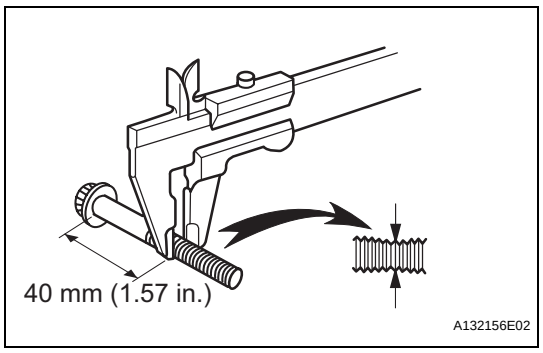


(a) Using a vernier caliper, measure the tension portion diameter of the bolt.

Standard diameter:
7.2 to 7.3 mm (0.283 to 0.287 in.)
Minimum diameter:
7.0 mm (0.276 in.)
If the diameter is less than the minimum, replace the bolt.

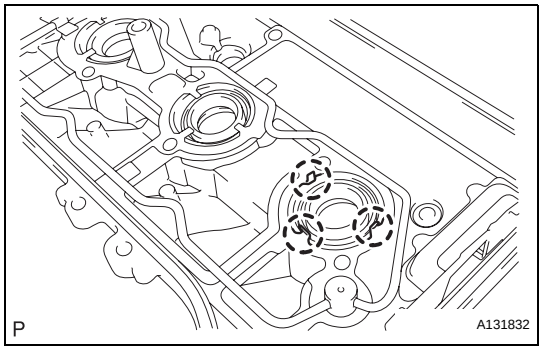


35. INSPECT CRANKSHAFT



(a) Inspect for circle runout.
  (1) Place the crankshaft on the V-blocks.
  (2) Using a dial indicator, measure the circle runout at the center journal.
  Maximum circle runout:
  0.06 mm (0.0024 in.)
  If the circle runout is greater than the maximum, replace the crankshaft.

(b) Inspect the main journals.
  (1) Using a micrometer, measure the diameter of each main journal.
  Standard journal diameter:
  60.988 to 61.00 mm (2.4011 to 2.4016 in.)
  If the diameter is not as specified, check the oil clearance. If necessary, replace the crankshaft.
  (2) Check each main journal for taper and out-of-round as shown in the illustration.
  Maximum taper and out-of-round:
  0.02 mm (0.0008 in.)
  If the taper and out-of-round is greater than the maximum, replace the crankshaft.



(c) Inspect the crank pin.
  (1) Using a micrometer, measure the diameter of each crank pin.
  Standard crank pin diameter:
  52.992 to 53.000 mm (2.0863 to 2.0866 in.)
  If the diameter is not as specified, check the oil clearance. If necessary, replace the crankshaft.
  (2) Check each crank pin for taper and out-of-round as shown in the illustration.
  Maximum taper and out-of-round:
  0.02 mm (0.0008 in.)
  If the taper and out-of-round is greater than the maximum, replace the crankshaft.

36. INSPECT CRANKSHAFT BEARING CAP SET BOLT

(a) Using a vernier caliper, measure the minimum diameter of the compressed thread at the measuring point.
  Standard diameter:
  10.8 to 11.0 mm (0.4252 to 0.4331 in.)
  Minimum diameter:
  10.70 mm (0.4213 in.)
  If the diameter is less than the minimum, replace the bolt.

EM

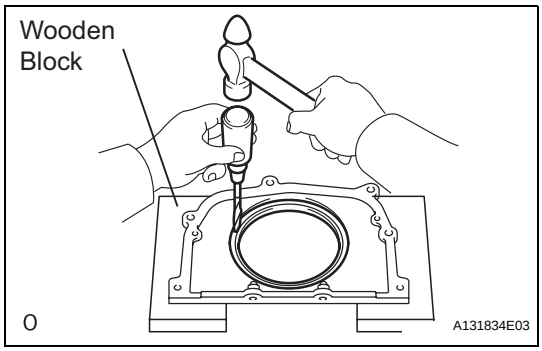
REPLACEMENT

1. REPLACE SPARK PLUG TUBE GASKET

(a) Pry up the claws of the ventilation baffle plate.



(b) Using a screwdriver with its tip taped and a hammer, tap out the 6 spark plug tube gaskets.

(c) Using a 32 mm socket wrench, tap in 6 new spark plug tube gaskets to the head covers.
NOTICE:
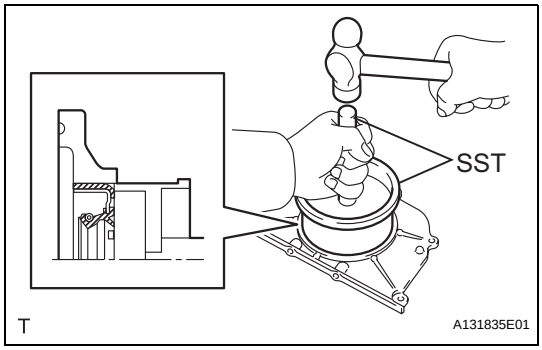
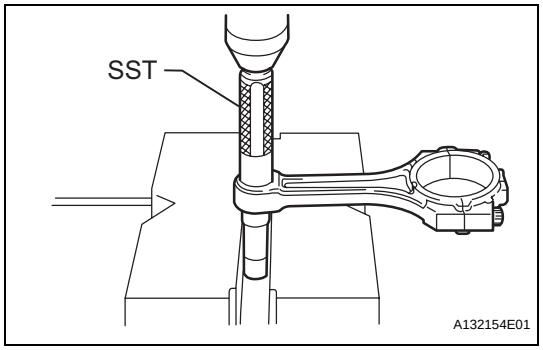
- **Keep the lip free from foreign matter.**
- **Do not tap on the oil seal at an angle.**



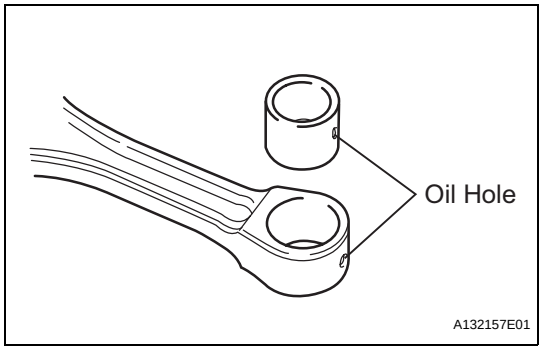
(d) Return the claw of the ventilation baffle plate to its original position.

2. REPLACE ENGINE REAR OIL SEAL



(a) Place the oil seal retainer on wooden blocks.

(b) Using a screwdriver and a hammer, tap out the oil seal.



(c) Using SST, tap in a new oil seal until its surface is flush with the oil seal retainer edge.
SST 09223-15030
NOTICE:
- **Keep the lip free from foreign matter.**
- **Do not tap on the oil seal at an angle.**

EM

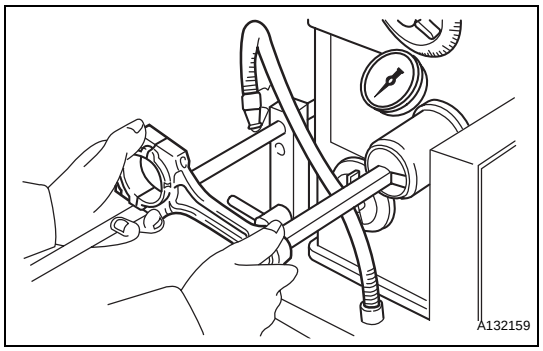
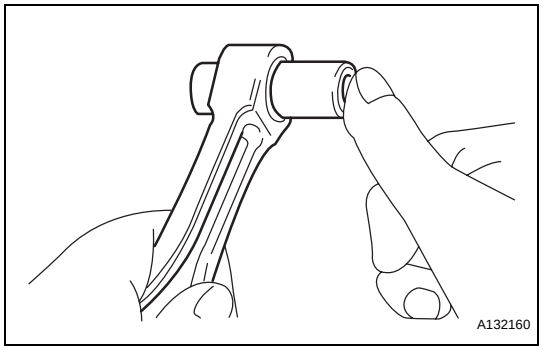
3. REPLACE CONNECTING ROD SMALL END BUSH



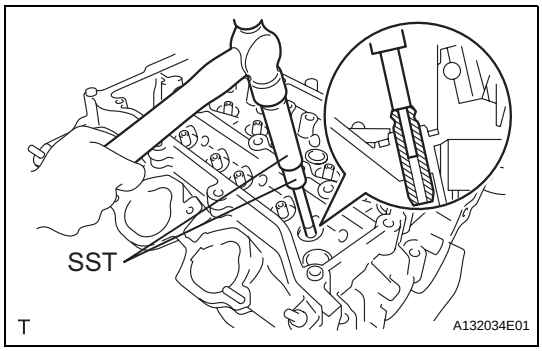
(a) Using SST and a press, push out the bush.
SST 09222-30010



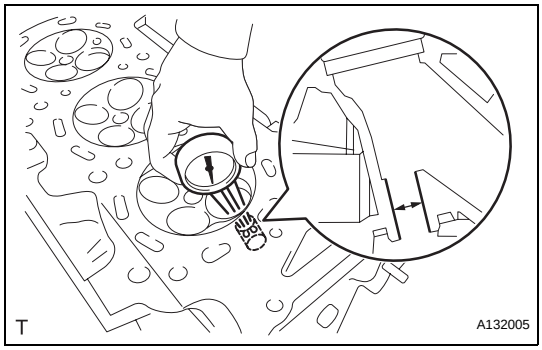
(b) Align the oil holes of the new bush and connecting rod.

(c) Using SST and a press, push in the bush.
SST 09222-30010

(d) Using a pin hole grinder, hone the bush to obtain the standard specified clearance between the bush and piston pin.



(e) Coat the piston pin with engine oil. Push the piston pin into the connecting rod with your thumb to check that the piston pin fits at normal room temperature.



4. REPLACE INTAKE VALVE GUIDE BUSH

(a) Heat the cylinder head to approximately 80 to 100°C (176 to 212°F).
(b) Place the cylinder head on wooden blocks.

EM

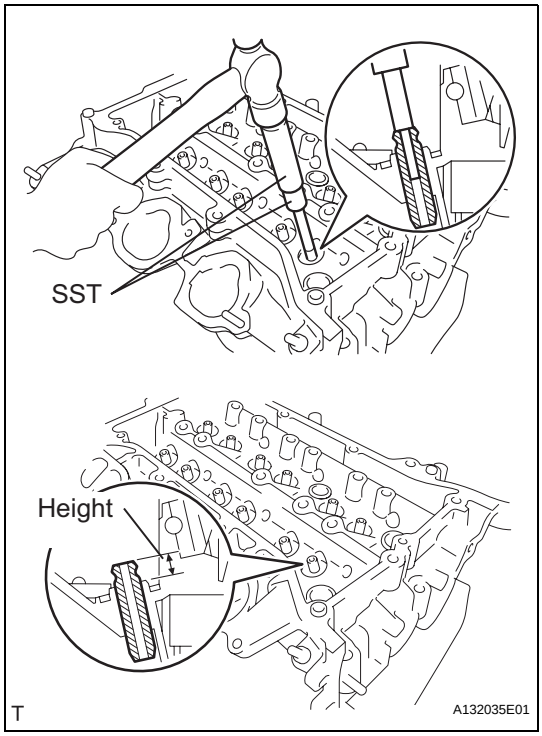
(c) Using SST and a hammer, tap out the valve guide bush.
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)



(d) Using a caliper gauge, measure the bush bore diameter of the cylinder head.
Standard cylinder bore diameter:
10.285 to 10.306 mm (0.4049 to0.4057 in.)

(e) Select a new guide bush (STD or O/S 0.05).
Standard bush bore diameter

Bush Size	Specified Condition
Use STD	10.335 to 10.356 mm (0.4069 to 0.4077 in.)
Use O/S 0.05	10.285 to 10.306 mm (0.4049 to 0.4057 in.)

HINT:
- If the bush bore diameter of the cylinder head is greater than 10.344 mm (0.4072 in.), machine the bush bore diameter to between 10.383 to 10.394 mm (0.4088 to 0.4092 in.).
- If the bush bore diameter of the cylinder head is greater than 10.344 mm (0.4072 in.), replace the cylinder head.

(f) Heat the cylinder head to approximately 80 to 100°C (176 to 212°F).

(g) Using SST and a hammer, tap in a new guide bush to the specified protrusion height.
Standard protrusion height:
9.1 to 9.9 mm (0.3582 to 0.3900 in.)
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)

EM

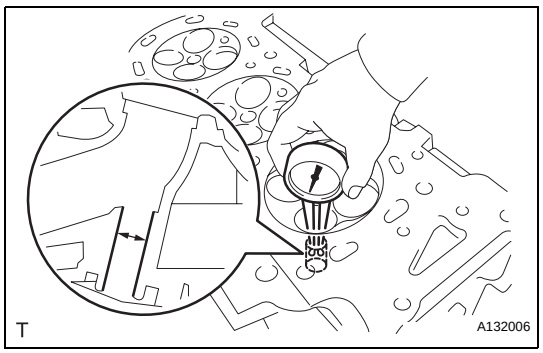
(h) Using a sharp 5.5 mm reamer, ream the guide bush to obtain the standard specified clearance between the guide bush and valve stem.

5. REPLACE EXHAUST VALVE GUIDE BUSH



(a) Heat the cylinder head to approximately 80 to 100°C (176 to 212°F).

(b) Place the cylinder head on wooden blocks.

(c) Using SST and a hammer, tap out the valve guide bush.

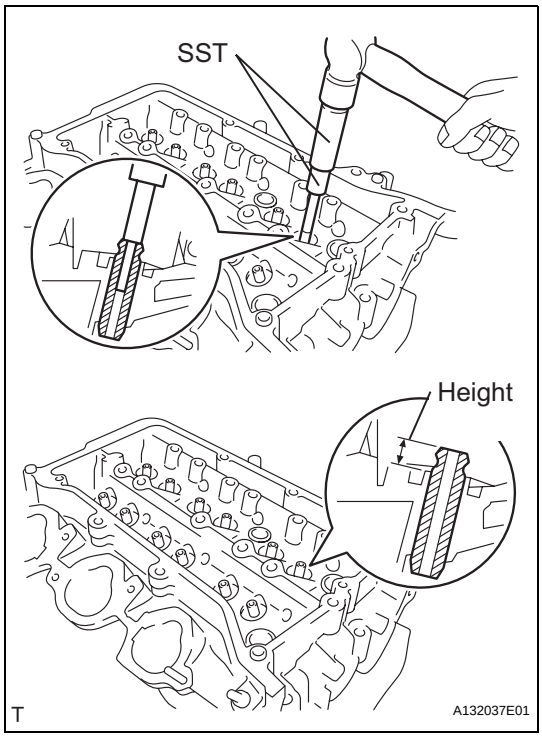
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)

(d) Using a caliper gauge, measure the bush bore diameter of the cylinder head.

Standard cylinder bore diameter:
10.285 to 10.306 mm (0.4049 to 0.4057 in.)

(e) Select a new guide bush (STD or O/S 0.05).

Standard bush bore diameter



Bush Size	Specified Condition
Use STD	10.335 to 10.356 mm (0.4069 to 0.4077 in.)
Use O/S 0.05	10.285 to 10.306 mm (0.4049 to 0.4057 in.)

HINT:

- If the bush bore diameter of the cylinder head is greater than 10.344 mm (0.4072 in.), machine the bush bore diameter to between 10.383 to 10.394 mm (0.4088 to 0.4092 in.).
- If the bush bore diameter of the cylinder head is greater than 10.344 mm (0.4072 in.), replace the cylinder head.

(f) Heat the cylinder head to approximately 80 to 100°C (176 to 212°F).

EM

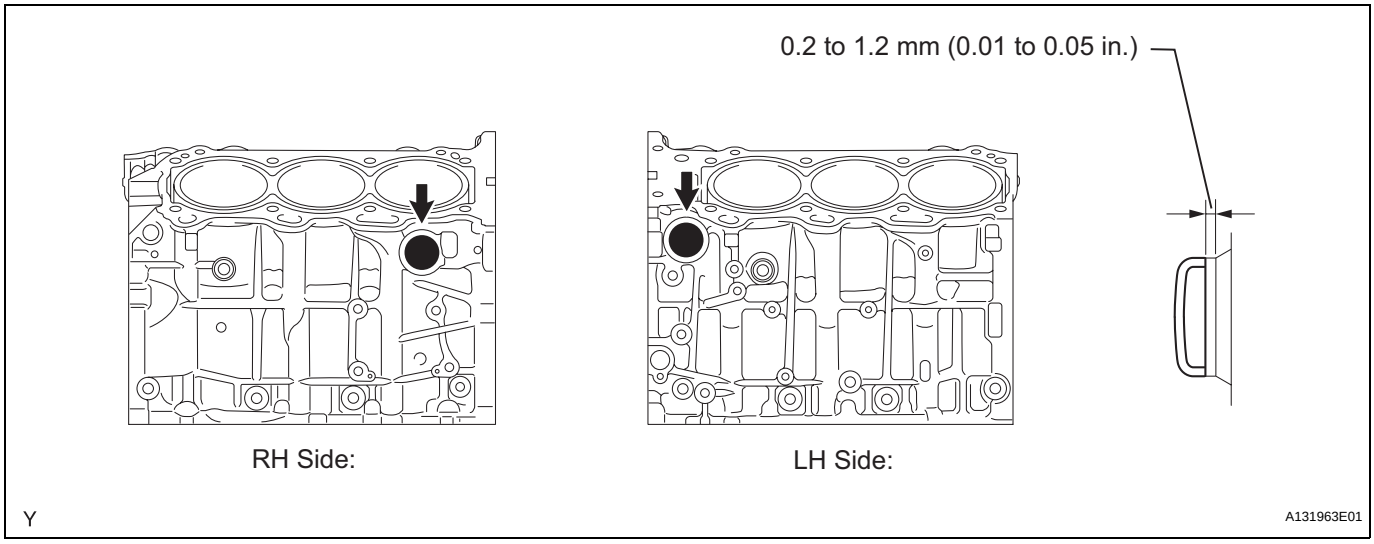
(g) Using SST and a hammer, tap in a new guide bush to the specified protrusion height.
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)
Standard protrusion height:
9.30 to 9.70 mm (0.3661 to 0.3819 in.)



(h) Using a sharp 5.5 mm reamer, ream the guide bush to obtain the standard specified clearance between the guide bush and valve stem.

6. REPLACE CYLINDER BLOCK TIGHT PLUG
NOTICE:
If water leaks from the tight plug or the plug corrodes, replace it.
(a) Remove the tight plugs.

(b) Apply adhesive around the tight plug.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent
(c) Using SST and a hammer, tap in 2 new tight plugs as shown in the illustration.
SST 09950-60010 (09951-00340), 09950-70010 (09951-07100)

7. REPLACE CYLINDER BLOCK STUD BOLT

NOTICE:

If a stud bolt is deformed or the threads are damaged, replace it.

(a) Remove the stud bolts.

(b) Using an E8 "torx" socket wrench, install the stud bolts.

Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

8. REPLACE CYLINDER BLOCK STRAIGHT PIN

NOTICE:

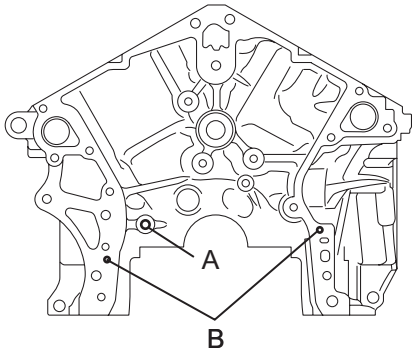
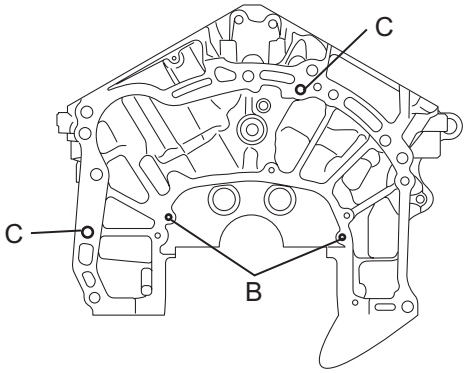
It is not necessary to remove the straight pin unless it is being replaced.



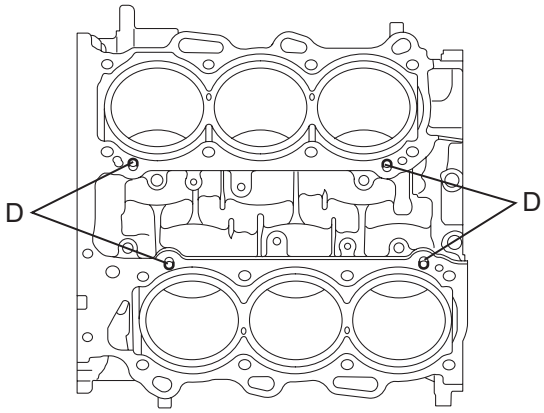
(a) Remove the straight pin.

(b) Using a plastic-faced hammer, tap in new straight pins to the cylinder block.

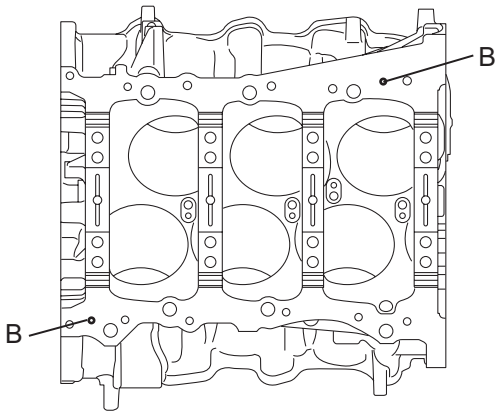


Standard protrusion

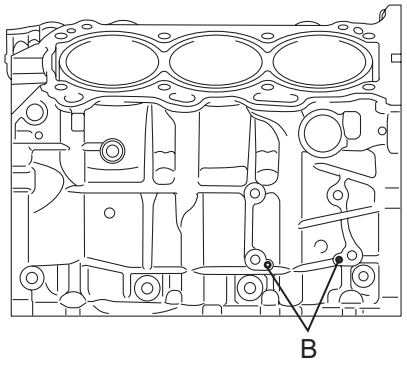
Item	Specified Condition
Pin A	23 mm (0.91 in.)
Pin B	6 mm (0.24 in.)
Pin C	11 mm (0.43 in.)
Pin D	9 mm (0.35 in.)



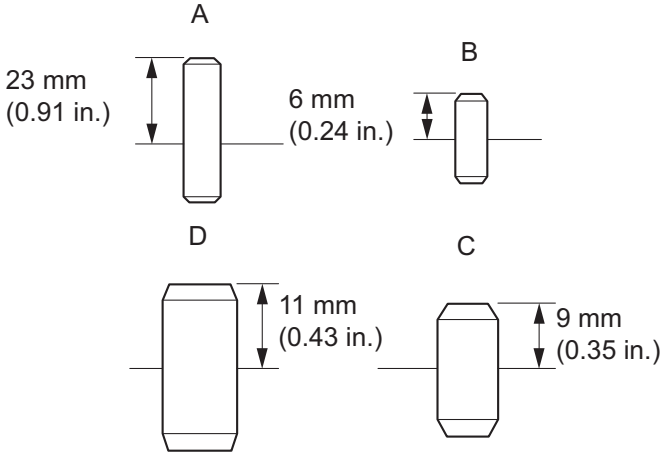
Cylinder Block Front:



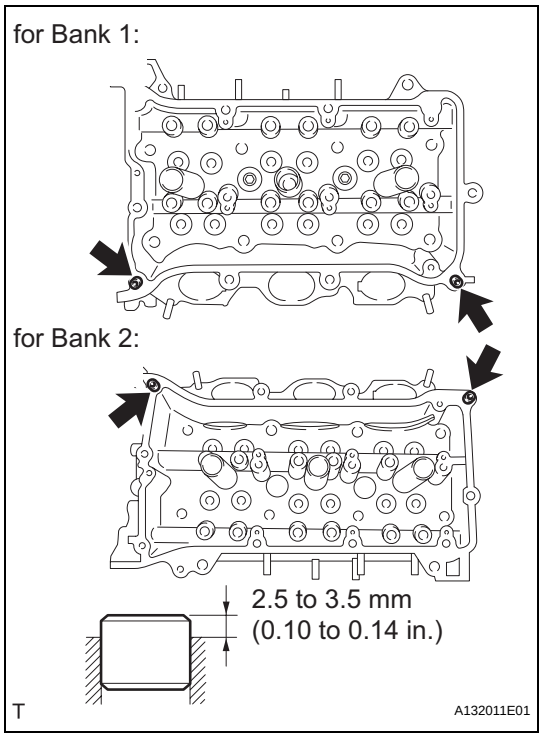
Cylinder Block Rear:



Cylinder Block Upper:



Cylinder Block Lower:



Cylinder Block RH Side:

Y

A131964E01

9. REPLACE CYLINDER HEAD RING PIN

NOTICE:

It is not necessary to remove the ring pin unless it is being replaced.

(a) Remove the ring pins.

(b) Using a plastic-faced hammer, tap in a new ring pin until the pin stops.

10. REPLACE CYLINDER HEAD STUD BOLT

NOTICE:

If a stud bolt is deformed or the threads are damaged, replace it.

(a) Remove the stud bolts.

(b) Using E6 and E8 "torx" socket wrenches, install the stud bolts.

Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf) for stud bolts A and B
4.0 N*m (41 kgf*cm, 35 in.*lbf) for stud bolt C

EM

11. REPLACE CYLINDER HEAD SET STRAIGHT PIN

NOTICE:

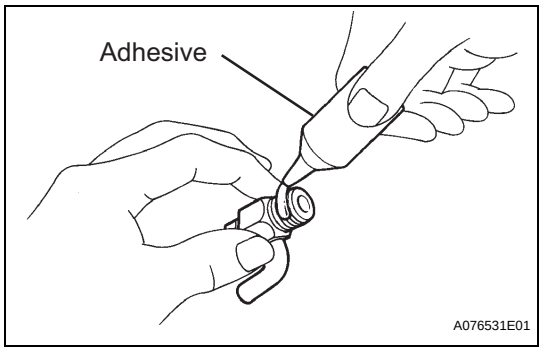
It is not necessary to remove the straight pin unless it is being replaced.

(a) Using a plastic-faced hammer, tap in a new straight pin as shown in the illustration.

Standard protrusion height:

18.0 to 19.0 mm (0.71 to 0.75 in.)



REASSEMBLY

1. INSTALL NO. 1 OIL NOZZLE SUB-ASSEMBLY

(a) Using a 5 mm hexagon wrench, install the 3 oil nozzles with the bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

EM

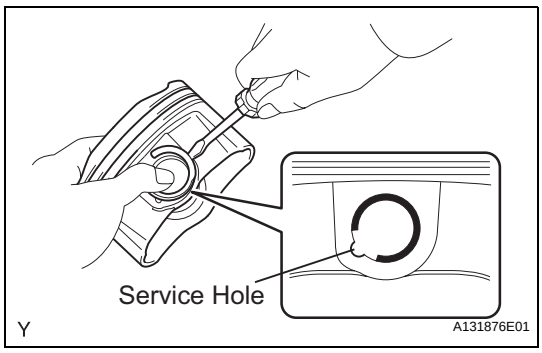
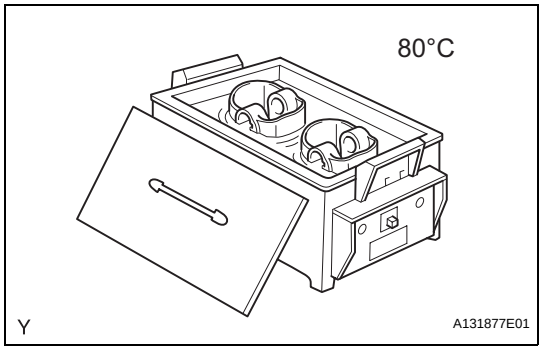
2. INSTALL CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY



(a) Apply adhesive around the drain cocks.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent

(b) Install the cylinder block water drain cocks.
(1) Temporarily install the drain cocks.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)



(2) Within one full rotation, tighten the drain cock to the angle shown in the illustration.
Torque: 45 N*m (459 kgf*cm, 33 ft.*lbf)
NOTICE:
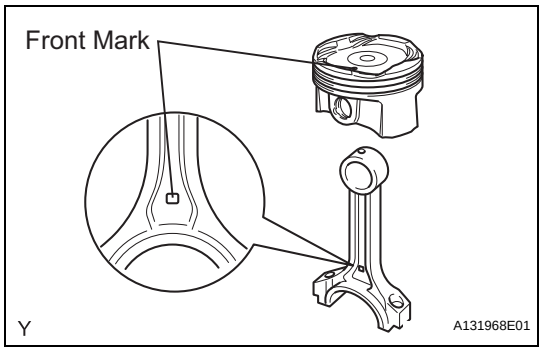
Do not loosen the drain cock to adjust it. If an adjustment is necessary, remove the drain cock and reinstall it.

(c) Install the water drain cock plug to the water drain cocks.
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)



3. INSTALL PISTON WITH PIN SUB-ASSEMBLY

(a) Using a screwdriver, install a new snap ring at one end of the piston pin hole.
HINT:
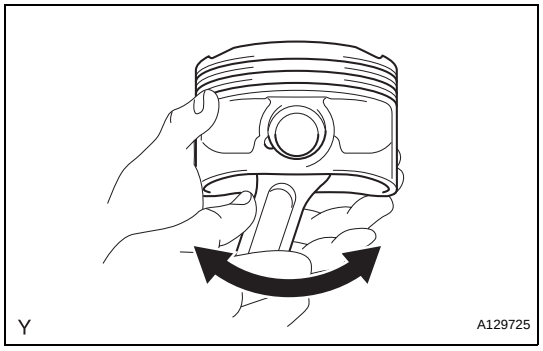
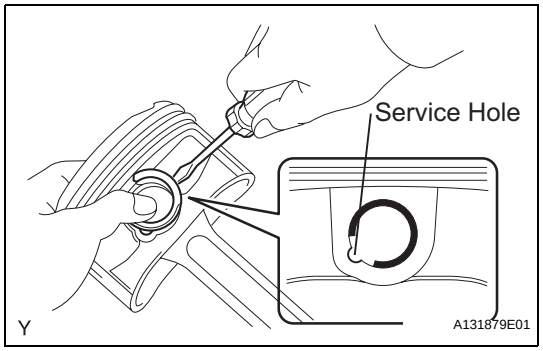
Be sure that the end gap of the snap ring is not aligned with the pin hole cutout portion of the piston.



(b) Gradually heat the piston to approximately 80°C (176°F).



(c) Coat the piston pin with engine oil.

(d) Align the front marks of the piston and connecting rod, and push in the piston pin with your thumb.
HINT:
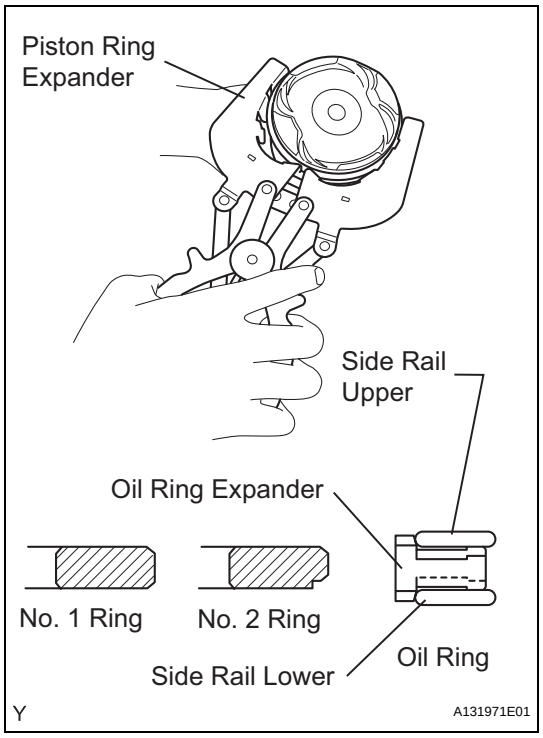
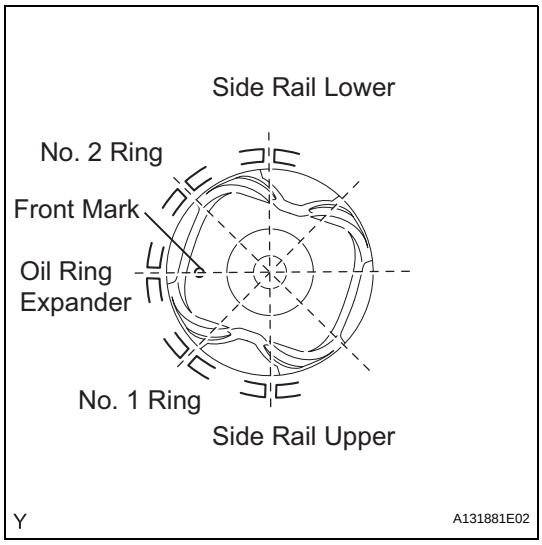
The piston and pin are a matched set.



(e) Check the fitting condition between the piston and piston pin by trying to move the piston back and forth on the piston pin.



(f) Using a screwdriver, install a new snap ring at the other end of the piston pin hole.
HINT:
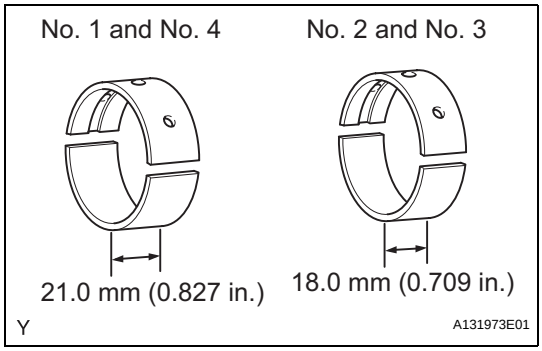
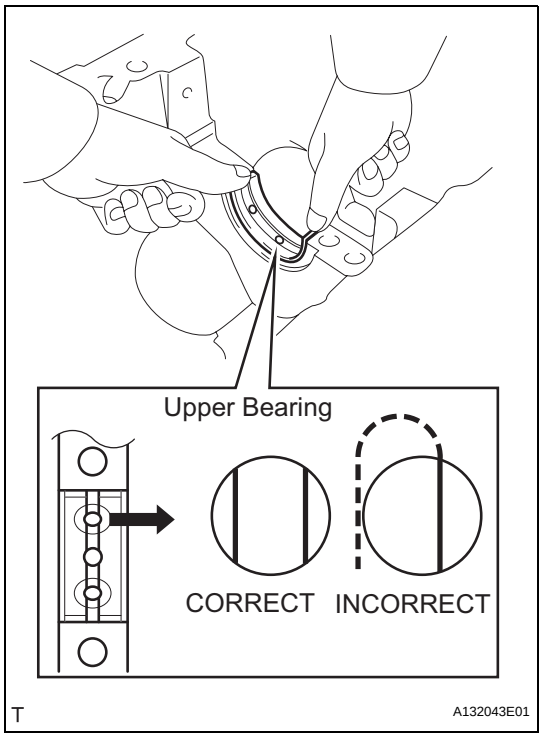
Be sure that the end gap of the snap ring is not aligned with the pin hole cutout portion of the piston.

4. INSTALL PISTON RING SET

(a) Install the oil ring expander and 2 side rails by hand.



(b) Using a piston ring expander, install the 2 compression rings so that the painted marks are positioned as shown in the illustration.



(c) Position the piston rings so that the ring ends are as shown in the illustration.
NOTICE:
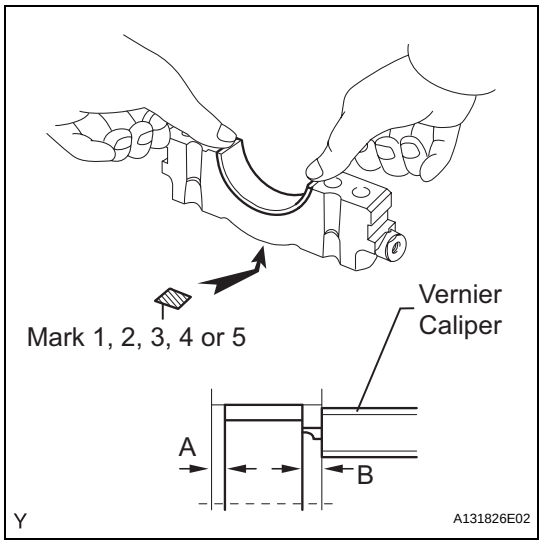
Do not align the ring ends.



5. INSTALL CRANKSHAFT BEARING
NOTICE:
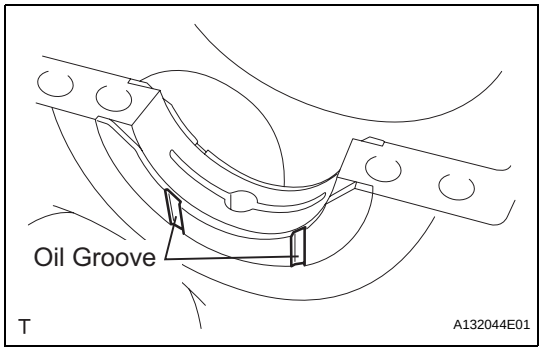
Main bearings come in widths between 18.0 mm (0.709 in.) and 21.0 mm (0.827 in.). Install the 21.0 mm (0.827 in.) bearings in the No. 1 and No. 4 cylinder block journal positions with the main bearing cap. Install the 18.0 mm (0.709 in.) bearings in the No. 2 and No. 3 positions.



(a) Clean the main journal and both surfaces of the bearing.

(b) Install the upper bearing.
(1) Install the upper bearing to the cylinder block as shown in the illustration.
NOTICE:
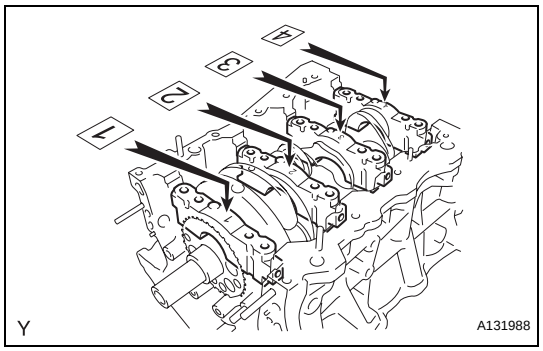
Do not apply engine oil to the bearing and its contact surface.



(c) Install the lower bearing.
(1) Install the lower bearing to the bearing cap.
(2) Using a vernier caliper, measure the distance between the bearing cap's edge and the lower bearing's edge.
Dimension (A - B):
0.7 mm (0.028 in.) or less.
NOTICE:
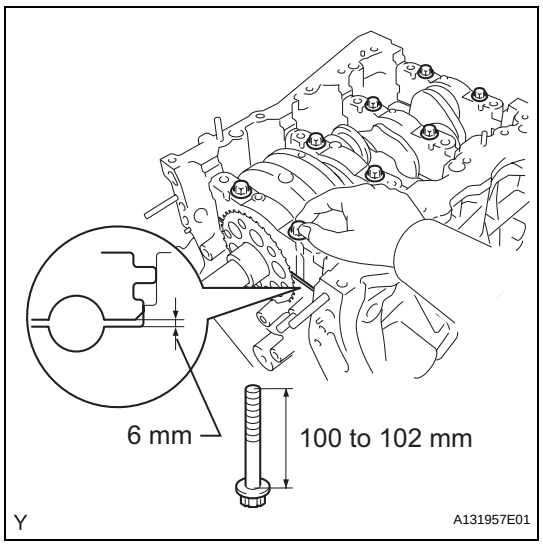
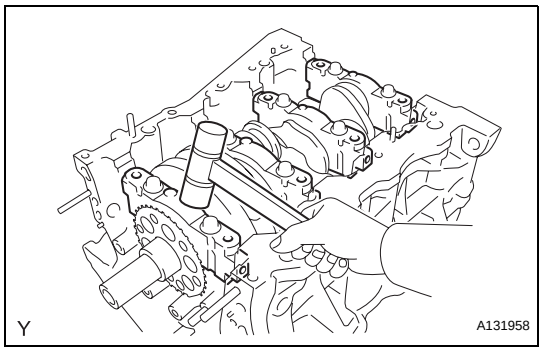
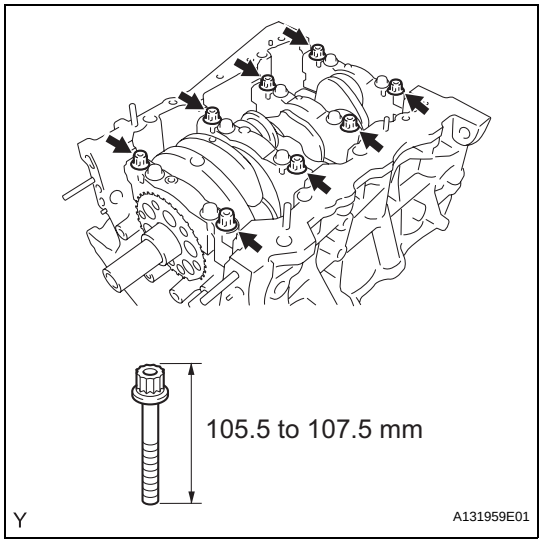
Do not apply engine oil to the bearing's contact area and underside.



6. INSTALL CRANKSHAFT



(a) Install the 2 thrust washers under the No. 2 journal position of the cylinder block with the oil grooves facing outward.
(b) Apply engine oil to the upper bearing, then place the crankshaft on the cylinder block.



(c) Confirm the front marks and numbers of the main bearing caps and install the bearing caps on the cylinder block.
HINT:
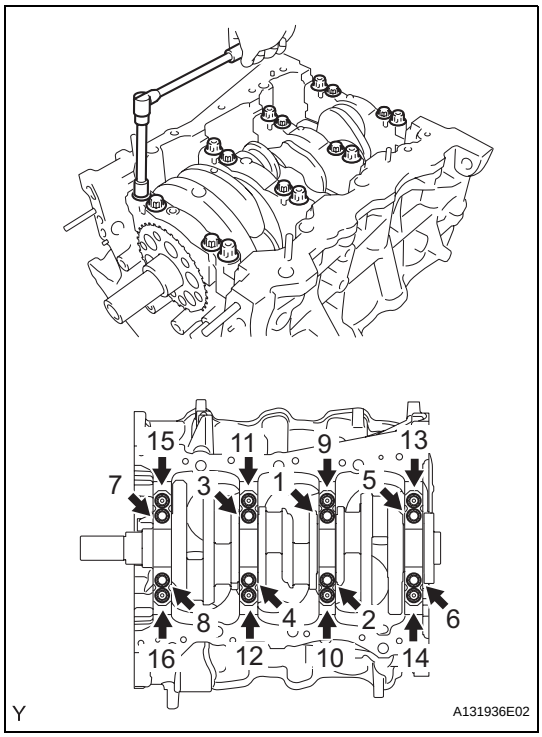
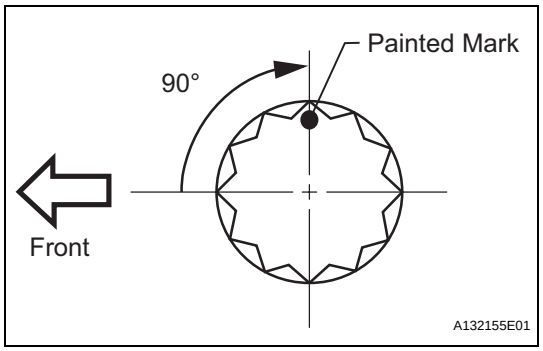
A number is marked on each main bearing cap to indicate the installation position.
(d) Apply a light coat of engine oil on the threads and under the heads of the bearing cap bolts.
(e) Temporarily install the 8 main bearing cap bolts to the inside positions.



(f) Insert the main bearing cap by hand until the clearance between the main bearing cap and the cylinder block is less than 6 mm (0.23 in.) by marking the 2 internal bearing cap bolts as a guide.
Bolt length:
100.0 to 102.0 mm (3.937 to 4.016 in.)



(g) Using a plastic-faced hammer, lightly tap the bearing cap to ensure a proper fit.
(h) Apply a light coat of engine oil to the threads and under the heads of the 8 main bearing cap bolts.

(i) Install the 8 main bearing cap bolts to the outside positions.
Bolt length:
105.5 to 107.5 mm (4.154 to 4.232 in.)
(j) Install the crankshaft bearing cap bolts.
HINT:
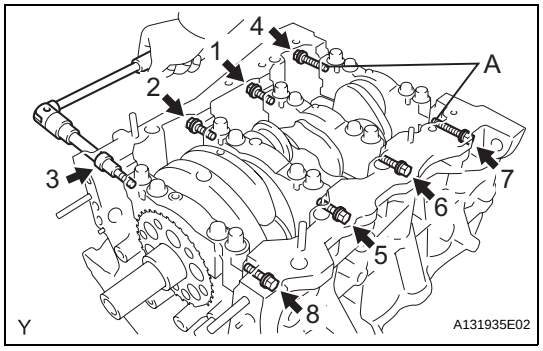
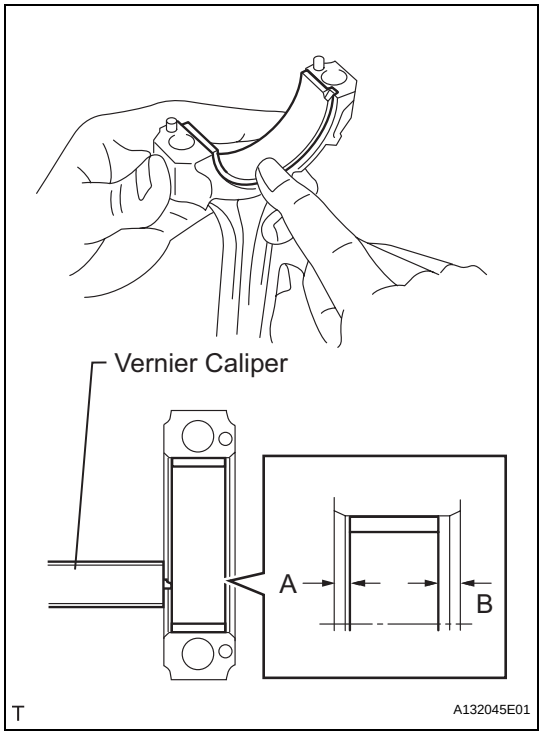
The main bearing cap bolts are tightened in 2 progressive steps.



(k) Step 1
(1) Install and uniformly tighten the 16 main bearing cap bolts in the sequence shown in the illustration.
Torque: 61 N*m (622 kgf*cm, 45 ft.*lbf)
If any of the main bearing cap bolts does not meet the specified torque, replace it.

(l) Step 2
  (1) Mark the front of the bearing cap bolts with paint.
  (2) Tighten the bearing cap bolts another 90° in the order shown in step 1.
  (3) Check that the painted mark is now at a 90° angle to the front.

(m) Check that the crankshaft turns smoothly.

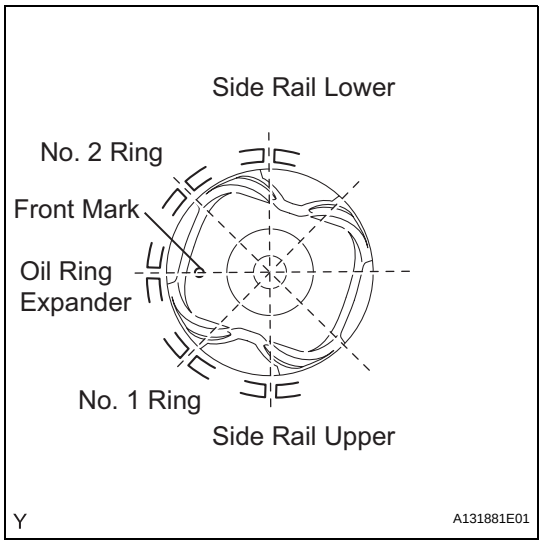


(n) Install and uniformly tighten the 8 main bearing cap bolts in several steps, in the sequence shown in the illustration.
Torque: 52 N*m (530 kgf*cm, 38 ft.*lbf)
Bolt length:
45 mm (1.77 in.) for bolt A
30 mm (1.18 in.) for except bolt A

(o) Check that the crankshaft turns smoothly.

7. INSTALL CONNECTING ROD BEARING

(a) Install the connecting rod bearing to the connecting rod and bearing cap.



(b) Using a vernier caliper, measure the distance between the connecting rod's and bearing cap's edges, and each connecting rod bearing's edge.
Dimension (A - B):
0.7 mm (0.028 in.) or less
NOTICE:
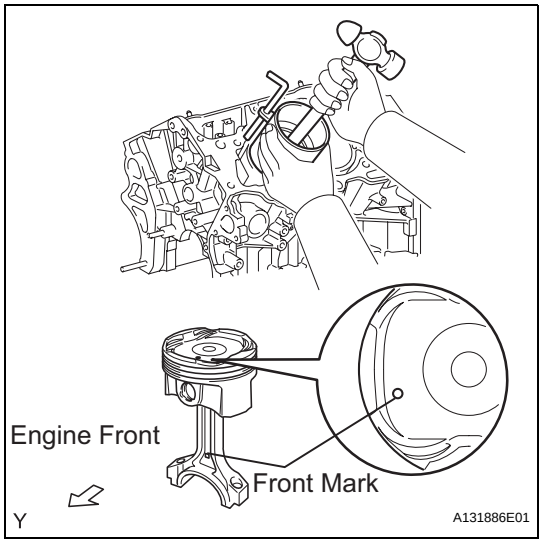
Do not apply engine oil to the bearing's contact area and underside.



8. INSTALL PISTON SUB-ASSEMBLY WITH CONNECTING ROD

(a) Apply engine oil to the cylinder walls, the pistons, and the surfaces of the connecting rod bearings.

EM

(b) Position the piston rings so that the ring ends are as shown in the illustration.
NOTICE:
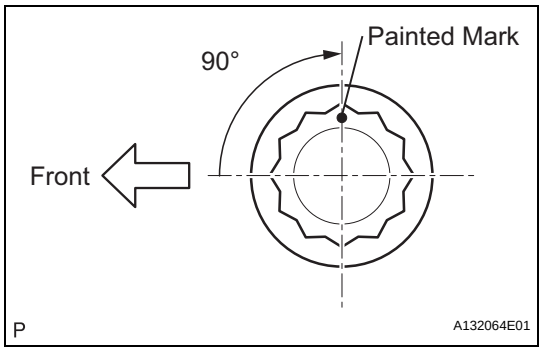
Do not align the ring ends.



(c) Using a piston ring compressor, push the correctly numbered piston and connecting rod into the cylinder with the front mark of the piston facing forward.
NOTICE:
Match the numbered connecting rod cap with the connecting rod.

(d) Check that the front mark of the connecting rod cap is facing forward.
(e) Apply a light coat of engine oil to the threads and under the heads of the connecting rod cap bolts.
(f) Install the connecting cap bolts.
HINT:
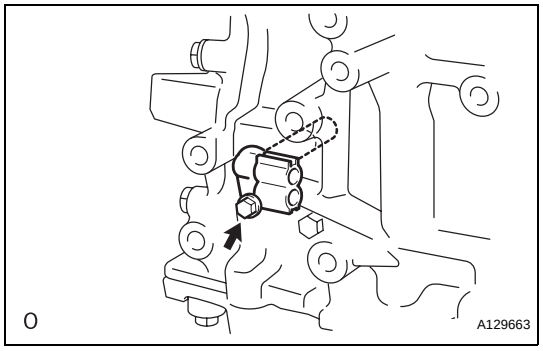
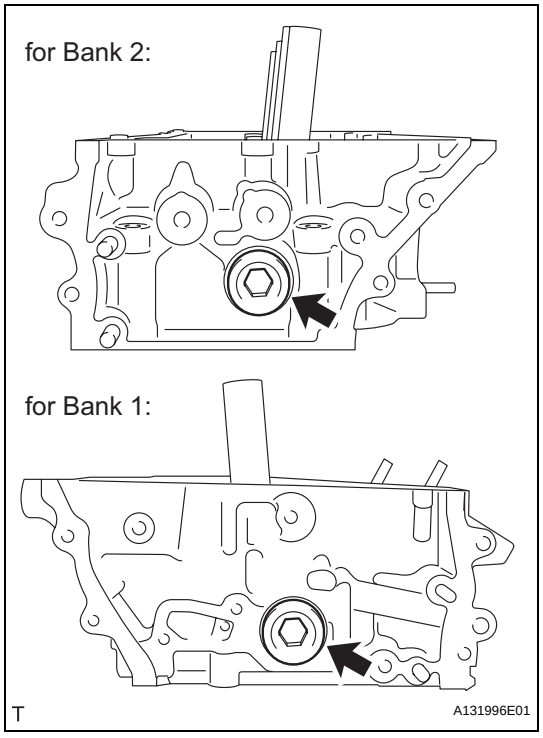
The connecting cap bolts are tightened in 2 progressive steps.



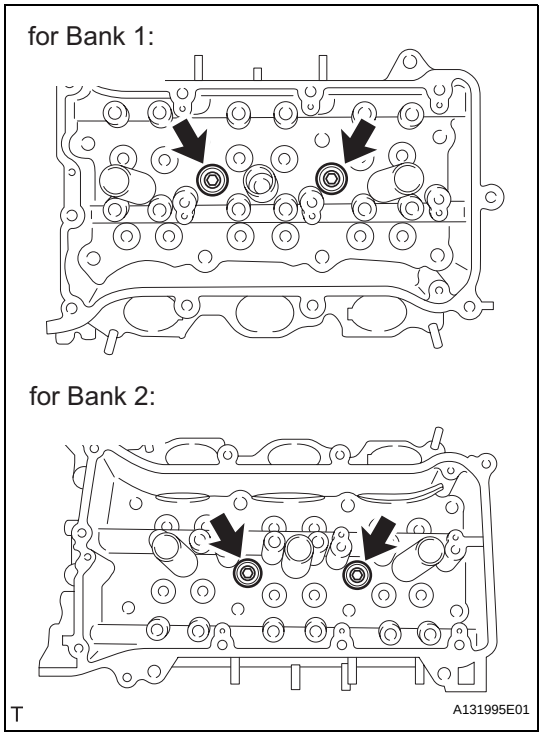
(g) Step 1
(1) Install and alternately tighten the bolts of the connecting rod cap in several steps.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)



(h) Step 2
  (1) Mark the front side of each connecting cap bolt with paint.
  (2) Tighten the cap bolts another 90° as shown in the illustration in the order in step 1.
  (3) Check that the painted mark is now at a 90° angle to the front.

(i) Check that the crankshaft turns smoothly.

9. INSTALL CRANKSHAFT POSITION SENSOR



(a) Install the crankshaft position sensor with the bolt.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

10. INSTALL NO. 2 STRAIGHT SCREW PLUG

(a) Using a 14 mm hexagon wrench, install 2 new gaskets and the 2 straight screw plugs.
Torque: 80 N*m (816 kgf*cm, 59 ft.*lbf)

EM

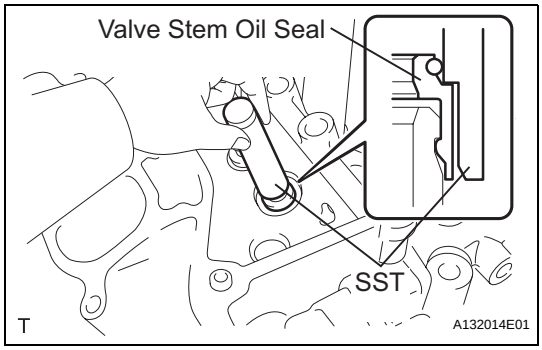
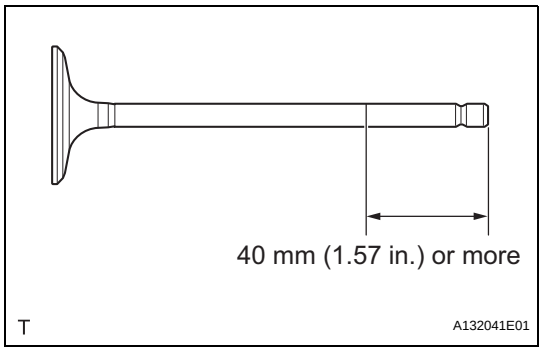
11. INSTALL NO. 1 STRAIGHT SCREW PLUG

(a) Using a 10 mm hexagon wrench, install 4 new gaskets and the straight screw plugs.
Torque: 44 N*m (449 kgf*cm, 32 ft.*lbf)



12. INSTALL VALVE SPRING SEAT

(a) Install the valve spring seats to the cylinder head.



13. INSTALL INTAKE VALVE STEM OIL SEAL

(a) Apply a light coat of engine oil to new oil seals.
NOTICE:
Pay attention when installing the intake and exhaust oil seals. For example, installing the intake oil seal into the exhaust side or installing the exhaust oil seal to the intake side can cause installation problems later.
HINT:
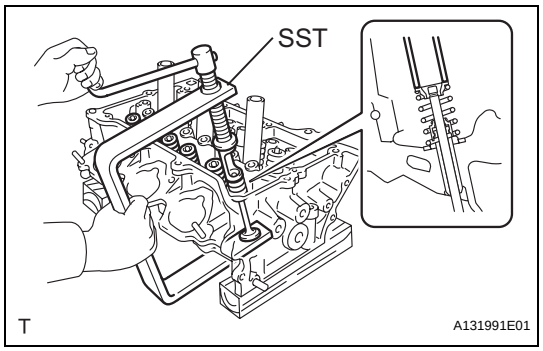
The intake valve oil seals are white and the exhaust valve oil seals are black.



(b) Using SST, push in the oil seals.
SST 09201-41020
NOTICE:
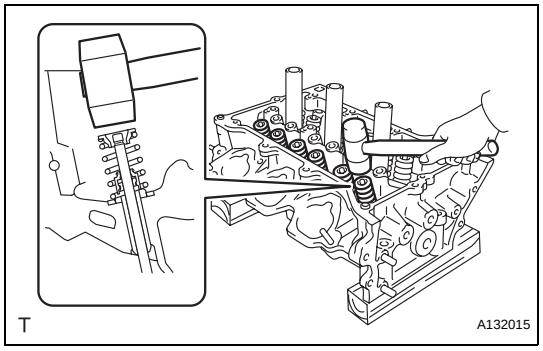
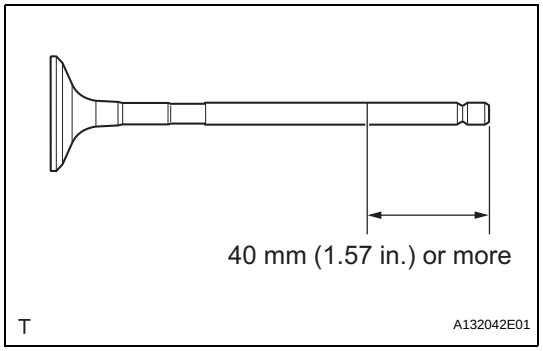
Failure to use SST will cause the seal to be damaged or improperly seated.



14. INSTALL INTAKE VALVE

(a) Apply plenty of engine oil to the tip area of the intake valve shown in the illustration.



(b) Install the valve, compression spring and spring retainer to the cylinder head.
NOTICE:
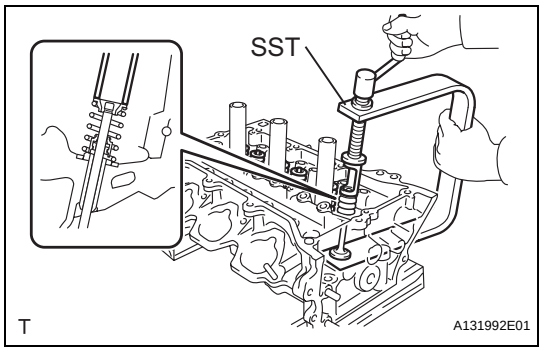
Install the same parts in the same combination to original locations.

(c) Using SST and wooden blocks, compress the spring and install the retainer lock.
SST 09202-70020 (09202-00010)



(d) Using a plastic-faced hammer, lightly tap the valve stem tip to ensure a proper fit.
NOTICE:
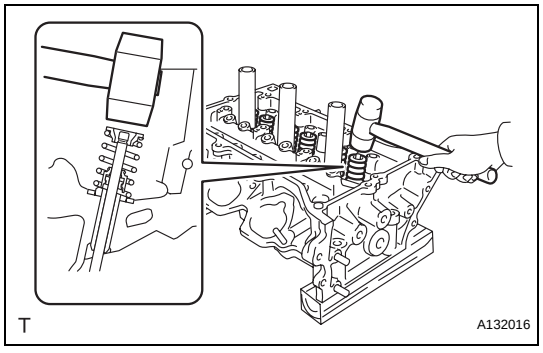
Be careful not to damage the retainer.



15. INSTALL EXHAUST VALVE

(a) Apply plenty of engine oil to the tip area of the exhaust valve shown in the illustration.

(b) Install the valve, compression spring and spring retainer to the cylinder head.
NOTICE:
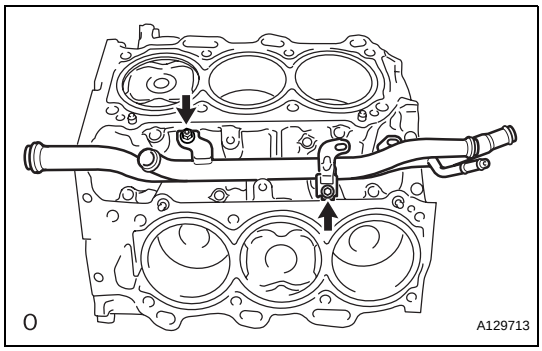
Install the same parts in the same combination to their original locations.

(c) Using SST and wooden blocks, compress the spring and install the retainer lock.
SST 09202-70020 (09202-00010)



(d) Using a plastic-faced hammer, lightly tap the valve stem tip to ensure a proper fit.
NOTICE:
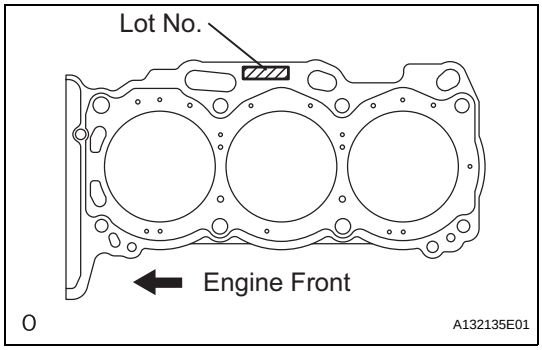
Be careful not to damage the retainer.

16. INSTALL VALVE STEM CAP

(a) Apply a light coat of engine oil to the valve stem caps.

(b) Install the valve stem caps to the cylinder head.

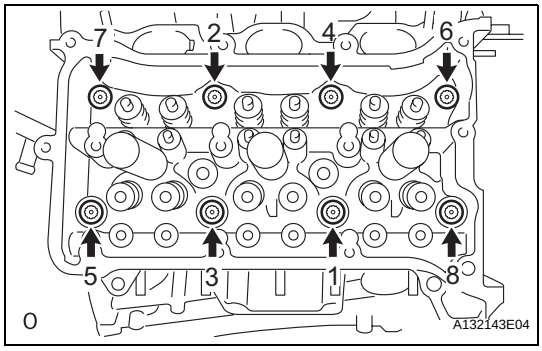


17. INSTALL WATER INLET PIPE

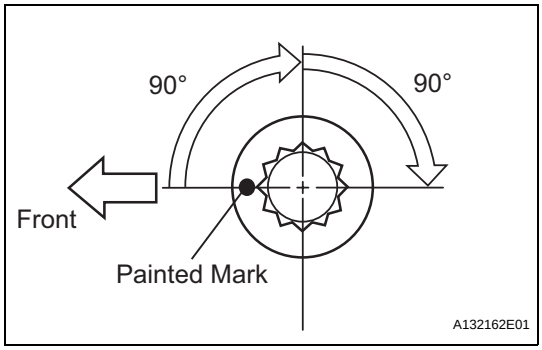
(a) Install the water inlet pipe with the 2 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

(b) Install the water by-pass hose.

18. INSTALL CYLINDER HEAD SUB-ASSEMBLY (for Bank 1)



(a) Check the piston protrusions for each cylinder.
(1) Clean the cylinder block with solvent.
(2) Set the piston of the cylinder to be measured to slightly before TDC.



(b) Place the cylinder head gasket on the cylinder block surface with the front face of the Lot No. stamp upward.
NOTICE:
- **Be careful of the installation direction.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the head.**

(c) Place the cylinder head on the cylinder block.
NOTICE:
Ensure that no oil is on the mounting surface of the cylinder head.
HINT:
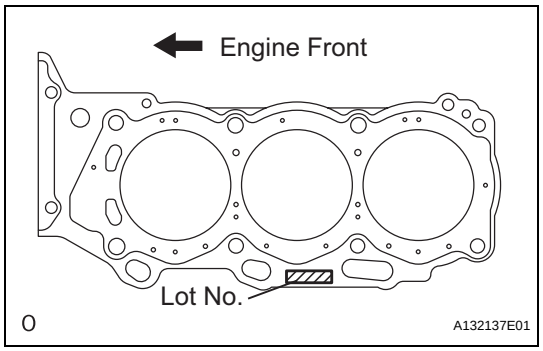
The cylinder head bolts are tightened in 3 progressive steps.

(d) Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

(e) Step 1
(1) Using a 10 mm bi-hexagon wrench, install and uniformly tighten the 8 cylinder head bolts with the plate washers in several steps, in the sequence shown in the illustration.
Torque: 36 N*m (367 kgf*cm, 27 ft.*lbf)

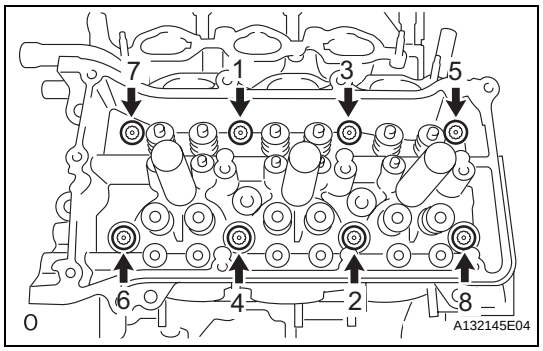


(f) Step 2
(1) Mark the cylinder head bolt head with paint as shown in the illustration.
(2) Tighten the cylinder heads bolts another 90° in the sequence shown in step 1.

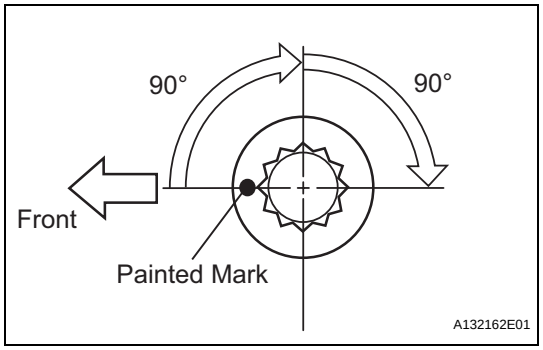
(g) Step 3
(1) Tighten the cylinder head bolts by an additional 90° in the sequence shown in step 1.
(2) Check that the painted mark is now facing rearward.

19. INSTALL CYLINDER HEAD SUB-ASSEMBLY (for Bank 2)

(a) Check the piston protrusions for each cylinder.
(1) Clean the cylinder block with solvent.



(2) Set the piston of the cylinder to be measured to slightly before TDC.



(b) Place the cylinder head gasket on the cylinder block surface with the front face of the Lot No. stamp upward.
NOTICE:
- **Be careful of the installation direction.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the head.**

(c) Place the cylinder head on the cylinder block.
NOTICE:
Ensure that no oil is on the mounting surface of the cylinder head.
HINT:
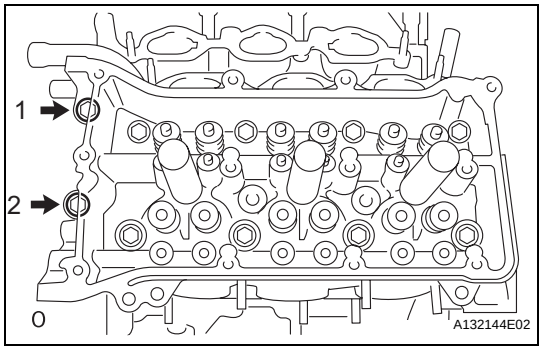
The cylinder head bolts are tightened in 3 progressive steps.

(d) Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.



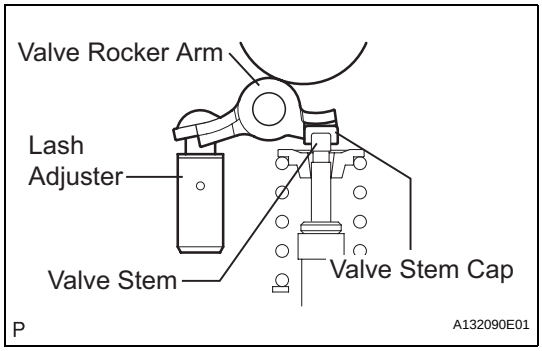
(e) Step 1
(1) Using a 10 mm bi-hexagon wrench, install and uniformly tighten the 8 cylinder head bolts with the plate washers in several steps, in the sequence shown in the illustration.
Torque: 36 N*m (367 kgf*cm, 27 ft.*lbf)

(f) Step 2
(1) Mark the cylinder head bolt heads with paint as shown in the illustration.
(2) Tighten the cylinder head bolts another 90° in the sequence shown in step 1.

(g) Step 3
(1) Tighten the cylinder head bolts by an additional 90° in the sequence shown in step 1.
(2) Check that the painted mark is now facing rearward.

(h) Install the 2 bolts in the order shown in the illustration.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

20. INSTALL VALVE LASH ADJUSTER ASSEMBLY



(a) Be sure to inspect the valve lash adjuster before installing it (see page EM-75).

(b) Install the lash adjusters.
NOTICE:
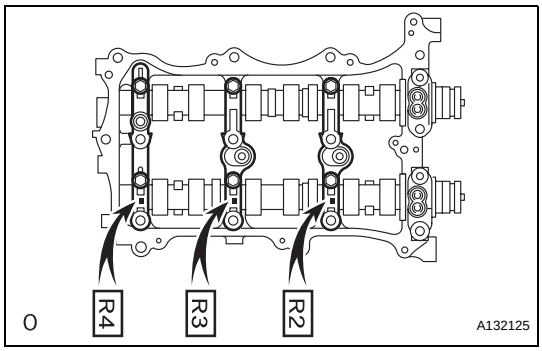
Install the lash adjuster at the same place it was removed from.

21. INSTALL NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

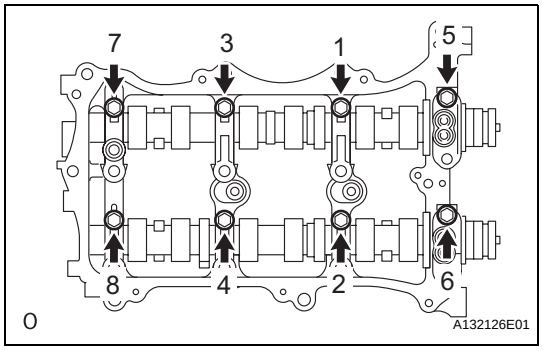
(a) Apply engine oil to the lash adjuster tips and valve stem cap ends.

(b) Make sure that the valve rocker arms are installed as shown in the illustration.



22. INSTALL CAMSHAFT BEARING CAP (for Bank 1)

(a) Apply engine oil to the camshaft journals, camshaft housings and bearing caps.



(b) Install the No. 1 camshaft and No. 2 camshaft to the camshaft housing.

(c) Confirm the marks and numbers on the camshaft bearing caps and place them each in their proper position and direction.

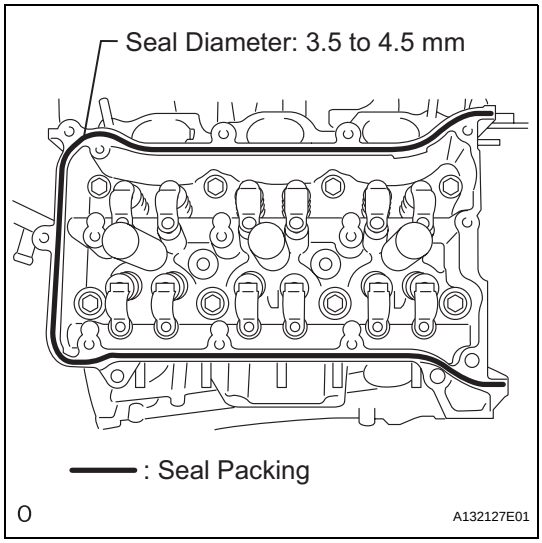
(d) Temporarily install the 8 bolts in the order shown in the illustration.

Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

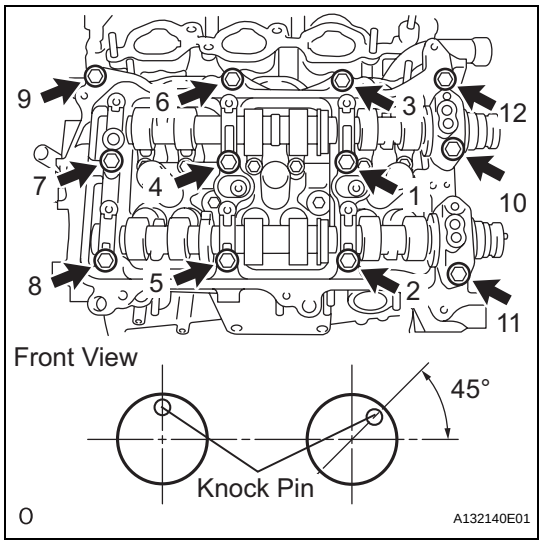
23. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY (for Bank 1)

(a) Apply seal packing in a continuous line as shown in the illustration.

Seal packing:



Toyota Genuine Seal Packing Block, Three Bond 1207B or Equivalent



Standard seal diameter:

3.5 to 4.5 mm (0.138 to 0.177 in.)

NOTICE:

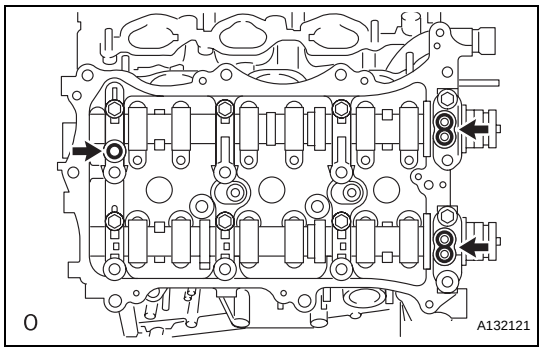
- **Remove any oil from the contact surface.**
- **Install the camshaft housing within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**



(b) Install the camshaft housing, and install the 12 bolts in the order shown in the illustration.
Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)
NOTICE:
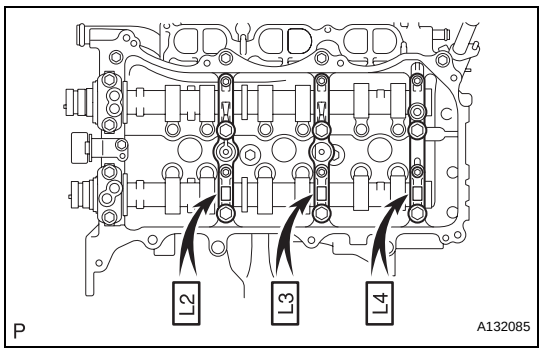
Make sure that the knock pin of the camshaft is positioned as shown in the illustration before installing the camshaft housing.



(c) Tighten the 8 bolts in the order shown in the illustration.
Torque: 16 N*m (163 kgf*cm, 12 ft.*lbf)
NOTICE:
Thoroughly wipe clean any seal packing.

EM

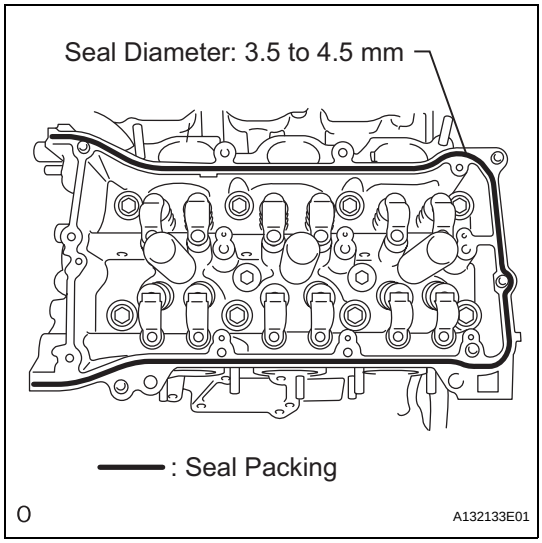
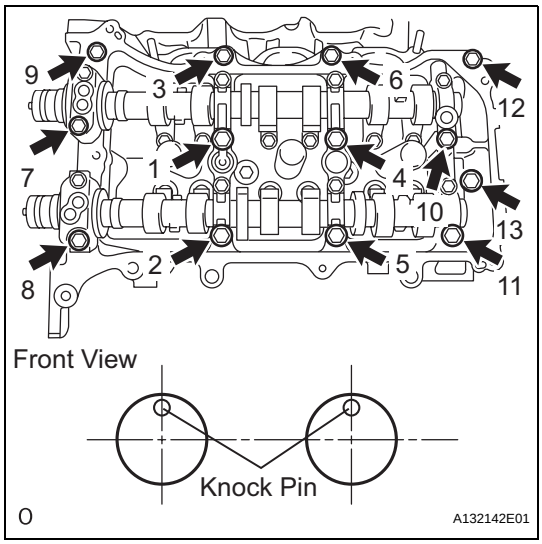
(d) Install 3 new gaskets.

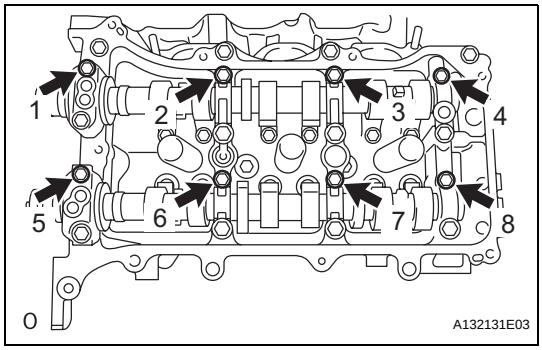


24. INSTALL CAMSHAFT BEARING CAP (for Bank 2)

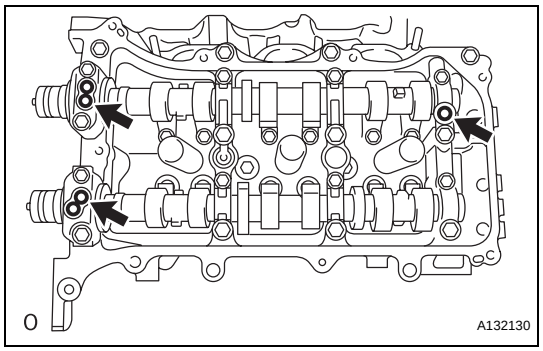
(a) Apply engine oil to the camshaft journals, camshaft housings and bearing caps.
(b) Install the camshaft No. 3 and camshaft No. 4 to the camshaft housing.
(c) Confirm the marks and numbers on the camshaft bearing caps and place them each in their proper position and direction.



(d) Temporarily install the 8 bolts in the order shown in the illustration.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)



25. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY (for Bank 2)



(a) Apply seal packing in a continuous line as shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Block, Three Bond 1207B or Equivalent
Standard seal diameter:
3.5 to 4.5 mm (0.138 to 0.177 in.)
NOTICE:
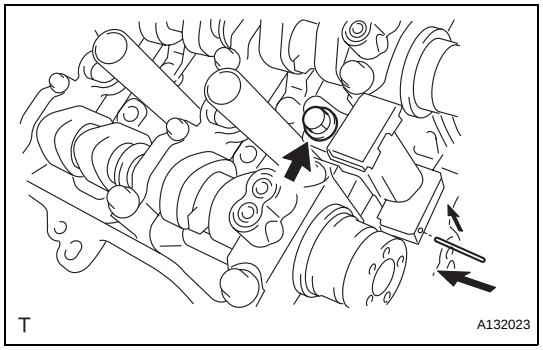
- **Remove any oil from the contact surface.**
- **Install the camshaft housing within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**



(b) Install the camshaft housing and tighten the 13 bolts in the order shown in the illustration.
Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)
NOTICE:
Make sure that the knock pin of the camshaft is positioned as shown in the illustration before installing the camshaft housing.

(c) Tighten the 8 bolts in the order shown in the illustration.
Torque: 16 N*m (163 kgf*cm, 12 ft.*lbf)
NOTICE:
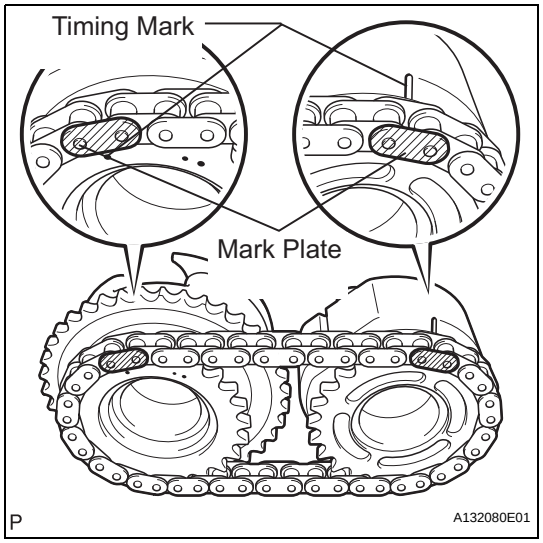
Thoroughly wipe clean any seal packing.

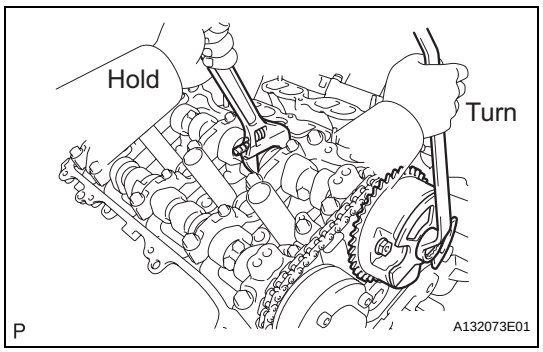


(d) Install 3 new gaskets.

26. INSTALL NO. 2 CHAIN TENSIONER ASSEMBLY

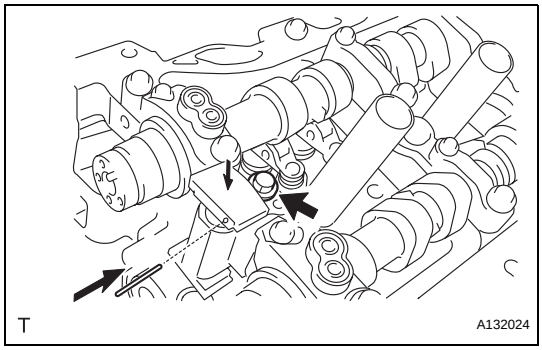
(a) Install the chain tensioner with the bolt.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

(b) While pushing in the tensioner, insert a pin of ϕ1.0 mm (0.039 in.) into the hole to fix it in place.



27. INSTALL CAMSHAFT TIMING GEARS AND NO. 2 CHAIN (for Bank 1)

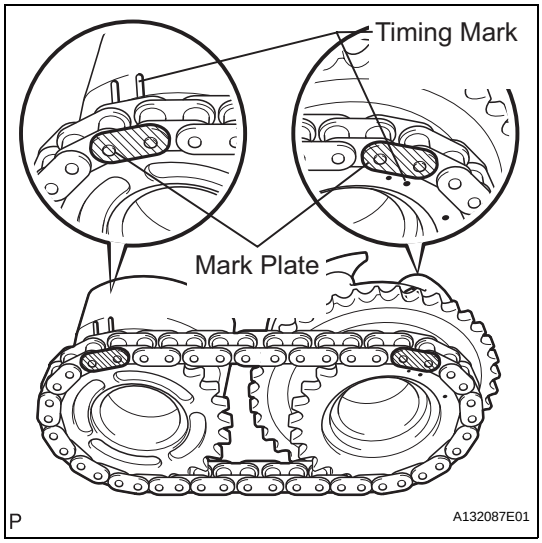
(a) Align the mark plate (yellow) with the timing marks (1 dot mark) of the camshaft timing gears as shown in the illustration.



(b) Apply a small amount of engine oil to the bolt threads and bolt-seating surface.

(c) Align the knock pin of the camshaft with the pin hole of the camshaft timing gear. Install the camshaft timing gear and camshaft timing exhaust gear with the No. 2 chain installed.

(d) Hold the hexagonal portion of the camshaft with a wrench, and tighten the 2 bolts.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

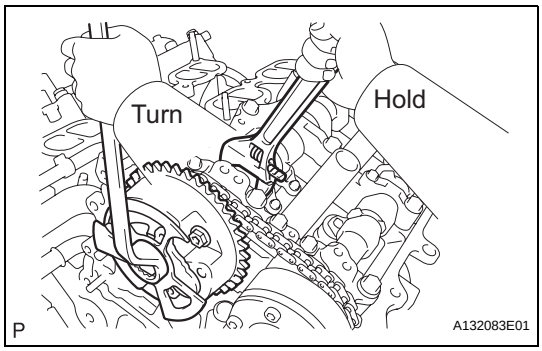


(e) Remove the pin from the No. 2 chain tensioner.

28. INSTALL NO. 3 CHAIN TENSIONER ASSEMBLY

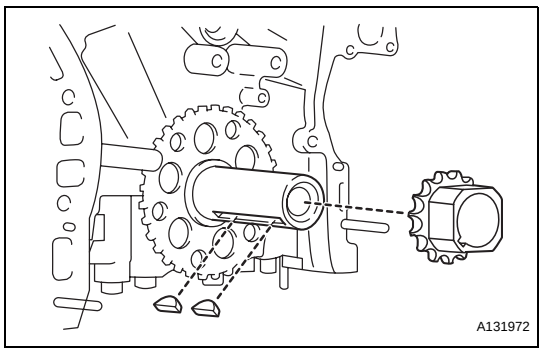
(a) Install the chain tensioner with the bolt.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

(b) While pushing in the tensioner, insert a pin of ϕ1.0 mm (0.039 in.) into the hole to fix it in place.



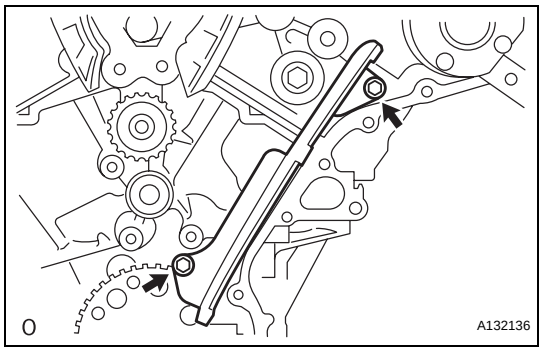
29. INSTALL CAMSHAFT TIMING GEARS AND NO. 2 CHAIN (for Bank 2)

(a) Align the mark plate (yellow) with the timing marks (2 dot mark) of the camshaft timing gears as shown in the illustration.



(b) Apply a small amount of engine oil to the bolt threads and bolt-seating surface.

(c) Align the knock pin of the camshaft with the pin hole of the camshaft timing gear. Install the camshaft timing gear and camshaft timing exhaust gear with the No. 2 chain installed.



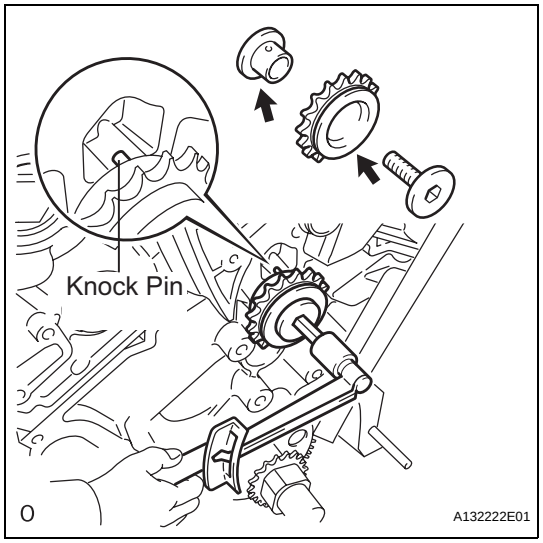
(d) Hold the hexagonal portion of the camshaft with a wrench, and tighten the 2 bolts.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

(e) Remove the pin from the No. 2 chain tensioner.

30. INSTALL CRANKSHAFT TIMING GEAR OR SPROCKET

(a) Install the timing gear set keys and timing gear as shown in the illustration.

31. INSTALL NO. 1 CHAIN VIBRATION DAMPER

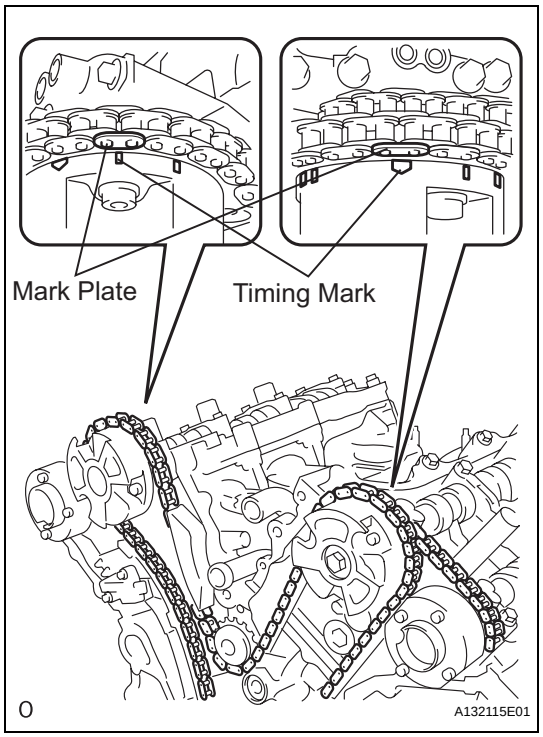


(a) Install the chain vibration damper with the 2 bolts.
Torque: 23 N*m (235 kgf*cm, 17 ft.*lbf)

32. INSTALL NO. 2 CHAIN VIBRATION DAMPER

(a) Install the 2 chain vibration damper.

33. INSTALL IDLE SPROCKET ASSEMBLY



(a) Apply a light coat of engine oil to the rotating surface of the No. 1 idle gear shaft.

(b) Temporarily install the No. 1 idle gear shaft and idle sprocket with the No. 2 idle gear shaft while aligning the knock pin of the No. 1 idle gear shaft with the knock pin groove of the cylinder block.
NOTICE:
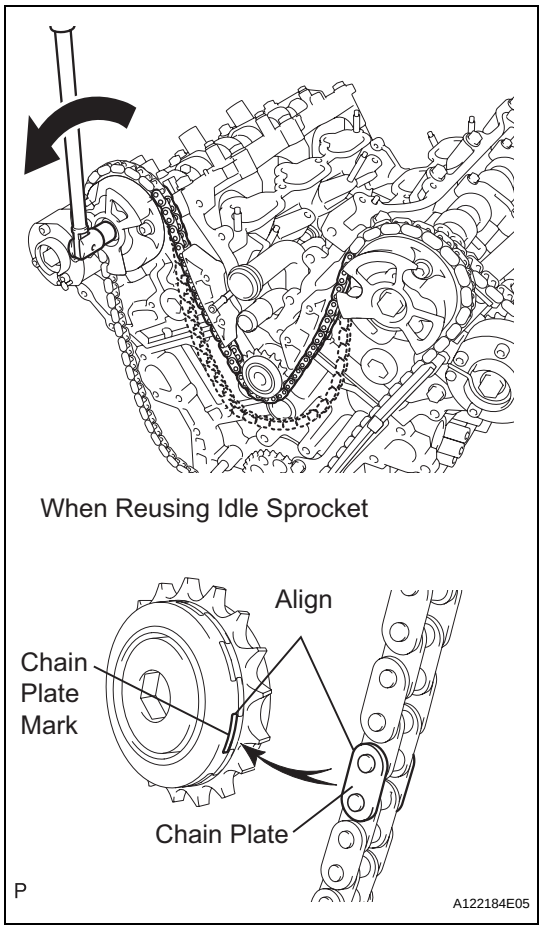
Be careful of the idle gear direction.



(c) Using a 10 mm hexagon wrench, tighten the No. 2 idle gear shaft.
Torque: 60 N*m (612 kgf*cm, 44 ft.*lbf)

EM

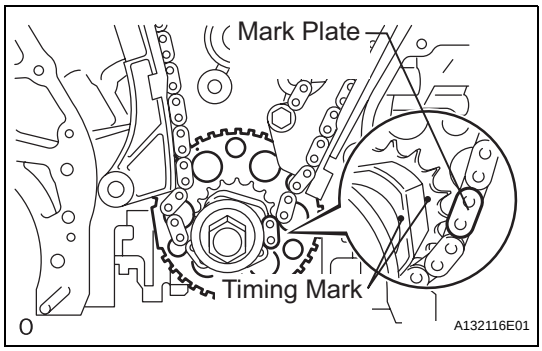
34. INSTALL CHAIN SUB-ASSEMBLY



(a) Align the mark plate and timing mark as shown in the illustration and install the chain.
NOTICE:
Do not pass the chain over the crankshaft, just put it on it.
HINT:
The chain mark plate is orange.

(b) Turn the camshaft timing gear on the bank 1 counterclockwise to tighten the chain between the banks.

NOTICE:

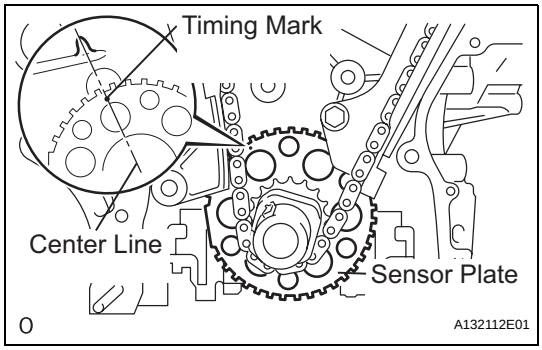
If reusing the idle sprocket, align one of the idle sprocket's chain plate marks with one of the chain's chain plates when installing the idle sprocket.



(c) Align the mark plate and timing mark as shown in the illustration and install the chain onto the crankshaft timing gear.

HINT:

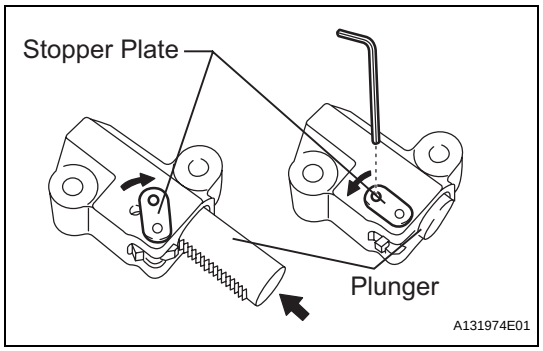
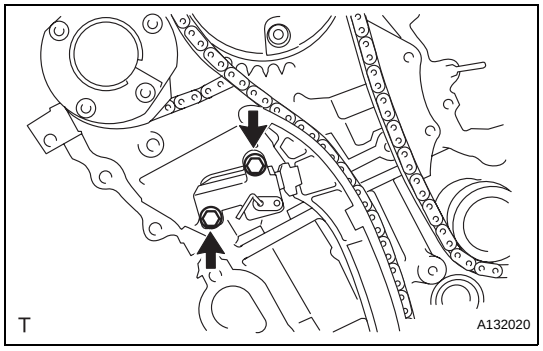
The chain mark plate is yellow.



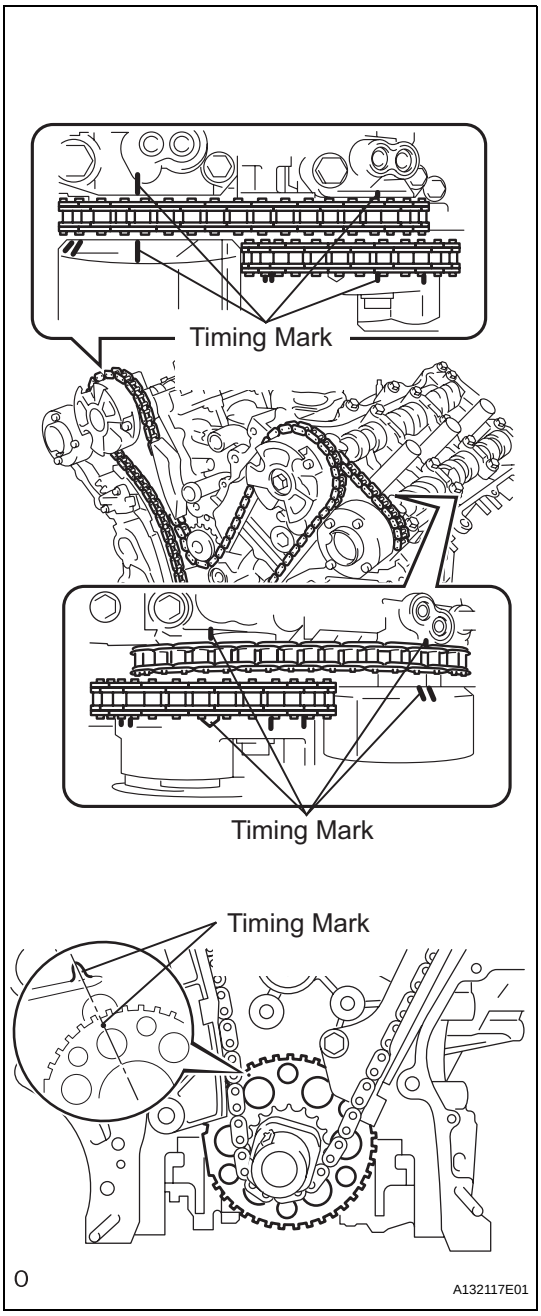
(d) Temporarily tighten the pulley set bolt.

(e) Turn the crankshaft clockwise to set it to the bank 1 block bore center line (TDC / compression).

35. INSTALL CHAIN TENSIONER SLIPPER



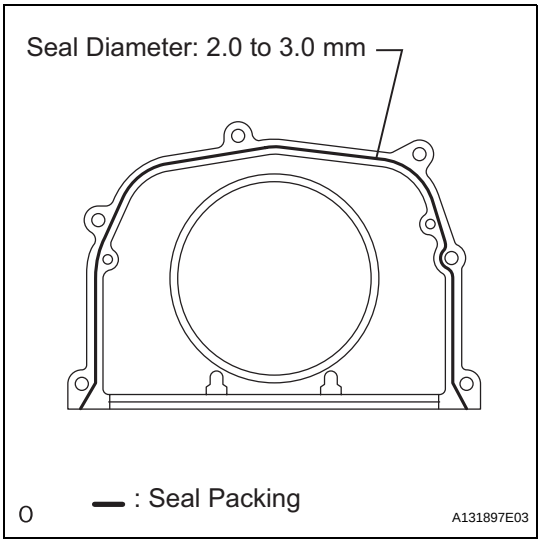
(a) Install the chain tensioner slipper.



36. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY

(a) Move the stopper plate upward to release the lock, and push the plunger deep into the tensioner.

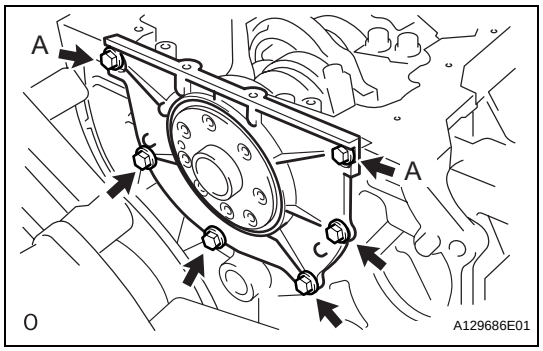
(b) Move the stopper plate downward to set the lock, and insert a hexagon wrench into the hole of the stopper plate.



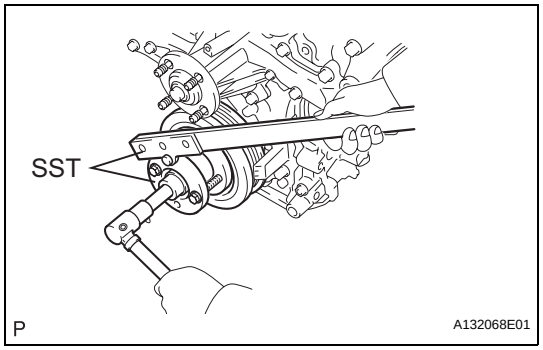
(c) Install the chain tensioner with the 2 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

(d) Remove the lock pin of the chain tensioner. Check that each timing mark is aligned with the crankshaft at the TDC / compression.
(e) Remove the pulley set bolt.

37. INSTALL TIMING CHAIN COVER SUB-ASSEMBLY (w/ Oil Pump) (See page LU-17)



38. INSTALL WATER PUMP ASSEMBLY (See page CO-13)



39. INSTALL ENGINE REAR OIL SEAL RETAINER

(a) Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Block, Three Bond 1207B or Equivalent
Standard seal diameter:
2.0 to 3.0 mm (0.079 to 0.118 in.)
NOTICE:
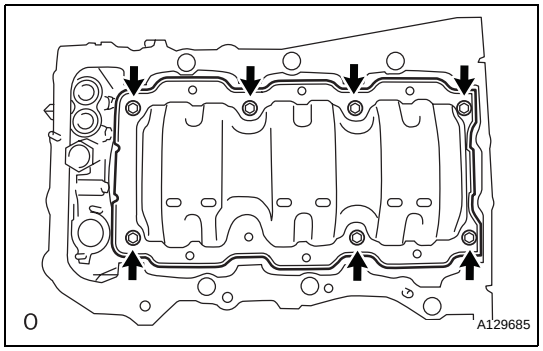
- **Remove any oil from the contact surface.**
- **Install the crankcase within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**



(b) Install the oil seal retainer with the 6 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)
NOTICE:
Apply adhesive 1324 to the 2 bolts labeled A.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent

40. INSTALL CRANKSHAFT PULLEY
(a) Align the pulley set key with the key groove of the pulley, and slide on the pulley.
(b) Using SST, install the pulley bolt.
SST 09213-70011 (09213-70020), 09330-00021
Torque: 250 N*m (2,549 kgf*cm, 184 ft.*lbf)

EM

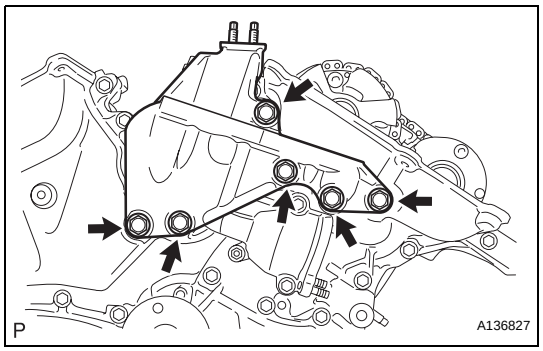
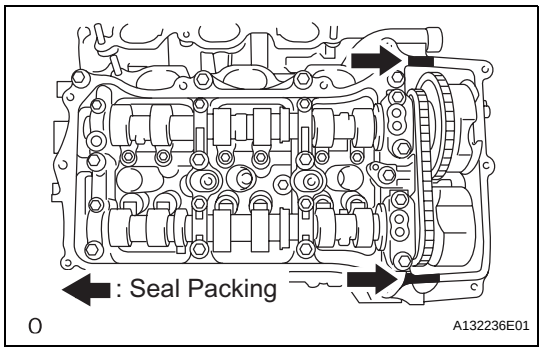
41. INSTALL OIL PAN BAFFLE PLATE
(a) Install the oil pan baffle plate with the 7 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

42. INSTALL OIL PAN SUB-ASSEMBLY (See page LU-21)



43. INSTALL OIL STRAINER SUB-ASSEMBLY (See page LU-22)

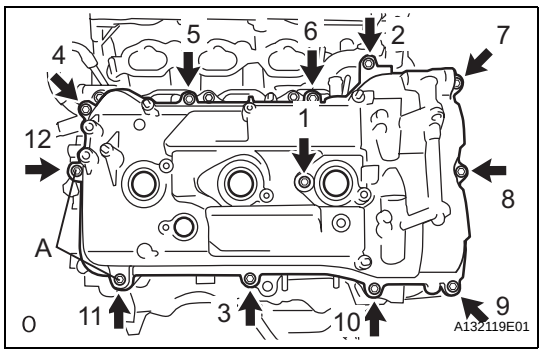
44. INSTALL NO. 2 OIL PAN SUB-ASSEMBLY (See page LU-22)



45. INSTALL OIL FILTER ELEMENT (See page LU-5)

46. INSTALL OIL FILTER CAP SUB-ASSEMBLY (See page LU-5)

47. INSTALL WATER INLET HOUSING (See page CO-14)



48. INSTALL FRONT NO. 1 ENGINE MOUNTING BRACKET
(a) Install the engine mounting bracket with the 6 bolts.
Torque: 54 N*m (551 kgf*cm, 40 ft.*lbf)
NOTICE:
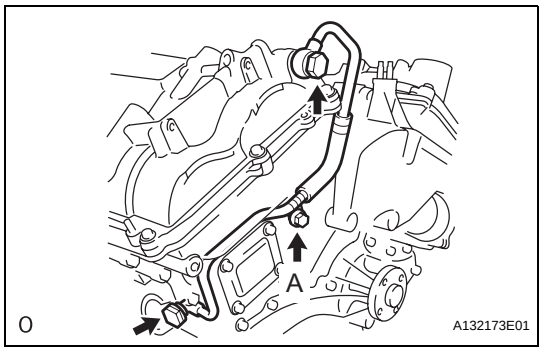
- **Install the water inlet and mounting bracket within 15 minutes after installing the chain cover.**
- **Do not start the engine for at least 2 hours after the installation.**



49. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (for Bank 1)

(a) Apply seal packing as shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Block, Three Bond 1207B or Equivalent
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the crankcase within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

(b) Install the gasket to the head cover.

(c) Install the head cover with the 12 bolts in the order shown in the illustration.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf) for bolt A
10 N*m (102 kgf*cm, 7 ft.*lbf) for except bolt A
HINT:
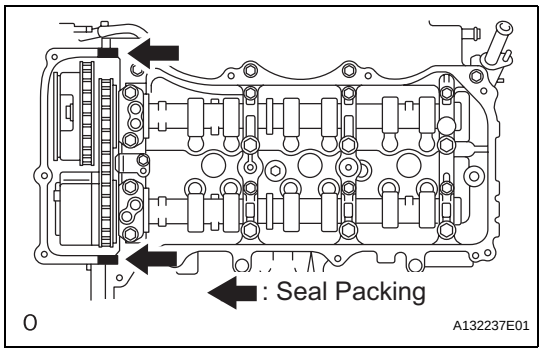
Make sure the tightening torque of bolt 1and 11 in correct.

50. INSTALL OIL PIPE



(a) Make sure that there is no foreign matter on the mesh of the oil control valve filter.

(b) Install the oil control valve filter to the oil pipe union. Install 2 new gaskets and temporarily install the oil pipe (on the head cover side) with the oil pipe union.
NOTICE:
Remove any oil from the contact surface.

(c) Install a new gasket and temporarily install the oil pipe (on the cylinder head side) with the oil pipe union.
NOTICE:
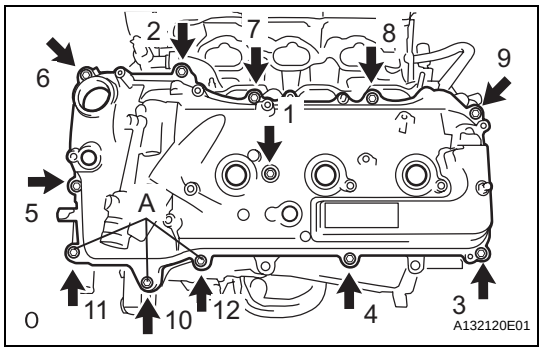
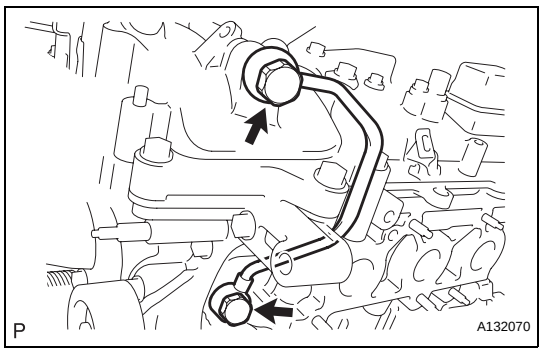
Remove any oil from the contact surface.

(d) Install bolt A to the cylinder head.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

(e) Tighten the 2 oil pipe union bolts.
Torque: 65 N*m (663 kgf*cm, 48 ft.*lbf)



51. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (for Bank 2)



(a) Apply seal packing as shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Block, Three Bond 1207B or Equivalent
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the crankcase within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

(b) Install the gasket to the head cover.

EM

(c) Install the head cover with the 12 bolts in the order in the illastration.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf) for bolt A
10 N*m (102 kgf*cm, 7 ft.*lbf) for except bolt A
HINT:
Make sure the tightening torque of bolts 1 and 10 is correct.

52. INSTALL NO. 1 OIL PIPE
(a) Make sure that there is no foreign matter on the mesh of the oil control valve filter.
(b) Install the oil control valve filter to the oil pipe union. Install 2 new gaskets and temporarily install the oil pipe (on the head cover side) with the oil pipe union.
(c) Install a new gasket and temporarily install the oil pipe (on the cylinder head side) with the oil pipe union.
NOTICE:
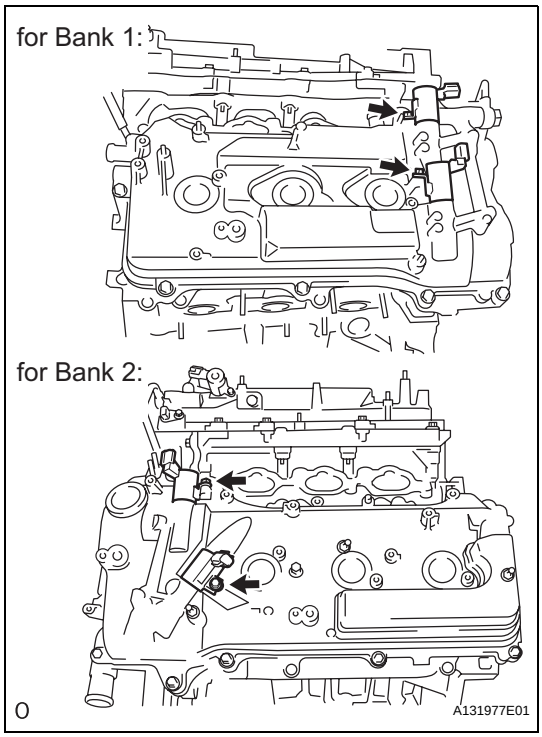
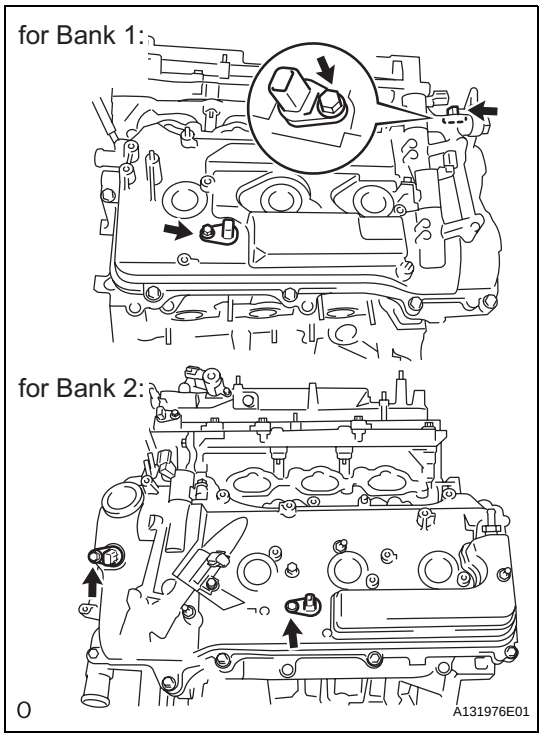
Remove any oil from the contract surface.
(d) Tighten the 2 oil pipe union bolts.
Torque: 65 N*m (663 kgf*cm, 48 ft.*lbf)



53. INSTALL WATER OUTLET
(a) Install 2 new gaskets and a new O-ring.
(b) Apply soapy water to the O-ring.



(c) Install the water outlet with the 2 bolts and 4 nuts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

EM

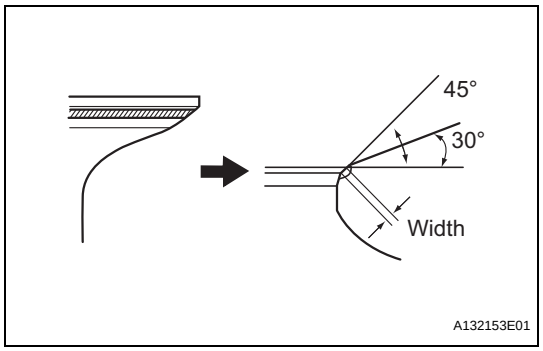
54. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

(a) Install the 4 camshaft timing oil control valves with the 4 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

55. INSTALL VVT SENSOR

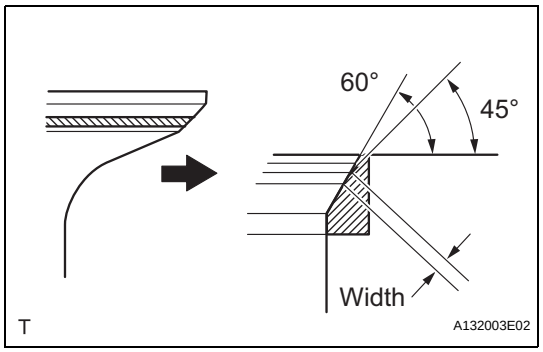
(a) Install the 4 VVT sensors with the 4 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

56. INSTALL SPARK PLUG



(a) Install the 6 spark plugs.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

REPAIR



1. REPAIR INTAKE VALVE SEAT

NOTICE:

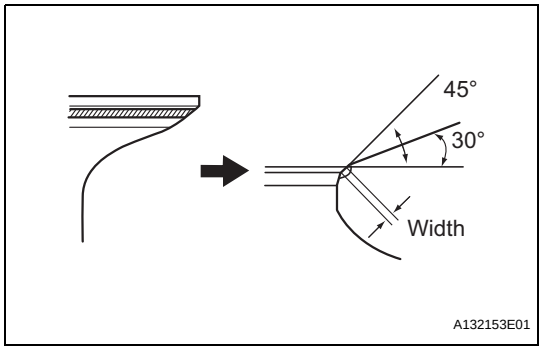
Keep the lip free from foreign matter.

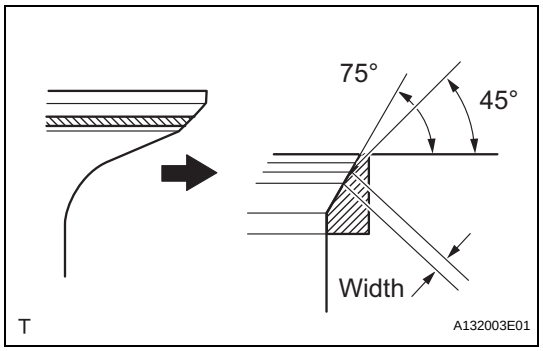
(a) If the seating is too high on the valve face, use 30° and 45° cutters to correct the seat.

(b) If the seating is too low on the valve face, use 60° and 45° cutters to correct the seat.



(c) Hand-lap the valve and valve seat with an abrasive compound.

(d) Check the valve seating position.



2. REPAIR EXHAUST VALVE SEAT

NOTICE:

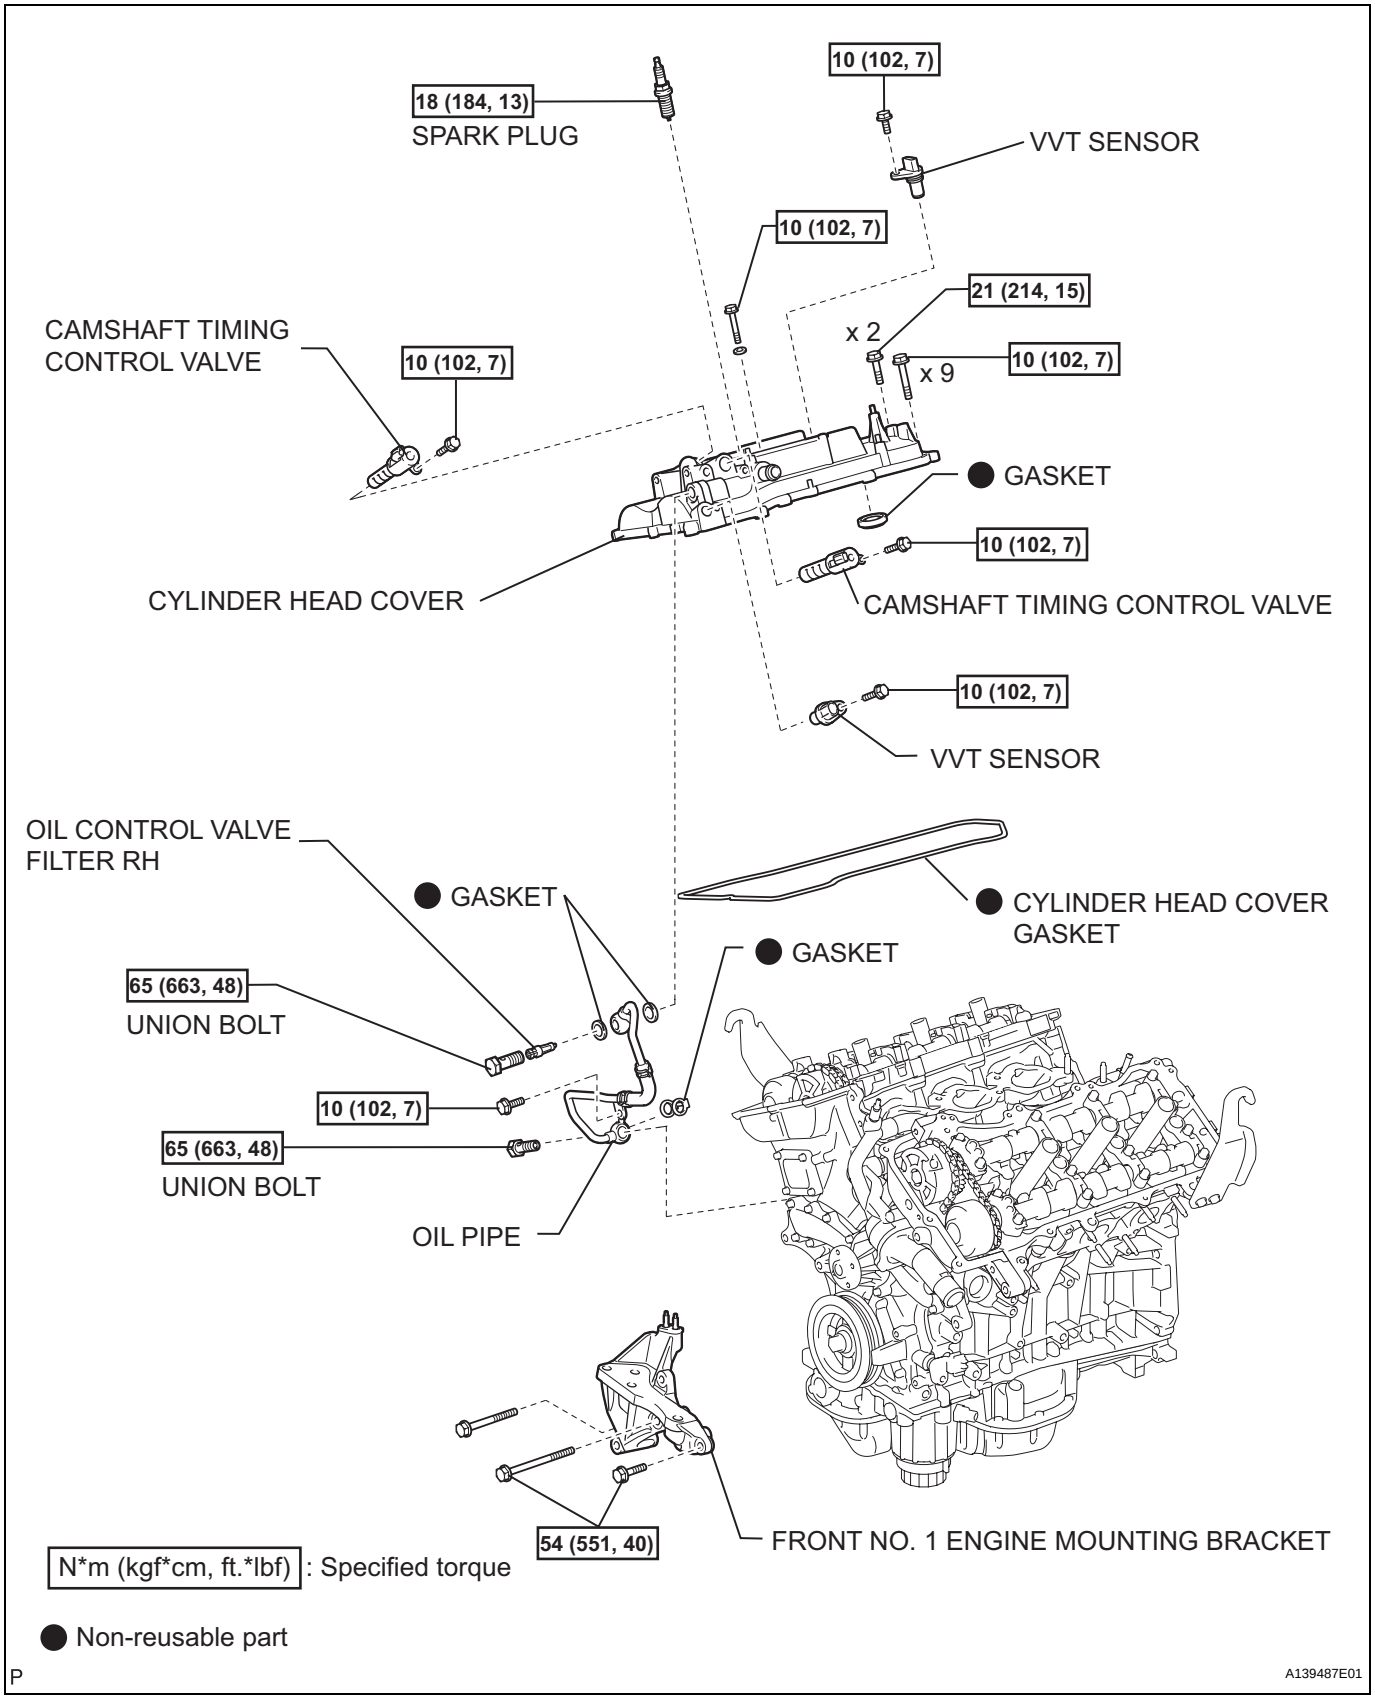
Keep the lip free from foreign matter.

(a) If the seating is too high on the valve face, use 30° and 45° cutters to correct the seat.

(b) If the seating is too low on the valve face, use 45° and 75° cutters to correct the seat.



(c) Hand-lap the valve and valve seat with an abrasive compound.

(d) Check the valve seating position.

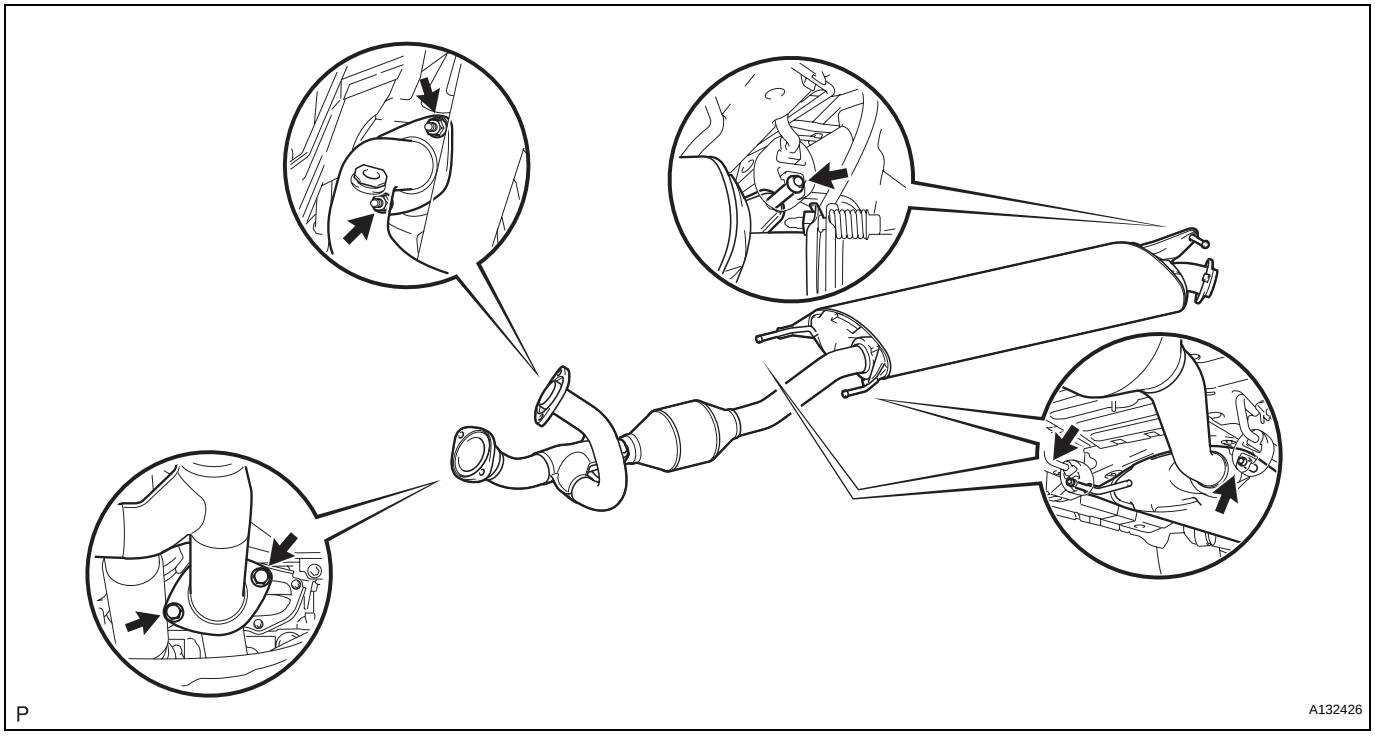
INSTALLATION

1. INSTALL FRONT EXHAUST PIPE ASSEMBLY

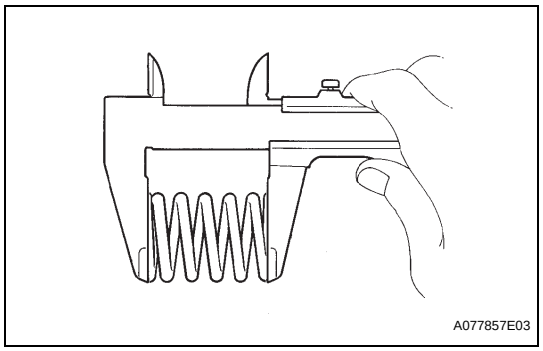
(a) Install a new gasket.

(b) Install the front exhaust pipe with the 2 nuts.
Torque: 62 N*m (632 kgf*cm, 46 ft.*lbf)

2. INSTALL NO. 1 FRONT EXHAUST PIPE SUPPORT BRACKET



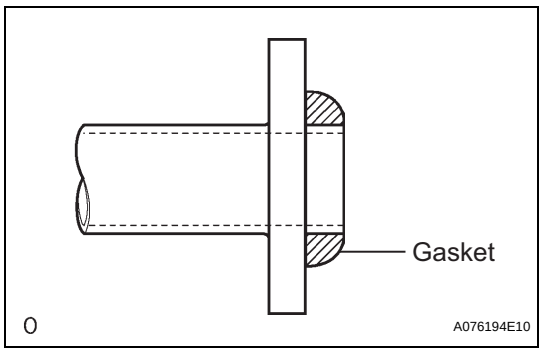
(a) Install the No. 1 front exhaust pipe support bracket with the 2 bolts.
Torque: 21 N*m (214 kgf*cm, 16 ft.*lbf)



3. INSTALL CENTER EXHAUST PIPE ASSEMBLY

(a) Install 2 new gaskets.

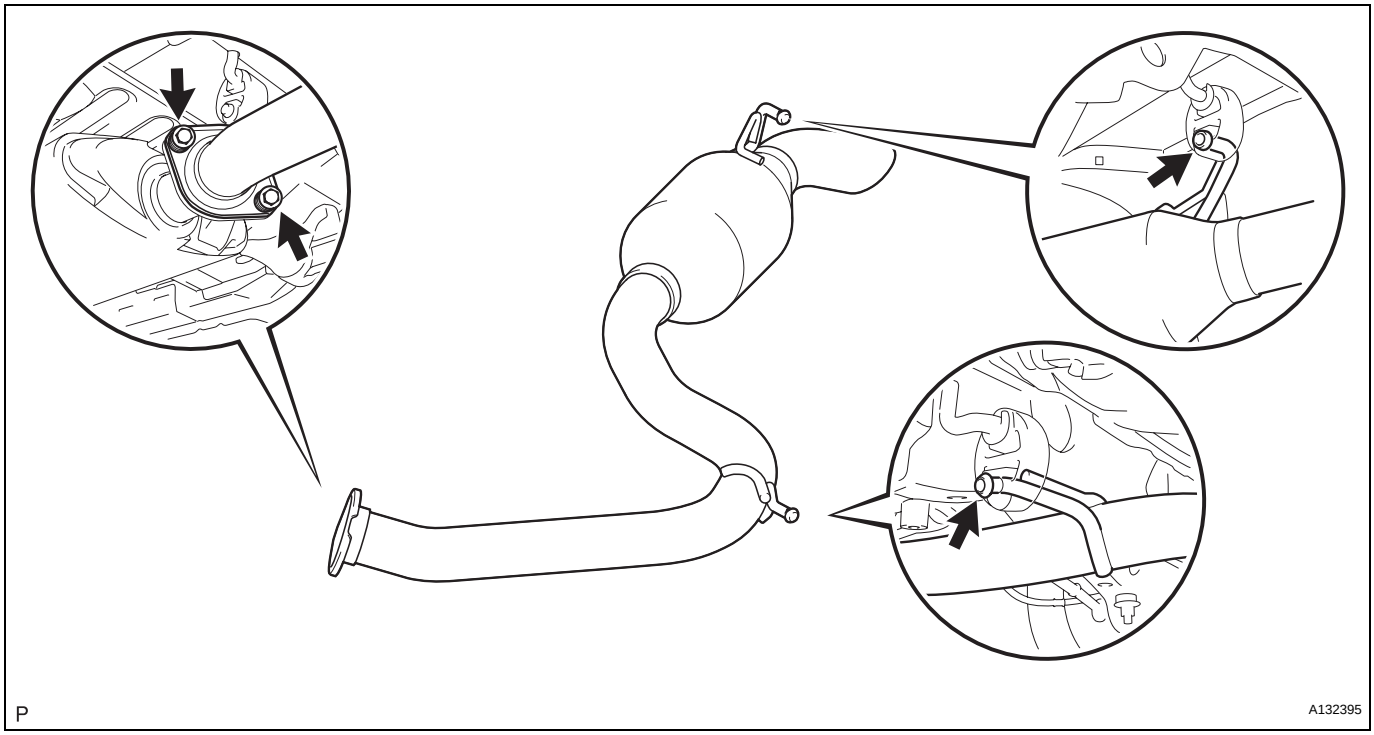
(b) Connect the 3 exhaust pipe supports, and install the center exhaust pipe.



(c) Install the 2 bolts and 2 nuts.
Torque: 43 N*m (440 kgf*cm, 32 ft.*lbf)

4. INSTALL TAILPIPE ASSEMBLY

(a) Using a vernier caliper, measure the free length of the compression spring.
Minimum length:
38.5 mm (1.516 in.)
If the length is less than the minimum, replace the compression spring.

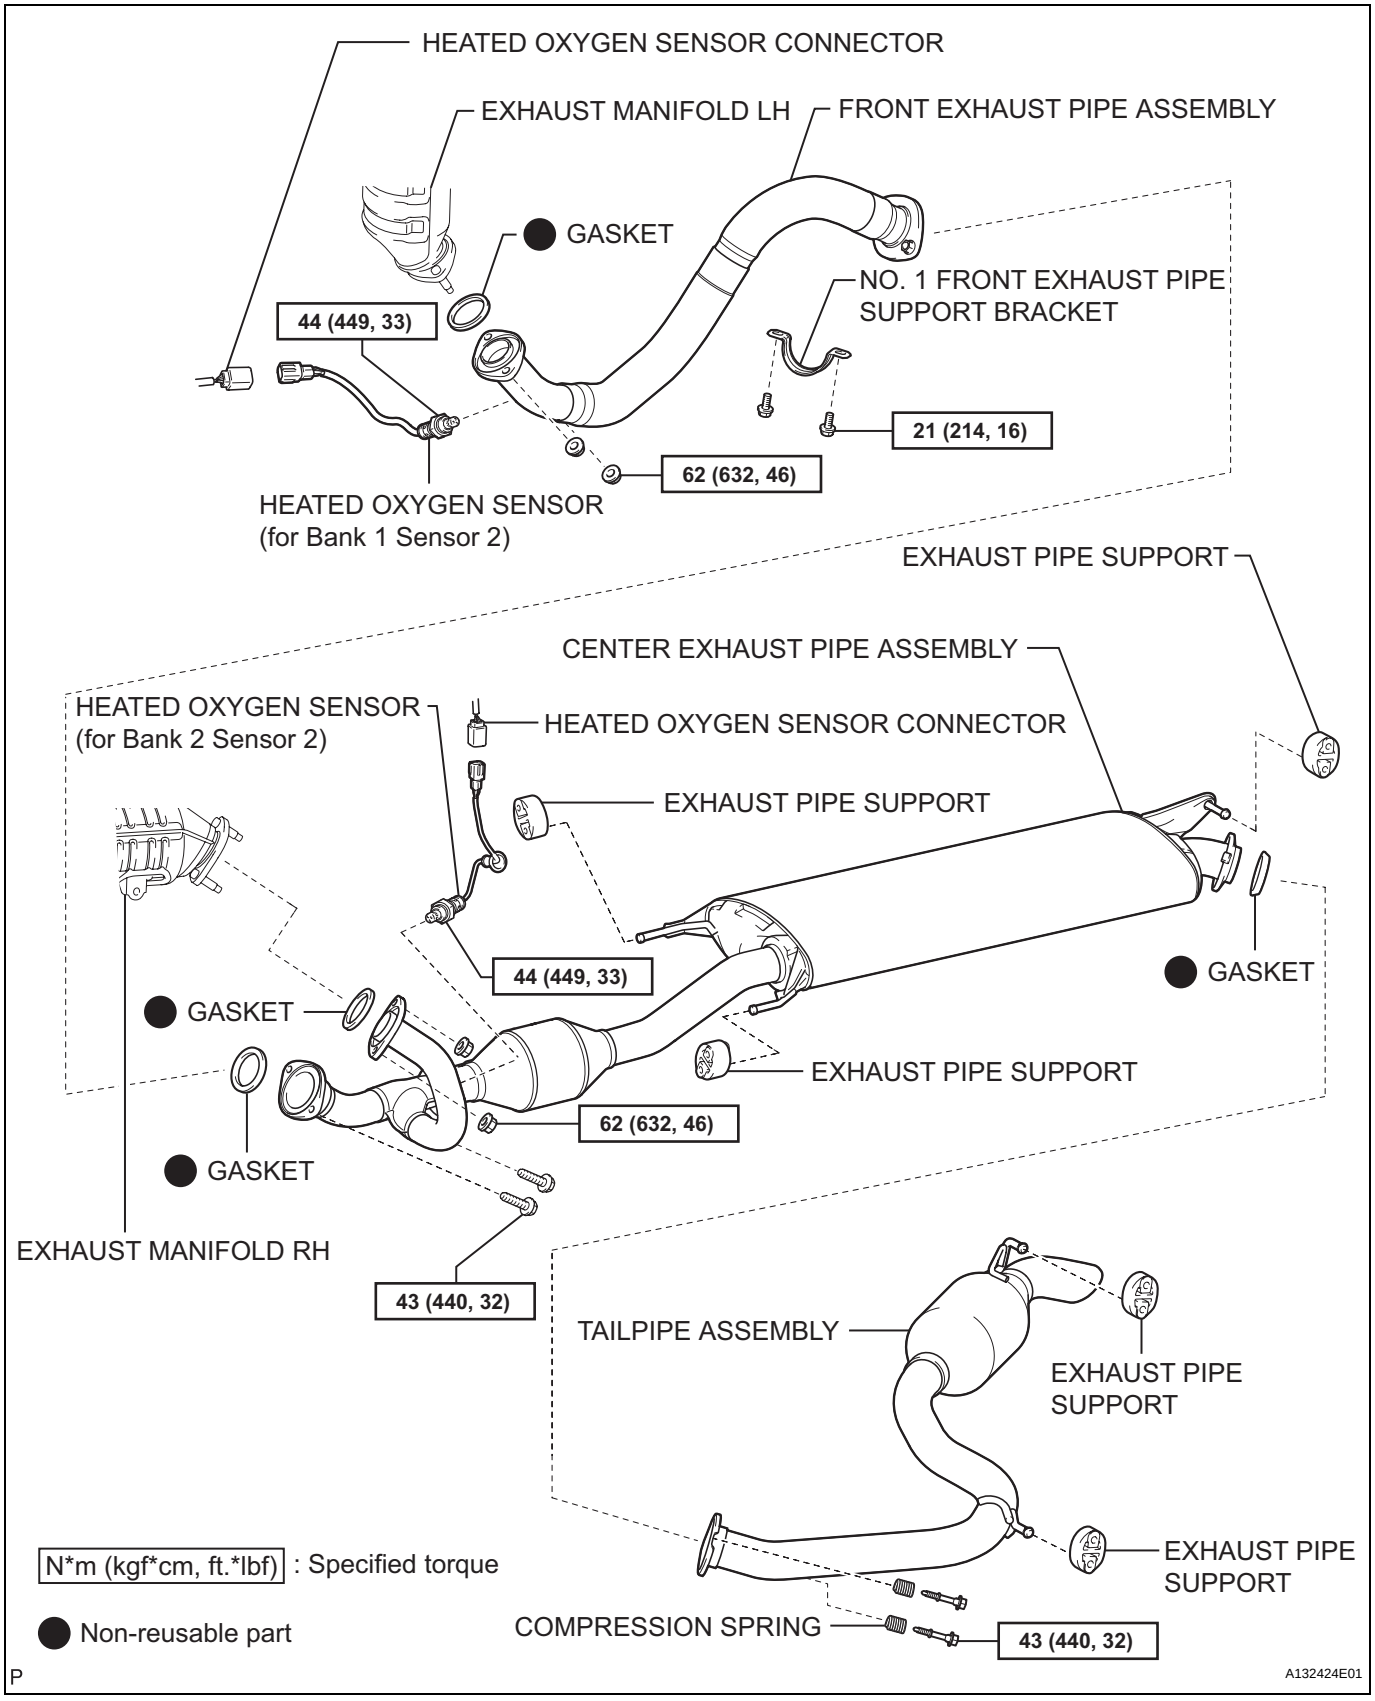


(b) Install a new gasket by hand so that its surface is flush with the center exhaust pipe.
NOTICE:
- **Tap in the gasket in the correct direction.**
- **Do not reuse the removed gasket.**
- **Do not push in the gasket while installing the tailpipe.**

(c) Connect the 2 exhaust pipe supports, and install the tailpipe.

(d) Install the 2 compression springs and 2 bolts.
Torque: 43 N*m (440 kgf*cm, 32 ft.*lbf)

EX

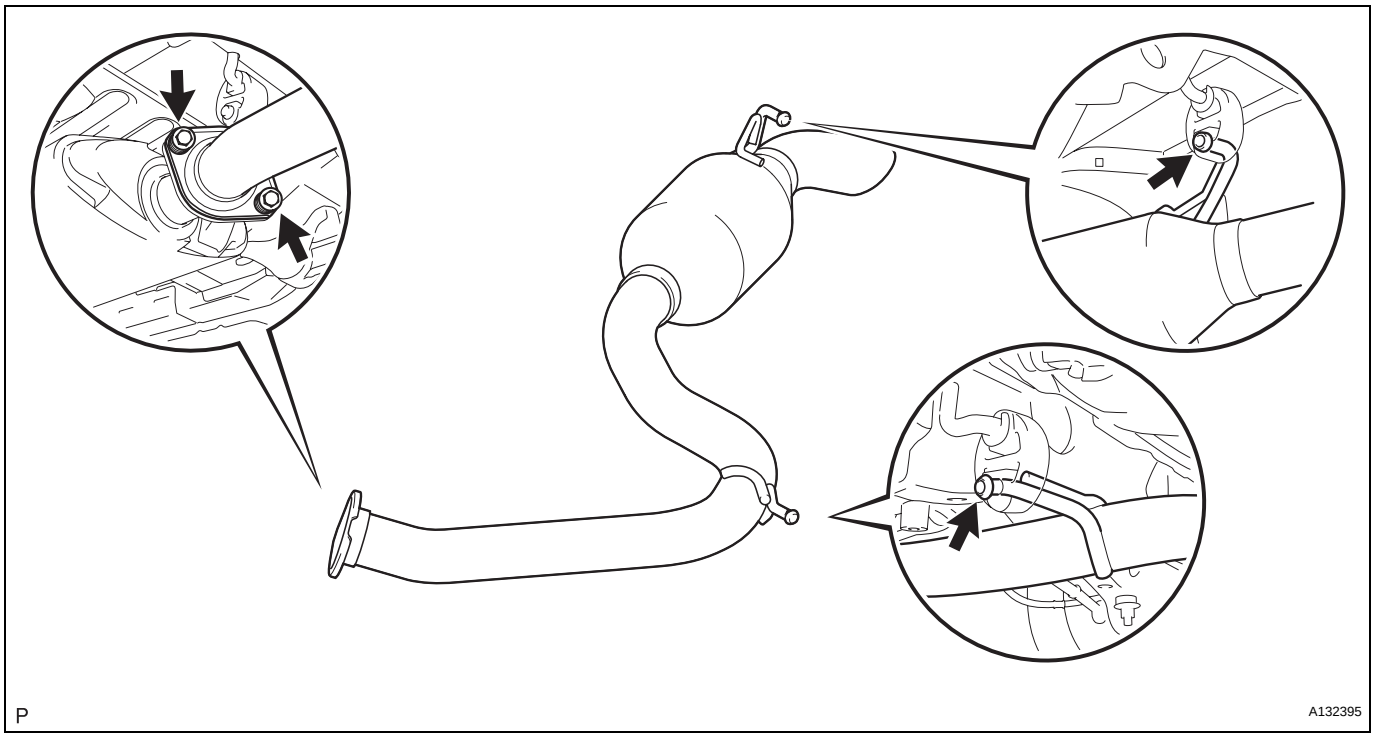


5. **INSTALL HEATED OXYGEN SENSOR (for Sensor 2) (See page EC-27)**

6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

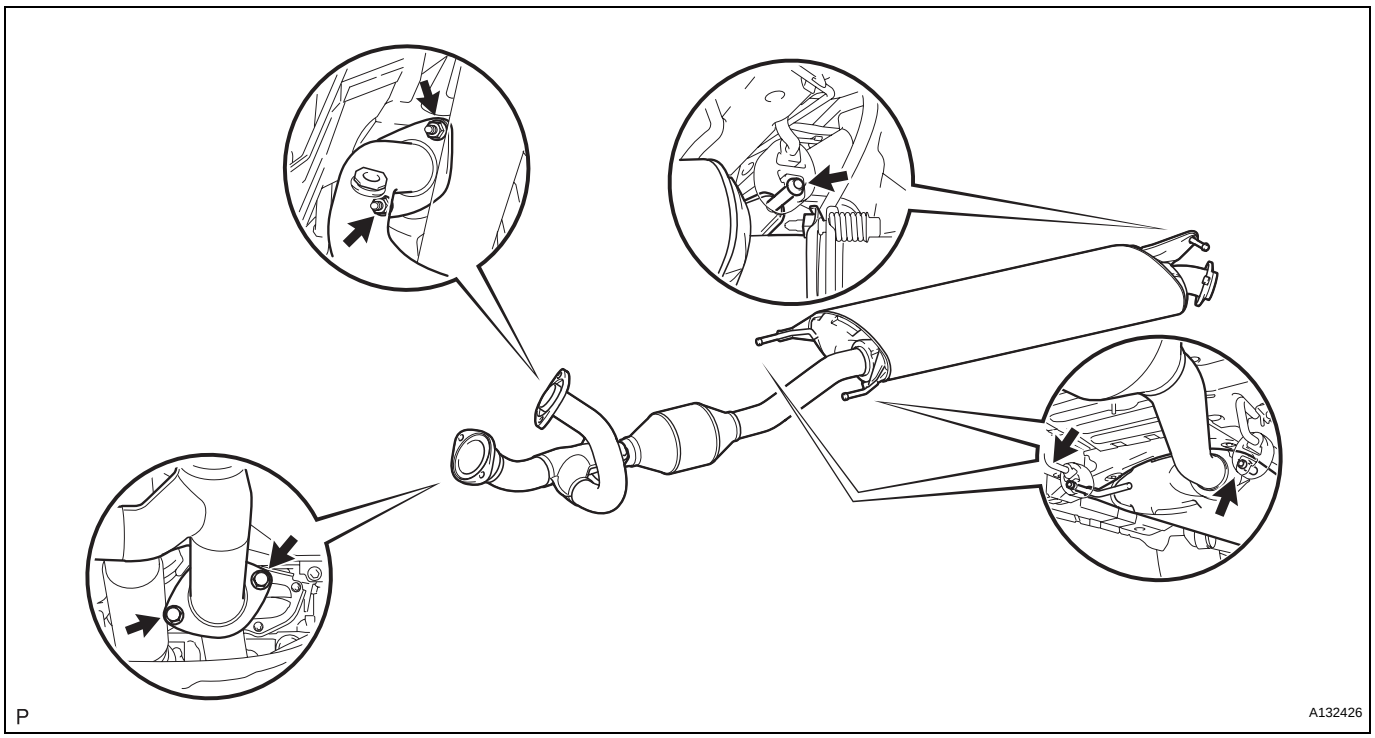
7. **CHECK FOR EXHAUST GAS LEAKS**
   If gas is leaking, tighten the problem areas to stop the leak. Replace damaged parts as necessary.

EXHAUST PIPE



COMPONENTS

EX



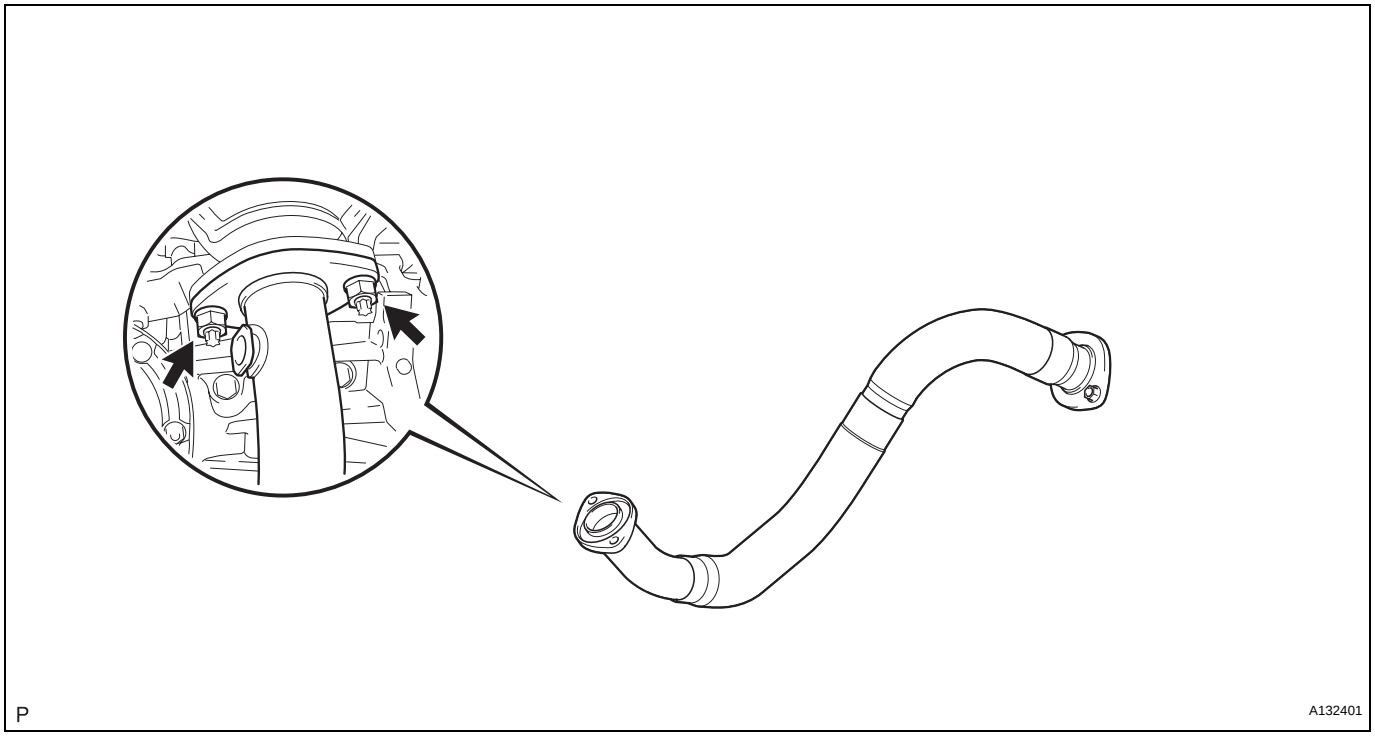
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE HEATED OXYGEN SENSOR (for Sensor 2) (See page EC-26)**
3. **REMOVE TAILPIPE ASSEMBLY**
   (a) Remove the 2 bolts and 2 compression springs.
   (b) Disconnect the 2 exhaust pipe supports and remove the tailpipe.
   (c) Remove the gasket from the center exhaust pipe.

4. **REMOVE CENTER EXHAUST PIPE ASSEMBLY**
   (a) Remove the 2 bolts and 2 nuts.
   (b) Disconnect the 3 exhaust pipe supports and remove the center exhaust pipe.

(c) Remove the 2 gaskets.

5. REMOVE NO. 1 FRONT EXHAUST PIPE SUPPORT BRACKET



(a) Remove the 2 bolts and No. 1 front exhaust pipe support bracket.

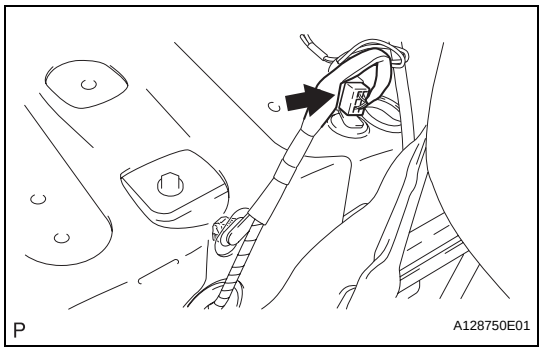
6. REMOVE FRONT EXHAUST PIPE ASSEMBLY

(a) Remove the 2 nuts and front exhaust pipe.

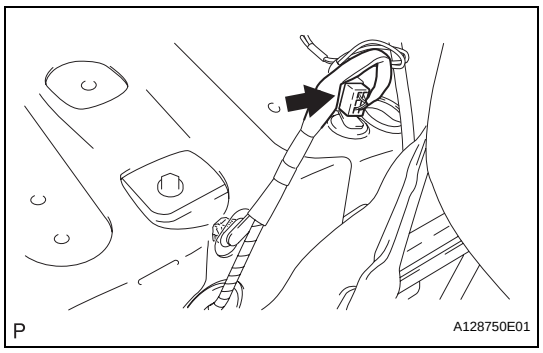
(b) Remove the gasket from the exhaust manifold.

EX

REMOVAL



CAUTION:
Do not allow fuel to spray when removing the pipe between the high pressure side fuel pump and the fuel injector. The fuel in the pipe is highly pressurized.



1. DISCHARGE FUEL SYSTEM PRESSURE

CAUTION:

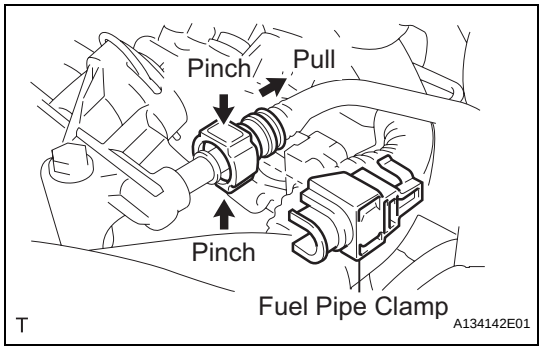
- **The "DISCHARGE FUEL SYSTEM PRESSURE" procedures must be performed before disconnecting any part of the fuel system.**
- **After performing the "DISCHARGE FUEL SYSTEM PRESSURE" procedures, pressure will remain in the fuel line. When disconnecting the fuel line, place a cloth or equivalent over fittings to reduce the risk of fuel spray.**

(a) Remove the console box (see page IP-16).
(b) Start the engine. After the engine has stopped, turn the ignition switch OFF.
HINT:
DTC P0171/P0172 (system too lean) may be set.
(c) Check that the engine does not start.
(d) Remove the fuel tank cap, and let the air out of the fuel tank.

(e) Connect the connector.
(f) Install the console box (see page IP-23).

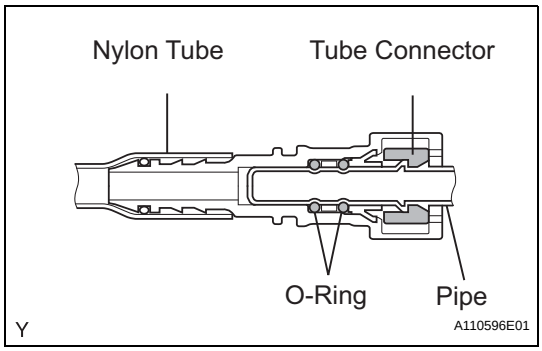
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.



3. REMOVE ENGINE ASSEMBLY

(a) Remove the engine (see page EM-21).

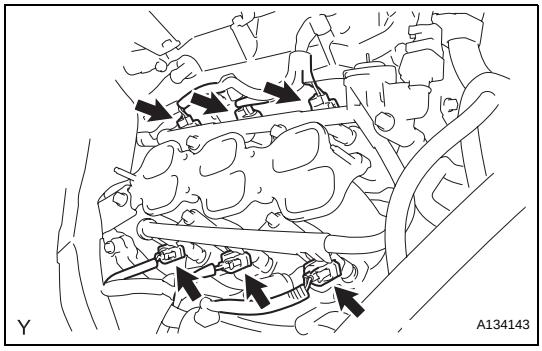


4. REMOVE INTAKE AIR SURGE TANK ASSEMBLY (See page EM-27)

5. DISCONNECT FUEL MAIN TUBE

(a) Remove the No. 2 fuel pipe clamp.

FU

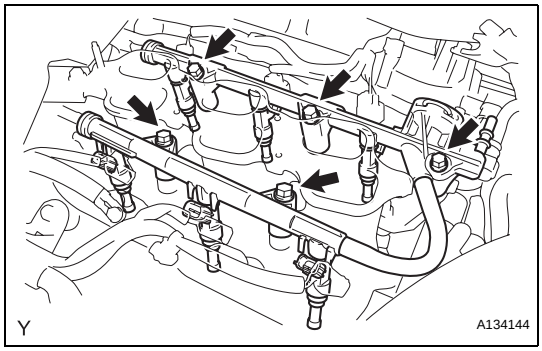


(b) Pinch the tube connector and then pull out the fuel pipe.

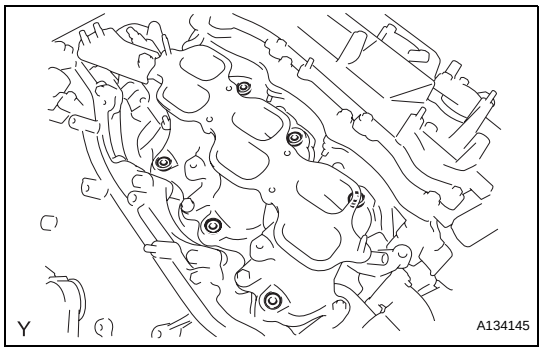
NOTICE:

- **Check for foreign matter in the fuel tube around the fuel tube's connector. Clean it if necessary. Foreign matter can affect the O-ring's ability to seal the connector and fuel main pipe.**
- **Do not use any tools to separate the connector and pipe.**
- **Do not forcefully bend or twist the hose.**
- **Keep the connector and pipe free from foreign matter.**
- **If the connector and pipe are stuck together, pinch the connector and turn it carefully to disconnect it.**
- **Put the connector in a plastic bag to prevent damage and contamination.**

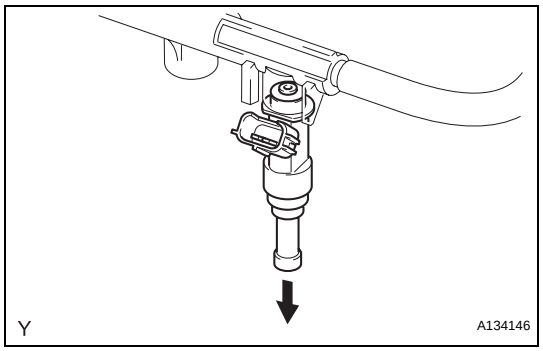
6. REMOVE FUEL INJECTOR ASSEMBLY



(a) Disconnect the 6 injector connectors.



(b) Remove the 5 bolts and fuel delivery pipe together with the 6 injectors.



NOTICE:

Be careful not to drop the fuel injectors when removing the fuel delivery pipe.

(c) Remove the 6 insulators from the intake manifold.

(d) Pull out the 6 fuel injectors from the fuel delivery pipe.
(e) Remove the O-ring from each fuel injector.

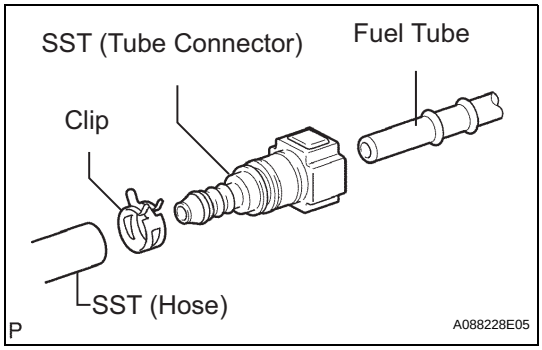
INSPECTION

1. INSPECT FUEL INJECTOR ASSEMBLY

(a) Inspect injector resistance.

(1) Measure the resistance between the terminals.

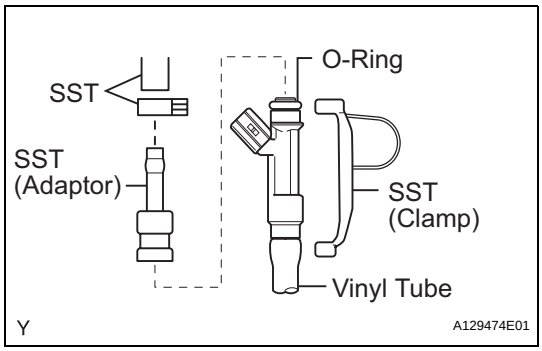
Standard resistance:



11.6 to 12.4 Ω at 20°C (68°F)

If the result is not as specified, replace the injector.

(b) Inspect the injection volume.



CAUTION:

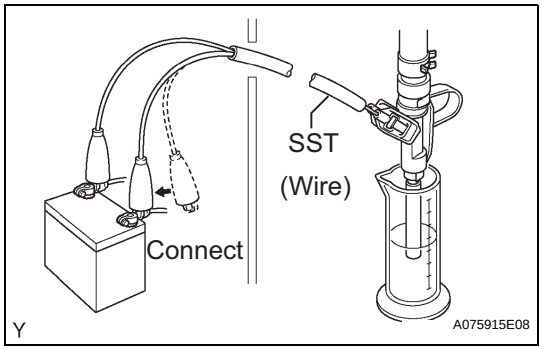
This test involves high-pressure fuel and electricity. Take every precaution regarding safe handling of both the fuel and the electricity. Perform this test in a safe area, and avoid any sparks or flames. Do not smoke.

(1) Install the fuel tube connector to SST (hose), then connect the tube connector to the fuel pipe (vehicle side).

SST 09268-41048 (95336-08070, 09268-41500)

(2) Install the O-ring to the fuel injector.

(3) Connect SST (adaptor and hose) to the injector, and hold the injector and union with SST (clamp).



SST 09268-41048 (09268-41130, 90467-13001), 09268-41400

(4) Put the injector into the graduated cylinder.

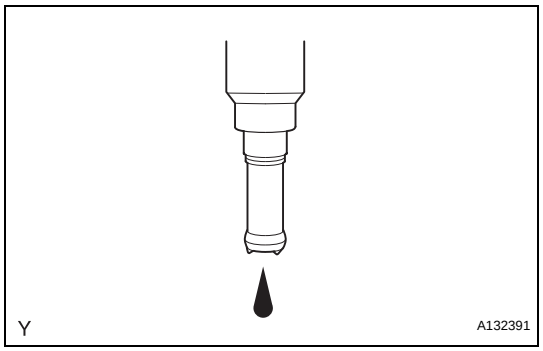
CAUTION:

Install a suitable vinyl tube onto the injector to contain gasoline spray.

(5) Operate the fuel pump.

(6) Connect SST (wire) to the injector and the battery for 15 seconds, and measure the injection volume with the graduated cylinder. Test each injector 2 or 3 times.

SST 09842-30080



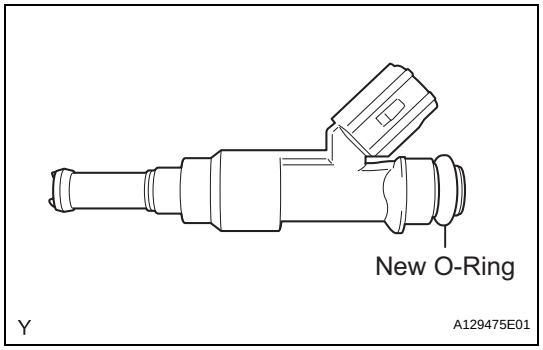
Standard volume:

84 to 100 cm^3 (5.1 to 6.0 cu in.) in 15 seconds

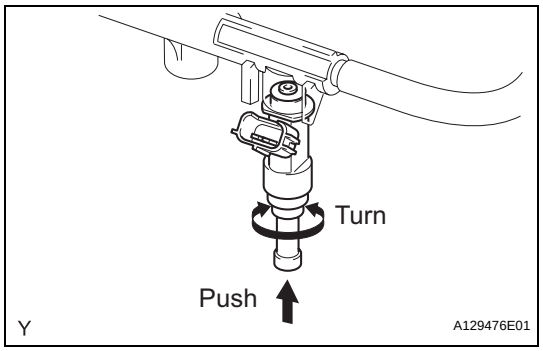
Difference between each injector:

16 cm^3 (0.96 cu in.) or less

If the injection volume is not as specified, replace the injector.

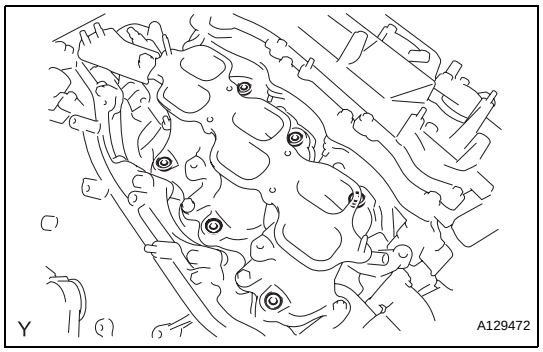


(c) Check for leakage.
(1) In the condition above, disconnect the tester probes of SST (wire) from the battery and check for fuel leakage from the injector.
Fuel drop:
1 drop or less in 16 minutes

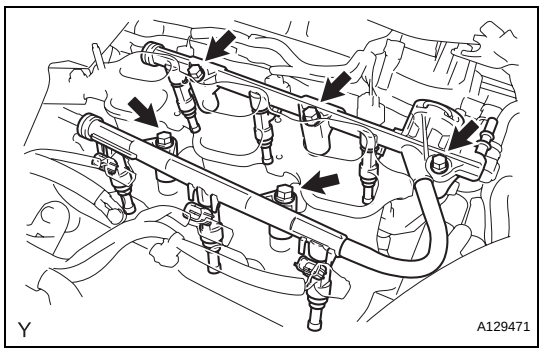


INSTALLATION

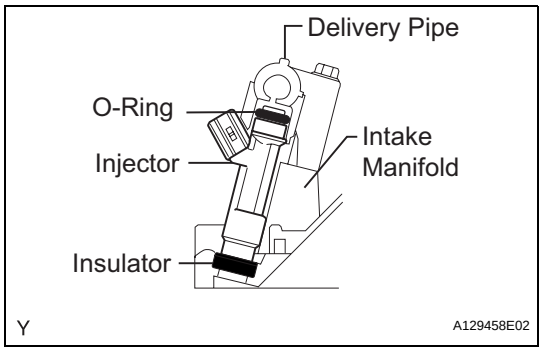
1. INSTALL FUEL INJECTOR ASSEMBLY



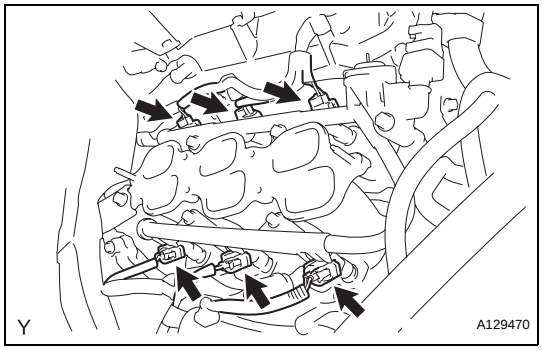
(a) Apply a light coat of spindle oil or gasoline to 6 new O-rings, and install an O-ring to each injector.



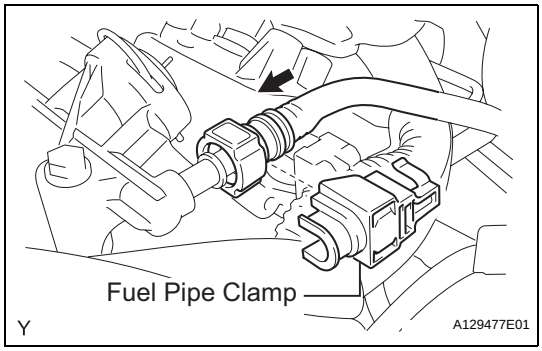
(b) Apply a light coat of spindle oil or gasoline where the fuel delivery pipe contacts the O-ring.
(c) Push the fuel injector while twisting it back and forth to install it in the fuel delivery pipe.
(d) Position the fuel injector connector outward.
NOTICE:
- **Be careful not to twist the O-ring.**
- **After installing the fuel injector, check that it turns smoothly. If it does not, reinstall it with a new O-ring.**



(e) Install 6 new insulators to the intake manifold.



(f) Place the fuel delivery pipe together with the 6 fuel injectors into the intake manifold.
NOTICE:
Be careful not to drop the fuel injectors when installing the fuel delivery pipe.



(g) Temporarily install the 5 bolts which are used to hold the fuel delivery pipe to the intake manifold.
NOTICE:
After installing the fuel injector, check that it turns smoothly. If it does not, reinstall it with a new O-ring.

(h) Tighten the 5 bolts which are used to hold the fuel delivery pipe to the intake manifold.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

(i) Connect the 6 fuel injector connectors.

2. CONNECT FUEL MAIN TUBE

(a) Push in the tube connector to the pipe until the tube connector makes a "click" sound.
NOTICE:
- **Check that there is no damage or foreign objects on the connected part of the fuel pipe.**
- **After connecting, check if the fuel tube connector and the pipe are securely connected by pulling on them.**

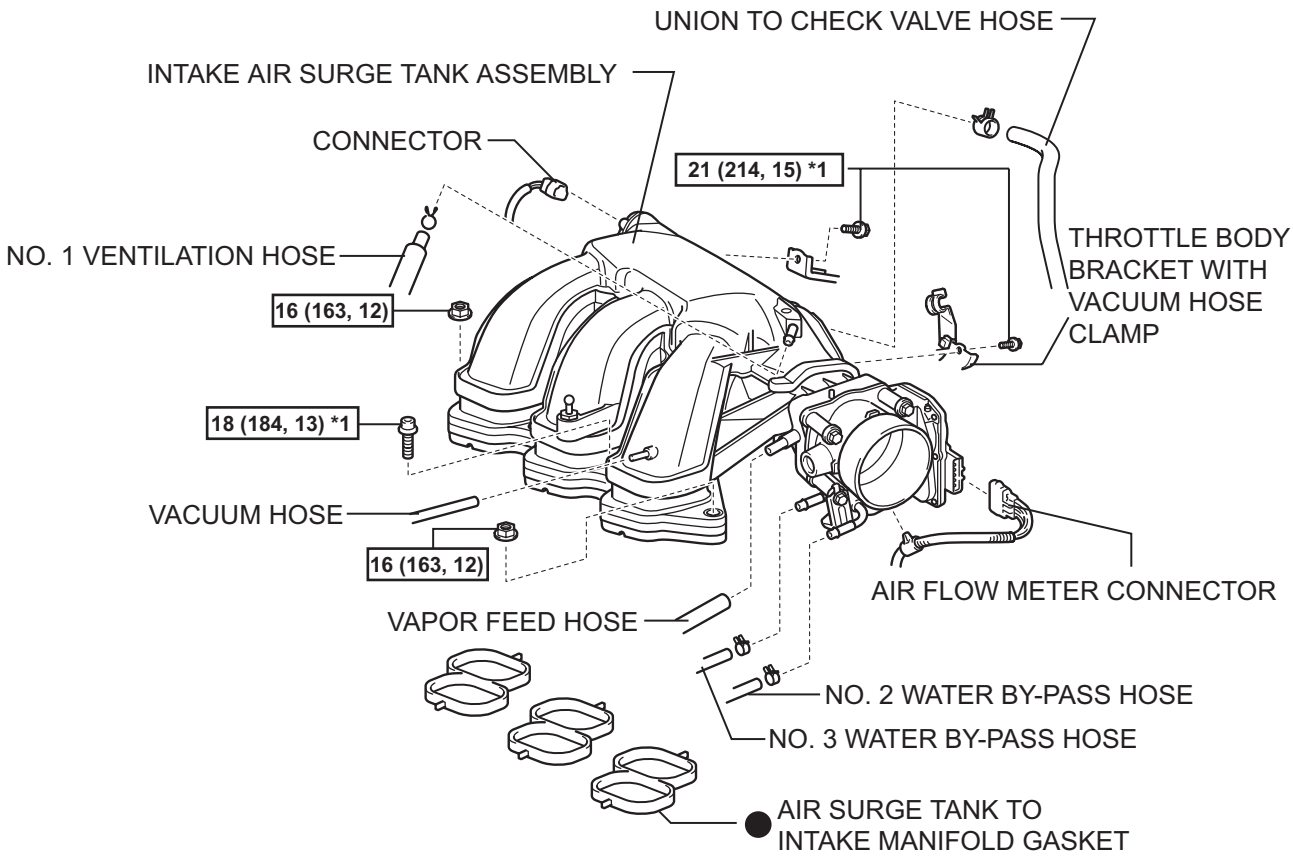
(b) Install the No. 2 fuel pipe clamp.

3. INSTALL INTAKE AIR SURGE TANK ASSEMBLY (See page EM-34)

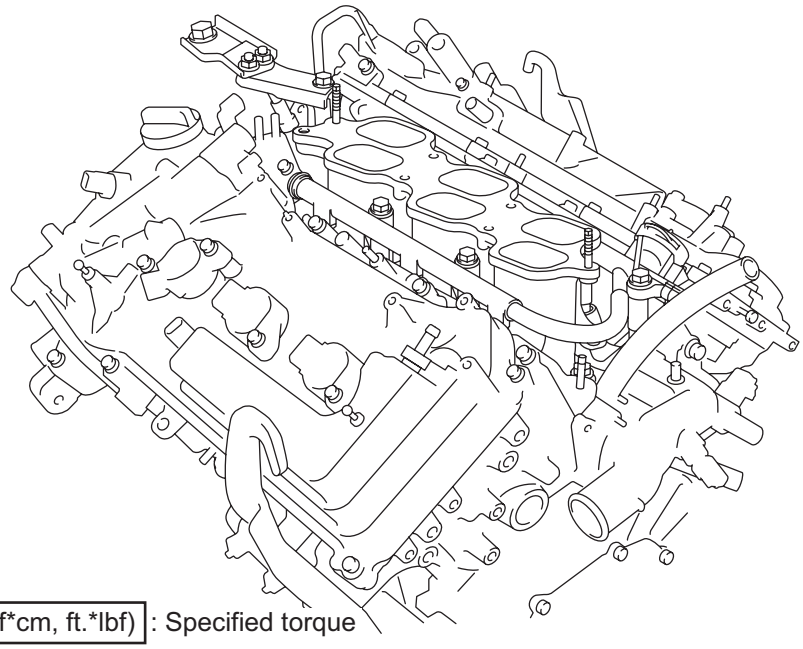
4. INSTALL ENGINE ASSEMBLY

(a) Install the engine (see page EM-31).

5. ADD ENGINE COOLANT (See page CO-8)



6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



7. CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)

8. CHECK FOR FUEL LEAKS

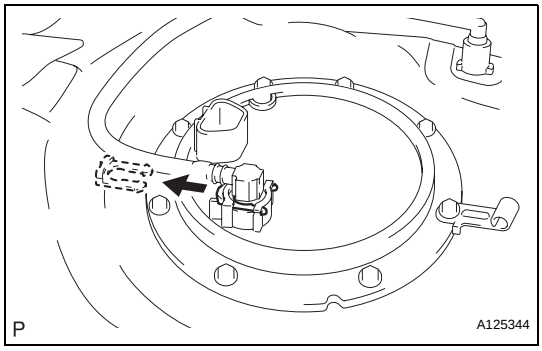
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
3. **REMOVE ENGINE ASSEMBLY**
   (a) Remove the engine (see page EM-21).
4. **REMOVE INTAKE AIR SURGE TANK ASSEMBLY (See page EM-27)**
5. **REMOVE FUEL PRESSURE PULSATION DAMPER**
   (a) Remove the clip.
   (b) Pull out the fuel pressure pulsation damper from the fuel delivery pipe.

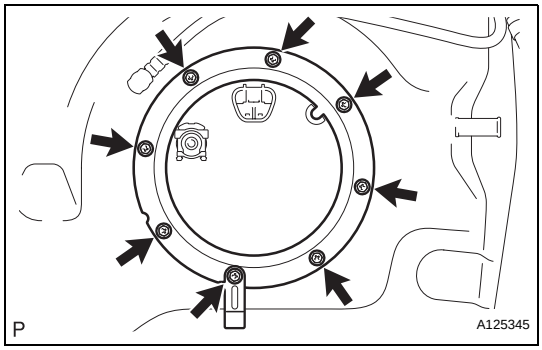


FU

REMOVAL

1. REMOVE FUEL TANK ASSEMBLY

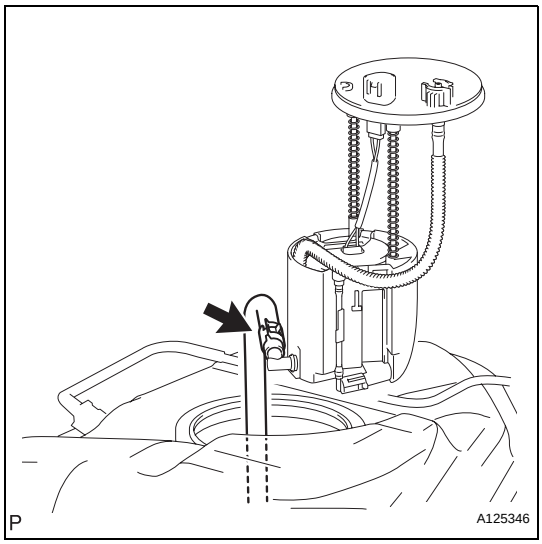
(a) Remove the fuel tank (see page FU-33).



2. REMOVE FUEL TANK MAIN TUBE SUB-ASSEMBLY

(a) Remove the joint clip and fuel tank main tube.

CAUTION:

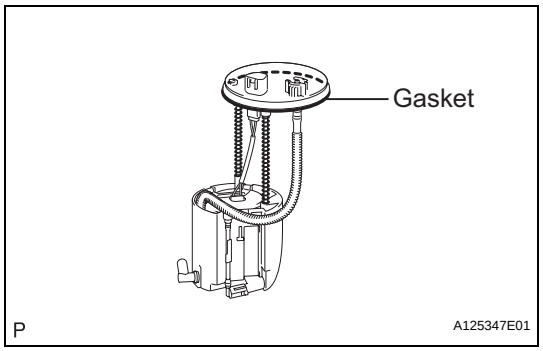


- **Before removing the tube joint clip, check for foreign matter around the clip. Clean if necessary.**
- **Keep the O-ring free of foreign matter, as it becomes contaminated easily.**
- **Do not use any tools in this procedure.**
- **Do not forcefully bend or twist the tube.**
- **Put the tube in a plastic bag to prevent damage and contamination.**
- **If the fuel suction plate and tube are stuck together, pinch the tube and turn it carefully to disconnect it.**
- **Be careful not to damage the clip. If the clip is damaged, replace it.**

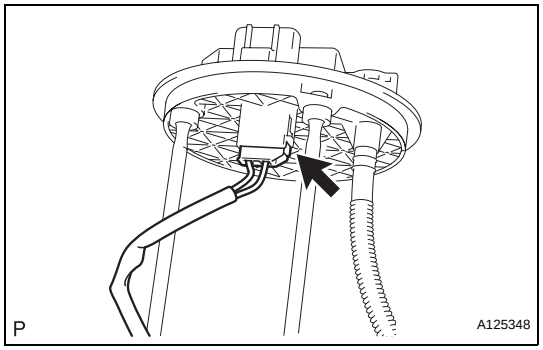
FU

3. REMOVE FUEL TANK VENT TUBE SET PLATE

(a) Remove the 8 bolts and set plate.



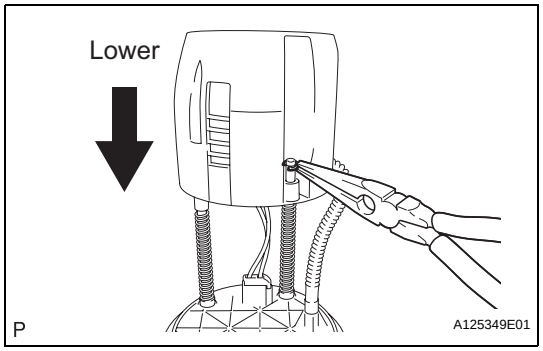
4. REMOVE FUEL SUCTION WITH PUMP ASSEMBLY



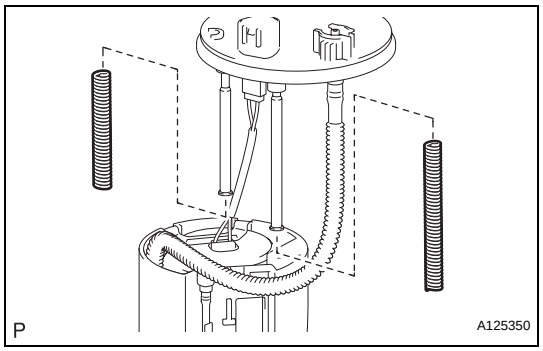
(a) Disconnect the fuel hose and remove the fuel pump from the fuel tank.

NOTICE:

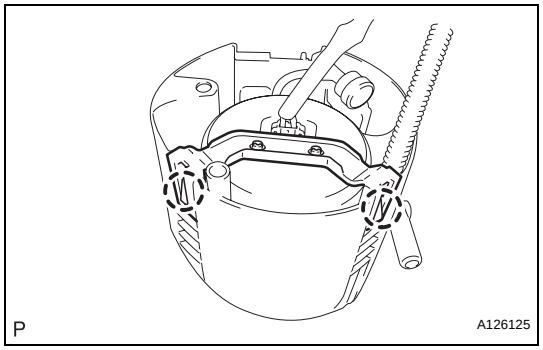
Do not damage the fuel pump.



(b) Remove the gasket from the fuel pump.

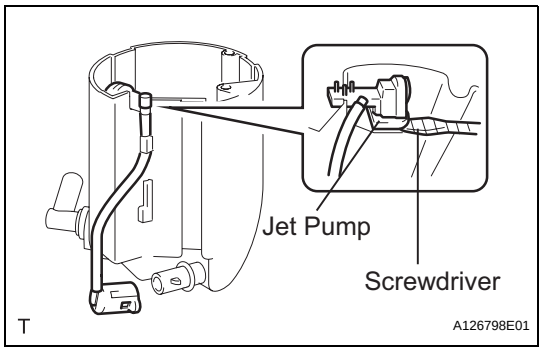


5. REMOVE FUEL SUB-TANK ASSEMBLY

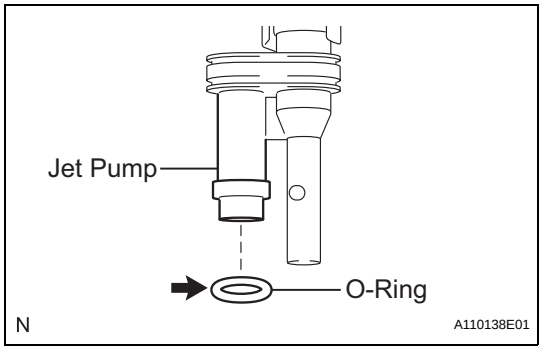


(a) Disconnect the wire harness.

(b) Using needle nose pliers, remove the E-ring.
HINT:
Slightly lower the sub-tank to remove the E-ring.

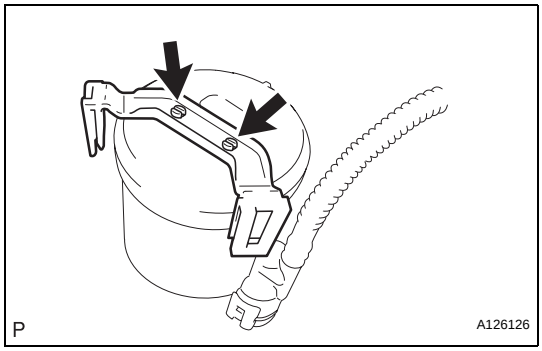


(c) Remove the 2 springs from the 2 shafts.

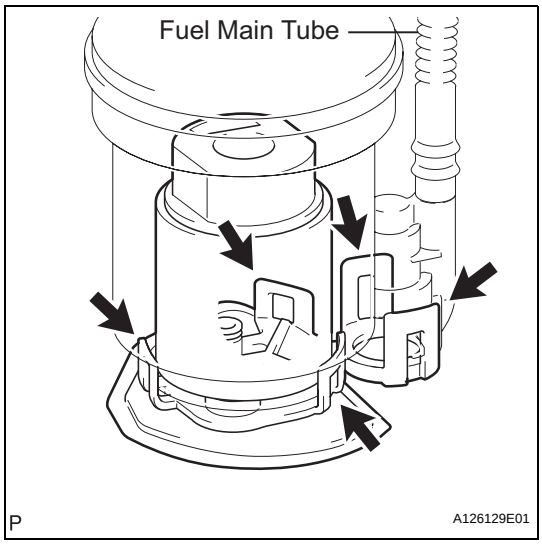


(d) Detach the 2 claws and remove the sub-tank.

FU

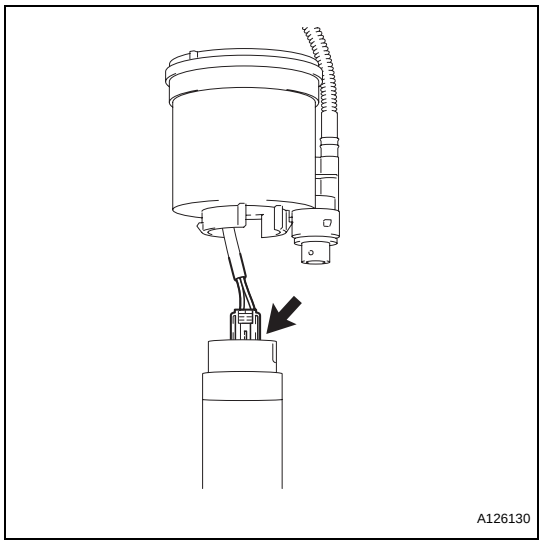


(e) Detach the claw of the jet pump nozzle and remove the jet pump nozzle.
(f) Using a screwdriver, remove the jet pump.
HINT:
Tape the screwdriver tip before use.



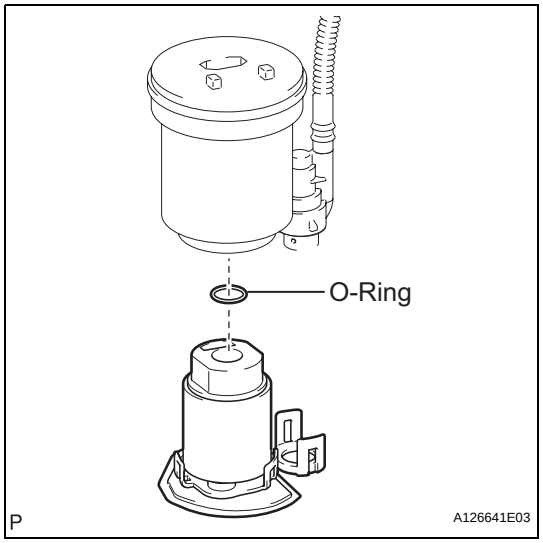
(g) Remove the O-ring from the jet pump.

FU

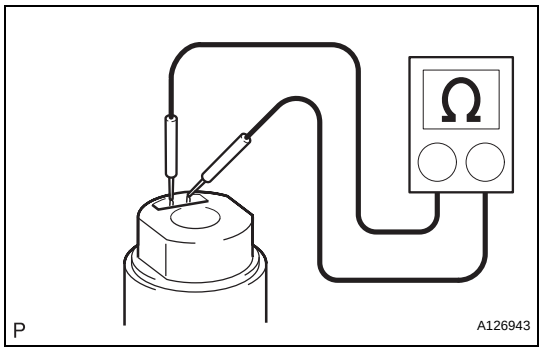


6. REMOVE BRACKET

(a) Using a screwdriver, detach the 2 claws and remove the bracket.
HINT:
Tape the screwdriver tip before use.



7. REMOVE FUEL PUMP ASSEMBLY



(a) Detach the 5 claws on the filter and remove the fuel pump from the fuel filter.
HINT:
When removing the claw, do not disconnect the fuel main tube.

(b) Disconnect the fuel pump connector.

(c) Remove the O-ring from the fuel filter.

INSPECTION

1. INSPECT FUEL PUMP

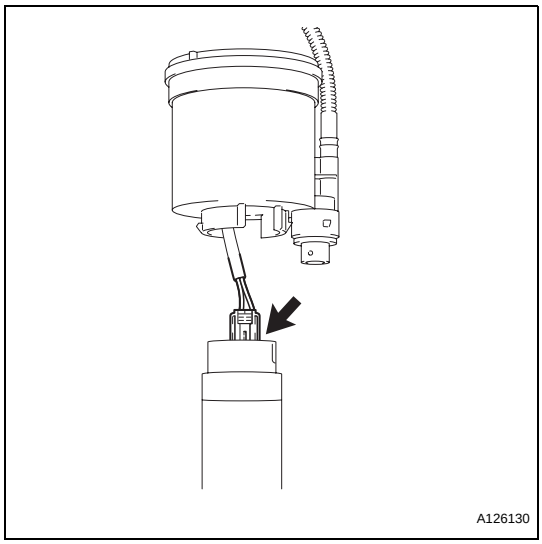
(a) Check the fuel pump resistance.

(1) Measure the resistance between terminals 1 and 2.

Standard resistance:

0.2 to 3.0 Ω at 20°C (68°F)

If the result is not as specified, replace the fuel pump.

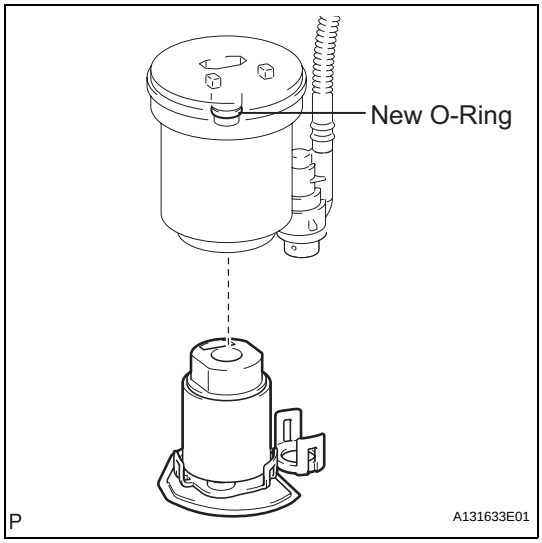


(b) Check fuel pump operation.

(1) Apply battery voltage to terminals 1 and 2. Check that the pump operates.

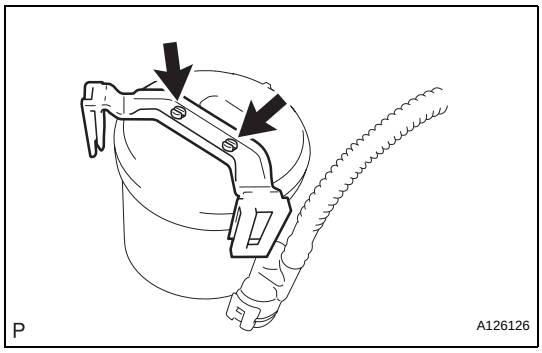
NOTICE:

- **These tests must be completed within 10 seconds to prevent the coil from burning out.**
- **Keep the fuel pump as far away from the battery as possible.**
- **Always turn the voltage on and off on the battery side, not the fuel pump side.**



If the pump does not operate, replace the fuel pump.

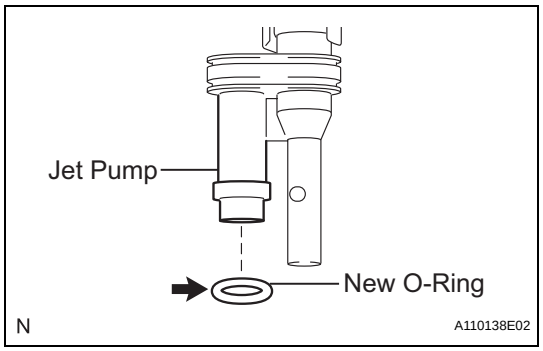
INSTALLATION



1. INSTALL FUEL PUMP ASSEMBLY

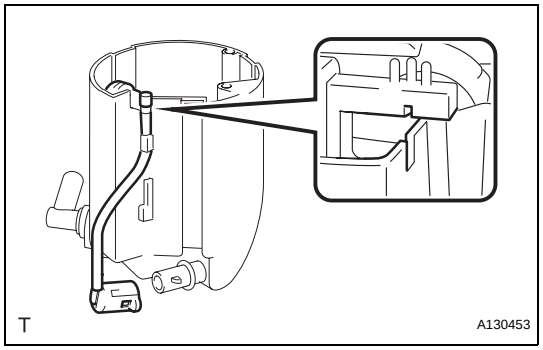
(a) Connect the pump harness connector.

(b) Apply gasoline to a new O-ring and install the O-ring to the fuel filter.



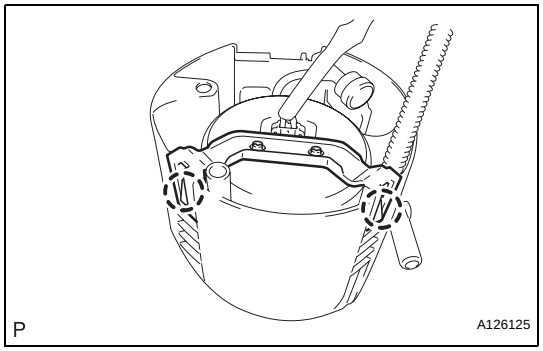
(c) Attach the 5 claws to the claw holes and install the fuel pump.

2. INSTALL BRACKET



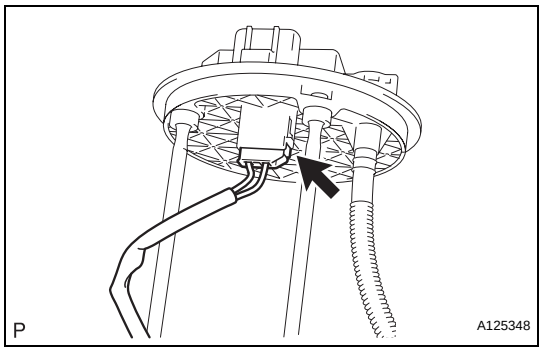
(a) Attach the 2 claws to the claw holes and install the bracket.

FU

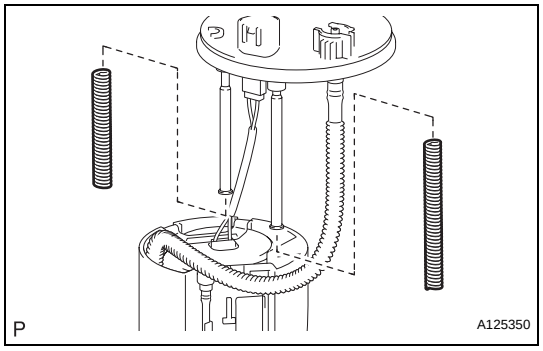


3. INSTALL FUEL SUB-TANK ASSEMBLY

(a) Apply gasoline to a new O-ring and install it to the jet pump.

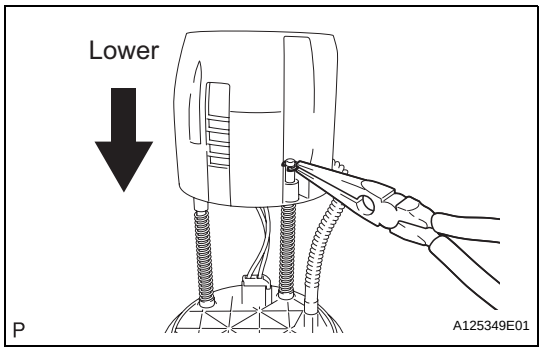


(b) Install the jet pump while aligning it with the installation position of the sub-tank.

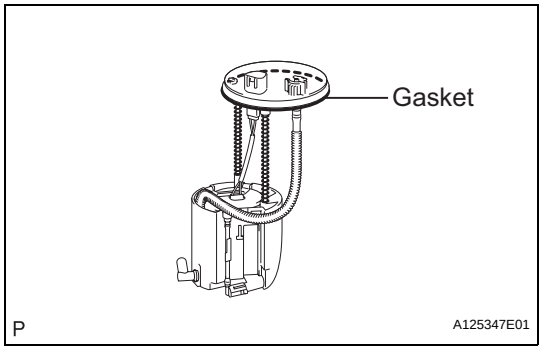


(c) Install the jet pump nozzle.

(d) Attach the 2 claws to the claw holes and install the fuel sub-tank.

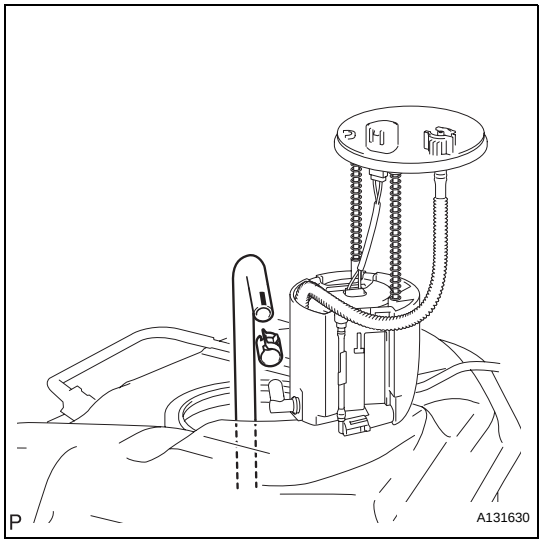


(e) Connect the wire harness.

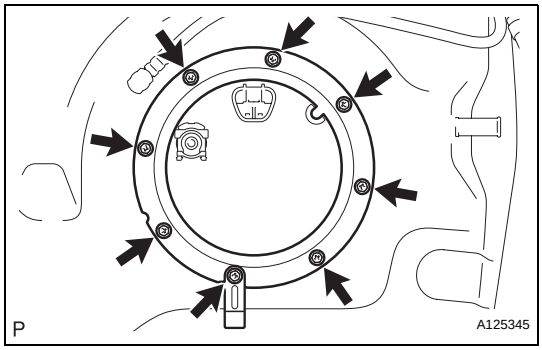


(f) Install the springs to the fuel suction plate shafts and install them to the sub-tank.

FU



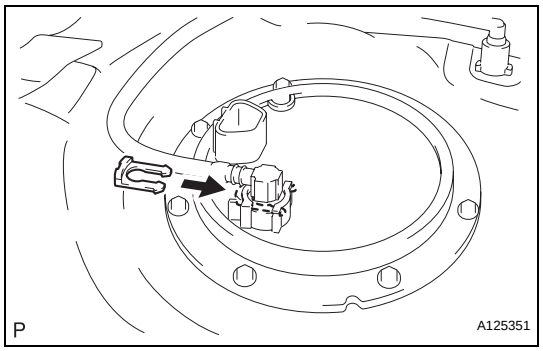
(g) Using needle-nose pliers, install a new E-ring.
HINT:
Slightly lower the sub-tank to install the E-ring.

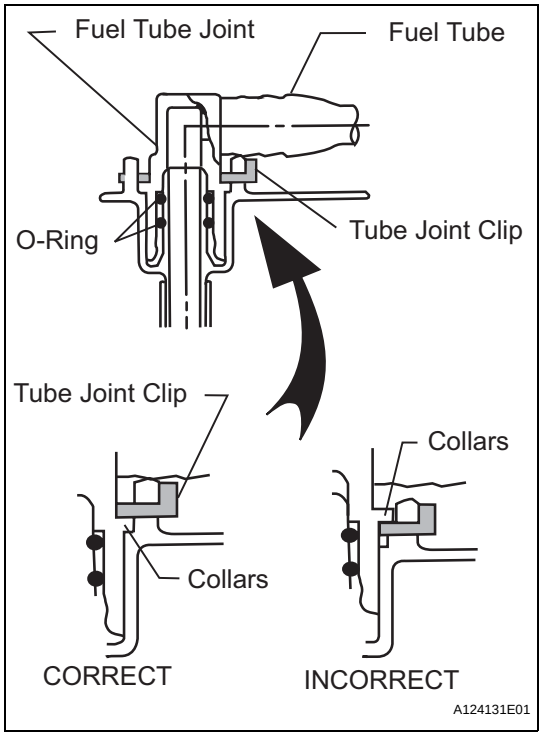


4. INSTALL FUEL SUCTION WITH PUMP ASSEMBLY

(a) Install a new gasket onto the fuel pump.

FU





(b) Connect the fuel hose and install the fuel pump into the fuel tank.
NOTICE:
Do not damage the fuel pump filter.

5. INSTALL FUEL TANK VENT TUBE SET PLATE

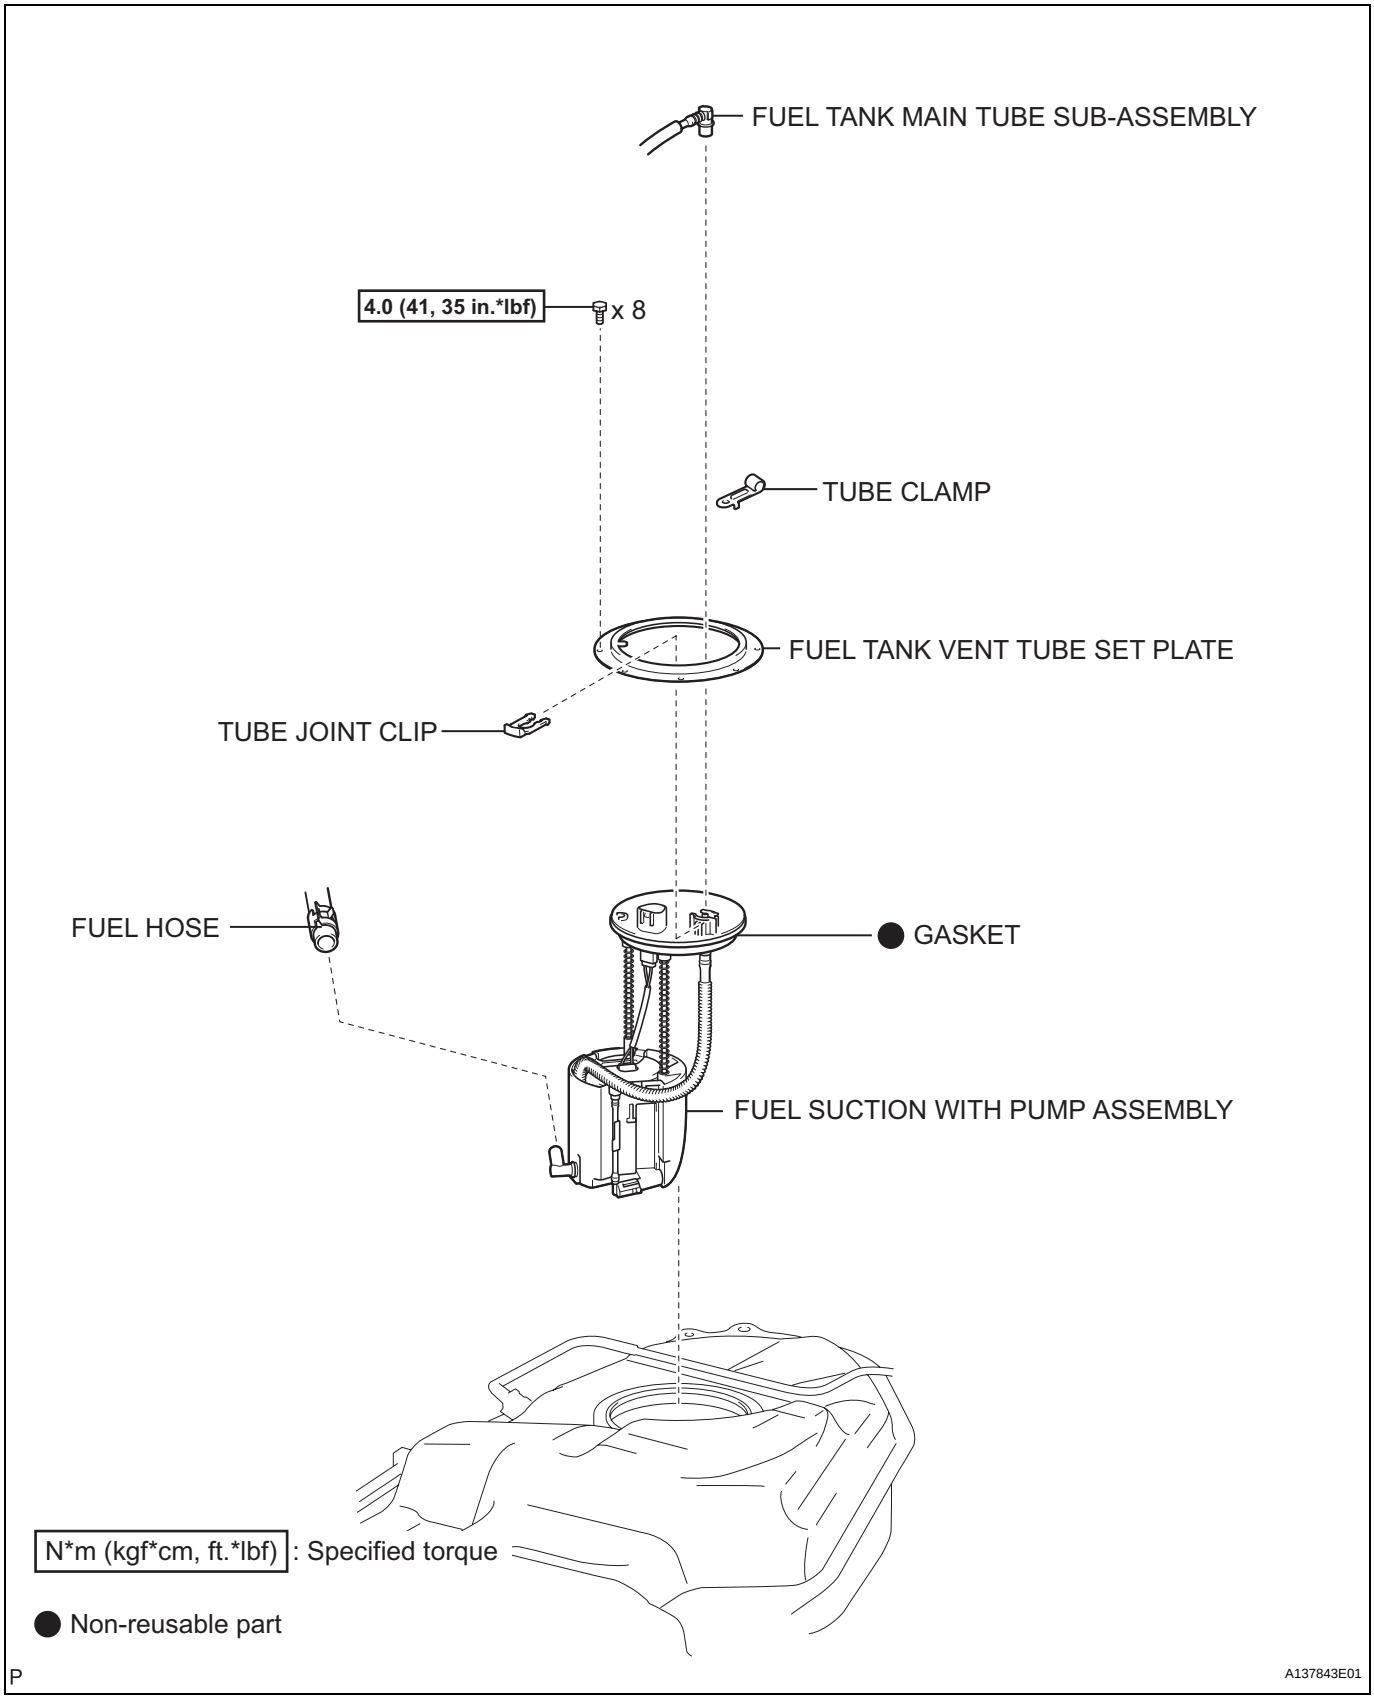
(a) Install the set plate with the 8 bolts.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)

6. INSTALL FUEL TANK MAIN TUBE SUB-ASSEMBLY

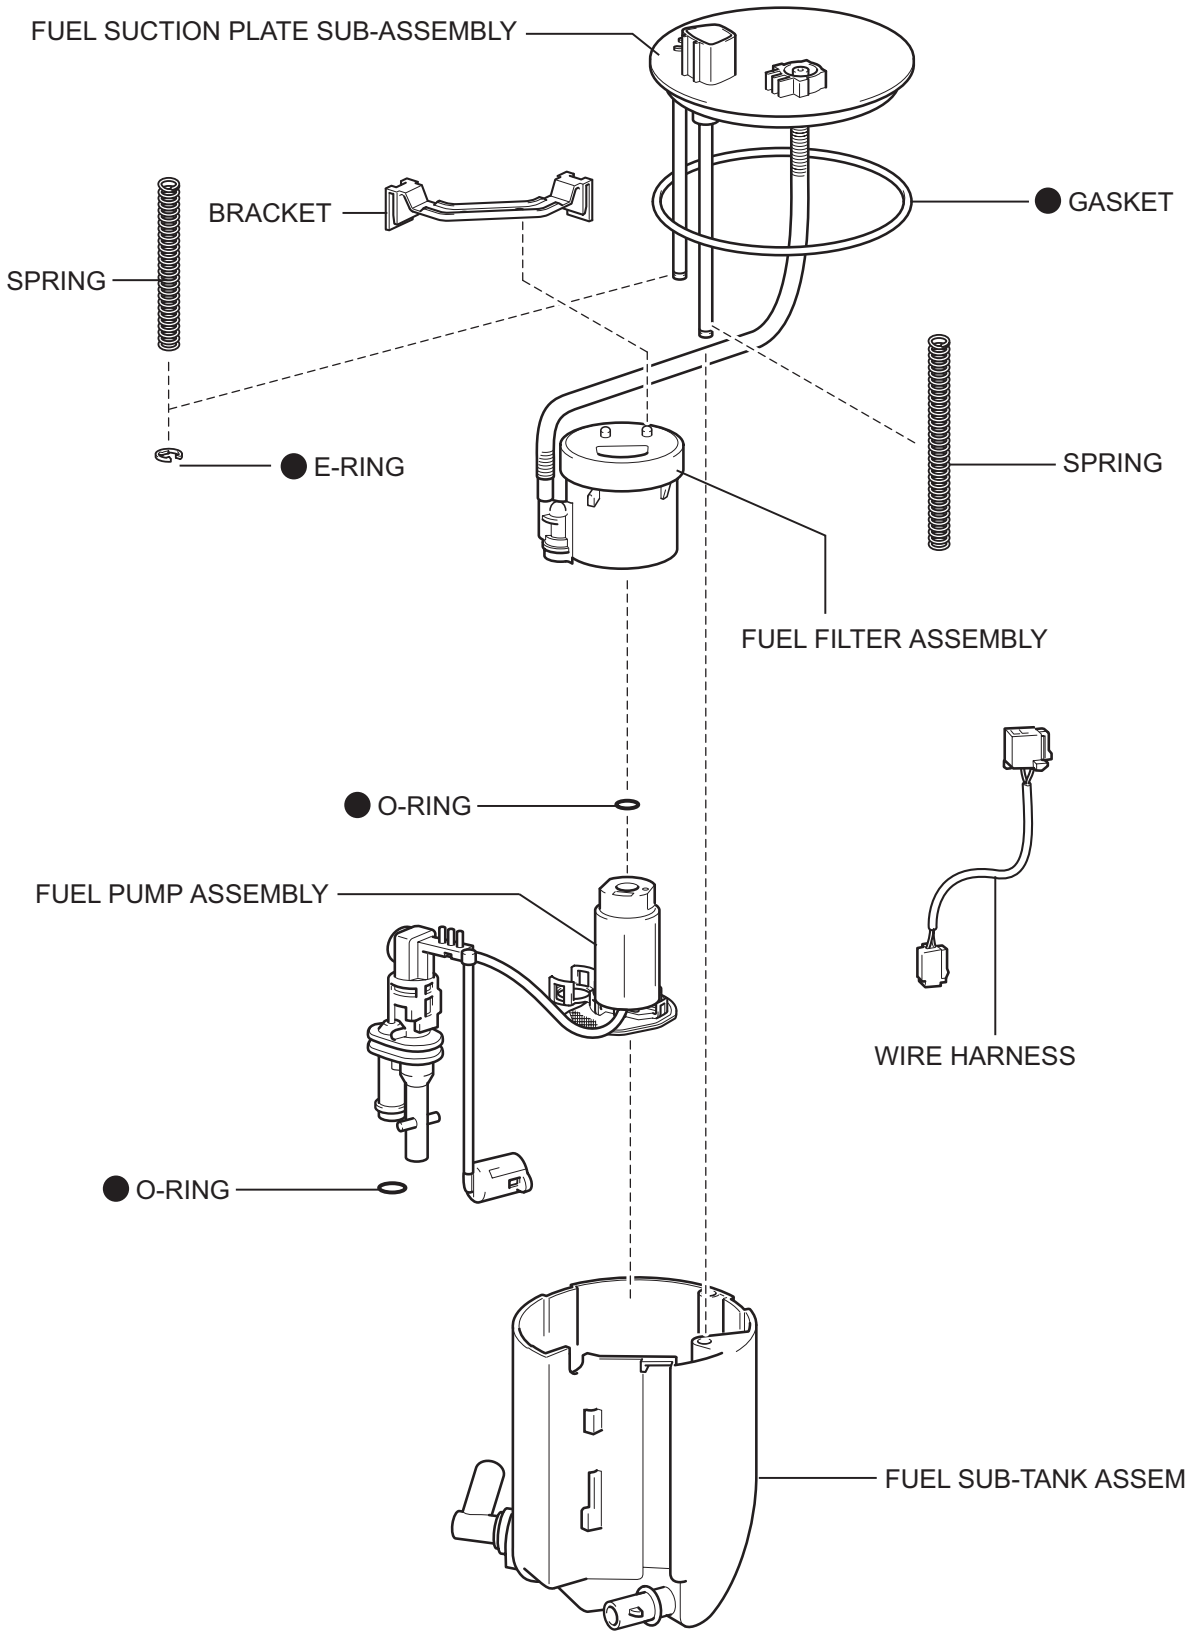
(a) Install the fuel tank main tube with the joint clip.

CAUTION:

- **Check that there are no scratches or foreign objects on the connecting parts.**
- **Check that the fuel tube joint is inserted securely.**
- **Check that the fuel tube joint clip is on the collars of the fuel tube joint.**
- **After installing the tube joint clip, check that the fuel tube joint has not been pulled off.**
- **Be careful not to damage the clip. If the clip is damaged, replace it.**



7. INSTALL FUEL TANK ASSEMBLY



(a) Install the fuel tank (see page FU-38).

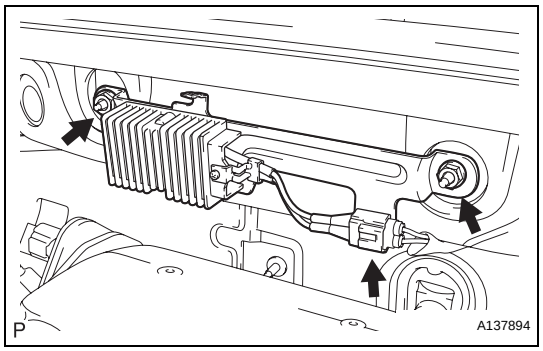
REMOVAL

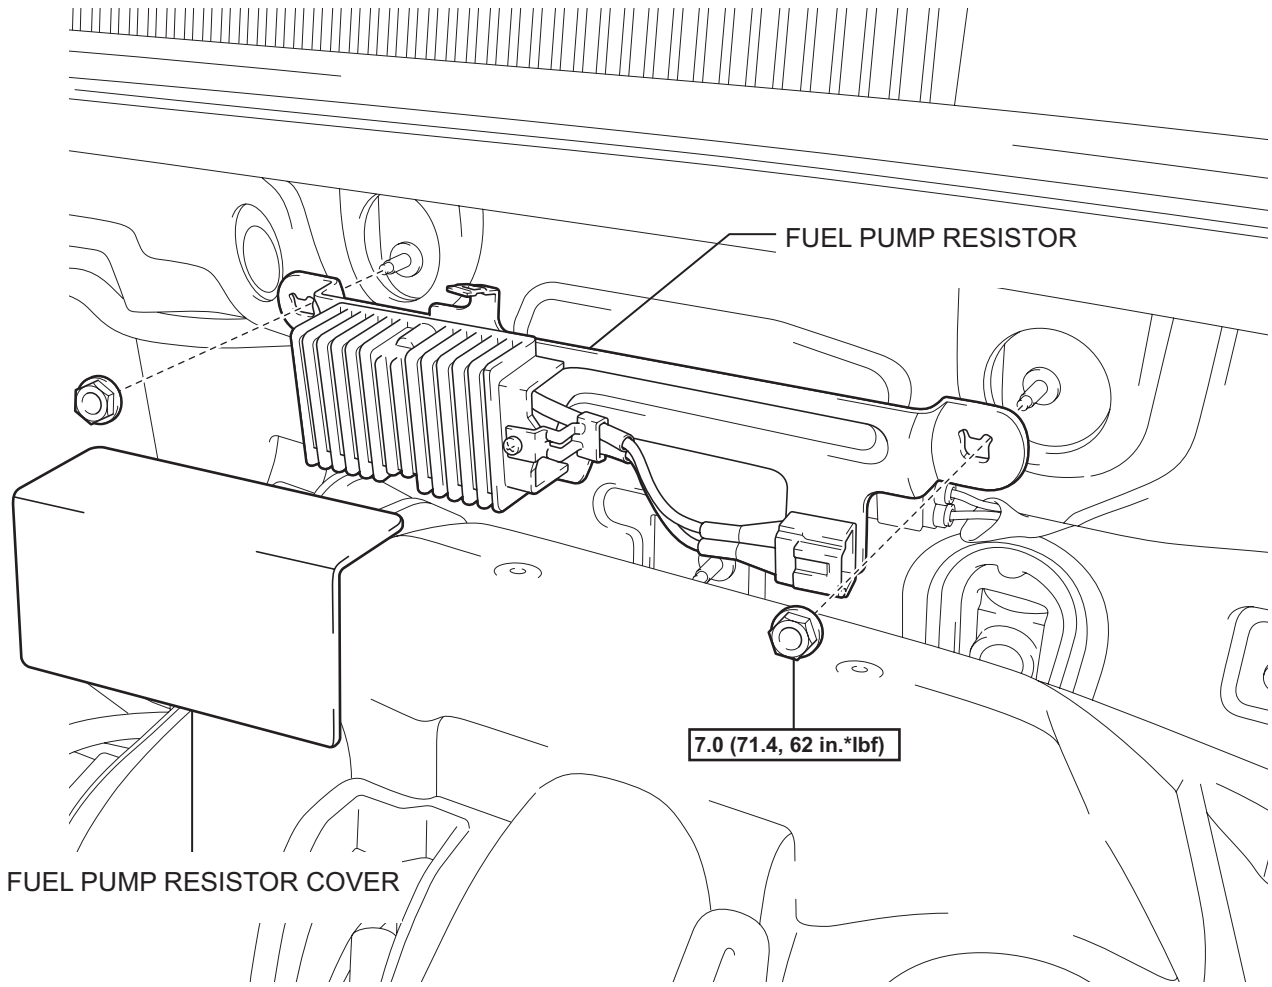
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE FUEL PUMP RESISTOR COVER**
   (a) Remove the cover from the resistor.
3. **REMOVE FUEL PUMP RESISTOR**
   (a) Disconnect the connector.
   (b) Remove the 2 bolts and resistor.



INSPECTION

1. **INSPECT FUEL PUMP RESISTOR**
   (a) Inspect the fuel pump resistor resistance.
      (1) Measure the resistance between the terminals.
      Standard resistance:
      0.53 to 0.57 Ω at 20°C (68°F)

INSTALLATION



1. **INSTALL FUEL PUMP RESISTOR**
   (a) Install the resistor with the 2 bolts.
   Torque: 7.0 N*m (71.4 kgf*cm, 62 in.*lbf)
   (b) Connect the connector.
2. **INSTALL FUEL PUMP RESISTOR COVER**
   (a) Install the cover to the resistor.
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

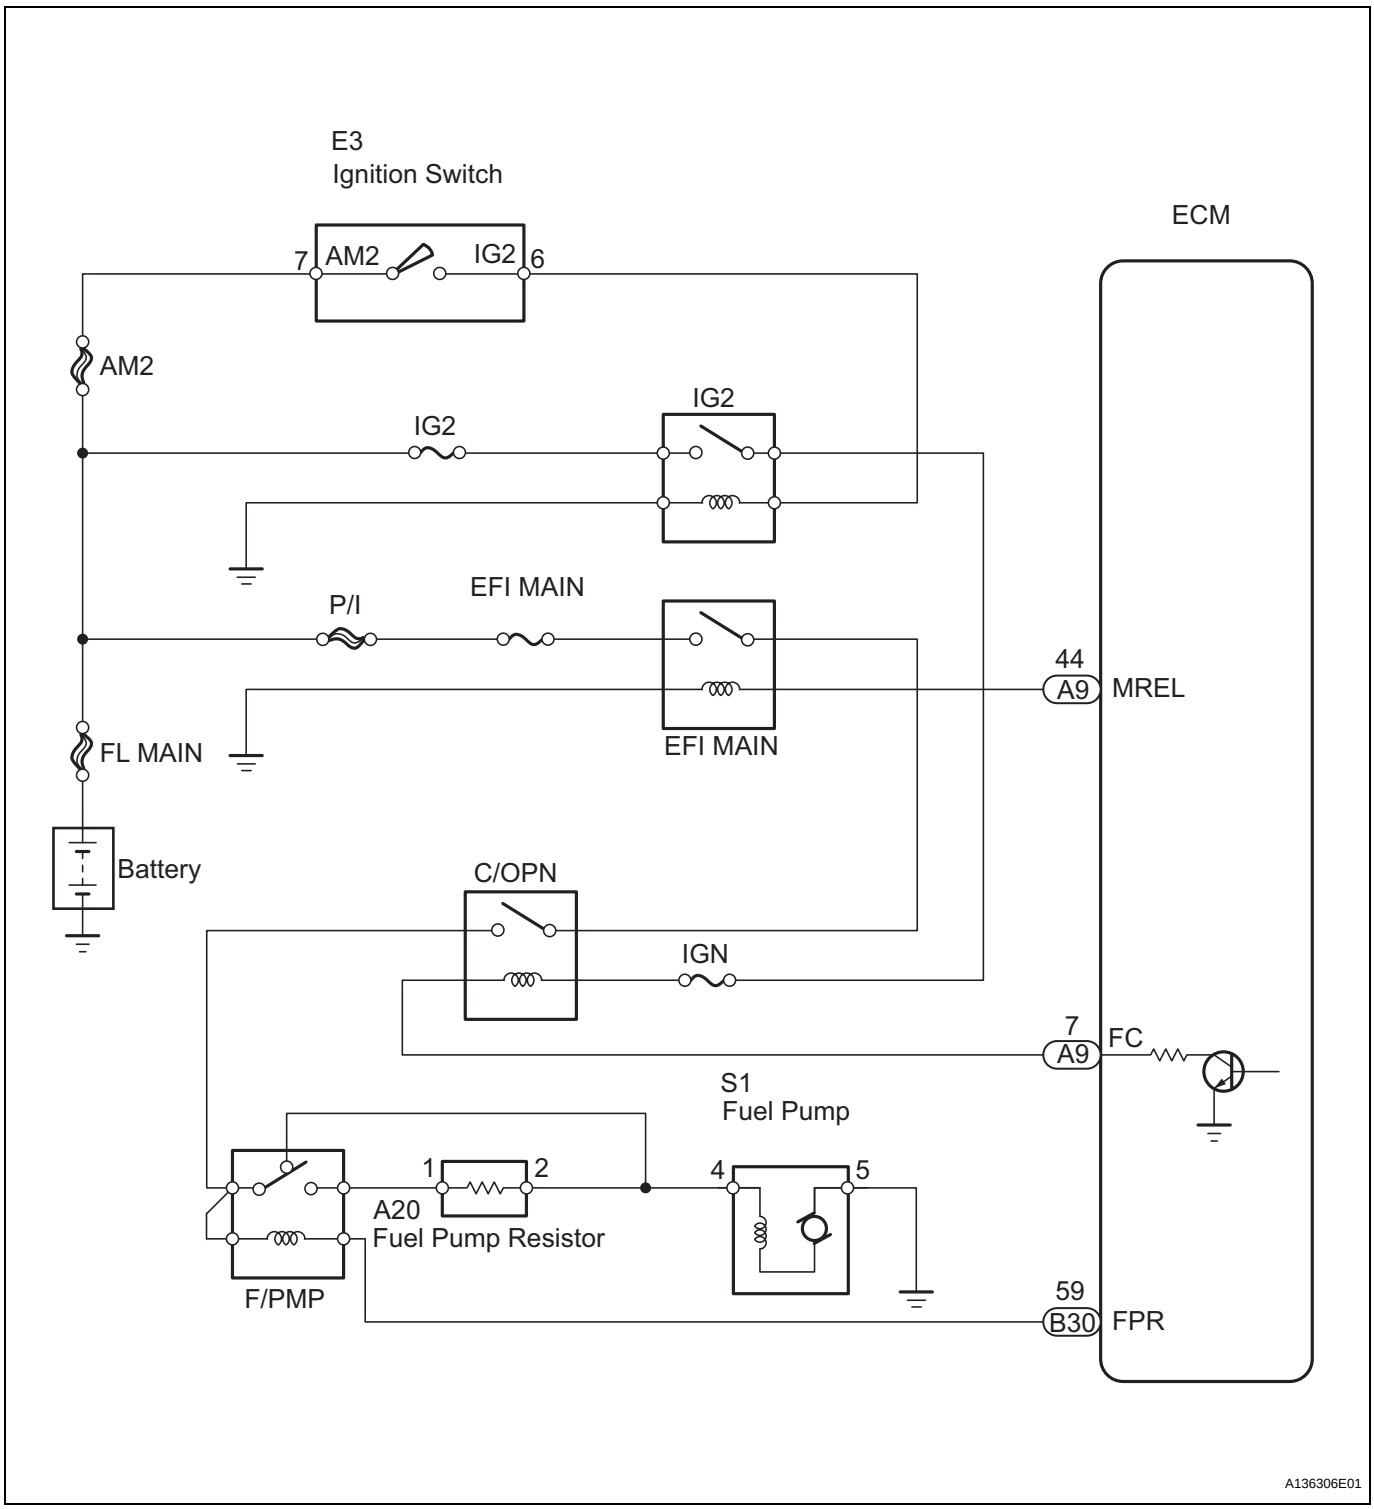
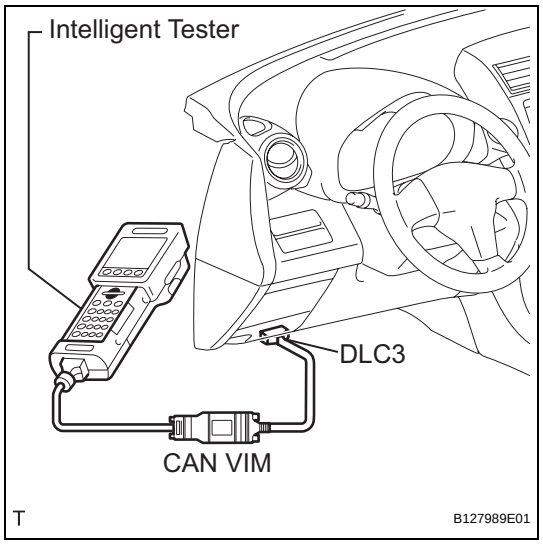
SYSTEM DIAGRAM

1. FUEL FLOW DIAGRAM





2. FUEL SYSTEM WIRING DIAGRAM

FU

3. FUEL SYSTEM WIRING DIAGRAM

ON-VEHICLE INSPECTION

1. CHECK FUEL PUMP OPERATION

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch ON.

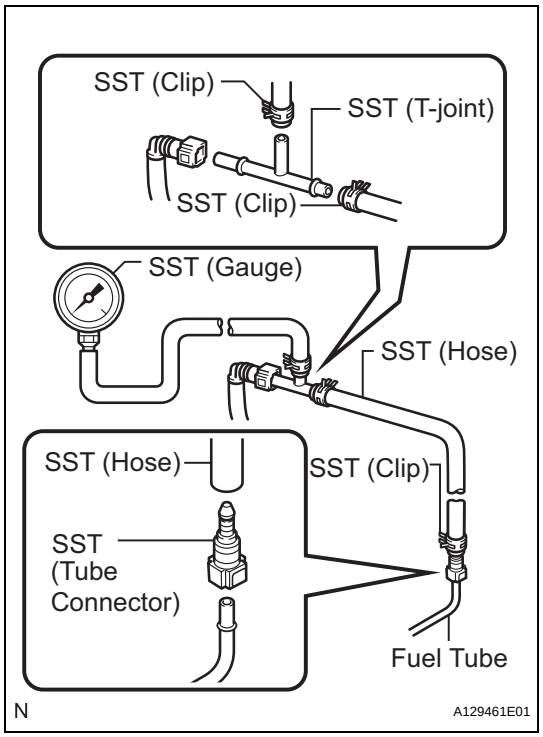
NOTICE:

Do not start the engine.

(c) Select the following tester menus: DIAGNOSIS, ENHANCED OBD II, ACTIVE TEST and FUEL PUMP/SPD. Operate the fuel pump.

(d) Touch the fuel hose in the engine compartment to check the fuel flow, and you will be able to hear the sound of the fuel pump.

(e) Stop the fuel pump. If there is no fuel flow, the fuel pump may not be operating. Check the fuel pump circuit.



2. CHECK FUEL PRESSURE

(a) Check that the battery positive voltage is above 12 V.

(b) Perform the "DISCHARGE FUEL SYSTEM PRESSURE" procedures (see page FU-1).

(c) Disconnect the cable from the negative (-) battery terminal.

(d) Disconnect the fuel main tube (see page FU-22).

(e) Install SST (pressure gauge) using SST and a fuel tube connector as shown in the illustration.

SST 09268-41048 (90467-13001, 95336-08070, 09268-41500), 09268-45014 (09268-41200, 09268-41220, 09268-41250)

(f) Wipe up any gasoline.

(g) Reconnect the cable to the negative (-) battery terminal.

(h) Start the engine.

(i) Measure the fuel pressure at idle.

Standard fuel pressure:

304 to 343 kPa (3.1 to 3.5 kgf/cm^2,44.1 to 49.7 psi)

- If the fuel pressure is greater than the standard value, replace the fuel pump.
- If the fuel pressure is less than the standard value, check the connection of the fuel hose and the fuel pump.

(j) Stop the engine.

(k) Check that the fuel pressure remains as specified for 5 minutes after the engine stops.

Standard fuel pressure:

147 kPa (1.5 kgf/cm^2, 21 psi) or more

If the fuel pressure is not as specified, check the fuel pump or fuel injector.

(l) After checking the fuel pressure, carefully disconnect the negative (-) battery cable, and remove SST and fuel tube connector to prevent gasoline from splashing.

(m) Reconnect the fuel main tube (see page FU-29).

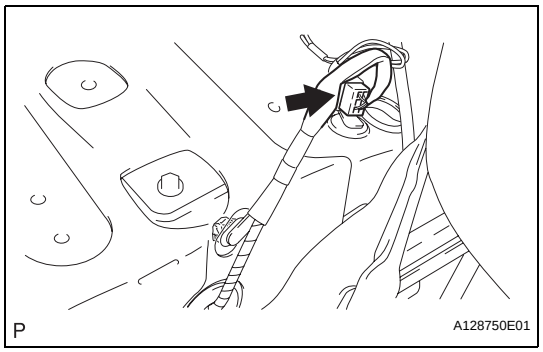
FU

(n) Check for fuel leaks.

FUEL SYSTEM

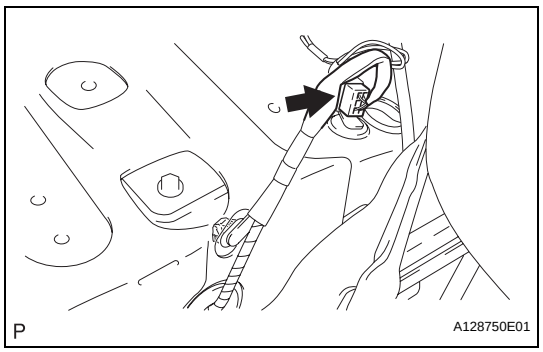
PRECAUTION

1. BEFORE WORKING ON FUEL SYSTEM



(a) Do not work near an open flame.
(b) Keep gasoline away from rubber and leather parts.
(c) Perform the "DISCHARGE FUEL SYSTEM PRESSURE" procedures below before disconnecting the fuel line to prevent gasoline from spilling out.

2. DISCHARGE FUEL SYSTEM PRESSURE

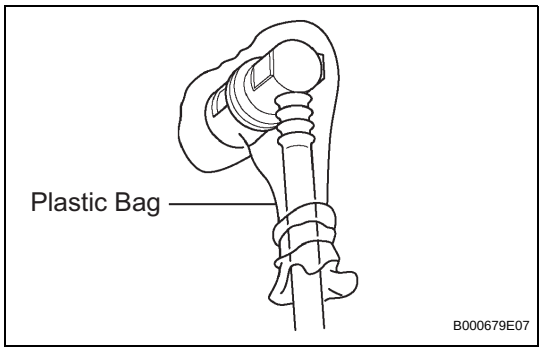


CAUTION:

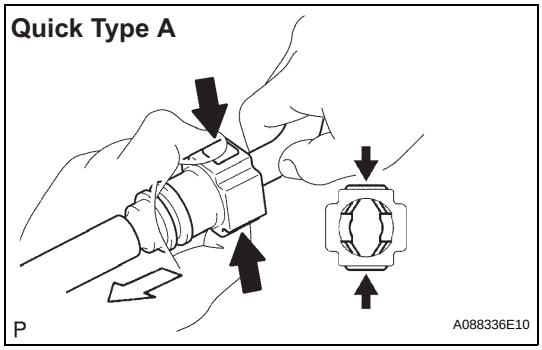
- **The "DISCHARGE FUEL SYSTEM PRESSURE" procedures must be performed before disconnecting any part of the fuel system.**
- **After performing the "DISCHARGE FUEL SYSTEM PRESSURE" procedures, pressure will remain in the fuel line. When disconnecting the fuel line, place a cloth or equivalent over fittings to reduce the risk of fuel spray.**

(a) Remove the console box (see page IP-16).

(b) Disconnect the connector.
(c) Start the engine. After the engine has stopped, turn the ignition switch OFF.
HINT:
DTC P0171/P0172 (system too lean) may be set.
(d) Check that the engine does not start.
(e) Remove the fuel tank cap, and let the air out of the fuel tank.

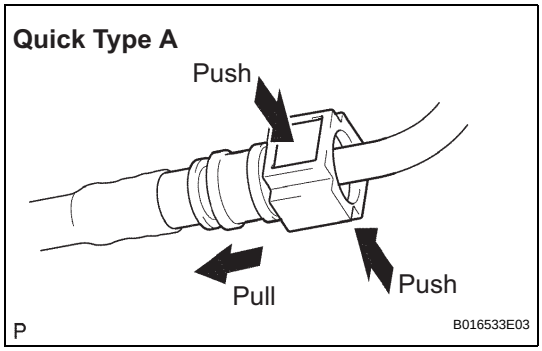


(f) Connect the connector.
(g) Install the console box (see page IP-23).

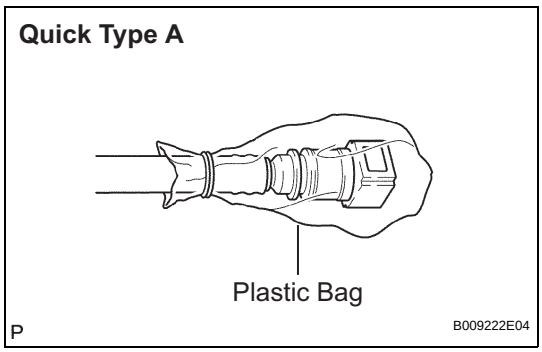


3. FUEL SYSTEM

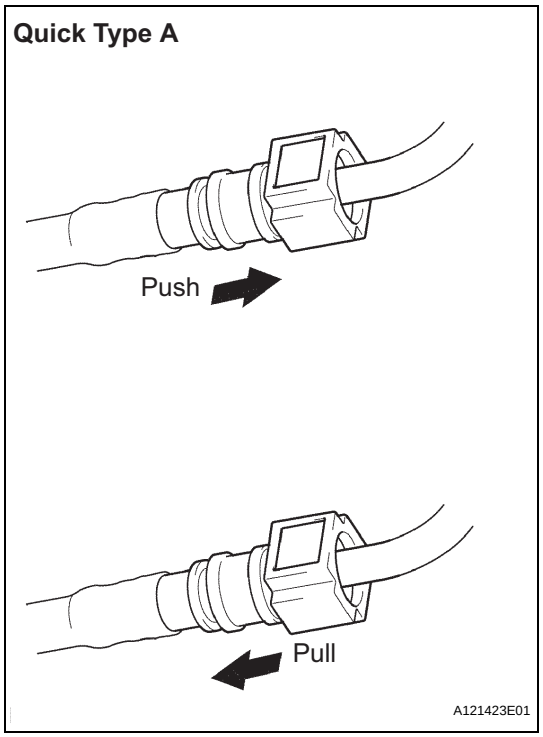
(a) When disconnecting the high fuel pressure line, a large amount of gasoline will spill out, so observe the following procedures:
(1) Discharge the fuel system pressure.
(2) Disconnect the fuel pump main tube (see page FU-22).
(3) Drain the fuel that remains inside the fuel pump main tube.



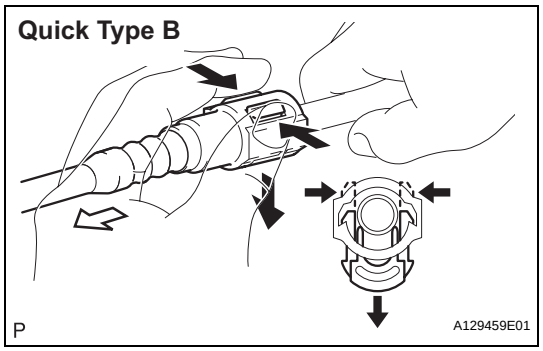
FU



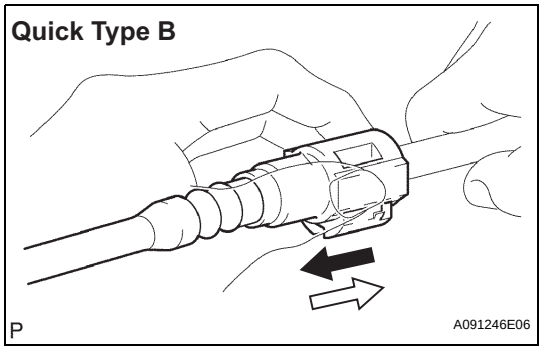
(4) To protect the disconnected fuel pump main tube from damage and contamination, cover it with a plastic bag.
(5) Put a container under the connection part.



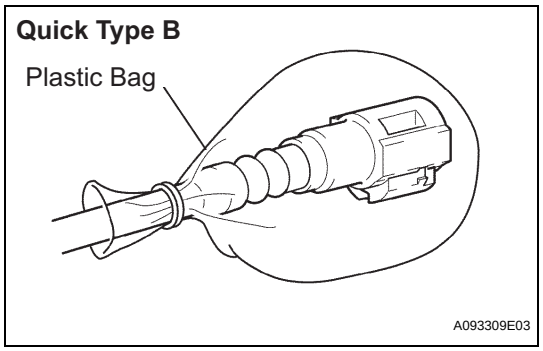
(b) Observe the following precautions when disconnecting the fuel tube connectors (quick type A):
(1) Remove the No. 1 fuel pipe clamp.



(2) Check that there is no dirt or other foreign objects on the pipe and around the connector before disconnecting them. Clean them if necessary.
(3) Disconnect the connector from the pipe by hand.
(4) When the connector and the pipe are stuck, push in and pull on the connector to release it and pull the connector out of the pipe carefully.
(5) Check that there is no dirt or other foreign objects on the sealing surface of the disconnected pipe. Clean it away if necessary.

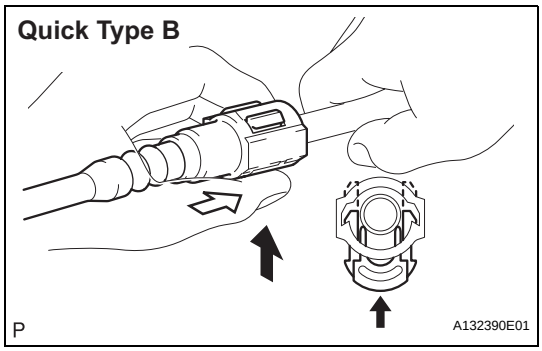


(6) Do not damage the disconnected pipe and connector, and prevent intrusion of foreign objects by covering them with a plastic bag.



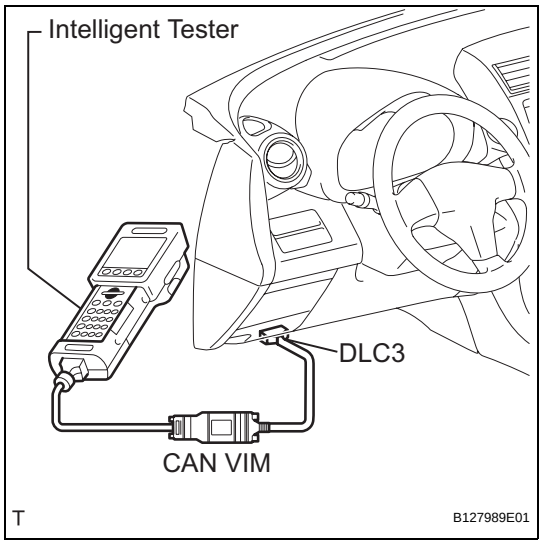
(c) Observe the following precautions when connecting the fuel tube connectors (quick type A):
(1) Check that there is no damage or foreign objects in the connected part of the pipe.
(2) Match the axis of the connector with the axis of the pipe, and push the pipe into the connector until the connector makes a "click" sound. If the connection is tight, apply a small amount of fresh engine oil to the tip of the pipe.
(3) After finishing the connection, check if the pipe and the connector are securely connected by pulling on them.
(4) Check for fuel leaks.

(d) Observe the following precautions when disconnecting the fuel tube connector (quick type B):
(1) Check that there is no dirt or other foreign objects around the connector before disconnecting the fuel pump tube.
(2) Detach the 2 claws of the connector retainer. Push down on the connector and disconnect it from the pipe.
HINT:
Be sure to disconnect the connector by hand.



(3) If the connector and pipe are stuck, pinch the fuel pipe by hand and push or pull on the connector to disconnect it.
(4) Check that there is no dirt or other foreign objects on the sealing surface of the disconnected pipe.

(5) Do not damage the connector and pipe, and prevent intrusion of foreign objects by covering them with a plastic bag.



FU

(e) Observe the following precautions when disconnecting the fuel tube connector (quick type B):
(1) Match the axis of the connector with the axis of the pipe. Push the pipe into the connector and push up on the retainer.
HINT:
If it is hard to make the connection, apply a small amount of engine oil to the tip of the pipe.
(2) After finishing the connection, pull on the connector and pipe and make sure that they are securely connected.
(3) Check for fuel leaks.

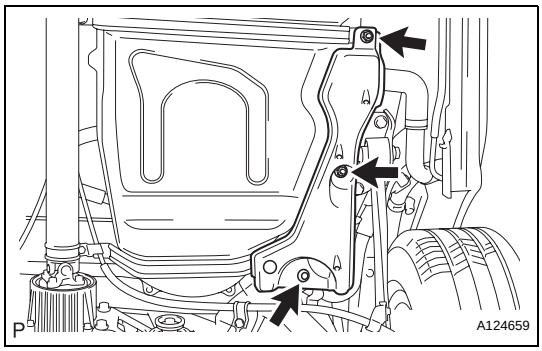
(f) Observe the following precautions when handling a nylon tube:
CAUTION:
- **Do not twist the connection part of the nylon tube and the quick connector when connecting them.**
- **Do not bend or twist the nylon tube.**
- **Do not remove the EPDM protector on the outside of the nylon tube.**
- **Do not close the piping by bending the nylon tube.**

FU

4. CHECK FOR FUEL LEAKS

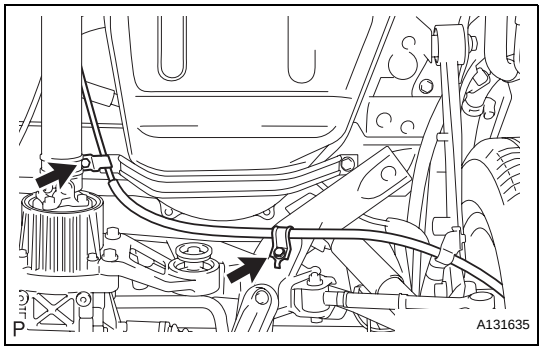
(a) Make sure that there are no fuel leaks after performing maintenance on the fuel system.
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch ON, and push the intelligent tester main switch ON.
NOTICE:
Do not start the engine.
(3) Select the Active Test mode on the intelligent tester.
(4) Check that there are no leaks from the fuel system.
(5) Turn the ignition switch OFF.
(6) Disconnect the intelligent tester from the DLC3.

REMOVAL

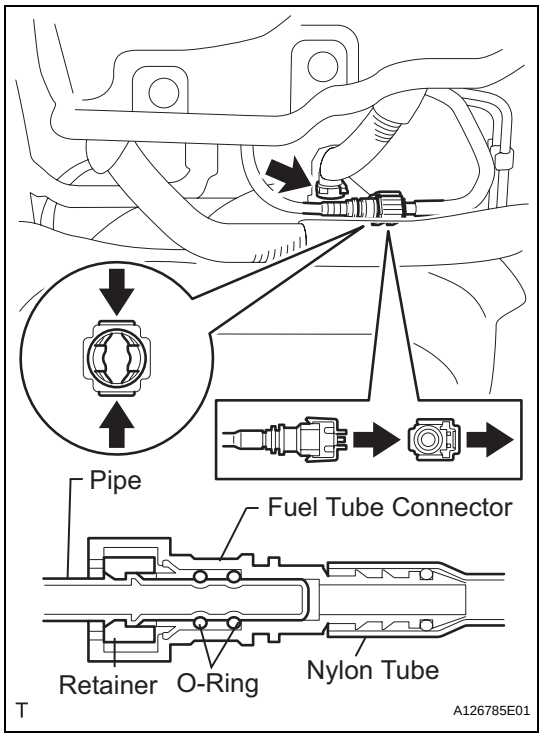


1. **DISCHARGE FUEL SYSTEM PRESSURE (See page FU-13)**

2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.



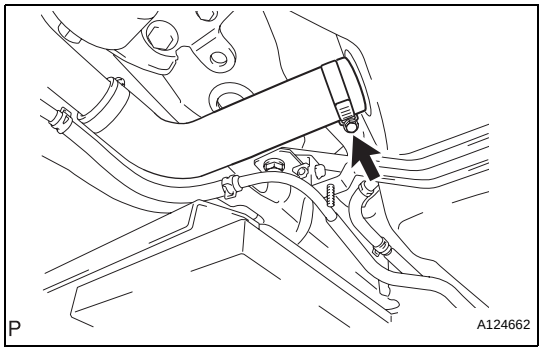
3. **REMOVE FUEL TANK CAP**



4. **REMOVE FRONT FLOOR COVER**
   (a) Remove the nut, bolt, 3 clips and floor cover.

5. **REMOVE NO. 1 FLOOR UNDER COVER**
   (a) Remove the 2 nuts, clip and floor under cover.

6. **DISCONNECT NO. 2 PARKING BRAKE CABLE ASSEMBLY**
   (a) Remove the 2 bolts and disconnect the parking brake cable.

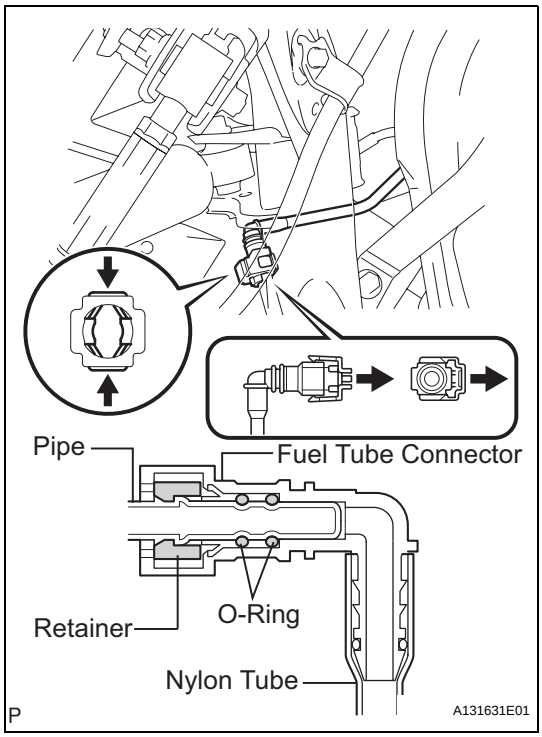


7. DISCONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY

(a) Pinch and pull the main tube connector to disconnect the connector from the pipe.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



(b) Disconnect the EVAP hose from the tank.

8. DISCONNECT FUEL TANK TO FILLER PIPE HOSE

(a) Disconnect the filler pipe hose from the fuel tank.

FU

9. DISCONNECT FUEL TANK BREATHER HOSE

(a) Disconnect the breather hose from the fuel tank.

NOTICE:

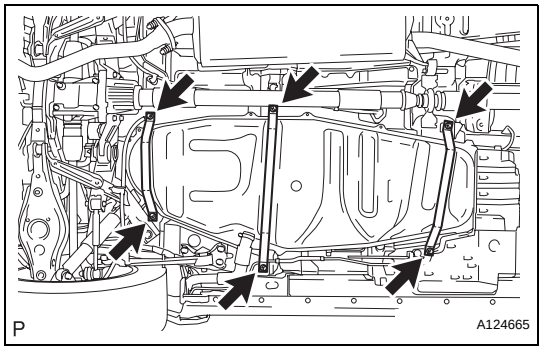
- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

10. REMOVE FUEL TANK FILLER PIPE

(a) Remove the 3 bolts and filler pipe protector.

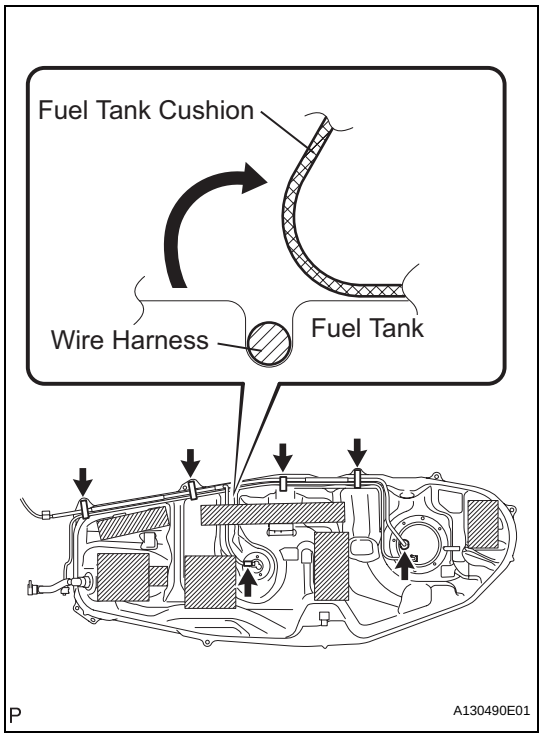
(b) Remove the 2 bolts and filler pipe.

11. REMOVE FUEL TANK ASSEMBLY



(a) Set a mission jack underneath the fuel tank.

(b) Remove the 6 bolts and 3 fuel tank bands.



(c) Slightly lower the mission jack.

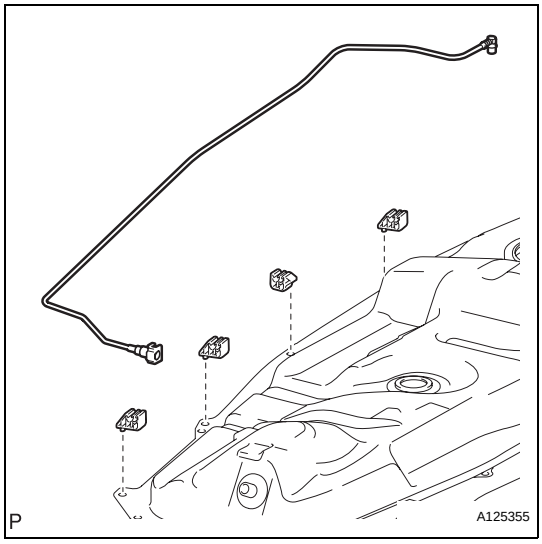
NOTICE:

Be careful not to cut the wirings.

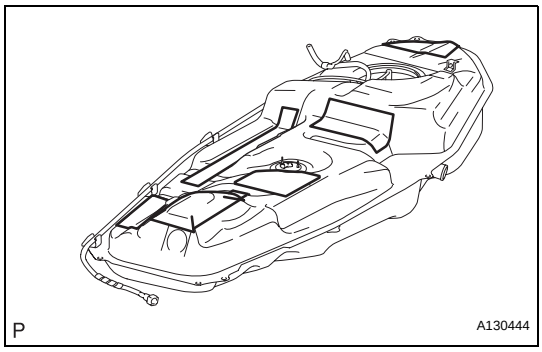
FU

(d) Fold back approximately half of each cushion rubber so that the wire harness can be detached from the fuel tank in the step below.

(e) Disconnect the fuel pump connector and sender gauge connector.

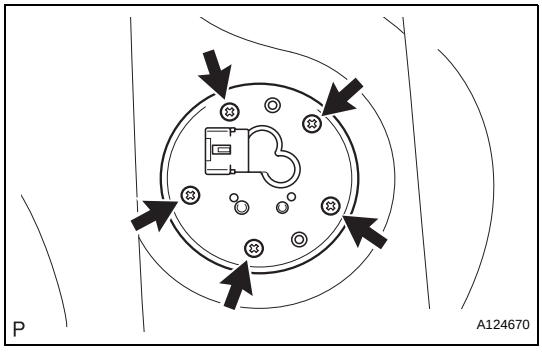


NOTICE:



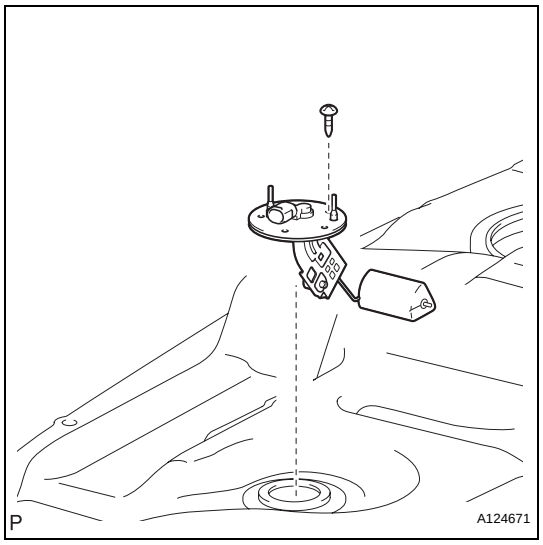
- **Before this procedure, check the connector for dirt, mud or other contamination.**
- **Do not use any tools in this procedure.**

(f) Detach the wire harness from the 4 clamps and remove the fuel tank.

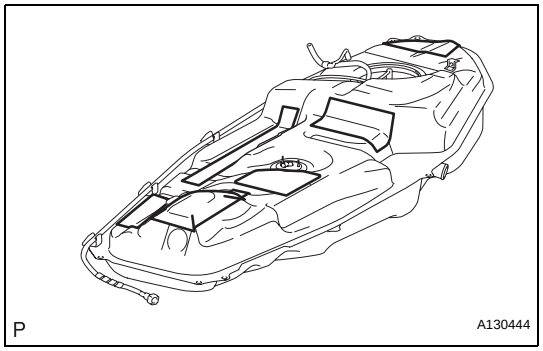


DISASSEMBLY

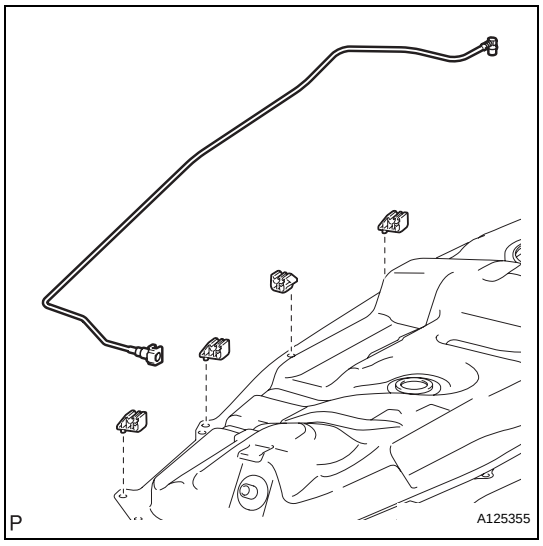
1. **DISCONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY (See page FU-22)**
2. **REMOVE FUEL TANK VENT TUBE SET PLATE (See page FU-22)**
3. **REMOVE FUEL SUCTION WITH PUMP ASSEMBLY (See page FU-22)**
4. **REMOVE FUEL TANK MAIN TUBE SUB-ASSEMBLY**
   (a) Remove the tube from the 4 fuel tube clamps.
5. **REMOVE NO. 1 FUEL TUBE CLAMP**
   (a) Remove the 4 tube clamps from the fuel tank.



6. **REMOVE NO. 1 FUEL TANK CUSHION**
   (a) Remove the 7 fuel tank cushions from the fuel tank.

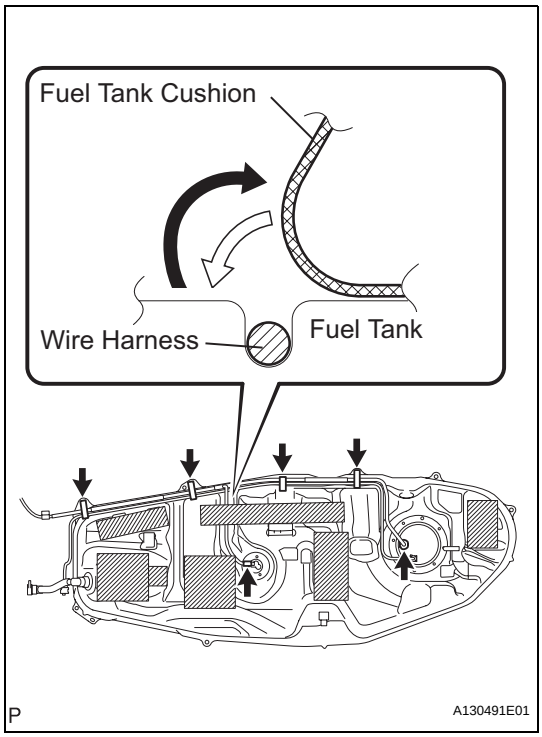


7. **REMOVE FUEL SENDER GAUGE ASSEMBLY**
   (a) Remove the 5 screws and sender gauge.



REASSEMBLY

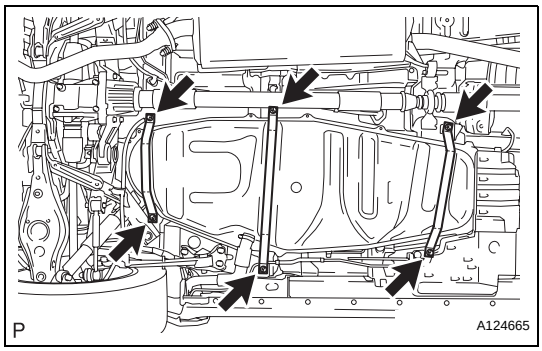
1. **INSTALL FUEL SENDER GAUGE ASSEMBLY**
   (a) Install the sender gauge with the 5 screws.
   Torque: 1.5 N*m (15 kgf*cm, 13 in.*lbf)



2. **INSTALL NO. 1 FUEL TANK CUSHION**
   (a) Install 7 new fuel tank cushions onto the fuel tank as shown in the illustration.

3. **INSTALL NO. 1 FUEL TUBE CLAMP**
   (a) Install the 4 tube clamps to the fuel tank.
4. **INSTALL FUEL TANK MAIN TUBE SUB-ASSEMBLY**
   (a) Install the tube to the 4 fuel tube clamps.
5. **INSTALL FUEL SUCTION WITH PUMP ASSEMBLY (See page FU-26)**
6. **INSTALL FUEL TANK VENT TUBE SET PLATE (See page FU-28)**
7. **CONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY (See page FU-39)**

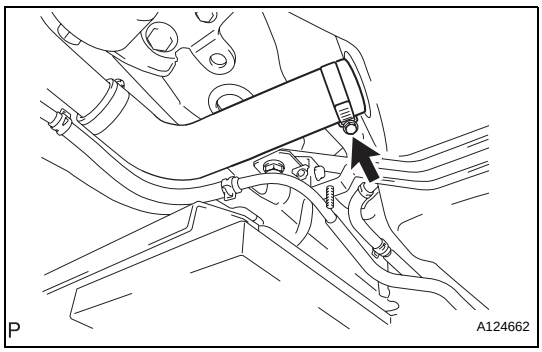
FU



INSTALLATION

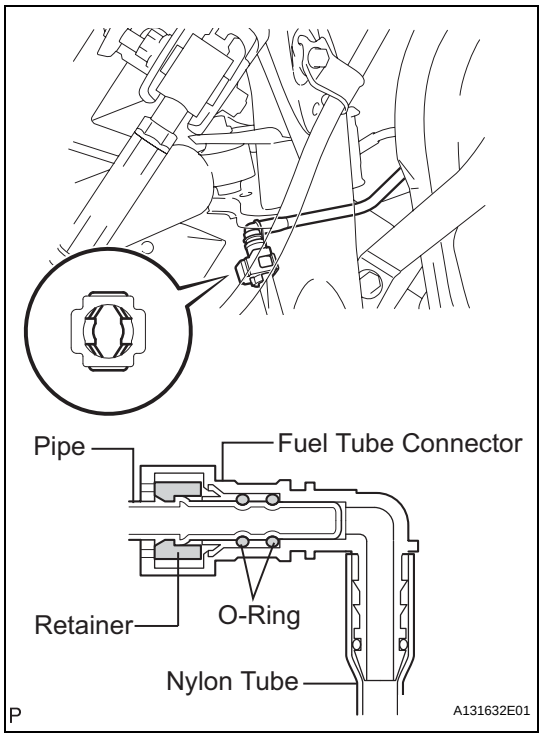
1. INSTALL FUEL TANK ASSEMBLY

(a) Set the fuel tank on a mission jack.
(b) Raise the mission jack.
(c) Fold back the 2 cushion rubbers.
(d) Connect the fuel pump connector and sender gauge connector to the fuel tank.
NOTICE:
Be careful not to cut the wirings.
(e) Attach the wire harness to the 4 clamps.



FU

(f) Install the 3 fuel tank bands with the 6 bolts.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)



2. INSTALL FUEL TANK FILLER PIPE

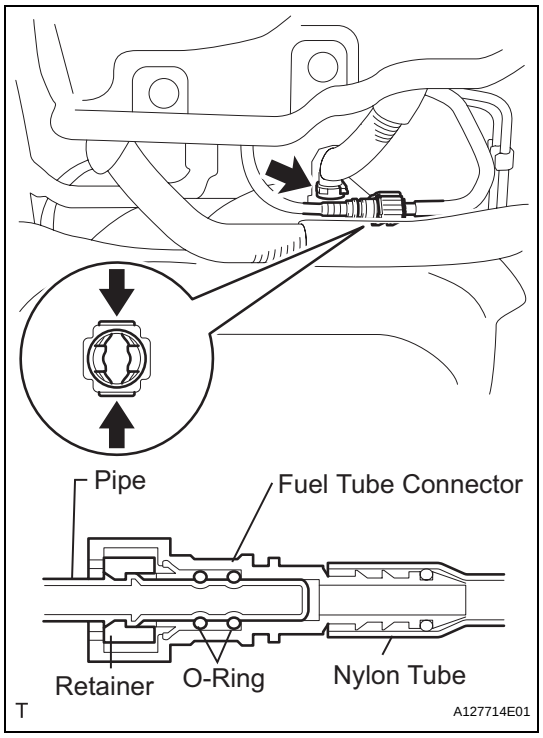
(a) Install the filler pipe with the 2 bolts.
Torque: 23.5 N*m (240 kgf*cm, 17 ft.*lbf)
(b) Install the filler pipe protector with the 3 bolts.

3. CONNECT FUEL TANK TO FILLER PIPE HOSE

(a) Connect the filler pipe hose to the fuel tank.

4. CONNECT FUEL TANK BREATHER HOSE

(a) Connect the fuel tank breather hose to the fuel tank.



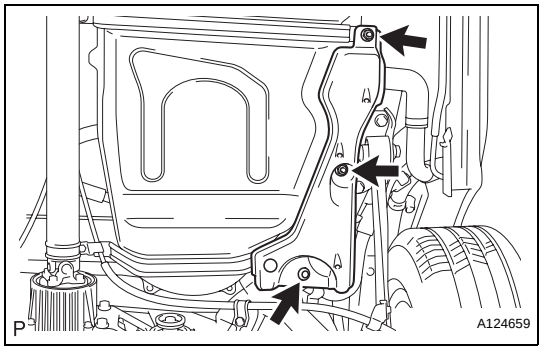
NOTICE:

- **Before installing the tube connector to the pipe, check the connector for damage and foreign matter.**
- **Check that the connector and pipe are securely connected by trying to pull them apart.**

5. CONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY

NOTICE:

Before installing the tube connector to the pipe, check the connector for damage and foreign matter.

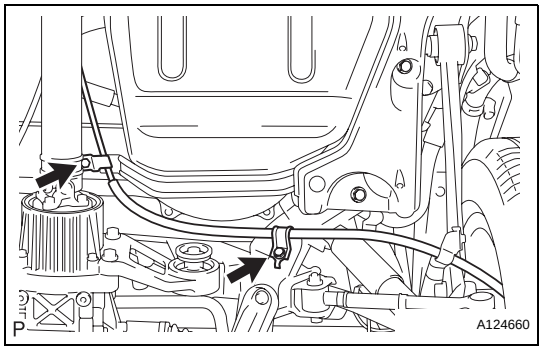


(a) Connect the main tube connector to the pipe. Push the 2 parts together firmly until a "click" sound is heard.

NOTICE:

Check that the connector and pipe are securely connected by trying to pull them apart.

(b) Connect the EVAP hose to the fuel tank.



6. INSTALL NO. 1 FLOOR UNDER COVER

(a) Install the floor cover with the clip and 2 nuts.

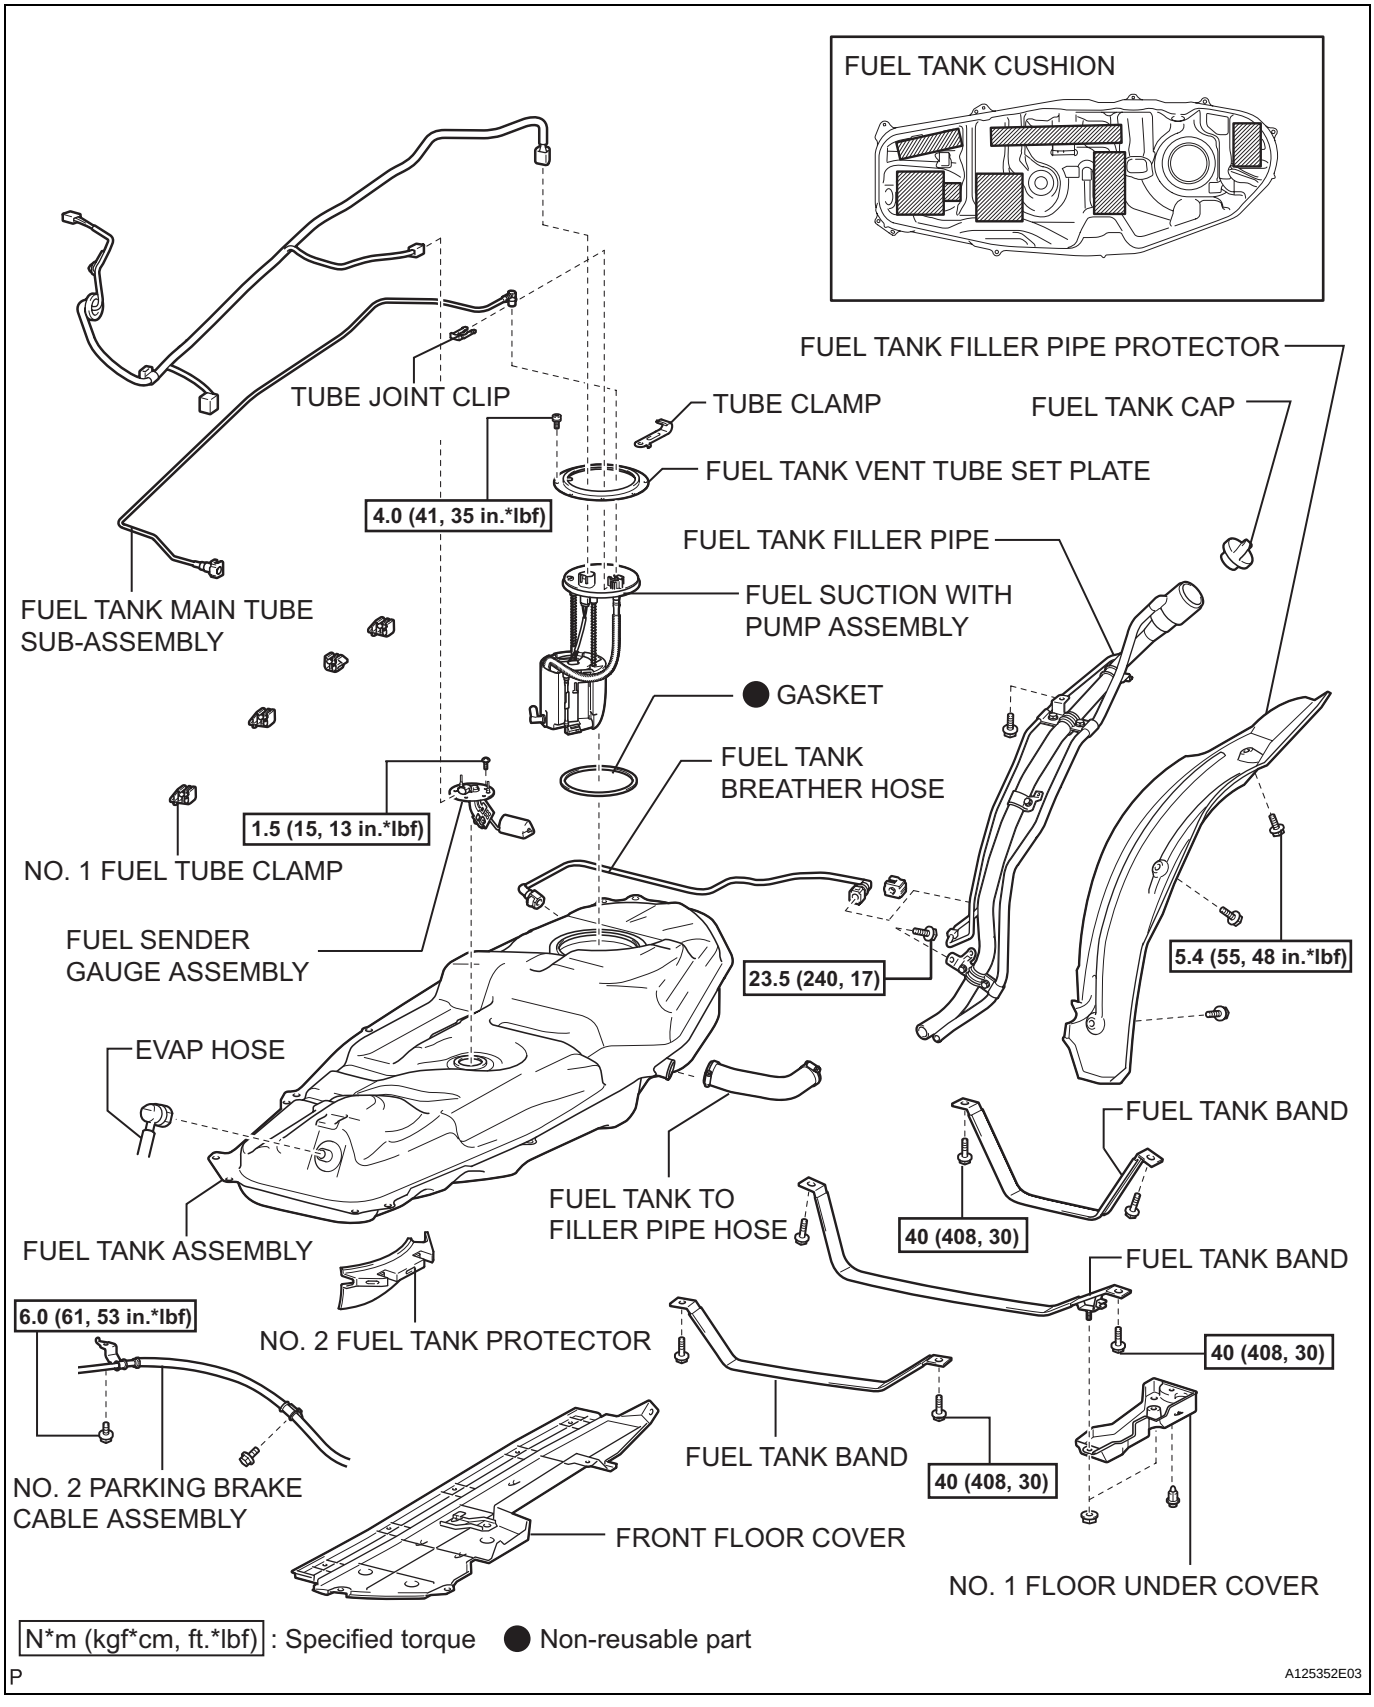
7. INSTALL FRONT FLOOR COVER

(a) Install the floor under cover with the 3 clips, bolt and nut.

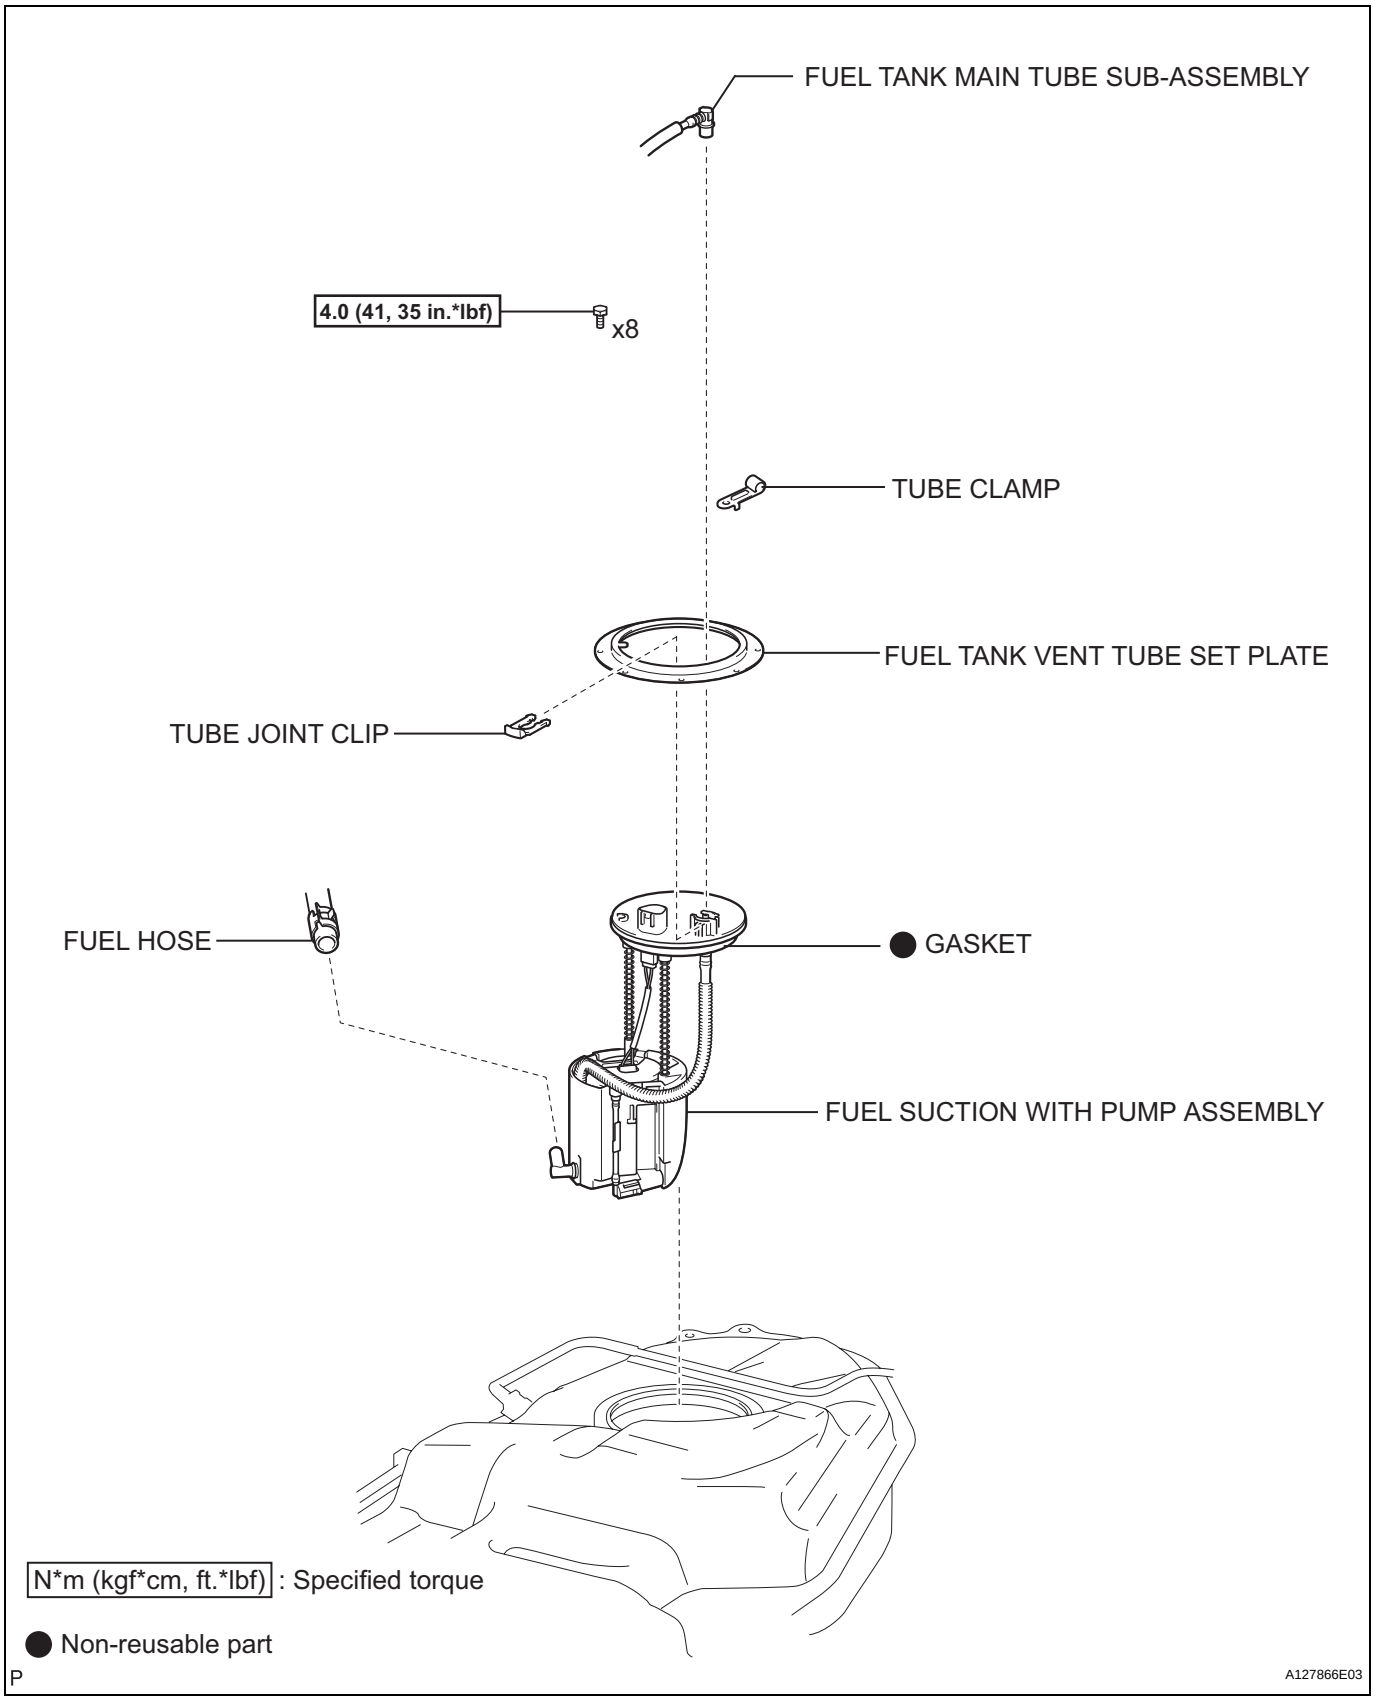
FU

8. INSTALL NO. 2 PARKING BRAKE CABLE ASSEMBLY

(a) Install the parking brake cable with the 2 bolts.



9. INSTALL FUEL TANK CAP



10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

11. CHECK FOR FUEL LEAKS

ON-VEHICLE INSPECTION

1. **CHECK IGNITION COIL ASSEMBLY AND PERFORM SPARK TEST**

NOTICE:

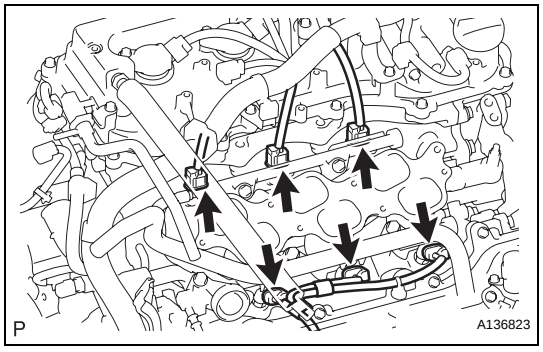
In this section, the terms "Cold" and "Hot" refer to the temperature of the sensor. "Cold" means approximately -10 to 50°C (14 to 122°F). "Hot" means approximately 50 to 100°C (122 to 212°F).

(a) Check the DTCs.

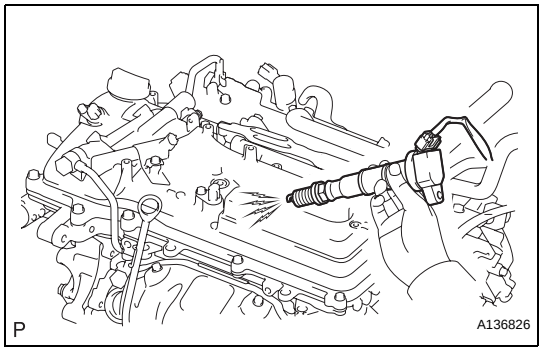
NOTICE:

If a DTC is present, perform troubleshooting in accordance with the procedure for that DTC.

(b) Check that sparks occur.



(1) Remove the V-bank cover.



(2) Remove the intake air surge tank (see page EM-27).

(3) Remove the bolt and ignition coil.

(4) Using a 16 mm spark plug wrench, remove the spark plug.

(5) Disconnect the 6 fuel injector connectors.

(6) Install the spark plug into the ignition coil, and then connect the ignition coil connectors.

(7) Ground the spark plug.

(8) Check that sparks occur at the spark plug while the engine is being cranked.

NOTICE:

- **Be sure to ground the spark plugs when checking them.**
- **If the ignition coil has been struck or dropped, replace it.**
- **Do not crank the engine for more than 2 seconds.**

If sparks do not occur, perform troubleshooting using the spark test flowchart.

(9) Using a 16 mm plug wrench, install the spark plug.

Torque: 25 N*m (254 kgf*cm, 18 ft.*lbf)

(10) Install the ignition coil with the bolt.

Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

(11) Connect the 6 fuel injector connectors.

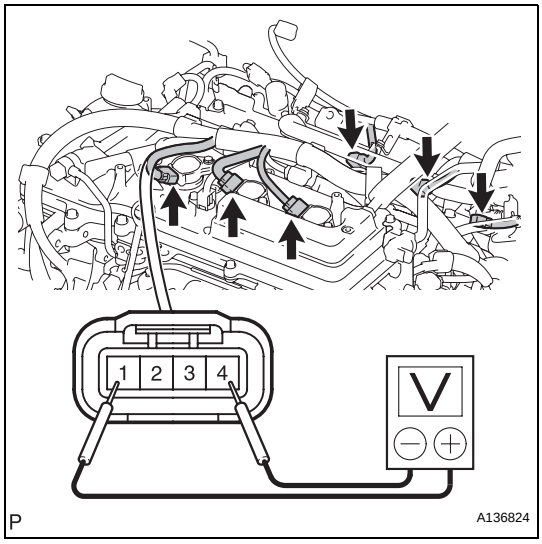
(12) Install the intake air surge tank (see page EM-34).

(13) Install the V-bank cover.

(c) Perform troubleshooting using the spark test flowchart.

(1) Check that the ignition coil connector is securely connected.

Result



Result	Proceed to
NG	Connect securely
OK	Go to next step

(2) Perform the spark test on each ignition coil.

1. Replace the ignition coil with a normal one.
2. Perform the spark test again.

Result

Result	Proceed to
OK	Replace ignition coil
NG	Go to next step

(3) Check the power supply to the ignition coil.

1. Disconnect the ignition coil connector.
2. Turn the ignition switch ON.
3. Measure the voltage of the wire harness side connector.

Standard voltage

Tester Connection	Specified Condition
1 (+B) - 4 (GND)	9 to 14 V

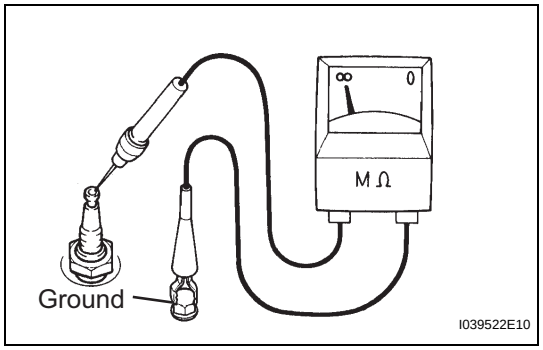
Result

Result	Proceed to
NG	Check wire harness and connector
OK	Go to next step

(4) Check the resistance of the crankshaft position sensor.

Standard resistance

Temperature Condition	Specified Condition
Cold	1,630 to 2,740 Ω
Hot	2,065 to 3,225 Ω



Result

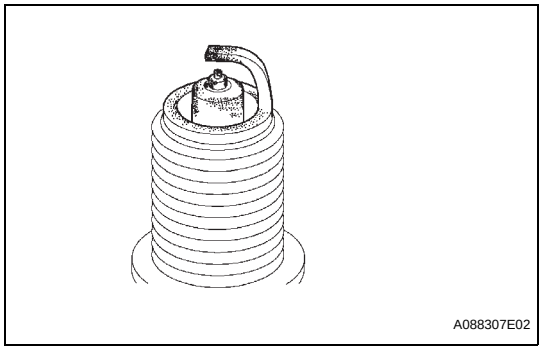
Result	Proceed to
NG	Replace crankshaft position sensor
OK	Go to next step

(5) Check the IGT signal from the ECM.

Result

Result	Proceed to
NG	Check ECM (see page ES-220)
OK	Repair wiring between ignition coil and ECM

2. CHECK SPARK PLUG



(a) Check the electrode with megohmmeter:

(1) Using a megohmmeter, measure the insulation resistance.

Standard insulation resistance:

10 MΩ or more

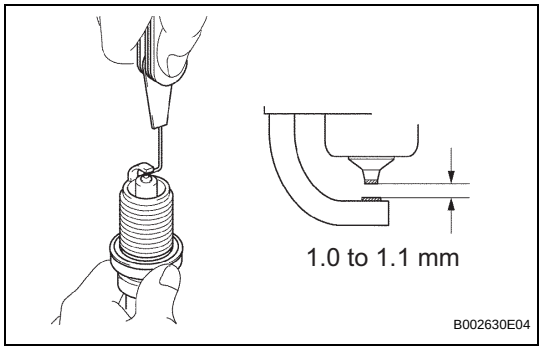
If the result is 10 MΩ or less, clean the plug and measure the resistance again.

(b) Check the electrode without megohmmeter:

(1) Quickly accelerate the engine to 4,000 rpm 5 times.

(2) Remove the spark plug.

(3) Visually check the spark plug.



If the electrode is dry, the spark plug is functioning properly. If the electrode is damp, proceed to the next step.

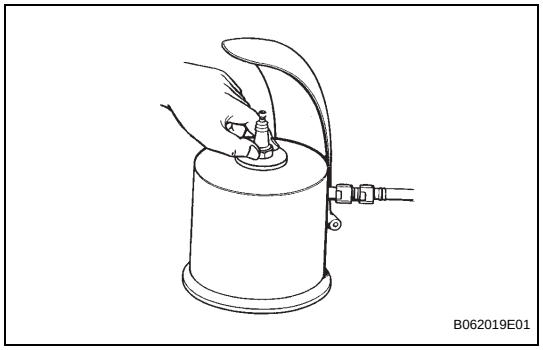
(c) Check the spark plug for any damage on its thread and insulator.

If there is damage, replace the spark plug.

Recommended spark plug

Manufacturer	Spark plug type
DENSO	FK20HR11

(d) Check the spark plug electrode gap.



Maximum electrode gap for used spark plug:

1.4 mm (0.055 in.)

If the gap is greater than the maximum, replace the spark plug.

Electrode gap for new spark plug:

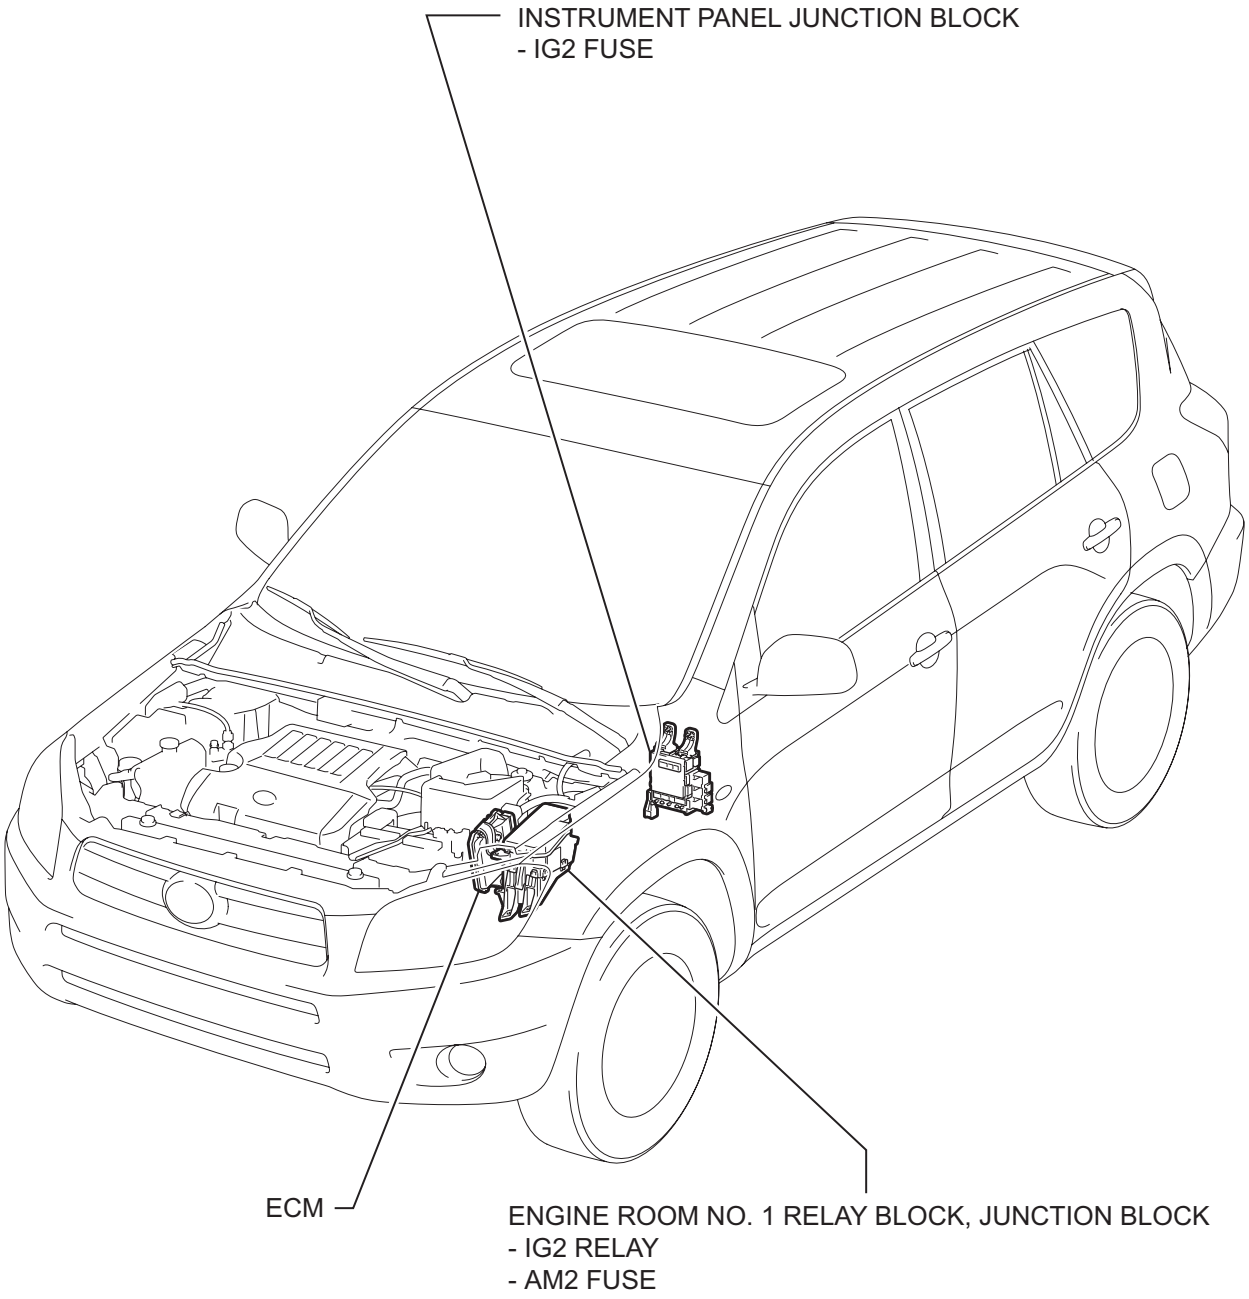
1.0 to 1.1 mm (0.039 to 0.043 in.)

If the electrode has traces of wet carbon, clean the electrode with a spark plug cleaner and then dry it.

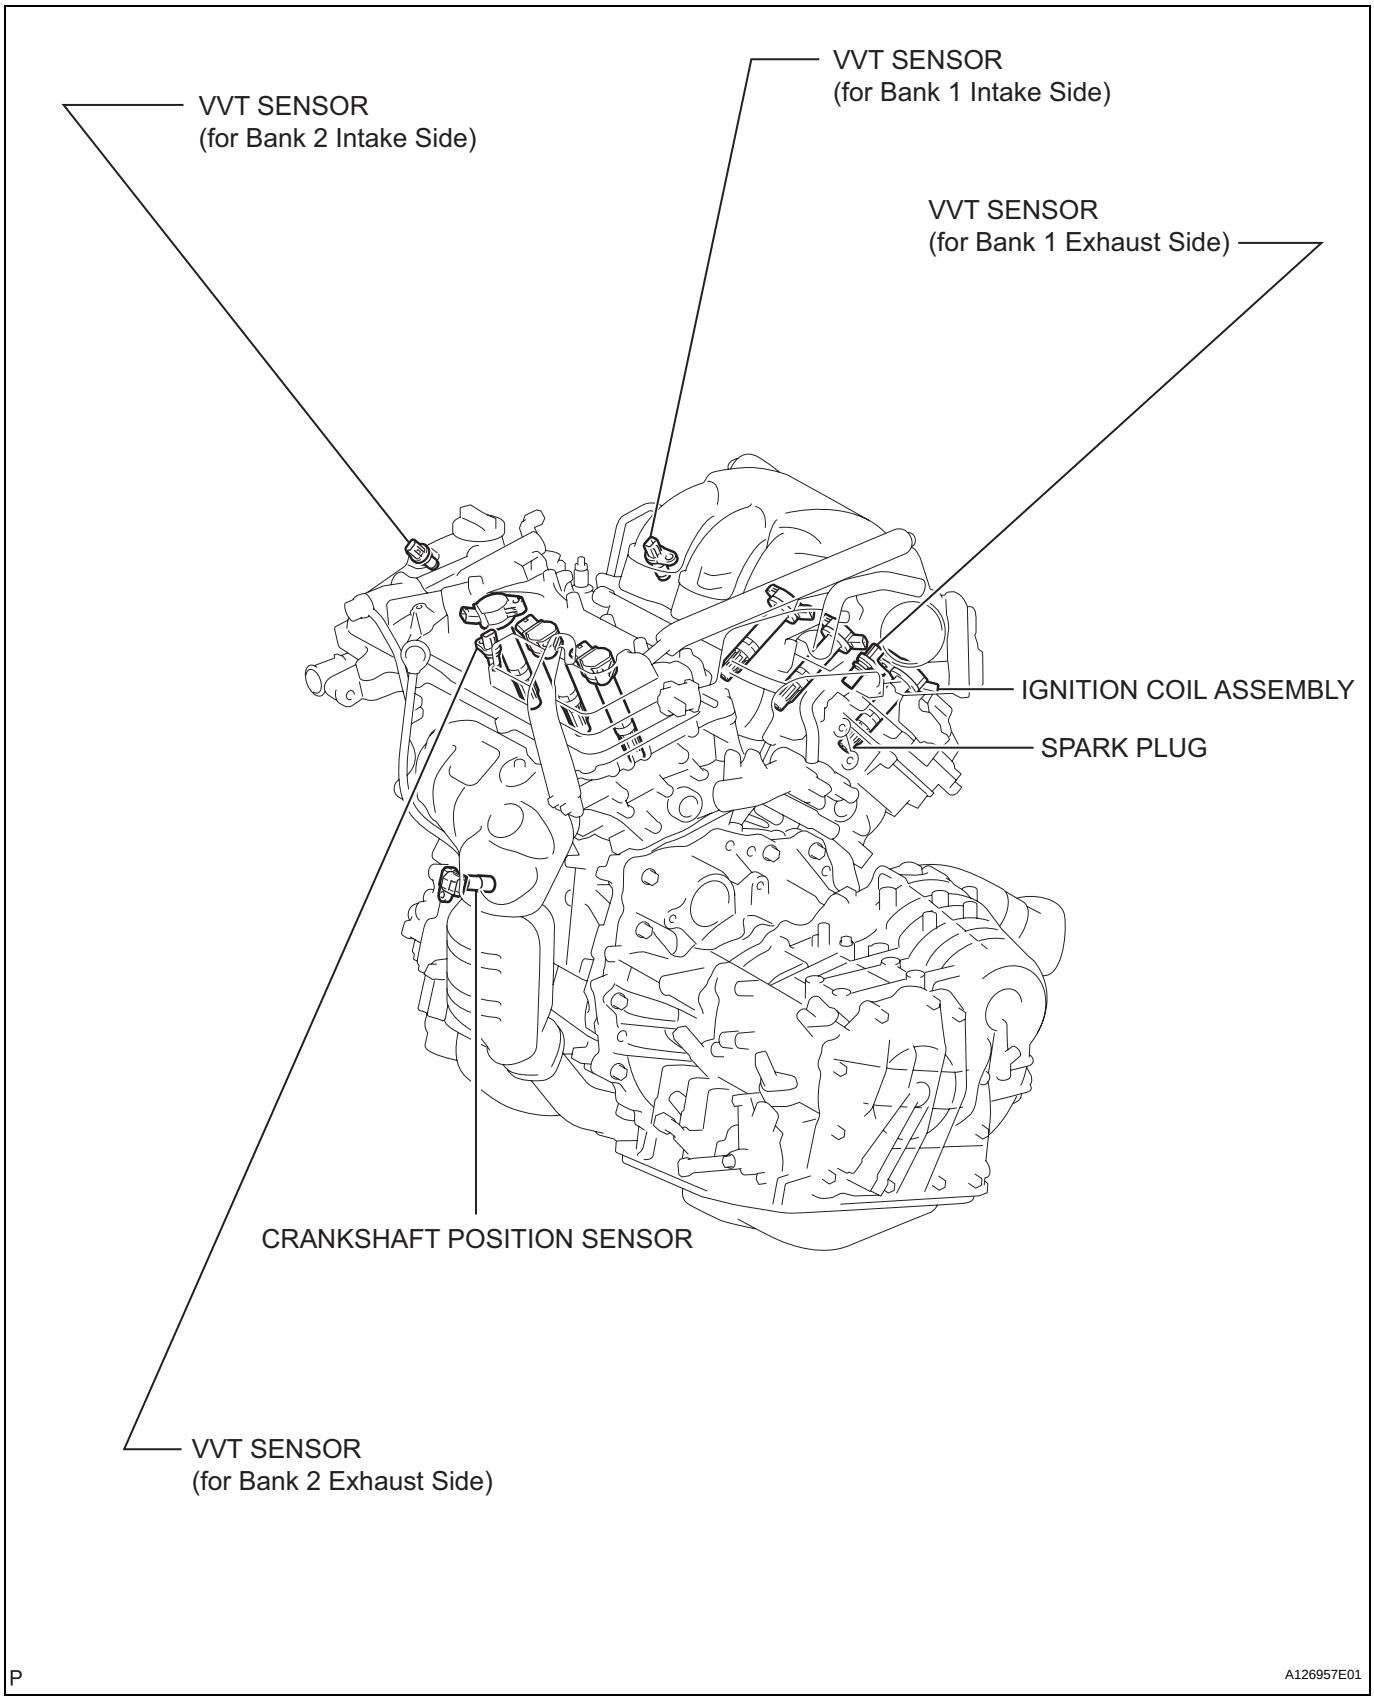
Standard air pressure:

588 kPa (6 kgf/cm^2, 85 psi)

Standard duration:



20 seconds or less



HINT:

Only use the spark plug cleaner when the electrode is free of oil. If the electrode has traces of oil, use gasoline to clean off the oil before using the spark plug cleaner.

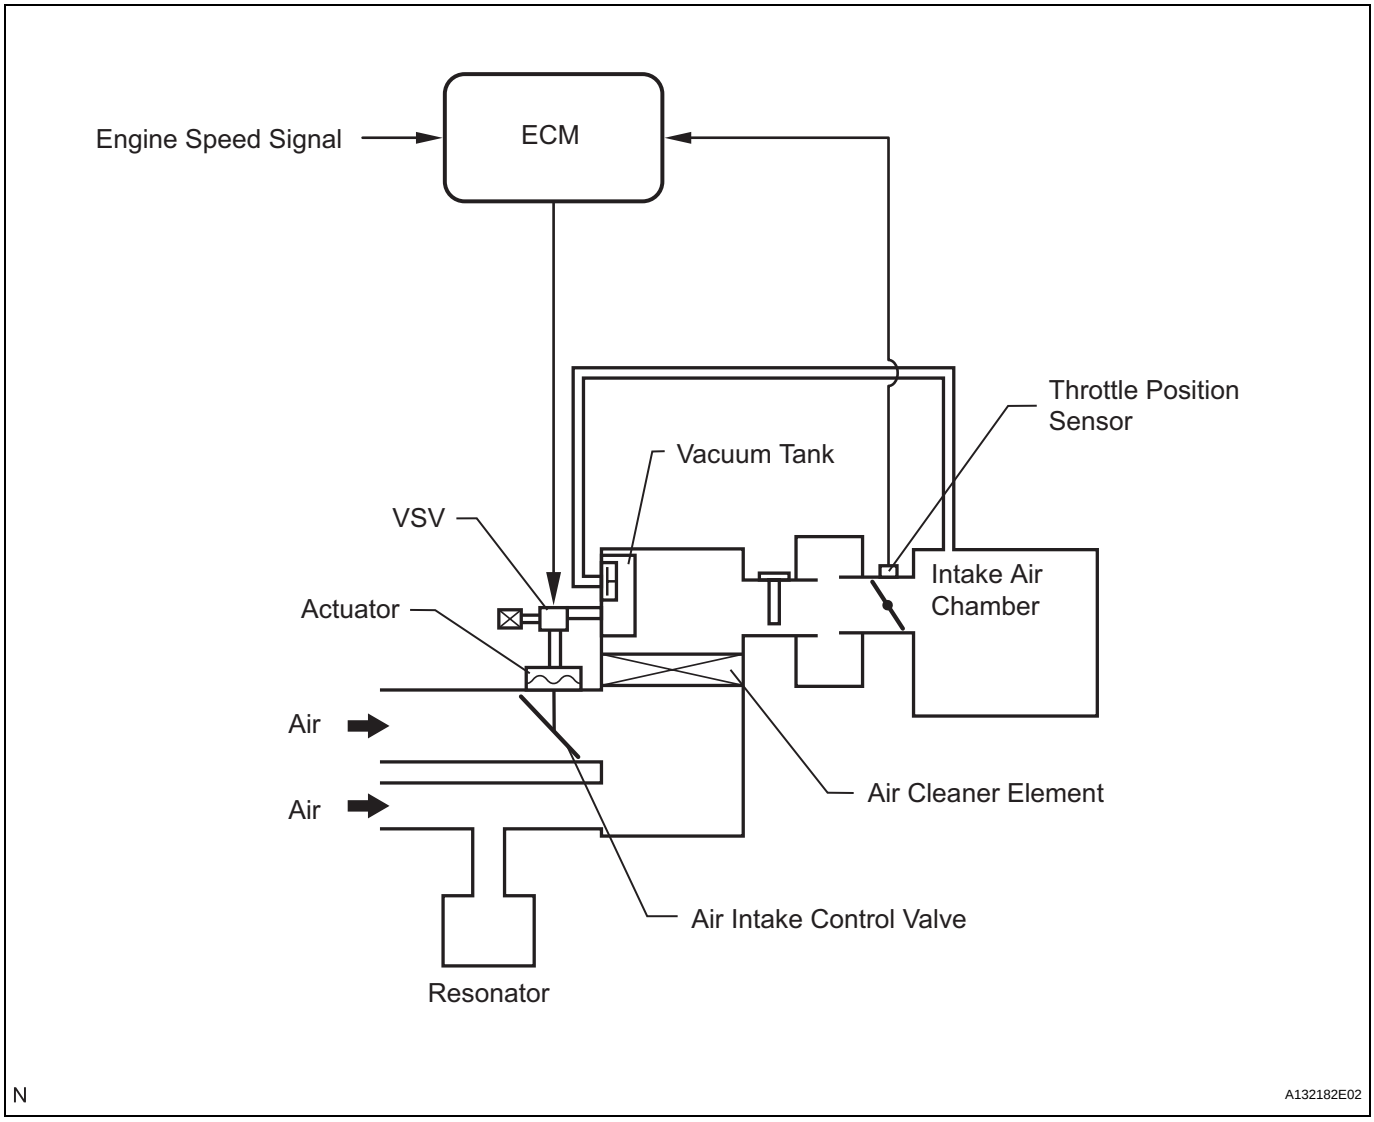
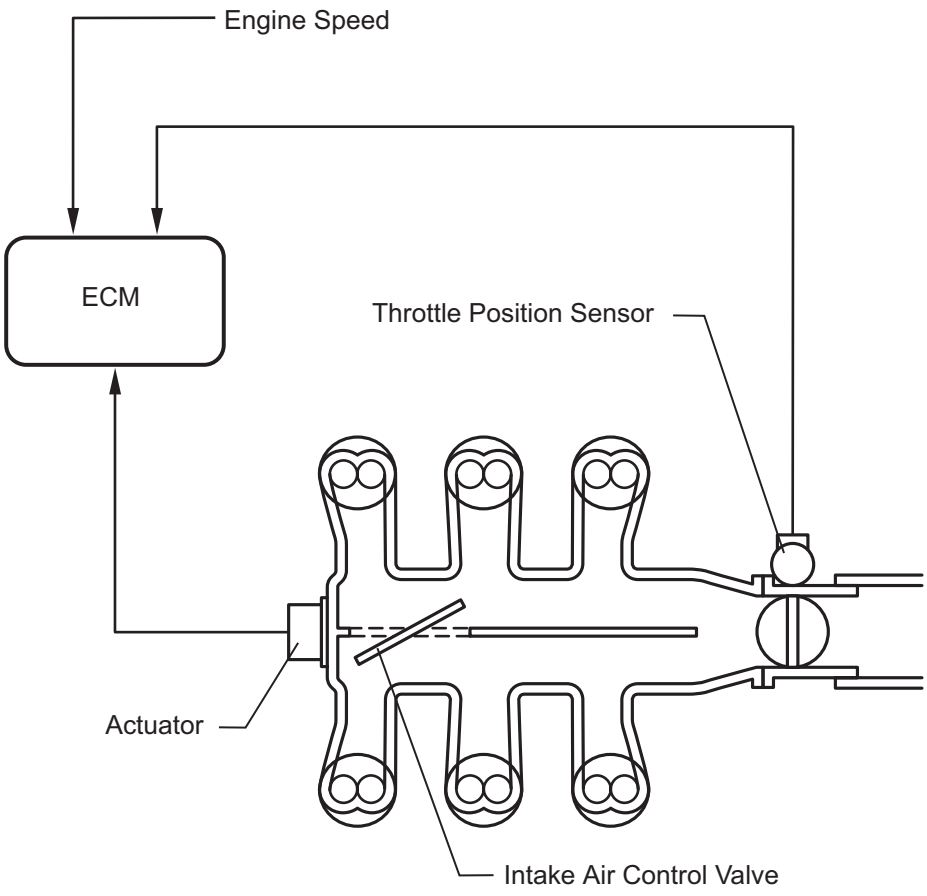
INTAKE SYSTEM



PARTS LOCATION

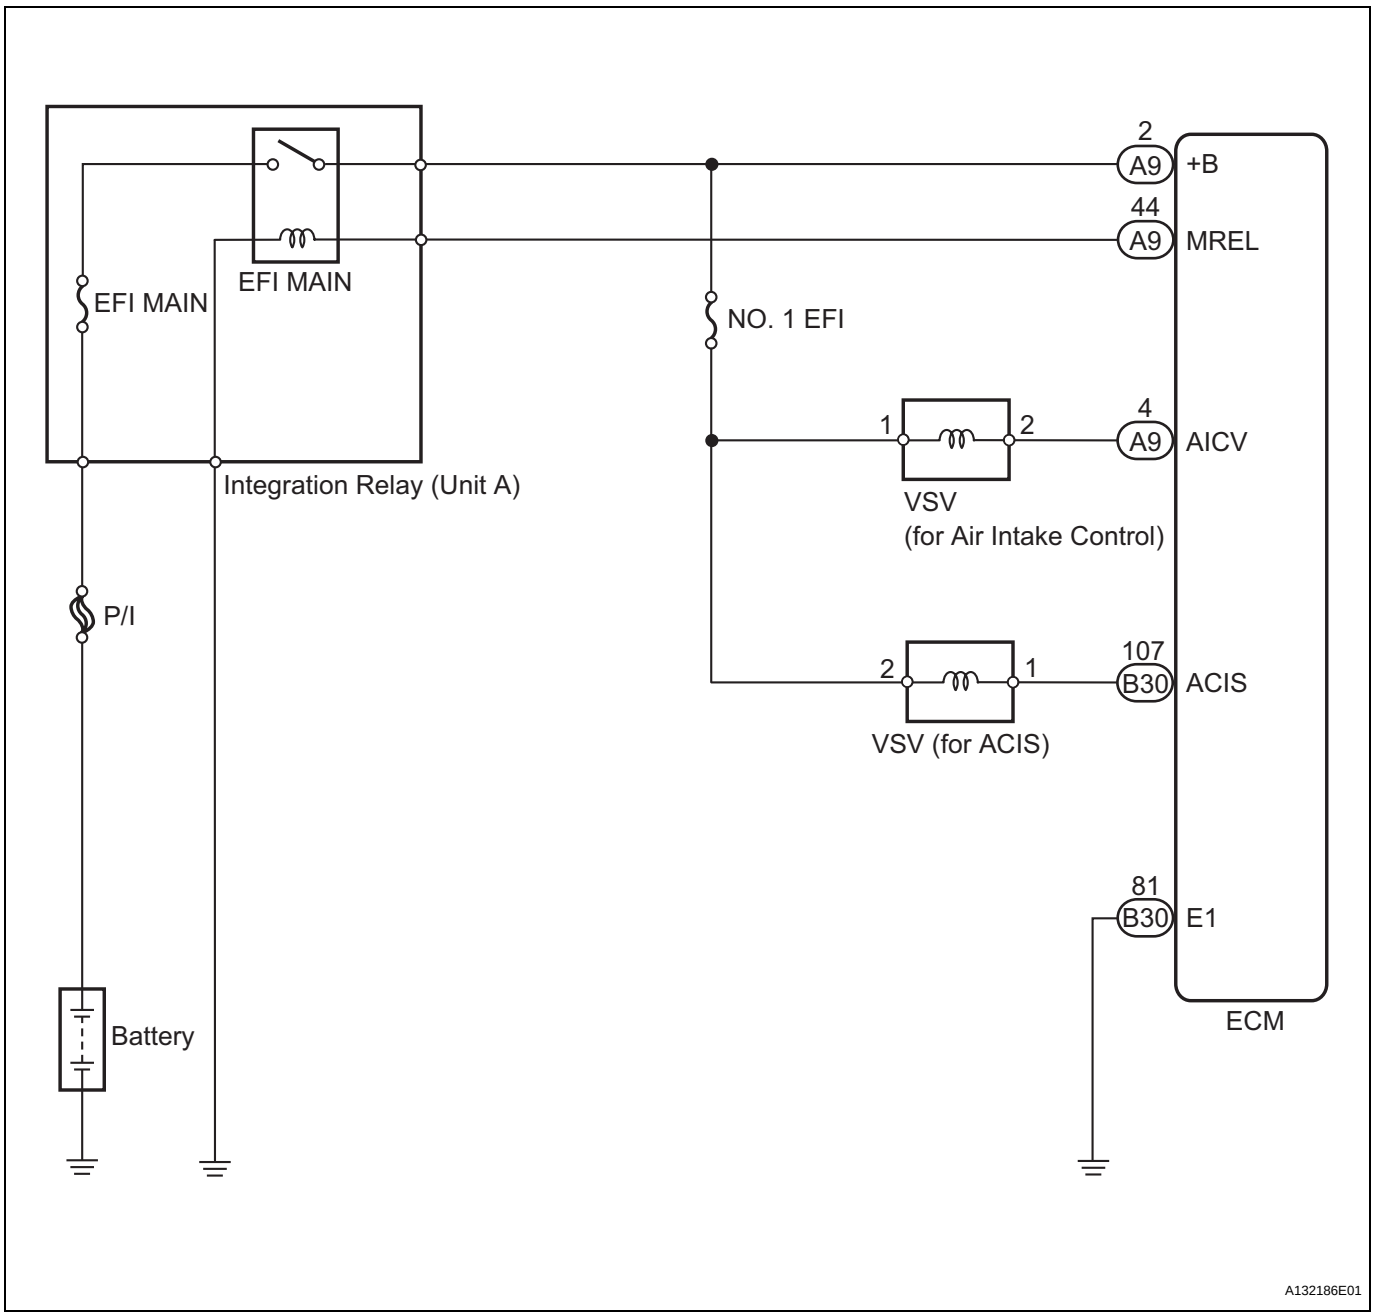
SYSTEM DIAGRAM

1. AIR INTAKE CONTROL SYSTEM DIAGRAM



- The system has a dual path design for air intake. An air intake control valve and actuator control the air flow path.
- When the engine is operating in the low to medium speed range, this control operates the air intake control valve to close one side of the air cleaner inlet.
- When the engine is operating in the high speed range, this control operates the air intake control valve to open both sides of the air cleaner inlet.

2. ACOUSTIC CONTROL INDUCTION SYSTEM DIAGRAM

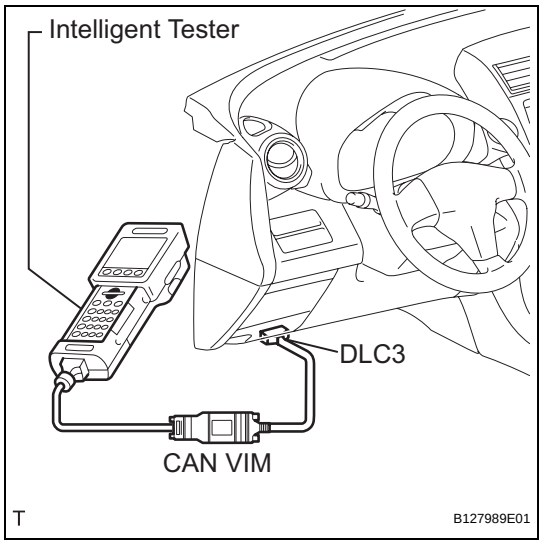


- The ACIS is realized by using a bulkhead to divide the intake manifold into 2 stages, with an intake air control valve in the bulkhead being opened and closed to vary the effective length of the intake manifold in accordance with the engine speed and throttle valve opening angle. This increases the power output in all ranges from low to high speed.

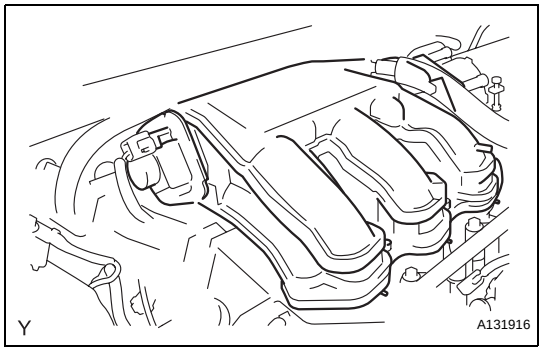
- When the intake control valve closes:
  While the engine is running at medium speed under high load, the ECM controls the actuator to close the control valve. As a result, the effective length of the intake manifold is lengthened and the intake efficiency, in the medium speed range, is improved due to the dynamic effect of the intake air, thereby increasing power output.
- When the intake control valve opens:
  Under any condition except when the engine is running at medium speed under high load, the ECM controls the actuator to open the control valve. When the control valve is open, the effective length of the intake air chamber is shortened and peak intake efficiency is shifted to the low to high engine speed range, thus providing greater output at low to high engine speeds.

N A132183E02

3. INTAKE SYSTEM WIRING DIAGRAM



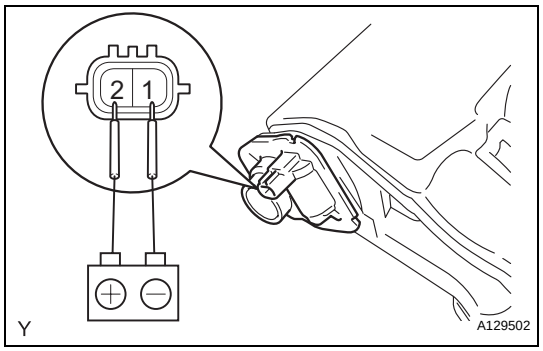
ON-VEHICLE INSPECTION



1. INSPECT INTAKE AIR CONTROL VALVE ASSEMBLY

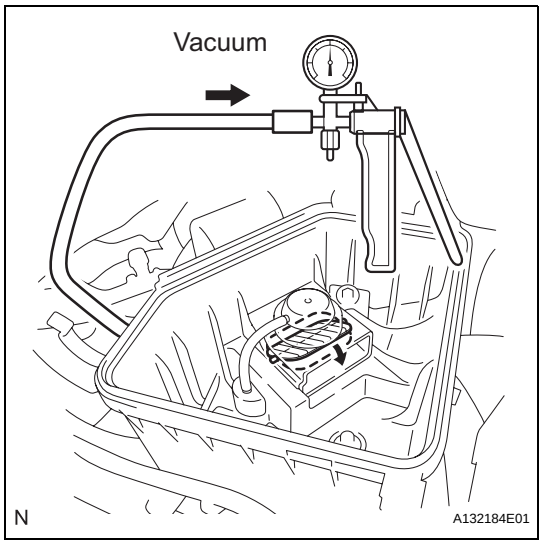
(a) Inspection procedure when using the intelligent tester.

(1) Warm up the engine.
(2) Stop the engine.
(3) Connect the intelligent tester to the DLC3.
(4) Turn the ignition switch ON.
(5) Turn the tester ON.
(6) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / INTAKE CONTROL VSV1. Press the right or left button.



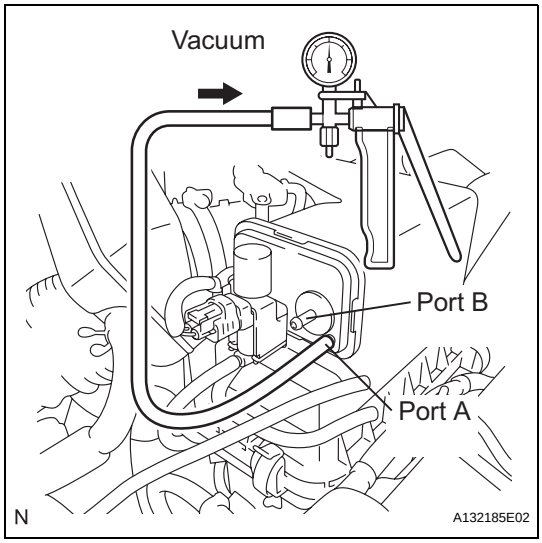
(7) Make sure that a clicking sound is heard from the intake air control valve when current flows. If the result is not as specified, replace the intake air surge tank.

(b) Inspection procedure when applying voltage between the terminals.



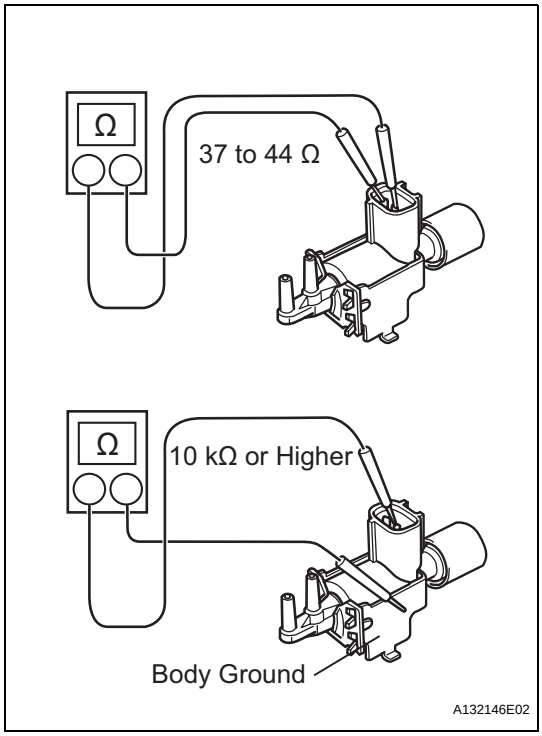
(1) Disconnect the connector from the intake air control valve.
(2) Apply battery voltage between terminals 1 (-) and 2 (+) of the intake air control valve. Check that a clicking sound is heard from the intake air control valve.
If the result is not as specified, replace the intake air surge tank.

2. INSPECT VACUUM SWITCHING VALVE



(a) Perform the Active Test to operate the VSV (see page ES-426).

IT

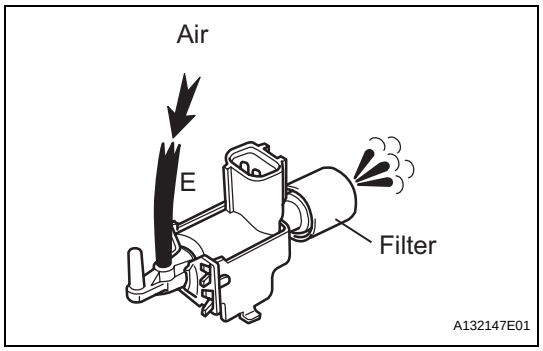


3. INSPECT AIR CLEANER ASSEMBLY

(a) Inspect the actuator.
  (1) Apply 80 kPa (600 mmHg, 23.6 in. Hg) of vacuum to the actuator. Check if the valve rotates open, as shown in the illustration.
  (2) Apply the vacuum for 1 minute. The actuator should continue to keep the valve open.
  If the result is not as specified, replace the air cleaner case assembly.

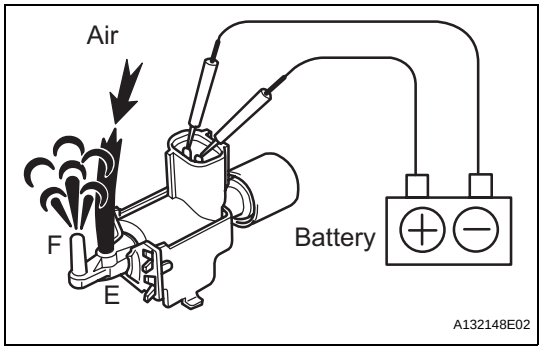
(b) Inspect the vacuum tank.
  (1) Connect the vacuum pump to port A.
  (2) Apply a vacuum of 66.7 kPa (500 mmHg, 20 in. Hg) to the vacuum tank.
  (3) 1 minute after applying the vacuum, check that the pressure does not change.

(c) Check that there is no ventilation when pressure is applied to port B, and that there is ventilation when a vacuum is applied to port B.
  If the result is not as specified, replace the air cleaner cap assembly.



4. INSPECT VACUUM SWITCHING VALVE

(a) Check the resistance of the VSV.
  Standard resistance



Tester Connection	Specified Condition
1 - 2	37 to 44 Ω at 20°C (68°F)
1 - Body ground 2 - Body ground	10 kΩ or higher

If the result is not as specified, replace the VSV.

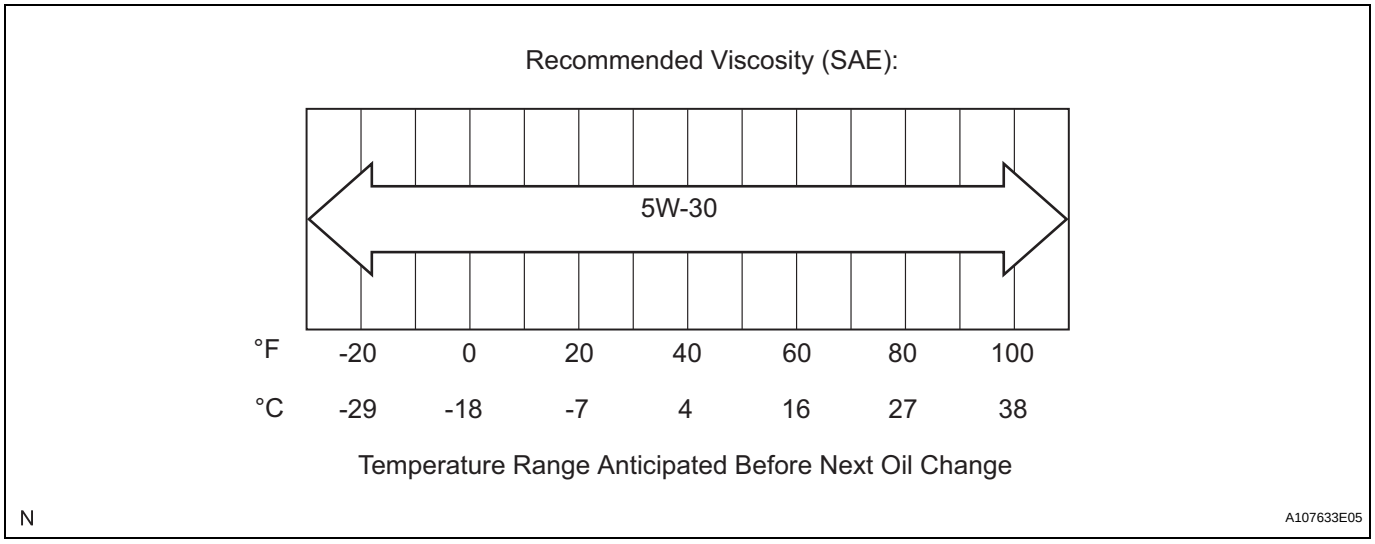
IT

(b) Check VSV operation.
(1) Check that air flows from port E to the filter.

(2) Apply battery voltage across the terminals.
Check that air flows from port E to port F.
If the result is not as specified, replace the VSV.

LUBRICATION SYSTEM

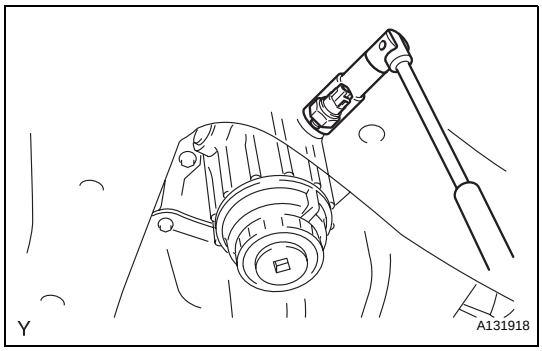
ON-VEHICLE INSPECTION



1. CHECK ENGINE OIL LEVEL

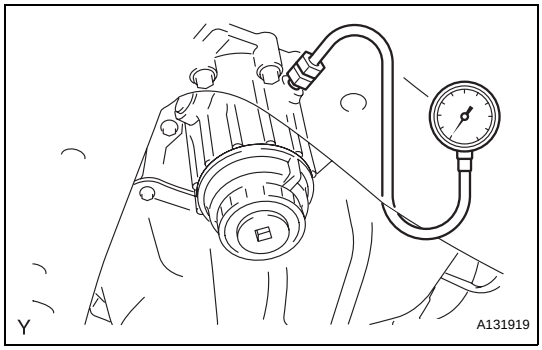
(a) Warm up the engine, stop the engine and wait for 5 minutes. The oil level should be between the dipstick's low and full level marks.
If the oil level is low, check for leakage and add oil up to the full level mark.
NOTICE:
Do not fill engine oil above the full level mark.

2. CHECK ENGINE OIL QUALITY



(a) Check the oil for deterioration, water contamination, discoloring or thinning.
If the quality is visibly poor, replace the oil.
HINT:
- TOYOTA Genuine Motor Oil is in this vehicle when it is shipped.
- Use TOYOTA approved TOYOTA Genuine Motor Oil or equivalent to satisfy the following grade and viscosity.

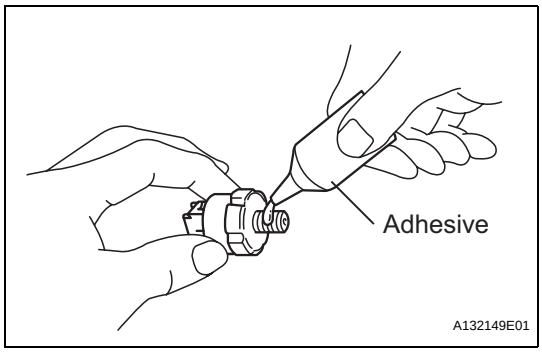
Oil grade:
ILSAC multigrade engine oil is recommended. SAE 5W-30 is the best choice for good fuel economy and good starting in cold weather.
If SAE 5W-30 in not available, SAE 10W-30 may be used. However, it should be replaced with SAE 5W-30 at the next oil change.



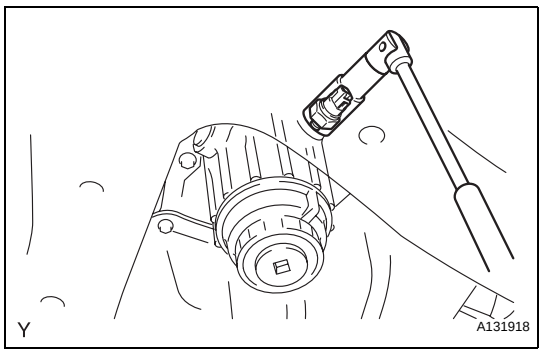
3. CHECK ENGINE OIL PRESSURE

(a) Disconnect the oil pressure switch connector.

(b) Using a 24 mm deep socket wrench, remove the oil pressure switch.



(c) Install the oil pressure gauge.
(d) Warm up the engine.
(e) Measure the oil pressure.
Standard oil pressure

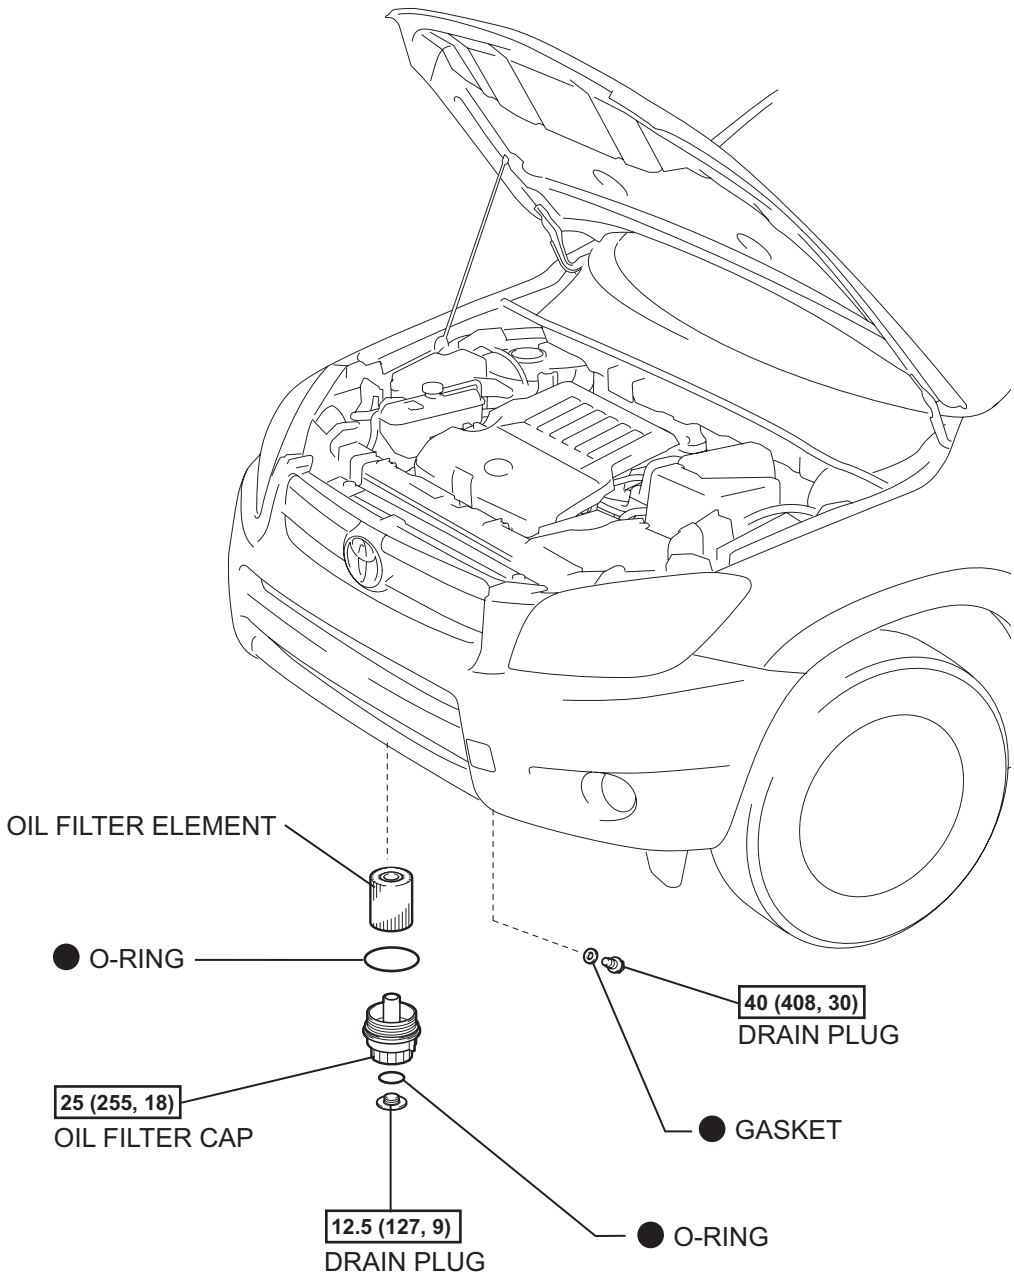


Condition	Specified Condition
Idle	80 kPa (0.8 kgf/cm^2, 11.6 psi) or more
6,000 rpm	380 kPa (3.9 kgf/cm^2, 55.5 psi) or more

If the oil pressure is not as specified, check the oil pump.

(f) Remove the oil pressure gauge.

(g) Apply adhesive to 2 or 3 threads of the oil pressure switch.
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent



(h) Install the oil pressure switch.
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)
NOTICE:
Do not start the engine for at least 1 hour after installation of the switch.
(i) Connect the oil pressure switch connector.
(j) Start the engine and check for engine oil leaks.

LU

OIL FILTER

COMPONENTS

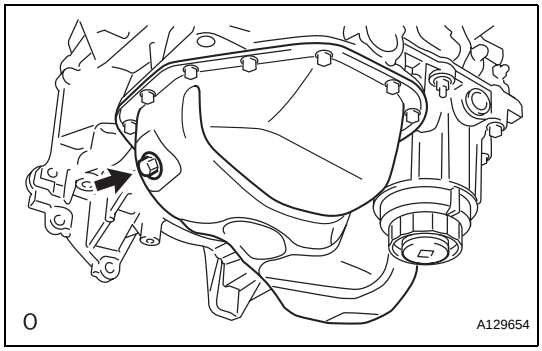
N*m (kgf*cm, ft.*lbf) : Specified torque

● Non-reusable part

P

A132177E01

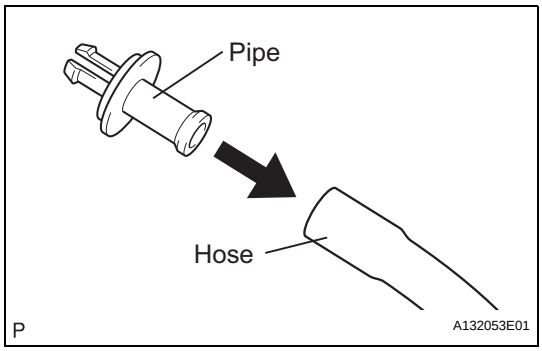
REPLACEMENT



CAUTION:

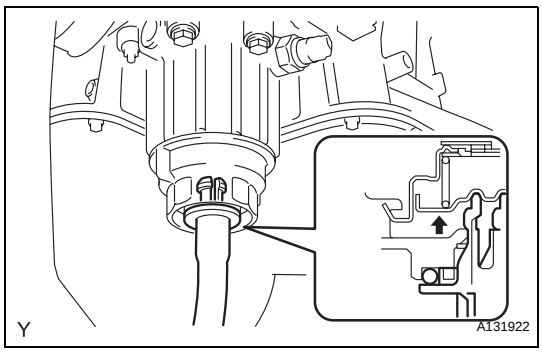
- **Prolonged and repeated contact with mineral oil will result in the loss of the skin's natural oils, leading to dryness, irritation and dermatitis. In addition, used engine oil contains potentially harmful contaminants which may cause skin cancer.**
- **Wear protective clothing and gloves. Avoid contact with used oil. If contact occurs, wash the area thoroughly with soap and waterless hand cleaner. Never use gasoline, thinners, or solvents to wash the skin.**
- **In order to protect the environment, dispose of used oil and used oil filters at designated disposal sites only.**

1. DRAIN ENGINE OIL

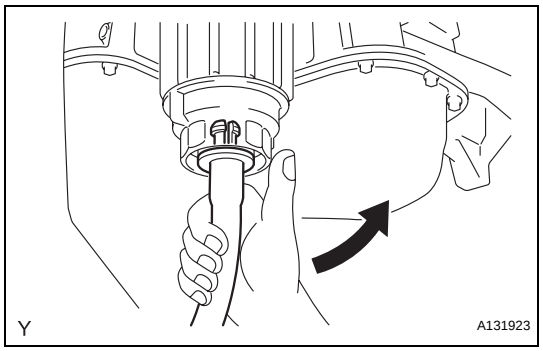


(a) Remove the oil filler cap.

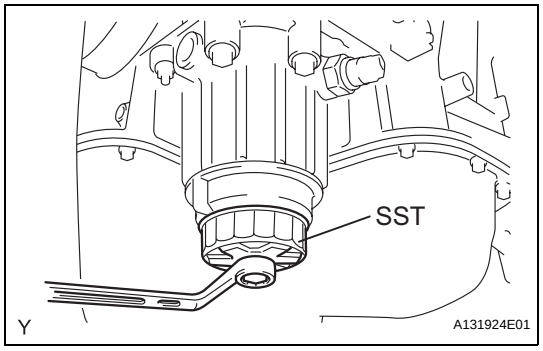
(b) Remove the oil drain plug and gasket, and drain the engine oil into a container.



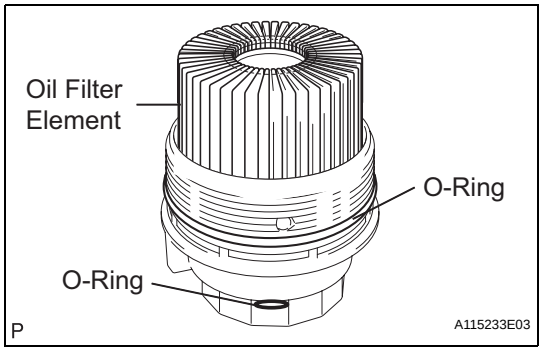
2. REMOVE OIL FILTER CAP ASSEMBLY



(a) Connect the hose to a pipe.
HINT:
The drain pipe is supplied with the oil filter element.



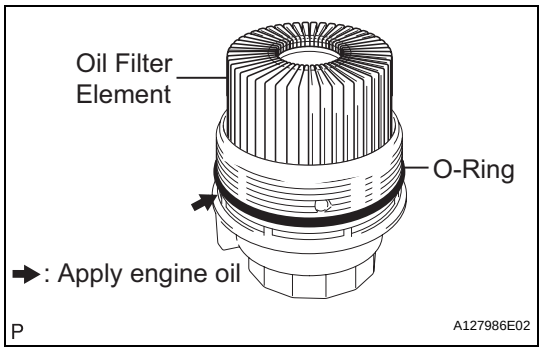
(b) Remove the oil filter drain plug and O-ring, and then insert the drain pipe into the oil filter cap and drain the engine oil into a container.



LU

(c) Make sure that oil is completely drained, and remove the pipe and O-ring.
HINT:
Be sure to turn the pipe in the direction of the arrow to remove it.

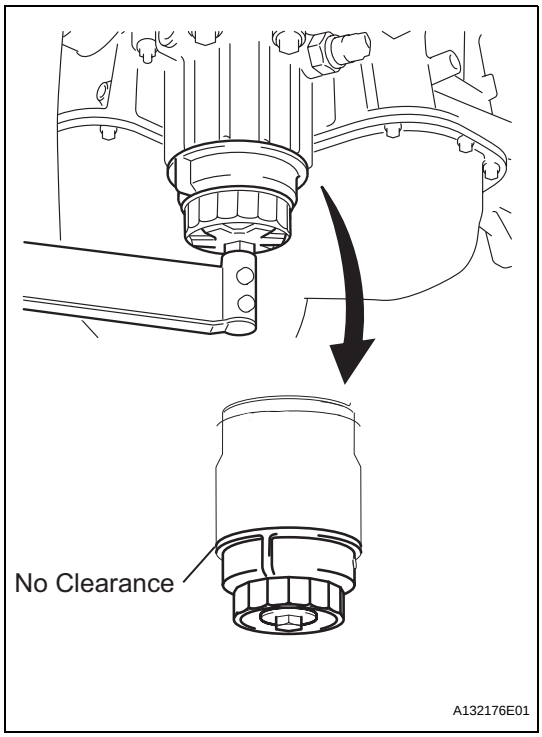
(d) Using SST, remove the oil filter cap together with the oil filter element.
SST 09228-06501



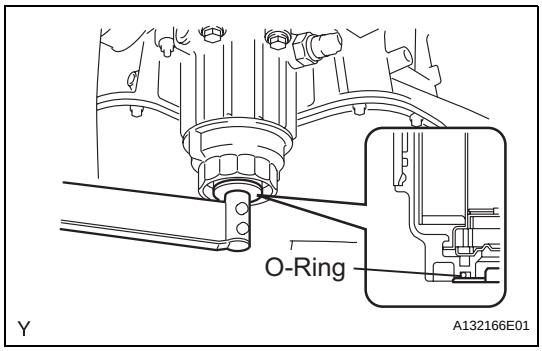
3. REMOVE OIL FILTER ELEMENT

(a) Remove the oil filter element and 2 O-rings from the oil filter cap.
NOTICE:
Be sure to remove the O-ring (for the cap) by hand, without using any tools, to prevent damage to the groove for the O-ring on the cap.

4. INSTALL OIL FILTER ELEMENT



(a) Clean the oil filter cap threads and O-ring groove.



(b) Apply a small amount of engine oil to a new O-ring and install it to the oil filter cap.
(c) Set a new oil filter element in the oil filter cap.

5. INSTALL OIL FILTER CAP ASSEMBLY

(a) Remove any dirt or foreign matter from the installation surface and inside of the engine.
(b) Apply a small amount of engine oil to the O-ring again and install the oil filter cap.
NOTICE:
Be careful that the O-ring does not get caught between the parts.

(c) Using SST, tighten the oil filter cap.
SST 09228-06501
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)
NOTICE:
- **Make sure that the oil filter is installed securely as shown in the illustration.**
- **Be careful that the O-ring does not get caught between the parts.**

(d) Apply a small amount of engine oil to a new drain plug O-ring, and install it to the oil filter cap.
NOTICE:
Before installing the O-ring, remove any dirt or foreign matter from the installation surface of the oil filter cap.

(e) Install the oil filter drain plug to the filter cap.
Torque: 12.5 N*m (127 kgf*cm, 9 ft.*lbf)
NOTICE:
Be careful that the O-ring does not get caught between the parts.

6. ADD ENGINE OIL

(a) Wipe the oil pan and drain plug before installing the plug.

(b) Install a new gasket and the oil pan drain plug.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)

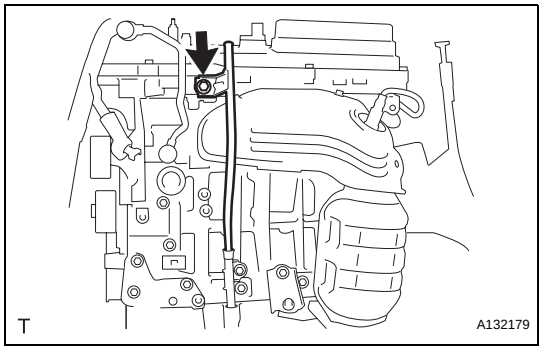
(c) Add new oil.
Standard oil capacity

Item	Specified Condition
Drain and refill with oil filter change	6.1 liters (6.4 US qts, 5.4 Imp. qts)
Drain and refill without oil filter change	5.7 liters (6.0 US qts, 5.0 Imp. qts)
Dry fill	6.5 liters (6.9 US qts, 5.7 Imp. qts)

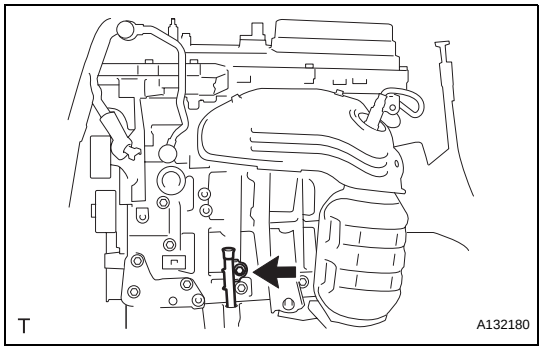
(d) Install the oil filler cap.

7. CHECK FOR ENGINE OIL LEAKS

(a) Start the engine. Make sure that no oil leaks from the connection point of the oil filter cap.

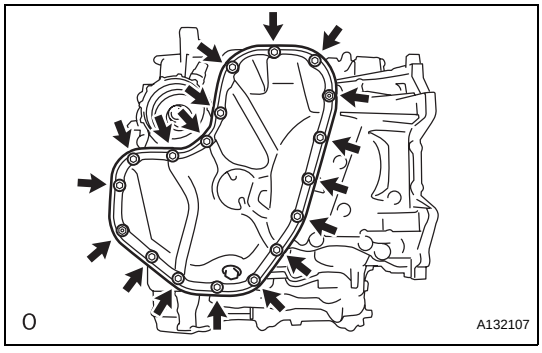


8. PERFORM OIL CHANGE REMINDER LIGHT RESET PROCEDURE



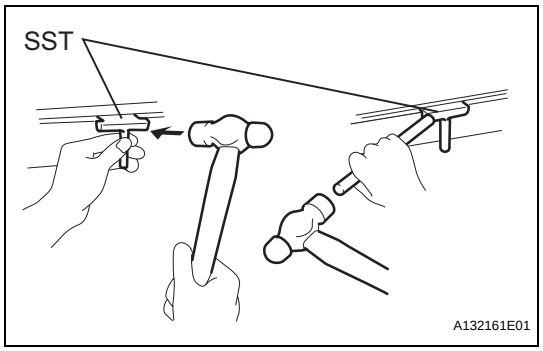
NOTICE:

To prevent the oil change reminder light from coming on after changing the engine oil, perform the oil change reminder light reset procedure (see page ME-15).

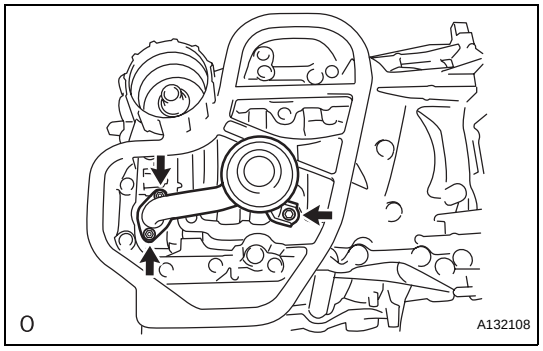


REMOVAL

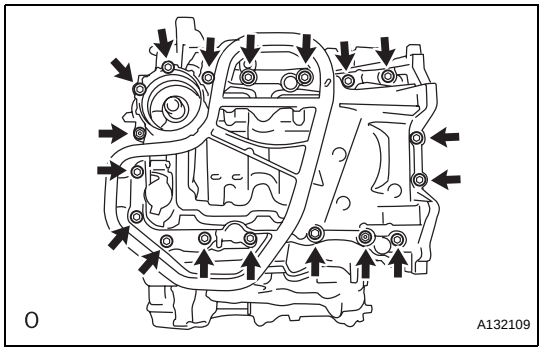
1. **DISCHARGE FUEL SYSTEM PRESSURE (See page FU-9)**
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
3. **REMOVE ENGINE ASSEMBLY**
   (a) Remove the engine from the vehicle (see page EM-21).
4. **INSTALL ENGINE TO STAND**
5. **REMOVE NO. 2 OIL DIPSTICK GUIDE**
   (a) Remove the oil dipstick.
   (b) Remove the bolt and dipstick guide.



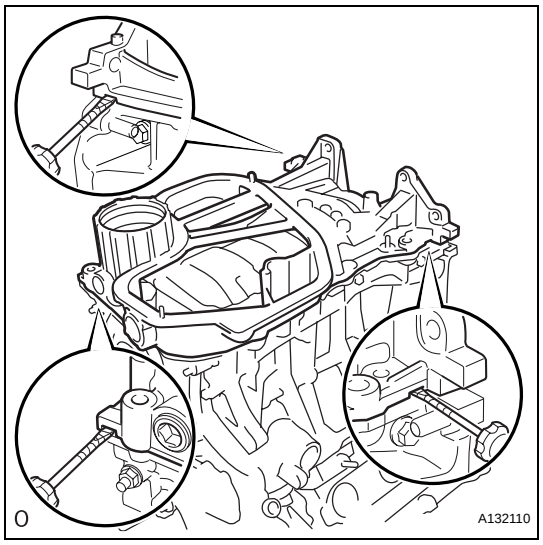
6. **REMOVE OIL DIPSTICK GUIDE**
   (a) Remove the bolt and dipstick guide.
7. **REMOVE OIL FILTER CAP ASSEMBLY (See page LU-4)**
8. **REMOVE OIL FILTER ELEMENT KIT (See page LU-5)**



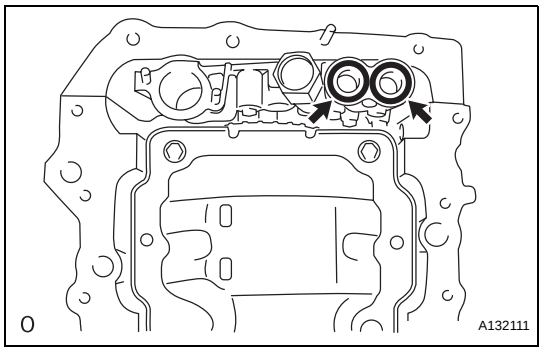
9. **REMOVE NO. 2 OIL PAN SUB-ASSEMBLY**
   (a) Remove the 16 bolts and 2 nuts.



LU

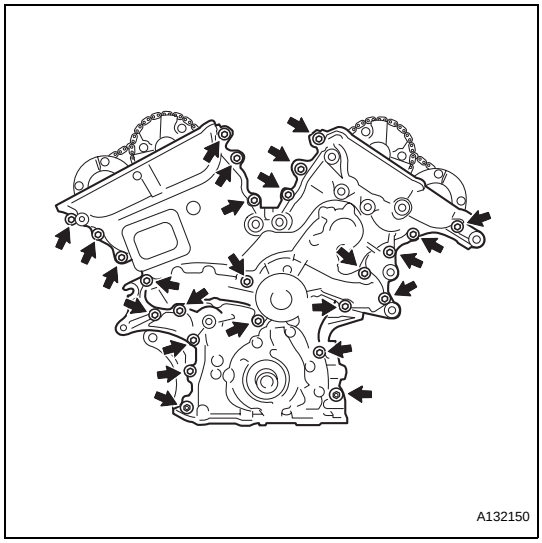


(b) Insert the blade of SST between the oil pan, cut through the applied sealer and remove the oil pan.
SST 09032-00100
NOTICE:
Be careful not to damage the contact surfaces of the oil pan.

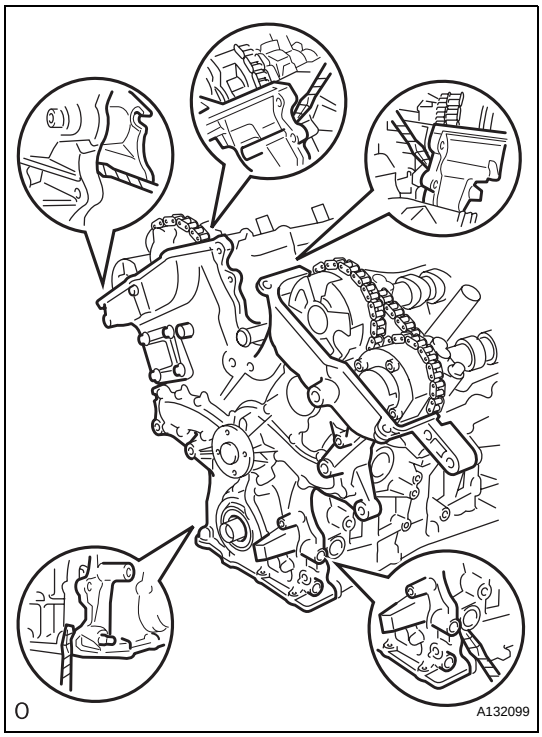


10. REMOVE OIL STRAINER SUB-ASSEMBLY
(a) Remove the bolt, 2 nuts, oil strainer and gasket.

11. REMOVE OIL PAN SUB-ASSEMBLY
(a) Remove the 16 bolts and 2 nuts.
HINT:
Be sure to clean the bolts and stud bolts and check the threads for cracks or other damage.

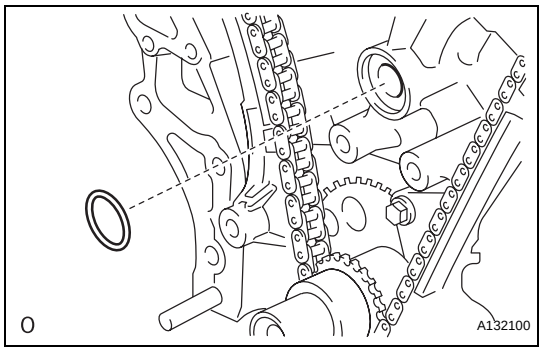


(b) Remove the oil pan by prying between the oil pan and cylinder block with a screwdriver.
NOTICE:
Be careful not to damage the contact surfaces of the cylinder block and oil pan.
HINT:
Tape the screwdriver tip before use.

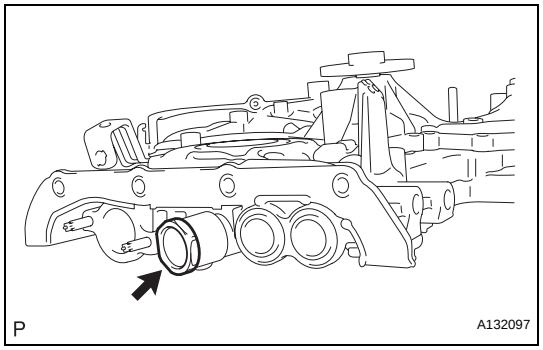


(c) Remove the 2 O-rings from the oil pump.

12. **REMOVE WATER INLET HOUSING (See page CO-12)**
13. **REMOVE OIL PIPE (See page EM-52)**
14. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (for Bank 1) (See page EM-52)**
15. **REMOVE NO. 1 OIL PIPE (See page EM-53)**
16. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (for Bank 2) (See page EM-53)**
17. **REMOVE CRANKSHAFT PULLEY (See page EM-54)**
18. **REMOVE TIMING CHAIN COVER SUB-ASSEMBLY (w/ Oil Pump)**



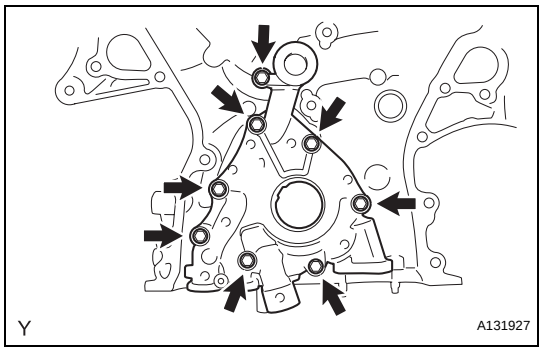
(a) Remove the 23 bolts and 2 nuts as shown in the illustration.



(b) Remove the timing chain cover by prying between the timing chain cover and cylinder head or cylinder block with a screwdriver.
HINT:
Tape the screwdriver tip before use.
NOTICE:
Do not damage the contact surfaces of the cylinder head, cylinder block and timing chain cover.

LU

(c) Remove the gasket.



DISASSEMBLY

1. REMOVE OIL PUMP RELIEF VALVE

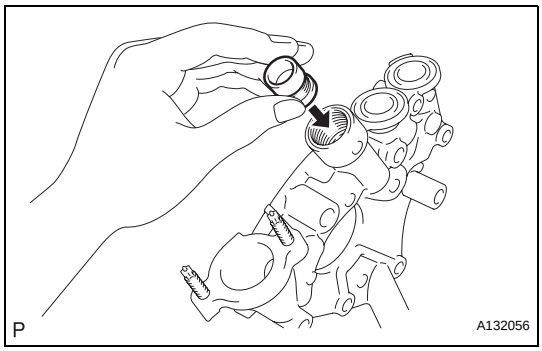
(a) Using a 27 mm socket wrench, remove the plug.

(b) Remove the valve spring and oil pump relief valve.

2. REMOVE OIL PUMP COVER

(a) Remove the 8 bolts, oil pump cover, drive rotor and driven rotor.

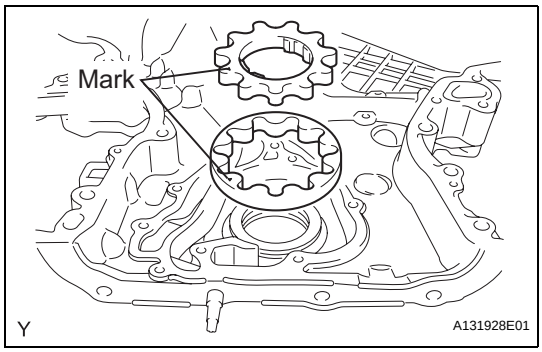
NOTICE:



Be careful not to damage the drive and driven rotors.

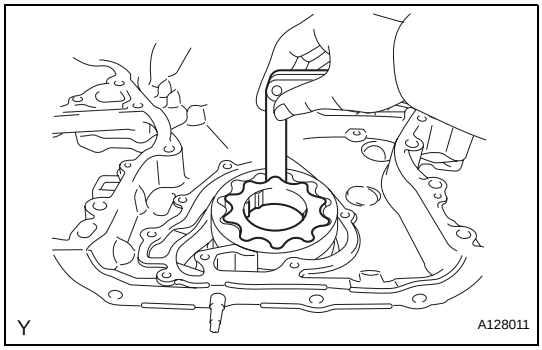
INSPECTION

1. INSPECT OIL PUMP RELIEF VALVE



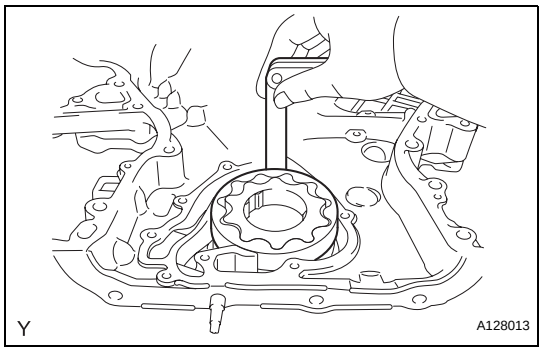
(a) Coat the relief valve with engine oil and drop it into the relief valve hole.

(b) Check that the relief valve falls in smoothly by its own weight.
If it does not, replace the relief valve. If necessary, replace the timing chain cover.



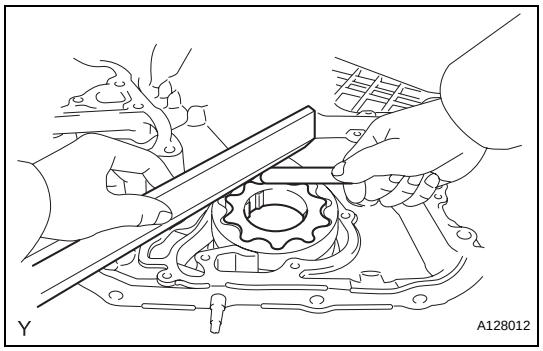
2. INSPECT OIL PUMP ROTOR SET

(a) Install the drive and driven rotors into the timing chain cover with the rotors' marks facing the cylinder block side. Check that the rotors revolve smoothly.



(b) Check the tip clearance.

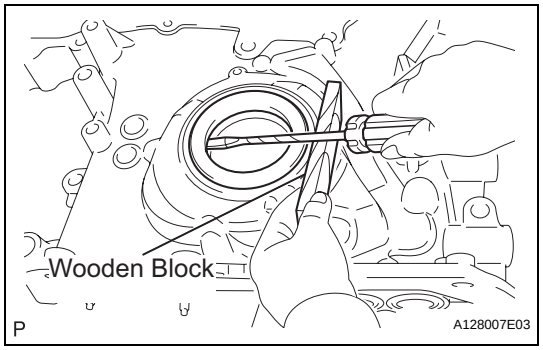
(1) Using a feeler gauge, measure the clearance between the drive rotor and driven rotor tips.
Standard tip clearance:
0.060 to 0.160 mm (0.0024 to 0.0063 in.)
Maximum tip clearance:
0.16 mm (0.0063 in.)
If the tip clearance is greater than the maximum, replace the timing chain cover.



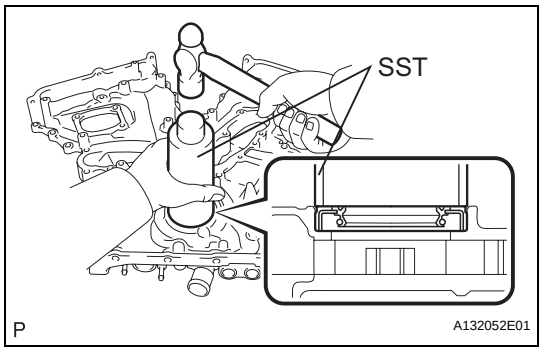
(c) Check the body clearance.

(1) Using a feeler gauge, measure the clearance between the timing chain cover and driven rotor.
Standard body clearance:
0.250 to 0.325 mm (0.0098 to 0.0128 in.)
Maximum body clearance:
0.325 mm (0.0128 in.)
If the body clearance is greater than the maximum, replace the timing chain cover.

LU



(d) Check the side clearance.
(1) Using a feeler gauge and precision straightedge, measure the clearance between the rotors and precision straightedge.
Standard side clearance:
0.030 to 0.090 mm (0.0012 to 0.0035 in.)
Maximum side clearance:
0.090 mm (0.0035 in.)
If the side clearance is greater than the maximum, replace the timing chain cover.

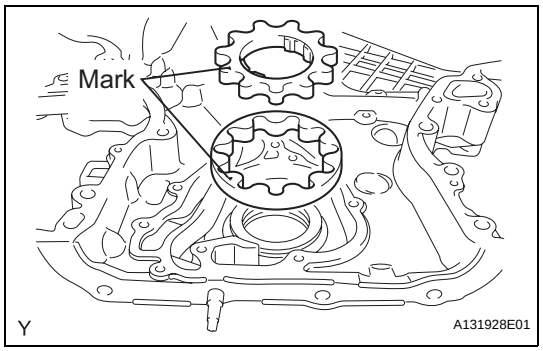


REPLACEMENT

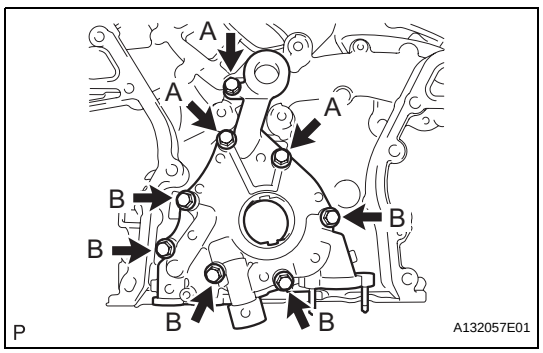
1. REPLACE TIMING CHAIN COVER OIL SEAL

(a) Using a screwdriver, pry out the oil seal.
HINT:
Tape the screwdriver tip before use.
NOTICE:
Do not damage the surface of the oil seal press fit hole.

(b) Using SST and a hammer, tap in a new oil seal until its surface is flush with the timing chain cover edge.
SST 09316-60011 (09316-00011)
NOTICE:
- **Keep the lip free from foreign matter.**
- **Do not tap the oil seal at an angle.**
- **Make sure that the oil seal edge does not stick out of the timing chain case.**



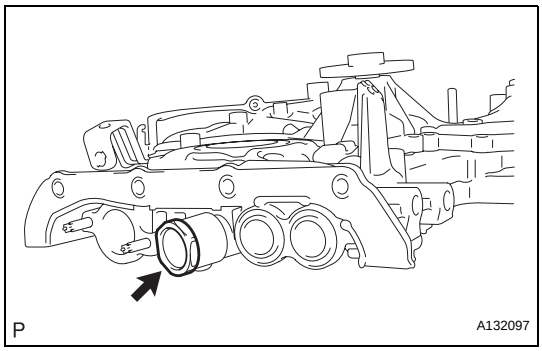
(c) Apply MP grease to the lip of the oil seal.



REASSEMBLY

1. INSTALL OIL PUMP COVER

(a) Install the drive and driven rotors into the timing chain cover with the rotors' marks facing the cylinder block side. Check that the rotors revolve smoothly.

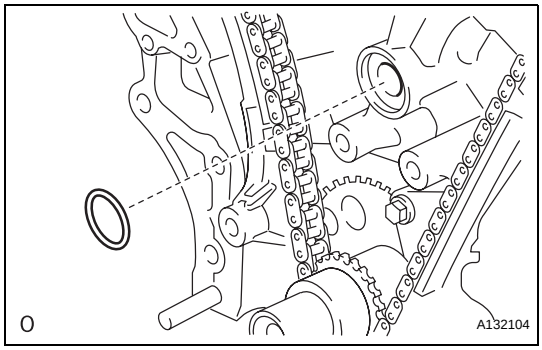


(b) Install the oil pump cover with the 8 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
HINT:
Bolt length:
22 mm (0.87 in.) for bolt A
40 mm (1.58 in.) for bolt B

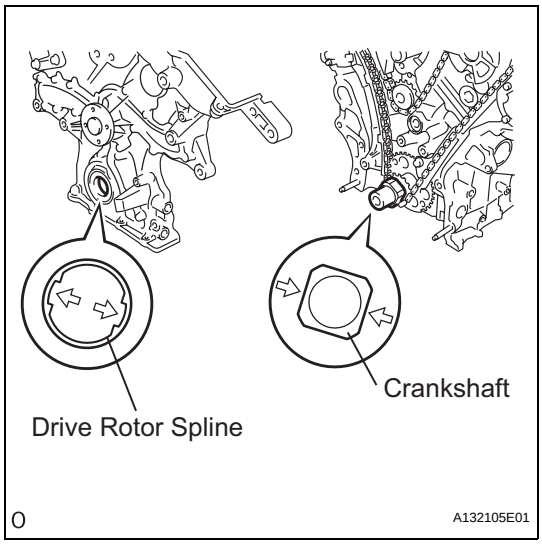
2. INSTALL OIL PUMP RELIEF VALVE

(a) Coat the oil pump relief valve with engine oil.
(b) Install the relief valve and relief valve spring into the timing chain cover hole.

LU

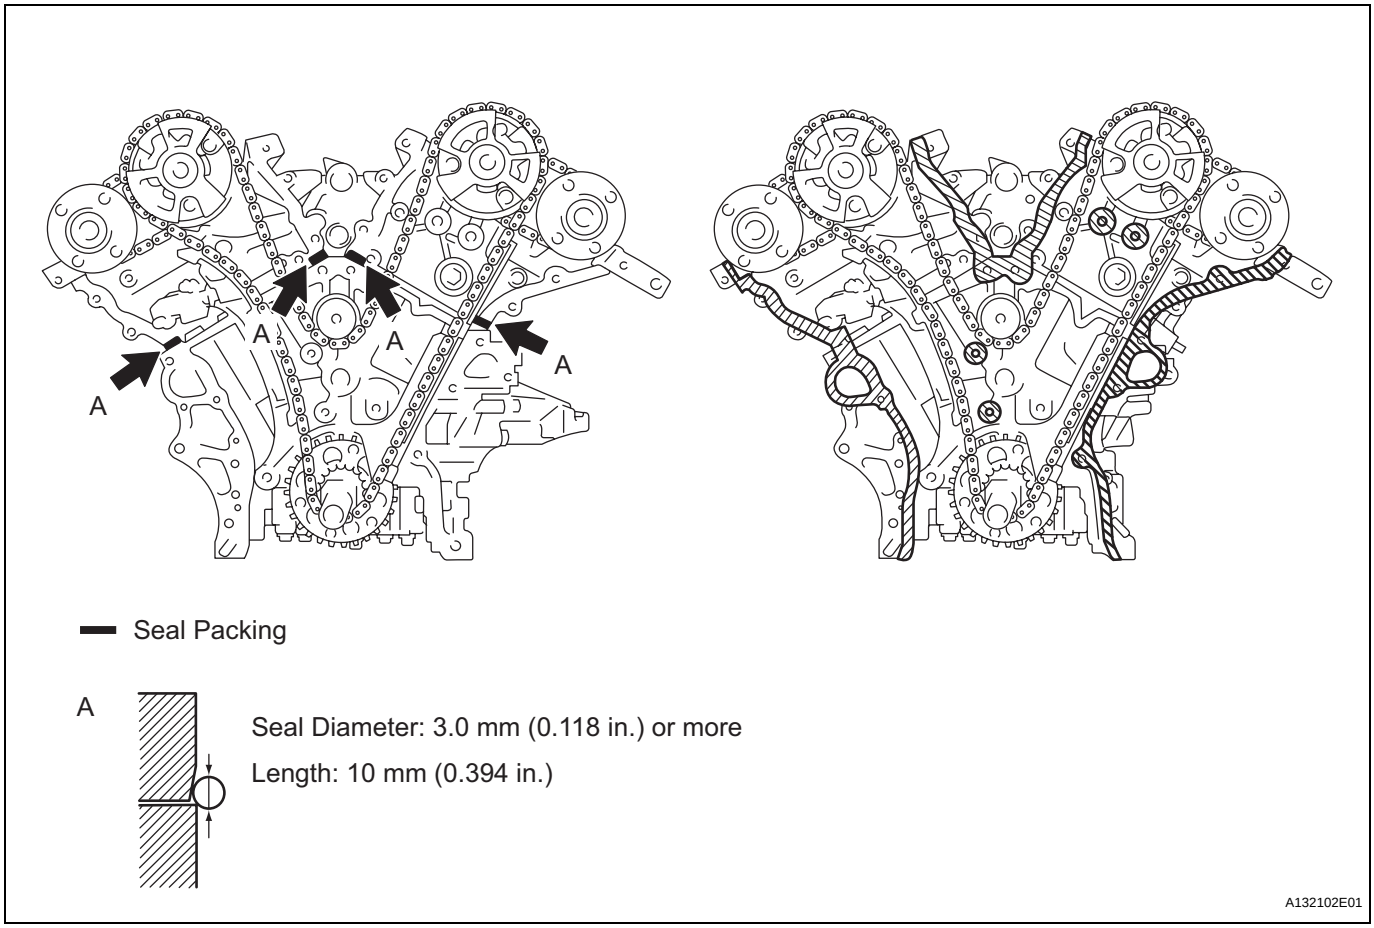


(c) Using a 27 mm socket wrench, install the plug.
Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)



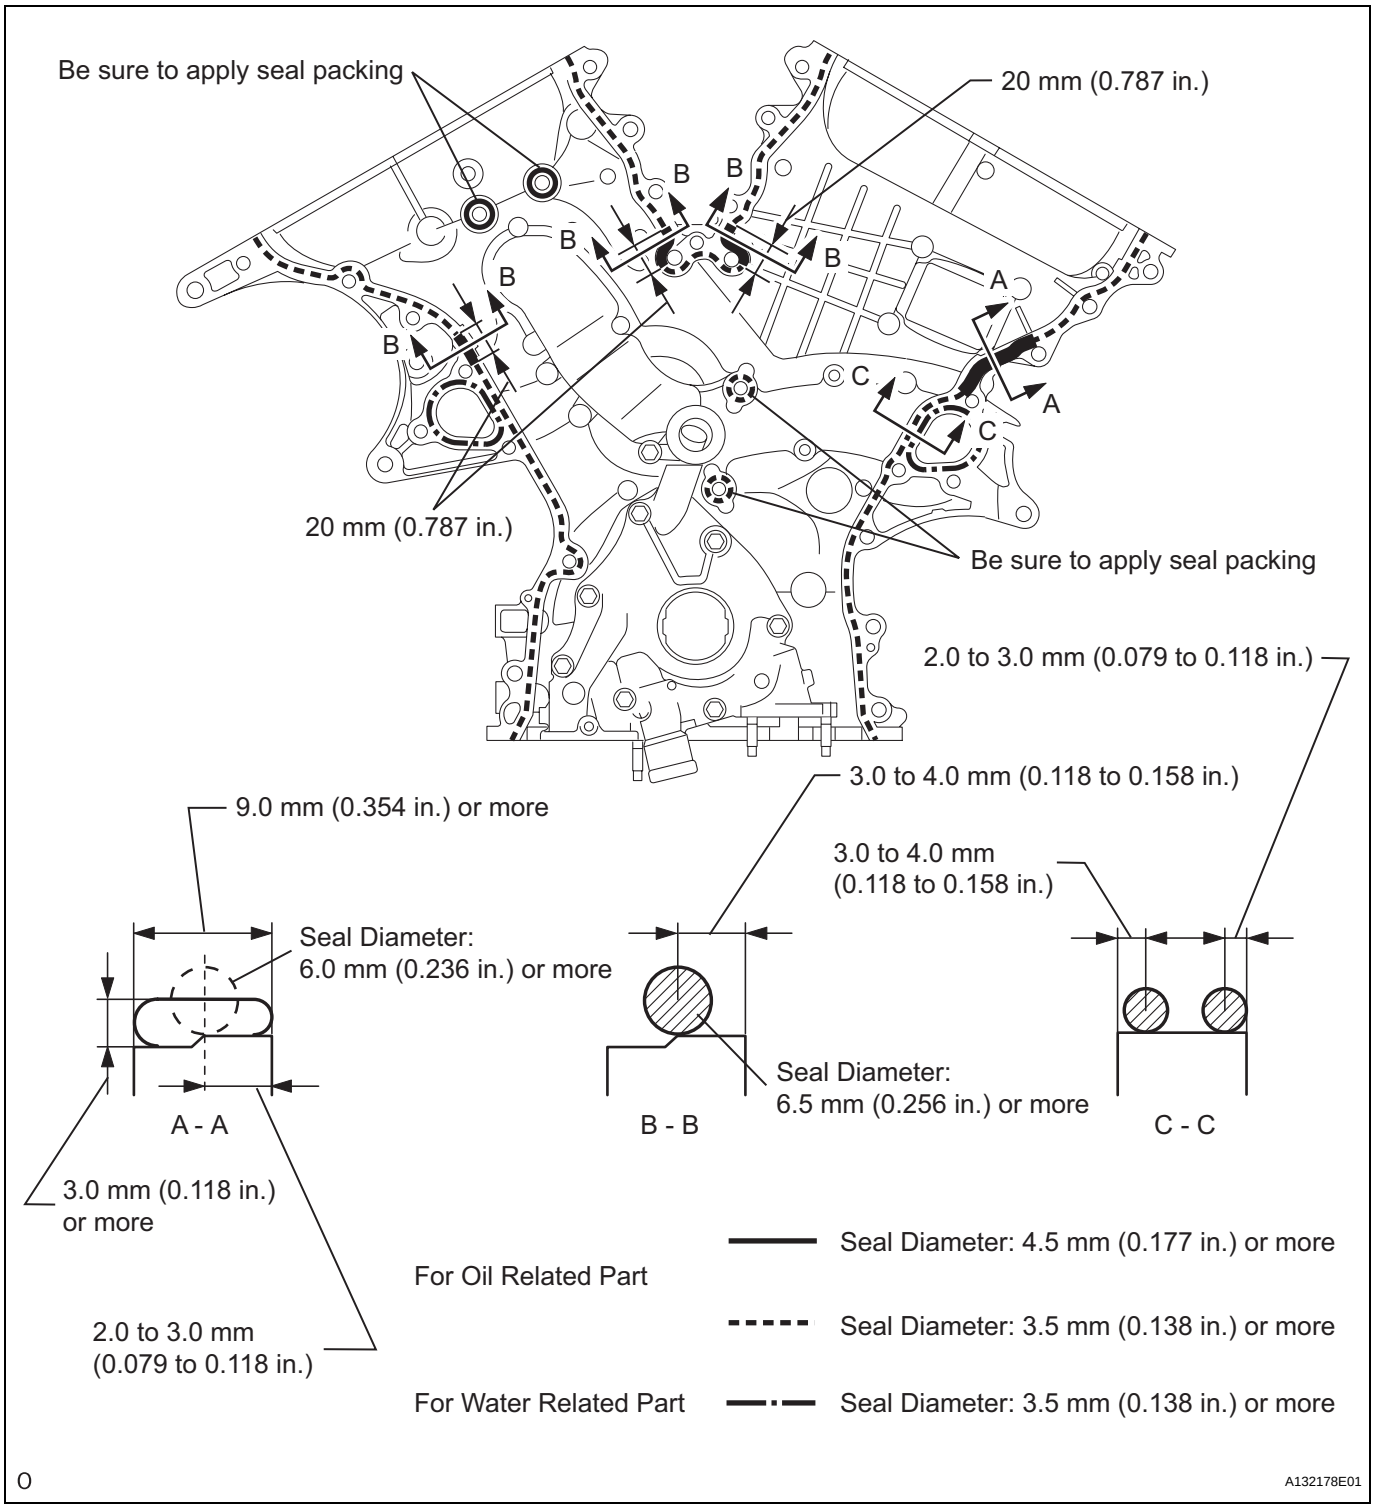
INSTALLATION

1. INSTALL TIMING CHAIN COVER SUB-ASSEMBLY (w/ Oil Pump)



(a) Install a new gasket.

(b) Align the oil pump's drive rotor spline and the crankshaft as shown in the illustration.



(c) Apply seal packing in a continuous bead to the engine unit as shown in the illustration.

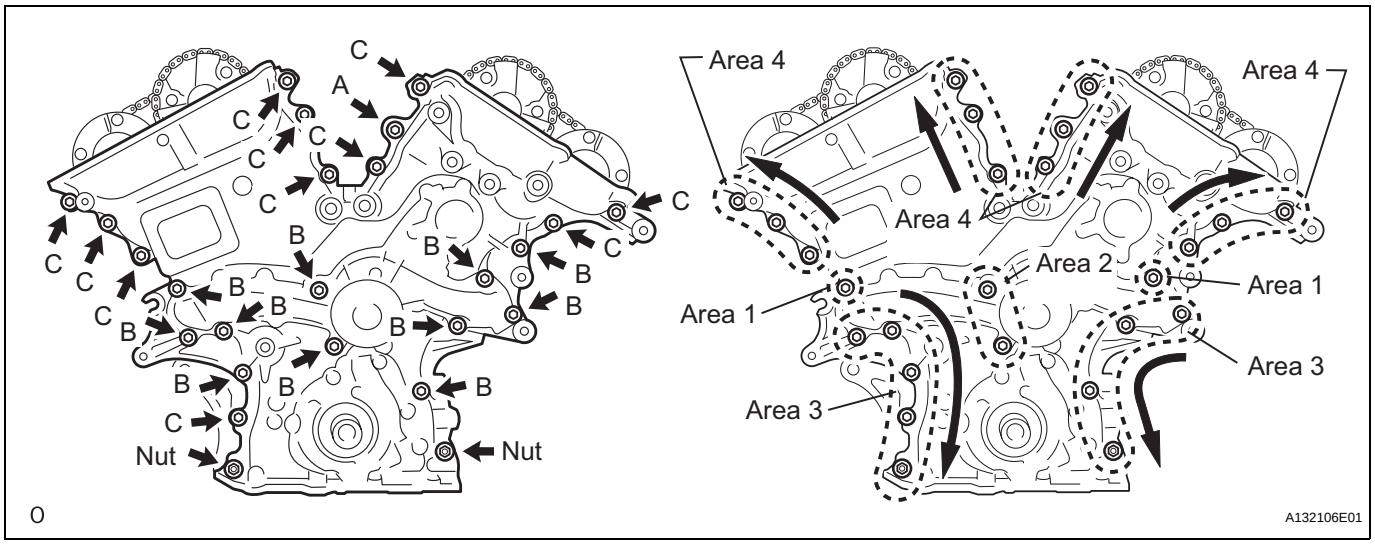
Seal packing:
Toyota Genuine Seal Packing Block, Three Bond 1207B or Equivalent.
Standard seal diameter:
3.0 mm (0.118 in.) or more
Standard length:
10 mm (0.394 in.)
NOTICE:

- **Be sure to clean and degrease the contact surfaces, especially the hatched areas in the illustration.**
- **When the contact surfaces are wet, wipe them off with an oil-free cloth before applying seal packing.**
- **Install the timing chin cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

(d) Apply seal packing in a continuous line to the timing chain cover as shown in the illustration.

Seal packing:
For oil related part:
Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent
For water related part:
Toyota Genuine Seal Packing 1282B, Three Bond 1282B or Equivalent

LU



Standard seal diameter

Position	Specified Condition
A - A	6.0 mm (0.236 in.)
B - B	6.5 mm (0.256 in.)
Continuous line area	4.5 mm (0.138 in.) or more
Dashed line area	3.5 mm (0.138 in.) or more
Alternate long and short dashed line area	3.5 mm (0.138 in.) or more

NOTICE:

- **When the contact surfaces are wet, wipe them off with an oil-free cloth before applying seal packing.**
- **Install the timing chain cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

(e) Temporarily install the timing chain cover with the 23 bolts and 2 nuts.

NOTICE:

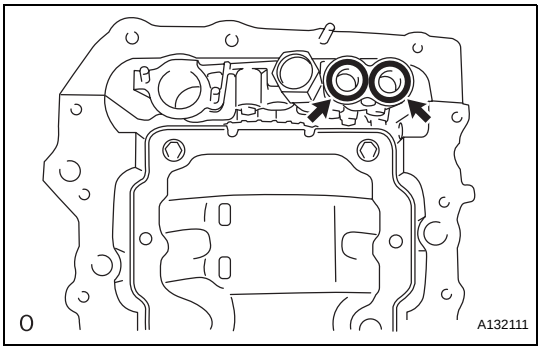
Make sure there is no oil on the bolts. If there is oil on the bolts, clean them before installing them.

HINT:

Bolt length:

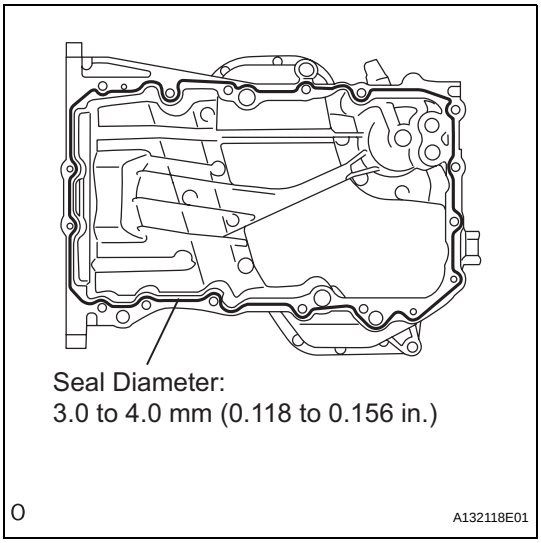
40 mm (1.57 in.) for bolt A

55 mm (2.17 in.) for bolt B



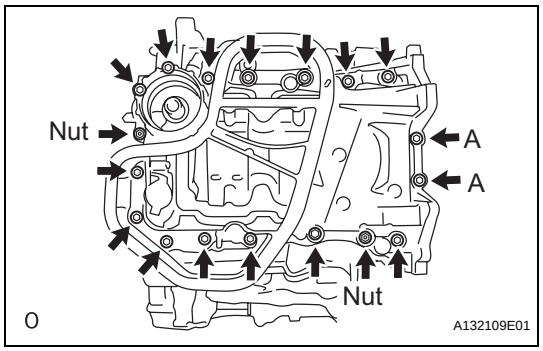
25 mm (0.98 in.) for bolt C

LU

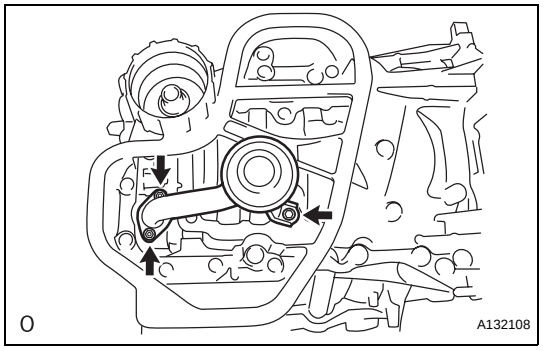


(f) Tighten the bolts in this order: Area 1, Area 2, Area 3, Area 4.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf) for Area 1, 2 bolt
21 N*m (214 kgf*cm, 15 ft.*lbf) for Area 3 bolt, nut
43 N*m (438 kgf*cm, 32 ft.*lbf) for Area 4 bolt A
21 N*m (214 kgf*cm, 15 ft.*lbf) for Area 4 except bolt A

2. **INSTALL CRANKSHAFT PULLEY (See page EM-126)**
3. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (for Bank 2) (See page EM-127)**
4. **INSTALL NO. 1 OIL PIPE (See page EM-128)**
5. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (for Bank 1) (See page EM-127)**
6. **INSTALL OIL PIPE (See page EM-127)**
7. **INSTALL WATER INLET HOUSING (See page CO-14)**
8. **INSTALL OIL PAN SUB-ASSEMBLY**

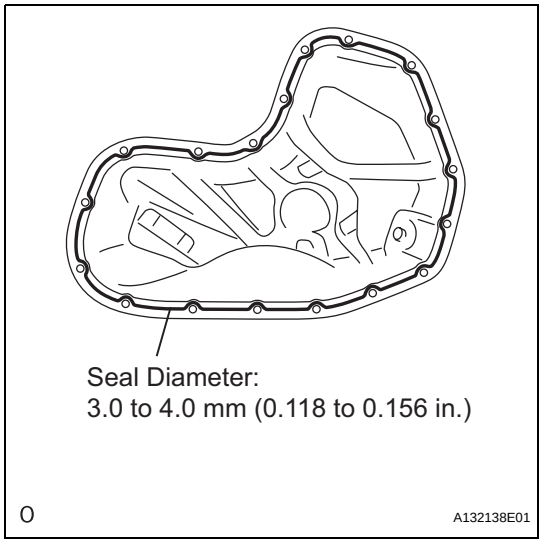


(a) Install 2 new O-rings to the timing chain cover.

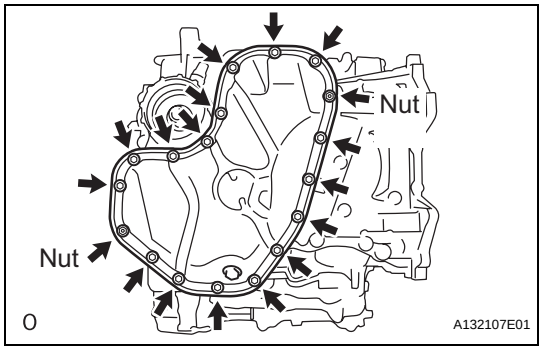


(b) Apply seal packing in a continuous line as shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent
Standard seal diameter:
3.0 to 4.0 mm (0.118 to 0.156 in.)
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

LU



(c) Install the oil pan with the 16 bolts and 2 nuts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf) for bolt A
21 N*m (214 kgf*cm, 15 ft.*lbf) for except bolt A, nut



9. INSTALL OIL STRAINER SUB-ASSEMBLY

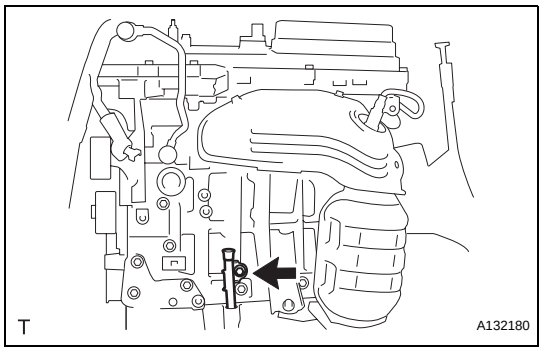
(a) Install a new gasket and the oil strainer with the bolt and 2 nuts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

10. INSTALL NO. 2 OIL PAN SUB-ASSEMBLY

(a) Apply seal packing in a continuous line as shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent
Standard seal diameter:
3.0 to 4.0 mm (0.118 to 0.156 in.)
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes and tighten the bolts within 10 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

(b) Install the oil pan with the 16 bolts and 2 nuts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

(c) Install a new gasket and the drain plug.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)

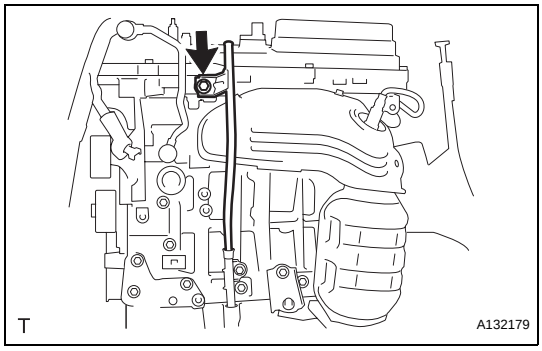


11. INSTALL OIL FILTER ELEMENT KIT (See page LU-5)

12. INSTALL OIL FILTER CAP ASSEMBLY (See page LU-5)

13. INSTALL OIL DIPSTICK GUIDE

(a) Install a new O-ring to the dipstick guide.



LU

(b) Install the dipstick guide with the bolt.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

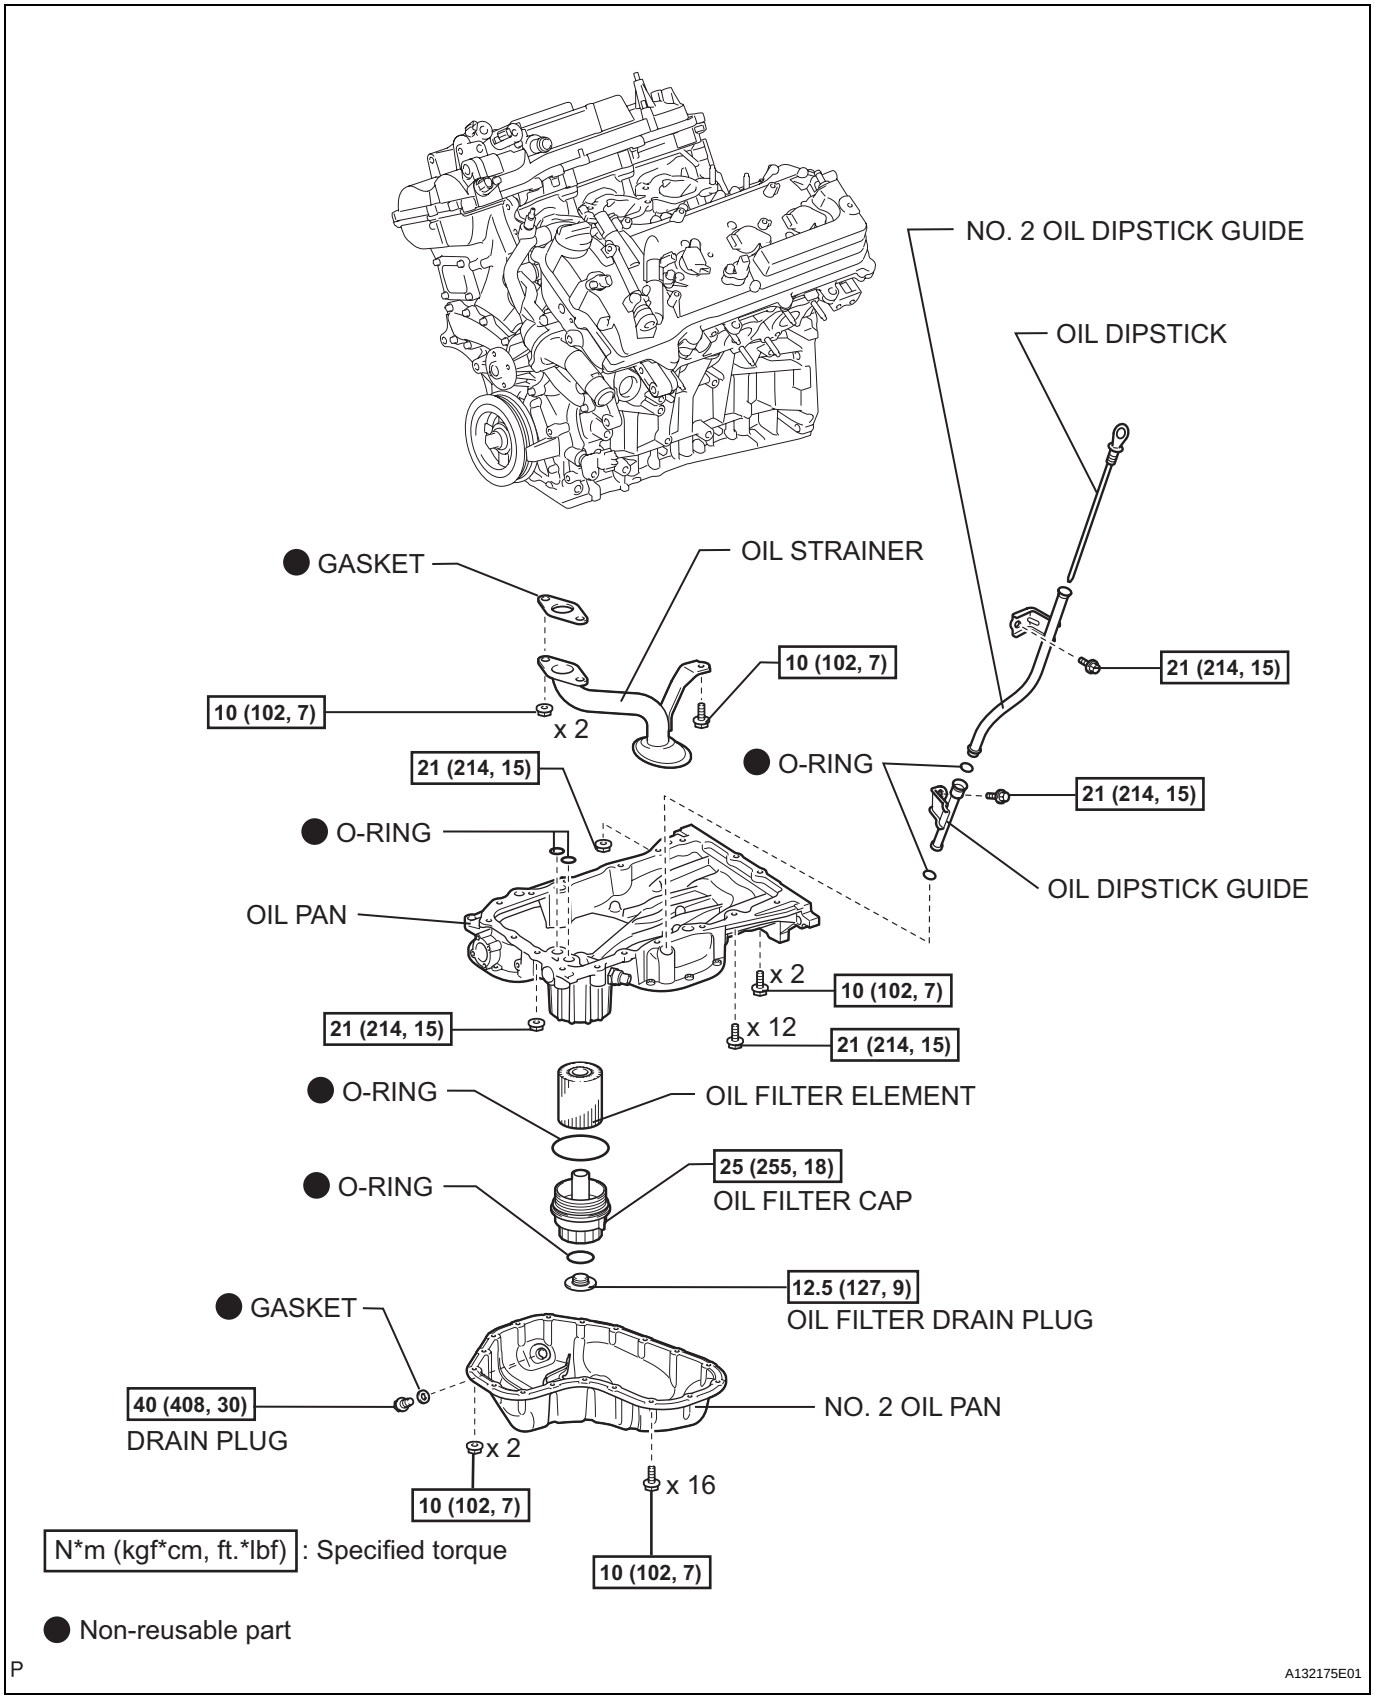
14. INSTALL NO. 2 OIL DIPSTICK GUIDE

(a) Install a new O-ring to the dipstick guide.

(b) Install the dipstick guide with the bolt.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

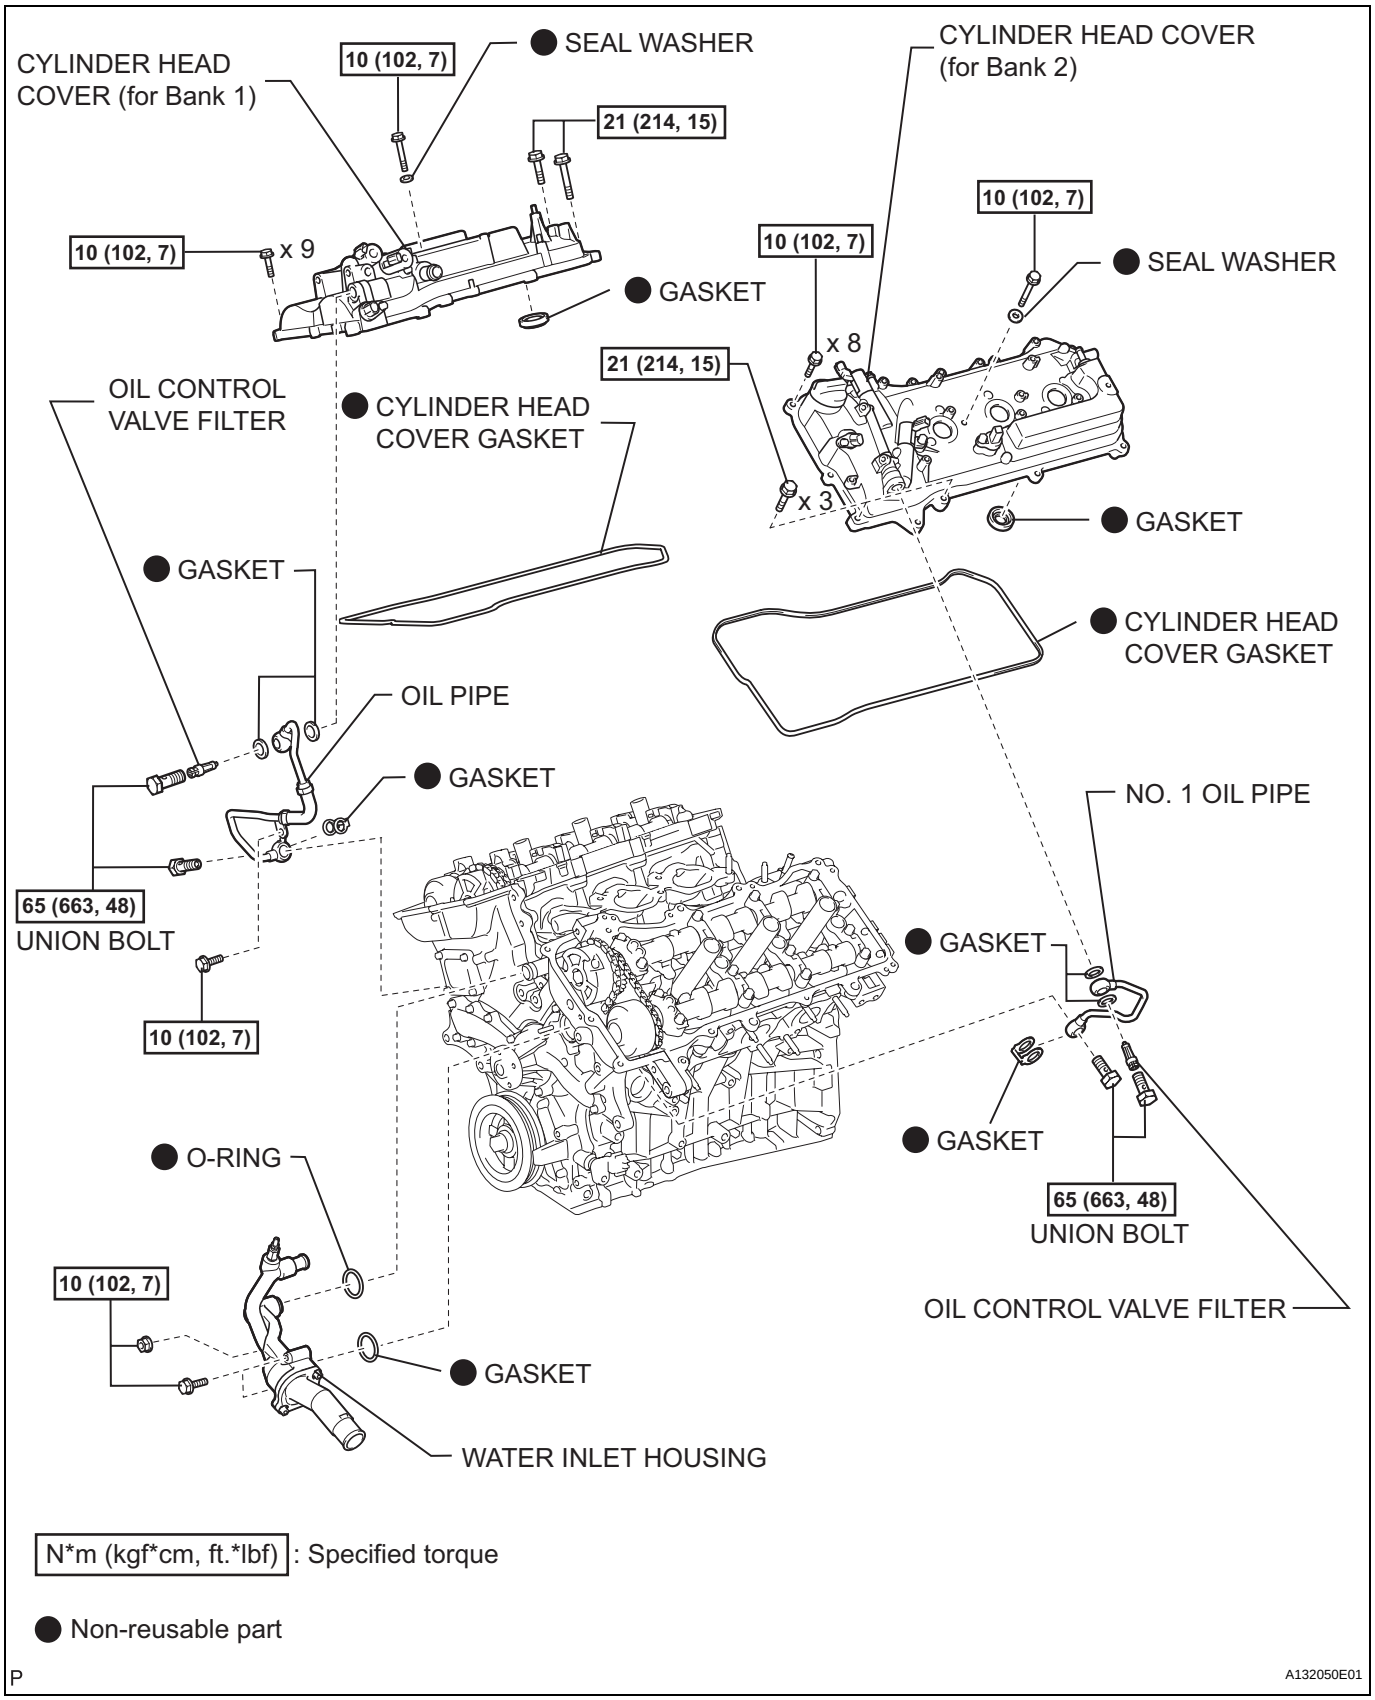
(c) Install the oil dipstick.

15. REMOVE ENGINE FROM STAND



16. INSTALL ENGINE ASSEMBLY

(a) Install the engine to the vehicle (see page EM-31).



17. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

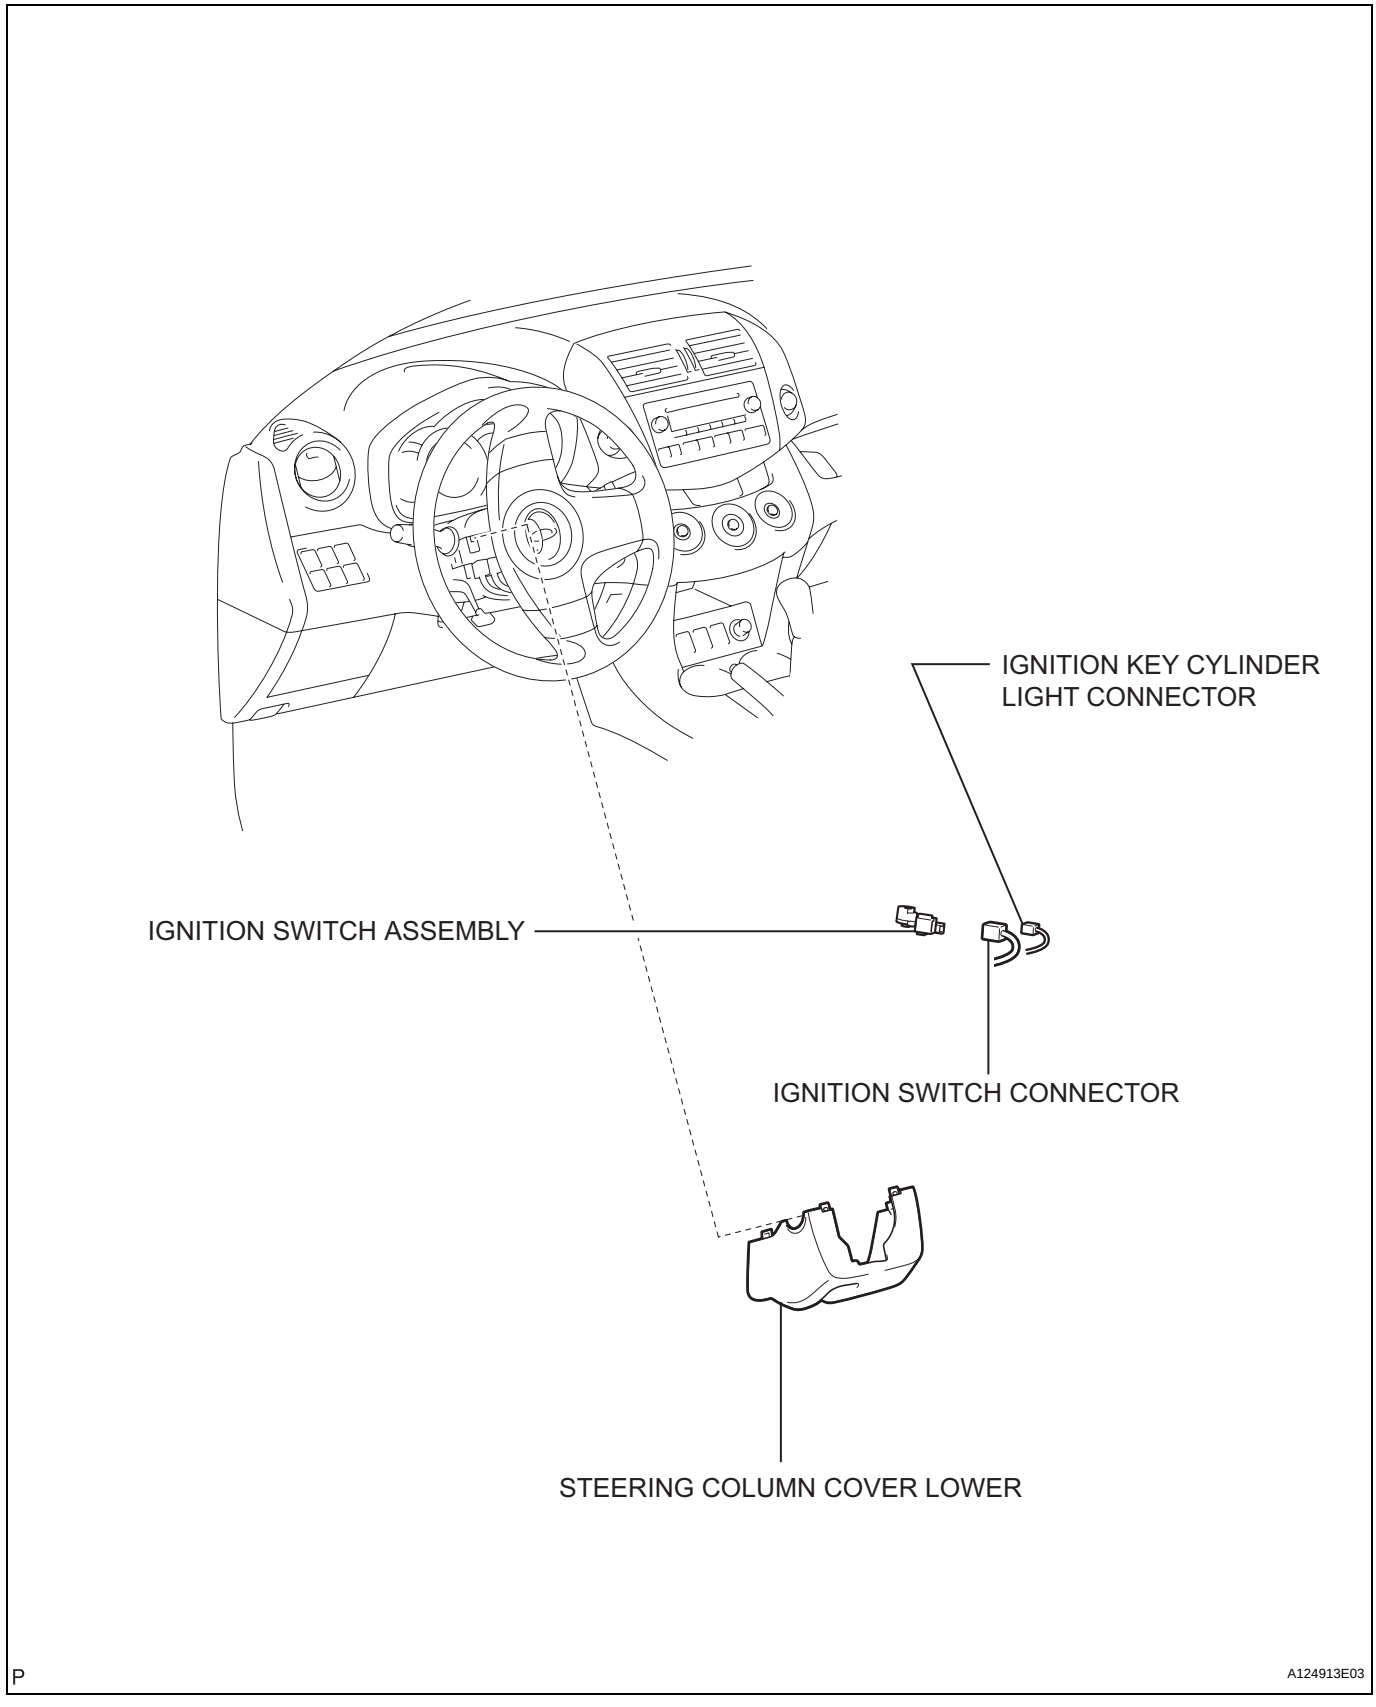
INSTALLATION

1. INSTALL IGNITION SWITCH ASSEMBLY

(a) Install the ignition switch with the 2 screws.

(b) Connect the ignition key cylinder light connector.

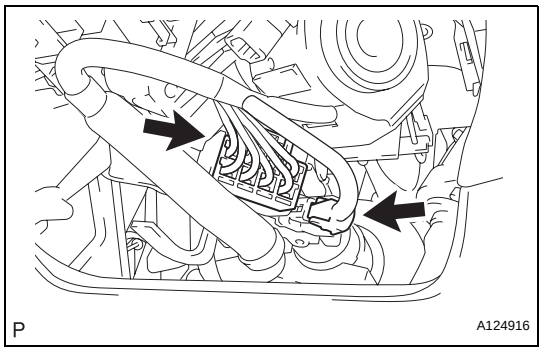
(c) Connect the ignition switch connector.



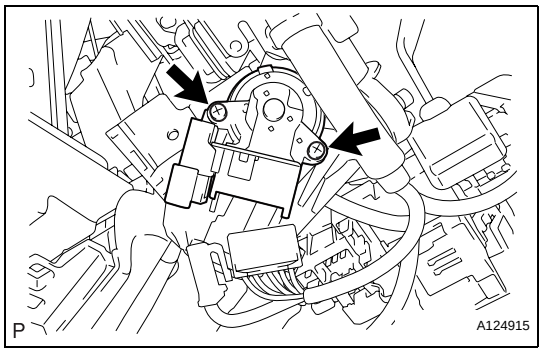
2. INSTALL STEERING COLUMN COVER LOWER

(a) Install the steering column cover lower (see page SR-20).

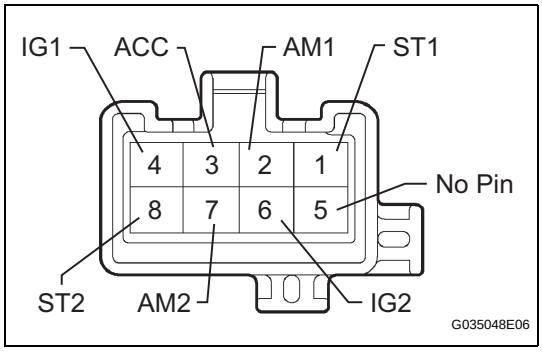
3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



IGNITION SWITCH



COMPONENTS

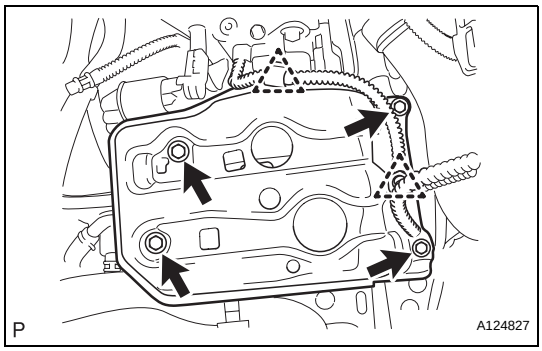


REMOVAL

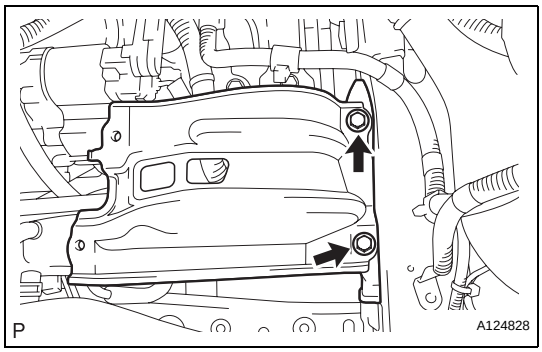
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE STEERING COLUMN COVER LOWER**
   (a) Remove the steering column cover lower (see page SR-12).
3. **REMOVE IGNITION SWITCH ASSEMBLY**
   (a) Disconnect the ignition switch connector.

   (b) Disconnect the ignition key cylinder light connector.
   (c) Remove the 2 screws and ignition switch.

INSPECTION

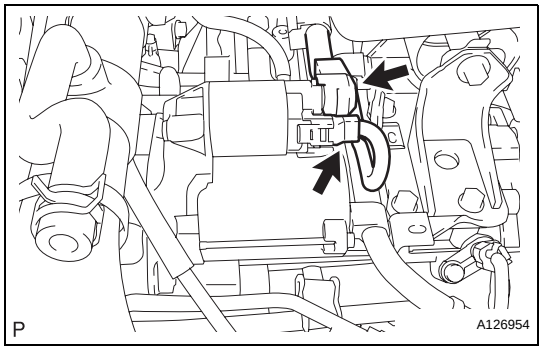


1. **INSPECT IGNITION SWITCH ASSEMBLY**
   (a) Measure the resistance of the switch.
   Standard resistance

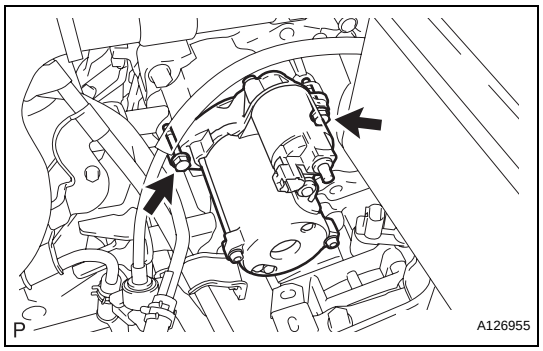


Tester Connection	Switch Condition	Specified Condition
-	LOCK	10 kΩ or higher
2 (AM1) - 3 (ACC)	ACC	Below 1 Ω
2 (AM1) - 3 (ACC) 2 (AM1) - 4 (IG1) 6 (IG2) - 7 (AM2)	ON	Below 1 Ω
1 (ST1) - 2 (AM1) 1 (ST1) - 4 (IG1) 6 (IG2) - 7 (AM2) 6 (IG2) - 8 (ST2)	START	Below 1 Ω

If the result is not as specified, replace the switch assembly.

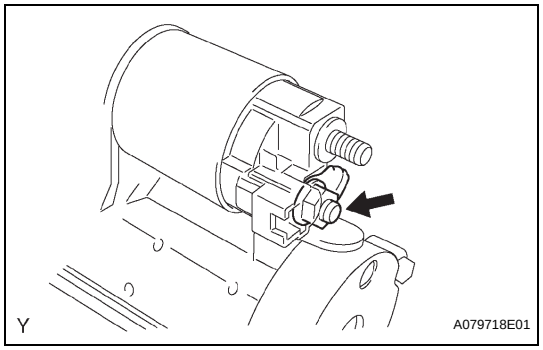


REMOVAL

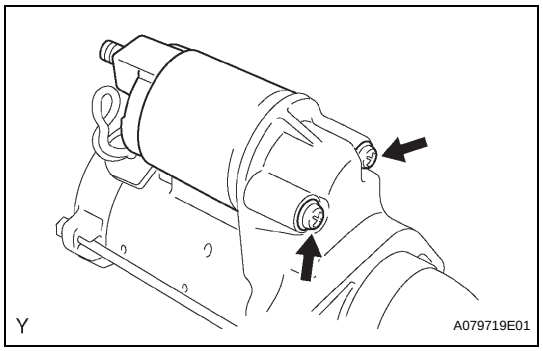


1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE BATTERY CLAMP SUB-ASSEMBLY**
   (a) Loosen the bolt and nut, and remove the battery clamp.
3. **REMOVE BATTERY INSULATOR**
4. **REMOVE BATTERY**
5. **REMOVE BATTERY TRAY**
6. **REMOVE FRONT BATTERY CARRIER**
   (a) Disconnect the 2 clamps of the engine wire.
   (b) Remove the 4 bolts and front battery carrier.

7. **REMOVE BATTERY BRACKET REINFORCEMENT**
   (a) Remove the 2 bolts and battery bracket reinforcement.
8. **REMOVE STARTER ASSEMBLY**
   (a) Disconnect the starter connector.
   (b) Open the terminal cap, remove the nut and disconnect the starter wire.



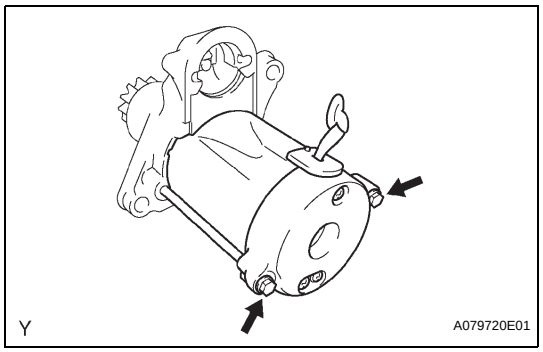
(c) Remove the 2 bolts and starter.



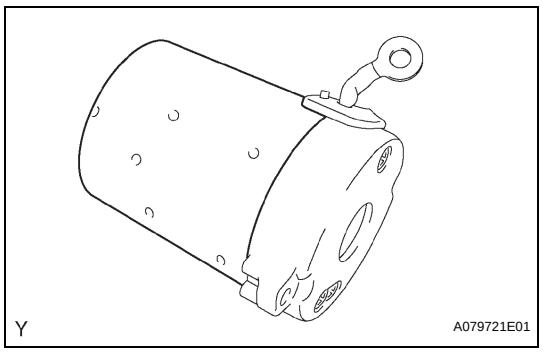
DISASSEMBLY

1. REMOVE MAGNETIC SWITCH ASSEMBLY

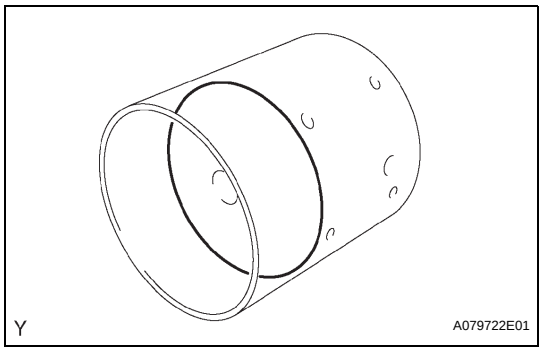
(a) Remove the nut and disconnect the lead wire from the magnetic switch assembly.



(b) Remove the 2 screws holding the magnetic switch assembly to the starter drive housing assembly.
(c) Remove the magnetic switch assembly.
(d) Remove the return spring and plunger from the starter drive housing assembly.

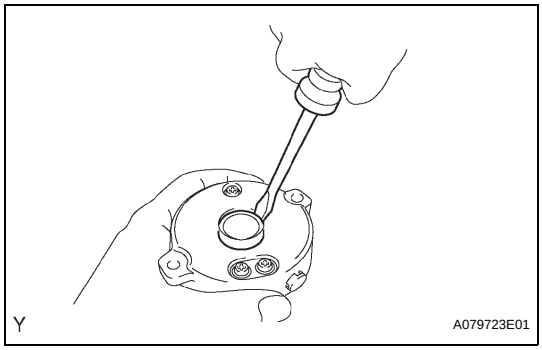


2. REMOVE STARTER YOKE ASSEMBLY

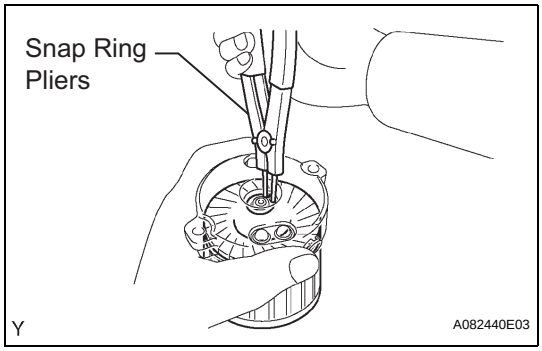


(a) Remove the 2 through-bolts, and pull out the starter yoke assembly together with the starter commutator end frame assembly.

3. REMOVE STARTER COMMUTATOR END FRAME ASSEMBLY



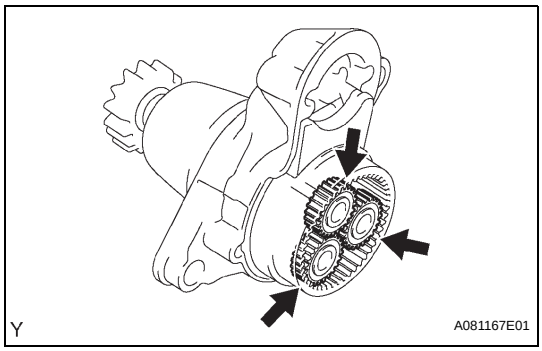
(a) Remove the starter commutator end frame assembly from the starter yoke assembly.



4. REMOVE STARTER ARMATURE PLATE

(a) Remove the starter armature plate from the starter yoke assembly.

5. REMOVE STARTER COMMUTATOR END FRAME COVER



(a) Using a screwdriver, pry out the starter commutator end frame cover.

6. REMOVE STARTER ARMATURE ASSEMBLY

(a) Using snap ring pliers, remove the snap ring and plate washer.

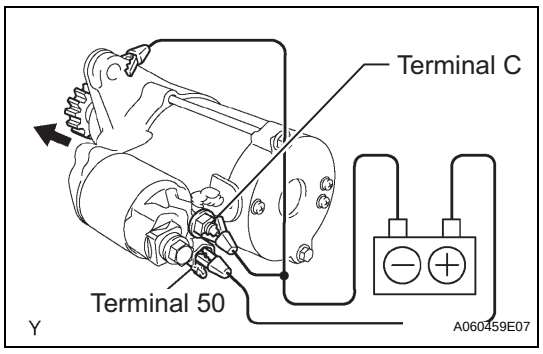
(b) Remove the starter armature assembly from the starter commutator end frame assembly.

7. REMOVE PLANETARY GEAR

(a) Remove the 3 planetary gears from the starter drive housing assembly.

INSPECTION

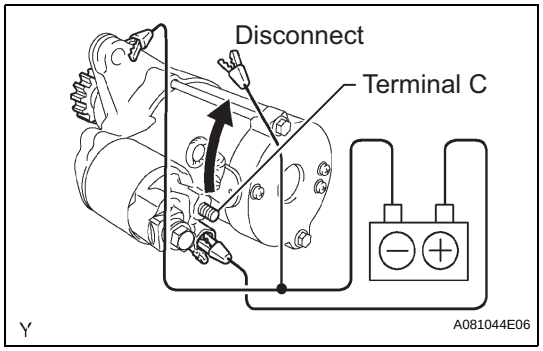
1. INSPECT STARTER ASSEMBLY



CAUTION:

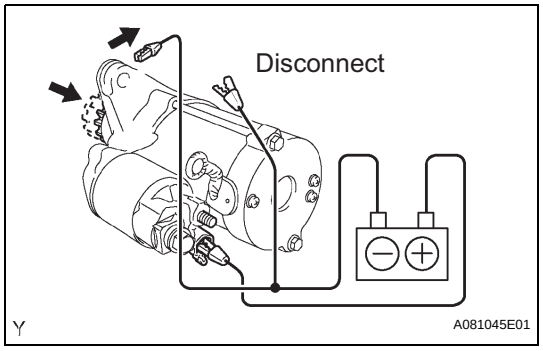
These tests must be performed within 3 to 5 seconds to avoid burning out the coil.

(a) Perform the pull-in test.



(1) Disconnect the lead wire from terminal C.

(2) Connect the battery to the magnetic switch assembly as shown in the illustration. Check that the clutch pinion gear extends.
If the clutch pinion gear does not move, replace the magnetic switch assembly.

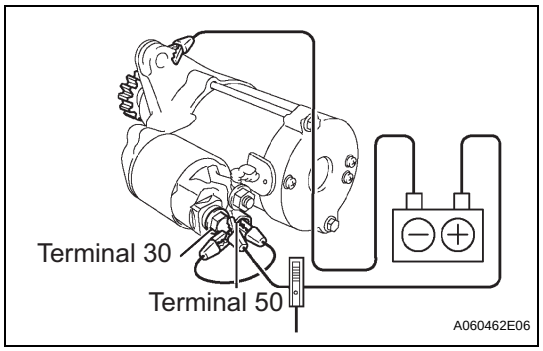


(b) Perform the hold-in test.

(1) Maintain the battery connections of the pull-in test above, but disconnect the negative (-) lead from terminal C. Check that the pinion gear remains extended.
If the clutch pinion gear returns inward, replace the magnetic switch assembly.

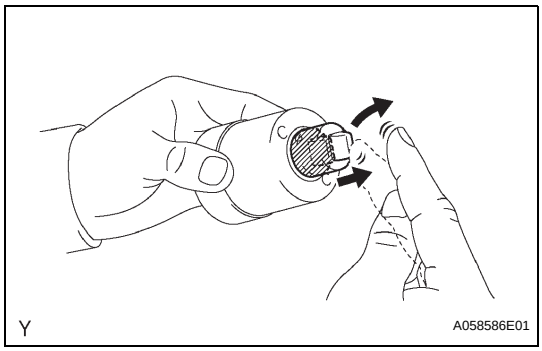
(c) Check the clutch pinion gear return.

(1) Disconnect the negative (-) lead from the switch body. Check that the clutch pinion gear returns.
If the clutch pinion gear does not return, replace the magnetic switch assembly.



(d) Perform the no-load performance test.

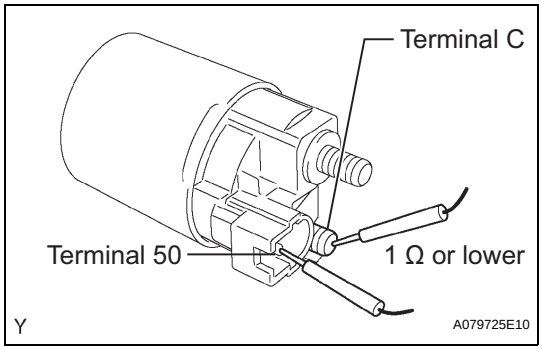
(1) Connect the lead wire to terminal C. Make sure that the lead is not grounded.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)



(2) Clamp the starter in a vise.

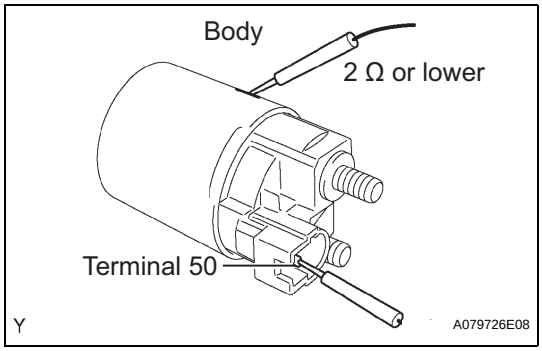
(3) Connect the battery and an ammeter to the starter as shown in the illustration.

(4) Check that the starter rotates smoothly and steadily while the pinion gear is moving out. Then measure the current.
Standard current:
90 A or less at 11.5 V
If the test result is not as specified, overhaul the starter assembly.



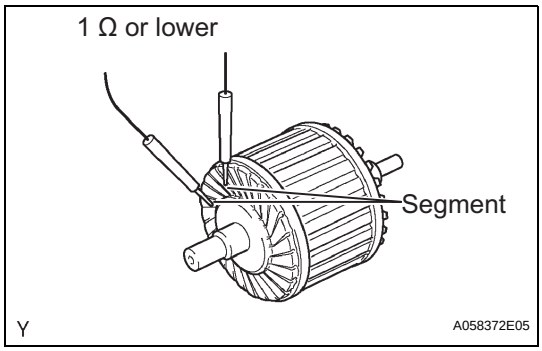
ST

2. INSPECT MAGNETIC SWITCH ASSEMBLY



(a) Check the plunger.

(1) Push in the plunger and check that it returns quickly to its original position.
If necessary, replace the magnetic switch assembly.

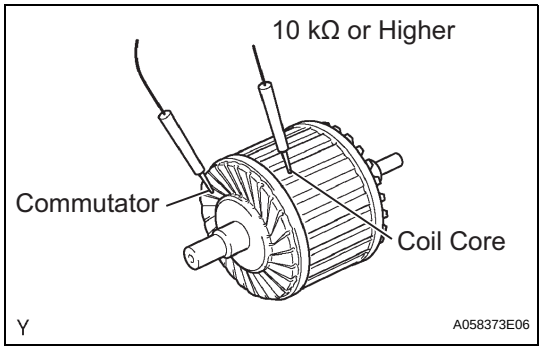


(b) Check if the pull-in coil has an open circuit.

(1) Measure the resistance between terminals 50 and C.
Standard resistance:
1 Ω or lower
If the result is not as specified, replace the magnetic switch assembly.

(c) Check if the hold-in coil has an open circuit.

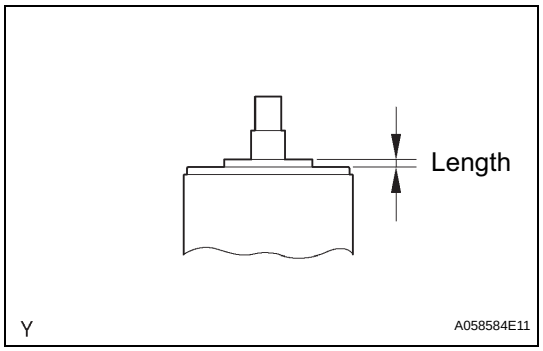
(1) Measure the resistance between terminal 50 and the switch body.
Standard resistance:
2 Ω or lower
If the result is not as specified, replace the magnetic switch assembly.



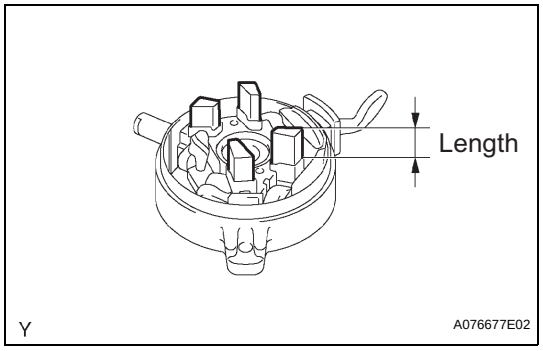
3. INSPECT STARTER ARMATURE ASSEMBLY

(a) Check if the commutator has an open circuit.

(1) Measure the resistance between the segments of the commutator.
Standard resistance:
1 Ω or lower
If the result is not as specified, replace the starter armature assembly.



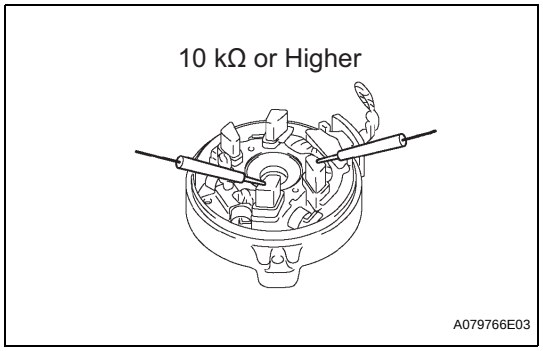
ST



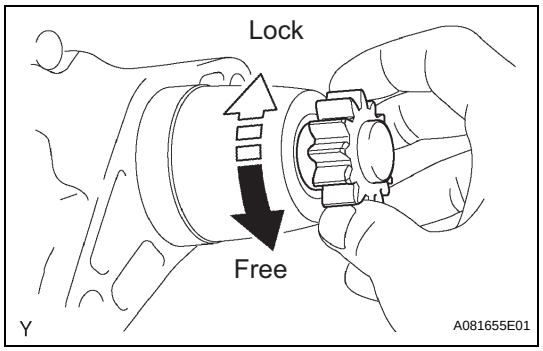
(b) Check if the commutator is grounded.

(1) Measure the resistance between the commutator and armature coil core.
Standard resistance:
10 kΩ or higher
If the result is not as specified, replace the starter armature assembly.

(c) Check the commutator for contamination and burns on its surface.
If the surface is dirty or burnt, correct it with sandpaper (No. 400) or a lathe.



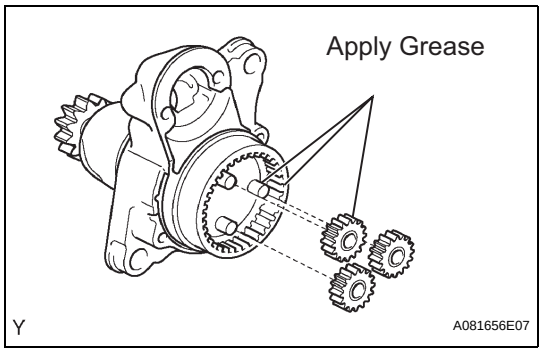
(d) Using a vernier caliper, measure the commutator's length.
Standard length:
3.1 mm (0.122 in.)
Maximum length:
3.8 mm (0.150 in.)
If the length is greater than the maximum, replace the starter armature assembly.



4. INSPECT STARTER COMMUTATOR END FRAME ASSEMBLY

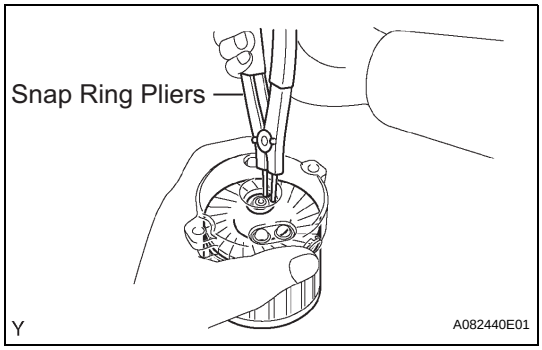
(a) Using a vernier caliper, measure the brush length.
Standard length:
9.0 mm (0.354 in.)
Minimum length:
4.0 mm (0.158 in.)
If the length is less than the minimum, replace the starter commutator end frame assembly.

(b) Check the brush insulation.
(1) Measure the resistance between the positive (+) and negative (-) brush.
Standard resistance:
10 kΩ or higher
If the result is not as specified, repair or replace the starter commutator end frame assembly.



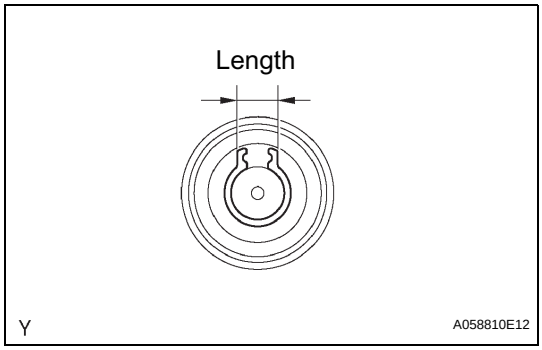
5. INSPECT STARTER CLUTCH

(a) Check the starter clutch.
(1) Rotate the clutch pinion gear counterclockwise and check that it turns freely. Try to rotate the clutch pinion gear clockwise and check that it locks.
If necessary, replace the starter drive housing assembly.



REASSEMBLY

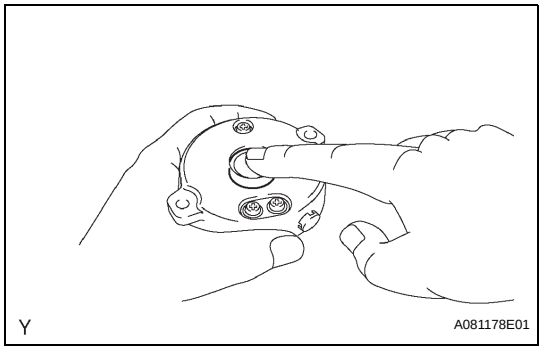
HINT:
Use high-temperature grease to lubricate the bearings, gears, return spring and steel ball when assembling the starter.



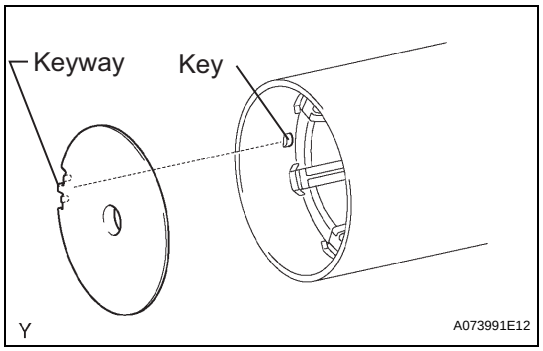
1. INSTALL PLANETARY GEAR

(a) Apply grease to the planetary gears and pin parts of the planetary shaft.
(b) Install the 3 planetary gears.

2. INSTALL STARTER ARMATURE ASSEMBLY

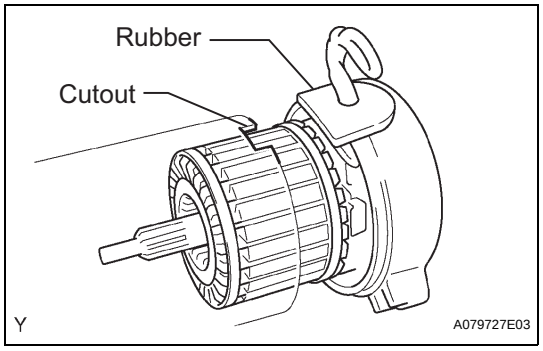


(a) Apply grease to the plate washers and the armature shaft.
(b) Install the starter armature assembly to the starter commutator end frame assembly.
(c) Using snap ring pliers, install the plate washer and a new snap ring.

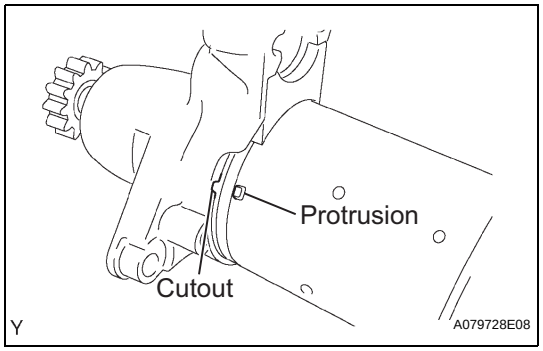


(d) Using a vernier caliper, measure the length of the snap ring.
Maximum length:
5.0 mm (0.197 in.)
If the length is greater than the maximum, replace it with a new snap ring.

3. INSTALL STARTER COMMUTATOR END FRAME COVER

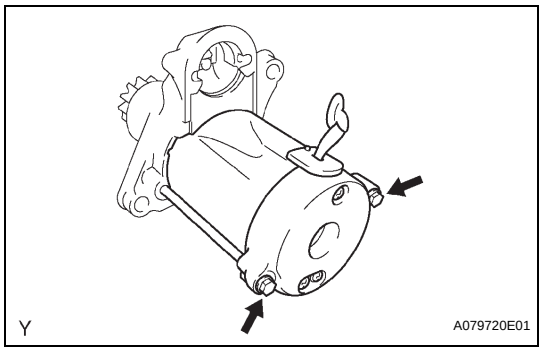


(a) Install the starter commutator end frame cover to the starter commutator end frame assembly.



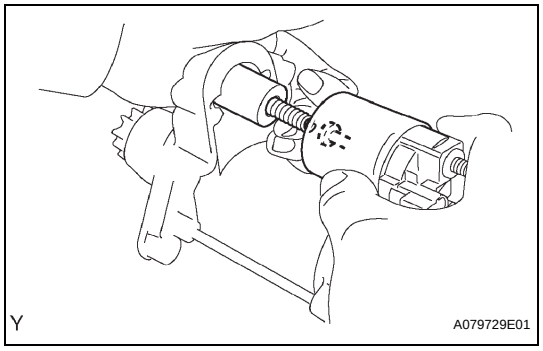
4. INSTALL STARTER ARMATURE PLATE

(a) Insert the starter armature plate to the starter yoke assembly.
   (1) Align the keyway of the starter armature plate with the key inside the starter yoke assembly, and install the starter armature plate.



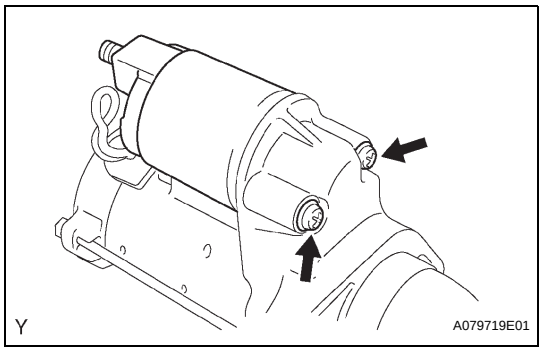
5. INSTALL STARTER COMMUTATOR END FRAME ASSEMBLY

(a) Align the rubber of the starter end frame assembly with the cutout of the starter yoke assembly.
(b) Install the starter commutator end frame assembly to the starter yoke assembly.

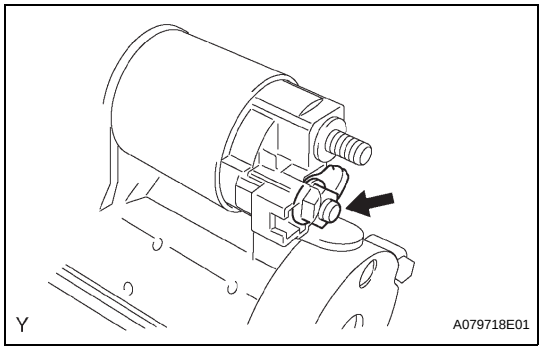


6. INSTALL STARTER YOKE ASSEMBLY

(a) Align the protrusion of the starter yoke assembly with the cutout of the starter drive housing assembly.



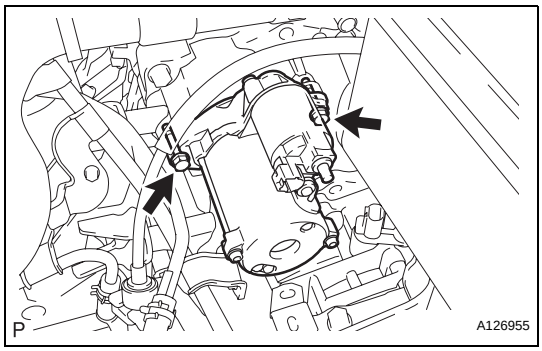
(b) Install the starter yoke assembly with the 2 through-bolts.
Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)



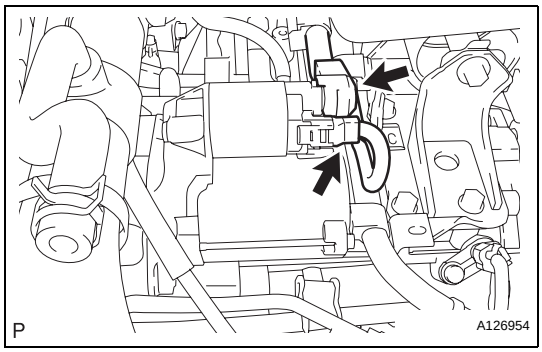
7. INSTALL MAGNETIC SWITCH ASSEMBLY

(a) Apply grease to the plunger and the hook.
(b) Hang the plunger hook of the magnetic switch assembly on the drive lever.
(c) Install the plunger and return spring.

ST



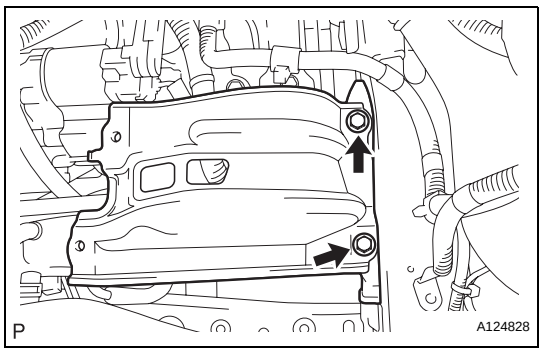
(d) Install the magnetic switch with the 2 screws.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)



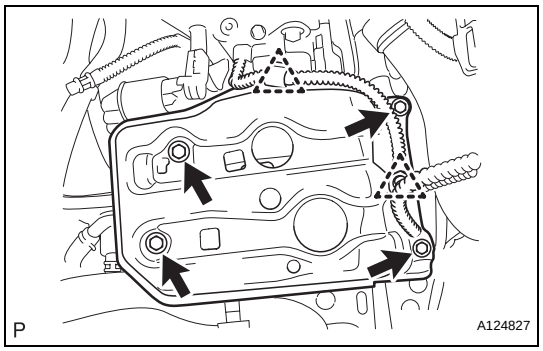
(e) Connect the lead wire to the magnetic switch with the nut.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

INSTALLATION

1. INSTALL STARTER ASSEMBLY



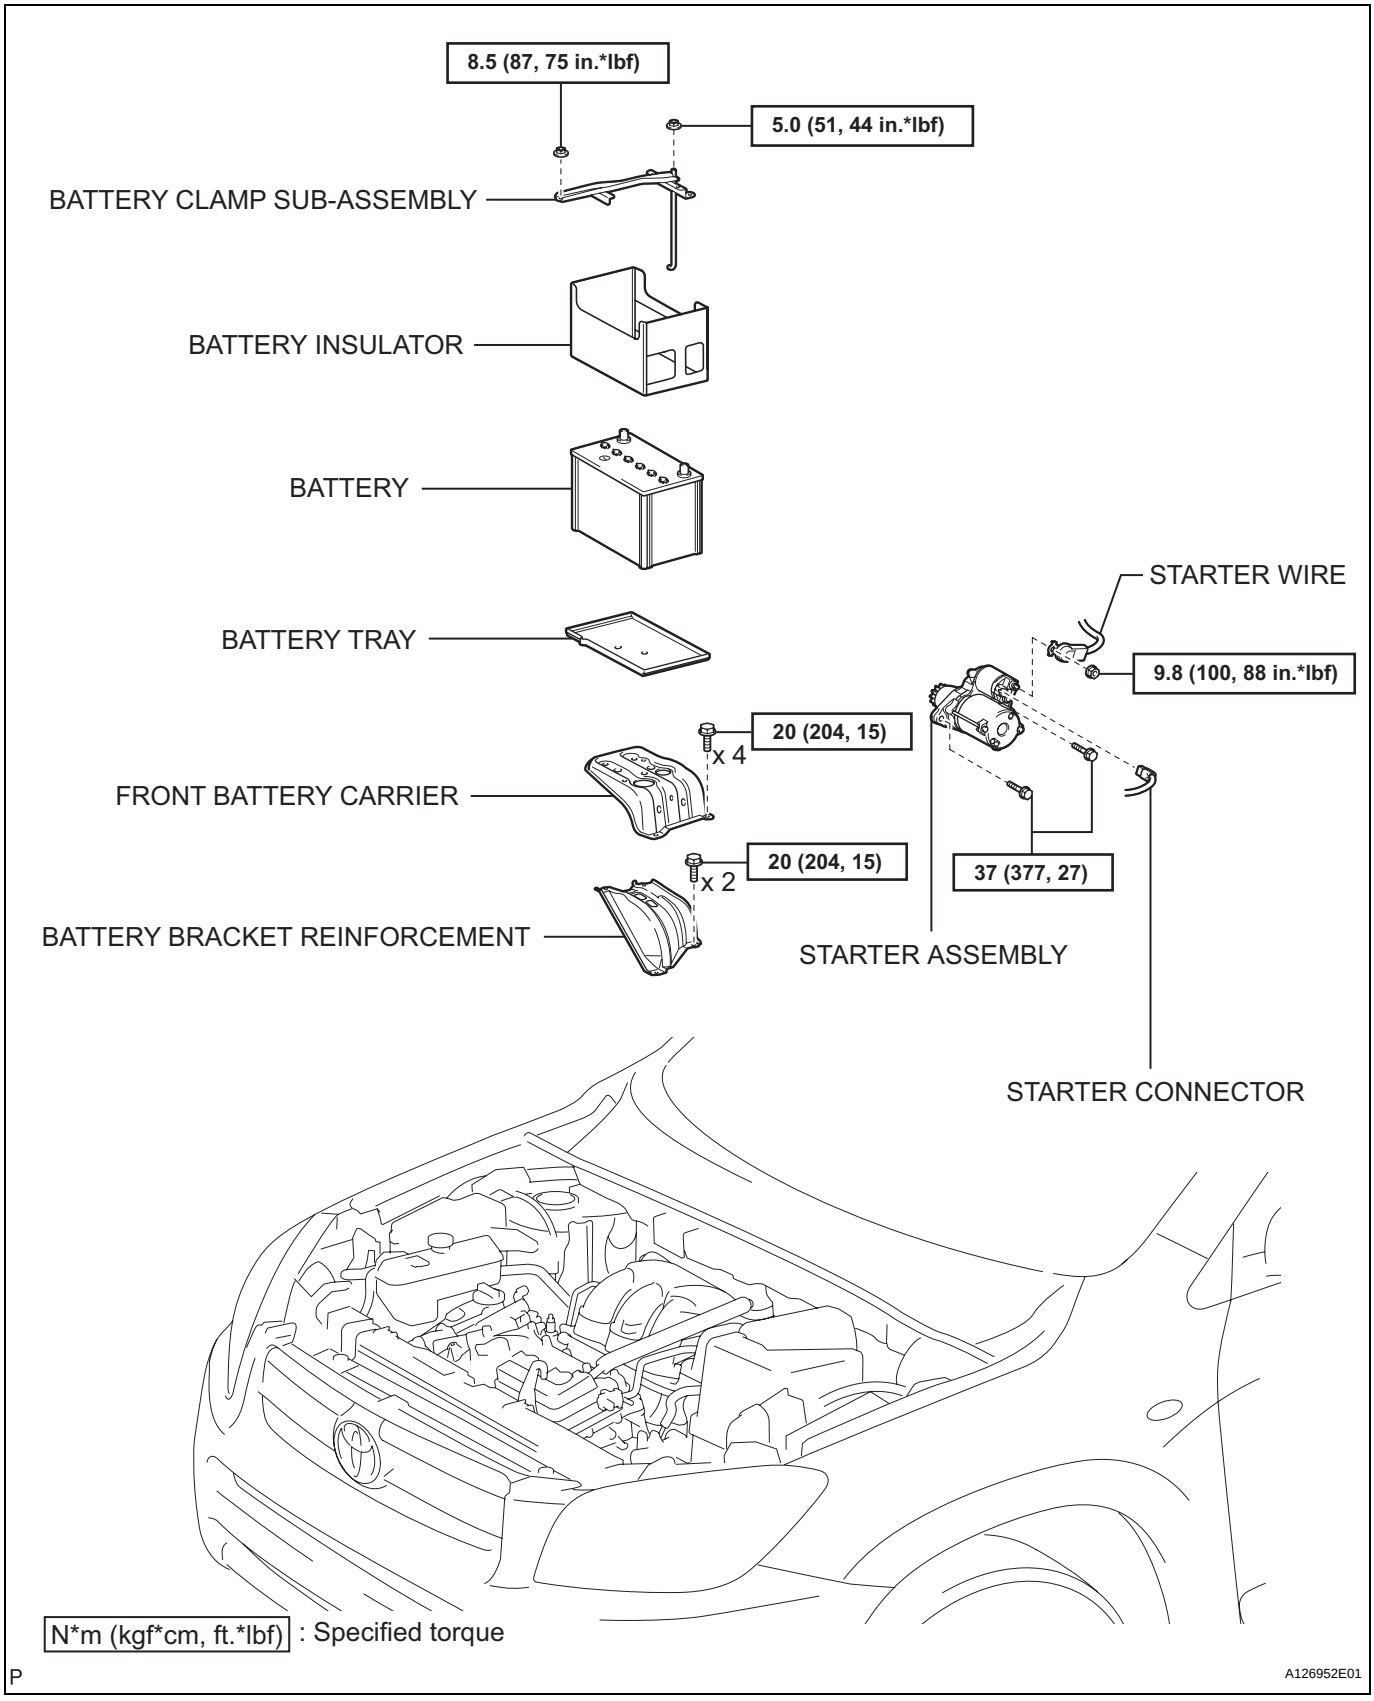
(a) Install the starter with the 2 bolts.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)



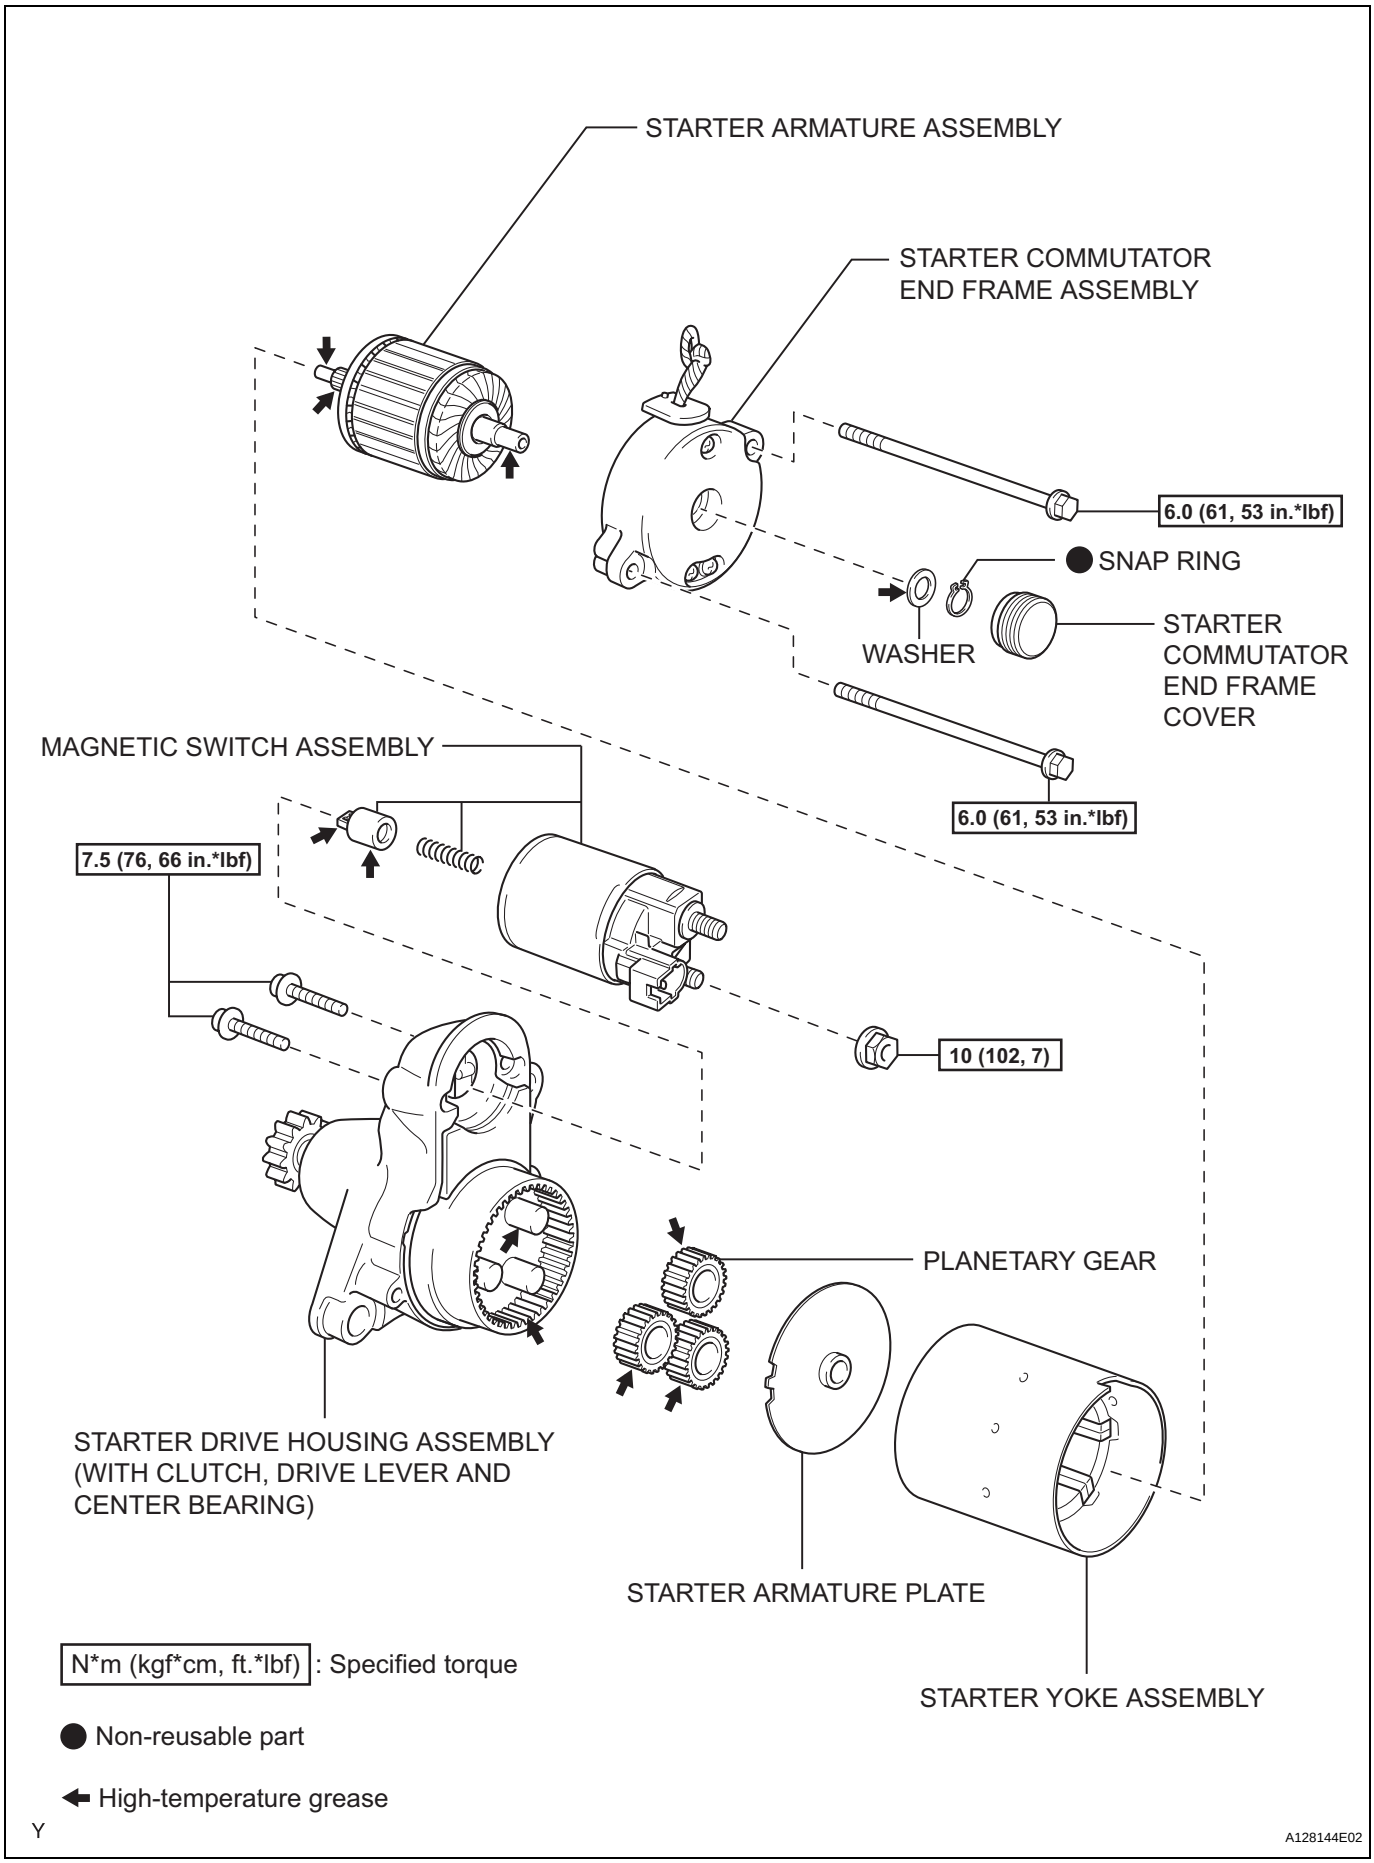
(b) Connect the starter connector.
(c) Install the terminal nut and cover the nut with the cap.
Torque: 9.8 N*m (100 kgf*cm, 88 in.*lbf)

2. INSTALL BATTERY BRACKET REINFORCEMENT

(a) Install the battery bracket reinforcement with the 2 bolts.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)



ST



3. **INSTALL FRONT BATTERY CARRIER**
   (a) Install the front battery carrier with the 4 bolts.
   Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
   (b) Connect the 2 clamps of the engine wire.
4. **INSTALL BATTERY TRAY**
5. **INSTALL BATTERY**
6. **INSTALL BATTERY INSULATOR**
7. **INSTALL BATTERY CLAMP SUB-ASSEMBLY**
   (a) Install the battery clamp by tightening the bolt and nut.
   Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf) for nut
   8.5 N*m (87 kgf*cm, 75 in.*lbf) for bolt
8. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

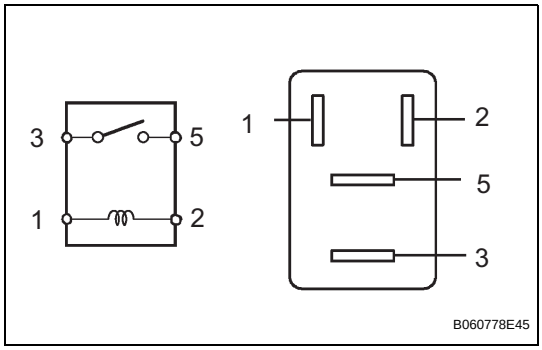
STARTER RELAY



ON-VEHICLE INSPECTION

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

2. REMOVE STARTER RELAY (Marking: ST)

(a) Remove the starter relay from the No. 7 relay block.

3. INSPECT STARTER RELAY (Marking: ST)

(a) Measure the resistance of the relay.

Standard resistance

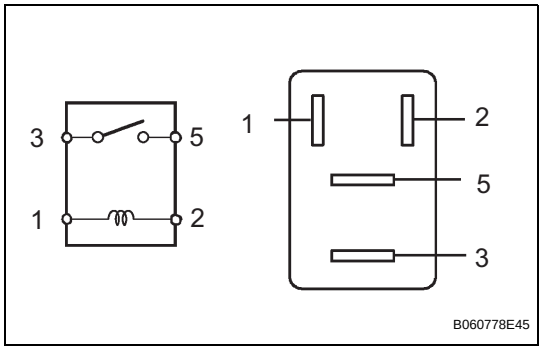
Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

If the resistance is not as specified, replace the relay.

4. INSTALL STARTER RELAY (Marking: ST)

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

STARTER RELAY



ON-VEHICLE INSPECTION

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

2. REMOVE STARTER RELAY (Marking: ST)

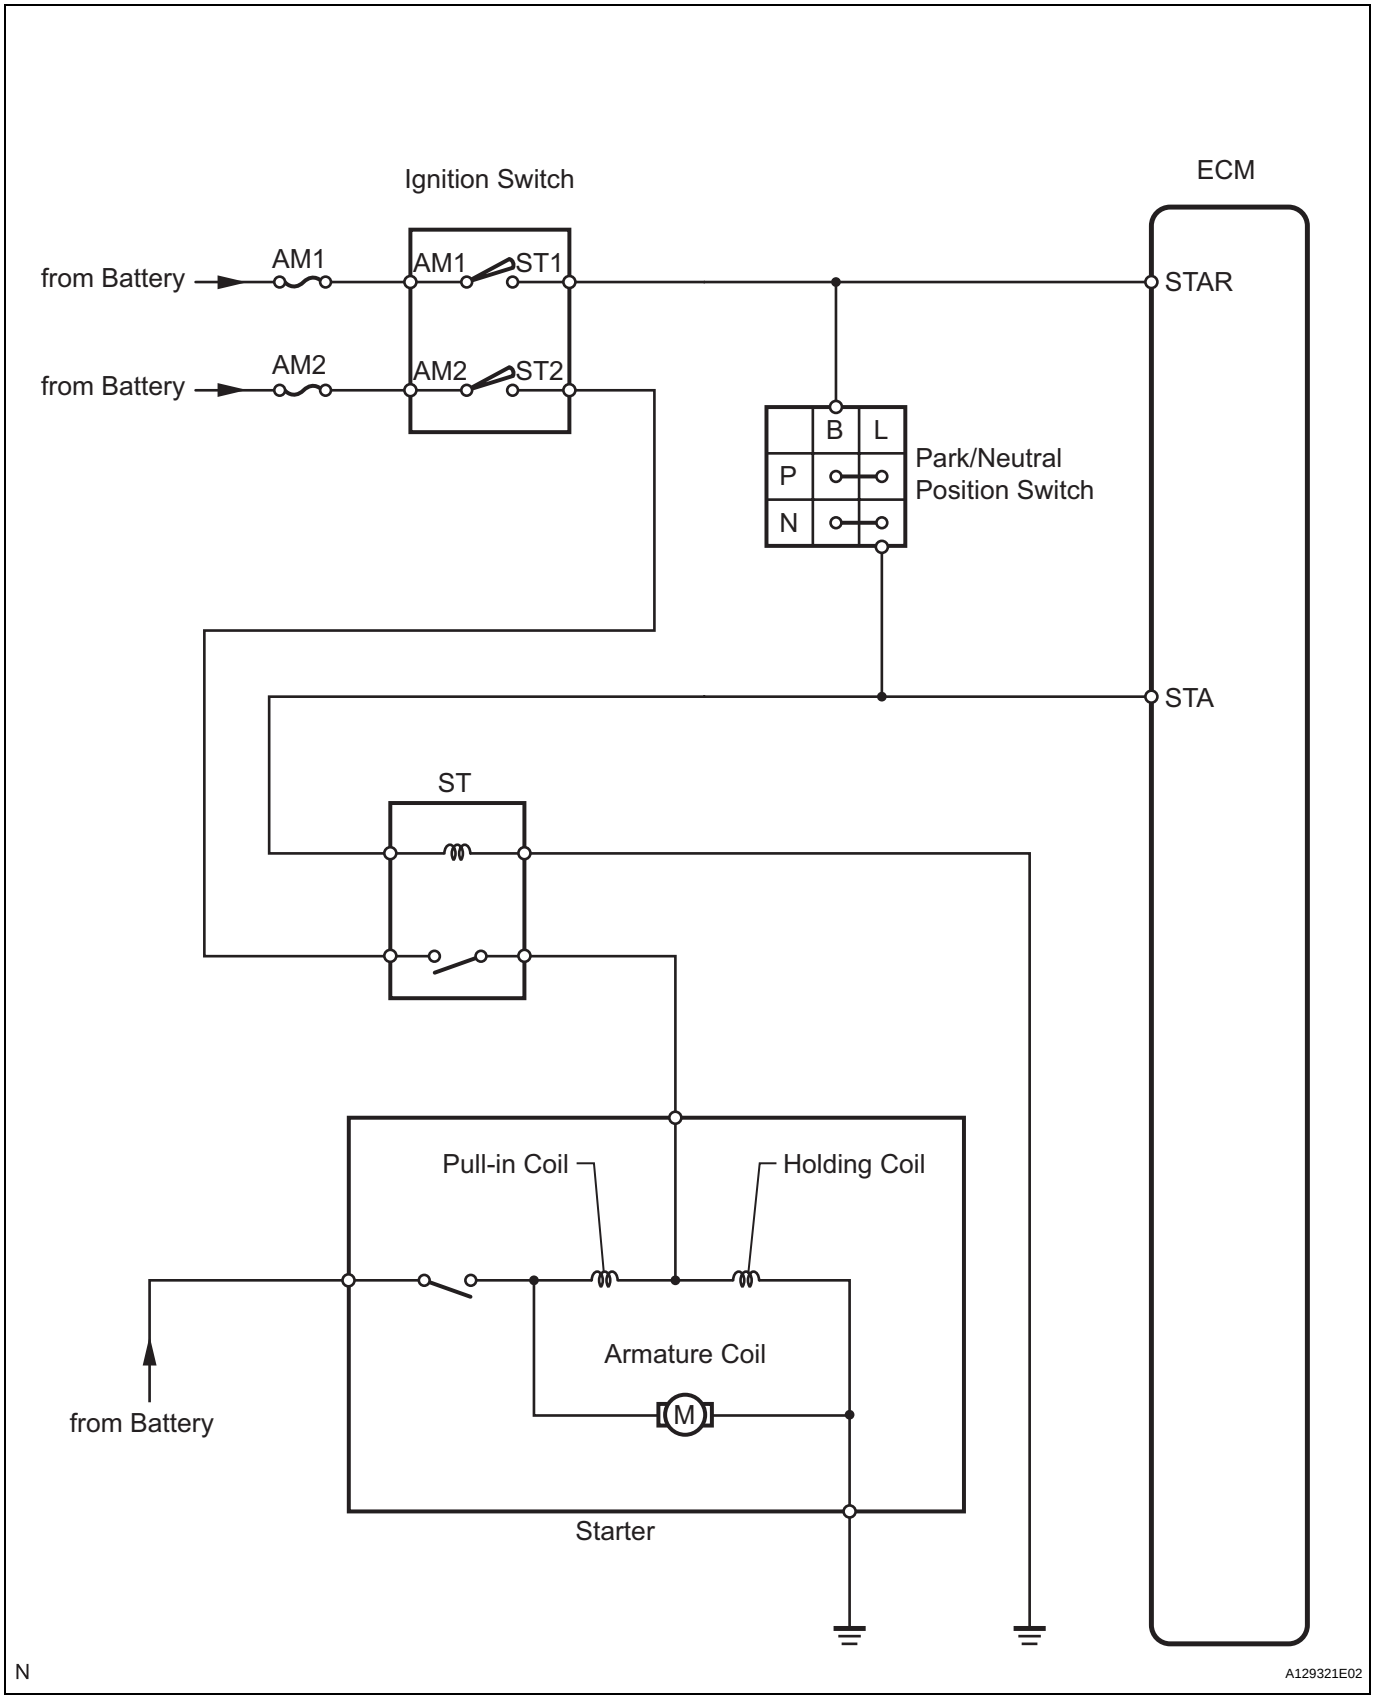
(a) Remove the starter relay from the No. 7 relay block.

3. INSPECT STARTER RELAY (Marking: ST)

(a) Measure the resistance of the relay.

Standard resistance

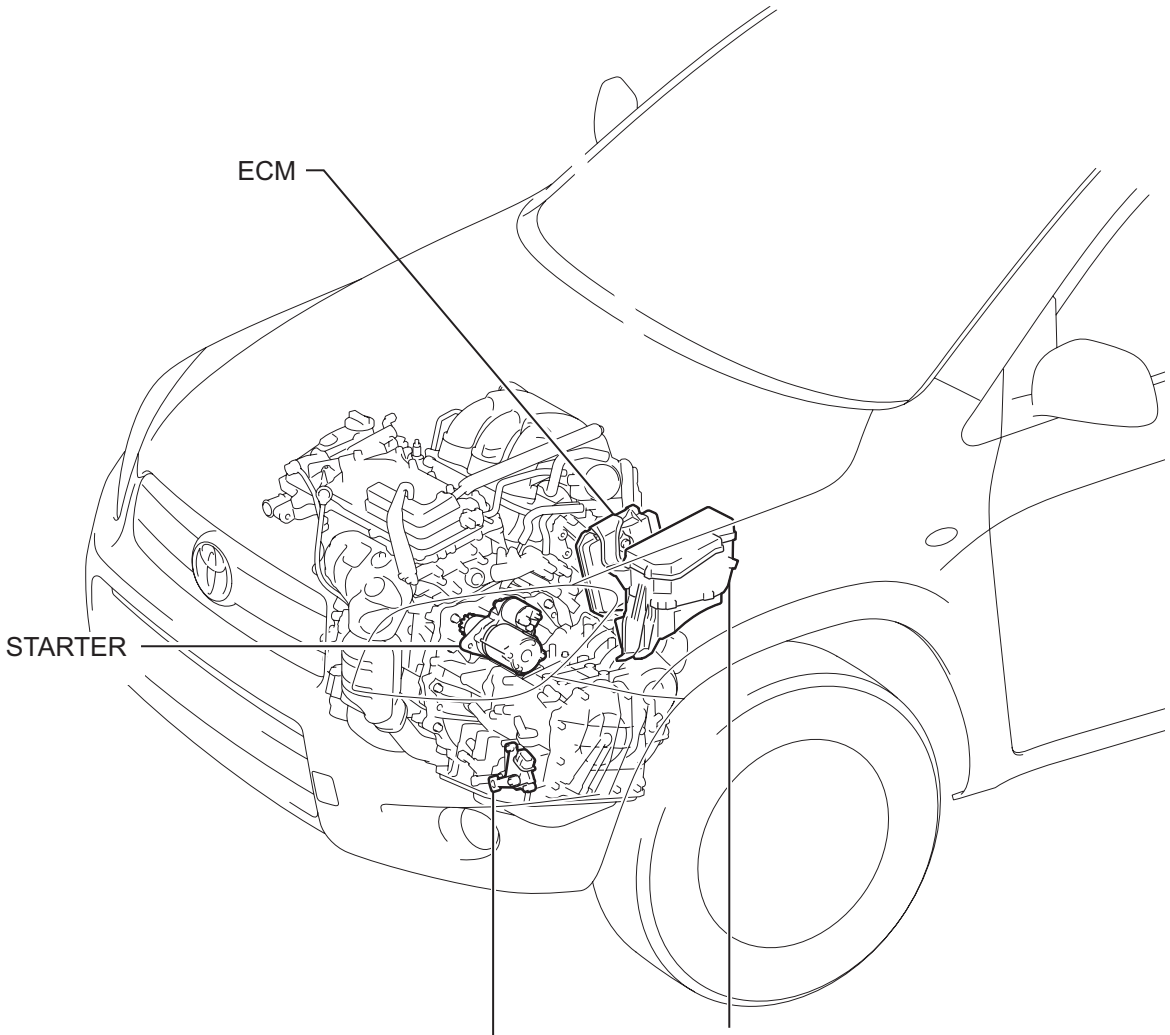
Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)



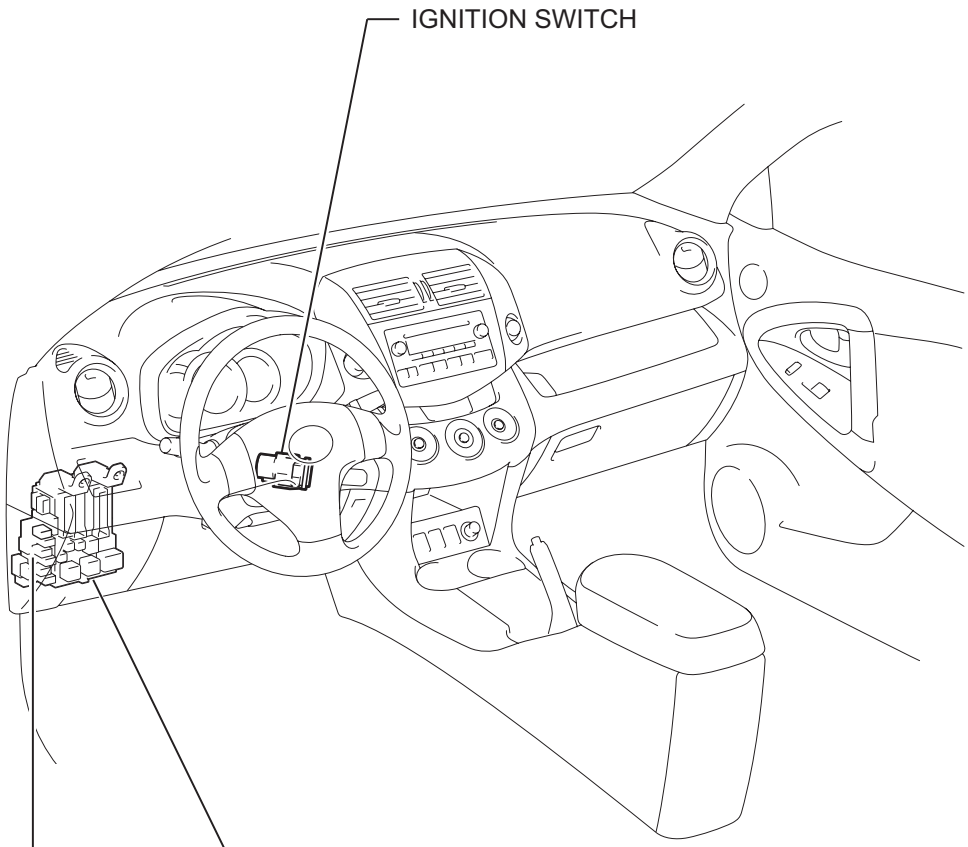
If the resistance is not as specified, replace the relay.

4. INSTALL STARTER RELAY (Marking: ST)

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



SYSTEM DIAGRAM



The starting system rotates the starter motor according to the signals from the ignition switch and PNP switch.

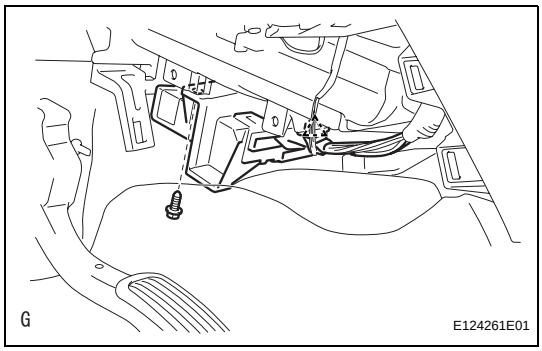
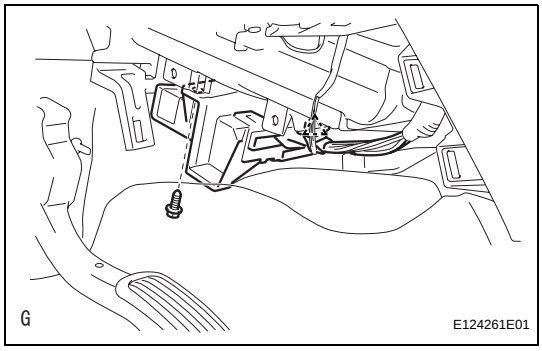
AIR CONDITIONING AMPLIFIER



COMPONENTS

G

E124260E01

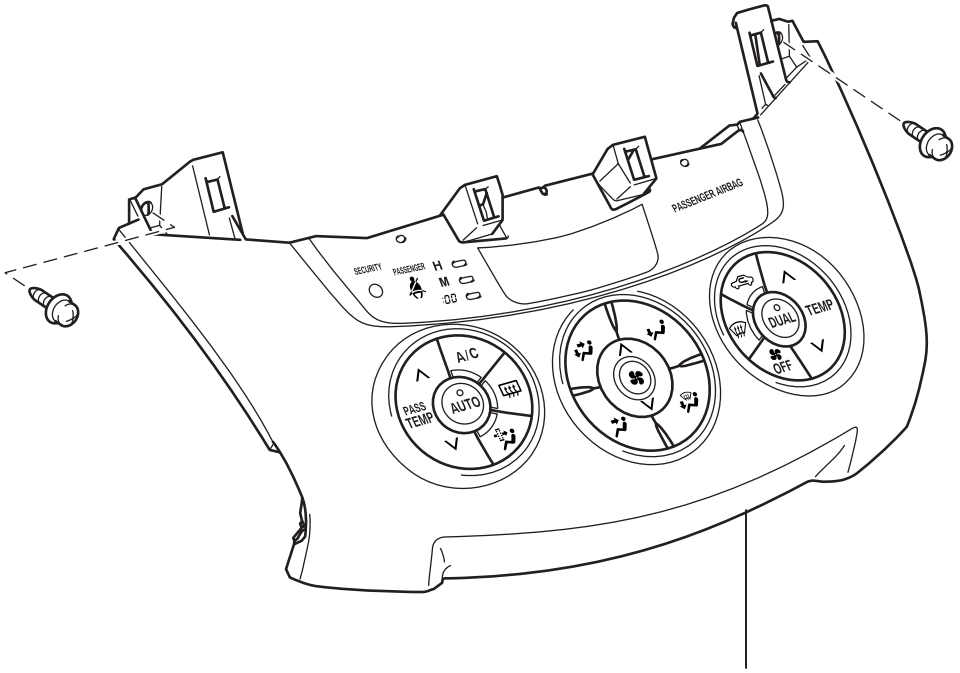


AC

REMOVAL

1. REMOVE AIR CONDITIONING AMPLIFIER ASSEMBLY

(a) Detach the clamp.
(b) Disconnect the connector.
(c) Remove the screw and A/C amplifier.



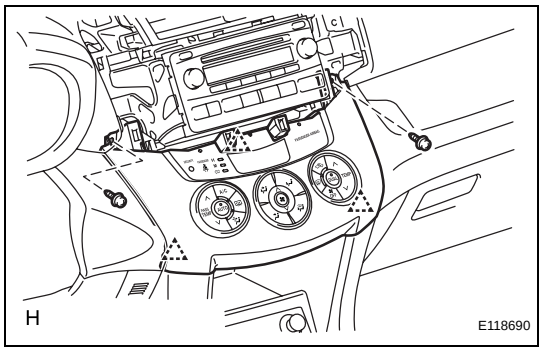
INSTALLATION

1. INSTALL AIR CONDITIONING AMPLIFIER ASSEMBLY

(a) Install the A/C amplifier with the screw.
(b) Connect the connector.
(c) Attach the clamp.

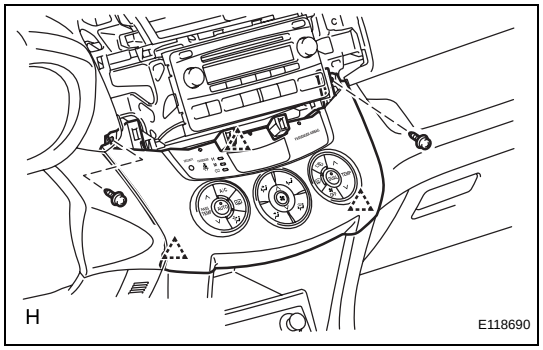
AIR CONDITIONING CONTROL ASSEMBLY (for Automatic Air Conditioning System)

COMPONENTS



AIR CONDITIONING CONTROL ASSEMBLY

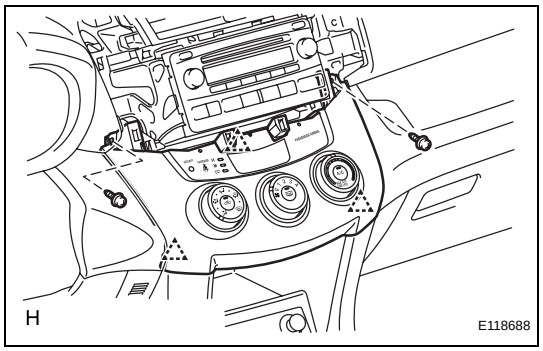
H



E118689E01

REMOVAL

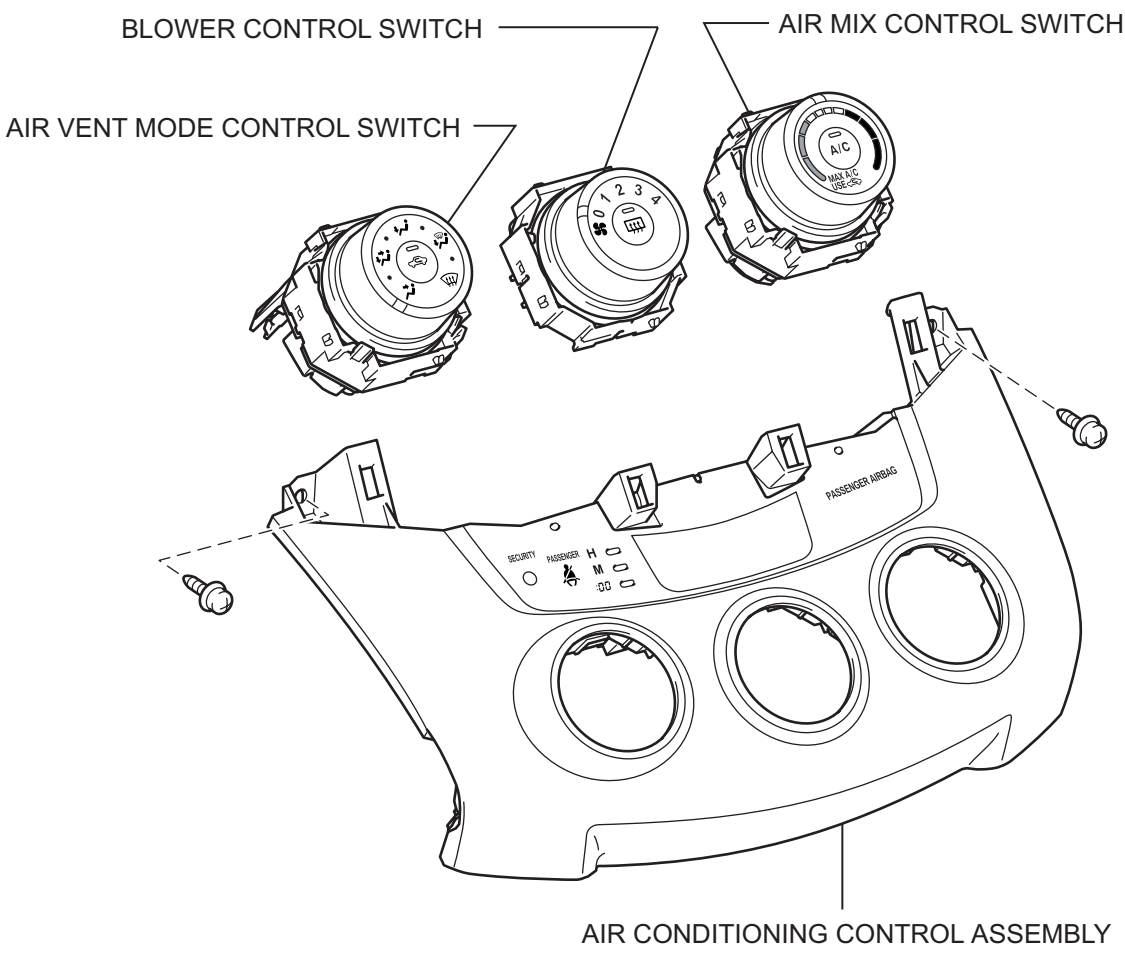
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   NOTICE:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL CENTER (See page IP-5)**
3. **REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL CENTER (See page IP-5)**
4. **REMOVE RADIO RECEIVER (See page IP-5)**
5. **REMOVE AIR CONDITIONING CONTROL ASSEMBLY**
   (a) Remove the 2 screws.
   (b) Using a screwdriver, detach the 3 clips.
   HINT:
   Tape the screwdriver tip before use.
   (c) Connect the connectors and remove the air conditioning control.



INSTALLATION

1. **INSTALL AIR CONDITIONING CONTROL ASSEMBLY**
   (a) Connect the connectors.
   (b) Attach the 3 clips to install the air conditioning control.
   (c) Install the 2 screws.
2. **INSTALL RADIO RECEIVER (See page IP-10)**
3. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL CENTER (See page IP-10)**
4. **INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL CENTER (See page IP-10)**
5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
6. **CHECK SRS WARNING LIGHT**
   (a) Check the SRS warning light (see page RS-37).

AC

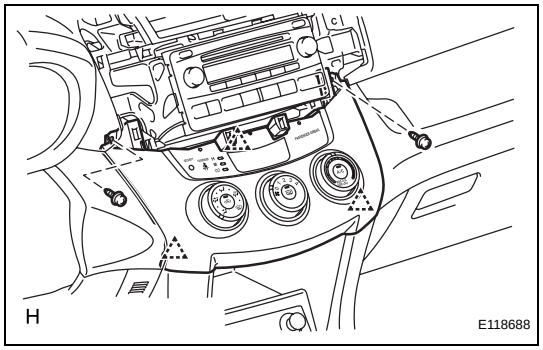


INSTALLATION

1. **INSTALL AIR VENT MODE CONTROL SWITCH**
   (a) Attach the 2 claws to install the mode control switch.
2. **INSTALL BLOWER CONTROL SWITCH**
   (a) Attach the 2 claws to install the blower control switch.
3. **INSTALL AIR MIX CONTROL SWITCH**
   (a) Attach the 2 claws to install the air mix control switch.
4. **INSTALL AIR CONDITIONING CONTROL ASSEMBLY**
   (a) Connect the connectors.
   (b) Attach the 3 clips to install the air conditioning control.
   (c) Install the 2 screws.
5. **INSTALL RADIO RECEIVER ASSEMBLY (w/ Radio Receiver) (See page IP-10)**
6. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL CENTER (See page IP-10)**
7. **INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL CENTER (See page IP-10)**
8. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
9. **CHECK SRS WARNING LIGHT**
   (a) Check the SRS warning light (see page RS-37).

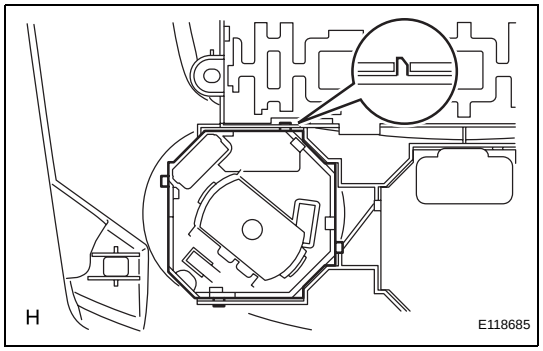
AIR CONDITIONING CONTROL ASSEMBLY (for Manual Air Conditioning System)

COMPONENTS



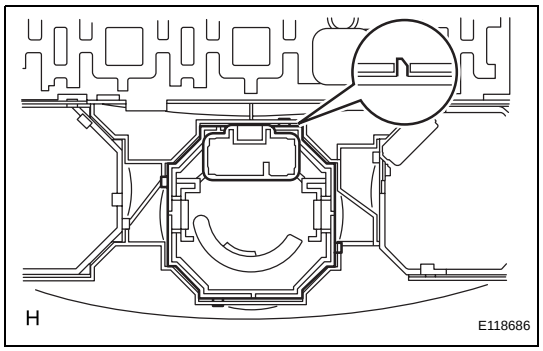
H

E118684E01

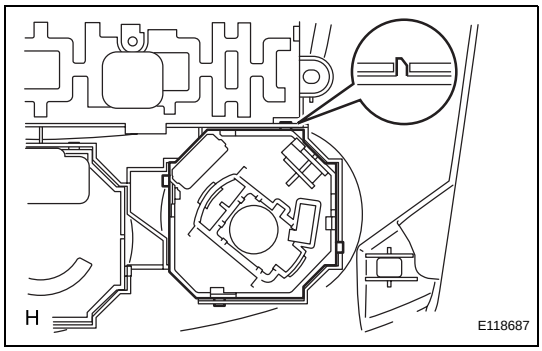


AC

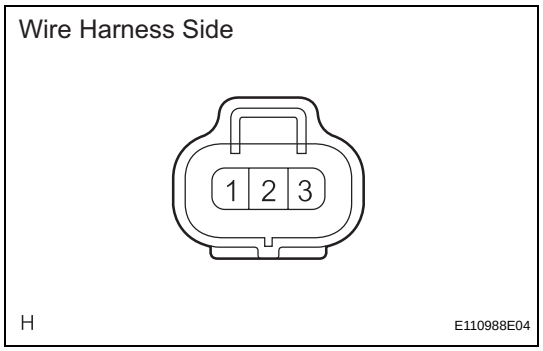
REMOVAL



1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   NOTICE:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL CENTER (See page IP-5)**
3. **REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL CENTER (See page IP-5)**
4. **REMOVE RADIO RECEIVER ASSEMBLY (See page IP-5)**
5. **REMOVE AIR CONDITIONING CONTROL ASSEMBLY**
   (a) Remove the 2 screws.
   (b) Using a screwdriver, detach the 3 clips.
   HINT:
   Tape the screwdriver tip before use.
   (c) Disconnect the connectors and remove the air conditioning control.



6. **REMOVE AIR MIX CONTROL SWITCH**
   (a) Detach the 2 claws and remove the air mix control switch.



7. **REMOVE BLOWER CONTROL SWITCH**
   (a) Detach the 2 claws and remove the blower control switch.

8. REMOVE AIR VENT MODE CONTROL SWITCH

(a) Detach the 2 claws and remove the mode control switch.

AIR CONDITIONING PRESSURE SENSOR

ON-VEHICLE INSPECTION

1. CHECK PRESSURE SENSOR

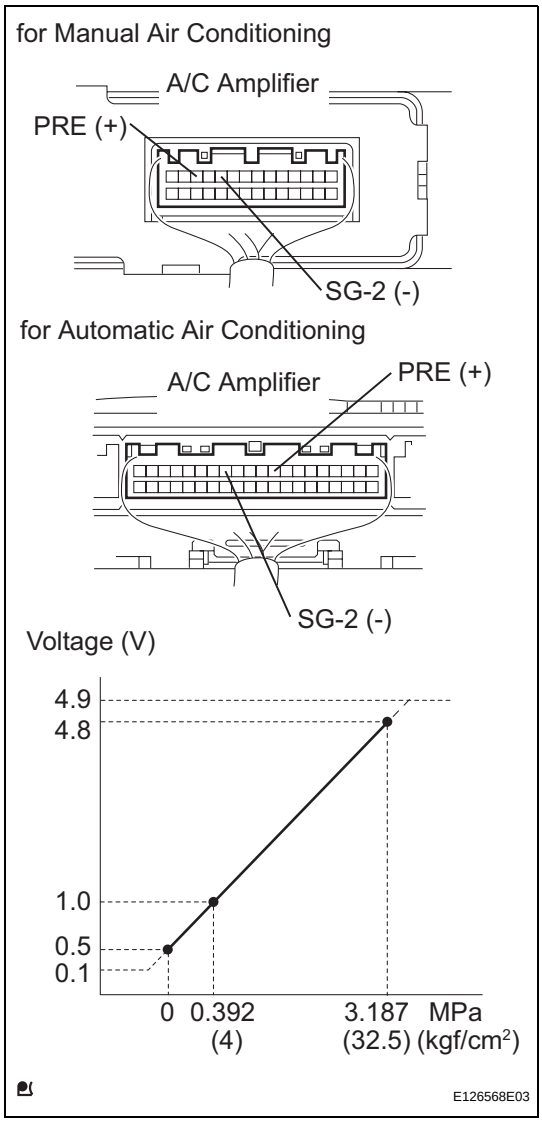
(a) Check the wire harness.

(1) Disconnect the connector of the pressure sensor.

(2) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
1 - Body ground	Below 1 Ω



(3) Turn the ignition switch ON.

(4) Measure the voltage of the wire harness side connector.

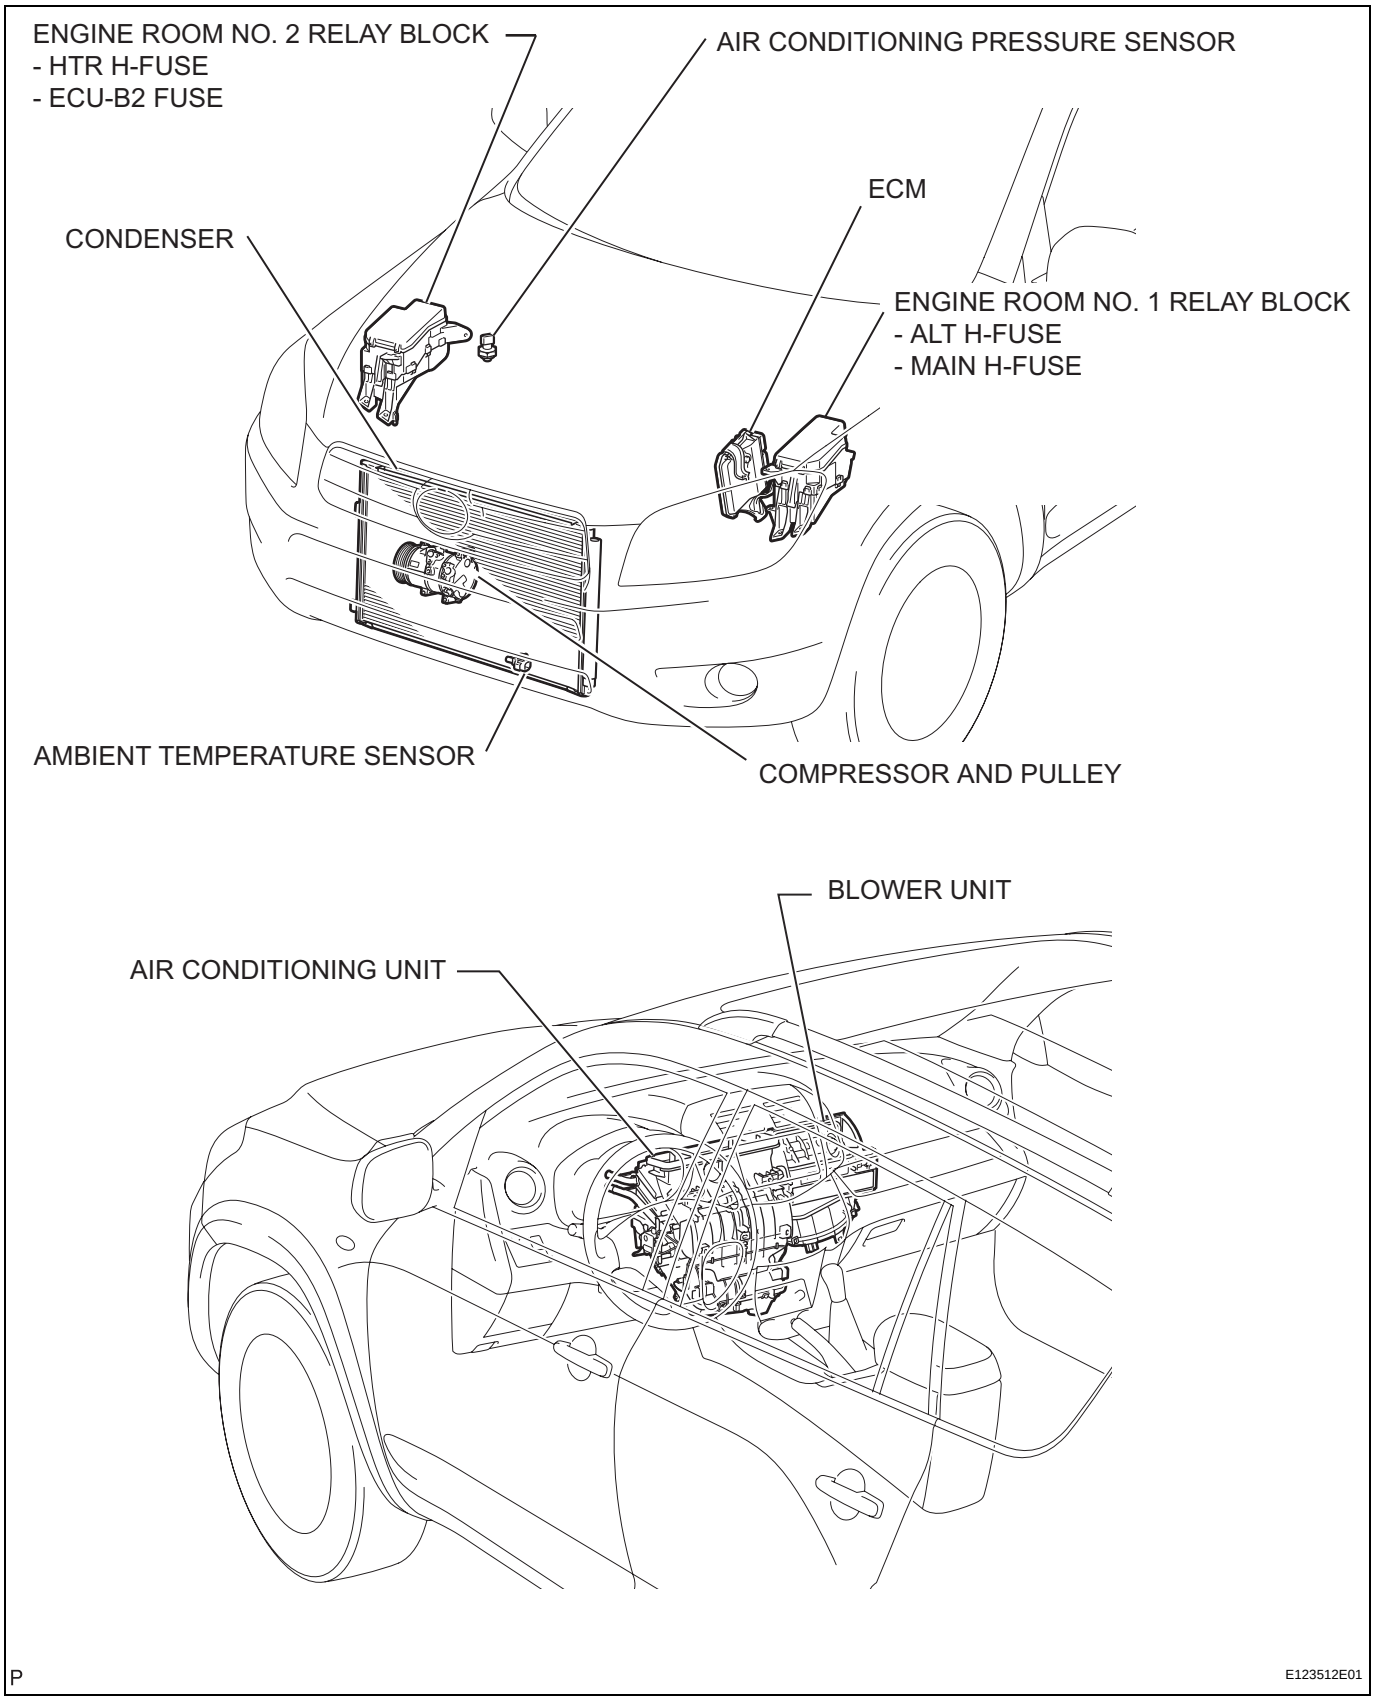
Standard voltage

Tester Connection	Specified Condition
1 - 3	4.7 to 5.3 V

If the result is not as specified, replace the pressure sensor.

(b) Check the pressure sensor.
(1) Set the manifold gauge.
(2) Connect the connector to the pressure sensor.
(3) Warm up the engine.
(4) Switch the A/C ON.
(5) Measure the voltage.

Standard voltage



Tester Connection	Refrigerant Pressure	Specified Condition
for Automatic Air Conditioner: E37-9 (PRE) - E37-13 (SG-2)	**0.176 to 3.025 MPa (1.8 to 30.9 kgf/cm^2)**	**0.76 to 4.74 V**
for Manual Air Conditioner: E36-12 (PRE) - E36-10 (SG-2)	**0.176 to 3.025 MPa (1.8 to 30.9 kgf/cm^2)**	**0.76 to 4.74 V**

If the result is not as specified, replace the pressure sensor.

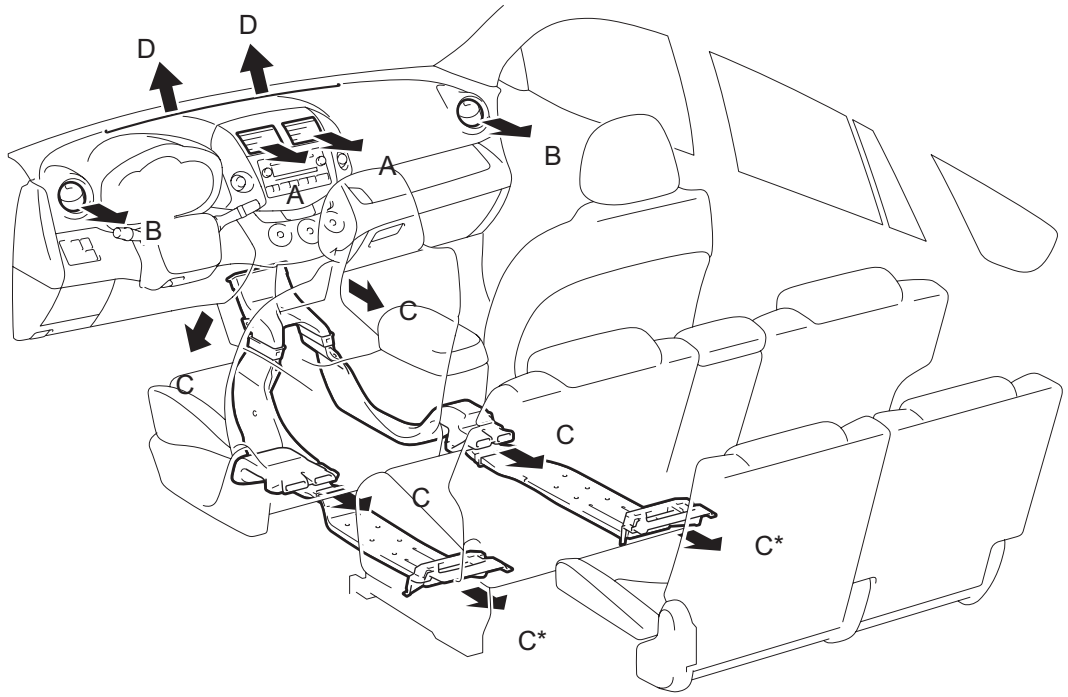
SYSTEM DESCRIPTION

1. GENERAL

(a) The air conditioning system has the following features:

- In accordance with the temperature set using the temperature control switch, the air conditioning amplifier determines the outlet temperature based on the input signals from various sensors. In addition, corrections are made in accordance with the signals from the water temperature sensor to control the outlet air temperature.
- Controls the blower motor in accordance with the airflow volume determined by the air conditioning amplifier based on the input signals from various sensors.
- Automatically changes the outlets in accordance with the outlet mode ratio that is determined by the air conditioning amplifier based on the input signals from various sensors.
- Based on the signals from the ambient temperature sensor, this system calculates the outside temperature and indicates it in the multi-information display in the combination meter assembly.
- The left/right independent temperature control and neural network control make air conditioner control available to suit the persons in the driver seat and in the passenger seat.
- Turns the rear defogger and outside rear mirror heaters on for 15 minutes when the rear defogger switch is pressed. Turns them off if the switch is pressed while they are operating.
- Checks the sensors in accordance with the operation of the air conditioner switches.
- The air conditioning amplifier has the function of controlling the indicator lighting.

2. MODE POSITION AND DAMPER OPERATION



Control Damper		Control Position	Damper Position	Operation
Air Inlet Control Damper		FRESH	A	Brings in fresh air.
		RECIRC	B	Recirculates internal air.
Air Mix Control Damper (Left/ Right Independent Control)	Driver and Front Passenger Side	MAX COOL to MAX HOT (TEMP. SETTING 18 to 32°C (65 to 85°F))	C, D, E	Varies mixture ratio of fresh air and recirculation air in order to regulate temperature continuously from HOT to COOL.

AC

Control Damper		Control Position	Damper Position	Operation
Mode Control Film Damper	Driver and Front Passenger Side	FACE	I, J, L, P, U	Air blows out of center registers and side registers.
		BI-LEVEL	I, Q, M, R, T	Air mainly blows out of center registers, side registers, and footwell register ducts.
		FOOT	H, K, N, O, S	Air mainly blows out of front and rear footwell register ducts. In addition, air blows out slightly from front and side defrosters, and side registers.
		FOOT/DEF	G, K, N, O, T	Air mainly blows out of front and side defrosters to defrost windshield. Air also blows out from front and rear footwell register ducts, and side registers.
		DEF	F, K, N, O, U	Air blows out of front and side defrosters and side registers to defrost windshield.

HOW TO PROCEED WITH TROUBLESHOOTING

(2005/11-2006/01)
HINT:

- Use these procedures to troubleshoot the air conditioning system.
- *: Use the intelligent tester.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS AND SYMPTOM CHECK

NEXT

3	INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

4	CHECK CAN COMMUNICATION SYSTEM*

AC

(a) Use the intelligent tester to check if the CAN communication system is functioning.
Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B → **Go to CAN COMMUNICATION SYSTEM**

A

5	CHECK DTC OR CHECK SENSOR CHECK CODE THROUGH PANEL DIAGNOSIS*

(a) Check DTCs or sensor check codes.
  (1) Write down the DTCs or sensor check codes.
(b) Clear the DTCs or sensor check codes.
(c) Check whether the DTCs or sensor check codes recur.
  (1) Reproduce the problem symptoms in accordance with the DTCs or sensor check codes that were written down, and check whether the DTCs or sensor check codes recur.

HINT:
Refer to the DTC chart when any DTCs or sensor check codes are output.

Result

CUSTOMIZE PARAMETERS

HINT:
The following items can be customized.
NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

Air conditioning system

Display (Item)	Default	Contents	Setting
SET TEMP SHIFT (Set Temperature Shift)	NORMAL	To control with shifted temperature against display temperature	+2 C / +1 C / NORMAL / -1 C / -2 C
AIR INLET MODE (Air Inlet Mode)	AUTO	In case of turning A/C ON when you desire to make compartment cool down quickly, this is function to change mode automatically to RECIRCULATION mode	MANUAL / AUTO
COMPRESSOR MODE (Compressor Mode)	AUTO	Function to turn A/C ON automatically by pressing AUTO button when blower is ON and A/C is OFF	MANUAL / AUTO
COMPRS / DEF OPER (Compressor / Air Inlet DEF Operation)	LINK	Function to turn A/C ON automatically linked with FRONT DEF button when A/C is OFF	NORMAL / LINK
EVAP CTRL (Evaporator Control)	AUTO	Function to set evaporator control to AUTOMATIC position (AUTO) to save power, or to coldest position (MANUAL) to dehumidify air and to prevent windows from fogging up	MANUAL / AUTO
FOOT / DEF MODE (Foot / DEF auto mode)	ON	Function to turn airflow from FOOT / DEF ON automatically when AUTO MODE is ON	OFF / ON
AUTO BLOW UP (Foot / DEF automatic blower up function)	ON	Function to change blower level automatically when defroster is ON	OFF / ON

PROBLEM SYMPTOMS TABLE

(2005/11-2006/01)

HINT:

- Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Air conditioning system

Symptom	Suspected area	See page
No functions of A/C panel operate	1. LIN communication line	-
	2. Air conditioning control assembly	AC-240
	3. Air conditioning amplifier	AC-24
No functions of A/C system operate	1. ECU-IG2 fuse	-
	2. Air conditioning control assembly	AC-240
	3. Air conditioning amplifier	AC-24
	4. Wire harness or connector	-
Airflow Control: No blower control (Blower motor does not operate)	1. HTR fuse	-
	2. Blower motor circuit	AC-90
	3. Air conditioning amplifier	AC-24
	4. Air conditioning control assembly	AC-240
	5. Wire harness or connector	-
Airflow Control: No blower control (Blower motor does not change speed)	1. Blower motor circuit	AC-90
	2. Air conditioning amplifier	AC-24
	3. Air conditioning control assembly	AC-240
Temperature Control: No cool air comes out	1. Refrigerant volume	-
	2. Refrigerant pressure	-
	3. Air conditioning pressure sensor	AC-59
	4. Compressor and pulley	AC-215
	5. Driver side air mix damper control servo motor circuit	AC-73
	6. Passenger side air mix damper control servo motor circuit	AC-67
	7. Evaporator temperature sensor circuit	AC-50
	8. Room temperature sensor circuit	AC-43
	9. Ambient temperature sensor circuit	AC-46
	10. Expansion valve	-
	11. Air conditioning amplifier	AC-24
	12. Air conditioning control assembly	AC-240
	13. ECM	ES-427
	14. LIN communication line	-
	15. CAN communication system	CA-75

Symptom	Suspected area	See page
Temperature Control: No warm air comes out	1. Driver side air mix damper control servo motor circuit	AC-73
	2. Passenger side air mix damper control servo motor circuit	AC-67
	3. Air conditioning harness	-
	4. Room temperature sensor circuit	AC-43
	5. Air conditioning amplifier	AC-24
	6. Air conditioning control assembly	AC-240
	7. ECM	ES-427
	8. LIN communication line	-
	9. CAN communication system	CA-75
Temperature Control: Output air is warmer or cooler than set temperature or response is slow	1. Driver side solar sensor circuit	AC-73
	2. Passenger side solar sensor circuit	AC-67
	3. Room temperature sensor circuit	AC-43
	4. Air inlet damper control servo motor circuit	AC-69
	5. Heater radiator	-
	6. Expansion valve	-
	7. Air conditioning amplifier	AC-24
	8. Air conditioning control assembly	AC-240
	9. ECM	ES-427
	10. LIN communication line	-
	11. CAN communication system	CA-75
Temperature Control: No temperature control (Only Max. cool or Max. warm)	1. Driver side solar sensor circuit	AC-64
	2. Passenger side solar sensor circuit	AC-53
	3. Air conditioning amplifier	AC-24
	4. Air conditioning control assembly	AC-240
	5. LIN communication line	-
No air inlet control	1. Air conditioning control assembly	AC-240
	2. Air inlet damper control servo motor circuit	AC-69
	3. Evaporator temperature sensor circuit	AC-50
	4. Air conditioning amplifier	AC-24
Diagnostic trouble codes are not recorded. Set mode is cleared when ignition switch turned to LOCK	1. Air conditioning amplifier	AC-24
	2. Back-up power source circuit	AC-100

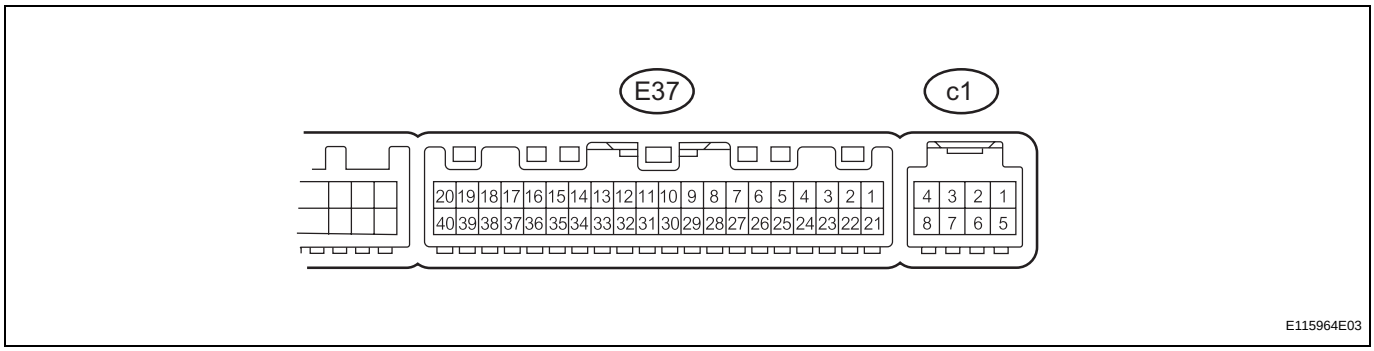
PROBLEM SYMPTOMS TABLE

(2006/01-)

HINT:

- Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Air conditioning system



Symptom	Suspected area	See page
No functions of A/C panel operate	1. LIN communication line	-
	2. Air conditioning control assembly	AC-87
	3. Air conditioning amplifier	AC-27
No functions of A/C system operate	1. ECU-IG2 fuse	-
	2. Air conditioning control assembly	AC-87
	3. Air conditioning amplifier	AC-27
	4. Wire harness or connector	-
Airflow Control: No blower control (Blower motor does not operate)	1. HTR fuse	-
	2. Blower motor circuit	AC-90
	3. Air conditioning amplifier	AC-27
	4. Air conditioning control assembly	AC-87

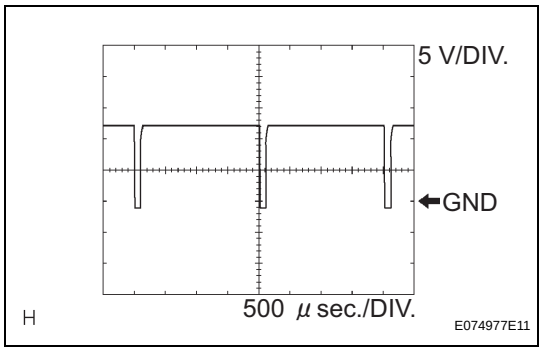
Diagnostic trouble codes are not recorded. Set mode is cleared when ignition switch turned to LOCK	1. Air conditioning amplifier	AC-27
	2. Back-up power source circuit	AC-100

TERMINALS OF ECU

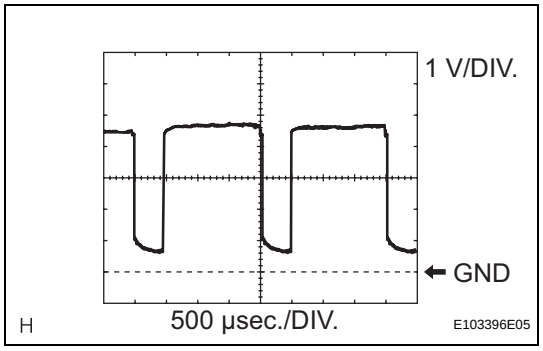
(2005/11-2006/01)

1. CHECK AIR CONDITIONING AMPLIFIER



(a) Measure the voltage and resistance of the connectors.
HINT:
Check from the rear of the connector while it is connected to the air conditioning amplifier.

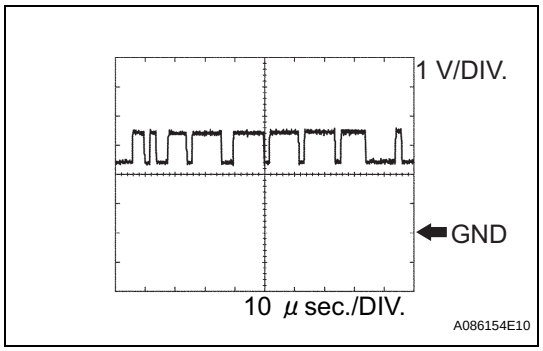
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (E37-21) - GND (E37-14)	R - W-B	Power source (Back-up)	Always	10 to 14 V
SOL+ (E37-2) - GND (E37-14)	GR - W-B	A/C compressor operation signal	Engine idling	Pulse generation (see waveform 1)
			Blower switch LO	
			A/C switch ON	
BLW (E37-23) - GND (E37-14)	R - W-B	Blower motor control signal	Ignition switch ON	Pulse generation (see waveform 2)
			Blower switch LO	
PRE (E37-9) - SG-2 (E37-13)	L - G	Air conditioning pressure sensor signal	Refrigerant pressure: Normal	0.76 to 4.74 V
PRE (E37-9) - SG-2 (E37-13)	L - G	Air conditioning pressure sensor signal	Refrigerant pressure: Abnormal (less than 0.196 MPa [2.0 kgf/cm^2, 28 psi])	Below 0.76 V
PRE (E37-9) - SG-2 (E37-13)	L - G	Air conditioning pressure sensor signal	Refrigerant pressure: Abnormal (more than 3.14 MPa [32 kgf/cm^2, 455 psi])	4.74 V or higher
TSD (E37-33) - S5-4 (E37-31)	L - LG	Driver side solar sensor signal	Ignition switch ON	0.8 to 4.3 V
			Solar sensor subject to electric light	
TSP (E37-32) - S5-4 (E37-31)	P - LG	Passenger side solar sensor signal	Ignition switch ON	0.8 to 4.3 V
			Solar sensor subject to electric light	
TR (E37-29) - SG-1 (E37-34)	CR - V	Room temperature sensor signal	Ignition switch ON	1.8 to 2.2 V
			Vehicle interior temperature: 25°C (77°F)	
SG-1 (E37-34) - Body ground	V - Body ground	Ground for room temperature sensor	Always	Below 1 Ω
GND (E37-14) - Body ground	W-B - Body ground	Ground for main power supply	Always	Below 1 Ω
IG+ (E37-1) - GND (E37-14)	Y - W-B	Power source (IG)	Ignition switch ON	10 to 14 V
S5-3 (E37-10) - GND (E37-14)	B - W-B	Power supply for pressure sensor	Ignition switch ON	4.5 to 5.5 V
CANH (E37-11) - GND (E37-14)	V - W-B	Hi-level CAN bus line	Ignition switch ON	Pulse generation (see waveform 3)



AC

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
CANL (E37-12) - GND (E37-14)	W - W-B	Lo-level CAN bus line	Ignition switch ON	Pulse generation (see waveform 4)
SG-2 (E37-13) - Body ground	G - Body ground	Ground for pressure sensor	Always	Below 1 Ω
RDFG (E37-38) - GND (E37-14)	B - W-B	Rear defogger switch signal	Ignition switch ON Rear defogger switch OFF	10 to 14 V
RDFG (E37-38) - GND (E37-14)	B - W-B	Rear defogger switch signal	Ignition switch ON Rear defogger switch ON	Below 1 Ω
LIN1 (E37-37) - GND (E37-14)	B - W-B	LIN communication signal	Ignition switch ON	Pulse generation
BUS G (c1-2) - Body ground	-	Ground for BUS IC	Always	Below 1 Ω
BUS (c1-3) - BUS G (c1-2)	-	BUS IC control signal	Ignition switch ON	Pulse generation
B BUS (c1-4) - BUS G (c1-2)	-	Power supply for BUS IC	Ignition switch ON	11 to 13 V
SGA (c1-5) - Body ground	-	Ground for evaporator temperature sensor	Always	Below 1 Ω
TEA (c1-6) - SGA (c1-5)	-	Evaporator temperature sensor signal	Ignition switch ON	1.4 to 1.8 V
			Evaporator temperature: 15°C (59°F)	

(b) Using an oscilloscope, check waveform 1.
Compressor and pulley operation signal

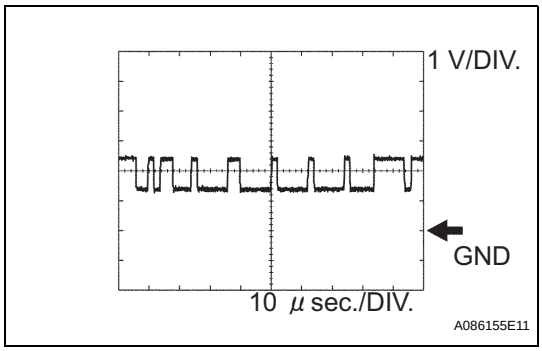


Item	Content
Symbols (Terminal No.)	SOL+ (E37-2) - GND (E37-14)
Tool Setting	5 V/DIV., 500 μsec./DIV.
Condition	Engine idling, Blower switch LO, A/C switch ON

(c) Using an oscilloscope, check waveform 2.
Blower motor control signal

Item	Content
Symbols (Terminal No.)	BLW (E37-23) - GND (E37-14)
Tool Setting	1 V/DIV., 500 μsec./DIV.
Condition	Ignition switch ON, Blower switch LO

HINT:
When the blower level is increased, the duty ratio changes accordingly.

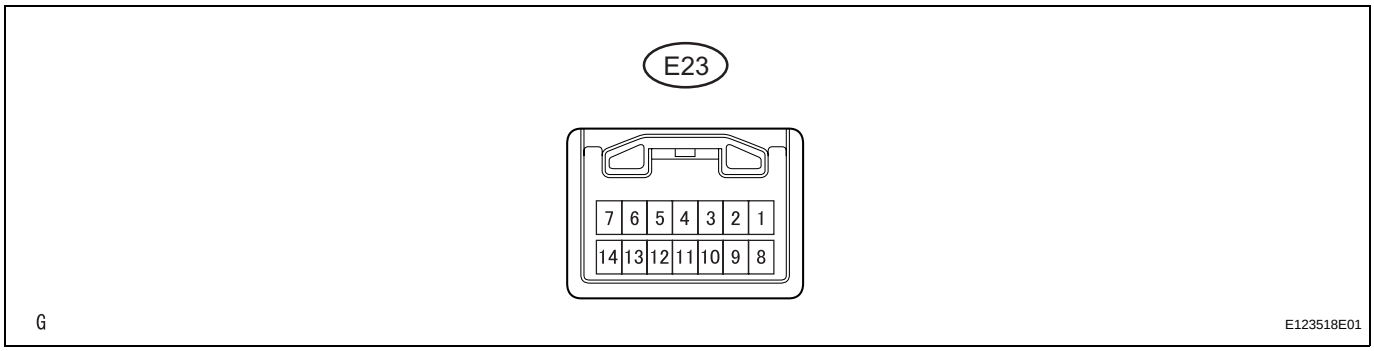


(d) Using an oscilloscope, check waveform 3.
CAN communication signal

Item	Content
Symbols (Terminal No.)	CANH (E37-11) - GND (E37-14)
Tool Setting	1 V/DIV., 10 μsec./DIV.
Condition	Ignition switch ON

HINT:
The waveform varies depending on the CAN communication signal.

AC



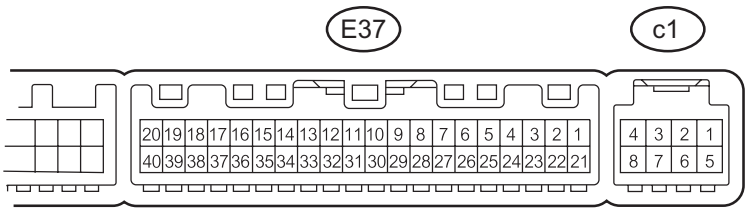
(e) Using an oscilloscope, check waveform 4.
CAN communication signal

Item	Content
Symbols (Terminal No.)	CANL (E37-12) - GND (E37-14)
Tool Setting	1 V/DIV., 10 μsec./DIV.
Condition	Ignition switch ON

HINT:
The waveform varies depending on the CAN communication signal.

2. CHECK AIR CONDITIONING CONTROL

(a) Measure the voltage and resistance of the connectors.



Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
IG+ (E23-2) - GND (E23-7)	L - W-B	Power source (IG)	Ignition switch ON	10 to 14 V
GND (E23-7) - Body ground	W-B - Body ground	Ground for air conditioning control assembly	Always	Below 1 Ω
LIN1 (E23-11) - GND (E23-7)	B - W-B	LIN communication signal	Ignition switch ON	Pulse generation
+B (E23-1) - GND (E23-7)	R - W-B	Power source (Back-up)	Always	10 to 14 V
ACC (E23-8) - GND (E23-7)	GR - W-B	ACC power supply	Always	Below 1 Ω

AC

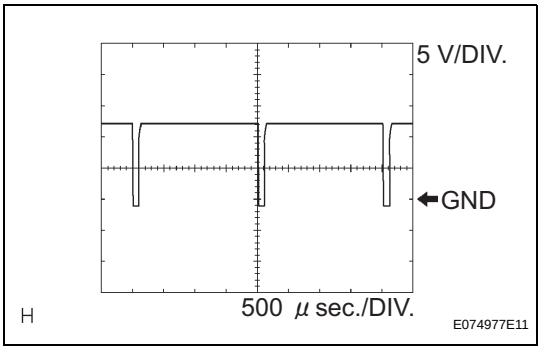
TERMINALS OF ECU

(2006/01-)

1. CHECK AIR CONDITIONING AMPLIFIER

E115964E03

(a) Measure the voltage and resistance of the connectors.
HINT:
Check from the rear of the connector while it is connected to the air conditioning amplifier.

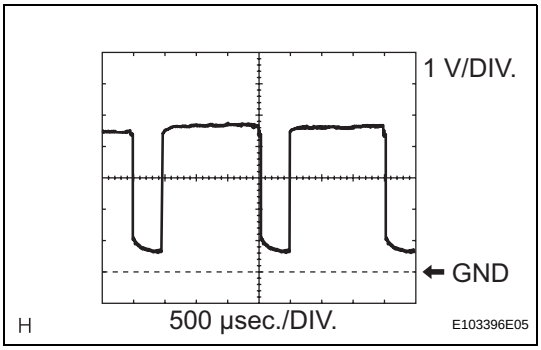


Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (E37-21) - GND (E37-14)	R - W-B	Power source (Back-up)	Always	10 to 14 V
SOL+ (E37-2) - GND (E37-14)	GR - W-B	A/C compressor operation signal	Engine idling	Pulse generation (see waveform 1)
			Blower switch LO	
			A/C switch ON	
BLW (E37-23) - GND (E37-14)	R - W-B	Blower motor control signal	Ignition switch ON	Pulse generation (see waveform 2)
			Blower switch LO	
PRE (E37-9) - SG-2 (E37-13)	L - G	Air conditioning pressure sensor signal	Refrigerant pressure: Normal	0.76 to 4.74 V
PRE (E37-9) - SG-2 (E37-13)	L - G	Air conditioning pressure sensor signal	Refrigerant pressure: Abnormal (less than 0.196 MPa [2.0 kgf/cm^2, 28 psi])	Below 0.76 V
PRE (E37-9) - SG-2 (E37-13)	L - G	Air conditioning pressure sensor signal	Refrigerant pressure: Abnormal (more than 3.14 MPa [32 kgf/cm^2, 455 psi])	4.74 V or higher
TSD (E37-33) - S5-4 (E37-31)	L - LG	Driver side solar sensor signal	Ignition switch ON	0.8 to 4.3 V
			Solar sensor subject to electric light	
TSP (E37-32) - S5-4 (E37-31)	P - LG	Passenger side solar sensor signal	Ignition switch ON	0.8 to 4.3 V
			Solar sensor subject to electric light	
TR (E37-29) - SG-1 (E37-34)	CR - V	Room temperature sensor signal	Ignition switch ON	1.8 to 2.2 V
			Vehicle interior temperature: 25°C (77°F)	
SG-1 (E37-34) - Body ground	V - Body ground	Ground for room temperature sensor	Always	Below 1 Ω
GND (E37-14) - Body ground	W-B - Body ground	Ground for main power supply	Always	Below 1 Ω
IG+ (E37-1) - GND (E37-14)	Y - W-B	Power source (IG)	Ignition switch ON	10 to 14 V
S5-3 (E37-10) - GND (E37-14)	B - W-B	Power supply for pressure sensor	Ignition switch ON	4.5 to 5.5 V
CANH (E37-11) - GND (E37-14)	V - W-B	Hi-level CAN bus line	Ignition switch ON	Pulse generation (see waveform 3)

AC

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
CANL (E37-12) - GND (E37-14)	W - W-B	Lo-level CAN bus line	Ignition switch ON	Pulse generation (see waveform 4)
SG-2 (E37-13) - Body ground	G - Body ground	Ground for pressure sensor	Always	Below 1 Ω
RDFG (E37-38) - GND (E37-14)	B - W-B	Rear defogger switch signal	Ignition switch ON Rear defogger switch OFF	10 to 14 V
RDFG (E37-38) - GND (E37-14)	B - W-B	Rear defogger switch signal	Ignition switch ON Rear defogger switch ON	Below 1 V
LIN1 (E37-37) - GND (E37-14)	B - W-B	LIN communication signal	Ignition switch ON	Pulse generation
BUS G (c1-2) - Body ground	-	Ground for BUS IC	Always	Below 1 Ω
BUS (c1-3) - BUS G (c1-2)	-	BUS IC control signal	Ignition switch ON	Pulse generation
B BUS (c1-4) - BUS G (c1-2)	-	Power supply for BUS IC	Ignition switch ON	11 to 13 V
SGA (c1-5) - Body ground	-	Ground for evaporator temperature sensor	Always	Below 1 Ω
TEA (c1-6) - SGA (c1-5)	-	Evaporator temperature sensor signal	Ignition switch ON	1.4 to 1.8 V
			Evaporator temperature: 15°C (59°F)	
LOCK (E37-8)* - SG-2 (E37-13)	W - G	Compressor lock sensor signal	Ignition switch ON AUTO switch ON A/C switch ON Magnetic clutch ON	Pulse generation (see waveform 5)
MGC (E37-20)* - GND (E37-14)	V - W-B	Magnetic clutch relay signal	Ignition switch ON Magnetic clutch OFF	10 to 14 V
MGC (E37-20)* - GND (E37-14)	V - W-B	Magnetic clutch relay signal	Ignition switch ON Magnetic clutch ON	Below 1.5 V

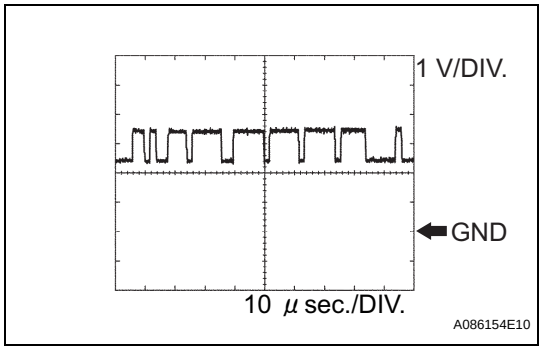
HINT:
*: for 2GR-FE



AC

(b) Using an oscilloscope, check waveform 1.
A/C Compressor* operation signal

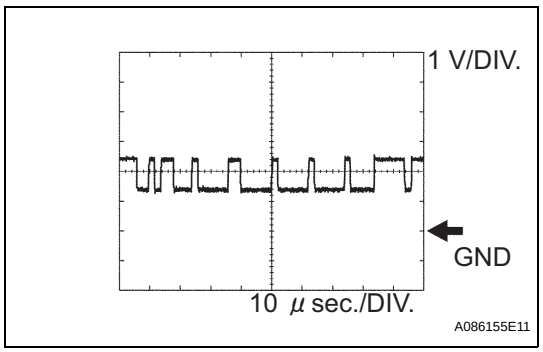
Item	Content
Symbols (Terminal No.)	SOL+ (E37-2) - GND (E37-14)
Tool Setting	5 V/DIV., 500 μsec./DIV.
Condition	Engine idling, Blower switch LO, A/C switch ON



HINT:
*: Compressor and pulley for 2AZ-FE, Compressor and magnetic clutch for 2GR-FE.

(c) Using an oscilloscope, check waveform 2.
Blower motor control signal

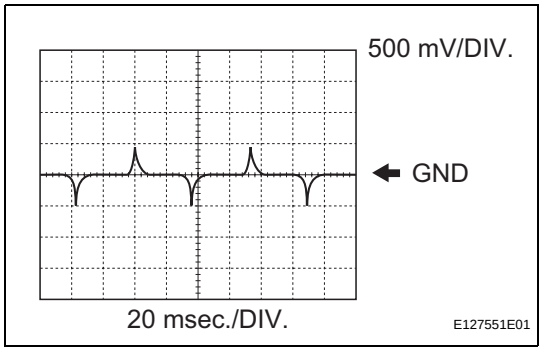
Item	Content
Symbols (Terminal No.)	BLW (E37-23) - GND (E37-14)
Tool Setting	1 V/DIV., 500 μsec./DIV.
Condition	Ignition switch ON, Blower switch LO



HINT:
When the blower level is increased, the duty ratio changes accordingly.

(d) Using an oscilloscope, check waveform 3.
CAN communication signal

Item	Content
Symbols (Terminal No.)	CANH (E37-11) - GND (E37-14)
Tool Setting	1 V/DIV., 10 μsec./DIV.
Condition	Ignition switch ON

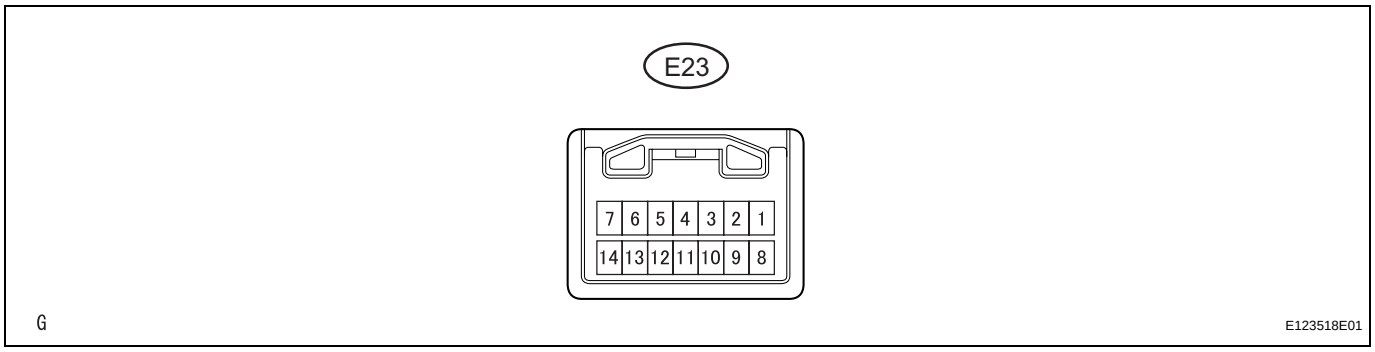


HINT:
The waveform varies depending on the CAN communication signal.

(e) Using an oscilloscope, check waveform 4.
CAN communication signal

Item	Content
Symbols (Terminal No.)	CANL (E37-12) - GND (E37-14)
Tool Setting	1 V/DIV., 10 μsec./DIV.
Condition	Ignition switch ON

HINT:
The waveform varies depending on the CAN communication signal.



(f) Using an oscilloscope, check waveform 5.
Compressor lock sensor signal*

Item	Content
Symbols (Terminal No.)	LOCK (E37-8)* - SG-2 (E37-13)
Tool Setting	500 mV/DIV., 20 msec./DIV.
Condition	Ignition switch ON, AUTO switch ON, A/C switch ON, Magnetic clutch ON

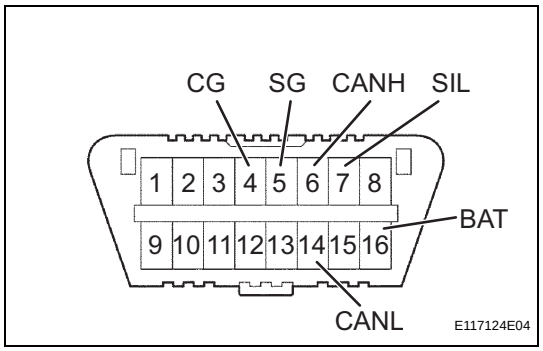
HINT:
*: for 2GR-FE

AC

2. CHECK AIR CONDITIONING CONTROL

(a) Measure the voltage and resistance of the connectors.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
IG+ (E23-2) - GND (E23-7)	L - W-B	Power source (IG)	Ignition switch ON	10 to 14 V
GND (E23-7) - Body ground	W-B - Body ground	Ground for air conditioning control assembly	Always	Below 1 Ω
LIN1 (E23-11) - GND (E23-7)	B - W-B	LIN communication signal	Ignition switch ON	Pulse generation
+B (E23-1) - GND (E23-7)	R - W-B	Power source (Back-up)	Always	10 to 14 V



Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
ACC (E23-8) - GND (E23-7)	GR - W-B	ACC power supply	Always	Below 1 Ω

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Air conditioning system data and the Diagnostic Trouble Codes (DTCs) can be read through the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform troubleshooting.

2. CHECK DLC3

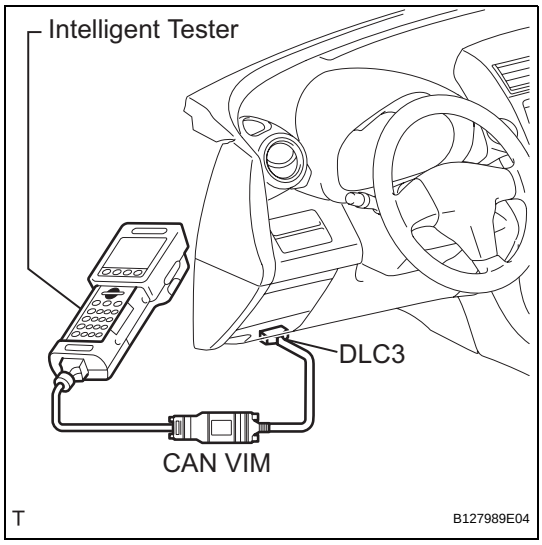
The vehicle's ECM uses the ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch LOCK*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch LOCK*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch LOCK*	1 MΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch LOCK*	200 Ω or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch LOCK*	1 MΩ or higher

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, other switches or doors.**



HINT:

Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.

If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

AC

DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON and turn the intelligent tester ON.

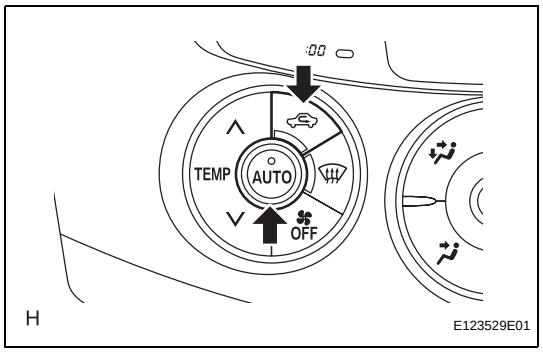
(c) Read the DTC by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

2. CLEAR DTC

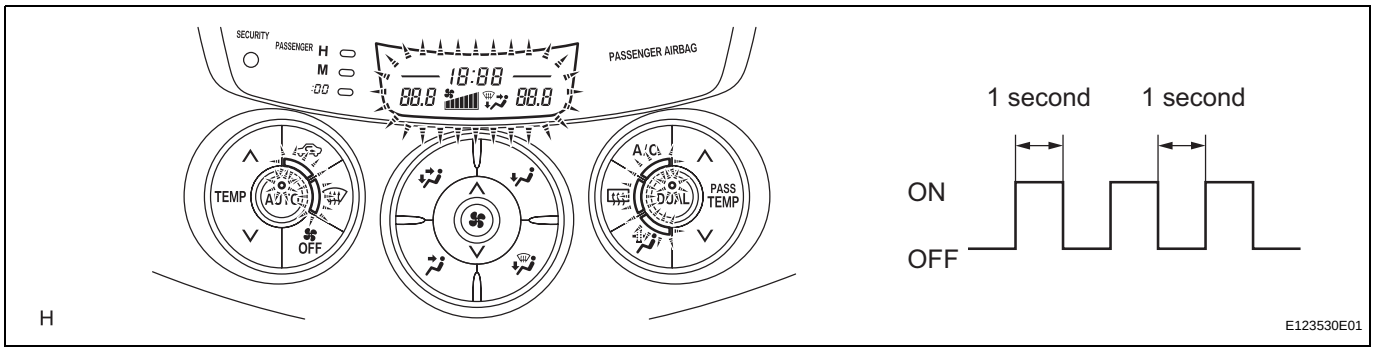
(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON and turn the intelligent tester ON.

(c) Clear the DTC by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.



CHECK MODE PROCEDURE



1. PANEL DIAGNOSIS (INDICATOR CHECK)

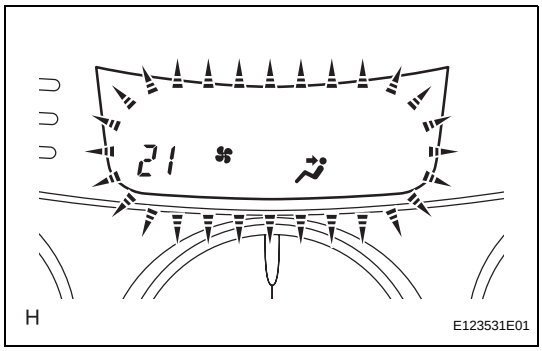
(a) Turn the ignition switch to LOCK.

(b) Turn the ignition switch ON while simultaneously pressing the A/C control AUTO switch and the REC/FRS switch.

(c) Check that all indicators and the display area are turned on and off 4 times in succession at 1 second intervals.

HINT:
After the indicator check is completed, the system automatically enters sensor check mode.

(d) Press the OFF switch to terminate the panel diagnosis.



2. PANEL DIAGNOSIS (SENSOR CHECK)

(a) Perform the indicator check.
HINT:
After the indicator check is completed, the system automatically enters sensor check mode.

(b) Press the REC/FRS switch to enter actuator check mode.

(c) After the actuator check is completed, press the AUTO switch to enter sensor check mode.
NOTICE:
The sensor check must be performed again after the actuator check is completed because sensor check mode, which starts automatically after the indicator check, cannot fully detect malfunctions.

AC

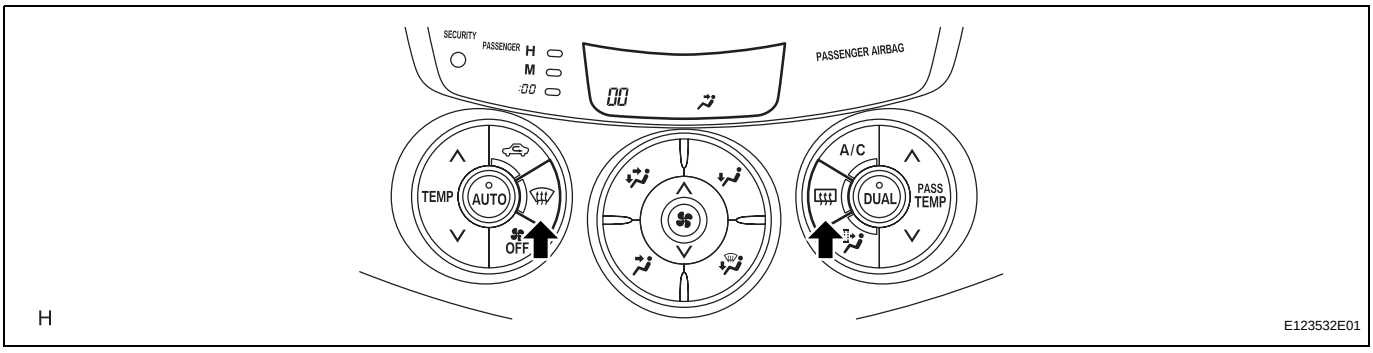
(d) Check the sensor check results displayed on the set temperature display.

Results	Code Display
Present malfunction	Blinks
Past malfunction	Blinks

HINT:

- The illustration shows the display when code 21 is output.
- When 2 or more sensor check codes are detected, the codes are displayed in ascending numerical order.
- In cases with 2 or more codes, if they are difficult to read, press the DEF switch to activate the step operation and display them one by one.
- The codes are displayed in ascending numerical order as the DEF switch is pressed.

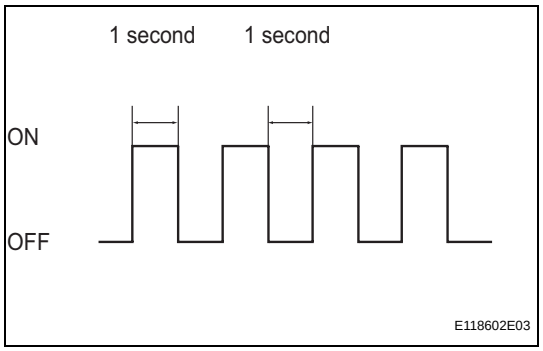
(e) When any sensor check codes are displayed, refer to the DTC chart (see page AC-39).



(f) Press the OFF switch to terminate the panel diagnosis.
HINT:
Pressing the REC/FRS switch returns the system to actuator check mode.

3. PANEL DIAGNOSIS (CLEAR SENSOR CHECK CODE)

(a) Inspect, and repair or replace the malfunctioning parts.



(b) Clear the sensor check codes.

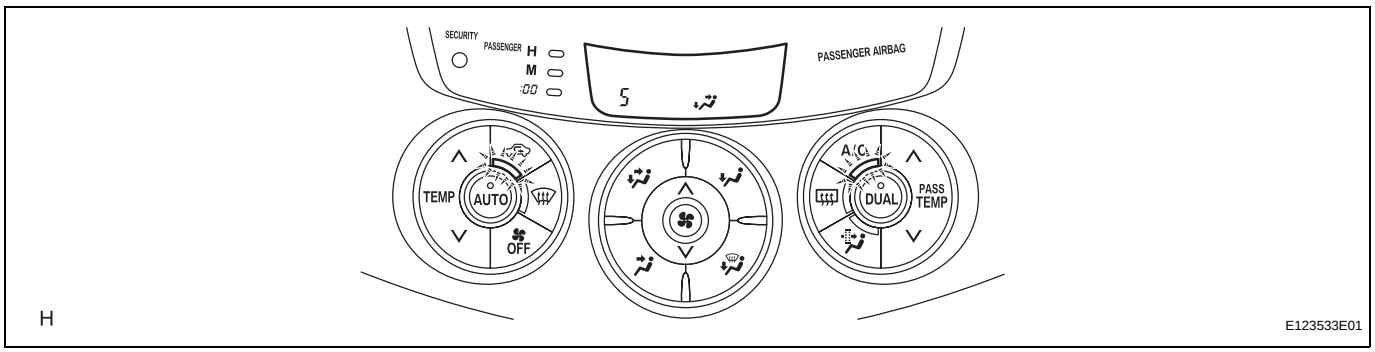
AC

(1) While pressing the DEF switch during sensor check mode, press the Rr DEF switch.
HINT:
Sensor check codes can be cleared by removing the ECU-B2 fuse from the engine room No. 2 relay block for more than 60 seconds.

(c) Perform the sensor check and confirm that normal code 00 is displayed.

4. PANEL DIAGNOSIS (ACTUATOR CHECK)

(a) Start the engine and warm it up.



(b) Perform the indicator check.

(c) When the sensor check is started after the indicator check, press the REC/FRS switch to start the actuator check.

HINT:

Perform the actuator check with the engine running.

(d) Check the temperature and blower levels by hand at each step while the actuator check proceeds from step 0 to 9 at 1 second intervals (continuous operation).

HINT:

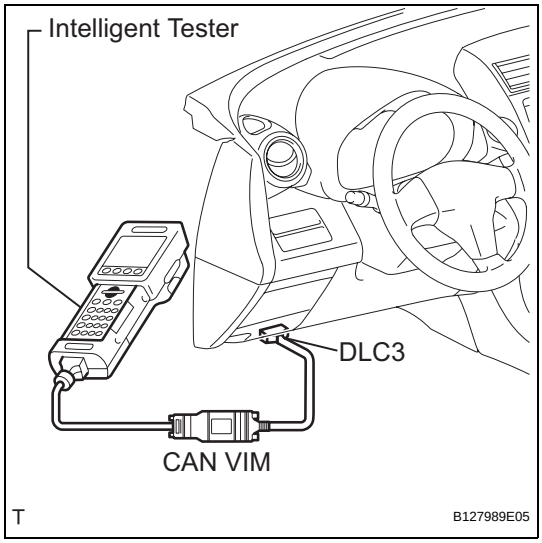
Each step number is displayed on the set temperature display.

(e) To display step numbers one by one manually, press the DEF switch to activate the step operation. The step number changes each time the DEF switch is pressed.

HINT:

- Each step number blinks at 1 second intervals during the step operation.
- The illustration shows the display when step number 5 is displayed.

(f) Press the OFF switch to terminate the panel diagnosis.



HINT:

Pressing the AUTO switch returns to sensor check mode.

AC

Step No.	Blower Level	Air Mix Damper	Air Flow Vent	Air Inlet Damper	Cool Air By-pass	Compressor
0	0	0% (MAX COLD)	FACE	FRESH	-	OFF

DATA LIST / ACTIVE TEST

(2005/11-2006/01)

1. READ DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON and turn the intelligent tester ON.

(c) Read the DATA LIST by following the prompts on the tester.

Air conditioning amplifier

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
ROOM TEMP	Room temperature sensor / Min.: -6.5°C (20.3°F) Max.: 57.25°C (135.05°F)	Actual room temperature is displayed	Open circuit: -6.5°C (20.3°F) Short circuit: 57.25°C (135.05°F)
AMBI TEMP SENS	Ambient temperature sensor / Min.: -23.3°C (-9.94°F) Max.: 65.95°C (150.71°F)	Actual ambient temperature is displayed	Open circuit: -23.3°C (-9.94°F) Short circuit: 65.95°C (150.71°F)
SOLAR SENS-D	Driver side solar sensor / Min.: 0, Max.: 255	Driver side temperature increases as brightness increases	-
SOLAR SENS-P	Passenger side solar sensor / Min.: 0, Max.: 255	Passenger side temperature increases as brightness increases	-
COOLANT TEMP	Engine coolant temperature / Min.: 1.3°C (34.34°F) Max.: 90.55°C (194.99°F)	Actual engine coolant temperature is displayed after engine warmed up	-
SET TEMP-D	Driver side set temperature / Min.: 0°C (32°F) Max.: 30°C (54°F)	Driver side actual set temperature is displayed	-
SET TEMP-P	Passenger side set temperature / Min.: 0°C (32°F) Max.: 30°C (54°F)	Passenger side actual set temperature is displayed	-

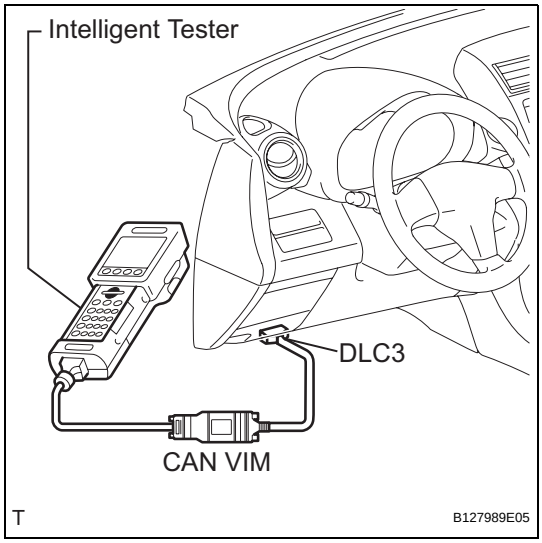
2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed in the ACTIVE TEST.



(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON and turn the intelligent tester ON.

(c) Perform the ACTIVE TEST by following the prompts on the tester.

Air conditioning amplifier

Item	Test Details / Display (Range)	Diagnostic Note
BLOWER MOTOR	Blower motor / Min.: 0, Max.: 31	-
A/C COMPRESSOR	A/C compressor / OFF, ON	-
DEFOGGER RLY-R	Defogger relay (Rear) / OFF, ON	-
AIR MIX PULSE	Air mix servo motor pulse / Min.: 0, Max.: 255	-
AIR MIX PULSE-P	Air mix servo motor pulse (P side) / Min.: 0, Max.: 255	-
AIR OUT PULSE	Air outlet servo motor pulse / Min.: 0, Max.: 255	-
A/I DAMP PLS	Air inlet damper target pulse / Min.: 0, Max.: 255	-

DATA LIST / ACTIVE TEST

(2006/01-)

1. READ DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON and turn the intelligent tester ON.

(c) Read the DATA LIST by following the prompts on the tester.

HINT:

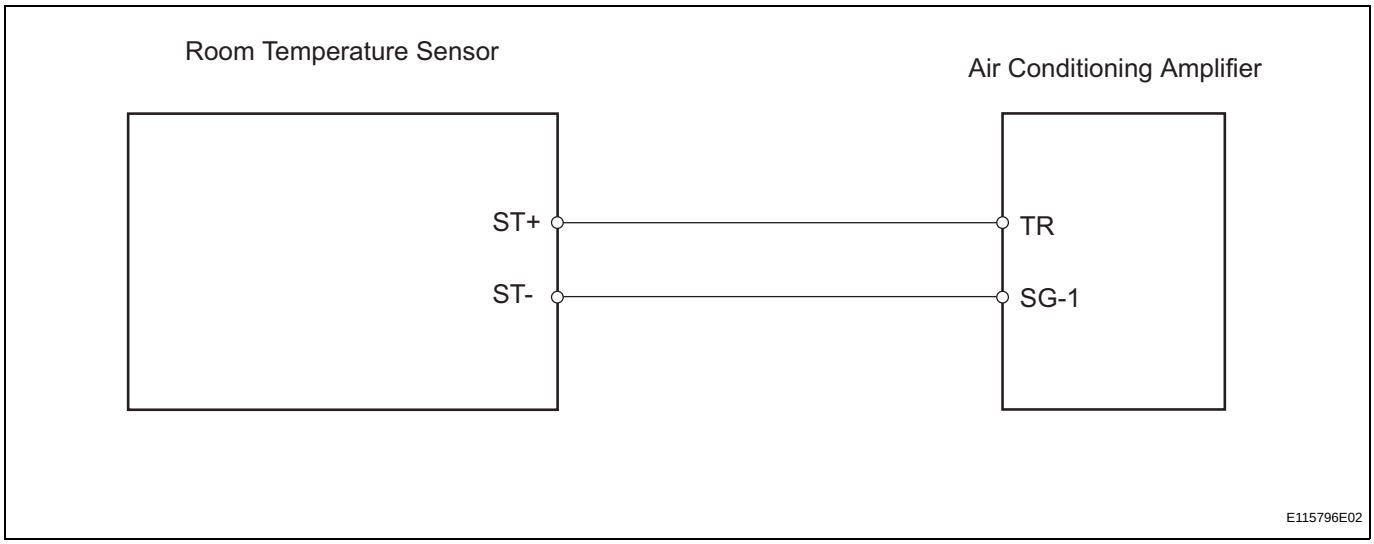
*1: DTC B1422/22 (Compressor Lock Sensor Circuit) is indicated only for a currently occurring malfunction for 2GR-FE.

To confirm DTC B1422/22, perform the following steps:

1. With the ignition switch ON, enter the DTC check mode.
2. Press the R/F (Recirculation/Fresh) switch to enter actuator check mode, and set the operation to Step No. 3.
3. Press the AUTO switch to return to DTC check mode.
4. The DTC is displayed after approximately 3 seconds.

*2: Compressor and pulley for 2AZ-FE, compressor and magnetic clutch for 2GR-FE



DTC	B1411/11	Room Temperature Sensor Circuit

DESCRIPTION

The room temperature sensor is installed in the instrument panel to detect the room temperature and control the heater and air conditioner AUTO mode. The resistance of the room temperature sensor changes in accordance with the room temperature. As the temperature decreases, the resistance increases. As the temperature increases, the resistance decreases.
The air conditioning amplifier applies a voltage (5 V) to the room temperature sensor and reads voltage changes as changes in the resistance of the room temperature sensor.

DTC No.	DTC Detection Condition	Trouble Area
B1411/11	Open or short in room temperature sensor circuit	• Room temperature sensor • Harness and connector between room temperature sensor and air conditioning amplifier • Air conditioning amplifier

WIRING DIAGRAM

AC

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER (ROOM TEMP)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON and turn the intelligent tester main switch ON.
(c) Select the item below in the DATA LIST, and read the value displayed on the intelligent tester.

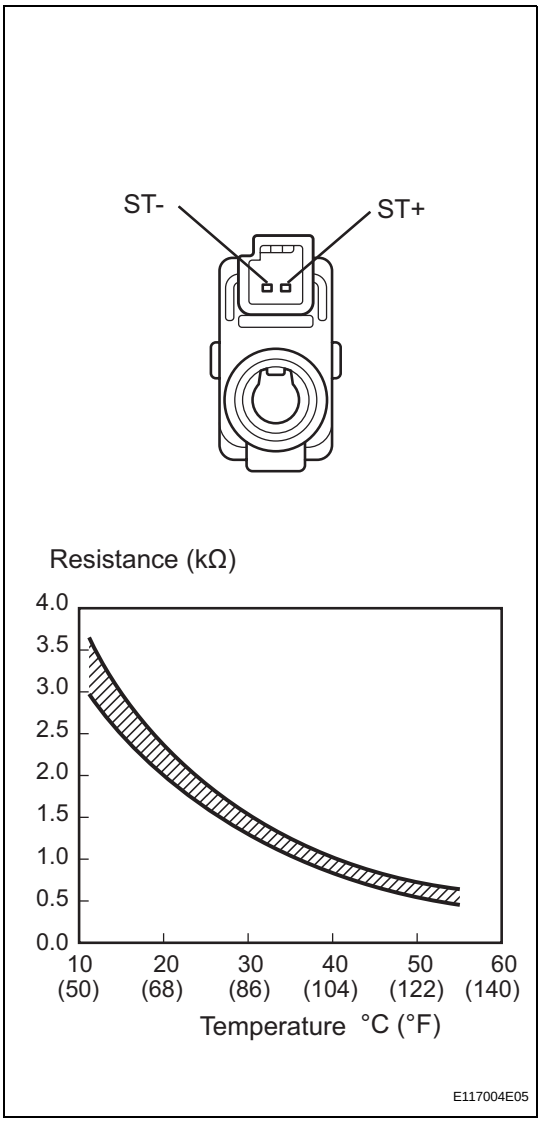
Air conditioning amplifier

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
ROOM TEMP	Room temperature sensor / Min.: -6.5°C (20.3°F) Max.: 57.25°C (135.05°F)	Actual room temperature is displayed	Open circuit: -6.5°C (20.3°F) Short circuit: 57.25°C (135.05°F)

OK:

The display is as specified in the normal condition column.

Result



Result	Proceed to
NG	A
OK (Checking from the PROBLEM SYMPTOMS TABLE)	B
OK (Checking from the DTC)	C

B → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

C → **REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY**

A

2 INSPECT COOLER THERMISTOR (ROOM TEMPERATURE SENSOR)

(a) Remove the room temperature sensor.

(b) Measure the resistance of the sensor.

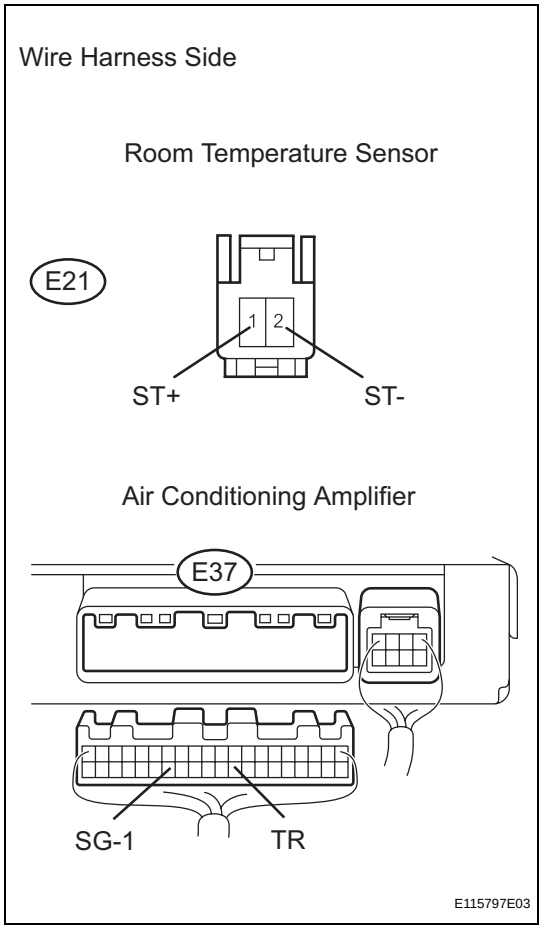
Standard resistance

Tester Connection	Condition	Specified Condition
1 (ST+) - 2 (ST-)	10°C (50°F)	3.00 to 3.73 kΩ
1 (ST+) - 2 (ST-)	15°C (59°F)	2.45 to 2.88 kΩ
1 (ST+) - 2 (ST-)	20°C (68°F)	1.95 to 2.30 kΩ
1 (ST+) - 2 (ST-)	25°C (77°F)	1.60 to 1.80 kΩ
1 (ST+) - 2 (ST-)	30°C (86°F)	1.28 to 1.47 kΩ
1 (ST+) - 2 (ST-)	35°C (95°F)	1.00 to 1.22 kΩ
1 (ST+) - 2 (ST-)	40°C (104°F)	0.80 to 1.00 kΩ
1 (ST+) - 2 (ST-)	45°C (113°F)	0.65 to 0.85 kΩ
1 (ST+) - 2 (ST-)	50°C (122°F)	0.50 to 0.70 kΩ
1 (ST+) - 2 (ST-)	55°C (131°F)	0.44 to 0.60 kΩ
1 (ST+) - 2 (ST-)	60°C (140°F)	0.36 to 0.50 kΩ

NOTICE:

- **Touching the sensor even slightly may change the resistance value. Be sure to hold the connector of the sensor.**
- **When measuring, the sensor temperature must be the same as the ambient temperature.**

HINT:



As the temperature increases, the resistance decreases (see the graph).

NG → **REPLACE COOLER THERMISTOR (ROOM TEMPERATURE SENSOR)**

AC

OK

3	**CHECK WIRE HARNESS (ROOM TEMPERATURE SENSOR - AIR CONDITIONING AMPLIFIER)**

(a) Disconnect the E21 sensor connector.
(b) Disconnect the E37 amplifier connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
E21-1 (ST+) - E37-29 (TR)	Below 1 Ω
E21-2 (ST-) - E37-34 (SG-1)	Below 1 Ω
E21-1 (ST+) - Body ground	1 MΩ or higher
E21-2 (ST-) - Body ground	1 MΩ or higher

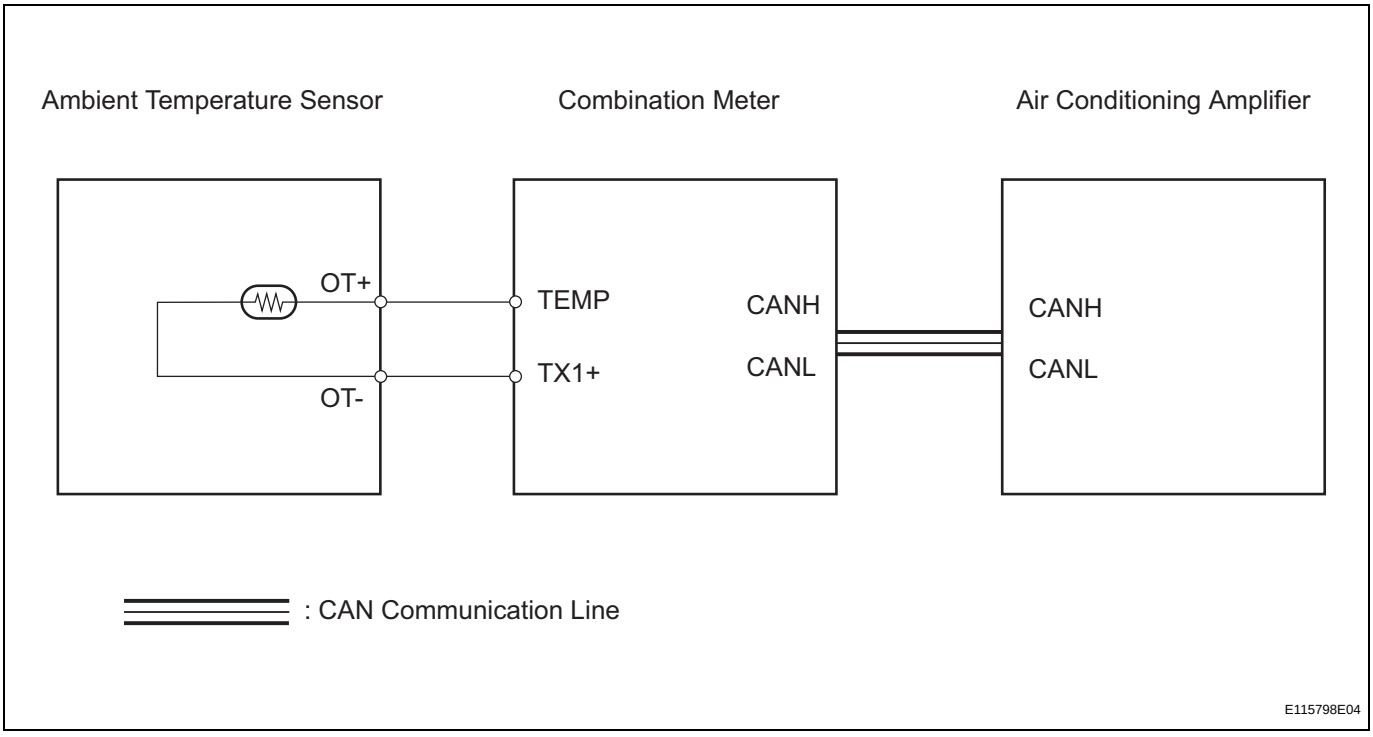
NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY

AC

DTC	B1412/12	Ambient Temperature Sensor Circuit



DESCRIPTION

The ambient temperature sensor is installed in the front part of the condenser to detect the ambient temperature and control the air conditioner. The sensor is connected to the combination meter and detects fluctuations in the ambient temperature. This data is used for controlling the room temperature. The sensor sends a signal to the air conditioning amplifier via the combination meter. The resistance of the ambient temperature sensor changes in accordance with the ambient temperature. As the temperature decreases, the resistance increases. As the temperature increases, the resistance decreases.

The air conditioning amplifier applies a voltage (5 V) to the ambient temperature sensor and reads voltage changes as changes in the resistance of the ambient temperature sensor. The combination meter sends the read signal to the air conditioning amplifier via CAN communication.

DTC No.	DTC Detection Condition	Trouble Area
B1412/12	Open or short in ambient temperature sensor circuit	• Ambient temperature sensor • Harness and connector between ambient temperature sensor and combination meter assembly • Combination meter • Air conditioning amplifier • CAN communication line

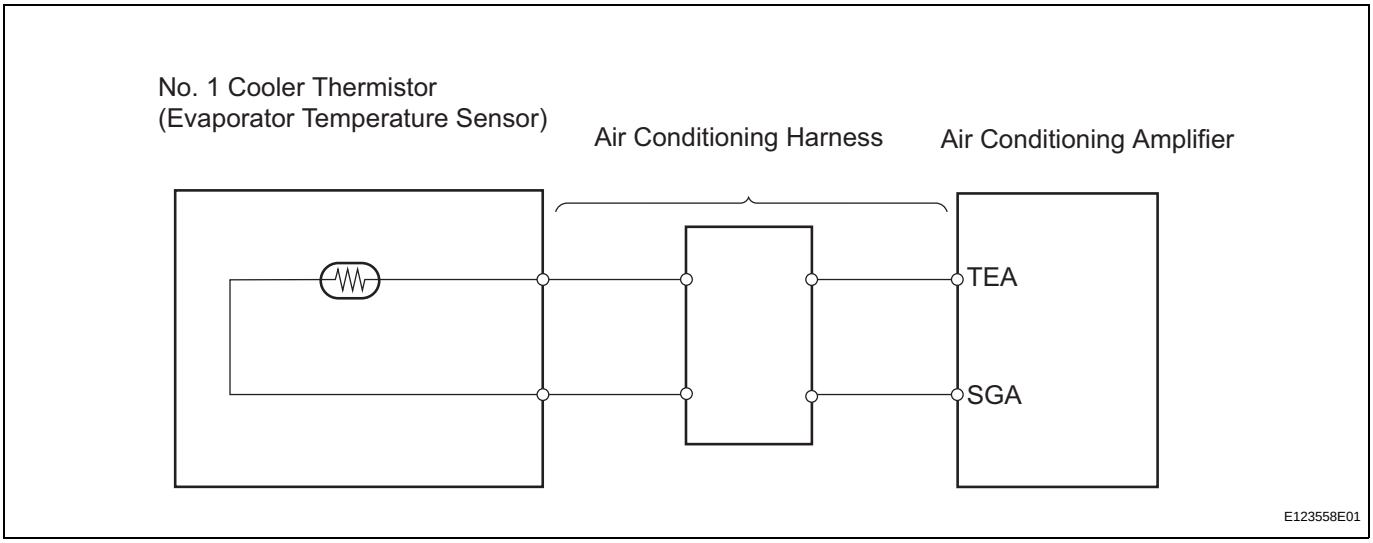
REPLACE COMBINATION METER

AC



DTC	B1413/13	Evaporator Temperature Sensor Circuit

DESCRIPTION

The No. 1 cooler thermistor (evaporator temperature sensor) is installed on the evaporator in the air conditioning unit to detect the temperature of the cooled air that has passed through the evaporator and to control the air conditioner. It sends signals to the air conditioning amplifier. The signals change in accordance with the resistance of the No. 1 cooler thermistor (evaporator temperature sensor). As the temperature decreases, the resistance increases. As the temperature increases, the resistance decreases. The air conditioning amplifier applies a voltage (5 V) to the No. 1 cooler thermistor (evaporator temperature sensor) and reads voltage changes as changes in the resistance of the No. 1 cooler thermistor (evaporator temperature sensor). This sensor is used for frost prevention.

DTC No.	DTC Detection Condition	Trouble Area
B1413/13	Open or short in evaporator temperature sensor circuit	• No. 1 cooler thermistor (evaporator temperature sensor) • Harness and connector between No. 1 cooler thermistor (evaporator temperature sensor) and air conditioning amplifier • Air conditioning amplifier

WIRING DIAGRAM

AC

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER (EVAP FIN TEMP)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON and turn the intelligent tester main switch ON.
(c) Select the item below in the DATA LIST, and read the value displayed on the intelligent tester.

Air conditioning amplifier

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
EVAP FIN TEMP	Evaporator temperature sensor / Min.: -29.7°C (-21.46°F) Max.: 59.6°C (139.28°F)	Actual evaporator temperature is displayed	Open circuit: -29.7°C (-21.46°F) Short circuit: 59.6°C (139.28°F)

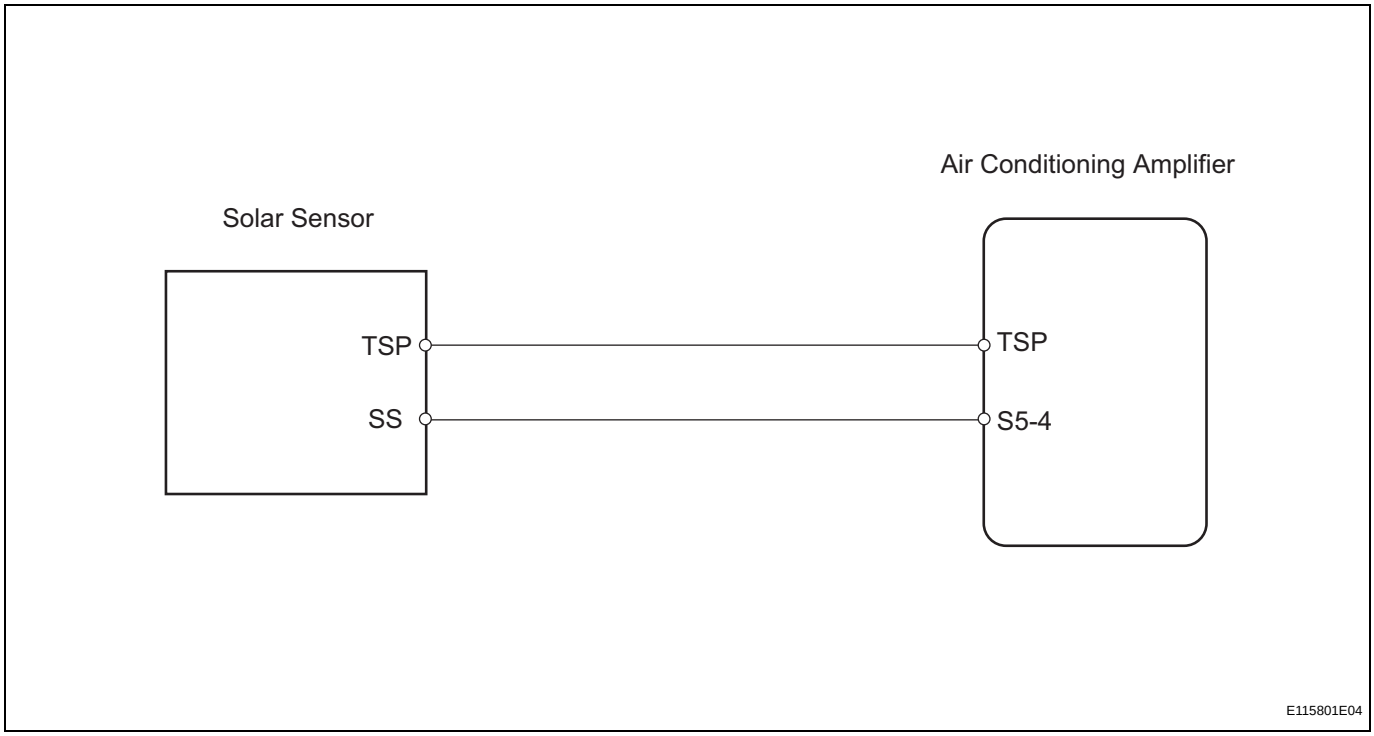
OK

REPLACE AIR CONDITIONING HARNESS ASSEMBLY

AC



DTC	B1421/21	Solar Sensor Circuit (Passenger Side)

DESCRIPTION

The solar sensor, which is installed on the upper side of the instrument panel, detects sunlight and controls the air conditioning AUTO mode. The output voltage from the solar sensor varies in accordance with the amount of sunlight. When the sunlight increases, the output voltage increases. As the sunlight decreases, the output voltage decreases.
The air conditioning amplifier detects changes in the output voltage from the solar sensor.

DTC No.	DTC Detection Condition	Trouble Area
B1421/21	Open or short in passenger side solar sensor circuit	• Solar sensor • Harness and connector between solar sensor and air conditioning amplifier • Air conditioning amplifier

WIRING DIAGRAM

AC

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER (SOLAR SENS-P)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON and turn the intelligent tester main switch ON.
(c) Select the item below in the DATA LIST, and read the value displayed on the intelligent tester.

Air conditioning amplifier

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note

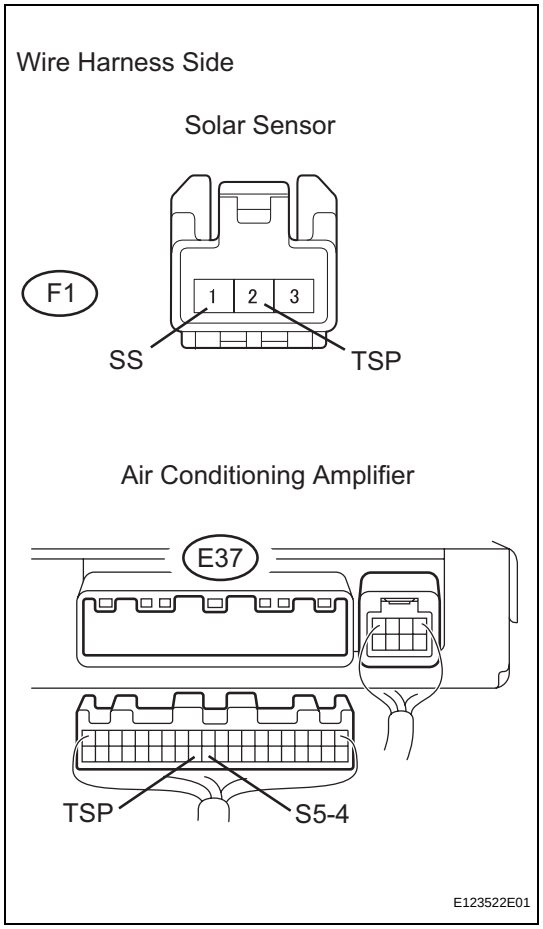
A

2 INSPECT COOLER (SOLAR SENSOR) THERMISTOR

(a) Remove the solar sensor.
(b) Measure the resistance of the sensor.
(c) Connect the ohmmeter's positive (+) lead to terminal 1 and the negative (-) lead to terminal 2 of the solar sensor.

Standard resistance

Tester Connection	Condition	Specified Condition
1 (SS) - 2 (TSP)	Sensor exposed to electric light	Except ∞ Ω
1 (SS) - 2 (TSP)	Sensor covered with cloth	∞ Ω (No continuity)



NOTICE:
The connection procedure for using a digital tester such as an electrical tester is shown above. When using an analog tester, connect the positive (+) lead to terminal 2 and the negative (-) lead to terminal 1 of the solar sensor.
HINT:
- As the inspection light is moved away from the sensor, the voltage decreases.
- Use an incandescent light for the inspection. Position it about 30 cm (11.8 in.) from the solar sensor.

NG → **REPLACE COOLER (SOLAR SENSOR) THERMISTOR**

OK

AC

3 CHECK WIRE HARNESS (SOLAR SENSOR - AIR CONDITIONING AMPLIFIER)

(a) Disconnect the F1 sensor connector.
(b) Disconnect the E37 amplifier connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
E37-32 (TSP) - F1-2 (TSP)	Below 1 Ω
E37-31 (S5-4) - F1-1 (SS)	Below 1 Ω

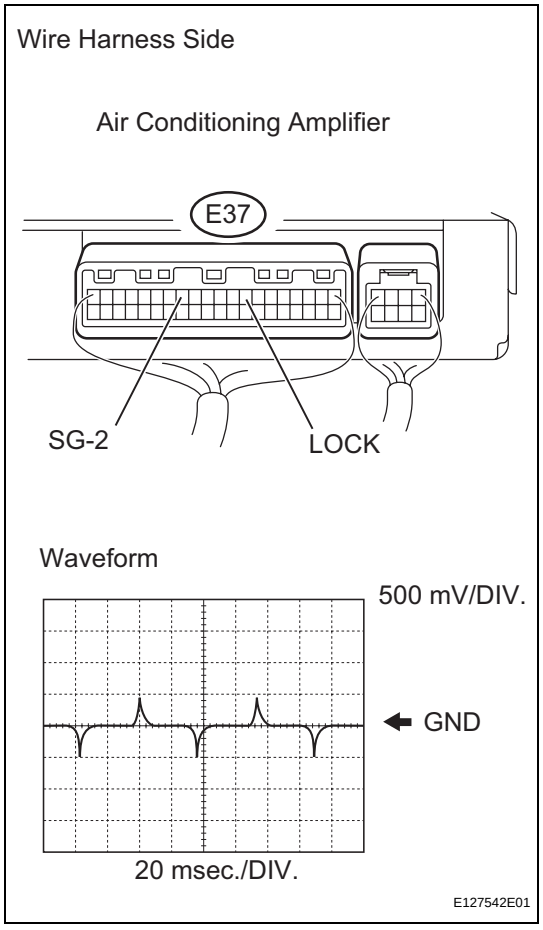
DTC	B1422/22	Compressor Lock Sensor Circuit

DESCRIPTION

This sensor sends 1 pulse per engine revolution to the air conditioning amplifier. If the ratio of the compressor speed divided by the engine speed is smaller than a predetermined value, the air conditioning amplifier turns the compressor off, and the indicator blinks at approximately 1 second intervals.

DTC No.	DTC Detection Condition	Trouble Area
B1422/22	Open or short in compressor lock sensor circuit All conditions below are detected for 3 seconds or more: 1. Engine speed: 450 rpm or more 2. Ratio between engine and compressor speed deviates 20% or more in comparison to normal operation	• Compressor and magnetic clutch • Compressor and magnetic clutch drive belt • Compressor lock sensor • Wire harness between compressor lock sensor and air conditioning amplifier • Air conditioning amplifier



WIRING DIAGRAM

AC

INSPECTION PROCEDURE

1	CHECK AIR CONDITIONING AMPLIFIER (LOCK SIGNAL)

(a) Remove the air conditioning amplifier with its connectors still connected.
(b) Check the waveform of the amplifier connector.
OK:
Waveform is as shown in the illustration.

Item	Content
Tester Connection	LOCK (E37-8) - SG-2 (E37-13)
Tool Setting	500 mV/DIV., 20 msec./DIV.
Condition	Ignition switch ON AUTO switch ON A/C switch ON Magnetic clutch ON

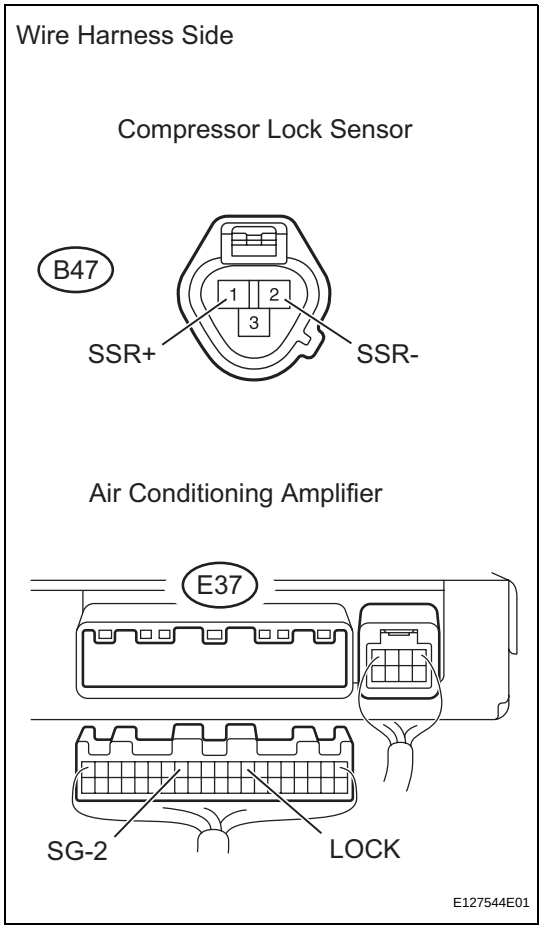
2 INSPECT COMPRESSOR LOCK SENSOR



(a) Disconnect the B47 compressor lock sensor connector.
(b) Measure the resistance of the sensor.
Standard resistance

Tester Connection	Condition	Specified Condition
1 (SSR+) - 2 (SSR-)	20°C (68°F)	65 to 125 Ω

NG → **REPLACE COMPRESSOR LOCK SENSOR**

OK

3 CHECK WIRE HARNESS (COMPRESSOR LOCK SENSOR - AIR CONDITIONING AMPLIFIER)

(a) Disconnect the B47 compressor lock sensor connector.
(b) Disconnect the E37 amplifier connector.
(c) Measure the resistance of the wire harness side connectors.
Standard resistance

Tester Connection	Specified Condition
B47-1 (SSR+) - E37-8 (LOCK)	Below 1 Ω
B47-2 (SSR-) - E37-13 (SG-2)	Below 1 Ω
B47-1 (SSR+) - E37-13 (SG-2)	10 kΩ or higher
E37-8 (LOCK) - Body ground	10 kΩ or higher

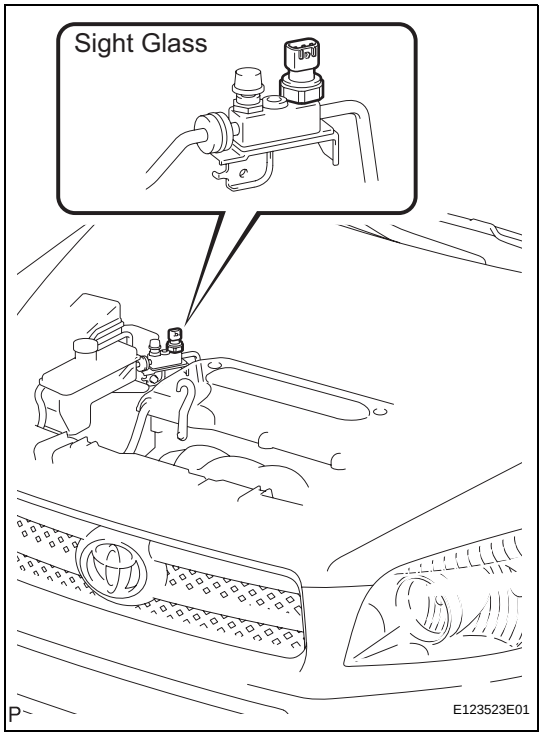
DTC	B1423/23	Pressure Sensor Circuit

DESCRIPTION

This DTC is output when the refrigerant pressure is either extremely low (0.19 MPa [2.0 kgf/cm^2, 28 psi] or less) or extremely high (3.14 MPa [32.0 kgf/cm^2, 455 psi] or more). The air conditioning pressure sensor, which is installed on the pipe of the high pressure side, detects the refrigerant pressure and sends refrigerant pressure signals to the air conditioning amplifier. The air conditioning amplifier determines the pressure from the signals in accordance with the sensor characteristics, and controls the compressor accordingly.

DTC No.	DTC Detection Condition	Trouble Area
B1423/23	Open or short in air conditioning pressure sensor circuit	• Air conditioning pressure sensor • Harness and connector between air conditioning pressure sensor and air conditioning amplifier • Air conditioning amplifier



WIRING DIAGRAM

AC

INSPECTION PROCEDURE

1	CHECK REFRIGERANT

(a) Check the sight glass of the cooler unit refrigerant liquid pipe.

(1) Prepare the vehicle in accordance with the chart below.

Item	Condition
Engine Speed	1,500 rpm
Vehicle Doors	Fully open
Temperature Setting	MAX COLD
Blower Speed	HI
A/C Switch	ON

(2) Compare the sight glass to the following chart.

Item	Symptom	Amount of Refrigerant	Corrective Procedures
1	Bubbles visible	Insufficient*	1. Check for gas leakage and repair if necessary 2. Add refrigerant until bubbles disappear
2	No bubbles visible	Empty, insufficient or too much	Refer to items 3 and 4
3	No temperature difference between compressor inlet and outlet	Empty or nearly empty	1. Check for gas leakage with gas leak detector and repair if necessary 2. Add refrigerant until bubbles disappear
4	Considerable temperature difference between compressor inlet and outlet	Correct or too much	Refer to items 5 and 6
5	Refrigerant becomes clear immediately after A/C turned OFF	Too much	1. Drain or discharge refrigerant 2. Bleed air and supply proper amount of purified refrigerant
6	Refrigerant foams and then becomes clear immediately after A/C turned OFF	Correct	-

HINT:

*: If the ambient temperature is higher than usual but cooling is sufficient, bubbles in the sight glass are permissible.

NG → **CHARGE REFRIGERANT**

OK

AC

2	READ VALUE OF INTELLIGENT TESTER (REG PRESS SENS)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON and turn the intelligent tester main switch ON.
(c) Select the item below in the DATA LIST, and read the value displayed on the intelligent tester.

Air conditioning amplifier

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
REG PRESS SENS	Regulator pressure sensor / Min.: 0 MPaG Max.: 3.187 MPaG	Actual regulator pressure is displayed	-

OK:
The display is as specified in the normal condition column.

Result

Result	Proceed to
NG	A

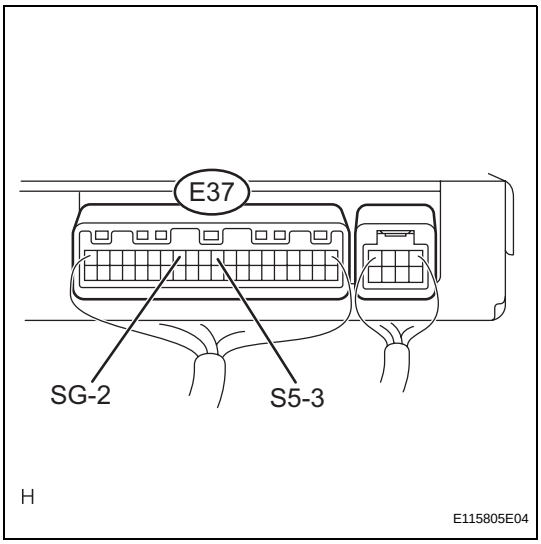
A

AC

3 CHECK WIRE HARNESS (PRESSURE SENSOR - AIR CONDITIONING AMPLIFIER)

(a) Disconnect the A21 pressure sensor connector.
(b) Disconnect the E37 amplifier connector.
(c) Measure the resistance of the wire harness side connectors.



Standard resistance

Tester Connection	Specified Condition
A21-3 (+) - E37-10 (S5-3)	Below 1 Ω
A21-2 (PR) - E37-9 (PRE)	Below 1 Ω
A21-1 (-) - E37-13 (SG-2)	Below 1 Ω
A21-3 (+) - Body ground	1 MΩ or higher
A21-2 (PR) - Body ground	1 MΩ or higher
A21-1 (-) - Body ground	1 MΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

4 CHECK AIR CONDITIONING AMPLIFIER

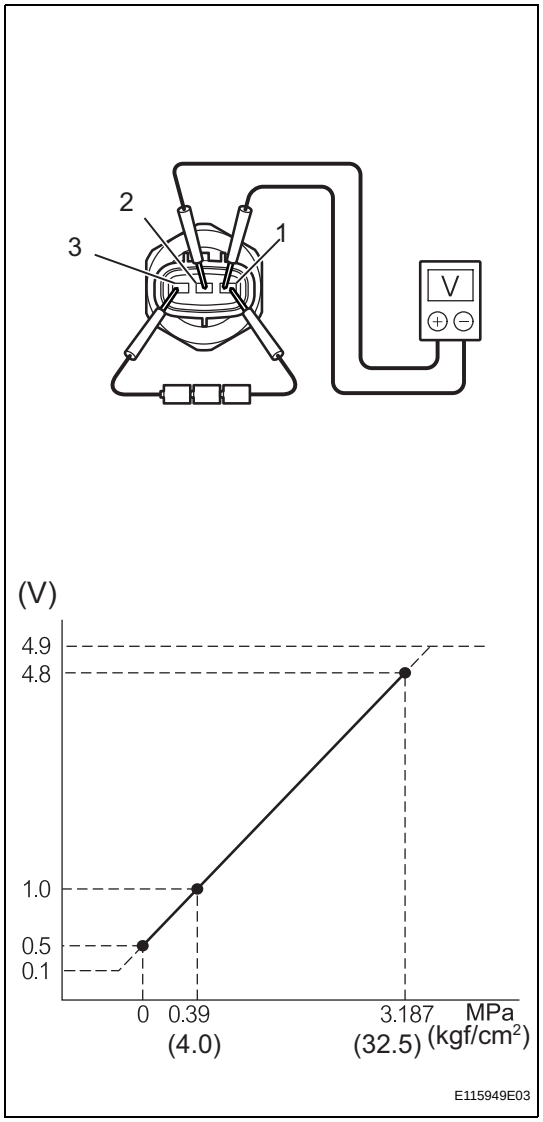
(a) Remove the air conditioning amplifier with its connectors still connected.
(b) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
E37-13 (SG-2) - Body ground	Below 1 Ω

(c) Turn the ignition switch ON.
(d) Measure the voltage of the wire harness side connector.

Standard voltage



Tester Connection	Specified Condition
E37-10 (S5-3) - E37-13 (SG-2)	4.5 to 5.5 V

NG → **REPLACE AIR CONDITIONING AMPLIFIER**

OK

AC

5	**INSPECT AIR CONDITIONING PRESSURE SENSOR**

(a) Turn the A/C switch ON.
(b) Disconnect the A21 sensor connector.
(c) Connect the three 1.5 V dry cell batteries' positive (+) lead to terminal 3 and the negative (-) lead to terminal 1. Then connect the voltmeter's positive (+) lead to terminal 2 and the negative (-) lead to terminal 1. Measure the voltage.

OK:

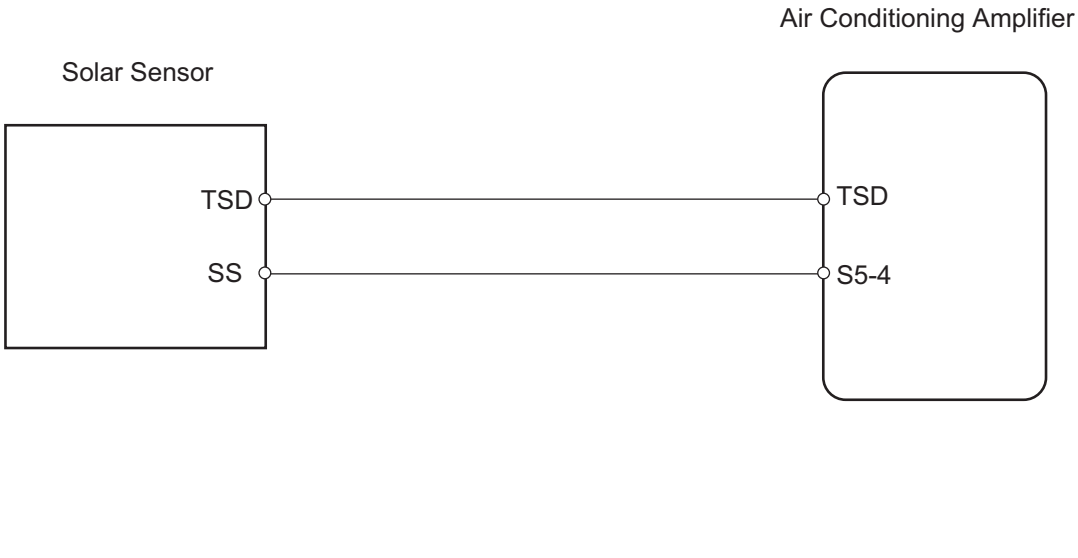
The voltage changes in accordance with the refrigerant pressure as shown in the graph.

NG → **REPLACE AIR CONDITIONING PRESSURE SENSOR**

OK

REPLACE AIR CONDITIONING AMPLIFIER

AC



DTC	B1424/24	Solar Sensor Circuit (Driver Side)

DESCRIPTION

The solar sensor, which is installed on the upper side of the instrument panel, detects sunlight and controls the air conditioning AUTO mode. The output voltage from the solar sensor varies in accordance with the amount of sunlight. When the sunlight increases, the output voltage increases. As the sunlight decreases, the output voltage decreases.
The air conditioning amplifier detects changes in the output voltage from the solar sensor.

DTC No.	DTC Detection Condition	Trouble Area
B1424/24	Open or short in passenger side solar sensor circuit	• Solar sensor • Harness and connector between solar sensor and air conditioning amplifier • Air conditioning amplifier

WIRING DIAGRAM

E115801E05

AC

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER (SOLAR SENSOR D SIDE)

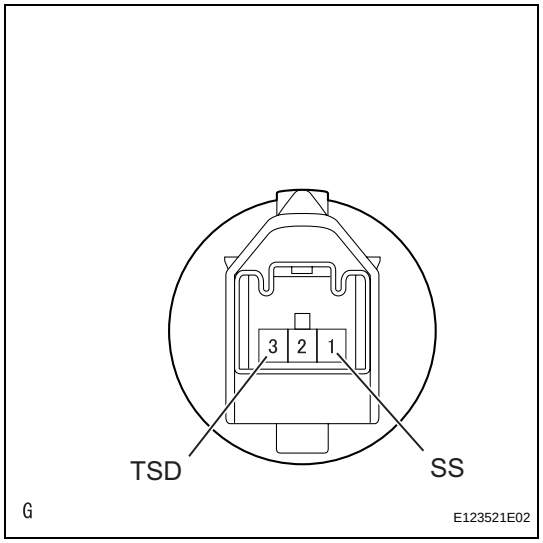
(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON and turn the intelligent tester main switch ON.
(c) Select the item below in the DATA LIST, and read the value displayed on the intelligent tester.

Air conditioning amplifier

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
SOLAR SENS-D	Driver side solar sensor / Min.: 0, Max.: 255	Driver side temperature increases as brightness increases	-

OK:
The display is as specified in the normal condition column.

Result



Result	Proceed to

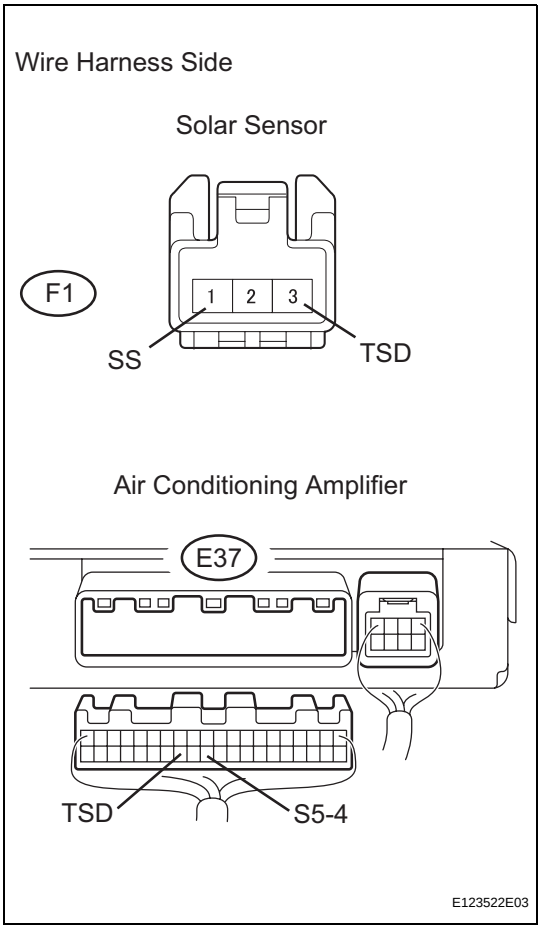
2 INSPECT SOLAR SENSOR

(a) Remove the solar sensor.
(b) Measure the resistance of the sensor.
(c) Connect the ohmmeter's positive (+) lead to terminal 1 and the negative (-) lead to terminal 3 of the solar sensor.

Standard resistance

Tester Connection	Condition	Specified Condition
1 (SS) - 3 (TSD)	Sensor exposed to electric light	Except ∞ Ω
1 (SS) - 3 (TSD)	Sensor covered with cloth	∞ Ω (No continuity)



NOTICE:
The connection procedure for using a digital tester such as an electrical tester is shown above. When using an analog tester, connect the positive (+) lead to terminal 3 and the negative (-) lead to terminal 1 of the solar sensor.
HINT:
- As the inspection light is moved away from the sensor, the voltage decreases.
- Use an incandescent light for the inspection. Position it about 30 cm (11.8 in.) from the solar sensor.

NG → **REPLACE SOLAR SENSOR**

OK

AC

3	CHECK WIRE HARNESS (SOLAR SENSOR - AIR CONDITIONING AMPLIFIER)

(a) Disconnect the F1 sensor connector.
(b) Disconnect the E37 amplifier connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
E37-33 (TSD) - F1-3 (TSD)	Below 1 Ω
E37-31 (S5-4) - F1-1 (SS)	Below 1 Ω
E37-33 (TSD) - Body ground	1 MΩ or higher

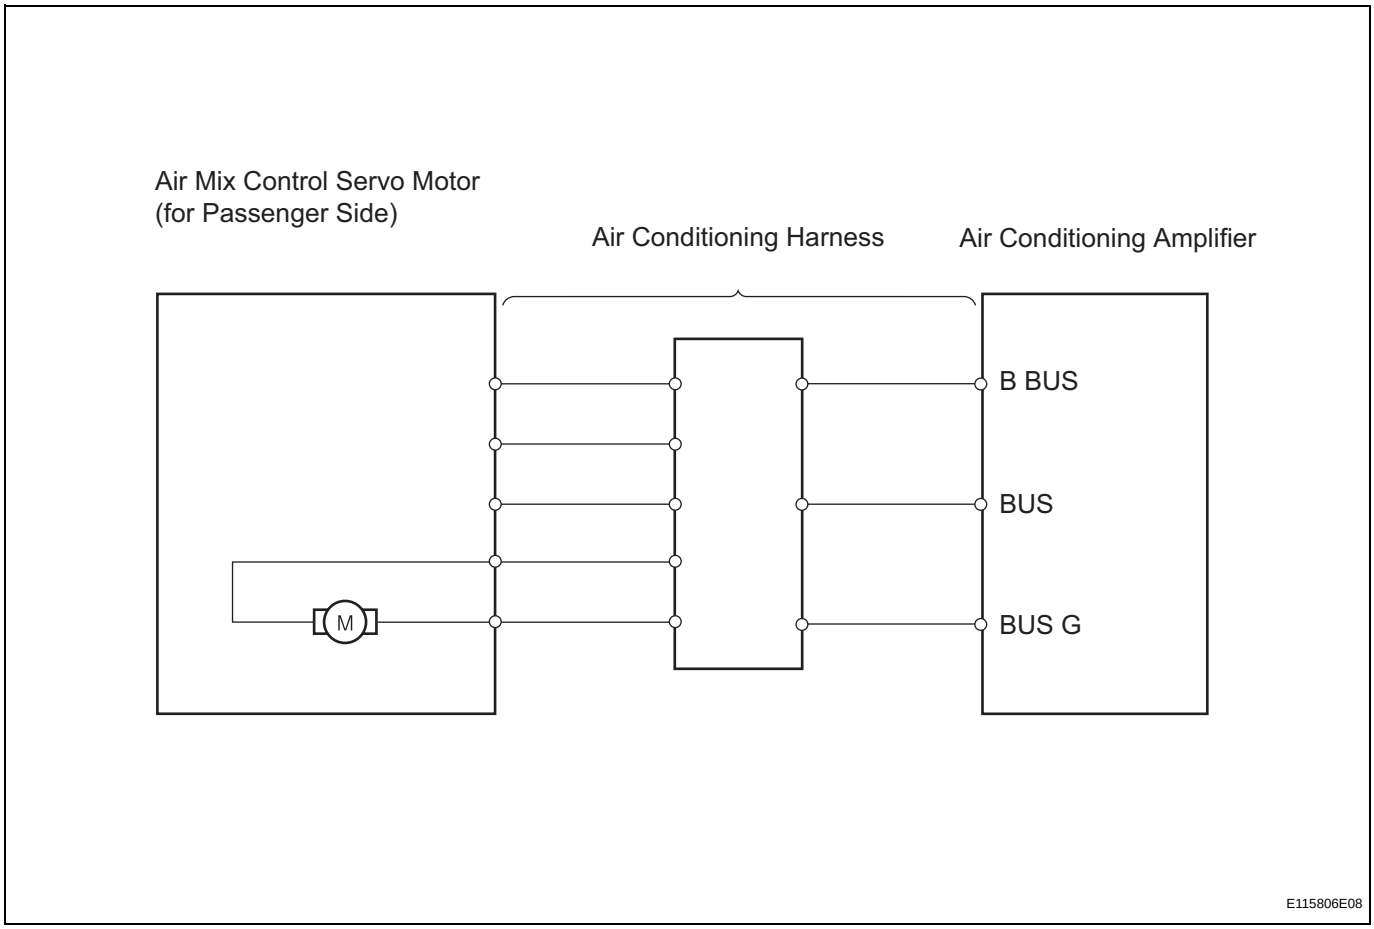
REPLACE AIR CONDITIONING AMPLIFIER

DTC	B1441/41	Air Mix Damper Control Servo Motor Circuit (Passenger Side)

DESCRIPTION



The air mix damper servo sends pulse signals to indicate the damper position to the air conditioning amplifier. The air conditioning amplifier activates the motor (normal or reverse) based on these signals to move the air mix damper (passenger seat) to the appropriate position. This adjusts the amount of air passing through the heater core after passing the evaporator and controls the temperature of the blown air.

HINT:

Confirm that there are no mechanical problems because this DTC can be output when either a damper link or damper is mechanically locked.

DTC No.	DTC Detection Condition	Trouble Area
B1441/41	Air mix damper position does not change even if air conditioning amplifier operates air mix control servo motor	• Air mix control servo motor • Air conditioning harness • Air conditioning amplifier

WIRING DIAGRAM

AC

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER (AIR MIX PULSE-P)

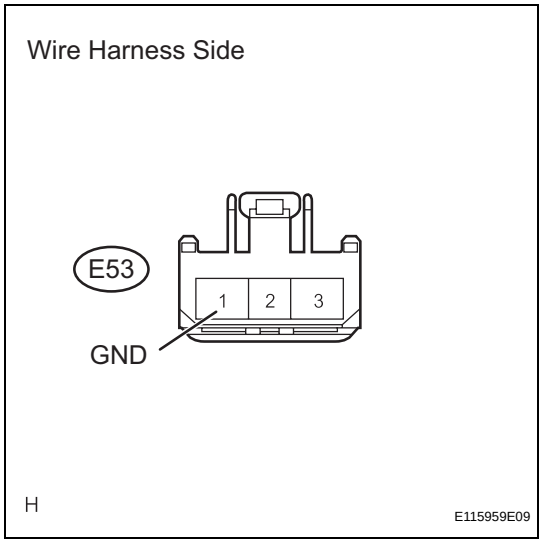
2 INSPECT FUSE (HTR)



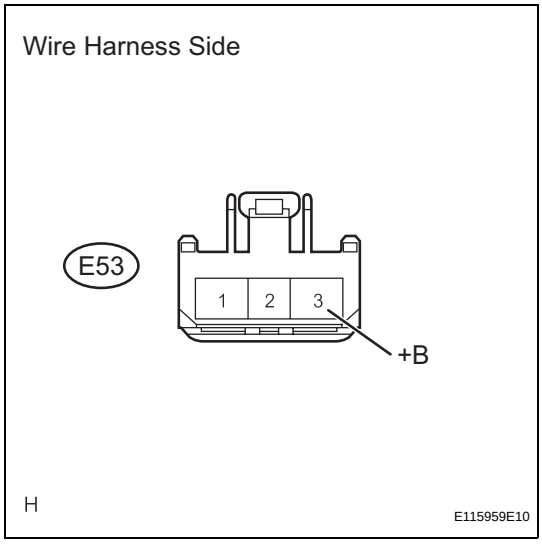
(a) Remove the HTR H-fuse from the engine room No. 2 relay block.
(b) Measure the resistance of the H-fuse.
Standard resistance:
Below 1 Ω

NG → REPLACE FUSE

AC

OK

3 CHECK WIRE HARNESS (BLOWER MOTOR - BODY GROUND)



(a) Disconnect the E53 motor connector.
(b) Measure the resistance of the wire harness side connector.
Standard resistance

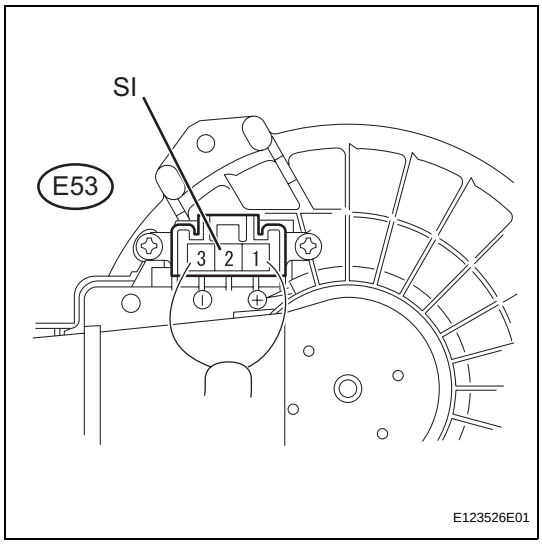
Tester Connection	Specified Condition
E53-1 (GND) - Body ground	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS AND CONNECTOR

OK

4 CHECK WIRE HARNESS (BLOWER MOTOR - BATTERY)

(a) Disconnect the E53 motor connector.
(b) Measure the voltage of the wire harness side connector.



Standard voltage

Tester Connection	Condition	Specified Condition
E53-3 (+B) - Body ground	Ignition switch ON	10 to 14 V

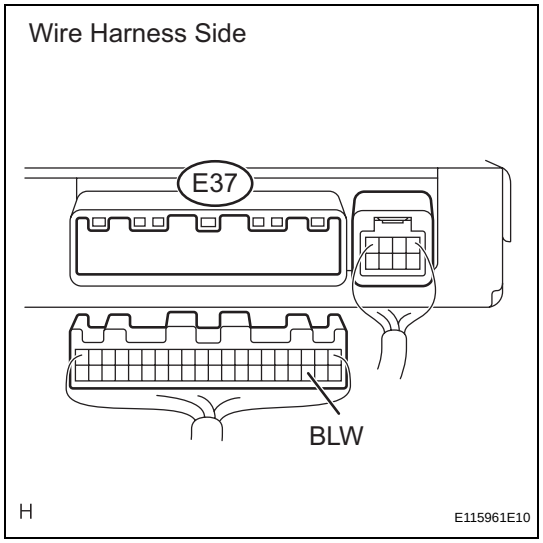
NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

5 CHECK BLOWER W/ FAN MOTOR SUB-ASSEMBLY

(a) Disconnect the E37 amplifier connector.
(b) Connect the E53 motor connector.
(c) Measure the voltage of the connector.

Standard voltage



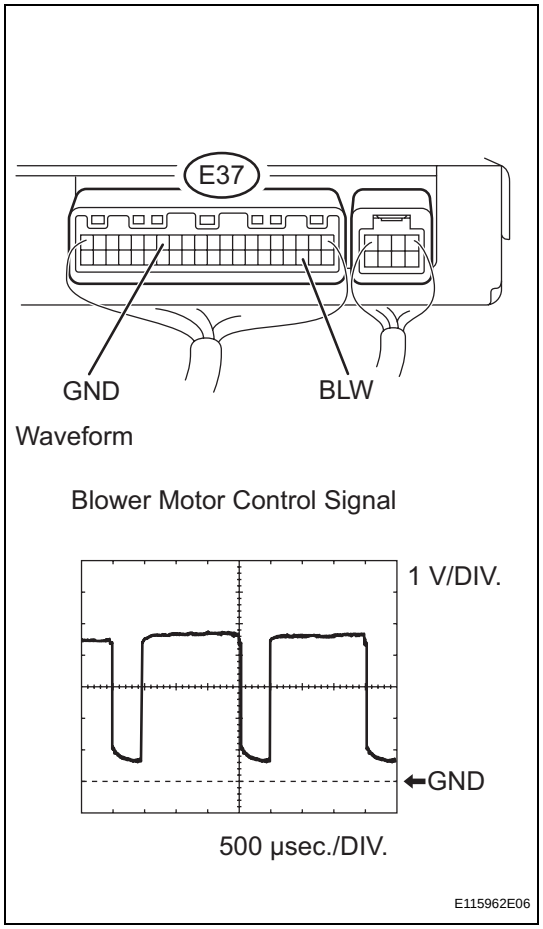
Tester Connection	Condition	Specified Condition
E53-2 (SI) - Body ground	Ignition switch ON	4.5 to 5.5 V

NG → **REPLACE BLOWER W/ FAN MOTOR SUB-ASSEMBLY**

OK

AC

6 CHECK WIRE HARNESS (AIR CONDITIONING AMPLIFIER - BODY GROUND)



(a) Disconnect the E37 amplifier connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Condition	Specified Condition
E37-23 (BLW) - Body ground	Ignition switch ON Blower switch OFF	4.5 to 5.5 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

7 CHECK AIR CONDITIONING AMPLIFIER

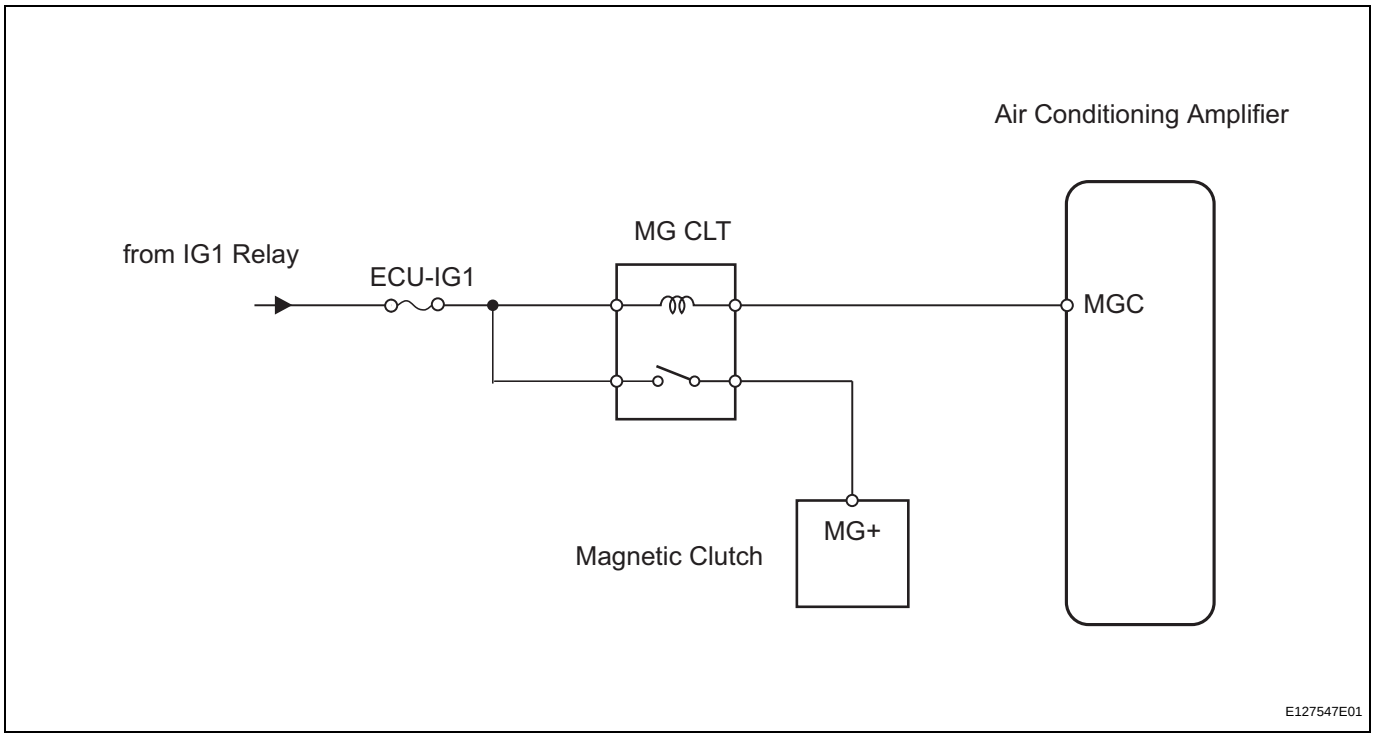
(a) Remove the air conditioning amplifier with its connectors still connected.
(b) Check the waveform of the amplifier connector.
OK:
Waveform is as shown in the illustration.
HINT:
The waveform varies with the blower level.

Item	Content
Tester Connection	BLW (E37-23) - GND (E37-14)
Tool Setting	1 V/DIV., 500 µsec./DIV.
Condition	Ignition switch ON Blower switch LO

NG → **REPLACE AIR CONDITIONING AMPLIFIER**

AC

OK



REPLACE BLOWER W/ FAN MOTOR SUB-ASSEMBLY

Compressor Circuit

DESCRIPTION

When the A/C switch is turned on, the magnetic clutch ON signal is sent from the air conditioning amplifier. Then the MG CLT relay turns on to operate the magnetic clutch.

WIRING DIAGRAM

AC

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (A/C MAG CLUTCH)

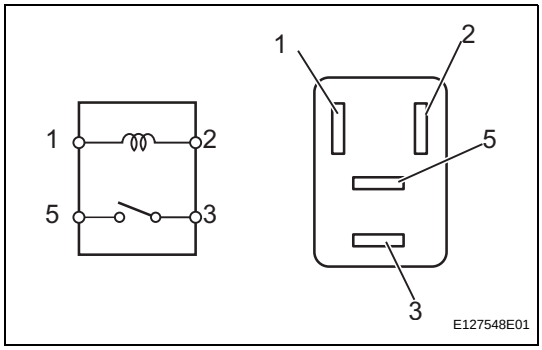
(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON and turn the intelligent tester main switch ON.
(c) Select the item below in the ACTIVE TEST and then check that the compressor magnetic relay operates.

Air conditioning amplifier

Item	Test Details / Display (Range)	Diagnostic Note
A/C MAG CLUTCH	Magnetic clutch relay / OFF, ON	Operating sound can be heard

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG



2	INSPECT FUSE (ECU-IG1)

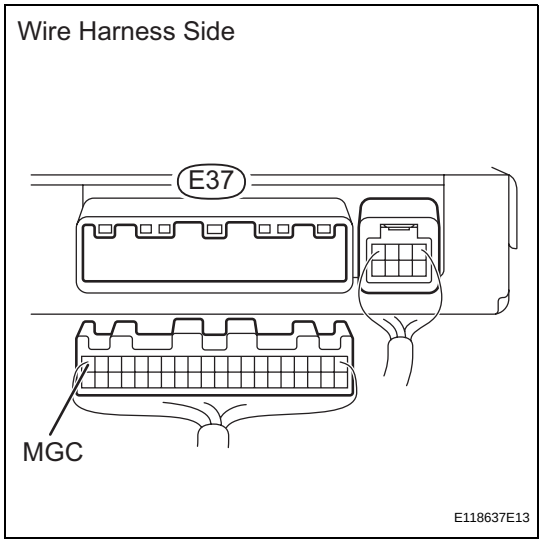
(a) Remove the ECU-IG1 fuse from the instrument panel junction block.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

3	INSPECT MAGNETIC CLUTCH RELAY (Marking: MG CLT)

(a) Remove the magnetic clutch relay from the engine room No. 1 relay block.
(b) Measure the resistance of the relay.
Standard resistance



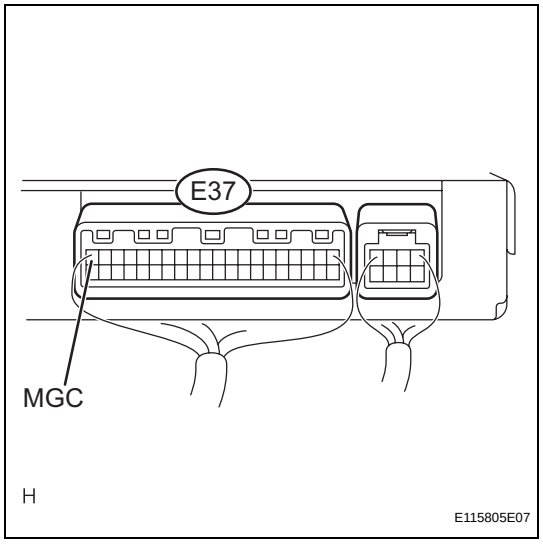
Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

NG → **REPLACE MAGNETIC CLUTCH RELAY**

OK

AC

4	CHECK WIRE HARNESS (AIR CONDITIONING AMPLIFIER - BATTERY)



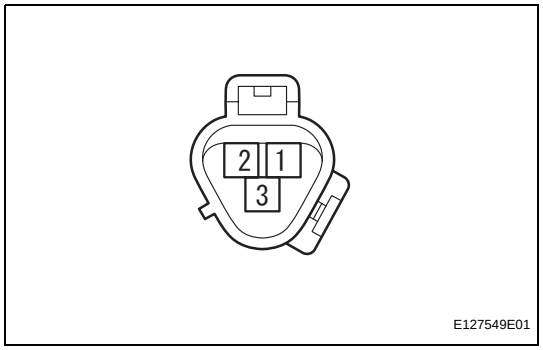
(a) Disconnect the E37 amplifier connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Condition	Specified Condition
E37-20 (MGC) - Body ground	Ignition switch ON	10 to 14 V
E37-20 (MGC) - Body ground	Ignition switch OFF	Below 1 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

5 CHECK AIR CONDITIONING AMPLIFIER (MGC VOLTAGE)



(a) Remove the air conditioning amplifier with its connectors still connected.
(b) Measure the voltage of the connector.
Standard voltage

Tester Connection	Condition	Specified Condition
E37-20 (MGC) - Body ground	Ignition switch ON A/C switch OFF	10 to 14 V
E37-20 (MGC) - Body ground	Ignition switch ON A/C switch ON	Below 1.5 V

NG → **REPLACE AIR CONDITIONING AMPLIFIER**

OK

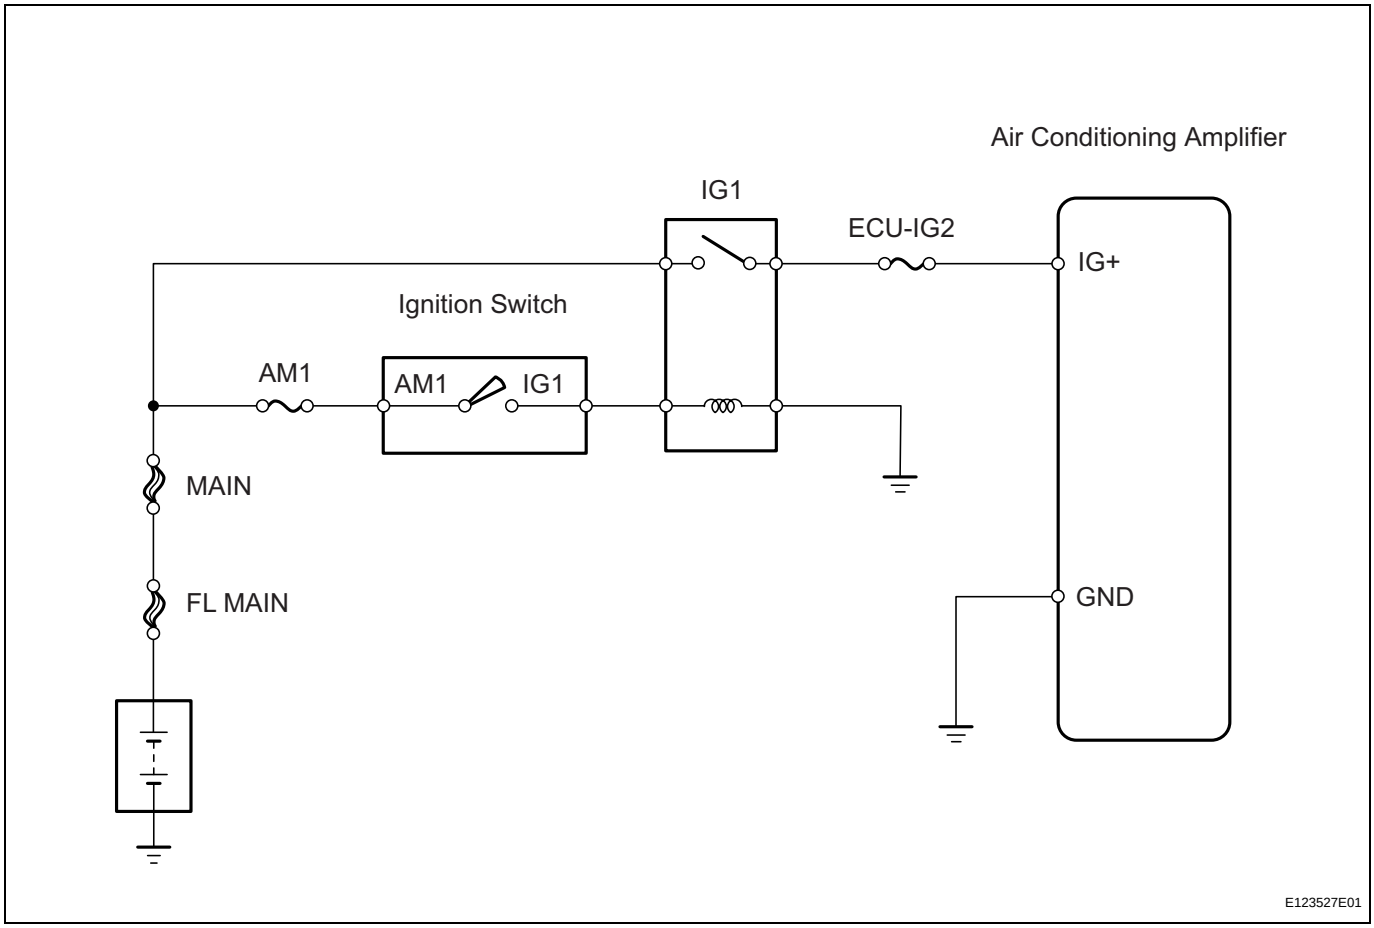
6 CHECK MAGNETIC CLUTCH

(a) Disconnect the B47 magnetic clutch connector.
(b) Connect the battery's positive (+) lead to terminal 3 of the magnetic clutch and the negative (-) lead to the body ground.
OK:
Magnetic clutch is engaged.

NG → **REPLACE MAGNETIC CLUTCH**

OK

REPAIR OR REPLACE WIRE HARNESS (MAGNETIC CLUTCH - ECU-IG1)



AC

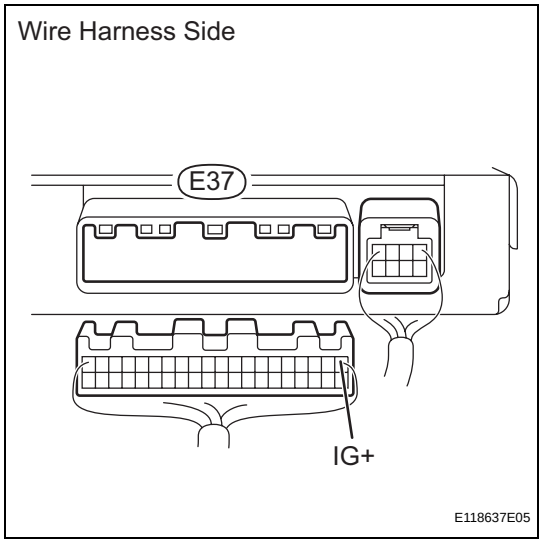
IG Power Source Circuit

DESCRIPTION

This is the main power source supplied to the air conditioning amplifier when the ignition switch is ON (IG). This power source is used for operating components, such as the air conditioning amplifier and servo motors.

WIRING DIAGRAM

INSPECTION PROCEDURE



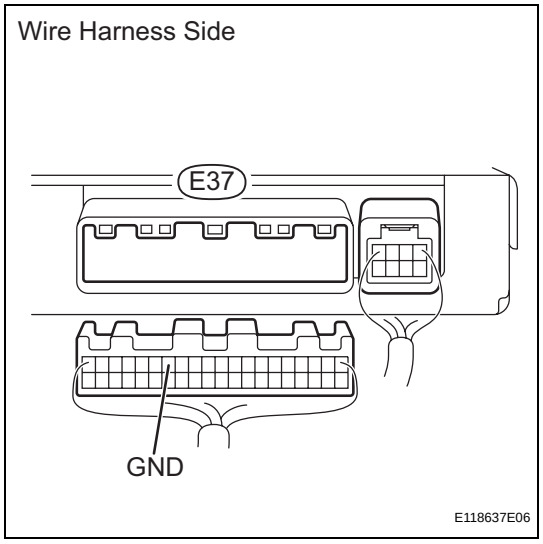
1	INSPECT FUSE (ECU-IG2)

(a) Remove the ECU-IG2 fuse from the instrument panel junction block.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

2 CHECK WIRE HARNESS (AIR CONDITIONING AMPLIFIER - BATTERY)



(a) Disconnect the E37 amplifier connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Condition	Specified Condition
E37-1 (IG+) - Body ground	Ignition switch ON	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

3 CHECK WIRE HARNESS (AIR CONDITIONING AMPLIFIER - BODY GROUND)

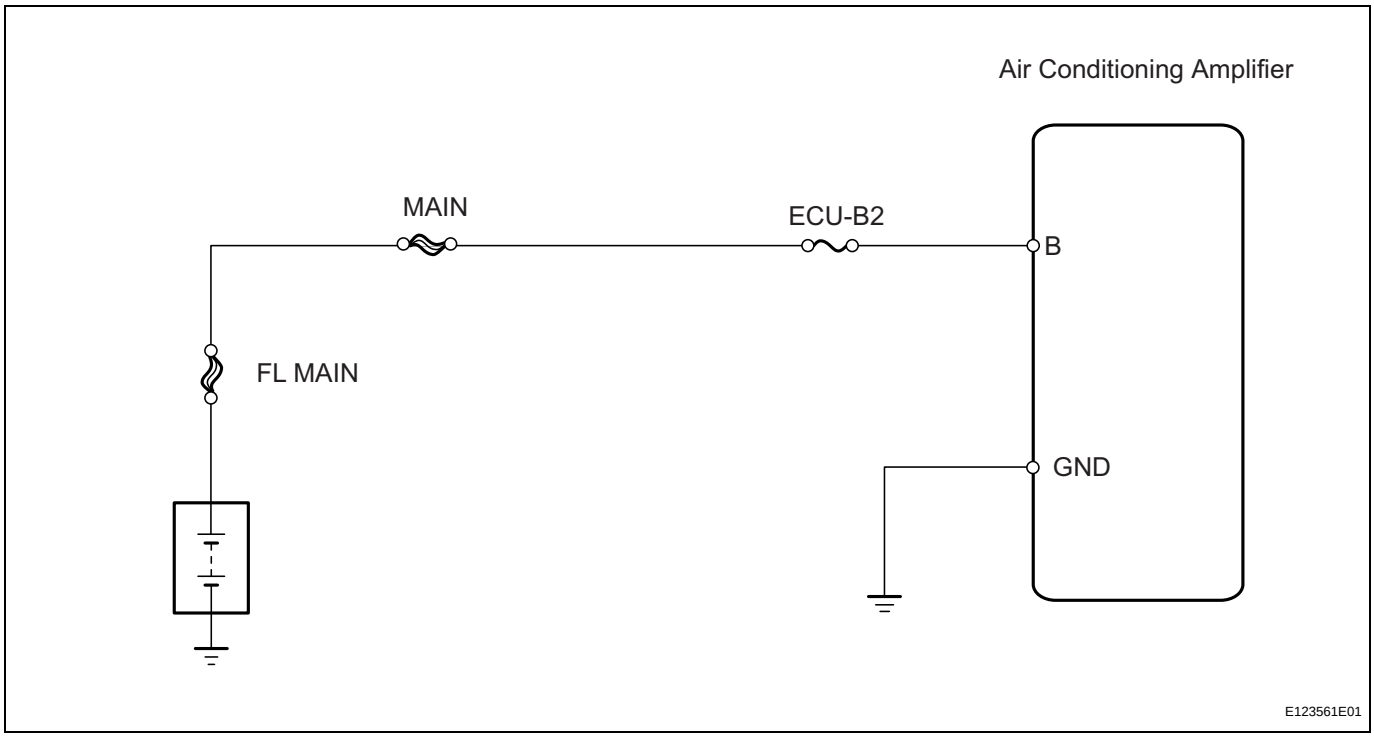
(a) Disconnect the E37 amplifier connector.
(b) Measure the resistance of the wire harness side connector.
Standard resistance

Tester Connection	Specified Condition
E37-14 (GND) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE



AC

Back-up Power Source Circuit

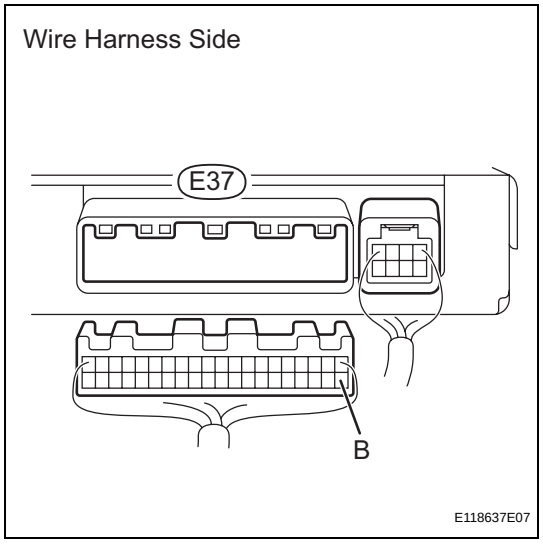
DESCRIPTION

This is the back-up power source circuit for the air conditioning amplifier. Power is supplied even when the ignition switch is turned OFF and is used for functions such as the diagnostic trouble code memory.

WIRING DIAGRAM

AC

INSPECTION PROCEDURE



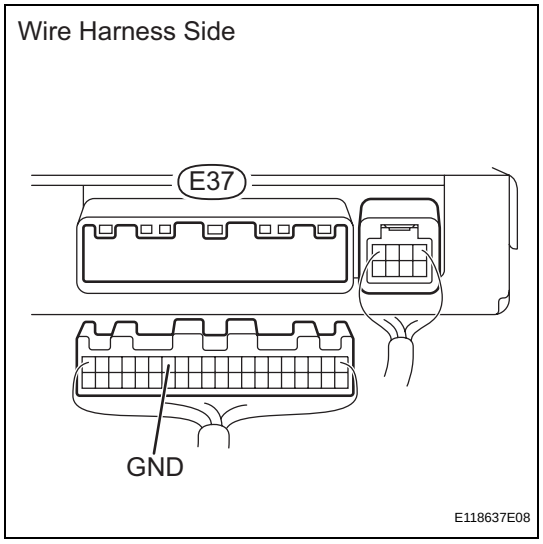
1	INSPECT FUSE (ECU-B2)

(a) Remove the ECU-B2 fuse from the engine room No. 2 relay block.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

2 CHECK WIRE HARNESS (AIR CONDITIONING AMPLIFIER - BATTERY)



(a) Disconnect the E37 amplifier connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Specified Condition
E37-21 (B) - Body ground	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

3 CHECK WIRE HARNESS (AIR CONDITIONING AMPLIFIER - BODY GROUND)

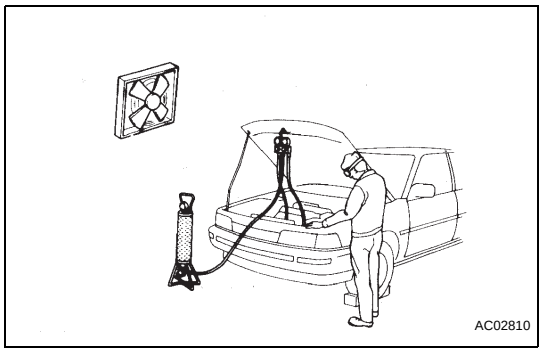
(a) Disconnect the E37 amplifier connector.
(b) Measure the resistance of the wire harness side connector.
Standard resistance

Tester Connection	Specified Condition
E37-14 (GND) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

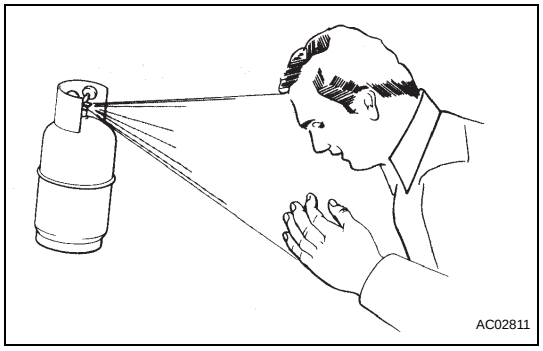
OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE



AC

AIR CONDITIONING SYSTEM (for Automatic Air Conditioning System)



PRECAUTION

1. **IF ANY OF FOLLOWING CONDITIONS ARE MET, KEEP ENGINE IDLING WITH A/C ON (ENGINE SPEED AT LESS THAN 2000 RPM) FOR AT LEAST 1 MINUTE:**
   - Refrigerant gas has been refilled or A/C parts have been replaced.
   - A long time has elapsed since the engine was stopped.

   NOTICE:
   If the engine speed exceeds 2,000 rpm, the A/C compressor may be damaged.

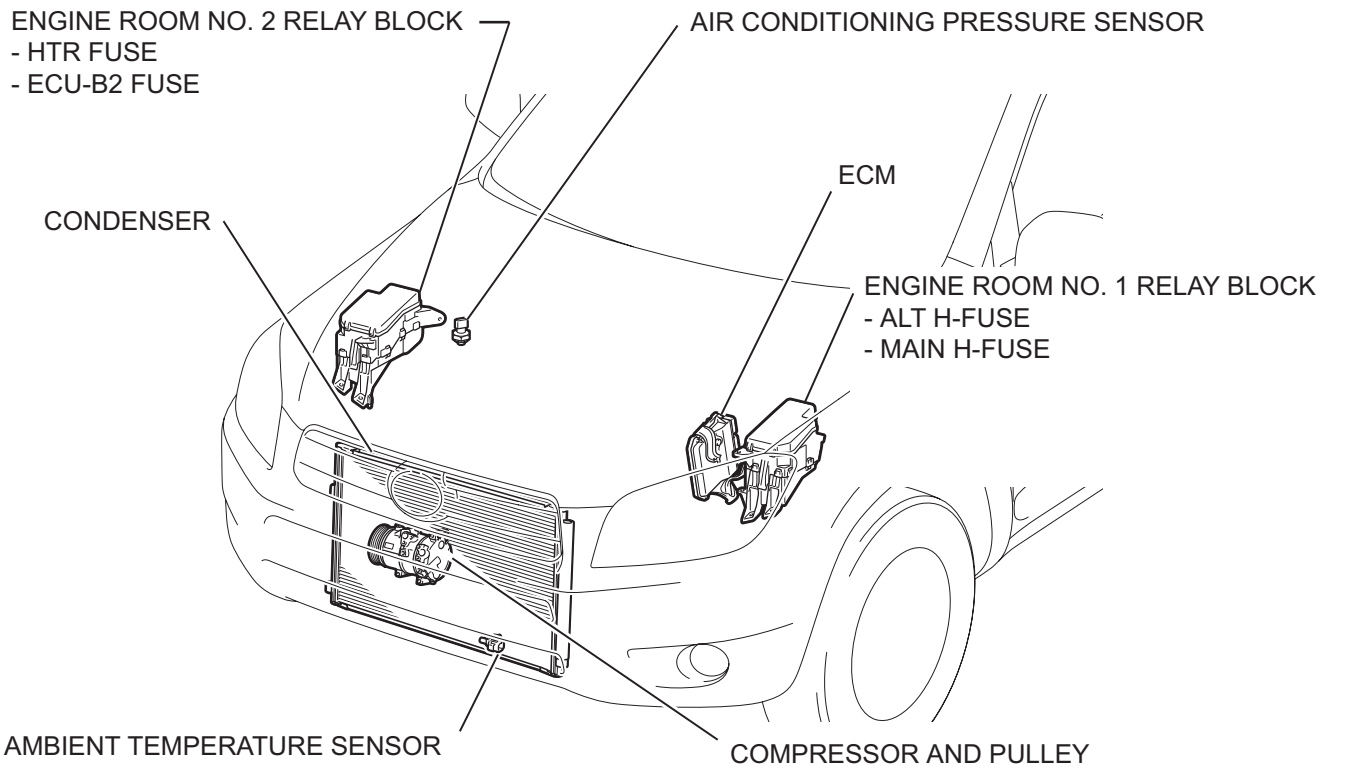
AC02810

2. **DO NOT HANDLE REFRIGERANT IN ENCLOSED AREAS OR NEAR OPEN FLAMES**
3. **ALWAYS WEAR EYE PROTECTION**

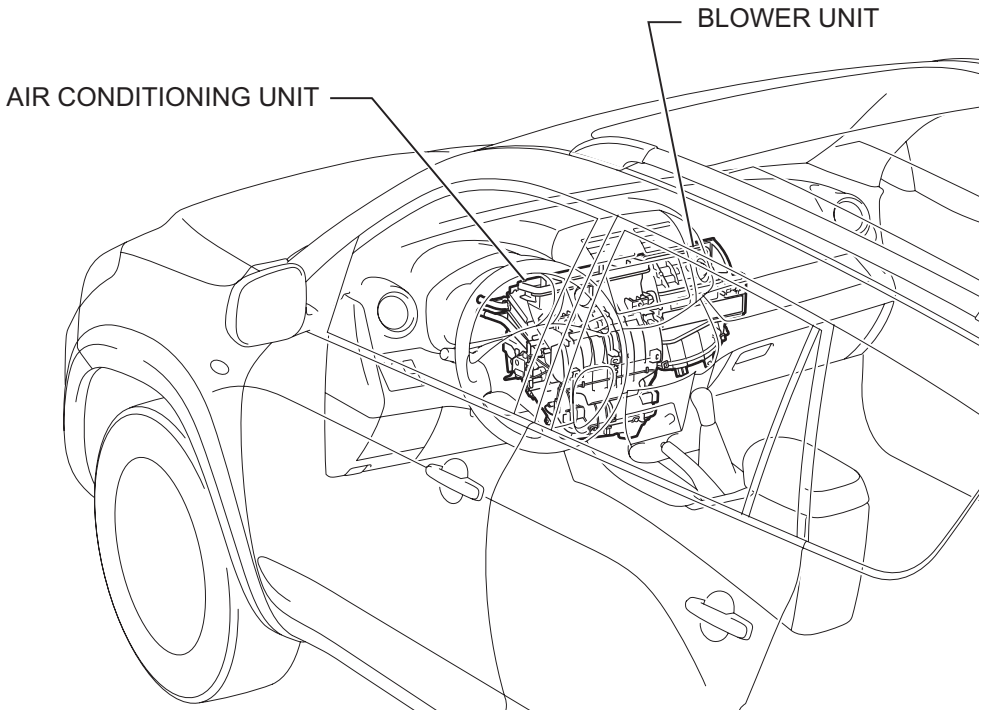
AC02811

4. **BE CAREFUL NOT TO GET LIQUID REFRIGERANT IN YOUR EYES OR ON YOUR SKIN**
   If liquid refrigerant gets in your eyes or on your skin:
   (a) Wash the area with lots of cold water.
   CAUTION:
   Do not rub your eyes or skin.
   (b) Apply clean petroleum jelly to the skin.
   (c) Go immediately to a physician or hospital for professional treatment.
5. **NEVER HEAT CONTAINER OR EXPOSE IT TO OPEN FLAME**
6. **BE CAREFUL NOT TO DROP CONTAINER OR SUBJECT IT TO PHYSICAL SHOCKS**

N011084E03



7. **DO NOT OPERATE COMPRESSOR WITH INSUFFICIENT REFRIGERANT IN REFRIGERANT SYSTEM**
   If there is not enough refrigerant in the refrigerant system, oil lubrication will be insufficient and compressor burnout may occur. Necessary care should be taken to avoid this.



AC

8. **DO NOT OPEN HIGH PRESSURE MANIFOLD VALVE WHILE COMPRESSOR IS OPERATING**
   Open and close only the low pressure valve. Opening and closing the high pressure valve could cause the charging cylinder to rupture.
9. **BE CAREFUL NOT TO OVERCHARGE SYSTEM WITH REFRIGERANT**
   If the refrigerant is overcharged, it causes problems such as insufficient cooling, poor fuel economy and engine overheating.
10. **DO NOT OPERATE ENGINE AND COMPRESSOR WITHOUT REFRIGERANT**
    NOTICE:
    This may damage the inside of the compressor.

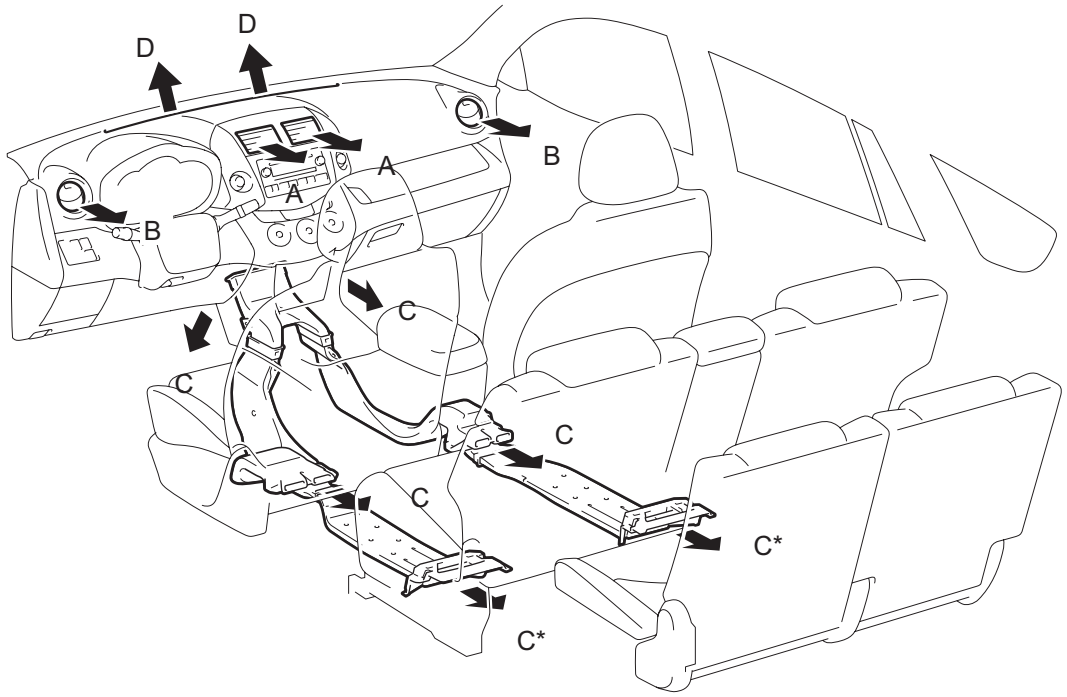
SYSTEM DESCRIPTION

1. GENERAL

(a) The air conditioning system has the following features:

- The air conditioning amplifier controls the operation of parts, such as the A/C compressor, automatically in accordance with the operating conditions of the air conditioning system.

2. MODE POSITION AND DAMPER OPERATION



E125197E01

Control Damper	Control Position	Damper Position	Operation
Air Inlet Control Damper	FRESH	A	Brings in fresh air.
	RECIRC	B	Recirculates internal air.

Control Damper	Control Position	Damper Position	Operation
Air Mix Control Film Damper	COOL to HOT	C, D, E	Varies the mixture ratio of fresh air and the recirculation air in order to regulate the temperature continuously from HOT to COOL.
Mode Control Film Damper	FACE	I, J, L, R	Air blows out of center registers and side registers.
	BI-LEVEL	I, O, M, Q	Air mainly blows out of center registers, side registers, and footwell register ducts.
	FOOT	H, K, N, P	Air mainly blows out of front and rear footwell register ducts. In addition, air blows out slightly from front and side defrosters, and side registers.
	FOOT/DEF	G, K, N, Q	Air mainly blows out of front and side defrosters to defrost windshield. Air also blows out from front and rear footwell register ducts, and side registers.
	DEF	F, K, N, R	Air blows out of front and side defrosters and side registers to defrost windshield.

3. AIR OUTLET AND AIRFLOW VOLUME

PROBLEM SYMPTOMS TABLE

(2005/11-2006/01)

HINT:

- Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Air conditioning system

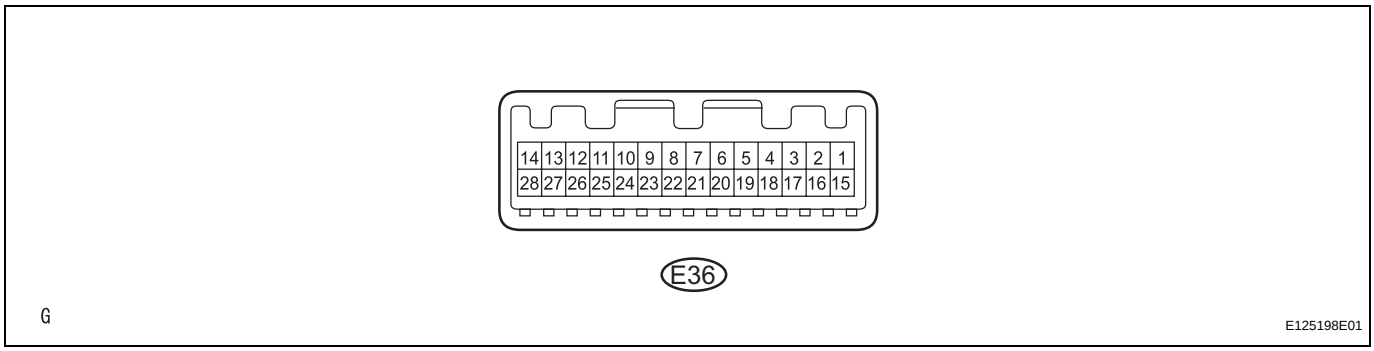
Symptom	Suspected area	See page
No functions of A/C system operate	1. ECU-IG2 fuse	-
	2. Wire harness or connector	-
	3. Air conditioning amplifier	AC-122
Airflow Control: Blower motor does not operate	1. HTR, ECU-IG1 fuse	-
	2. Blower motor circuit	AC-157
	3. Blower motor	AC-207
	4. Wire harness or connector	-
Airflow Control: Blower motor does not change speed	1. Blower resistor	AC-208
	2. Blower motor	AC-207
	3. Heater control (blower switch)	-
Temperature Control: No cool air comes out	1. Refrigerant volume	-
	2. Refrigerant pressure	-
	3. Air conditioning pressure sensor circuit	AC-143
	4. Heater control base (A/C switch)	-
	5. Compressor and pulley	AC-215
	6. Expansion valve	-
	7. Air conditioning amplifier	AC-122
	8. ECM	ES-427
	9. CAN communication	CA-45
Compressor and pulley does not operate	1. ECU-IG2 fuse	-
	2. Refrigerant pressure	-
	3. Compressor and pulley	AC-215
	4. Air conditioning pressure sensor circuit	AC-143
	5. Evaporator temperature sensor circuit	AC-136
	6. Air conditioning amplifier	AC-122
	7. ECM	ES-427
	8. CAN communication	CA-45

PROBLEM SYMPTOMS TABLE

(2006/01-)

HINT:

- Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.



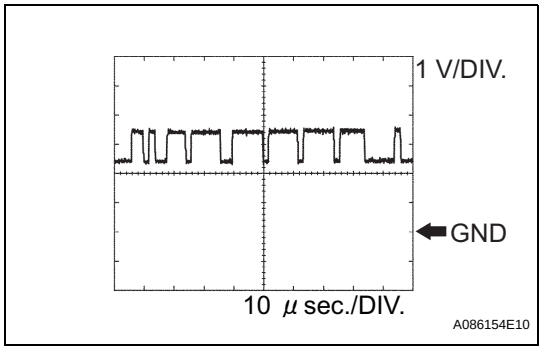
Air conditioning system

Symptom	Suspected area	See page
No functions of A/C system operate	1. ECU-IG2 fuse	-
	2. Wire harness or connector	-
	3. Air conditioning amplifier	AC-123
Airflow Control: Blower motor does not operate	1. HTR, ECU-IG1 fuse	-
	2. Blower motor circuit	AC-157
	3. Blower motor	AC-207
	4. Wire harness or connector	-
Airflow Control: Blower motor does not change speed	1. Blower resistor	AC-208
	2. Blower motor	AC-207
	3. Heater control (blower switch)	AC-239
Temperature Control: No cool air comes out	1. Refrigerant volume	-
	2. Refrigerant pressure	-
	3. Air conditioning pressure sensor circuit	AC-143
	4. Heater control base (A/C switch)	AC-242
	5. Compressor and pulley (for 2AZ-FE)	AC-215
	6. Compressor and magnetic clutch (for 2GR-FE)	AC-219
	7. Compressor circuit	AC-163
	8. Expansion valve	-
	9. Air conditioning amplifier	AC-123
	10. ECM (for 2AZ-FE)	ES-1
	11. ECM (for 2GR-FE)	ES-1
	12. CAN communication	CA-1
A/C compressor does not operate	1. ECU-IG2 fuse	-
	2. Refrigerant pressure	-
	3. Compressor and pulley (for 2AZ-FE)	AC-215
	4. Compressor and magnetic clutch (for 2GR-FE)	AC-219
	5. Air conditioning pressure sensor circuit	AC-143
	6. Evaporator temperature sensor circuit	AC-136
	7. Air conditioning amplifier	AC-123
	8. ECM (for 2AZ-FE)	ES-1
	9. ECM (for 2GR-FE)	ES-1
	10. CAN communication	CA-1
Engine idle up does not occur, or is continuos	1. Compressor circuit	AC-163
	2. ECM (for 2AZ-FE)	ES-1
	3. ECM (for 2GR-FE)	ES-1

TERMINALS OF ECU

(2005/11-2006/01)

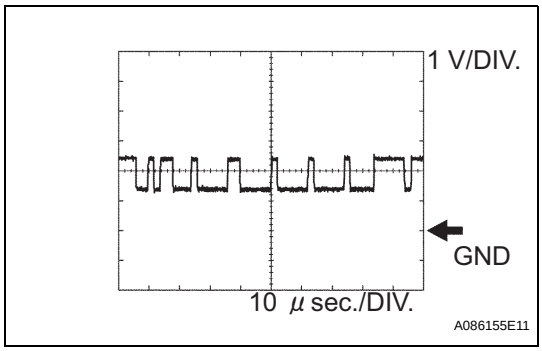
1. CHECK AIR CONDITIONING AMPLIFIER



(a) Measure the voltage and resistance of the connectors.
HINT:
Check from the rear of the connector while it is connected to the air conditioning amplifier.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
S5-3 (E36-7) - GND (E36-24)	B - W-B	Power supply for pressure sensor	Ignition switch ON	4.5 to 5.5 V
CANH (E36-8) - GND (E36-24)	V - W-B	Hi-level CAN bus line	Ignition switch ON	Pulse generation (see waveform 1)
CANL (E36-9) - GND (E36-24)	W - W-B	Lo-level CAN bus line	Ignition switch ON	Pulse generation (see waveform 2)
SG-3 (E36-23) - Body ground	B - Body ground	Ground for evaporator temperature sensor	Always	Below 1 Ω
PRE (E36-12) - SG-2 (E36-10)	L - G	Air conditioning pressure sensor signal	Refrigerant pressure: normal	0.76 to 4.74 V
PRE (E36-12) - SG-2 (E36-10)	L - G	Air conditioning pressure sensor signal	Refrigerant pressure: Abnormal (less than 0.196 MPa [2.0 kgf/cm^2, 28 psi]	Below 0.76 V
PRE (E36-12) - SG-2 (E36-10)	L - G	Air conditioning pressure sensor signal	Refrigerant pressure: Abnormal (more than 3.14 MPa [32 kgf/cm^2, 455 psi])	4.74 V or more
SG-2 (E36-10) - Body ground	B - Body ground	Ground for pressure sensor	Always	Below 1 Ω
SOL+ (E36-13) - GND (E36-24)	GR - W-B	A/C compressor operation signal	Engine idling	Pulse generation (see waveform 3)
			Heater control (blower switch): 1	
			A/C switch ON	
IG+ (E36-14) - GND (E36-24)	Y - W-B	Power source (IG)	Ignition switch ON	10 to 14 V
SBLW (E36-21) - GND (E36-24)	GR - W-B	Blower motor ON signal	Ignition switch ON	10 to 14 V → Below 1 V
			Heater control (blower switch): 0 → 1	
TE (E36-22) - SG-3 (E36-23)	W - B	Evaporator temperature sensor signal	Ignition switch ON	1 to 1.3 V
			Temperature near evaporator: 15°C (59°F)	
GND (E36-24) - Body ground	W-B - Body ground	Ground for main power supply	Always	Below 1 Ω
A/C (E36-27) - GND (E36-24)	P - W-B	A/C switch signal	Ignition switch ON	Below 1 V → 10 to 14 V
			A/C switch OFF → ON	

AC



Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
LED (E36-28) - Body ground	GR - Body ground	A/C switch indicator signal	Engine idling	10 to 14 V → Below 4 V

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Air conditioning system data and the Diagnostic Trouble Codes (DTCs) can be read through the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform troubleshooting.

2. CHECK DLC3

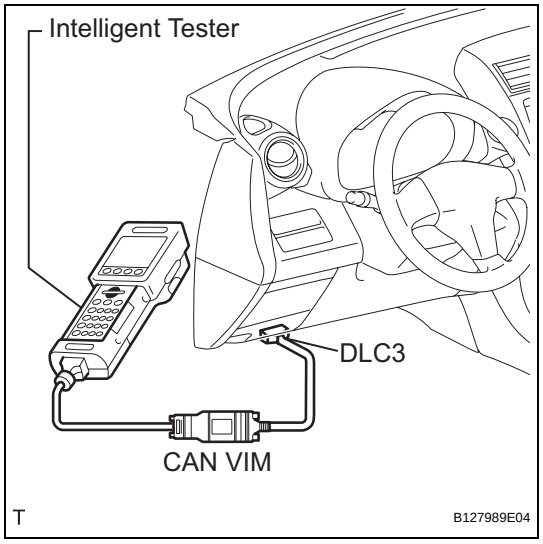
The vehicle's ECM uses the ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG(5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	HIGH-level CAN bus line	Ignition switch LOCK*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch LOCK*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch LOCK*	1 MΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch LOCK*	200 Ω or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch LOCK*	1 MΩ or higher

AC

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

NOTICE:



***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, other switches or doors.**

HINT:

Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.

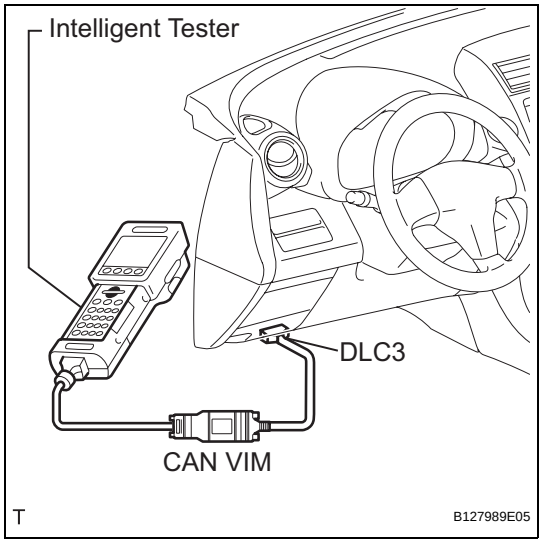
If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON and turn the intelligent tester ON.



(c) Read the DTC by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

2. CLEAR DTC

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON and turn the intelligent tester ON.

(c) Clear the DTC by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

(2005/11-2006/01)

1. READ DATA LIST

HINT:
Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON and turn the intelligent tester ON.

(c) Read the DATA LIST by following the prompts on the tester.

AC

Air conditioning amplifier

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
AMBI TEMP SENS	Ambient temperature sensor / Min.: -23.3°C (-9.94°F) Max.: 65.95°C (150.71°F)	Actual ambient temperature is displayed	Open circuit: -23.3°C (-9.94°F) Short circuit: 65.95°C (150.71°F)

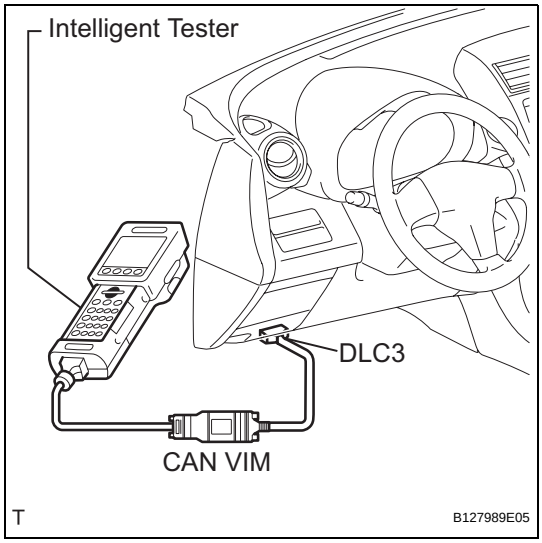
2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed in the ACTIVE TEST.



(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON and turn the intelligent tester ON.

(c) Perform the ACTIVE TEST by following the prompts on the tester.

Air conditioning amplifier

Item	Test Details / Display (Range)	Diagnostic Note
A/C COMPRESSOR	A/C compressor / OFF, ON	-

DATA LIST / ACTIVE TEST

(2006/01-)

1. READ DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON and turn the intelligent tester ON.

(c) Read the DATA LIST by following the prompts on the tester.

Air conditioning amplifier

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
AMBI TEMP SENS	Ambient temperature sensor / Min.: -23.3°C (-9.94°F) Max.: 65.95°C (150.71°F)	Actual ambient temperature is displayed	Open circuit: -23.3°C (-9.94°F) Short circuit: 65.95°C (150.71°F)

HINT:

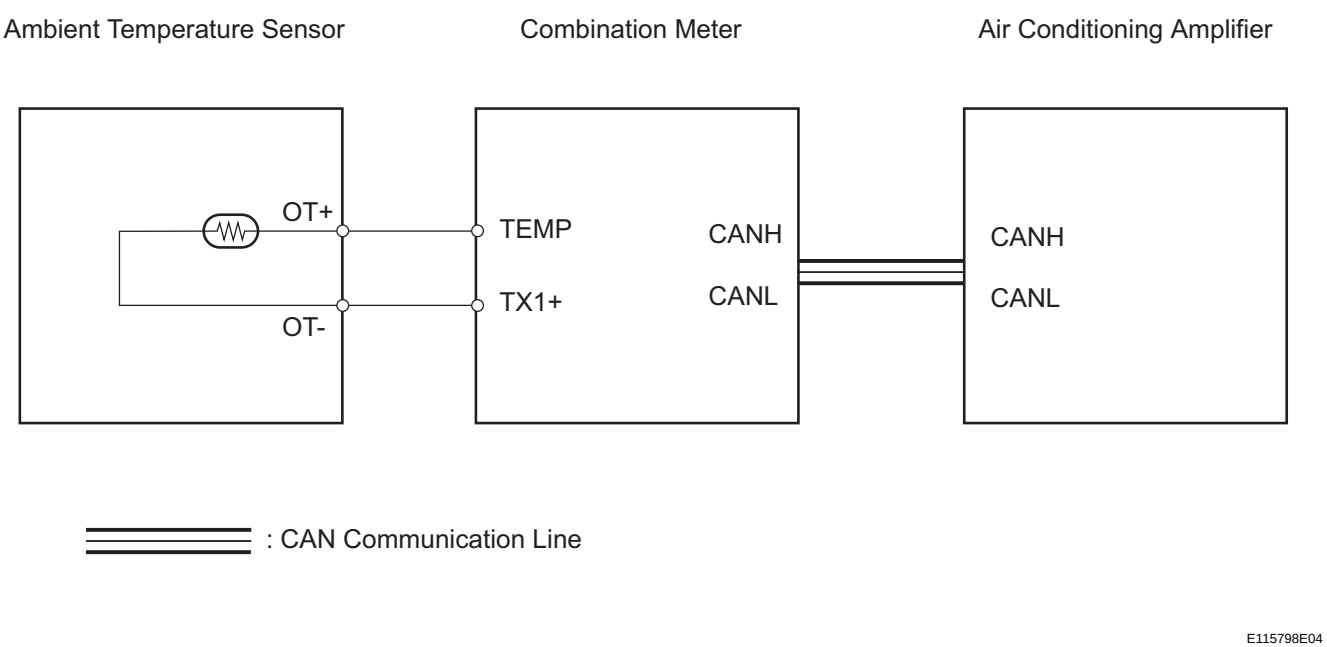
*1: DTC B1422/22 (Compressor Lock Sensor Circuit) is indicated only for a currently occurring malfunction for 2GR-FE.

*2: Compressor and Pulley for 2AZ-FE, Compressor and Magnetic Clutch for 2GR-FE

DTC	B1412/12	Ambient Temperature Sensor Circuit



DESCRIPTION

The ambient temperature sensor is installed in the front part of the condenser to detect the ambient temperature and control the air conditioner. The sensor is connected to the combination meter and detects fluctuations in the ambient temperature. This data is used for controlling the room temperature. The sensor sends a signal to the air conditioning amplifier via the combination meter. The resistance of the ambient temperature sensor changes in accordance with the ambient temperature. As the temperature decreases, the resistance increases. As the temperature increases, the resistance decreases.

The air conditioning amplifier applies a voltage (5 V) to the ambient temperature sensor and reads voltage changes as changes in the resistance of the ambient temperature sensor. The combination meter sends the read signal to the air conditioning amplifier via CAN communication.

DTC No.	DTC Detection Condition	Trouble Area
B1412/12	Open or short in ambient temperature sensor circuit	• Ambient temperature sensor • Harness and connector between ambient temperature sensor and combination meter • Combination meter • Air conditioning amplifier • CAN communication line

WIRING DIAGRAM

AC

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER (AMBI TEMP SENS)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON and turn the intelligent tester main switch ON.
(c) Select the item below in the DATA LIST, and read the value displayed on the intelligent tester.

Air conditioning amplifier

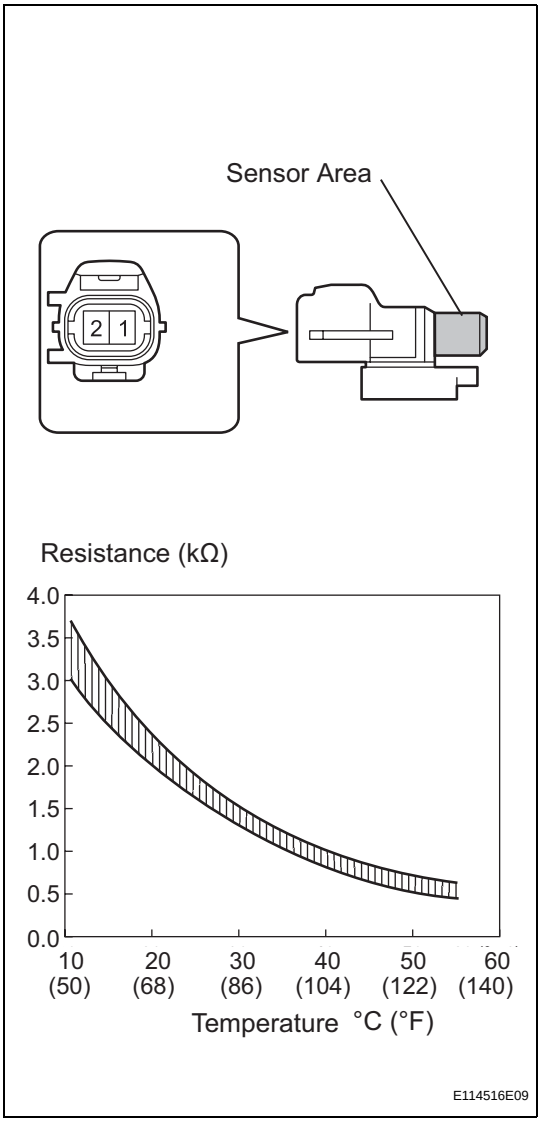
Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
AMBI TEMP SENS	Ambient temperature sensor / Min.: -23.3°C (-9.94°F) Max.: 65.95°C (150.71°F)	Actual ambient temperature is displayed	Open circuit: -23.3°C (-9.94°F) Short circuit: 65.95°C (150.71°F)

OK:

The display is as specified in the normal condition column.

Result

Result	Proceed to
NG	A
OK (Checking from the PROBLEM SYMPTOMS TABLE)	B
OK (Checking from the DTC)	C



B → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

C → REPLACE AIR CONDITIONING AMPLIFIER

A

AC

2	INSPECT AMBIENT TEMPERATURE SENSOR

(a) Remove the ambient temperature sensor.

(b) Measure the resistance of the sensor.

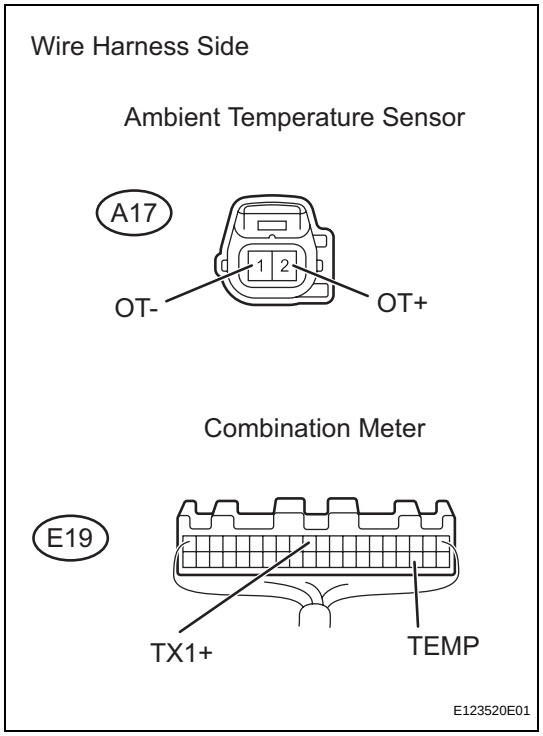
Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	10°C (50°F)	3.00 to 3.73 kΩ
1 - 2	15°C (50°F)	2.45 to 2.88 kΩ
1 - 2	20°C (68°F)	1.95 to 2.30 kΩ
1 - 2	25°C (77°F)	1.60 to 1.80 kΩ
1 - 2	30°C (86°F)	1.28 to 1.47 kΩ
1 - 2	35°C (95°F)	1.00 to 1.22 kΩ
1 - 2	40°C (104°F)	0.80 to 1.00 kΩ
1 - 2	45°C (113°F)	0.65 to 0.85 kΩ
1 - 2	50°C (122°F)	0.50 to 0.70 kΩ
1 - 2	55°C (131°F)	0.44 to 0.60 kΩ
1 - 2	60°C (140°F)	0.36 to 0.50 kΩ

NOTICE:

- **Touching the sensor even slightly may change the resistance value. Be sure to hold the connector of the sensor.**
- **When measuring, the sensor temperature must be the same as the ambient temperature.**

HINT:



As the temperature increases, the resistance decreases (see the graph).

NG → **REPLACE AMBIENT TEMPERATURE SENSOR**

OK

AC

3	CHECK WIRE HARNESS (AMBIENT TEMPERATURE SENSOR - COMBINATION METER)

(a) Disconnect the A17 sensor connector.
(b) Disconnect the E19 meter connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

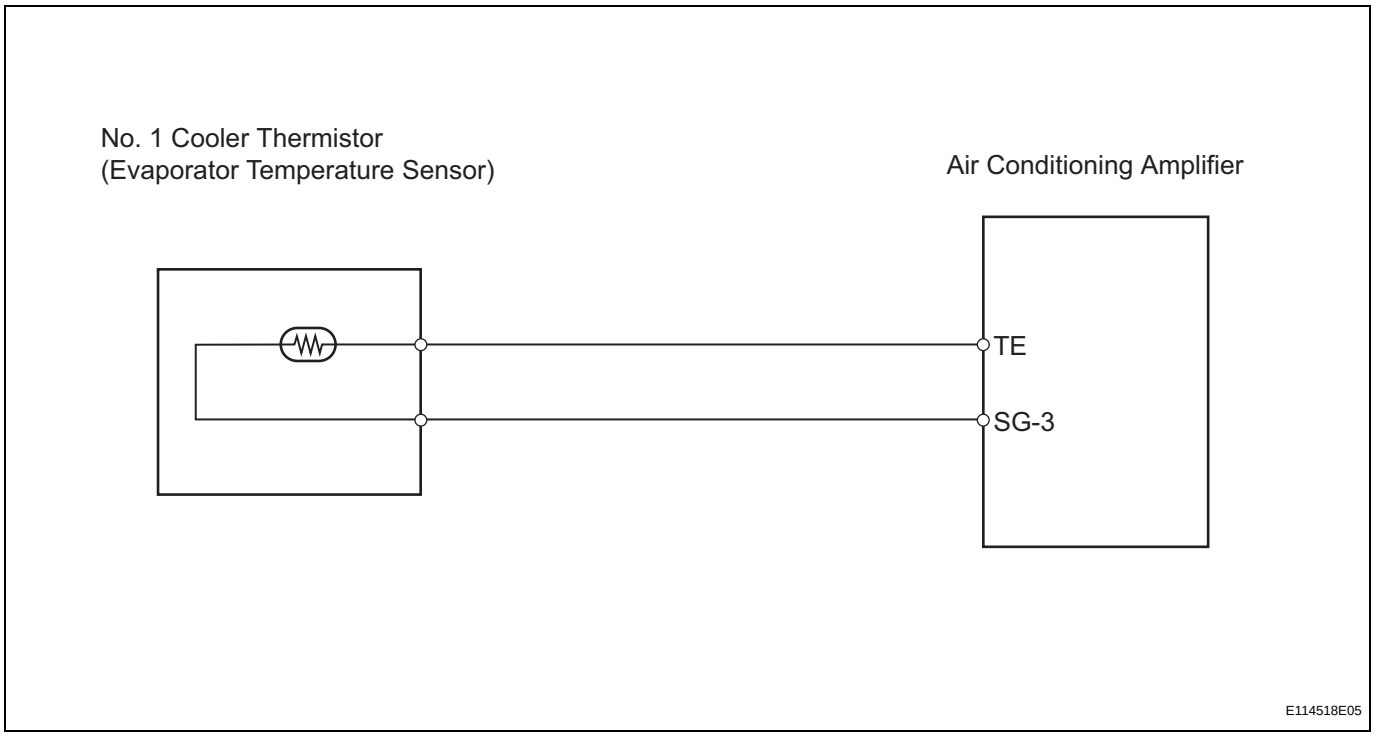
Tester Connection	Specified Condition
A17-2 (OT+) - E19-23 (TEMP)	Below 1 Ω
A17-1 (OT-) - E19-11 (TX1+)	Below 1 Ω
A17-2 (OT+) - Body ground	1 MΩ or higher
A17-1 (OT-) - Body ground	1 MΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE COMBINATION METER

AC



DTC	B1413/13	Evaporator Temperature Sensor Circuit

DESCRIPTION

The No. 1 cooler thermistor (evaporator temperature sensor) is installed on the evaporator in the air conditioning unit to detect the temperature of the cooled air that has passed through the evaporator and to control the air conditioner. It sends signals to the air conditioning amplifier. The signals change in accordance with the resistance of the No. 1 cooler thermistor (evaporator temperature sensor). As the temperature decreases, the resistance increases. As the temperature increases, the resistance decreases. The air conditioning amplifier applies a voltage (5 V) to the No. 1 cooler thermistor (evaporator temperature sensor) and reads voltage changes as changes in the resistance of the No. 1 cooler thermistor (evaporator temperature sensor). This sensor is used for frost prevention.

DTC No.	DTC Detection Condition	Trouble Area
B1413/13	Open or short in evaporator temperature sensor circuit	• No. 1 cooler thermistor (evaporator temperature sensor) • Harness and connector between No. 1 cooler thermistor (evaporator temperature sensor) and air conditioning amplifier • Air conditioning amplifier

WIRING DIAGRAM

AC

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER (EVAP FIN TEMP)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON and turn the intelligent tester main switch ON.
(c) Select the item below in the DATA LIST, and read the value displayed on the intelligent tester.

Air conditioning amplifier

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
EVAP FIN TEMP	Evaporator temperature sensor / Min.: -29.7°C (-21.46°F) Max.: 59.6°C (139.28°F)	Actual evaporator temperature is displayed	Open circuit: -29.7°C (-21.46°F) Short circuit: 59.6°C (139.28°F)

OK:

The display is as specified in the normal condition column.

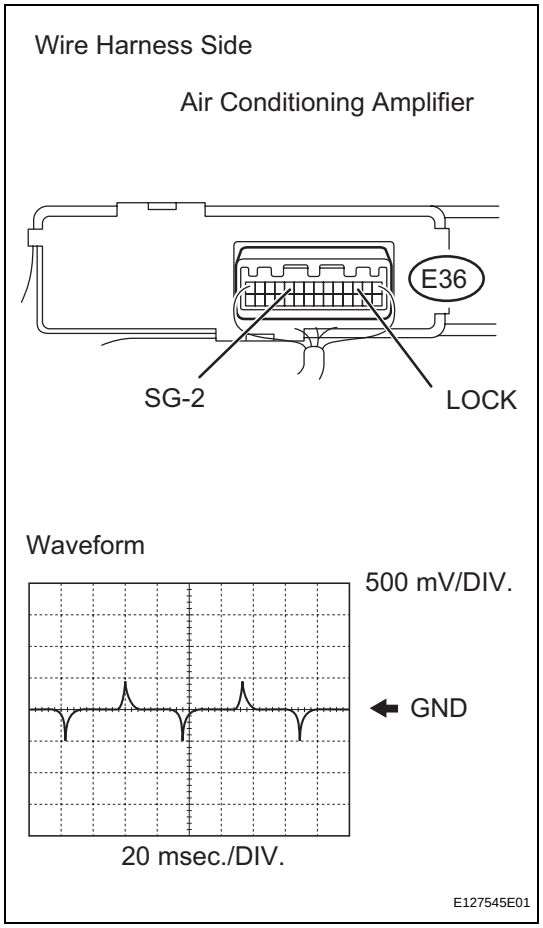
DTC	B1422/22	Compressor Lock Sensor Circuit

DESCRIPTION

This sensor sends 1 pulse per engine revolution to the air conditioning amplifier. If the ratio of the compressor speed divided by the engine speed is smaller than a predetermined value, the air conditioning amplifier turns the compressor off, and the indicator blinks at approximately 1 second intervals.

DTC No.	DTC Detection Condition	Trouble Area
B1422/22	Open or short in compressor lock sensor circuit All conditions below are detected for 3 seconds or more: 1. Engine speed: 450 rpm or more 2. Ratio between engine and compressor speed deviates 20% or more in comparison to normal operation	• Compressor and magnetic clutch • Compressor and magnetic clutch drive belt • Compressor lock sensor • Wire harness between compressor lock sensor and air conditioning amplifier • Air conditioning amplifier



WIRING DIAGRAM

AC

INSPECTION PROCEDURE

1	CHECK AIR CONDITIONING AMPLIFIER (LOCK SIGNAL)

(a) Remove the air conditioning amplifier with its connectors still connected.
(b) Check the waveform of the amplifier connector.
OK:
Waveform is as shown in the illustration.

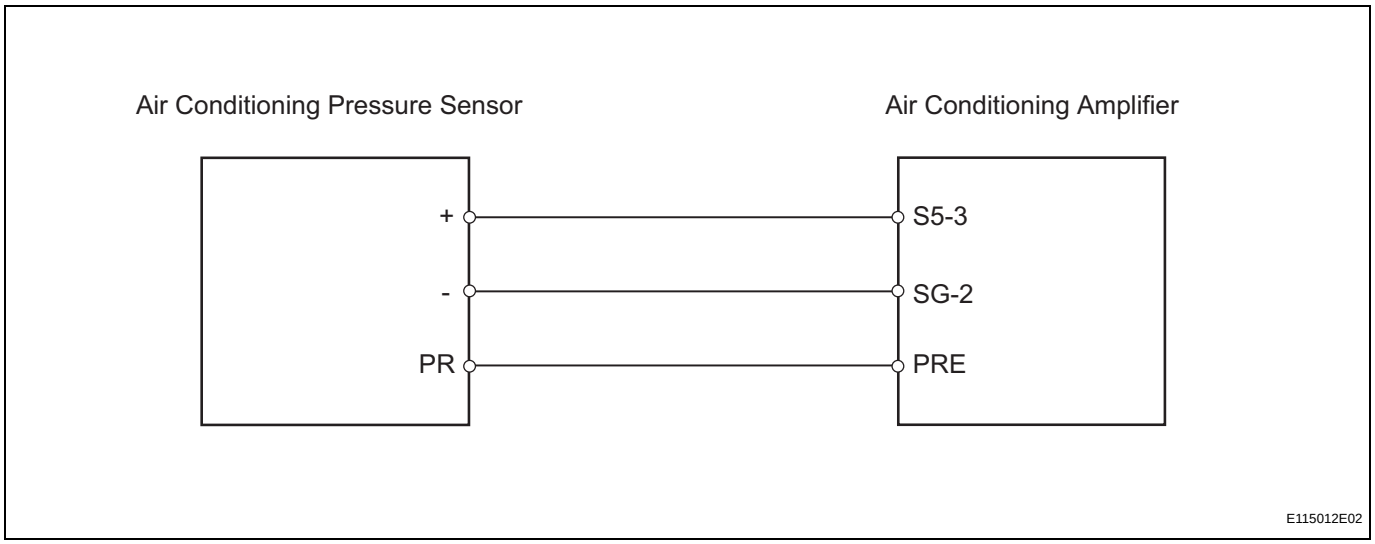
REPLACE AIR CONDITIONING AMPLIFIER

AC

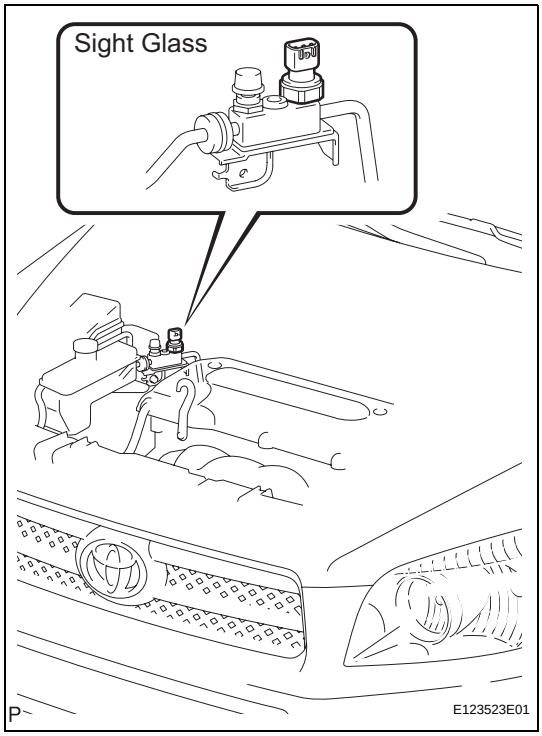


DTC	B1423/23	Pressure Sensor Circuit

DESCRIPTION

This DTC is output when the refrigerant pressure is either extremely low (0.19 MPa [2.0 kgf/cm^2, 28 psi] or less) or extremely high (3.14 MPa [32.0 kgf/cm^2, 455 psi] or more). The air conditioning pressure sensor, which is installed on the pipe of the high pressure side, detects the refrigerant pressure and sends refrigerant pressure signals to the air conditioning amplifier. The air conditioning amplifier determines the pressure from the signals in accordance with the sensor characteristics, and controls the compressor accordingly.

DTC No.	DTC Detection Condition	Trouble Area
B1423/23	Open or short in air conditioning pressure sensor circuit	• Air conditioning pressure sensor • Harness and connector between air conditioning pressure sensor and air conditioning amplifier • Air conditioning amplifier



WIRING DIAGRAM

AC

INSPECTION PROCEDURE

1	CHECK REFRIGERANT

(a) Check the sight glass of the cooler unit refrigerant liquid pipe.

(1) Prepare the vehicle in accordance with the chart below.

Item	Condition
Engine Speed	1,500 rpm
Vehicle Doors	Fully open
Temperature Setting	MAX COLD
Blower Speed	HI
A/C Switch	ON

(2) Compare the sight glass to the following chart.

Item	Symptom	Amount of Refrigerant	Corrective Procedures
1	Bubbles visible	Insufficient*	1. Check for gas leakage and repair if necessary 2. Add refrigerant until bubbles disappear
2	No bubbles visible	Empty, insufficient or too much	Refer to items 3 and 4
3	No temperature difference between compressor inlet and outlet	Empty or nearly empty	1. Check for gas leakage with gas leak detector and repair if necessary 2. Add refrigerant until bubbles disappear
4	Considerable temperature difference between compressor inlet and outlet	Correct or too much	Refer to items 5 and 6
5	Refrigerant becomes clear immediately after A/C turned OFF	Too much	1. Drain or discharge refrigerant 2. Bleed air and supply proper amount of purified refrigerant
6	Refrigerant foams and then becomes clear immediately after A/C turned OFF	Correct	-

HINT:

*: If the ambient temperature is higher than usual but cooling is sufficient, bubbles in the sight glass are permissible.

NG → **CHARGE REFRIGERANT**

OK

AC

2	READ VALUE OF INTELLIGENT TESTER (REG PRESS SENS)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON and turn the intelligent tester main switch ON.
(c) Select the item below in the DATA LIST, and read the value displayed on the intelligent tester.

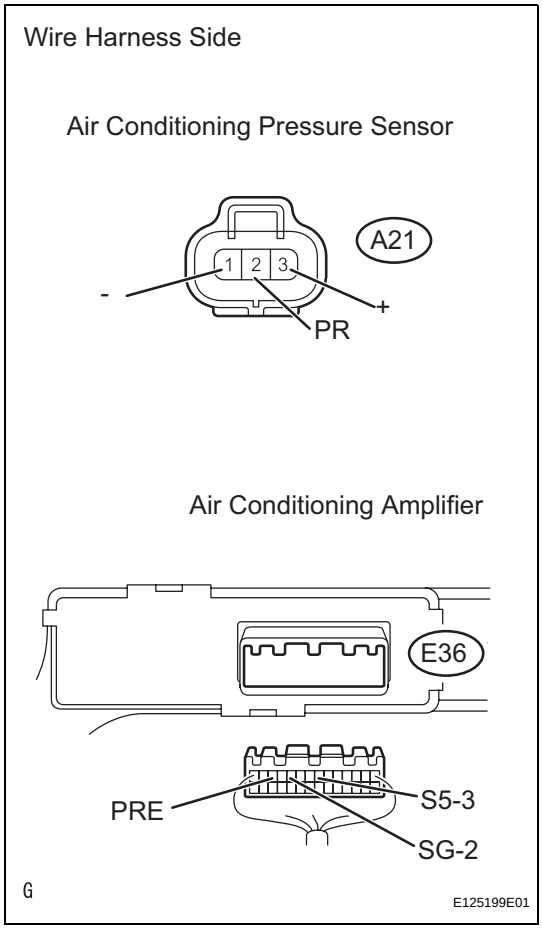
Air conditioning amplifier

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
REG PRESS SENS	Regulator pressure sensor / Min.: 0 MPaG Max.: 3.187 MPaG	Actual regulator pressure is displayed	-

OK:

The display is as specified in the normal condition column.

Result



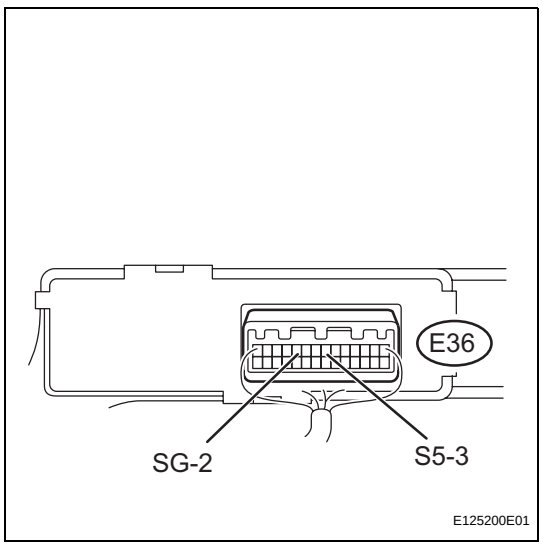
Result	Proceed to
NG	A
OK (Checking from the PROBLEM SYMPTOMS TABLE)	B
OK (Checking from the DTC)	C

B → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

C → REPLACE AIR CONDITIONING AMPLIFIER

A

3 CHECK WIRE HARNESS (PRESSURE SENSOR - AIR CONDITIONING AMPLIFIER)



(a) Disconnect the A21 pressure sensor connector.
(b) Disconnect the E36 amplifier connector.
(c) Measure the resistance of the wire harness side connectors.
Standard resistance

Tester Connection	Specified Condition
A21-3 (+) - E36-7 (S5-3)	Below 1 Ω
A21-2 (PR) - E36-12 (PRE)	Below 1 Ω
A21-1 (-) - E36-10 (SG-2)	Below 1 Ω
A21-3 (+) - Body ground	1 MΩ or higher
A21-2 (PR) - Body ground	1 MΩ or higher
A21-1 (-) - Body ground	1 MΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

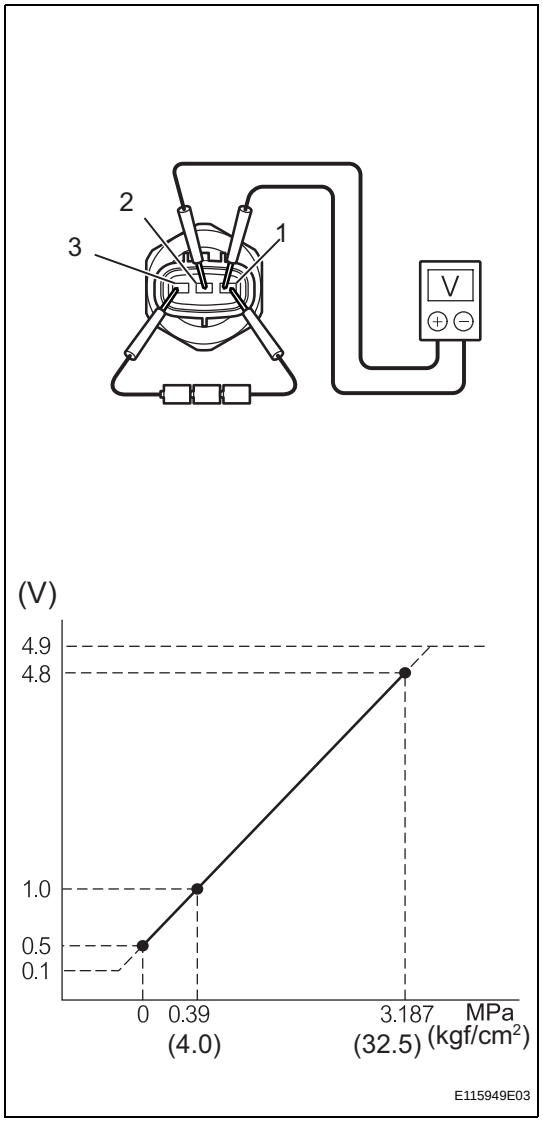
OK

4 CHECK AIR CONDITIONING AMPLIFIER

(a) Remove the air conditioning amplifier with its connectors still connected.
(b) Measure the resistance of the wire harness side connector.
Standard resistance

Tester Connection	Specified Condition
E36-10 (SG-2) - Body ground	Below 1 Ω

(c) Turn the ignition switch ON.
(d) Measure the voltage of the wire harness side connector.
Standard voltage



Tester Connection	Specified Condition
E36-7 (S5-3) - E36-10 (SG-2)	4.5 to 5.5 V

NG → **REPLACE AIR CONDITIONING AMPLIFIER**

OK

AC

5	**INSPECT AIR CONDITIONING PRESSURE SENSOR**

(a) Turn the A/C switch ON.
(b) Disconnect the A21 sensor connector.
(c) Connect the three 1.5 V dry cell batteries' positive (+) lead to terminal 3 and the negative (-) lead to terminal 1. Then connect the voltmeter's positive (+) lead to terminal 2 and the negative (-) lead to terminal 1. Measure the voltage.

OK:

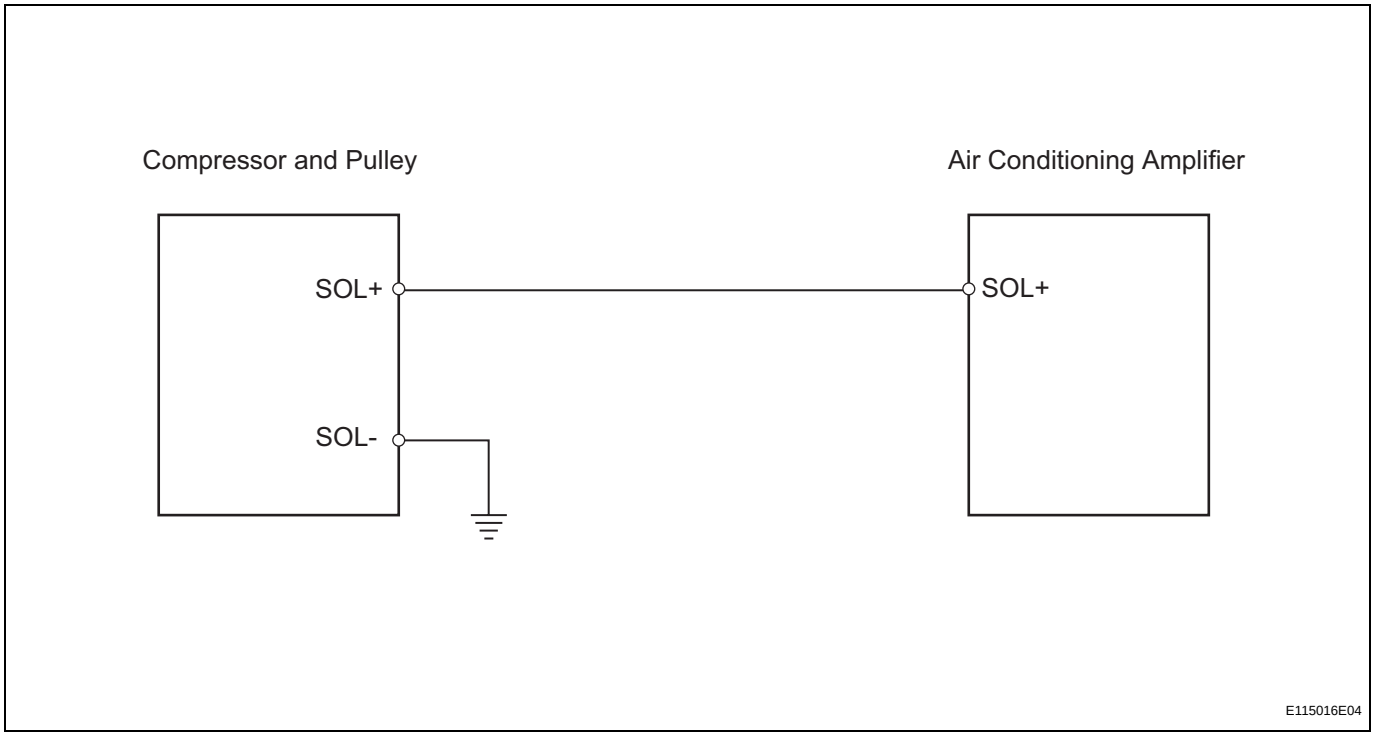
The voltage changes in accordance with the refrigerant pressure as shown in the graph.

NG → **REPLACE AIR CONDITIONING PRESSURE SENSOR**

OK

REPLACE AIR CONDITIONING AMPLIFIER

AC



DTC	B1451/51	**Compressor Solenoid Circuit** (2005/11-2006/01)

DESCRIPTION

In this circuit, the compressor receives a refrigerant compression demand signal from the air conditioning amplifier. Based on this signal, the compressor changes the degree of refrigerant compression.

DTC No.	DTC Detection Condition	Trouble Area
B1451/51	Open or short in solenoid of externally changeable compressor circuit	• Compressor and pulley • Harness and connector between air conditioning amplifier and compressor and pulley • Air conditioning amplifier

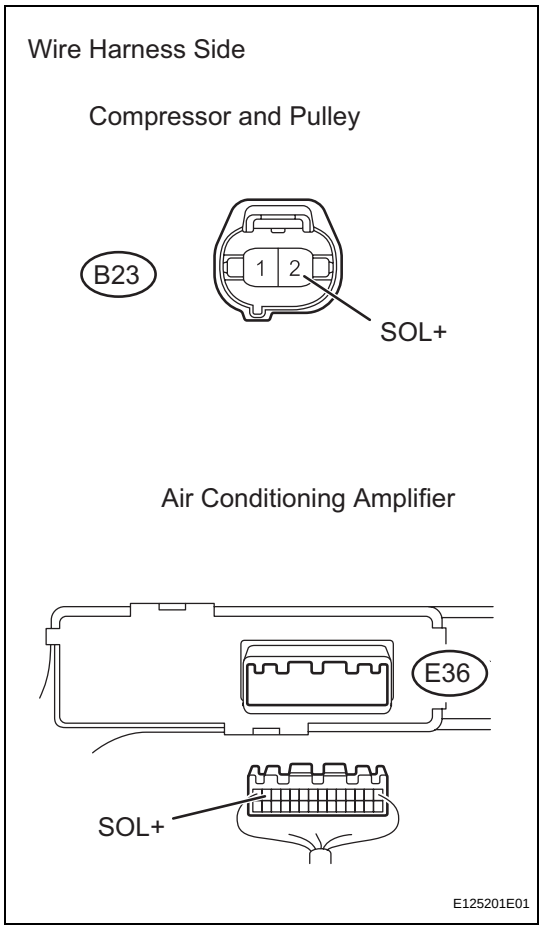
2 INSPECT COMPRESSOR AND PULLEY

(a) Disconnect the compressor and pulley connector.

(b) Measure the resistance of the connector.

Standard resistance



Tester Connection	Condition	Specified Condition
1 (SOL-) - 2 (SOL+)	25°C (77°F)	10.1 to 11.1 Ω

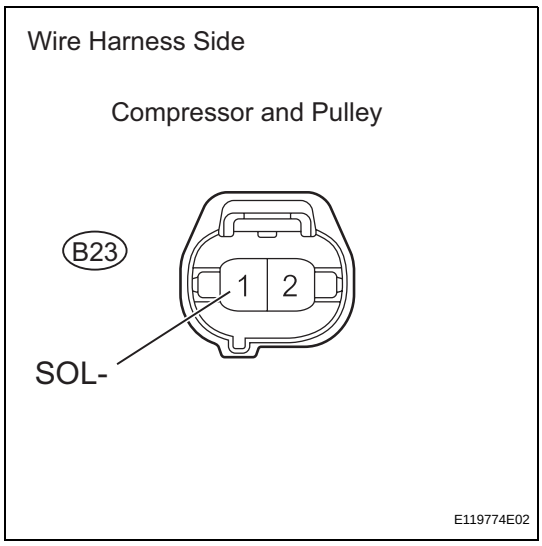
NG → **REPLACE COMPRESSOR AND PULLEY**

OK

AC

3	CHECK WIRE HARNESS (COMPRESSOR AND PULLEY - AIR CONDITIONING AMPLIFIER)

(a) Disconnect the B23 compressor and pulley connector.
(b) Disconnect the E36 amplifier connector.
(c) Measure the resistance of the wire harness side connectors.



Standard resistance

Tester Connection	Specified Condition
B23-2 (SOL+) - E36-13 (SOL+)	Below 1 Ω
B23-2 (SOL+) - Body Ground	1 MΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

4	CHECK WIRE HARNESS (COMPRESSOR AND PULLEY - BODY GROUND)

(a) Disconnect the B23 compressor and pulley connector.
(b) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
B23-1 (SOL-) - Body ground	Below 1 Ω

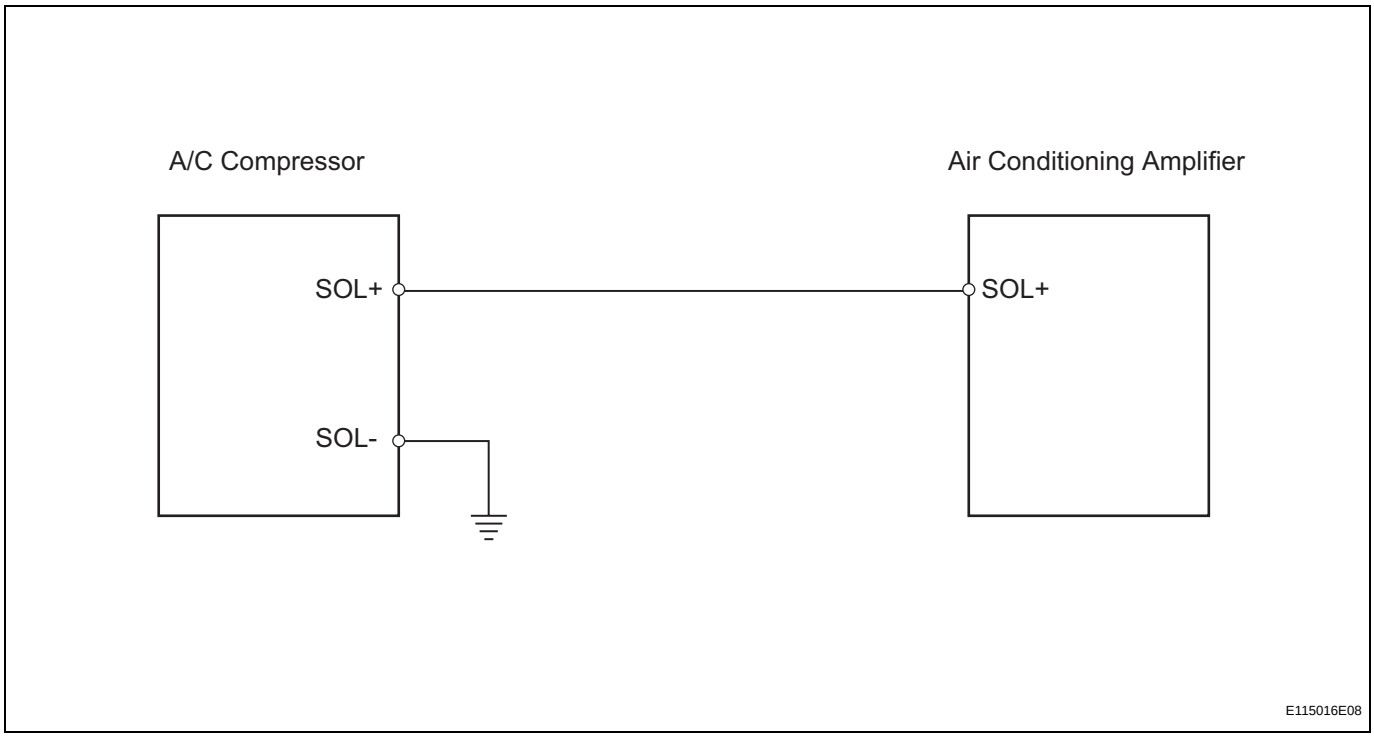
NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

AC

OK

REPLACE AIR CONDITIONING AMPLIFIER

DTC	B1451/51	**Compressor Solenoid Circuit** (2006/01-)



DESCRIPTION

In this circuit, the compressor receives a refrigerant compression demand signal from the air conditioning amplifier. Based on this signal, the compressor changes the degree of refrigerant compression.

DTC No.	DTC Detection Condition	Trouble Area
B1451/51	Open or short in solenoid of externally changeable compressor circuit	• A/C compressor* • Wire harness between air conditioning amplifier and A/C compressor* • Air conditioning amplifier

HINT:
*: Compressor and pulley for 2AZ-FE, compressor and magnetic clutch for 2GR-FE

WIRING DIAGRAM

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER (REG CTRL CURRNT)

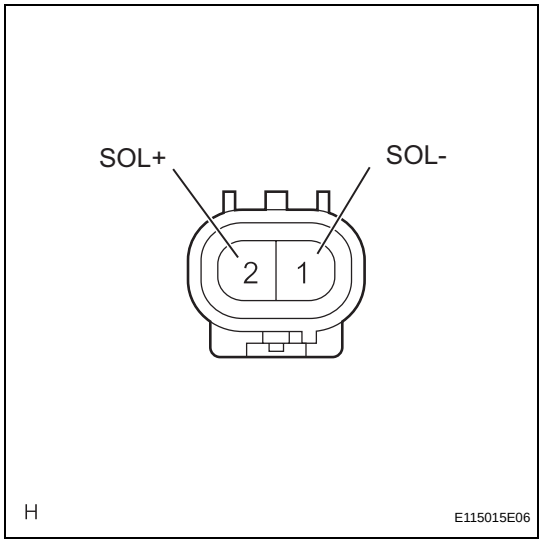
(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON and turn the intelligent tester main switch ON.
(c) Select the items below in the DATA LIST, and read the value displayed on the intelligent tester.

Air conditioning amplifier

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
REG CTRL CURRNT	Regulator control current / Min.: 0 A Max.: 0.997 A	Value changes between 0 A and 0.997 A in accordance with A/C compressor operation	-

OK:
The display is as specified in the normal condition column.

Result



Result	Proceed to
NG	A
OK (Checking from the PROBLEM SYMPTOMS TABLE)	B
OK (Checking from the DTC)	C

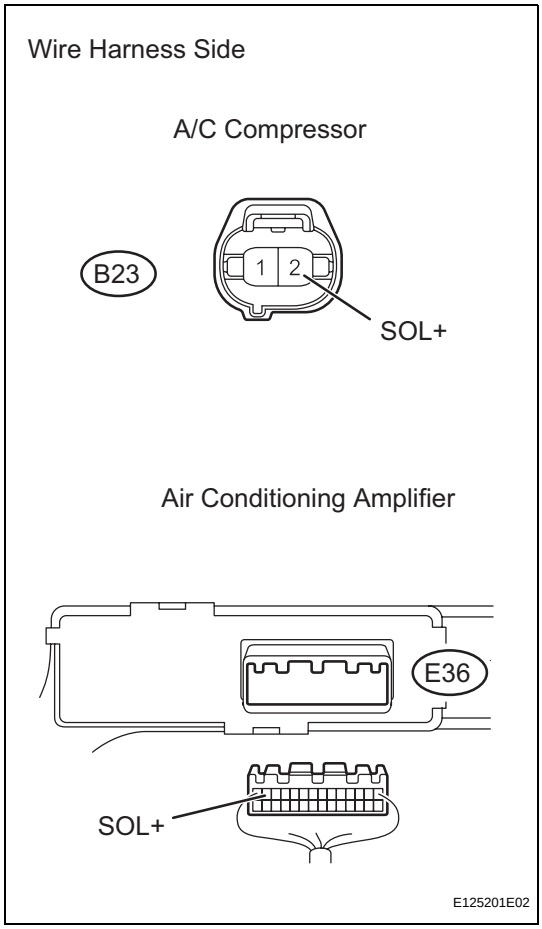
B → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

C → REPLACE AIR CONDITIONING AMPLIFIER

A

2 INSPECT A/C COMPRESSOR

(a) Disconnect the A/C compressor connector.
(b) Measure the resistance of the connector.
Standard resistance



Tester Connection	Condition	Specified Condition
1 (SOL-) - 2 (SOL+)	25°C (77°F)	10.1 to 11.1 Ω

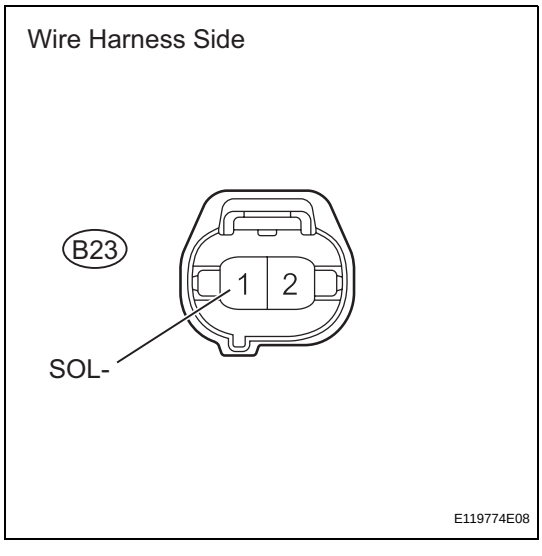
NG → REPLACE A/C COMPRESSOR

OK

AC

3 CHECK WIRE HARNESS (A/C COMPRESSOR - AIR CONDITIONING AMPLIFIER)

(a) Disconnect the B23 A/C compressor connector.
(b) Disconnect the E36 amplifier connector.
(c) Measure the resistance of the wire harness side connectors.



Standard resistance

Tester Connection	Specified Condition
B23-2 (SOL+) - E36-13 (SOL+)	Below 1 Ω
B23-2 (SOL+) - Body Ground	1 MΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

4 CHECK WIRE HARNESS (A/C COMPRESSOR - BODY GROUND)

(a) Disconnect the B23 A/C compressor connector.
(b) Measure the resistance of the wire harness side connector.

Standard resistance

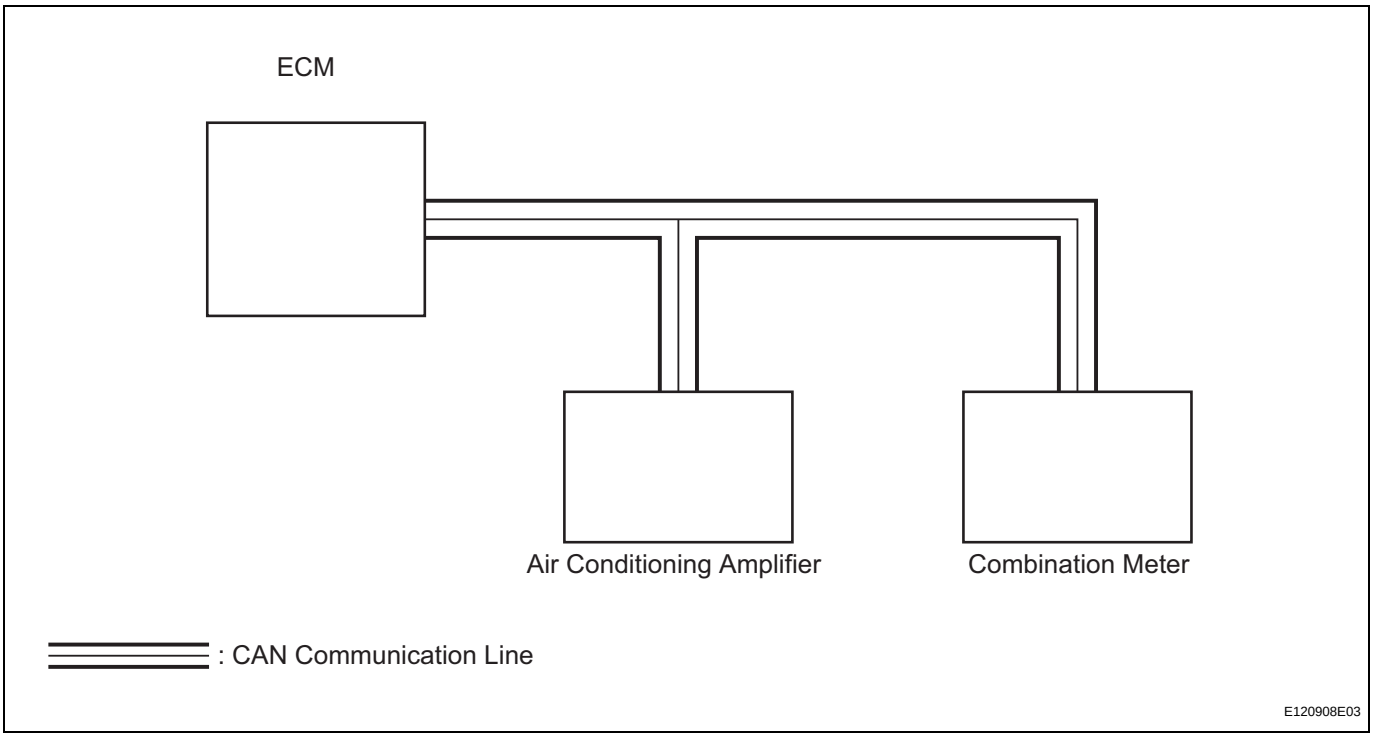
Tester Connection	Specified Condition
B23-1 (SOL-) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

AC

OK

REPLACE AIR CONDITIONING AMPLIFIER



DTC	B1499/99	Multiplex Communication Circuit

DESCRIPTION

The air conditioning amplifier communicates data with the ECM and combination meter through the CAN communication system.

DTC No.	DTC Detection Condition	Trouble Area
B1499/99	Open in CAN communication line	• Air conditioning amplifier • ECM • Combination meter • CAN communication line

WIRING DIAGRAM

AC

INSPECTION PROCEDURE

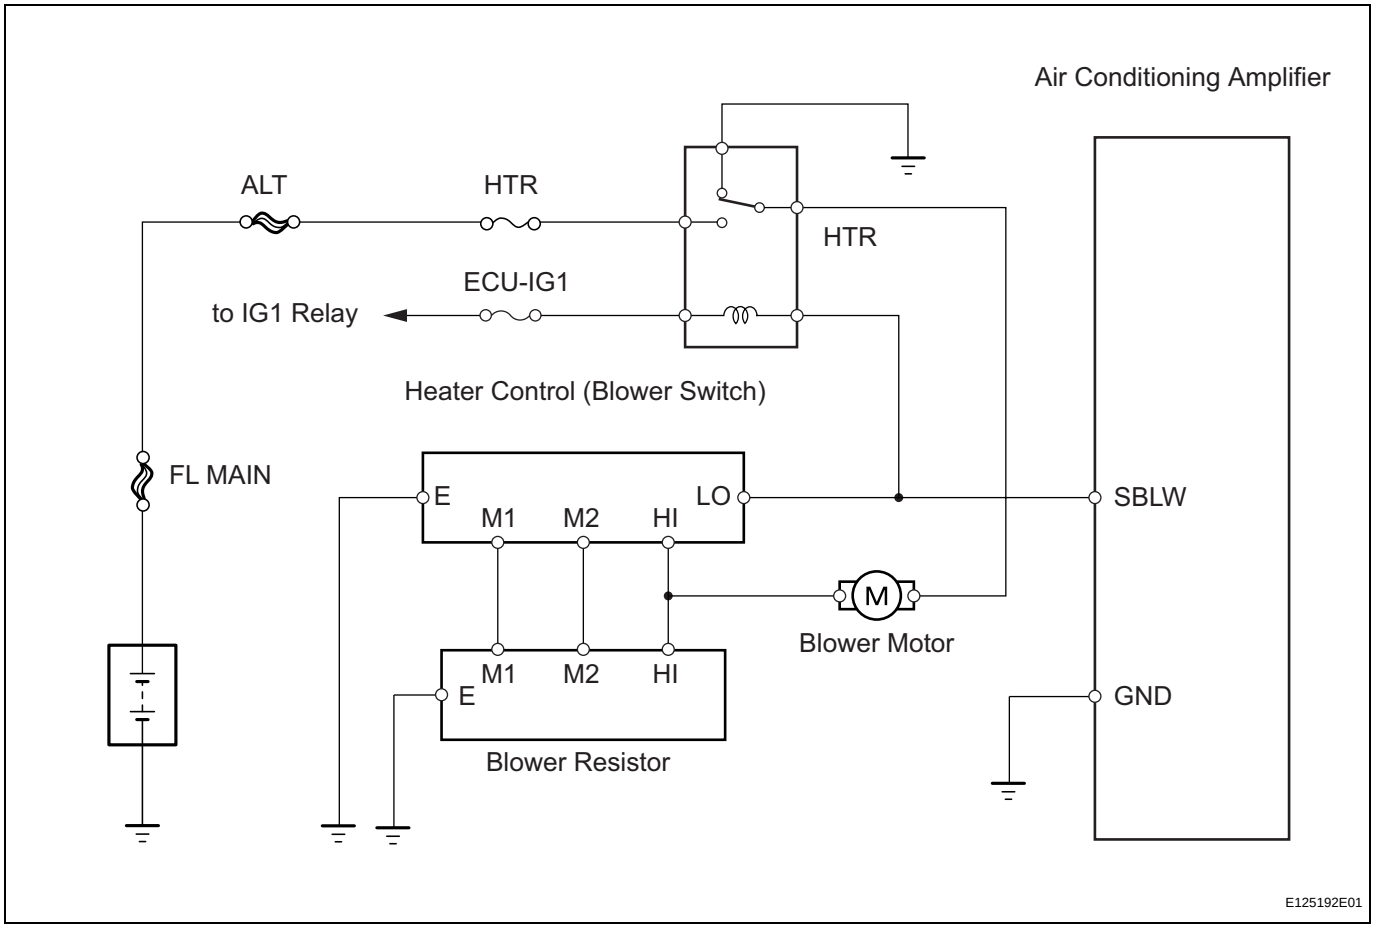
1	CHECK DTC

(a) Clear the DTC (see page AC-127).
(b) Read the DTC (see page AC-127).

Result

Result	Proceed to
DTC (B1499/99) is output	A (see page CA-1)
DTC (B1499/99) is not output	B

B → **SYSTEM IS OK**



A → **GO TO CAN COMMUNICATION SYSTEM**

Blower Motor Circuit

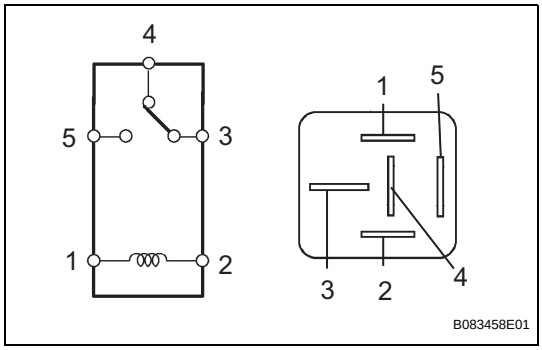
DESCRIPTION

When the heater control (blower switch) is set to position 1 or higher, the contact of the HTR relay is closed, current flows to the blower motor, and the blower motor operates. The blower motor speed can be changed by exchanging the ground and the blower resistor circuit with the heater control (blower switch).

WIRING DIAGRAM

INSPECTION PROCEDURE

1	INSPECT FUSE (HTR)



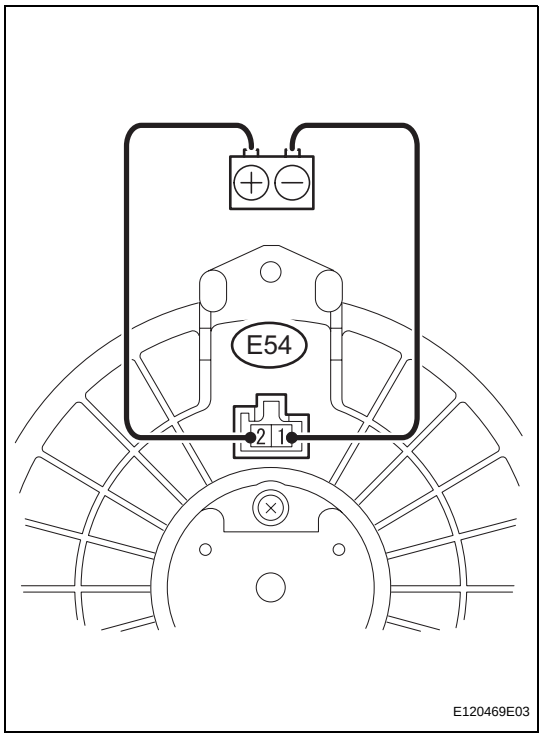
(a) Remove the HTR fuse from the engine room No. 2 relay block.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

AC

2 INSPECT HEATER RELAY (Marking: HTR)



(a) Remove the heater relay from the instrument panel junction block.
(b) Measure the resistance of the relay.
Standard resistance

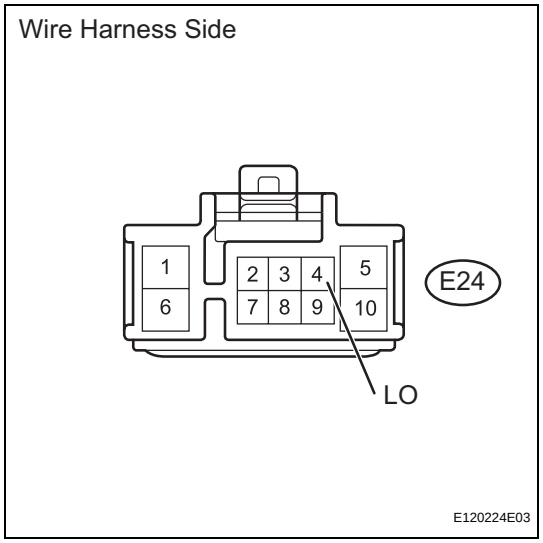
Tester Connection	Specified Condition
3 - 4	Below 1 Ω
3 - 5	10 kΩ or higher
3 - 4	10 kΩ or higher (when battery voltage is applied to terminals 1 and 2)
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

NG → **REPLACE HEATER RELAY**

OK

3 INSPECT BLOWER MOTOR

(a) Disconnect the E54 motor connector.
(b) Connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 1, then check that the blower motor operates smoothly.
OK:
The blower motor operates smoothly.
(c) Measure the current.
Standard current



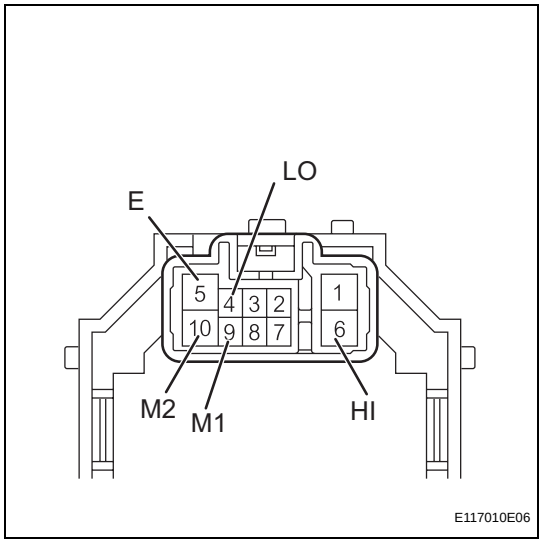
Tester Connection	Condition	Specified Condition
E54-1 - E54-2	Blower motor operates	1 to 3 A

NG → **REPLACE BLOWER MOTOR**

OK

AC

4 CHECK WIRE HARNESS (HEATER CONTROL (BLOWER SWITCH) - BATTERY)



(a) Disconnect the E24 heater control connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

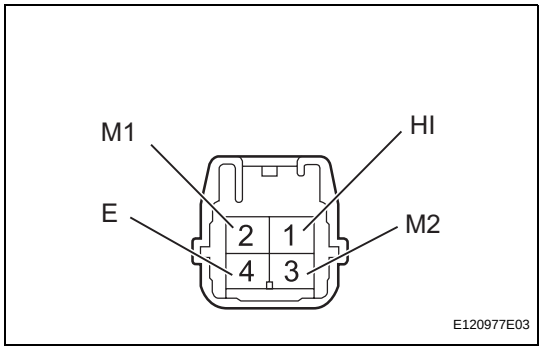
Tester Connection	Condition	Specified Condition
E24-4 (LO) - Body ground	Ignition switch ON	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

5 INSPECT HEATER CONTROL (BLOWER SWITCH)

(a) Remove the heater control.
(b) Measure the resistance of the switch.
Standard resistance



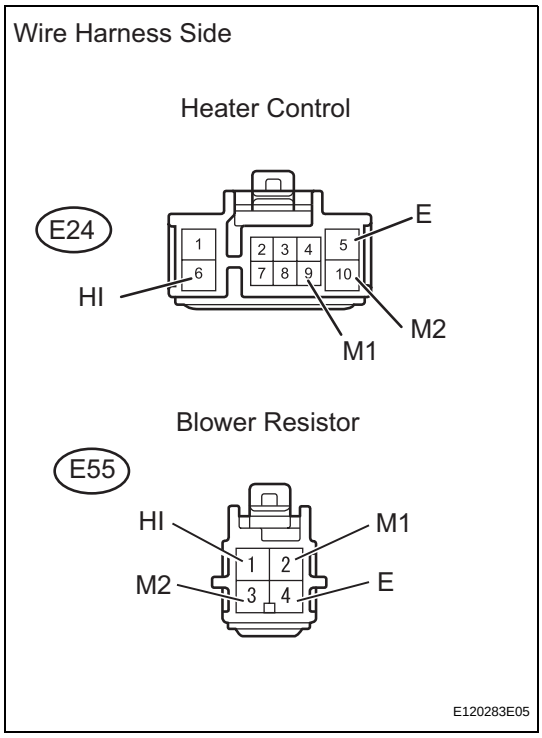
Tester Connection	Switch Position	Specified Condition
ALL - 5 (E)	0	10 kΩ or higher
4 (LO) - 5 (E)	1	Below 1 Ω
4 (LO) - 5 (E) - 9 (M1)	1 to 2	Below 1 Ω
4 (LO) - 5 (E) - 9 (M1)	2	Below 1 Ω
(LO) - (E) - 9 (M1) - 10 (M2)	2 to 3	Below 1 Ω
4 (LO) - 5 (E) - 10 (M2)	3	Below 1 Ω
4 (LO) - 5 (E) - 10 (M2) - 6(HI)	3 to 4	Below 1 Ω
4 (LO) - 5 (E) - 6 (HI)	4	Below 1 Ω

NG → **REPLACE HEATER CONTROL**

OK

AC

6 INSPECT BLOWER RESISTOR



(a) Remove the blower resistor.
(b) Measure the resistance of the resistor.
Standard resistance

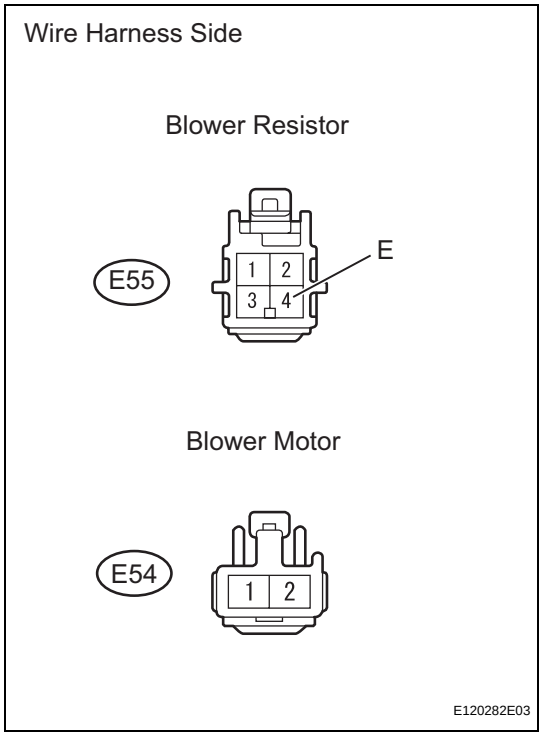
Tester Connection	Specified Condition
E55-4 (E) - E55-1 (HI)	3.12 to 3.60 Ω
E55-4 (E) - E55-3 (M2)	1.45 to 1.67 Ω
E55-4 (E) - E55-2 (M1)	0.52 to 0.60 Ω

NG → **REPLACE BLOWER RESISTOR**

OK

7 CHECK WIRE HARNESS (HEATER CONTROL (BLOWER SWITCH) - BLOWER RESISTOR)

(a) Disconnect the E24 heater control connector.
(b) Disconnect the E55 blower resistor connector.
(c) Measure the resistance of the wire harness side connectors.
Standard resistance



Tester Connection	Specified Condition
E24-6 (HI) - E55-1 (HI)	Below 1 Ω
E24-9 (M1) - E55-2 (M1)	Below 1 Ω
E24-10 (M2) - E55-3 (M2)	Below 1 Ω
E24-5 (E) - Body ground	Below 1 Ω
E55-4 (E) - Body ground	Below 1 Ω

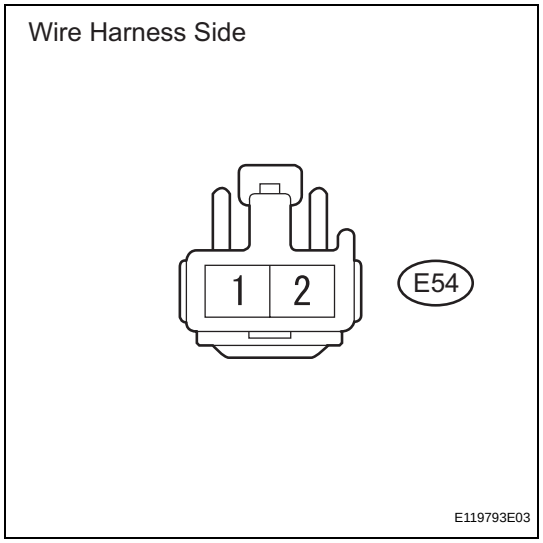
NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

AC

8 CHECK WIRE HARNESS (BLOWER RESISTOR - BLOWER MOTOR)

(a) Disconnect the E55 blower resistor connector.
(b) Disconnect the E54 motor connector.
(c) Measure the resistance of the wire harness side connectors.



Standard resistance

Tester Connection	Specified Condition
E55-4 (E) - E54-1	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

9 CHECK WIRE HARNESS (BLOWER MOTOR - BODY GROUND)

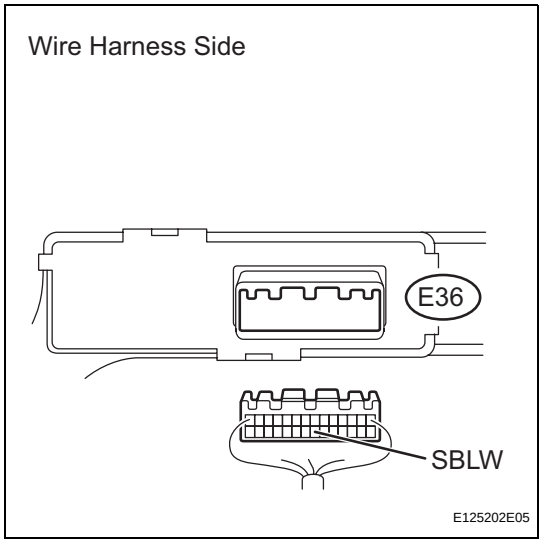
(a) Disconnect the E54 motor connector.
(b) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
E54-2 - Body ground	Below 1 Ω

(c) Measure the voltage of the wire harness side connector.

Standard voltage



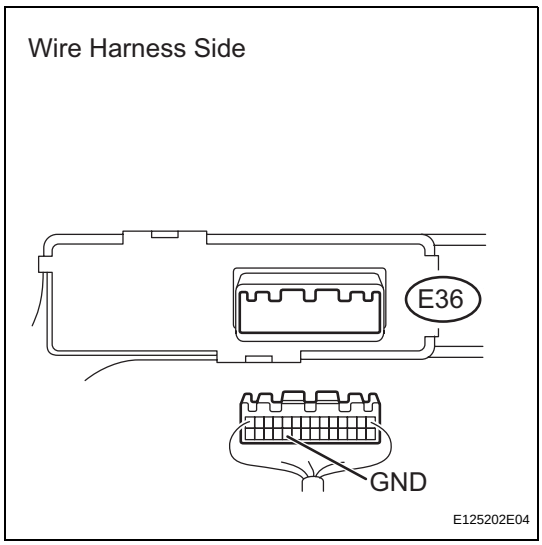
Tester Connection	Condition	Specified Condition
E54-2 - Body ground	Ignition switch ON Heater control (blower switch) 1	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

AC

10 CHECK WIRE HARNESS (AIR CONDITIONING AMPLIFIER - BATTERY)



(a) Disconnect the E36 amplifier connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Condition	Specified Condition
E36-21 (SBLW) - Body ground	Ignition switch ON Heater control (blower switch) 0	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

11 CHECK WIRE HARNESS (AIR CONDITIONING AMPLIFIER - BODY GROUND)

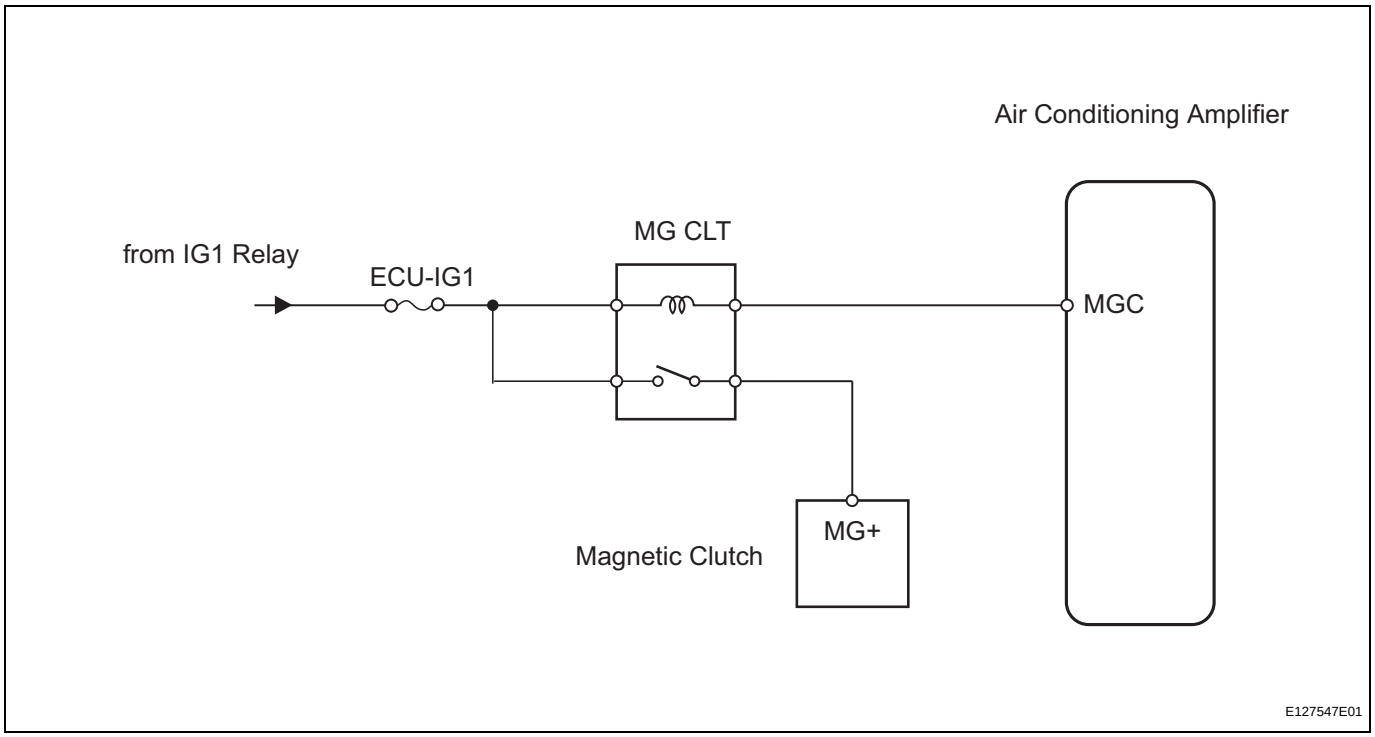
(a) Disconnect the E36 amplifier connector.
(b) Measure the resistance of the wire harness side connector.
Standard resistance

Tester Connection	Specified Condition
E36-24 (GND) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE



AC

Compressor Circuit

DESCRIPTION

When the A/C switch is turned on, the magnetic clutch ON signal is sent from the air conditioning amplifier. Then the MG CLT relay turns on to operate the magnetic clutch.

WIRING DIAGRAM

AC

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (A/C MAG CLUTCH)

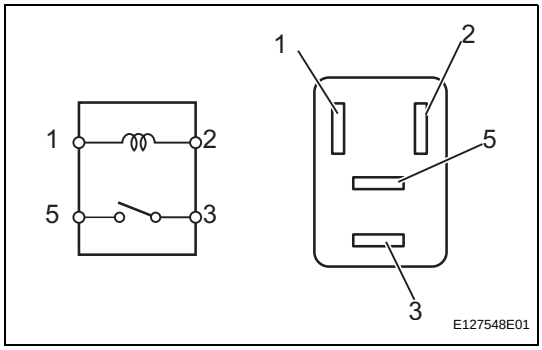
(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON and turn the intelligent tester main switch ON.
(c) Select the item below in the ACTIVE TEST and then check that the compressor magnetic relay operates.

Air conditioning amplifier

Item	Test Details / Display (Range)	Diagnostic Note
A/C MAG CLUTCH	Magnetic clutch relay / OFF, ON	Operating sound can be heard

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG



2	INSPECT FUSE (ECU-IG1)

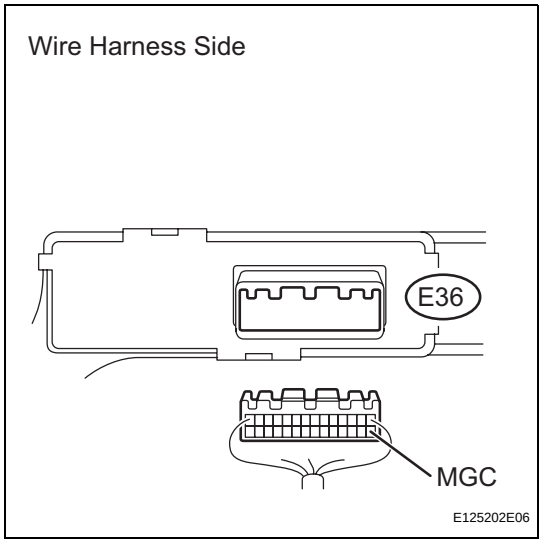
(a) Remove the ECU-IG1 fuse from the instrument panel junction block.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

3	INSPECT MAGNETIC CLUTCH RELAY (Marking: MG CLT)

(a) Remove the magnetic clutch relay from the engine room No. 1 relay block.
(b) Measure the resistance of the relay.
Standard resistance



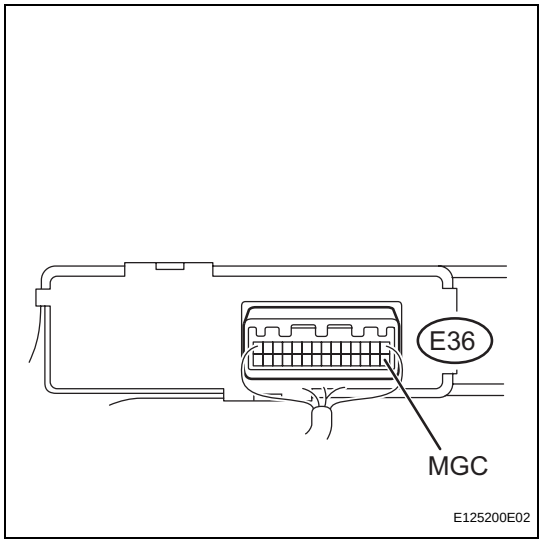
Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

NG → **REPLACE MAGNETIC CLUTCH RELAY**

OK

AC

4	CHECK WIRE HARNESS (AIR CONDITIONING AMPLIFIER - BATTERY)



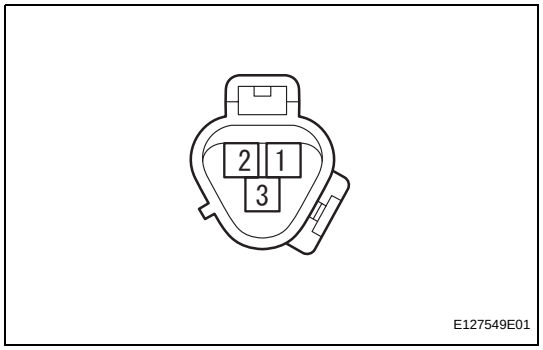
(a) Disconnect the E36 amplifier connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Condition	Specified Condition
E36-15 (MGC) - Body ground	Ignition switch ON	10 to 14 V
E36-15 (MGC) - Body ground	Ignition switch OFF	Below 1 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

5 CHECK AIR CONDITIONING AMPLIFIER (MGC VOLTAGE)



(a) Remove the air conditioning amplifier with its connectors still connected.
(b) Measure the voltage of the connector.
Standard voltage

Tester Connection	Condition	Specified Condition
E36-15 (MGC) - Body ground	Ignition switch ON A/C switch OFF	10 to 14 V
E36-15 (MGC) - Body ground	Ignition switch ON A/C switch ON	Below 1 V

NG → **REPLACE AIR CONDITIONING AMPLIFIER**

OK

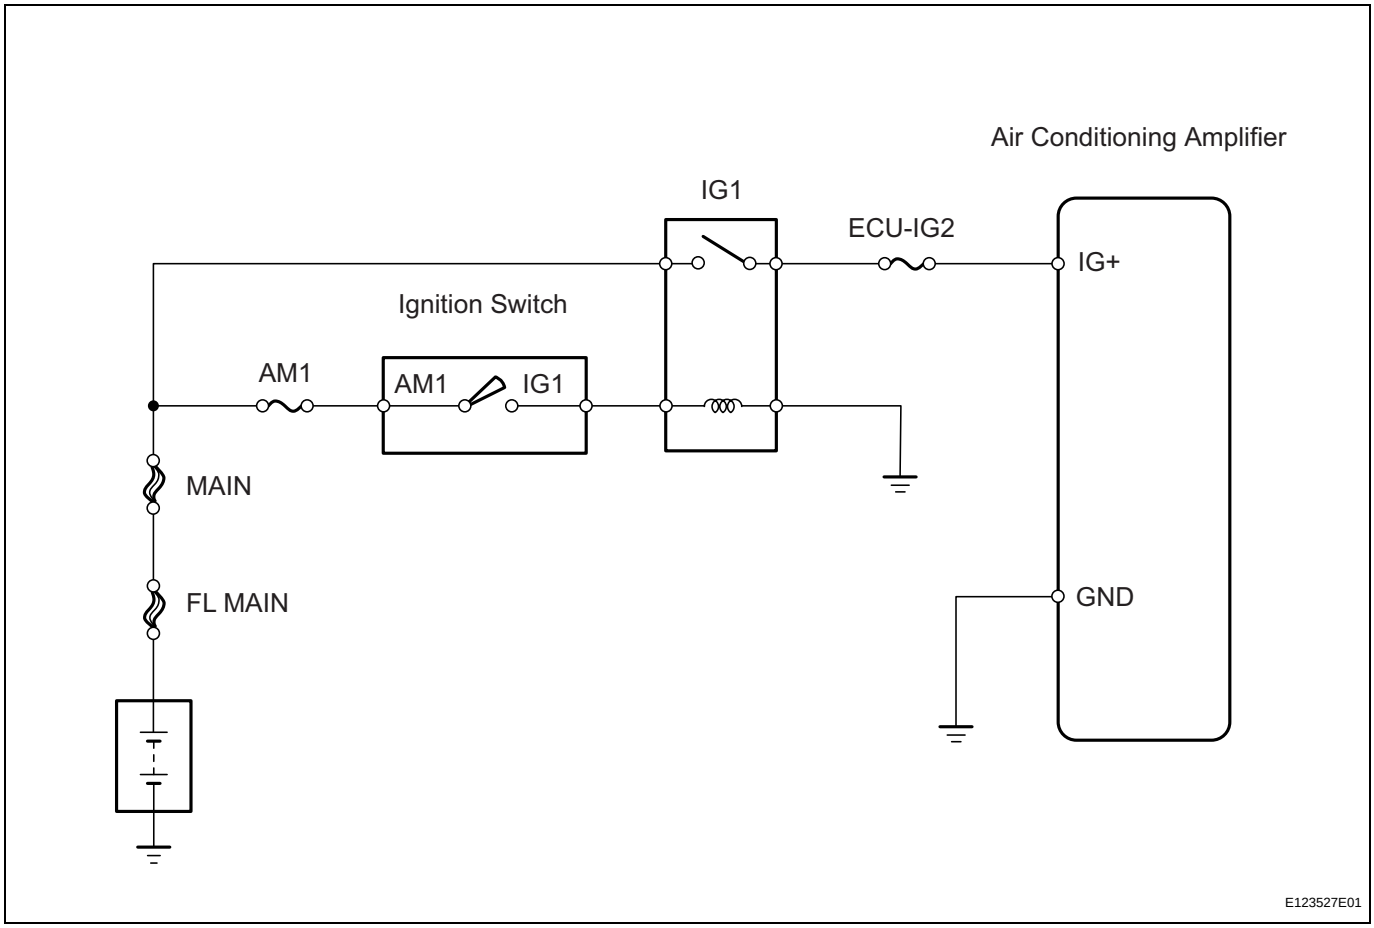
6 CHECK MAGNETIC CLUTCH

(a) Disconnect the B47 magnetic clutch connector.
(b) Connect the battery's positive (+) lead to terminal 3 of the magnetic clutch and the negative (-) lead to the body ground.
OK:
Magnetic clutch is engaged.

NG → **REPLACE MAGNETIC CLUTCH**

OK

REPAIR OR REPLACE WIRE HARNESS (MAGNETIC CLUTCH - ECU-IG1)



AC

IG Power Source Circuit

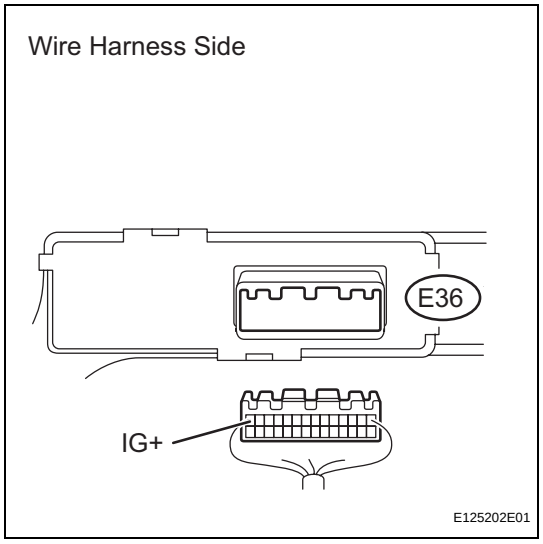
DESCRIPTION

This is the main power source supplied to the air conditioning amplifier when the ignition switch is ON. This power source is used for operating components, such as the air conditioning amplifier and servo motors.

WIRING DIAGRAM

AC

INSPECTION PROCEDURE



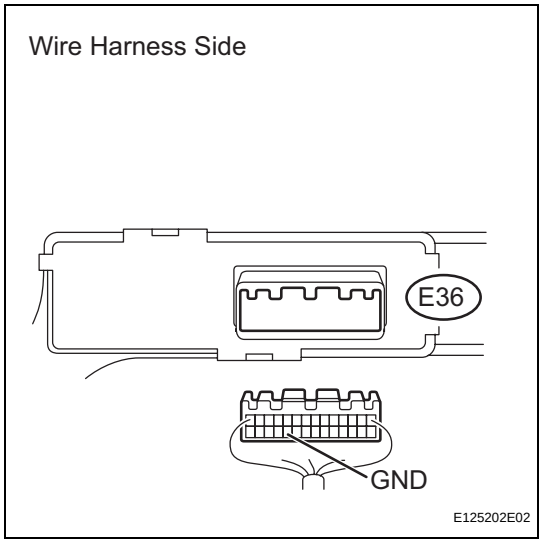
1	**INSPECT FUSE (ECU-IG2)**

(a) Remove the ECU-IG2 fuse from the instrument panel junction block.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

2 CHECK WIRE HARNESS (AIR CONDITIONING AMPLIFIER - BATTERY)



(a) Disconnect the E36 amplifier connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Condition	Specified Condition
E36-14 (IG+) - Body ground	Ignition switch ON	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

3 CHECK WIRE HARNESS (AIR CONDITIONING AMPLIFIER - BODY GROUND)

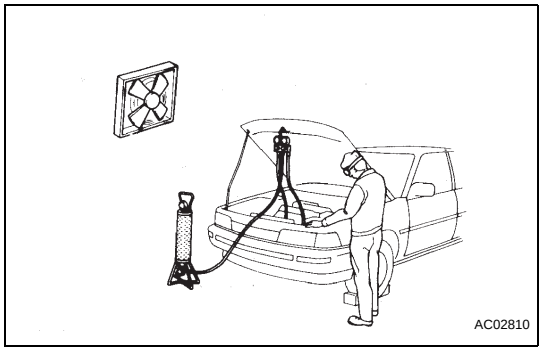
(a) Disconnect the E36 amplifier connector.
(b) Measure the resistance of the wire harness side connector.
Standard resistance

Tester Connection	Specified Condition
E36-24 (GND) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

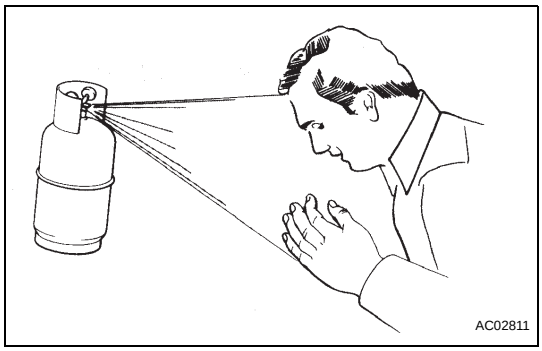
OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE



AC

AIR CONDITIONING SYSTEM (for Manual Air Conditioning System)



PRECAUTION

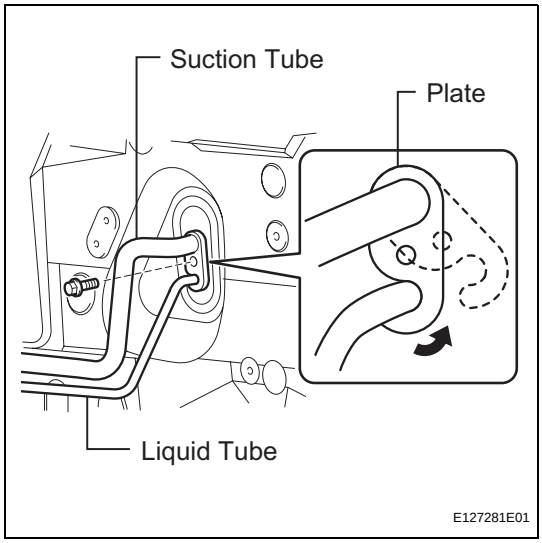
1. **IF ANY OF FOLLOWING CONDITIONS ARE MET, KEEP ENGINE IDLING WITH A/C ON (ENGINE SPEED AT LESS THAN 2000 RPM) FOR AT LEAST 1 MINUTE:**
   - Refrigerant gas has been refilled or A/C parts have been replaced.
   - A long time has elapsed since the engine was stopped.

   NOTICE:
   If the engine speed exceeds 2,000 rpm, the A/C compressor may be damaged.

2. **DO NOT HANDLE REFRIGERANT IN ENCLOSED AREAS OR NEAR OPEN FLAMES**
3. **ALWAYS WEAR EYE PROTECTION**

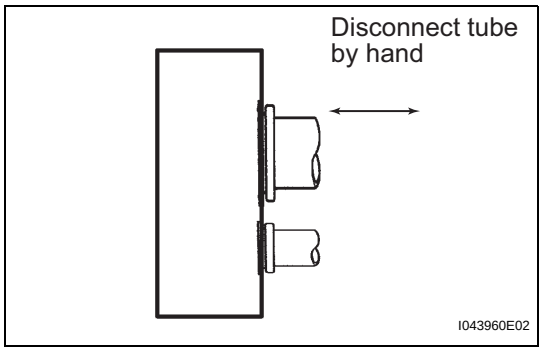
4. **BE CAREFUL NOT TO GET LIQUID REFRIGERANT IN YOUR EYES OR ON YOUR SKIN**
   If liquid refrigerant gets in your eyes or on your skin:
   (a) Wash the area with lots of cold water.
   CAUTION:
   Do not rub your eyes or skin.
   (b) Apply clean petroleum jelly to the skin.
   (c) Go immediately to a physician or hospital for professional treatment.
5. **NEVER HEAT CONTAINER OR EXPOSE IT TO OPEN FLAME**
6. **BE CAREFUL NOT TO DROP CONTAINER OR SUBJECT IT TO PHYSICAL SHOCKS**

7. **DO NOT OPERATE COMPRESSOR WITH INSUFFICIENT REFRIGERANT IN REFRIGERANT SYSTEM**
   If there is not enough refrigerant in the refrigerant system, oil lubrication will be insufficient and compressor burnout may occur. Necessary care should be taken to avoid this.
8. **DO NOT OPEN HIGH PRESSURE MANIFOLD VALVE WHILE COMPRESSOR IS OPERATING**
   Open and close only the low pressure valve. Opening and closing the high pressure valve could cause the charging cylinder to rupture.



AC

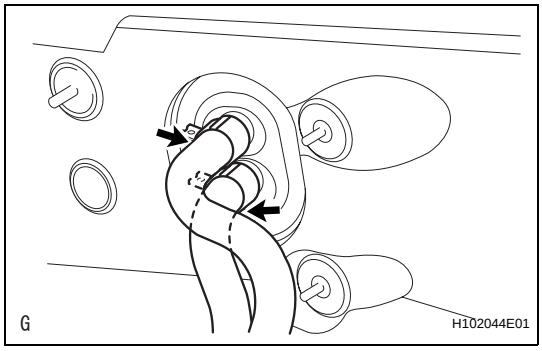
9. **BE CAREFUL NOT TO OVERCHARGE SYSTEM WITH REFRIGERANT**
   If the refrigerant is overcharged, it causes problems such as insufficient cooling, poor fuel economy and engine overheating.
10. **DO NOT OPERATE ENGINE AND COMPRESSOR WITHOUT REFRIGERANT**
    NOTICE:
    This may damage the inside of the compressor.



REMOVAL

1. **DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM (See page AC-172)**

2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
CAUTION:
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.



3. **REMOVE TUBE SUB-ASSEMBLY**
(a) Remove the bolt.
(b) Remove plate, as shown in the illustration.
(c) Disconnect the suction tube and liquid tube.
NOTICE:
- **Do not use a screwdriver or similar tool to disconnect the tube.**

- **Seal the opening of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.**

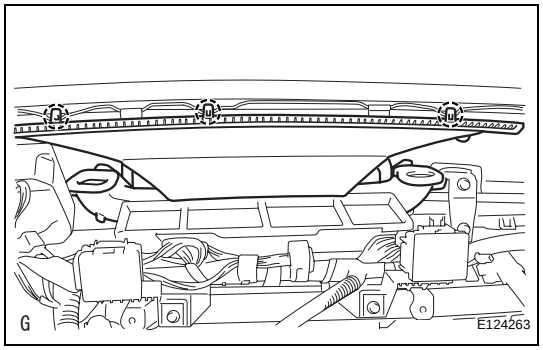
(d) Remove the 2 O-rings from the suction tube and liquid tube.

4. **DISCONNECT INLET HEATER WATER HOSE**
(a) Using pliers, grip the claws of the clip and slide the clip.
(b) Disconnect the heater water inlet hose.

5. **DISCONNECT OUTLET HEATER WATER HOSE**
HINT:
Disconnection of the heater water outlet hose is the same as for the heater water inlet hose.

6. **REMOVE STEERING COLUMN ASSEMBLY**
(a) Remove the steering column (see page SR-11).

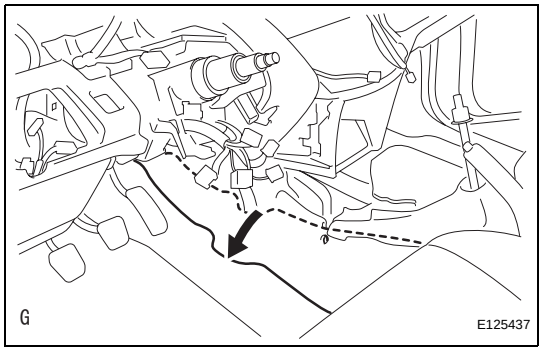
7. **REMOVE UPPER INSTRUMENT PANEL**
(a) Remove the upper instrument panel (see page IP-4).



AC

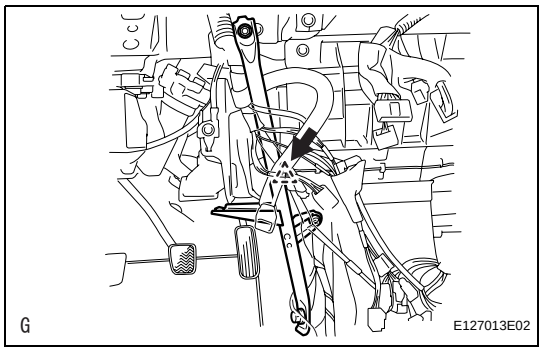
8. REMOVE LOWER INSTRUMENT PANEL

(a) Remove the lower instrument panel (see page IP-16).

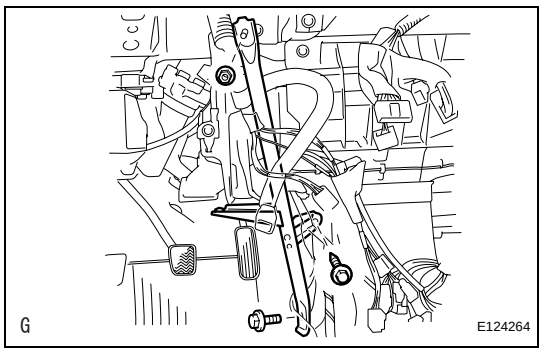


9. REMOVE DEFROSTER NOZZLE ASSEMBLY

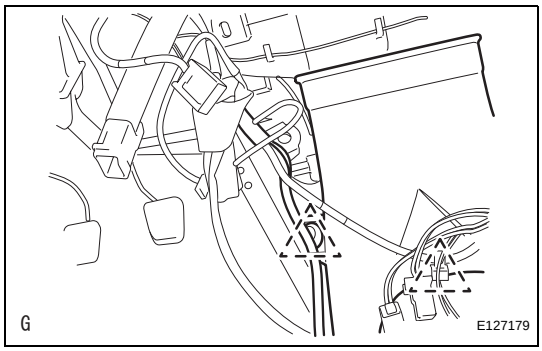
(a) Detach the 3 claws and remove the defroster nozzle assembly.



10. REMOVE NO. 1 INSTRUMENT PANEL BRACE SUB-ASSEMBLY

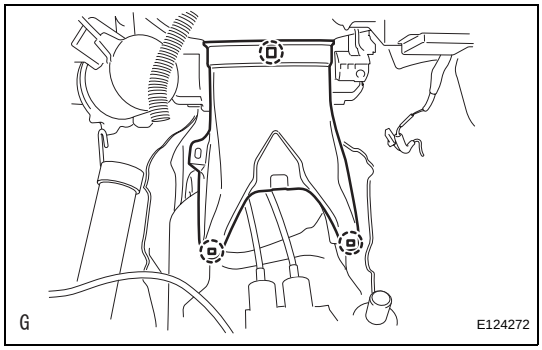


(a) Fold the floor carpet back.

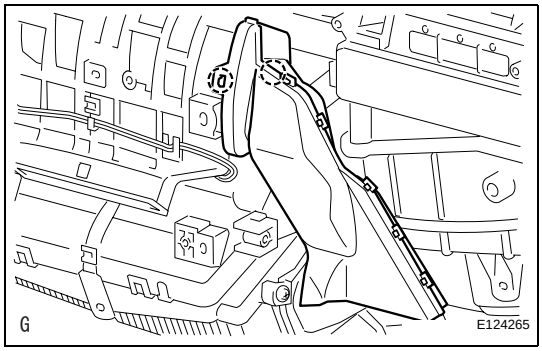


(b) Disconnect the clamp and disconnect the wire harness.

(c) Remove the bolt, nut, screw, and instrument panel brace.

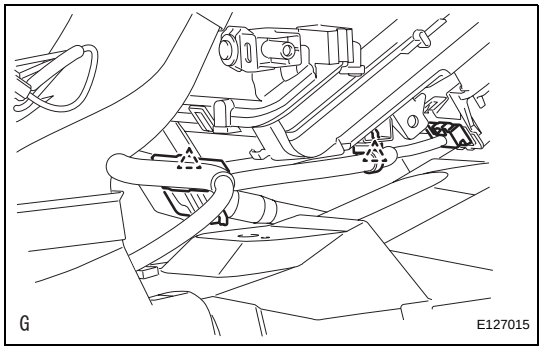


AC



11. REMOVE AIR DUCT REAR

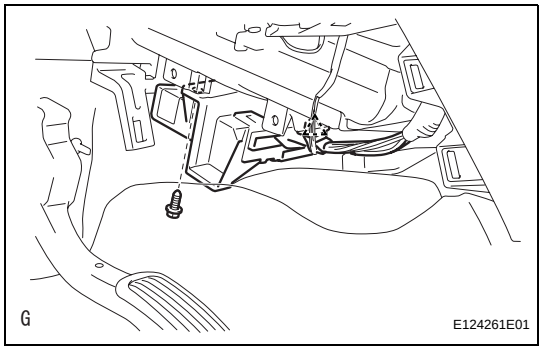
(a) Disconnect the 2 clamps and disconnect the wire harness.



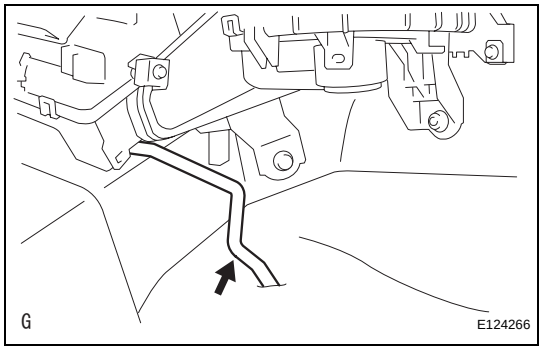
(b) Detach the 3 claws and remove the air duct rear.

12. REMOVE AIR DUCT

(a) Detach the 2 claws and remove the air duct.



AC

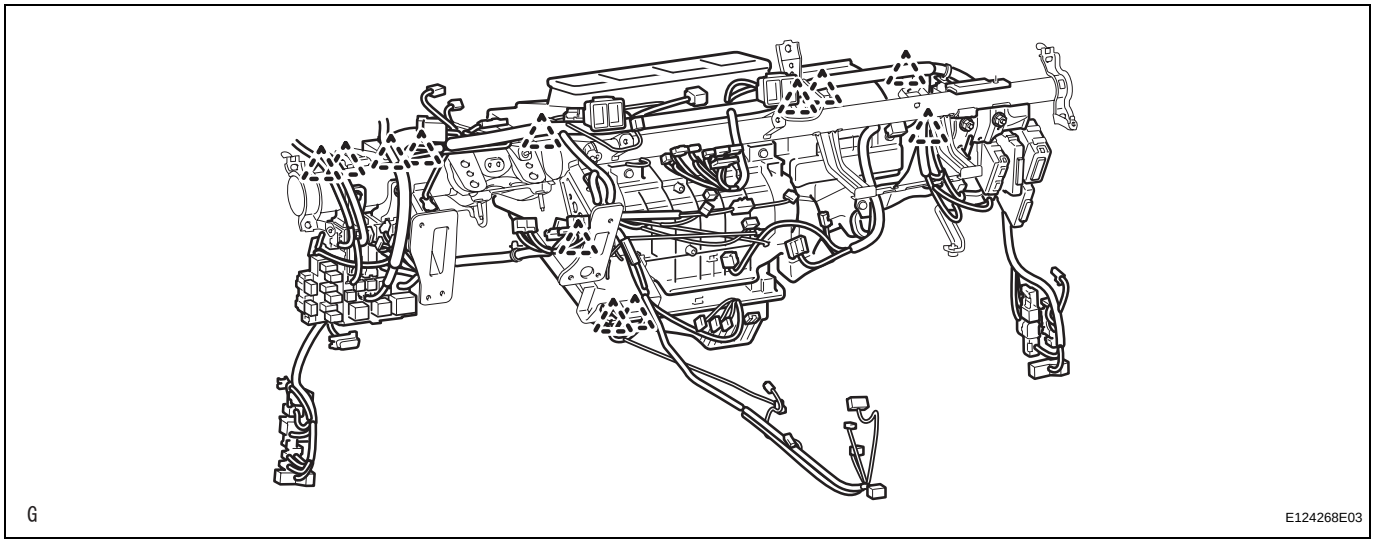


13. REMOVE AIR CONDITIONING AMPLIFIER ASSEMBLY

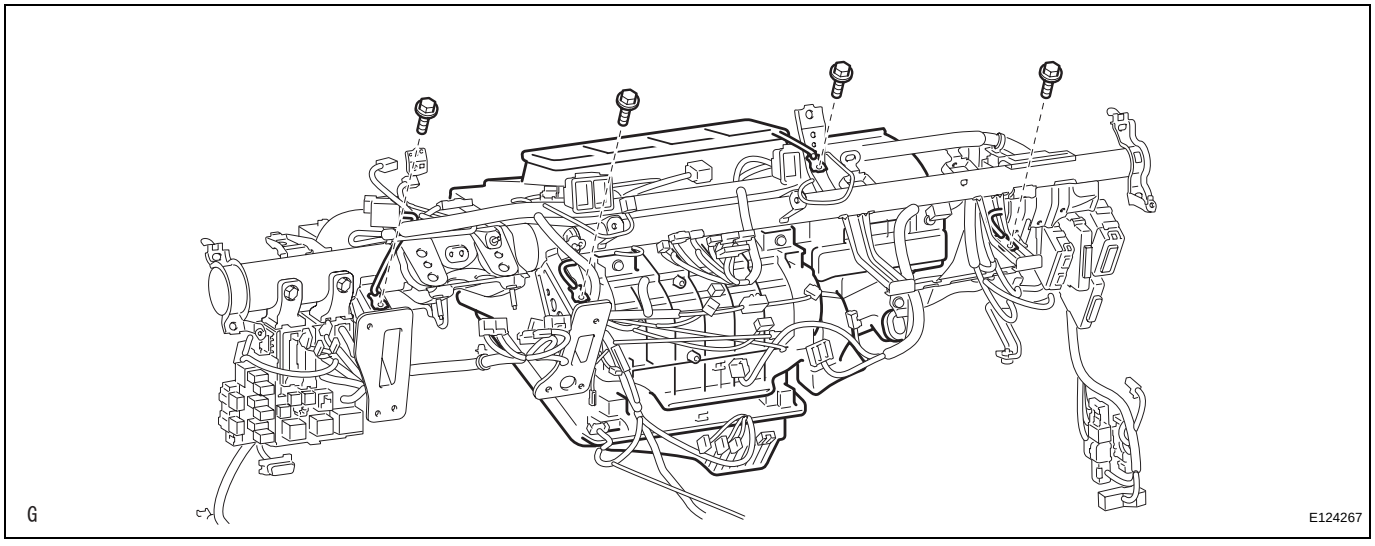
(a) Detach the 2 clamps.

(b) Disconnect the connector.

(c) Remove the screw and amplifier.



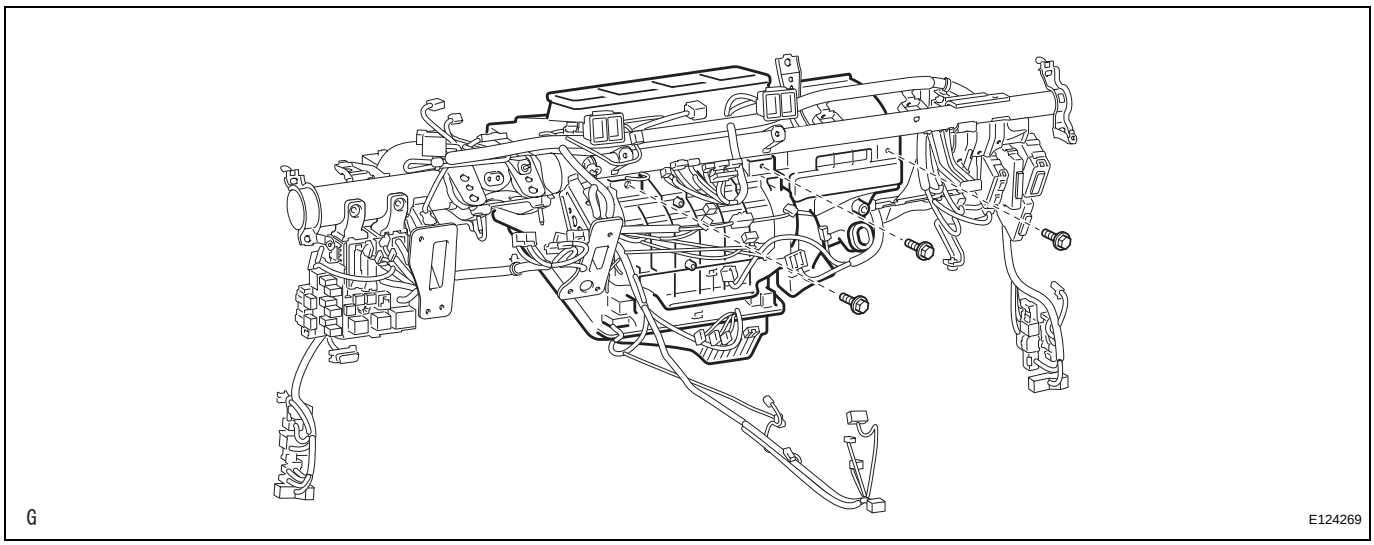
14. REMOVE DRAIN COOLER HOSE



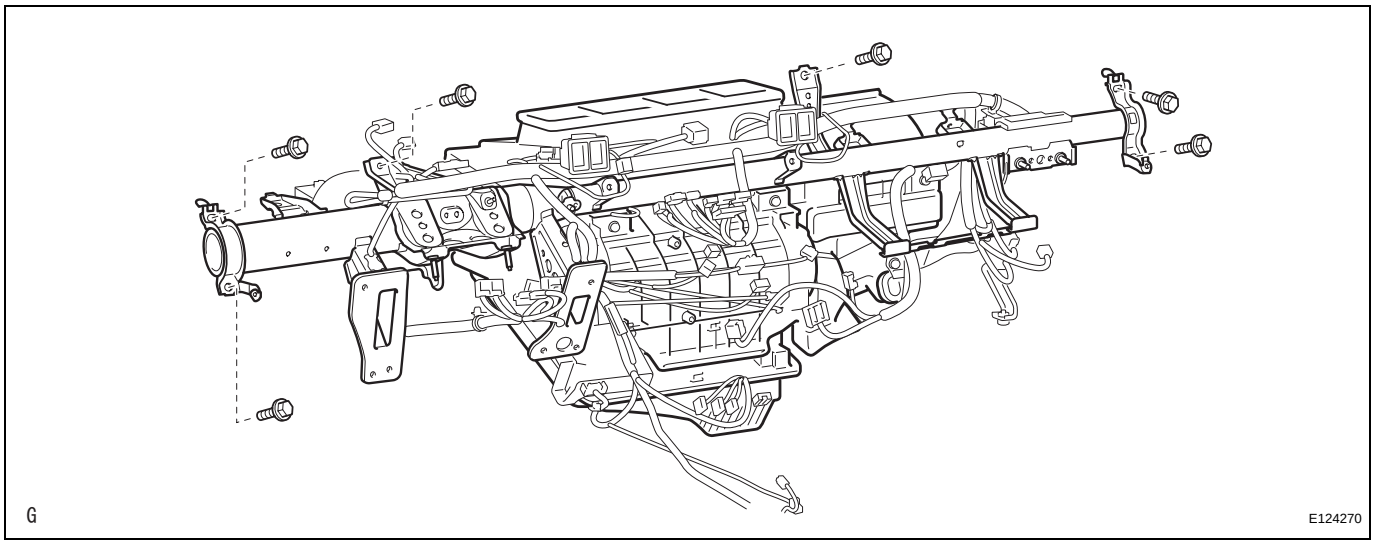
(a) Remove the drain hose.

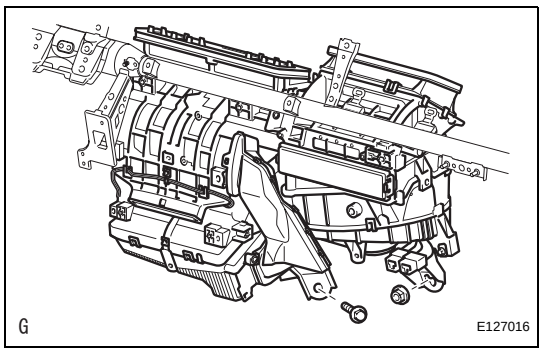
15. REMOVE INSTRUMENT PANEL REINFORCEMENT

(a) Disconnect the 12 clamps.



(b) Remove the 4 bolts and disconnect the ground wire.

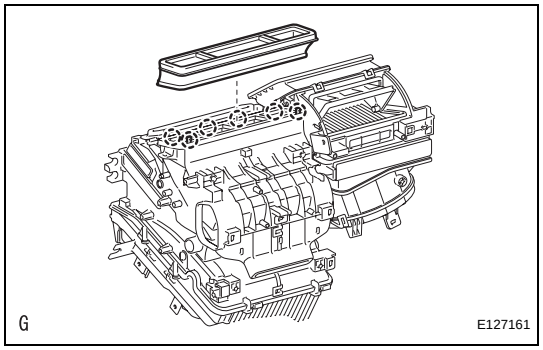




AC

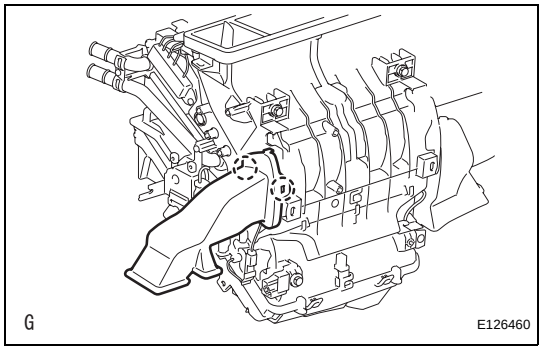
(c) Remove the 3 bolts.

(d) Remove the 6 bolts and instrument panel reinforcement.



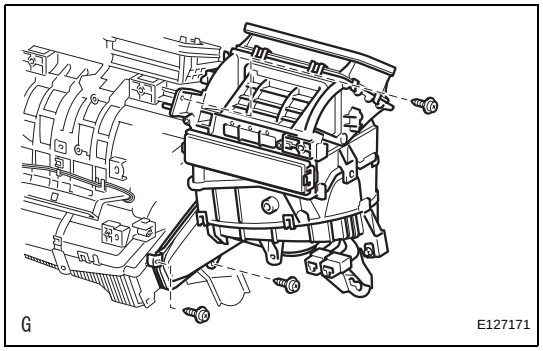
16. REMOVE AIR CONDITIONER UNIT ASSEMBLY

(a) Remove the bolt, nut and A/C unit.



AC

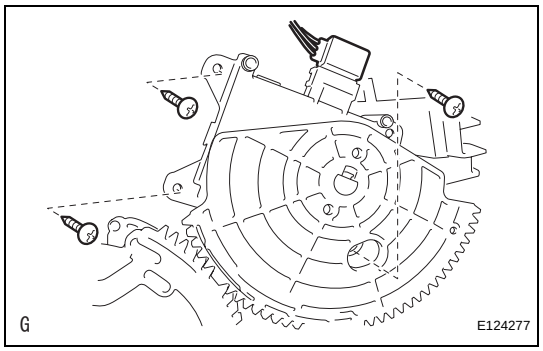
DISASSEMBLY



1. REMOVE NO. 3 HEATER TO REGISTER DUCT

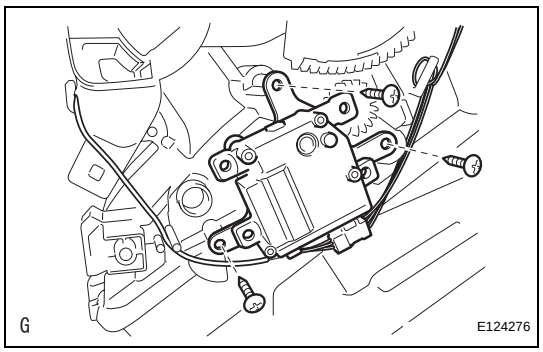
(a) Detach the 6 claws and remove the heater to register duct.

2. REMOVE AIR DUCT



(a) Detach the 2 claws and remove the air duct.

3. REMOVE AIR OUTLET CONTROL SERVO MOTOR

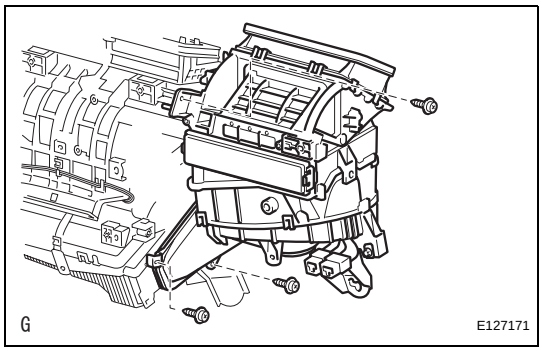


(a) Remove the 3 screws.

(b) Detach the evaporator case from the blower case.

(c) Remove the 3 screws and disconnect the connector.

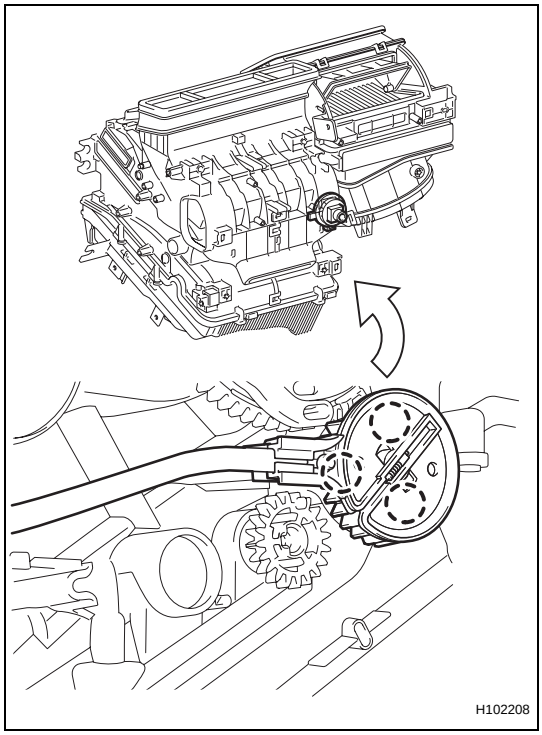
(d) Remove the air outlet control servo motor.



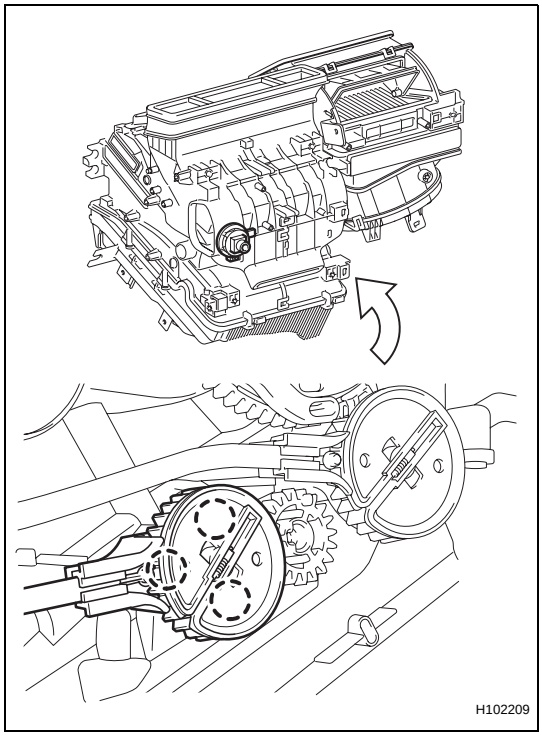
4. REMOVE AIR MIX CONTROL SERVO MOTOR

(a) Remove the 3 screws and disconnect the connector.

(b) Remove the air mix control servo motor.



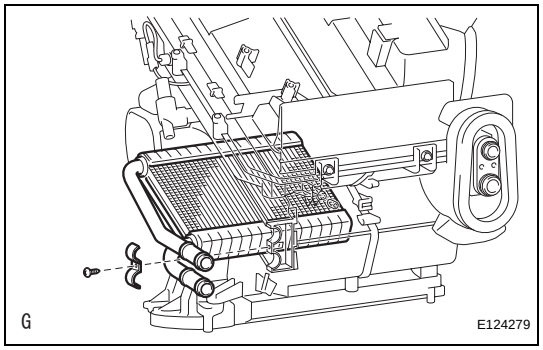
AC



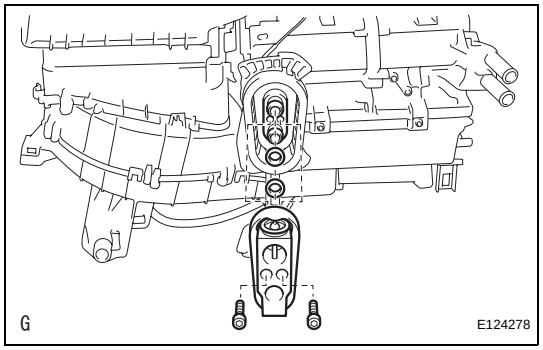
5. REMOVE MODE CONTROL CABLE ASSEMBLY (for Manual Air Conditioning System)

(a) Remove the 3 screws.

(b) Detach the evaporator case from the blower case.

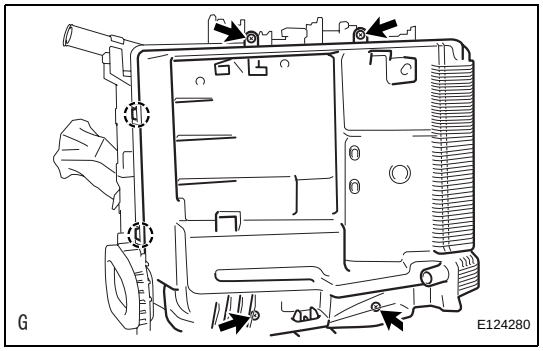


(c) Detach the 3 claws and remove the cable.



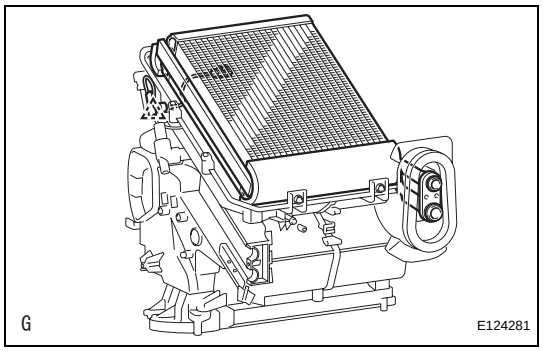
6. REPAIR AIRMIX DAMPER CONTROL CABLE SUB-ASSEMBLY (for Manual Air Conditioning System)

(a) Detach the 3 claws and remove the cable.



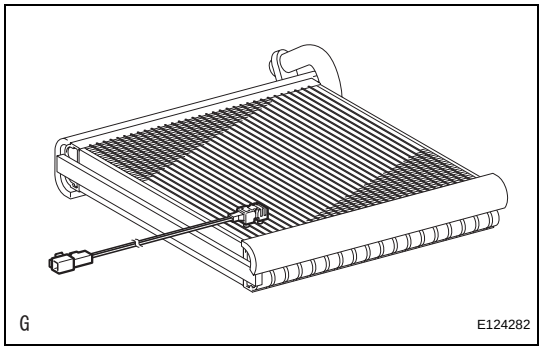
7. REMOVE HEATER RADIATOR UNIT SUB-ASSEMBLY

(a) Detach the screw and remove the clamp.
(b) Remove the heater radiator unit.



8. REMOVE COOLER EXPANSION VALVE

(a) Using a 4 mm hexagon wrench, remove the 2 hexagon bolts.
(b) Remove the cooler expansion valve and 2 O-rings from the cooler evaporator.



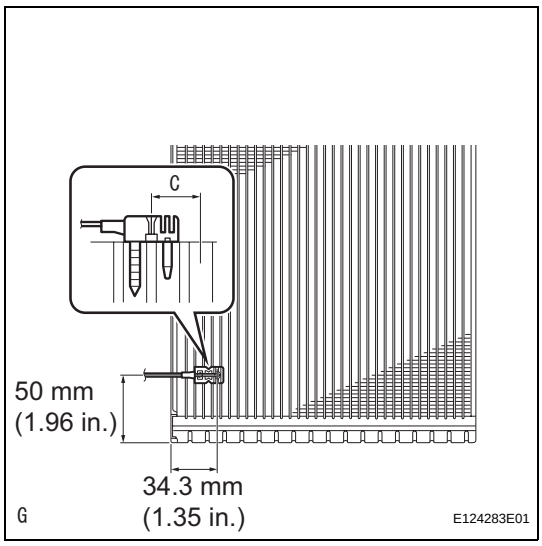
9. REMOVE NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY

(a) Remove the 4 screws.
(b) Detach the 2 claws and remove the cover.

(c) Detach the cooler thermistor clamp.
(d) Remove the cooler thermistor and cooler evaporator from the case.

10. REMOVE EVAPORATOR TEMPERATURE SENSOR

(a) Disconnect the cooler thermistor clamp from the cooler evaporator.

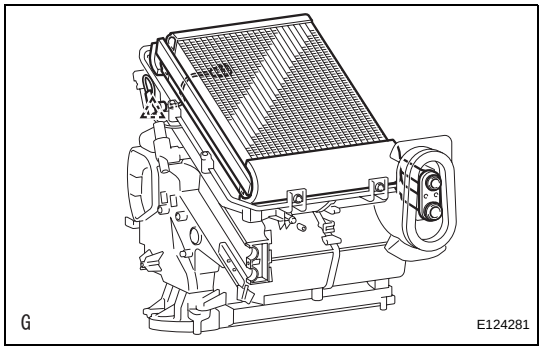


REASSEMBLY

1. INSTALL EVAPORATOR TEMPERATURE SENSOR

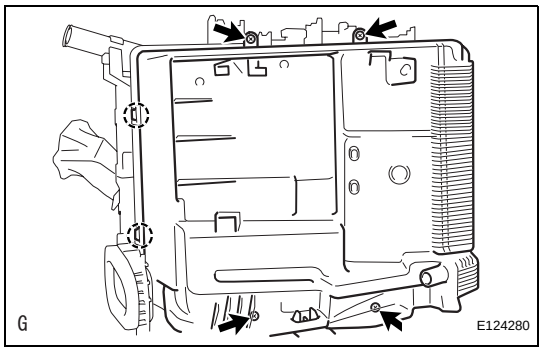
NOTICE:

If reusing the evaporator, do not insert the sensor to a location where the sensor was previously inserted. Insert the sensor within range C shown in the illustration.



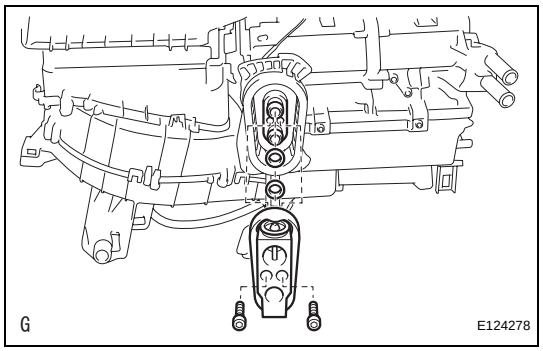
(a) Install the evaporator temperature sensor as shown in the illustration.

2. INSTALL NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY



(a) Install the cooler thermistor and cooler evaporator on the case.

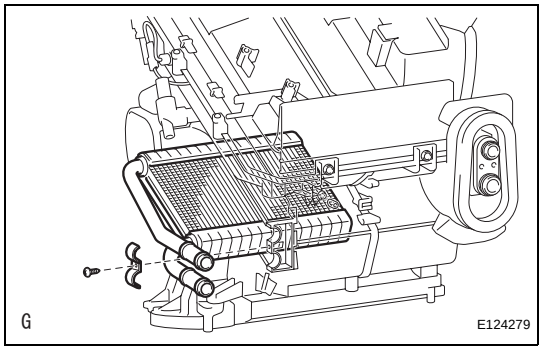
(b) Attach the temperature sensor clamp.



(c) Attach the 2 claws to install the cover.

(d) Install the 4 screws.

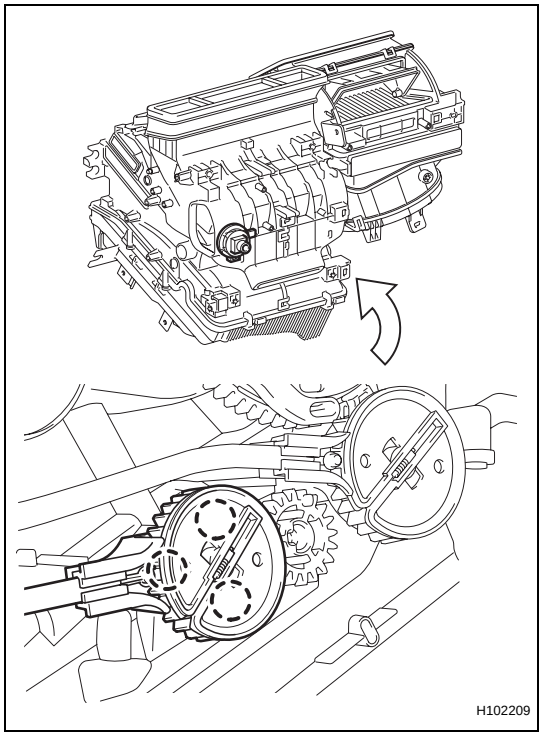
AC



3. INSTALL COOLER EXPANSION VALVE

(a) Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the hose joint.
Compressor oil:
ND-OIL 8 or equivalent

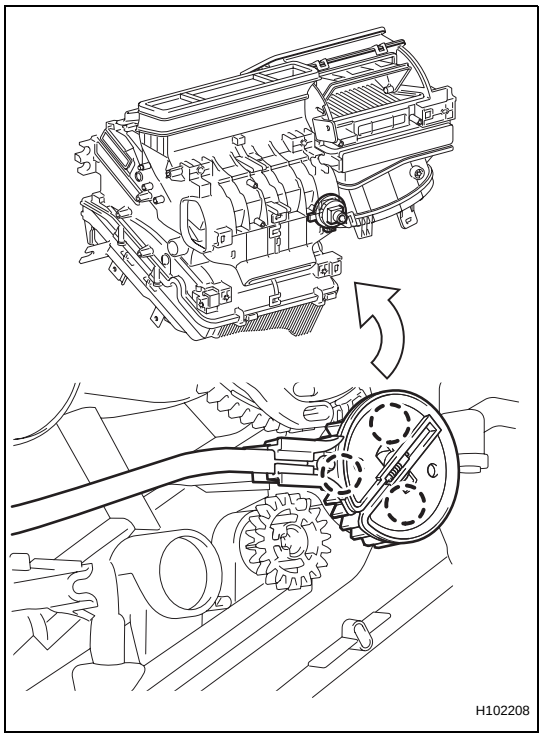
(b) Install the 2 O-rings to the cooler evaporator.



(c) Install the cooler expansion valve.

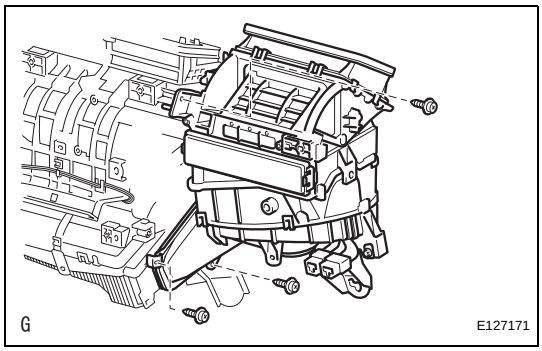
(d) Using a 4 mm hexagon wrench, install the A/C tube with the 2 hexagon bolts.
Torque: 3.5 N*m (35 kgf*cm, 30 in.*lbf)

4. INSTALL HEATER RADIATOR UNIT SUB-ASSEMBLY



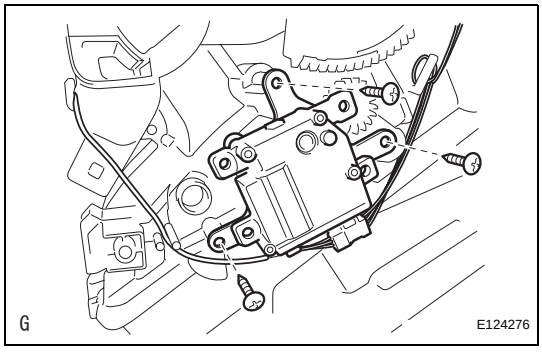
(a) Install the heater radiator with the clamp and screw.

5. INSTALL AIRMIX DAMPER CONTROL CABLE SUB-ASSEMBLY (for Manual Air Conditioning System)



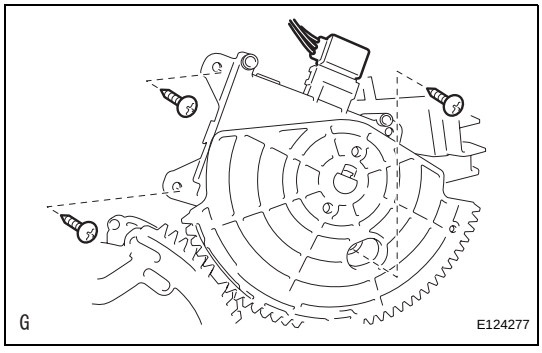
(a) Attach the 3 claws to install the cable.

AC



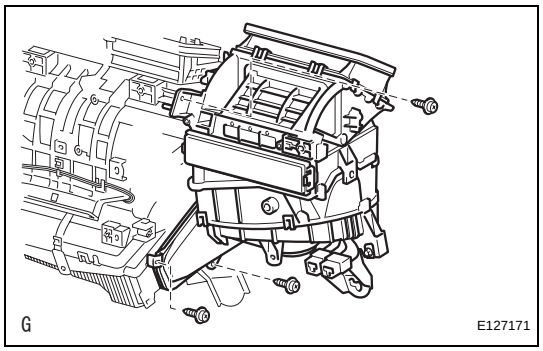
6. INSTALL MODE CONTROL CABLE ASSEMBLY (for Manual Air Conditioning System)

(a) Attach the 3 claws to install the cable.



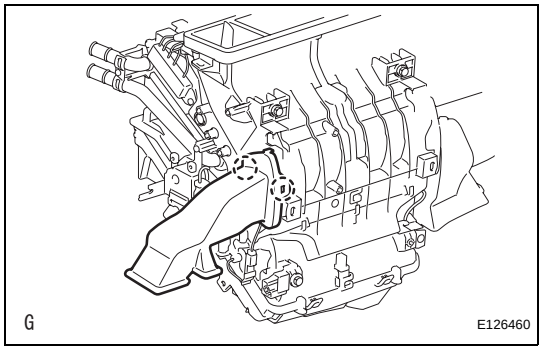
(b) Attach the evaporator case to the blower case.

(c) Install the cable with the 3 screws.



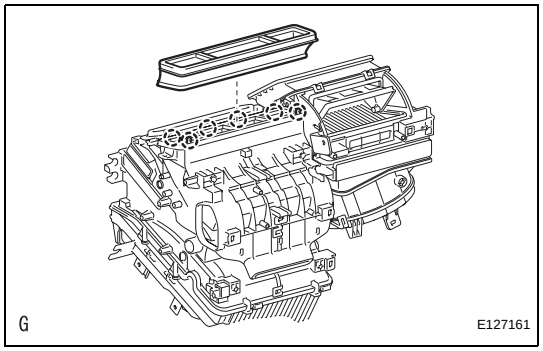
7. INSTALL AIR MIX CONTROL SERVO MOTOR

(a) Install the air mix control servo motor with the 3 screws and connect the connector.

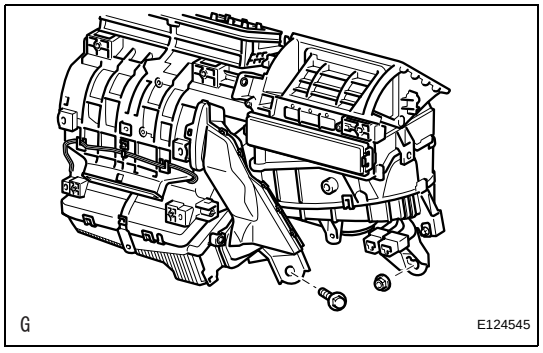


8. INSTALL AIR OUTLET CONTROL SERVO MOTOR

(a) Install the air outlet control servo motor with the 3 screws and connect the connector.



(b) Attach the evaporator case to the blower case.
(c) Install the 3 screws.

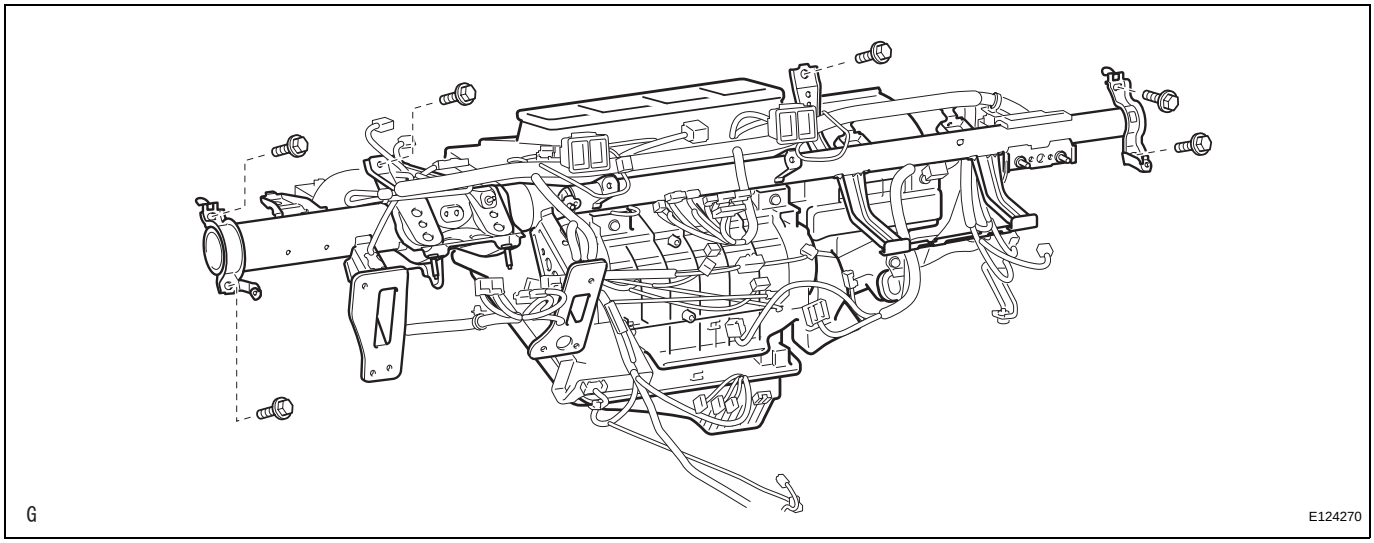


9. INSTALL AIR DUCT

(a) Attach the 2 claws and install the air duct.

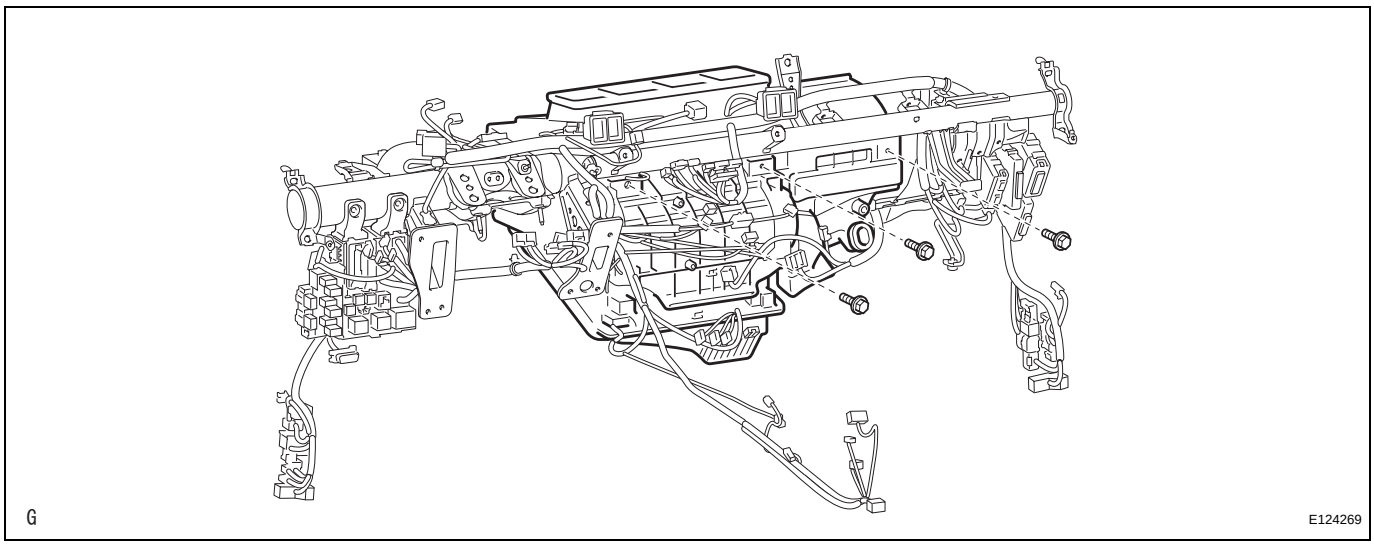
10. INSTALL NO. 3 HEATER TO REGISTER DUCT

(a) Attach the 6 claws and install the heater to register duct.



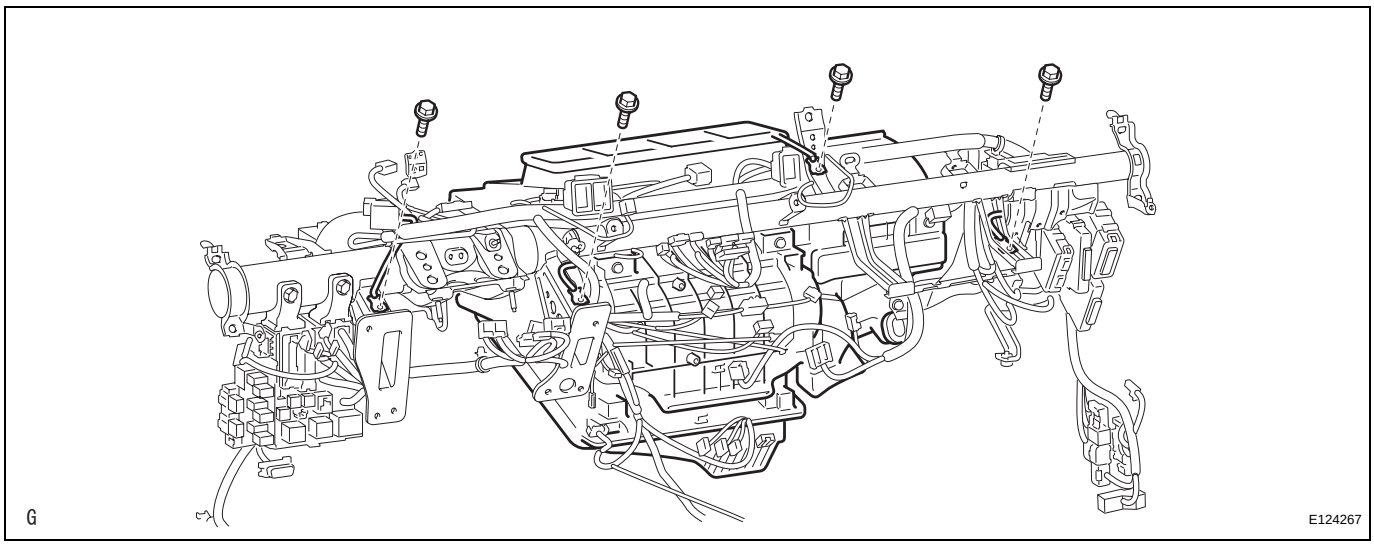
INSTALLATION

1. INSTALL AIR CONDITIONER UNIT ASSEMBLY

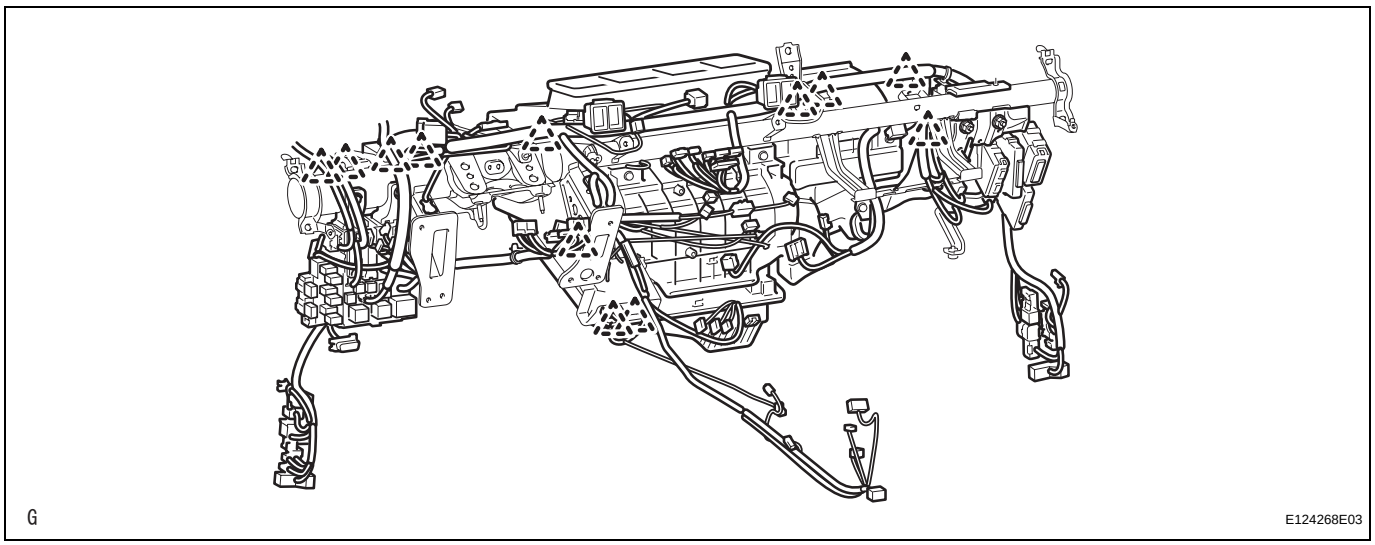


(a) Install the A/C unit with the bolt and nut.
Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)

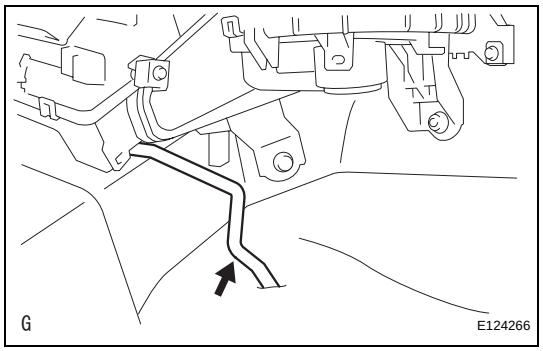
2. INSTALL INSTRUMENT PANEL REINFORCEMENT



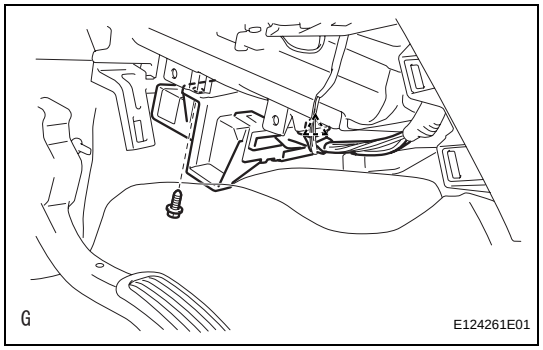
(a) Install the instrument panel reinforcement with the 6 bolts.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)



(b) Install the 3 bolts.
Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)

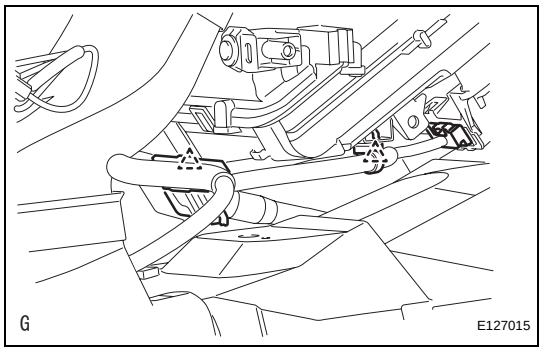


(c) Install the 4 bolts and connect the ground wire.



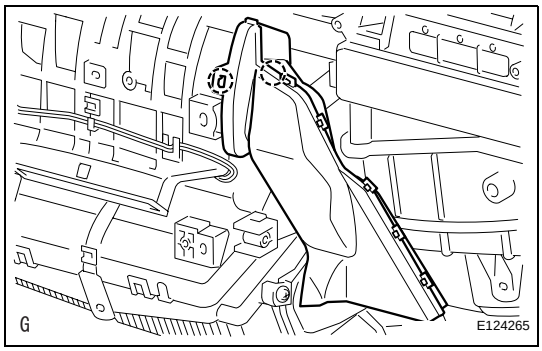
(d) Attach the 12 clamps.

3. INSTALL DRAIN COOLER HOSE



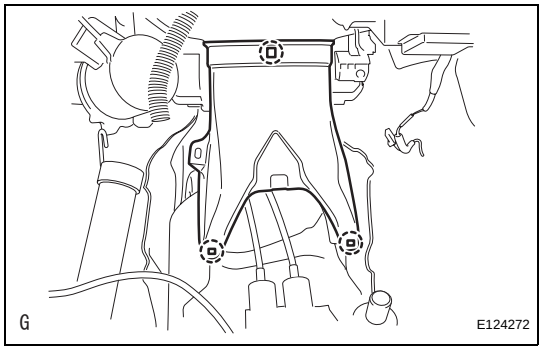
(a) Install the drain hose.

4. INSTALL AIR CONDITIONING AMPLIFIER ASSEMBLY



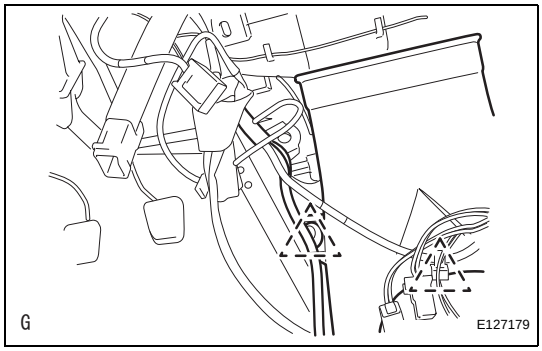
(a) Install the A/C amplifier with the screw.

(b) Connect the connector.



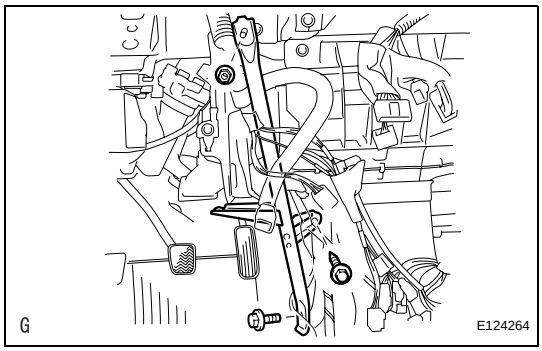
(c) Attach the 2 clamps to the amplifier.

AC



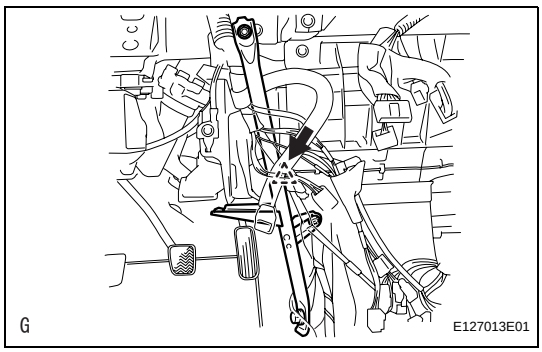
5. INSTALL AIR DUCT

(a) Attach the 2 claws and install the air duct.



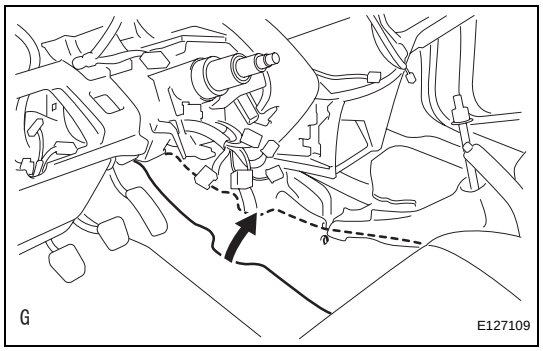
6. INSTALL REAR AIR DUCT

(a) Attach the 3 claws and install the air duct rear.

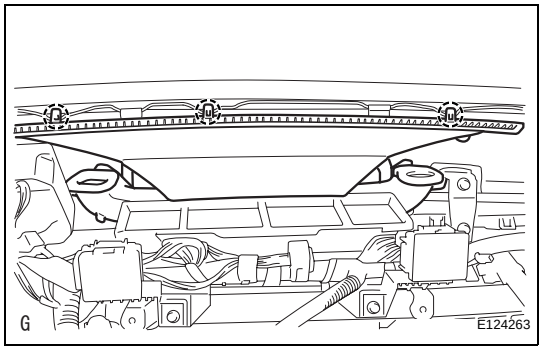


(b) Attach the 2 clamps and install the wire harness.

AC



7. INSTALL NO. 1 INSTRUMENT PANEL BRACE SUB-ASSEMBLY



(a) Install the instrument panel brace with the bolt, nut and screw.

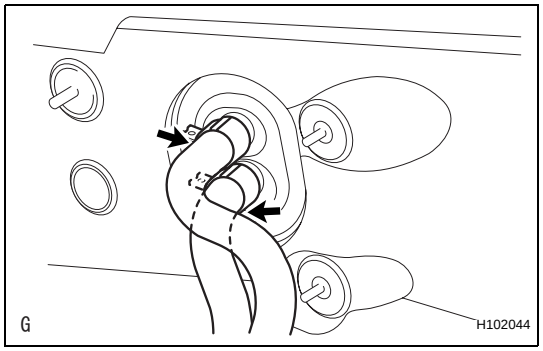
(b) Install the clamp and connect the wire harness.

(c) Reposition the floor carpet.

8. INSTALL DEFROSTER NOZZLE ASSEMBLY

(a) Attach the 3 claws and install the defroster nozzle assembly lower.

9. INSTALL LOWER INSTRUMENT PANEL



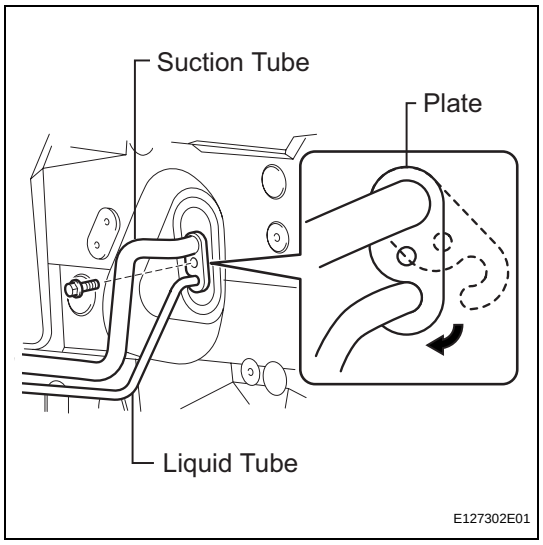
(a) Install the lower instrument panel (see page IP-23).

10. INSTALL UPPER INSTRUMENT PANEL

(a) Install the upper instrument panel (see page IP-9).

11. INSTALL STEERING COLUMN ASSEMBLY

(a) Install the steering column (see page SR-19).



12. CONNECT HEATER WATER OUTLET HOSE

(a) Connect the water hose and attach the clip.

13. CONNECT HEATER WATER INLET HOSE

HINT:
Use the same procedures described for the water outlet hose.

14. CONNECT TUBE SUB-ASSEMBLY

(a) Remove the attached vinyl tape from the pipe.

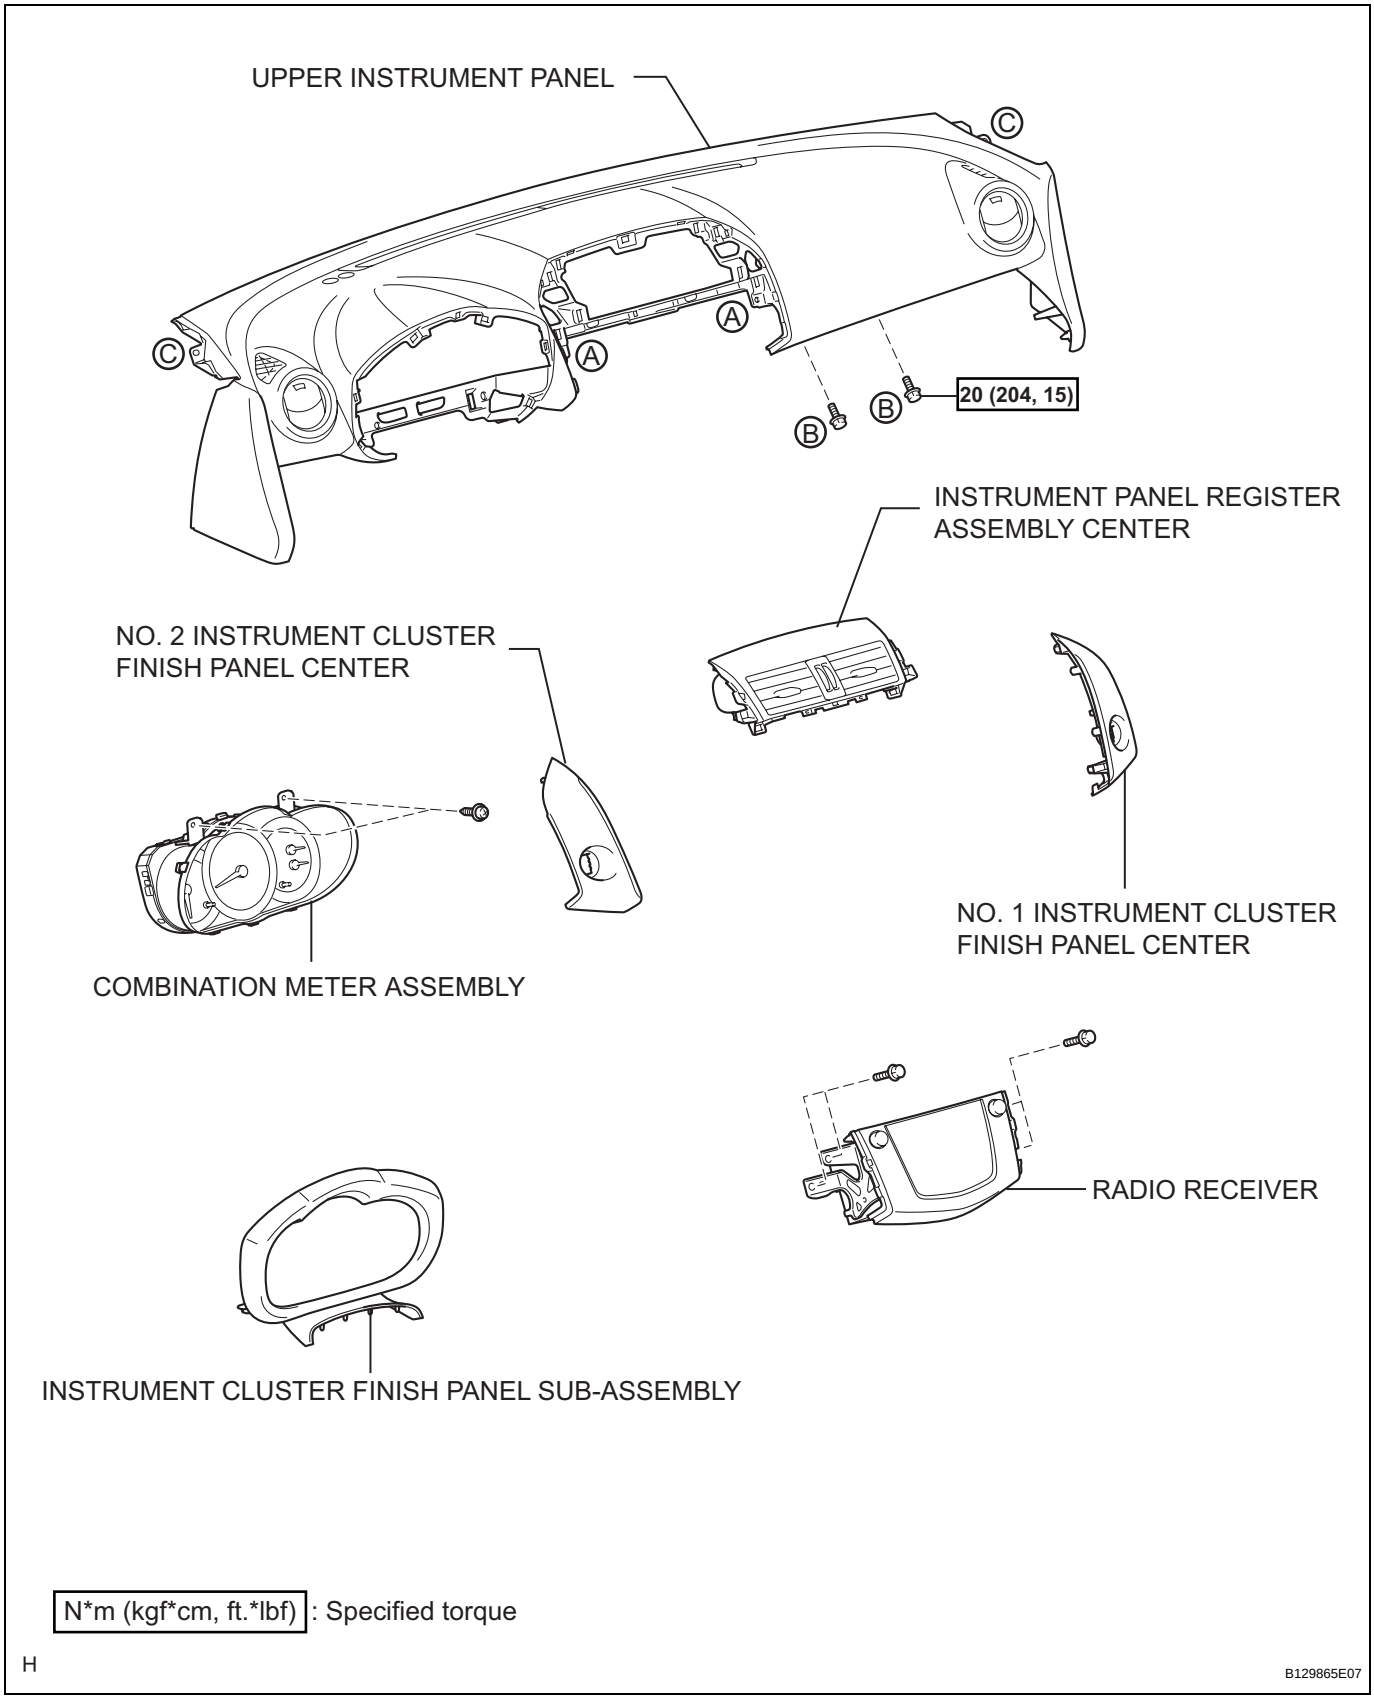
(b) Sufficiently apply compressor oil to new 2 O-rings and the fitting surface of the suction tube and liquid tube.
Compressor oil:
ND-OIL 8 or equivalent

(c) Install the 2 O-rings on the suction tube and liquid tube.

(d) Connect the suction tube and liquid tube.
HINT:
After the connection, check that the claw of the piping clamp is engaged.

(e) Install the plate with the bolt.
Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)

15. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



16. CHECK SRS WARNING LIGHT

(a) Check the SRS warning light (see page RS-37).

17. **REPLACE ENGINE COOLANT**
    Refer to the following procedures (see page CO-6).
18. **CHARGE REFRIGERANT (See page AC-172)**
19. **WARM UP ENGINE (See page AC-173)**
20. **CHECK FOR ENGINE COOLANT LEAKS**
21. **CHECK FOR LEAKAGE OF REFRIGERANT (See page AC-173)**

INSTALLATION

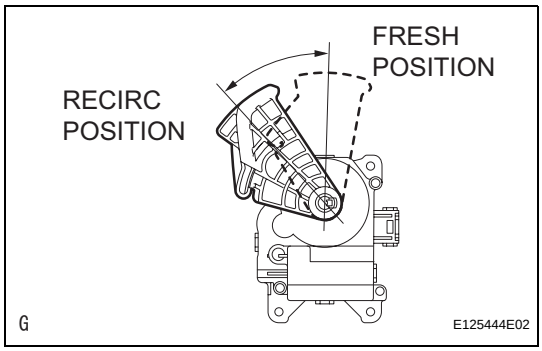
1. **INSTALL AIR INLET CONTROL SERVO MOTOR (See page AC-206)**

2. **INSTALL BLOWER ASSEMBLY**
   (a) Install the blower (see page AC-206).

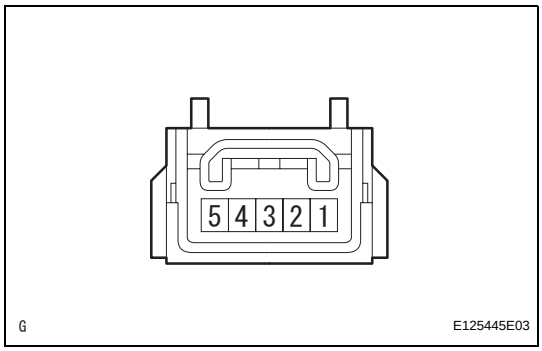
AIR INLET CONTROL SERVO MOTOR

COMPONENTS

E126831E01



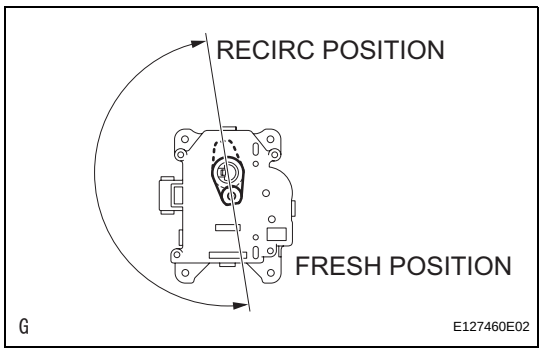
AC



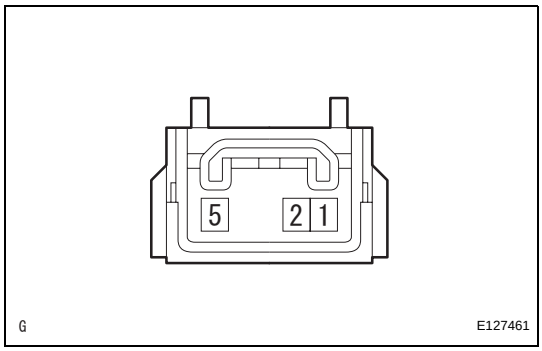
REMOVAL

1. **REMOVE BLOWER ASSEMBLY**
   (a) Remove the blower (see page AC-203).
2. **REMOVE AIR INLET CONTROL SERVO MOTOR (See page AC-210)**

INSPECTION



1. **INSPECT AIR INLET CONTROL SERVO MOTOR (for Automatic Air Conditioning System)**
   (a) Inspect the servo motor operation.

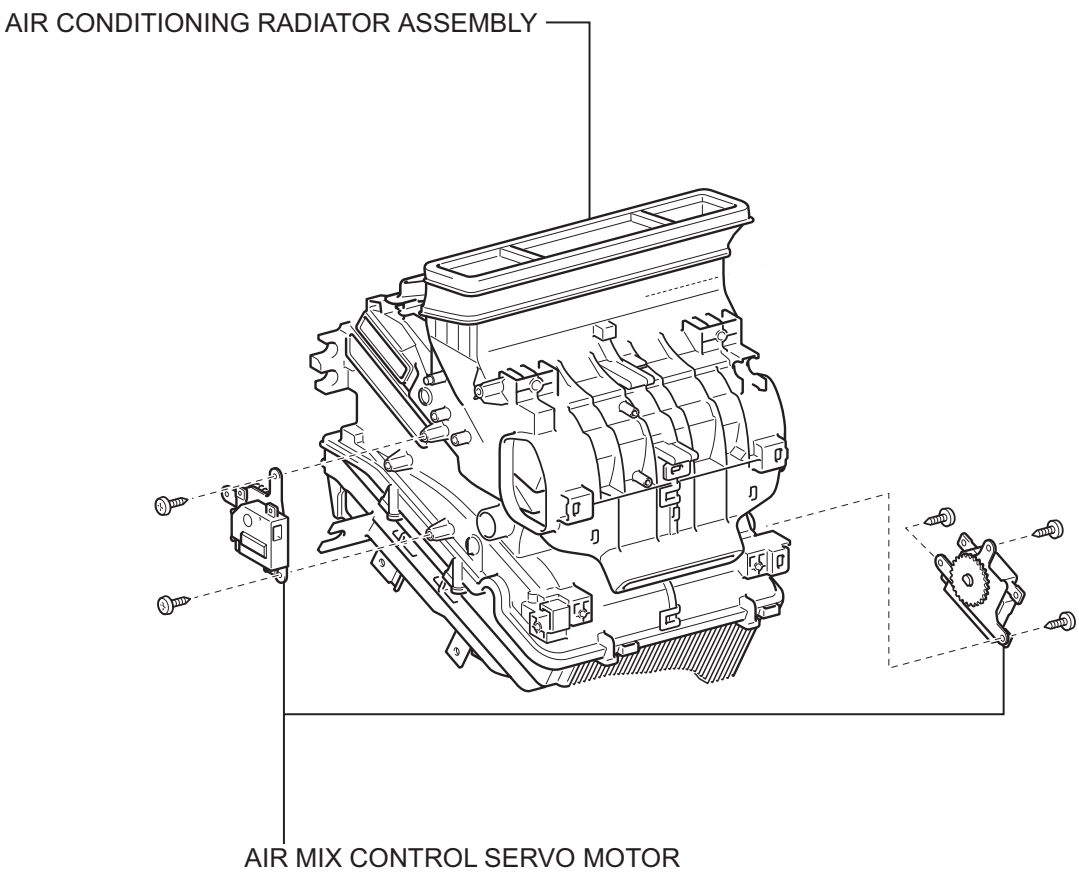


(1) Connect the positive (+) lead from the battery to terminal 4 and negative (-) lead to terminal 5, and then check that the arm turns to the "FRESH" side smoothly.
(2) Connect the positive (+) lead from the battery to terminal 5 and negative (-) lead to terminal 4, and then check that the arm turns to the "RECIRCULATION" side smoothly.
If the operation is not as specified, replace the air inlet control servo motor.

2. **INSPECT AIR INLET CONTROL SERVO MOTOR (for Manual Air Conditioning System)**
   (a) Inspect the servo motor operation.

(1) Connect the positive (+) lead from the battery to terminal 5 and negative (-) lead to terminal 1, and then check that the arm turns to the "FRESH" side smoothly.
(2) Connect the positive (+) lead from the battery to terminal 1 and negative (-) lead to terminal 5, and then check that the arm turns to the "RECIRCULATION" side smoothly. if the operation is not as specified, replace the air inlet servo motor.

AC



INSTALLATION

1. **INSTALL AIR MIX CONTROL SERVO MOTOR (See page AC-196)**

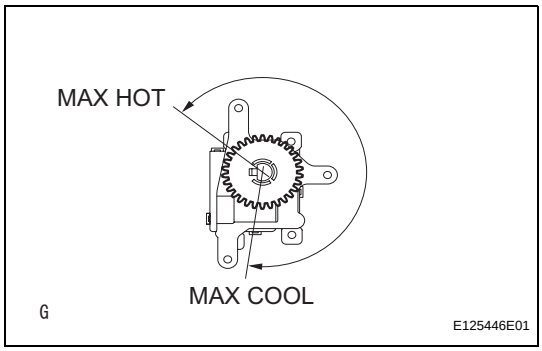
2. **INSTALL AIR CONDITIONING UNIT**
   (a) Install the air conditioning radiator (see page AC-197).

AIR MIX CONTROL SERVO MOTOR (for Automatic Air Conditioning System)

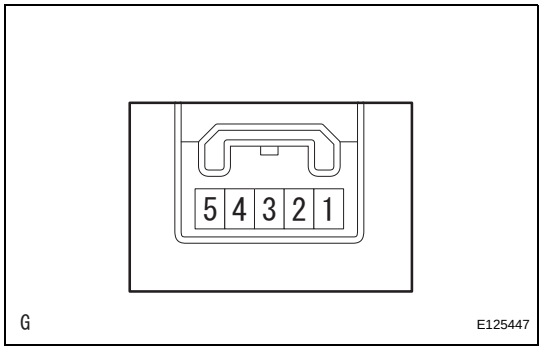
COMPONENTS

REMOVAL

1. REMOVE AIR CONDITIONING UNIT



(a) Remove the air conditioning radiator (see page AC-185).



2. REMOVE AIR MIX CONTROL SERVO MOTOR (See page AC-191)

INSPECTION

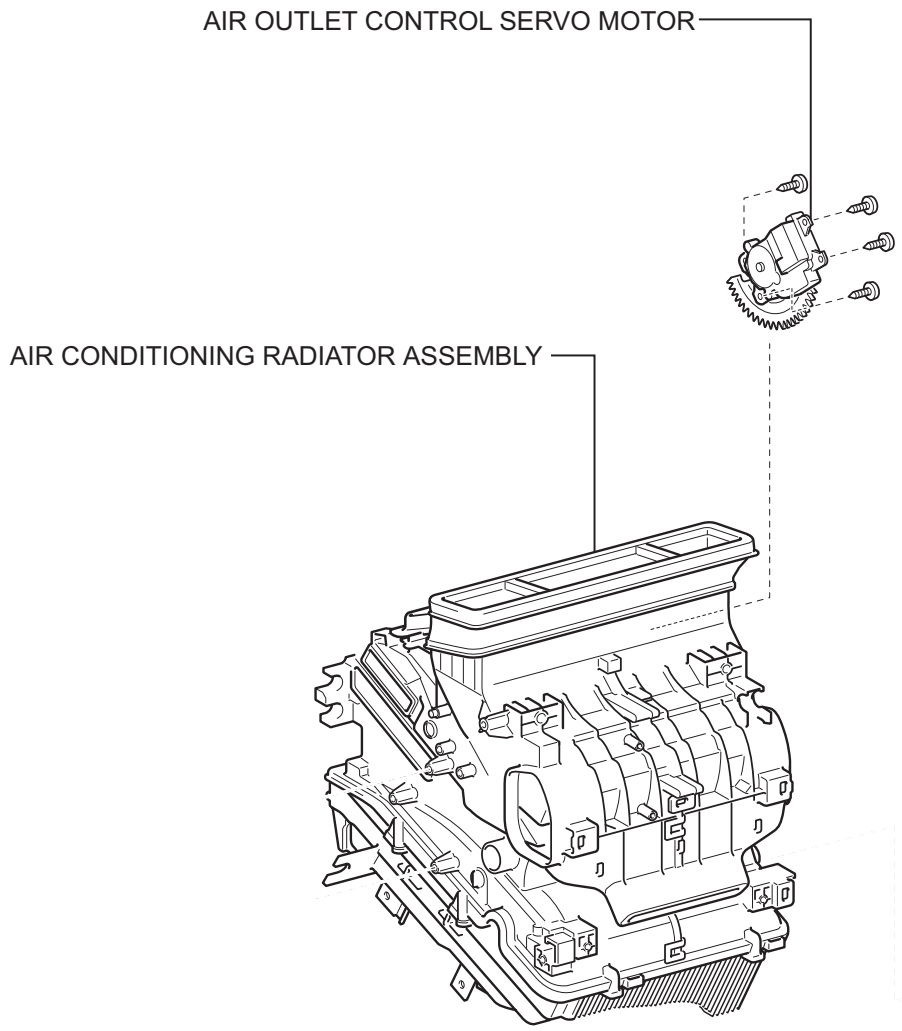
1. INSPECT AIR MIX CONTROL SERVO MOTOR

(a) Inspect the servo motor operation.

(1) Connect the positive (+) lead from the battery to terminal 4 and negative (-) lead to terminal 5, and then check that the lever turns to the "MAX HOT" position smoothly.

(2) Connect the positive (+) lead from the battery to terminal 5 and negative (-) lead to terminal 4, and then check that the lever turns to the "MAX COOL" position smoothly.

If the operation is not as specified, replace the air mix control servo motor.



INSTALLATION

1. **INSTALL AIR OUTLET CONTROL SERVO MOTOR (See page AC-196)**

2. **INSTALL AIR CONDITIONING UNIT**
   (a) Install the air conditioning radiator (see page AC-197).

AIR OUTLET CONTROL SERVO MOTOR (for Automatic Air Conditioning System)

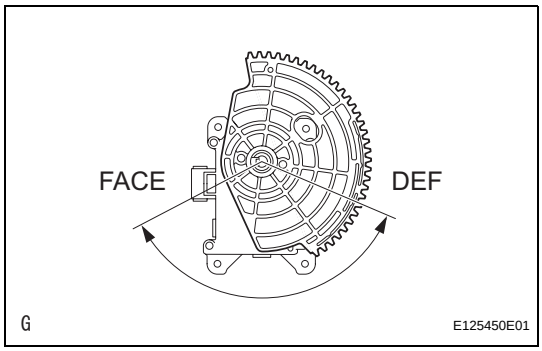
COMPONENTS

E126832E02

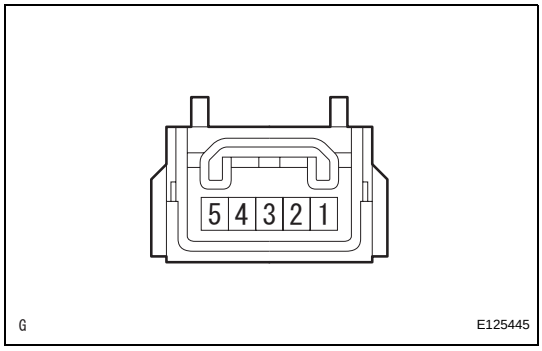
AC

REMOVAL

1. REMOVE AIR CONDITIONING UNIT



(a) Remove the air conditioning radiator (see page AC-185).



2. REMOVE AIR OUTLET CONTROL SERVO MOTOR (See page AC-191)

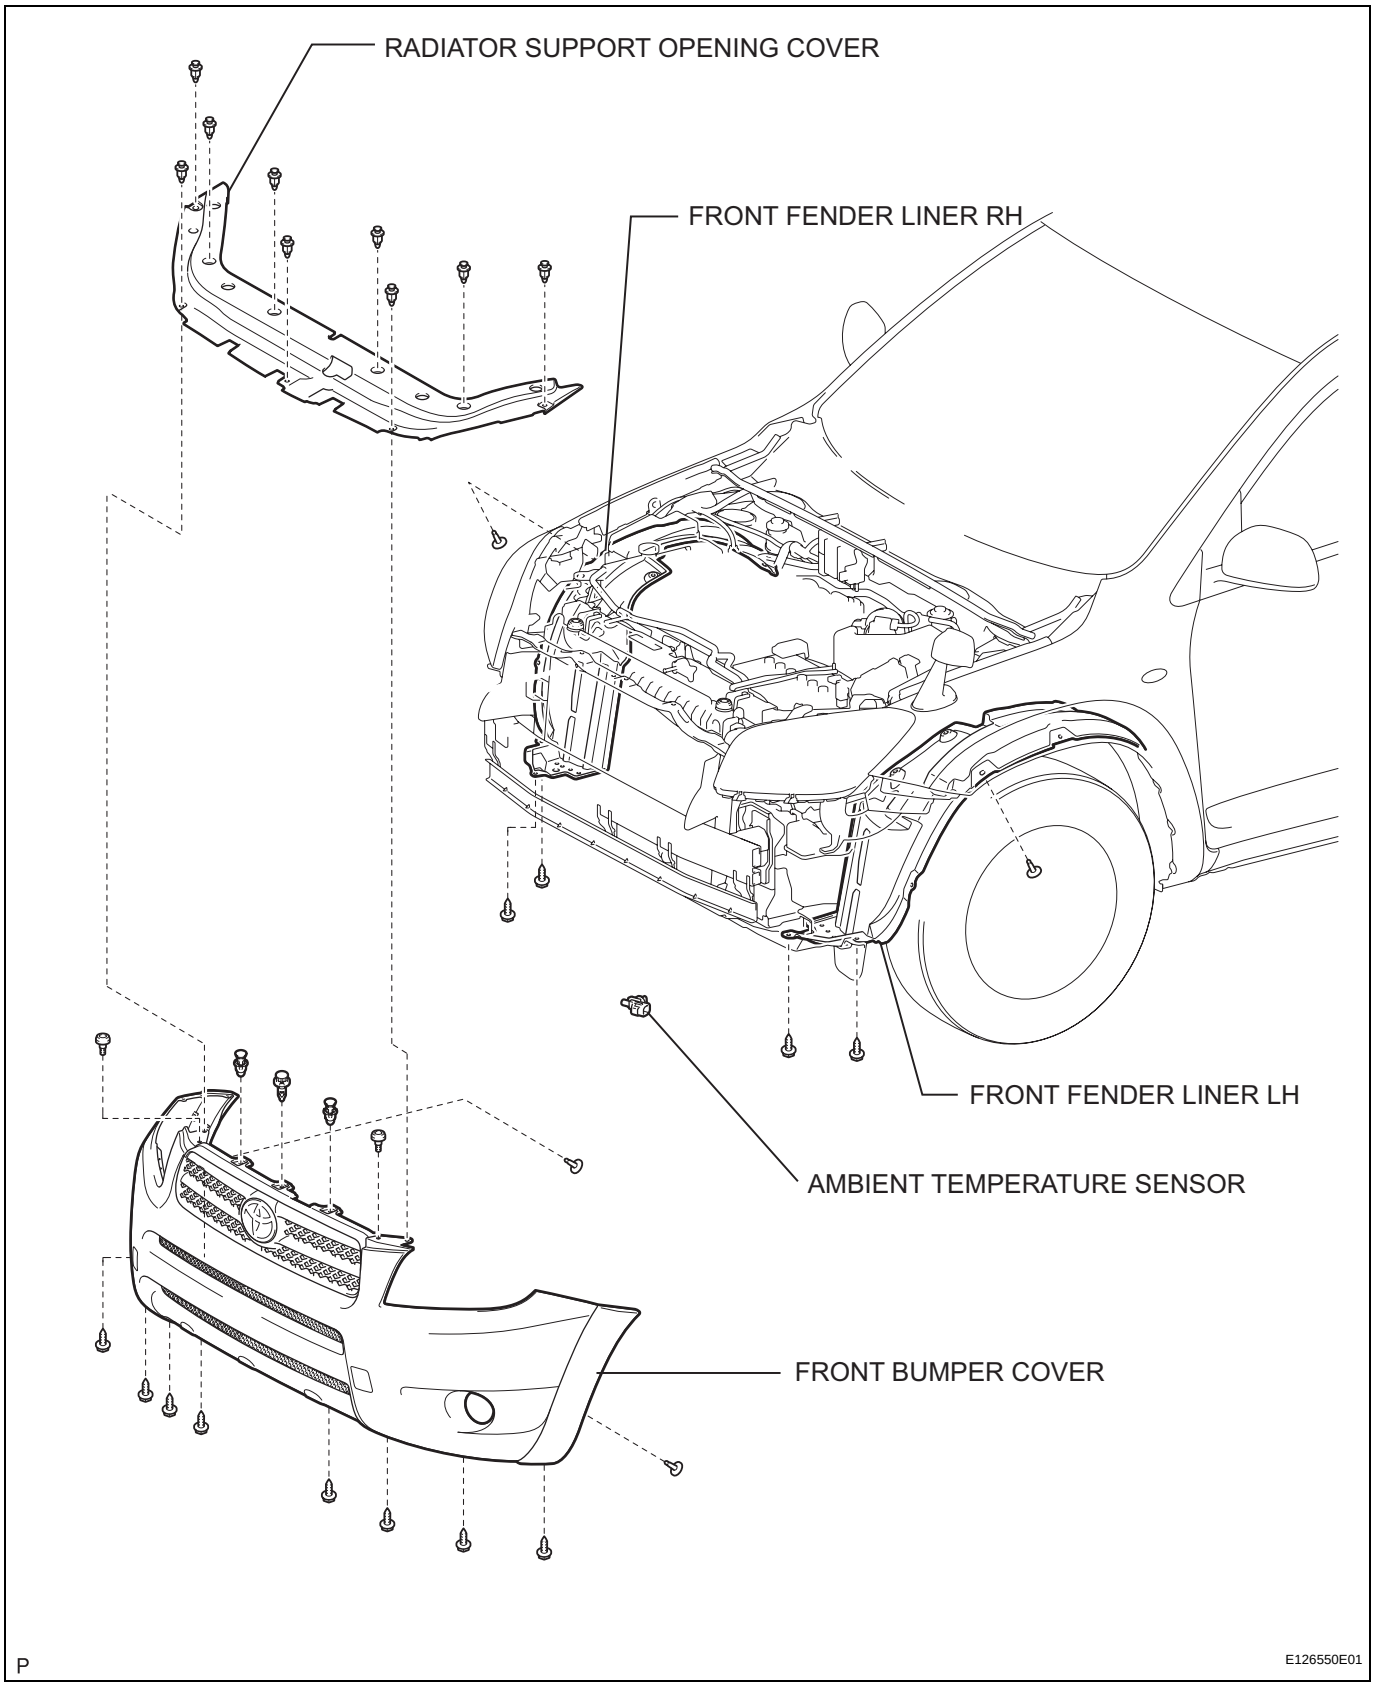
INSPECTION

1. INSPECT AIR OUTLET CONTROL SERVO MOTOR

(a) Inspect the servo motor operation.

(1) Connect the positive (+) lead from the battery to terminal 4 and negative (-) lead to terminal 5, and then check that the lever turns to the "FACE" position smoothly.

(2) Connect the positive (+) lead from the battery to terminal 5 and negative (-) lead to terminal 4, and then check that the lever turns to the "DEF" position smoothly.



If the operation is not as specified, replace the air outlet control servo motor.

INSTALLATION

1. **INSTALL AMBIENT TEMPERATURE SENSOR**
   (a) Connect the connector, and then push in the sensor.
2. **INSTALL FRONT BUMPER COVER**
   (a) Install the front bumper cover (see page ET-10).
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
4. **CHECK SRS WARNING LIGHT**
   (a) Check SRS warning light (see page RS-37).

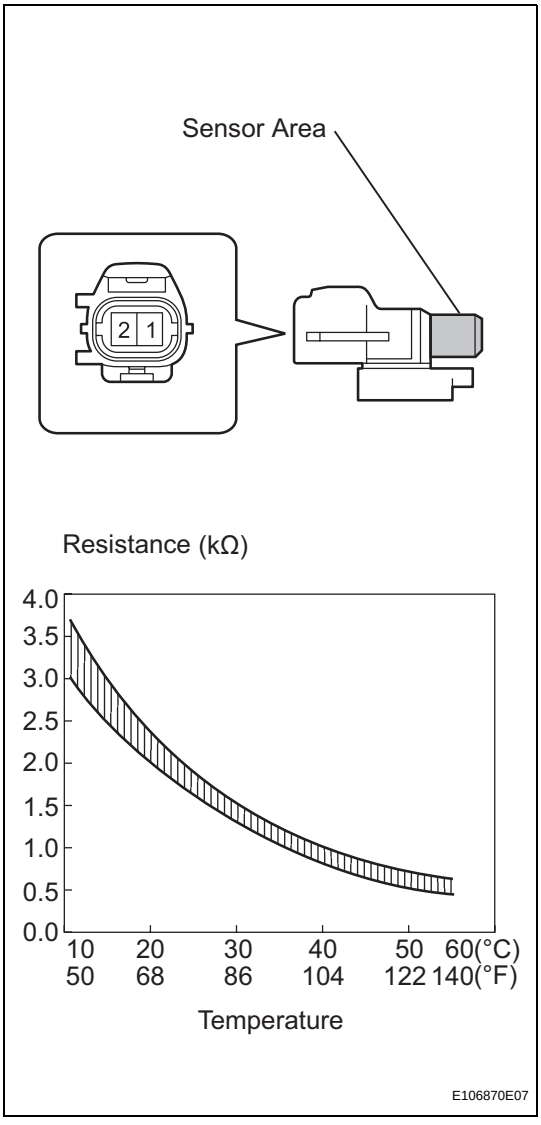
AMBIENT TEMPERATURE SENSOR (for Automatic Air Conditioning System)

COMPONENTS

AC

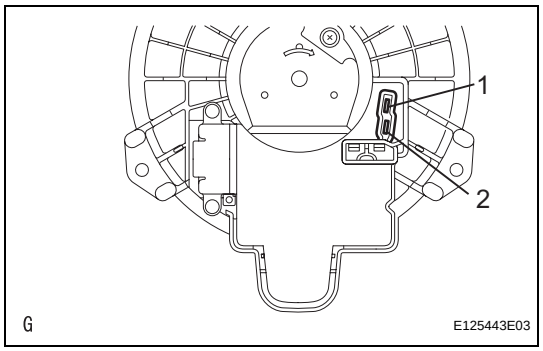
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE FRONT BUMPER COVER**
   (a) Remove the front bumper cover (see page ET-4).
3. **REMOVE AMBIENT TEMPERATURE SENSOR**
   (a) Using a screwdriver, pull out the sensor, then disconnect the connector.
   HINT:
   Tape the screwdriver tip before use.

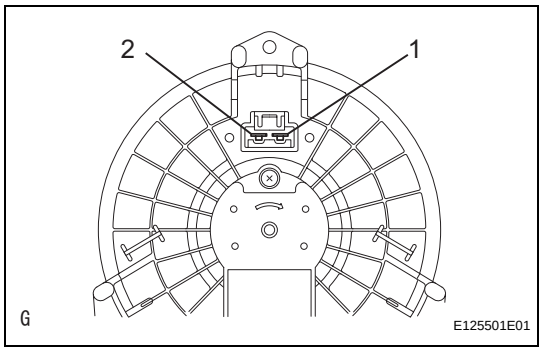


INSPECTION

1. **INSPECT AMBIENT TEMPERATURE SENSOR**
   (a) Measure the resistance of the sensor.
   Standard resistance



Tester Connection	Condition	Specified Condition
1 - 2	10°C (50°F)	3.00 to 3.73 kΩ
1 - 2	15°C (59°F)	2.45 to 2.88 kΩ
1 - 2	20°C (68°F)	1.95 to 2.30 kΩ
1 - 2	25°C (77°F)	1.60 to 1.80 kΩ
1 - 2	30°C (86°F)	1.28 to 1.47 kΩ
1 - 2	35°C (95°F)	1.00 to 1.22 kΩ
1 - 2	40°C (104°F)	0.80 to 1.00 kΩ
1 - 2	45°C (113°F)	0.65 to 0.85 kΩ
1 - 2	50°C (122°F)	0.50 to 0.70 kΩ
1 - 2	55°C (131°F)	0.44 to 0.60 kΩ
1 - 2	60°C (140°F)	0.36 to 0.50 kΩ



NOTICE:
- **Touching the sensor even slightly may change the resistance value. Hold the connector of the sensor.**
- **When measuring the resistance, the sensor temperature must be the same as the ambient temperature.**

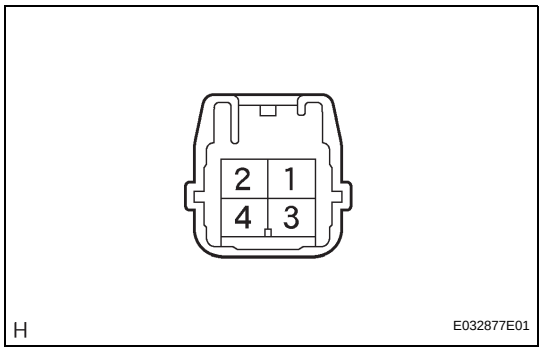
HINT:
As the temperature increases, the resistance decreases (see the graph).
If the result is not as specified, replace the ambient temperature sensor.

AC

BLOWER MOTOR

ON-VEHICLE INSPECTION

1. INSPECT BLOWER MOTOR (for Automatic Air Conditioning System)



(a) Disconnect the blower motor connector.

(b) Connect the positive (+) lead from the battery to terminal 1 and negative (-) lead to terminal 2, and then check that the motor operates smoothly.
If the operation is not as specified, replace the blower motor.

2. INSPECT BLOWER MOTOR (for Manual Air Conditioning System)

(a) Disconnect the blower motor connector.

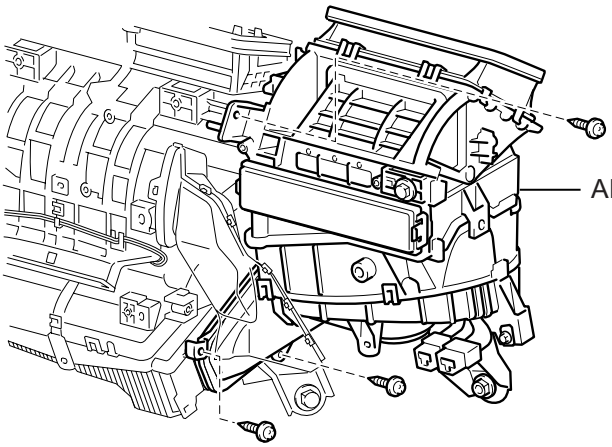
(b) Connect the positive (+) lead from the battery to terminal 2 and negative (-) lead to terminal 1, and then check that the motor operates smoothly.
If the operation is not as specified, replace the blower motor.

BLOWER RESISTOR

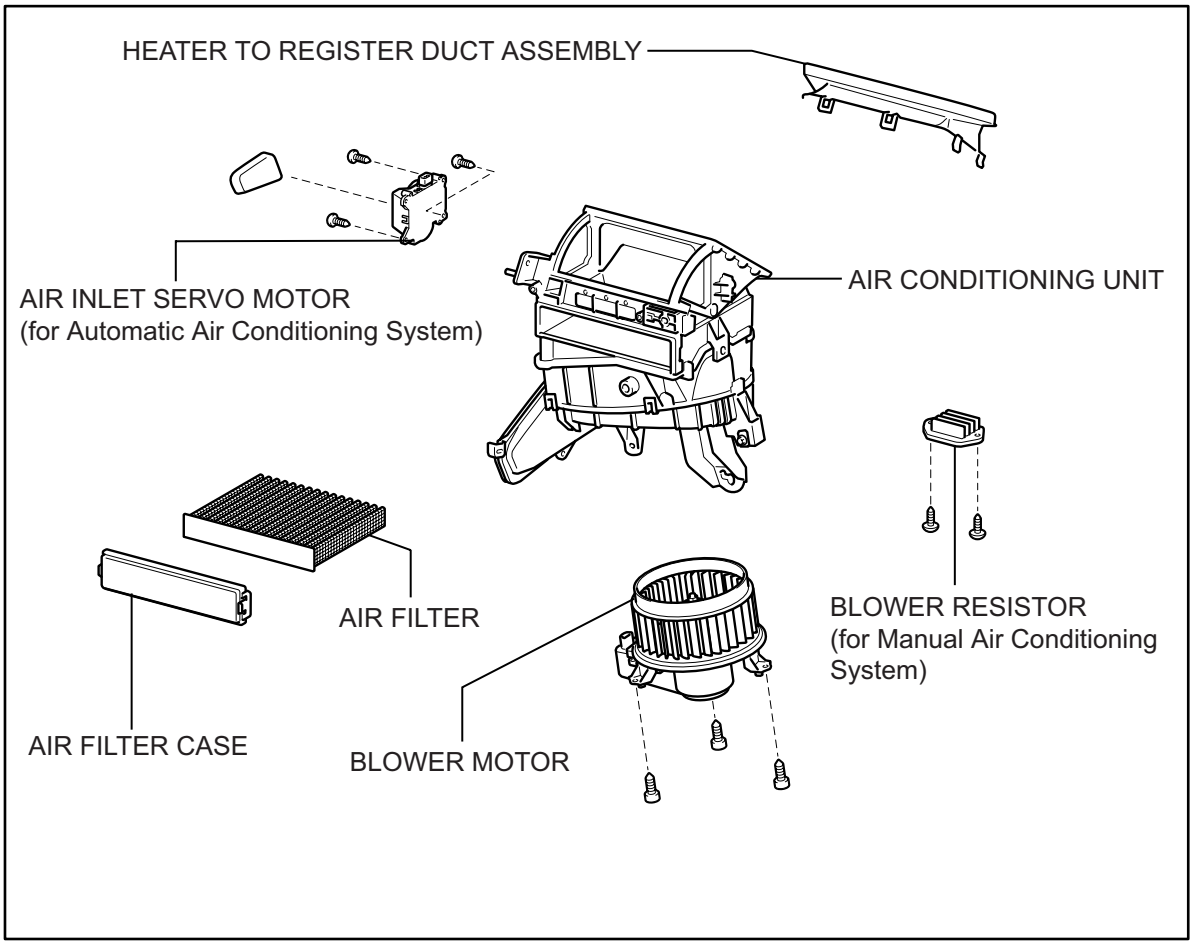
ON-VEHICLE INSPECTION

1. INSPECT BLOWER MOTOR CONTROL

(a) Measure the resistance of the blower resistor.



Standard resistance

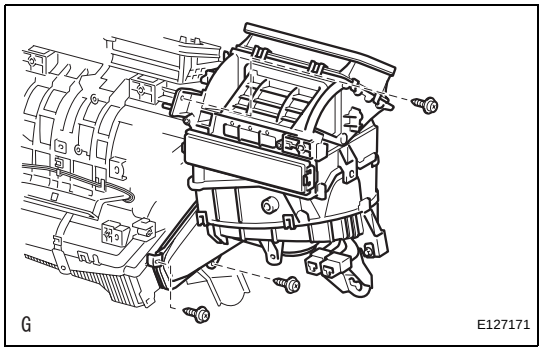


Tester Connection	Specified Condition
1 - 2	1.45 to 1.67 Ω
1 - 3	0.52 to 0.60 Ω
1 - 4	3.12 to 3.60 Ω

If the resistance is not as specified, replace the blower motor control.

BLOWER UNIT

COMPONENTS

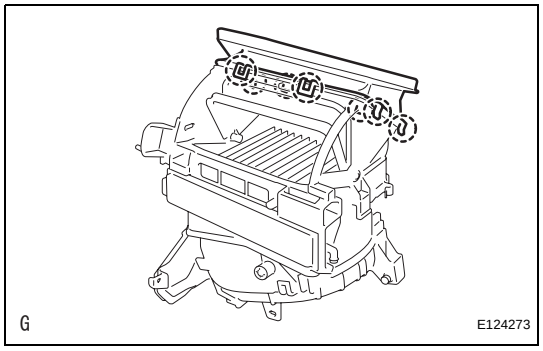


AC

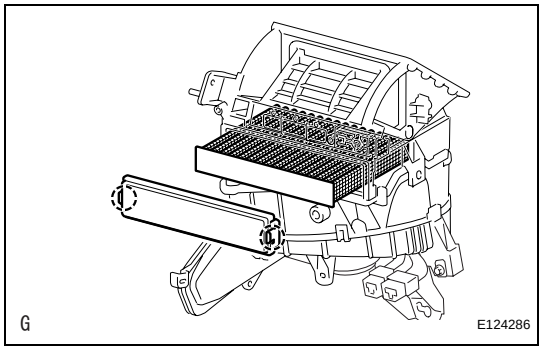
G

E127175E03

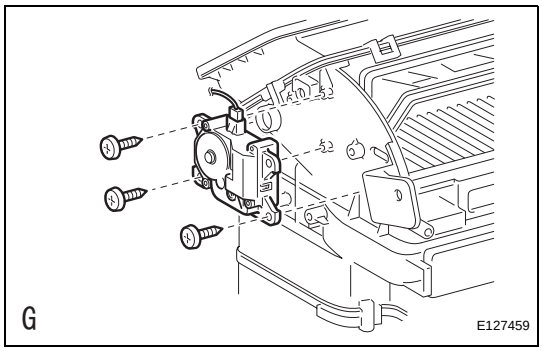
REMOVAL



1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE UPPER INSTRUMENT PANEL**
   (a) Remove the upper instrument panel (see page IP-4).
3. **REMOVE LOWER INSTRUMENT PANEL**
   (a) Remove the lower instrument panel (see page IP-16).
4. **REMOVE AIR DUCT (See page AC-188)**
5. **REMOVE AIR CONDITIONING UNIT**
   (a) Remove the air conditioning unit (see page AC-185).
6. **REMOVE BLOWER ASSEMBLY**
   (a) Remove the 3 screws and blower.

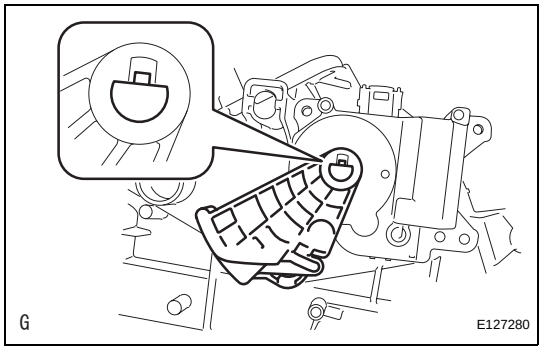


DISASSEMBLY



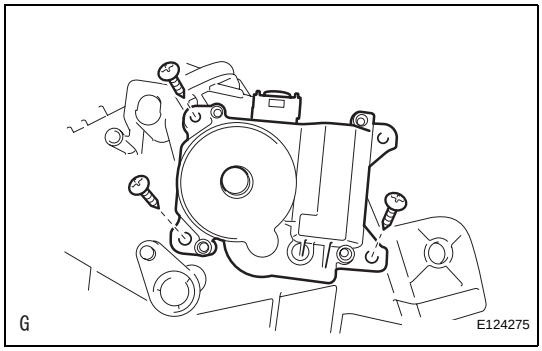
AC

1. **REMOVE HEATER TO REGISTER DUCT ASSEMBLY**
   (a) Detach the 7 claws and register duct.

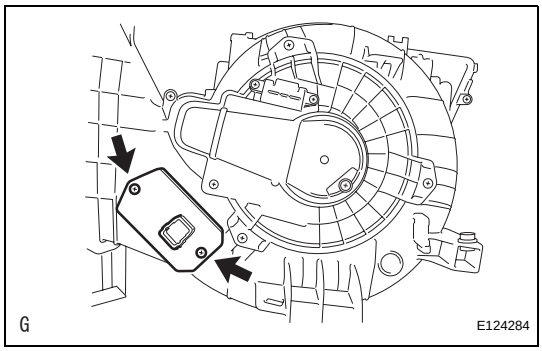


2. **REMOVE AIR FILTER CASE**
   (a) Detach the 2 claws and remove the air filter case.
   (b) Remove the air filter.

3. REMOVE AIR INLET CONTROL SERVO MOTOR (for Manual Air Conditioning System)



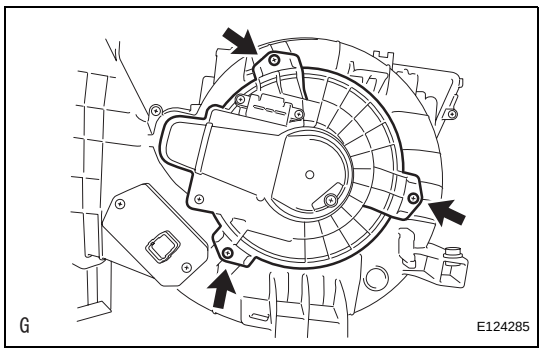
(a) Remove the 3 screws and air inlet servo motor.



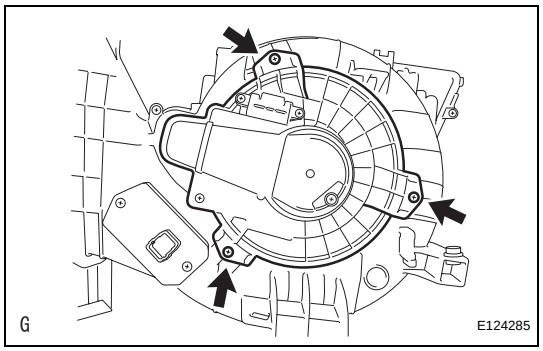
4. REMOVE AIR INLET CONTROL SERVO MOTOR (for Automatic Air Conditioning System)

(a) Detach the claws and lever.

(b) Remove the 3 screws and air inlet servo motor.



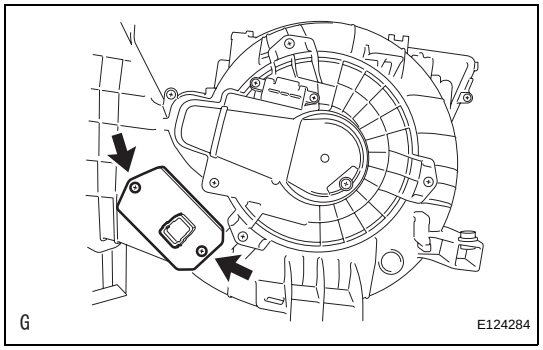
AC



5. REMOVE BLOWER RESISTOR (for Manual Air Conditioning System)

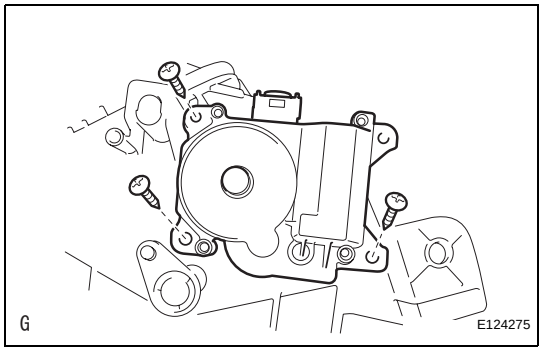
(a) Remove the 2 screws and blower resistor.

6. REMOVE BLOWER MOTOR



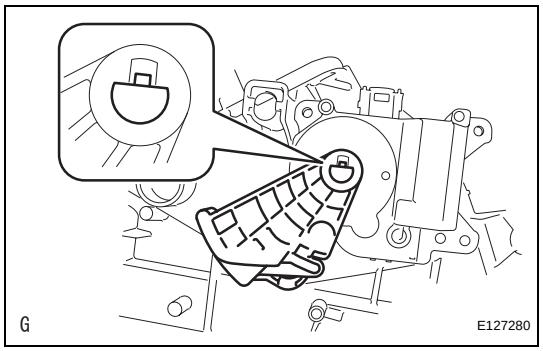
(a) Remove the 3 screws and blower motor.

REASSEMBLY



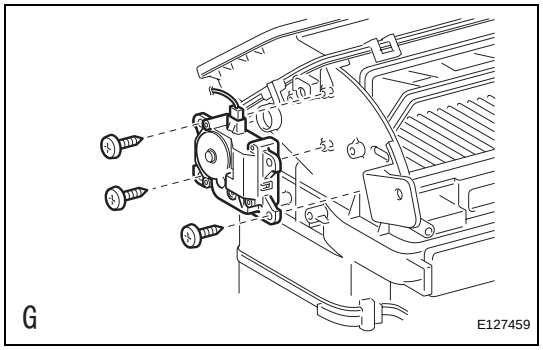
1. INSTALL BLOWER MOTOR

(a) Install the blower motor with the 3 screws.



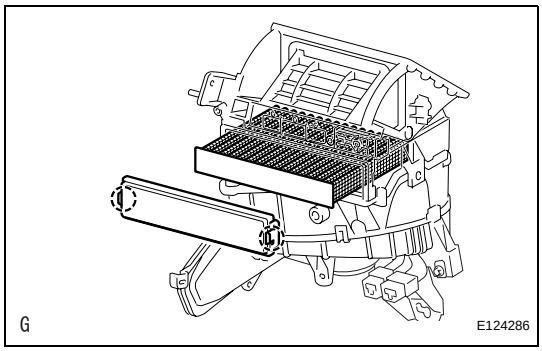
2. INSTALL BLOWER RESISTOR (for Manual Air Conditioning System)

(a) Install the blower resistor with the 2 screws.



3. INSTALL AIR INLET CONTROL SERVO MOTOR (for Automatic Air Conditioning System)

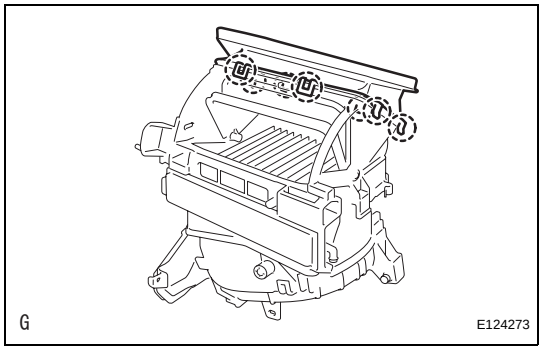
(a) Install the air inlet servo motor with the 3 screws.



(b) Attach the claw to install the lever.

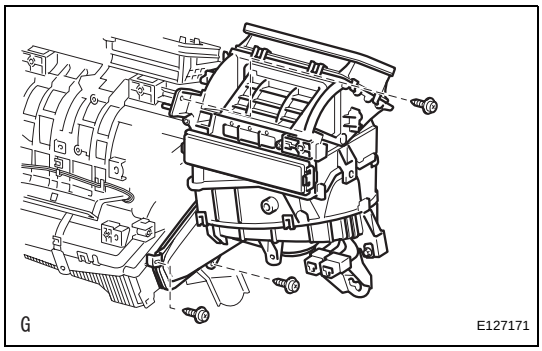
4. INSTALL AIR INLET CONTROL SERVO MOTOR (for Manual Air Conditioning System)

(a) Install the air inlet servo motor with the 3 screws.



AC

5. INSTALL AIR FILTER CASE



(a) Install the air filter.

(b) Attach the 2 claws to install the air filter case.

6. INSTALL HEATER TO REGISTER DUCT ASSEMBLY

(a) Attach the 7 claws to install the register duct.

INSTALLATION

1. INSTALL BLOWER ASSEMBLY

(a) Install the blower assembly with the 3 screws.

2. INSTALL AIR CONDITIONING UNIT

(a) Install the air conditioning unit (see page AC-197).

3. INSTALL AIR DUCT (See page AC-199)

4. INSTALL LOWER INSTRUMENT PANEL

(a) Install the lower instrument panel (see page IP-23).

5. INSTALL UPPER INSTRUMENT PANEL

(a) Install the upper instrument panel (see page IP-9).

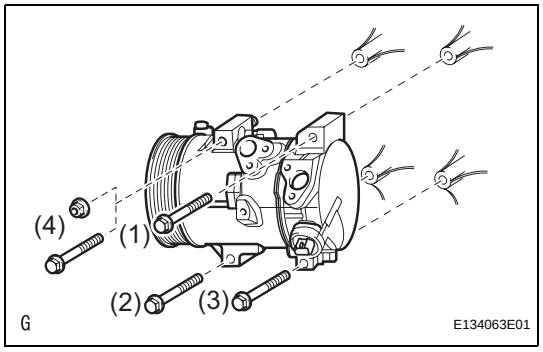
6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

7. CHECK SRS WARNING LIGHT

(a) Check the SRS warning light (see page RS-37).

INSTALLATION

1. ADJUST ADJUST COMPRESSOR OIL



(a) When replacing the compressor and magnetic clutch with a new one, gradually discharge the refrigerant gas from the service valve, and drain the following amount of oil from the new compressor and magnetic clutch before installation.

Standard:

(Oil capacity inside the new compressor and magnetic clutch: 130 + 15 cc (4.6 + 0.51 fl.oz.)) -(Remaining oil amount in the removed compressor and magnetic clutch) = (Oil amount to be removed from the new compressor when replacing)

NOTICE:

- **When checking the compressor oil level, observe the precautions on the cooler removal/installation.**
- **If a new compressor and magnetic clutch is installed without removing some oil remaining in the pipes of the vehicle, the oil amount will be too large. This prevents heat exchange in the refrigerant cycle and causes refrigerant failure.**
- **If the volume of oil remaining in the removed compressor and magnetic clutch is too small, check for oil leakage.**
- **Be sure to use ND-OIL 8 or equivalent for compressor oil.**

2. INSTALL COOLER COMPRESSOR ASSEMBLY

(a) w/o Stud Bolt:

Install the cooler compressor with the 4 bolts.

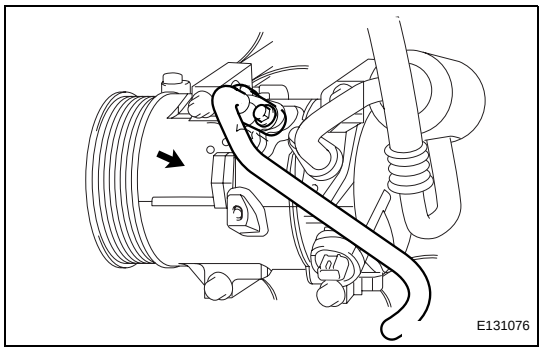
Torque: 24.5 N*m (250 kgf*cm, 18 ft.*lbf)

NOTICE:

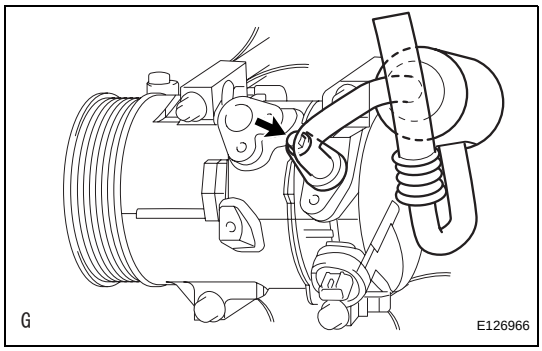
Tighten the bolts in the order shown in the illustration to install the cooler compressor.

(b) w/ Stud Bolt:

Install the cooler compressor with the 3 bolts and nut.



Torque: 24.5 N*m (250 kgf*cm, 18 ft.*lbf)



NOTICE:

Tighten the bolts in the order shown in the illustration to install the cooler compressor.

(c) Connect the connector.

AC

3. **INSTALL NO. 1 COOLER REFRIGERANT DISCHARGE HOSE**
   (a) Remove the attached vinyl tape from the hose.
   (b) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the cooler compressor.
   Compressor oil:
   ND-OIL 8 or equivalent
   (c) Install the O-ring on the cooler refrigerant discharge hose.
   (d) Install the cooler refrigerant discharge hose on the cooler compressor with the bolt.
   Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)

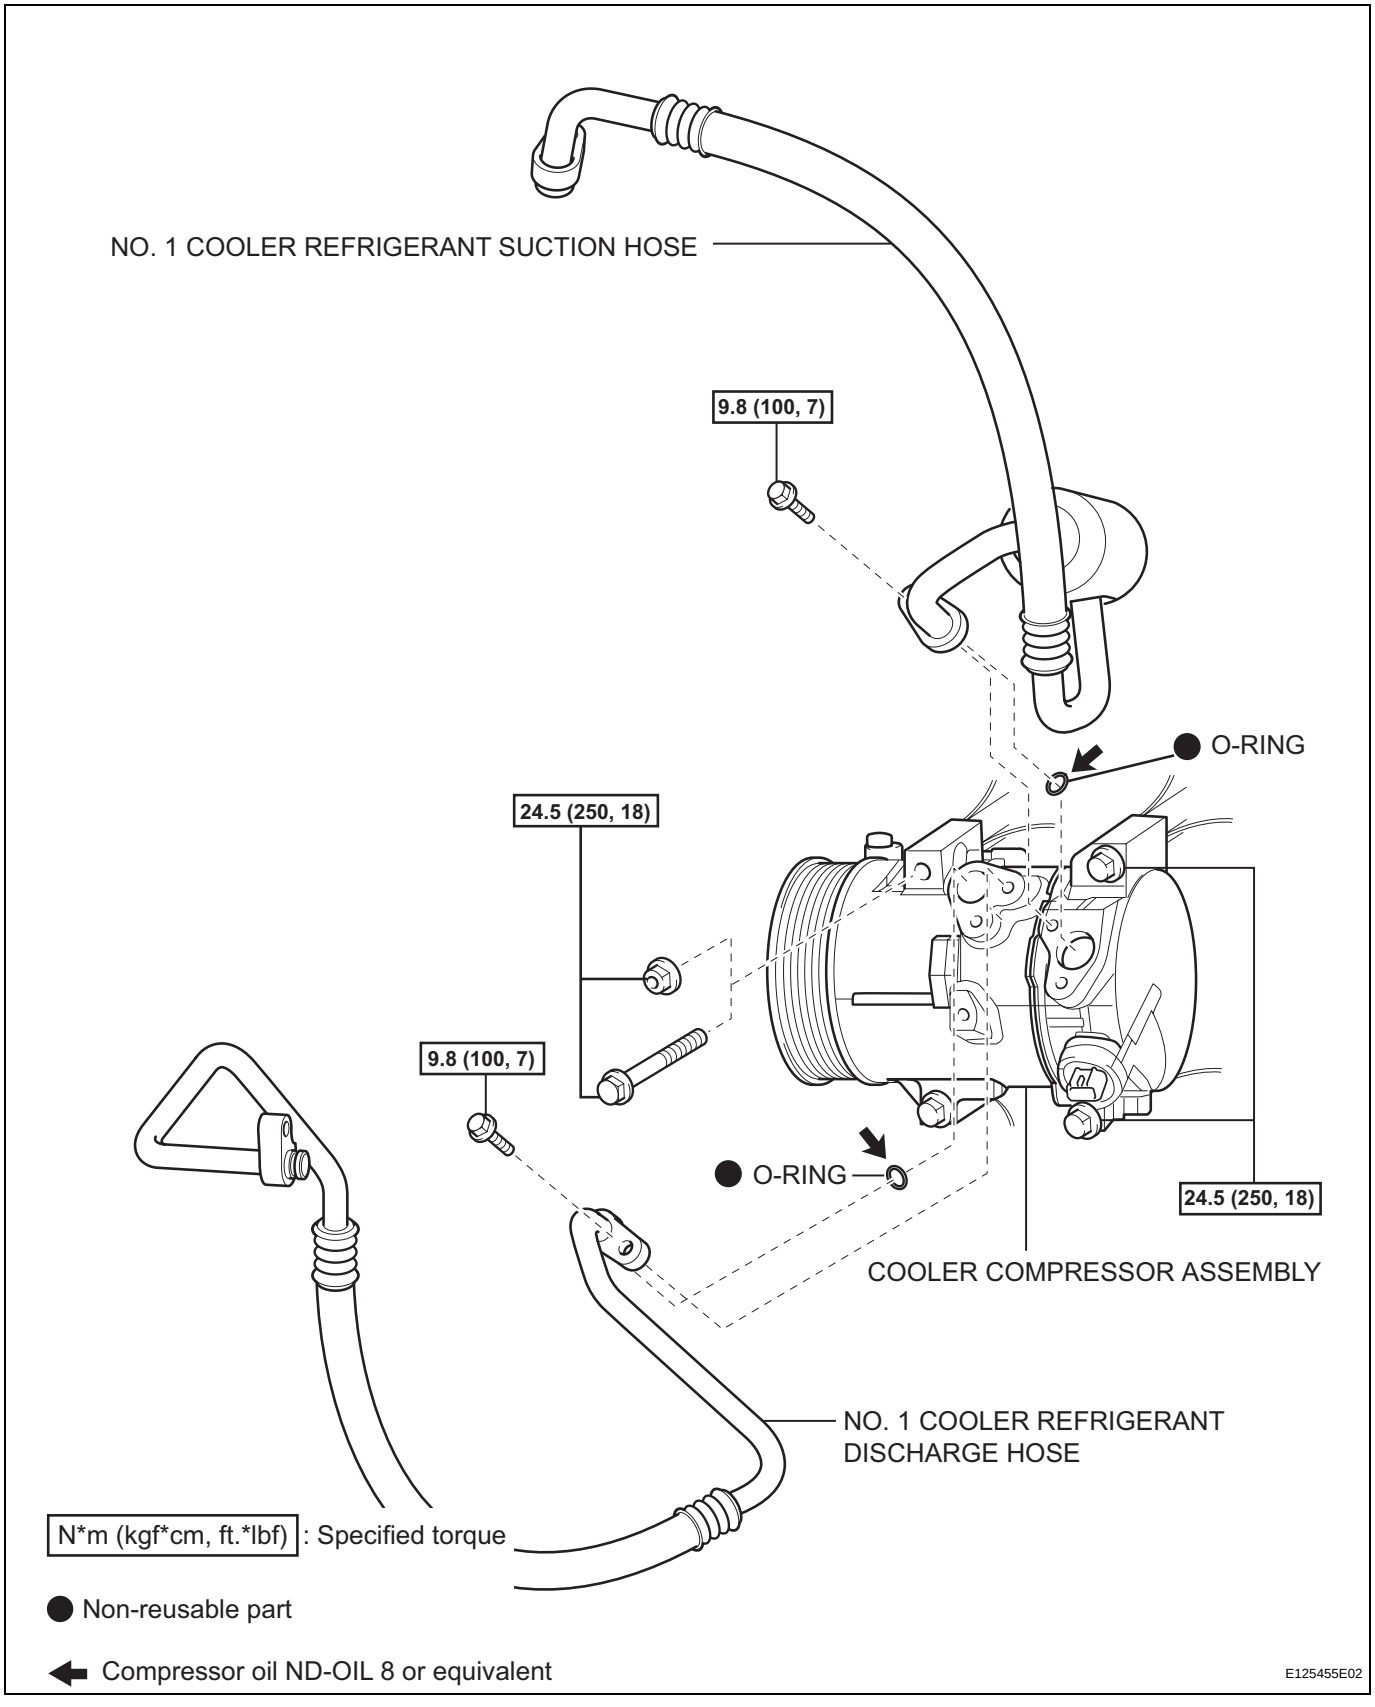
4. **INSTALL NO. 1 COOLER REFRIGERANT SUCTION HOSE**
   (a) Remove the attached vinyl tape from the hose.
   (b) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the cooler compressor.
   Compressor oil:
   ND-OIL 8 or equivalent
   (c) Install the O-ring on the cooler refrigerant suction hose.
   (d) Install the cooler refrigerant suction hose on the cooler compressor with the bolt.
   Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)

5. **INSTALL FAN AND GENERATOR V BELT (See page EM-7)**

6. **INSTALL NO. 1 ENGINE UNDER COVER**

7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

8. **CHARGE REFRIGERANT (See page AC-172)**



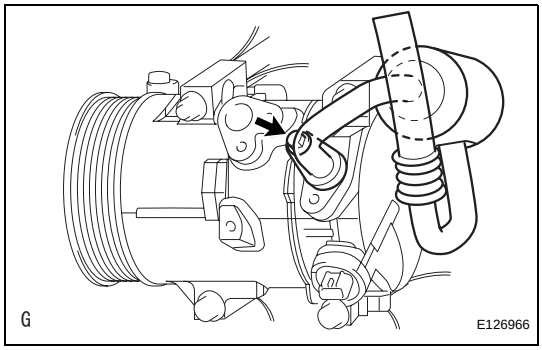
9. **WARM UP ENGINE (See page AC-173)**

10. **CHECK FOR LEAKAGE OF REFRIGERANT (See page AC-173)**

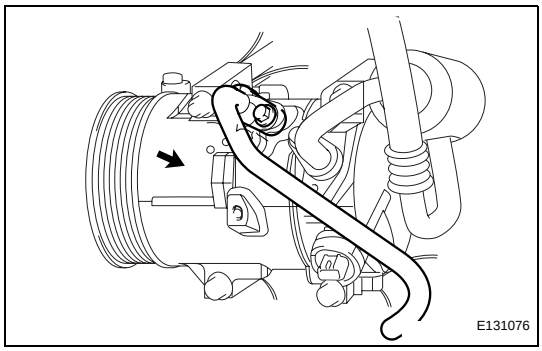
AC

COMPRESSOR AND PULLEY (for 2AZ-FE)

COMPONENTS



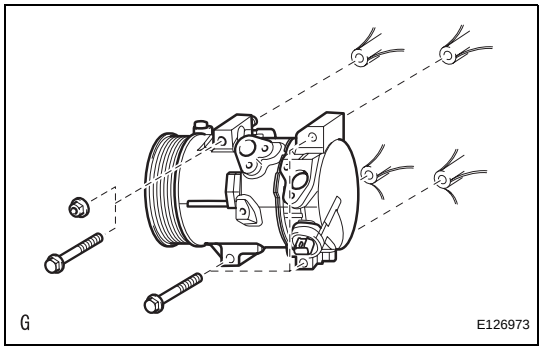
AC



REMOVAL

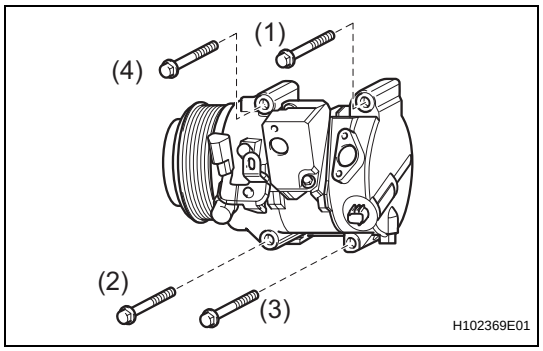
1. **DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM (See page AC-172)**

2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.



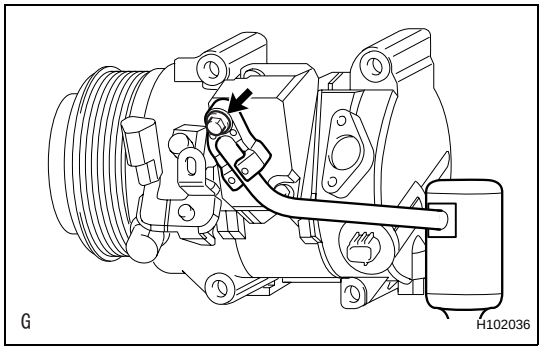
3. **DISCONNECT NO. 1 COOLER REFRIGERANT SUCTION HOSE**
   (a) Remove the bolt and disconnect the cooler refrigerant suction hose from the cooler compressor.
   (b) Remove the O-ring from the cooler refrigerant suction hose.
   NOTICE:
   Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.

4. **DISCONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE**
   (a) Remove the bolt and disconnect the cooler refrigerant discharge hose from the cooler compressor.
   (b) Remove the O-ring from the cooler refrigerant discharge hose.
   NOTICE:
   Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.



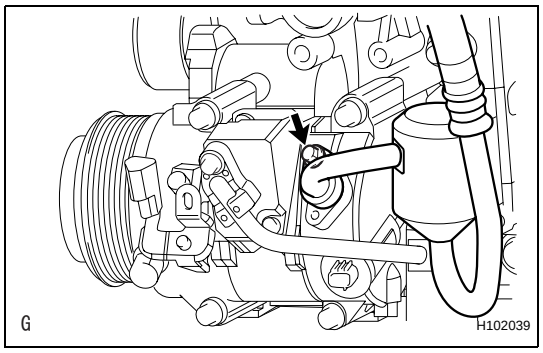
5. **REMOVE NO. 1 ENGINE UNDER COVER**

6. **REMOVE FAN AND GENERATOR V BELT (See page EM-6)**



7. **REMOVE COOLER COMPRESSOR ASSEMBLY**
   (a) Disconnect the connector.
   (b) w/o Stud Bolt:
   Remove the 4 bolts and cooler compressor.
   (c) w/ Stud Bolt:
   Remove the 3 bolts, nut and cooler compressor.

AC



INSTALLATION

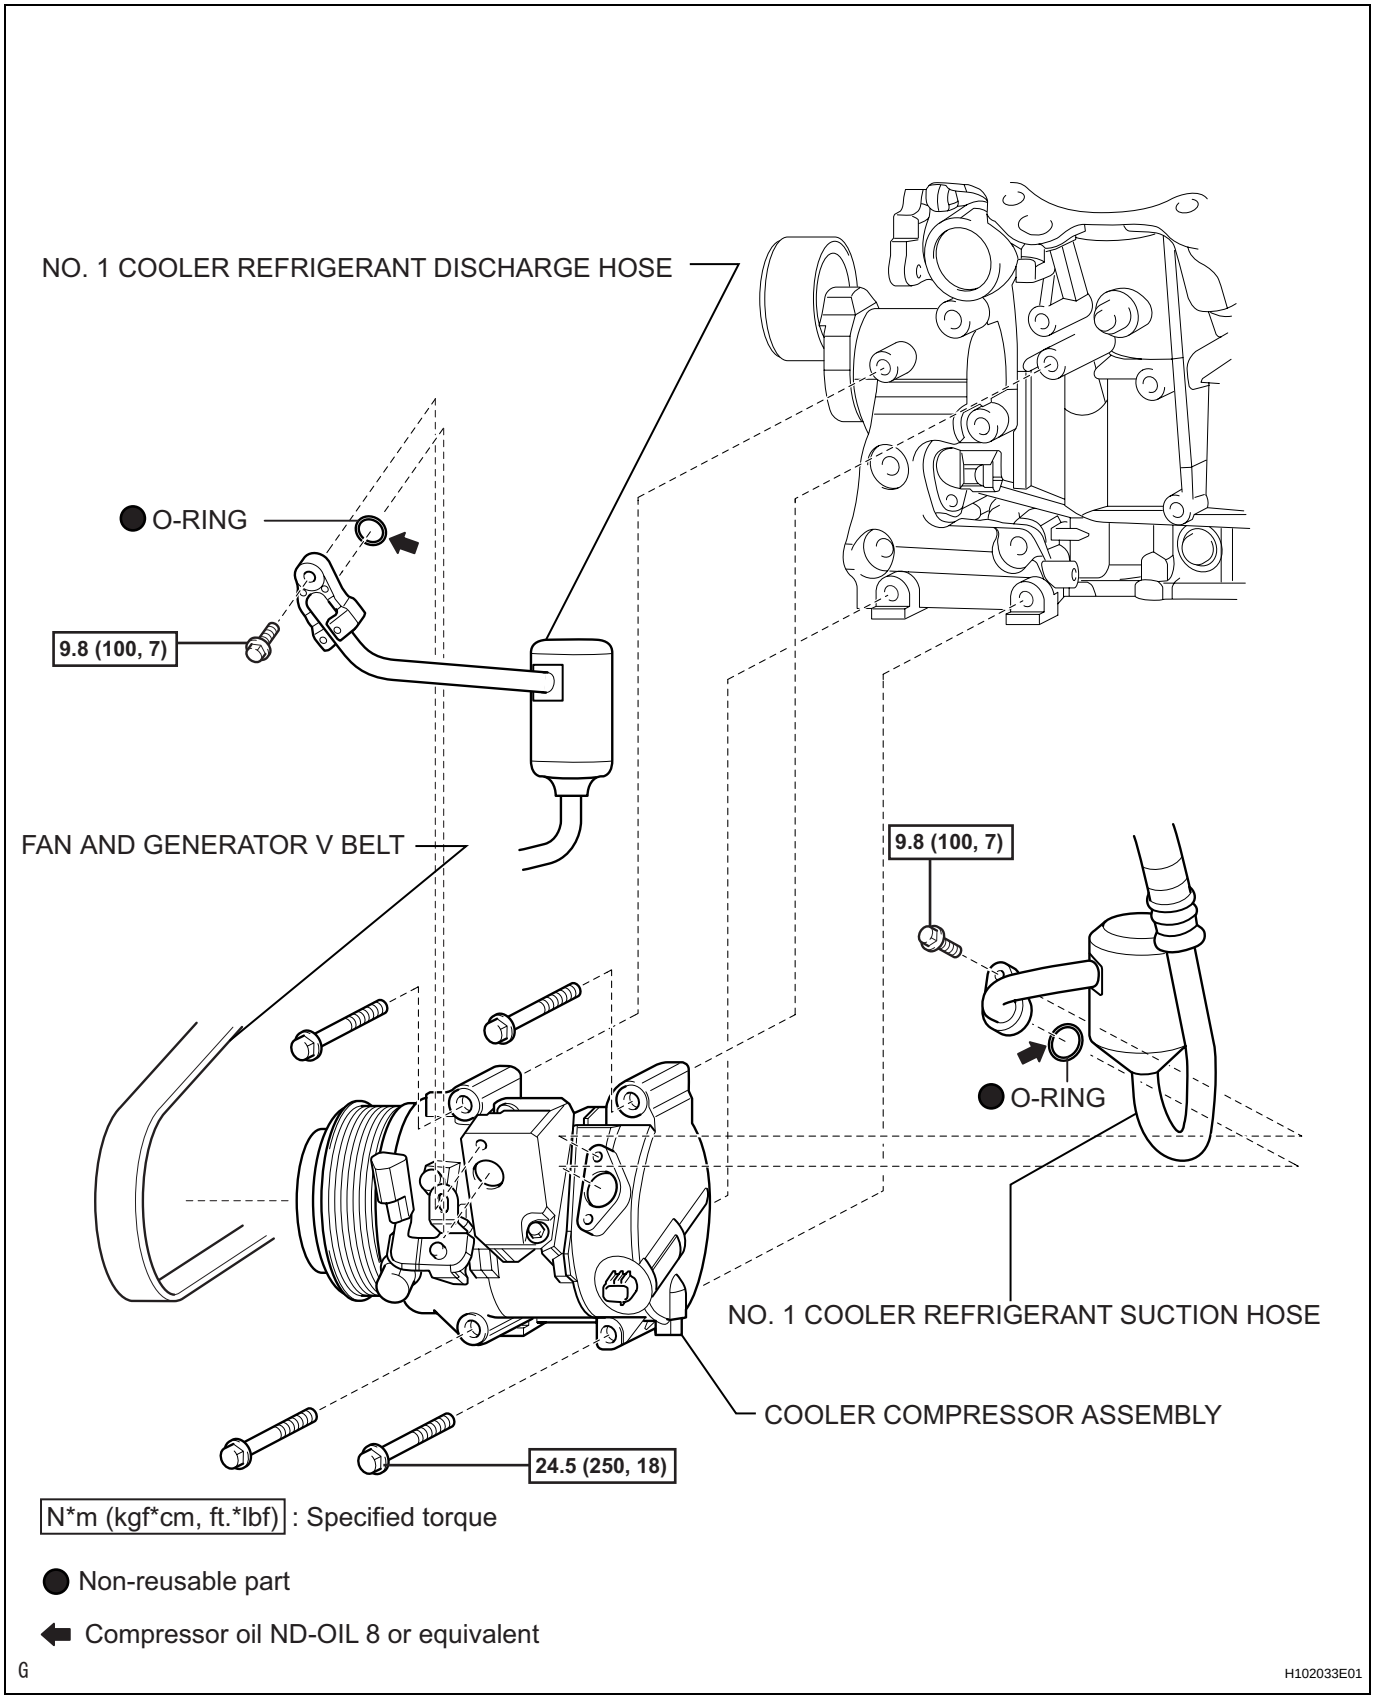
1. **INSTALL COOLER COMPRESSOR ASSEMBLY**
   (a) Install the cooler compressor with the 4 bolts.
   Torque: 24.5 N*m (250 kgf*cm, 18 ft.*lbf)
   NOTICE:
   Tighten the bolts in the order shown in the illustration to install the cooler compressor.
   (b) Connect the connector.

2. **CONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE**
   (a) Remove the attached vinyl tape from the hose.
   (b) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the cooler compressor.
   Compressor oil:
   ND-OIL 8 or equivalent
   (c) Install the O-ring to the cooler refrigerant discharge hose.
   (d) Connect the cooler refrigerant discharge hose to the cooler compressor with the bolt.
   Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)

3. **CONNECT NO. 1 COOLER REFRIGERANT SUCTION HOSE**
   (a) Remove the attached vinyl tape from the hose.
   (b) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the cooler compressor.
   Compressor oil:
   ND-OIL 8 or equivalent
   (c) Install the O-ring to the cooler refrigerant suction hose.
   (d) Connect the cooler refrigerant suction hose to the cooler compressor with the bolt.
   Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)

4. **INSTALL FAN AND GENERATOR V BELT (See page EM-8)**

5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**



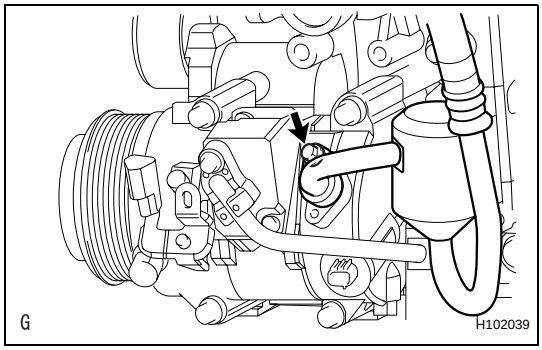
6. **CHARGE REFRIGERANT (See page AC-172)**

7. **WARM UP ENGINE (See page AC-173)**

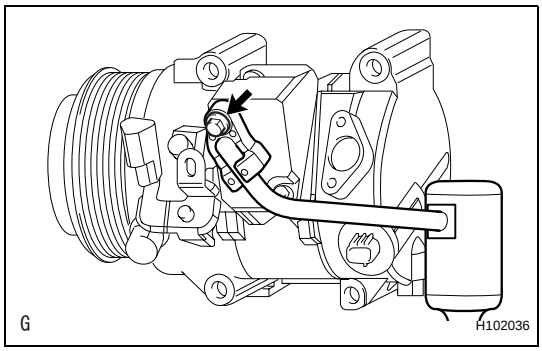
8. **CHECK FOR LEAKAGE OF REFRIGERANT (See page AC-173)**

COMPRESSOR AND PULLEY (for 2GR-FE)

COMPONENTS



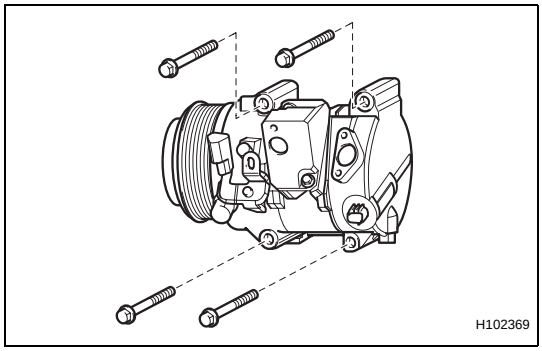
AC



REMOVAL

1. **DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM (See page AC-172)**

2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.



3. **DISCONNECT NO. 1 COOLER REFRIGERANT SUCTION HOSE**
   (a) Remove the bolt and disconnect the cooler refrigerant suction hose from the cooler compressor.
   (b) Remove the O-ring from the cooler refrigerant suction hose.
   NOTICE:
   Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.

4. **DISCONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE**
   (a) Remove the bolt and disconnect the cooler refrigerant discharge hose from the cooler compressor.
   (b) Remove the O-ring from the cooler refrigerant discharge hose.
   NOTICE:
   Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.

5. **REMOVE FAN AND GENERATOR V BELT (See page EM-8)**

6. **REMOVE COOLER COMPRESSOR ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the 4 bolts and cooler compressor.

AC

ON-VEHICLE INSPECTION

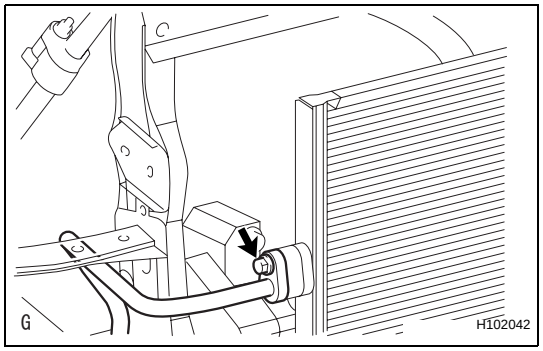
1. INSPECT COOLER CONDENSER ASSEMBLY

(a) If the fins of the cooler condenser are dirty, clean them with water. Dry the fins with compressed air.
NOTICE:
Do not damage the fins of the condenser.

(b) If a fin of the cooler condenser is bent, straighten it using a screwdriver or pliers.

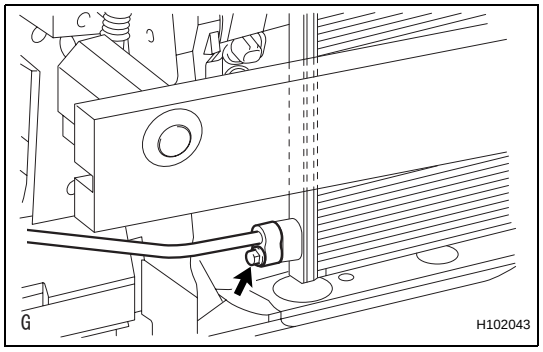
2. CHECK CONDENSER FOR LEAKAGE OF REFRIGERANT

(a) Using a halogen leak detector, check the pipe joints for gas leakage.



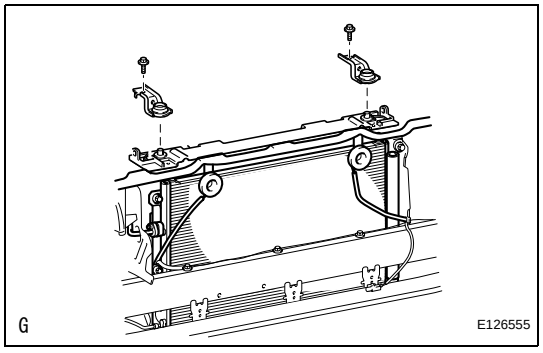
(b) If gas leakage is detected in a joint, check the torque of the joint.

REMOVAL



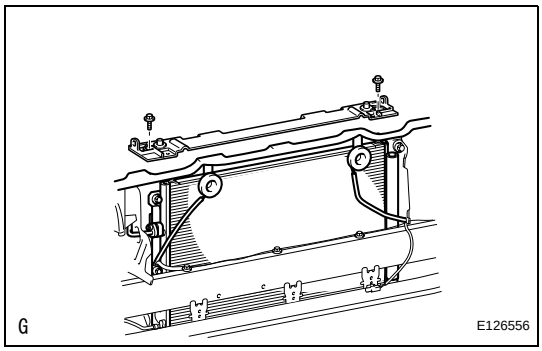
1. **DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM (See page AC-172)**

2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

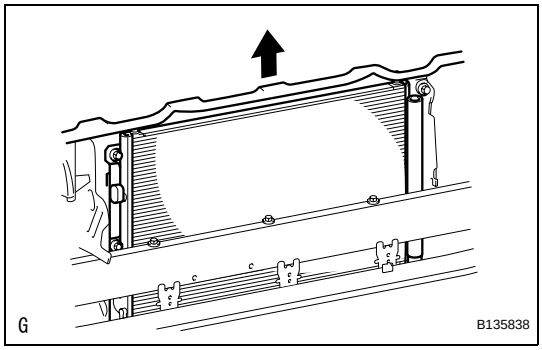


3. **REMOVE FRONT BUMPER COVER**
   (a) Remove front bumper cover (see page ET-4).

4. **DISCONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE**
   (a) Remove the bolt and disconnect the cooler refrigerant discharge hose from the cooler condenser.
   (b) Remove the O-ring from the cooler refrigerant discharge hose.
   NOTICE:
   Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.

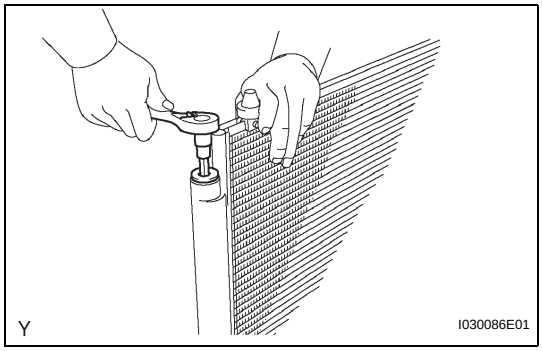


5. **DISCONNECT COOLER REFRIGERANT LIQUID PIPE**
   (a) Remove the bolt and disconnect the cooler refrigerant liquid pipe from the cooler condenser.
   (b) Remove the O-ring from the cooler refrigerant liquid pipe.
   NOTICE:
   Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.



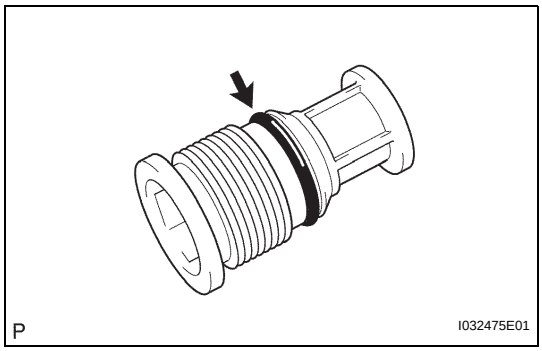
6. **REMOVE RADIATOR SUPPORT UPPER BRACKET**
   (a) Remove the 2 bolts and 2 brackets.

AC



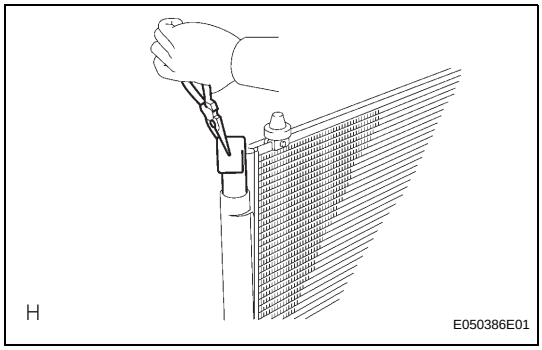
7. REMOVE NO. 2 FAN SHROUD

(a) Remove the 2 bolts and fan shroud.



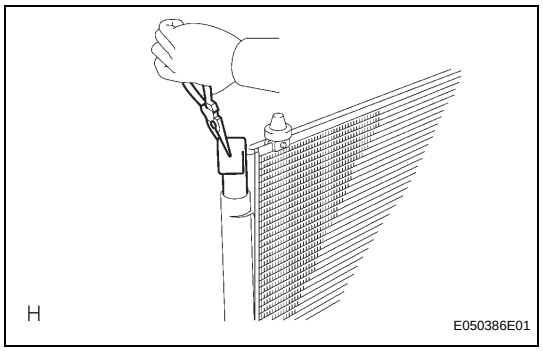
8. REMOVE COOLER CONDENSER ASSEMBLY

(a) Remove the cooler condenser.



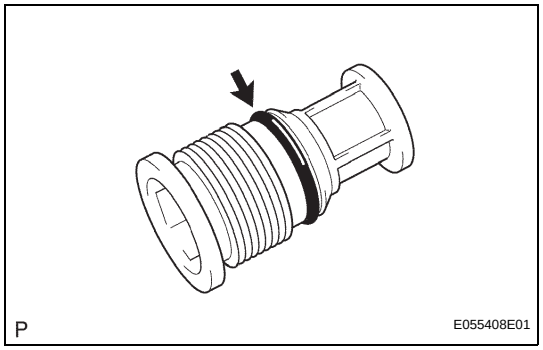
9. REMOVE COOLER DRYER

(a) Using a 14 mm socket hexagon wrench, remove the cap from the modulator.



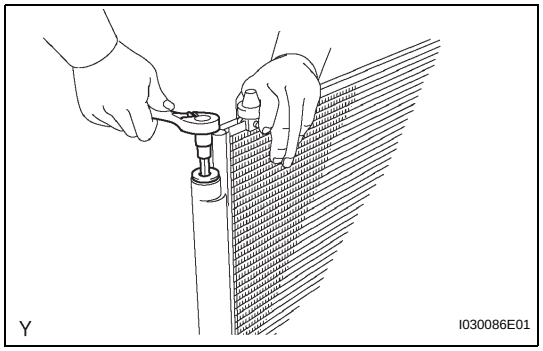
(b) Remove the O-ring from the cap.

(c) Using pliers, remove the cooler dryer.



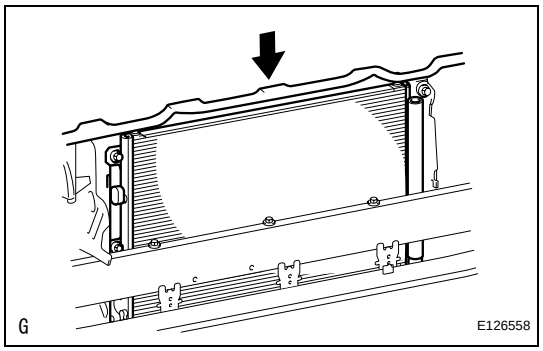
AC

INSTALLATION



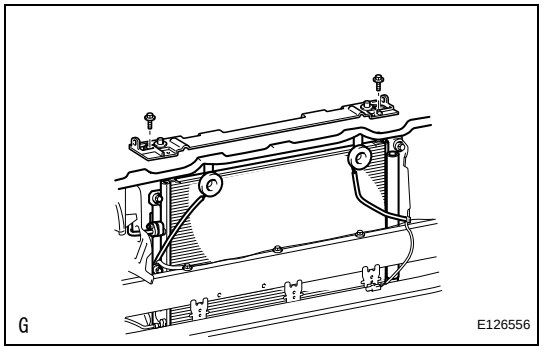
1. INSTALL COOLER DRYER

(a) Using pliers, install the cooler dryer.



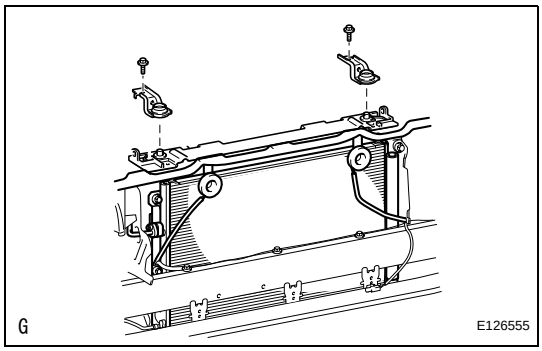
(b) Apply a sufficient amount of compressor oil to the contact surfaces of a new O-ring and the cap.
Compressor oil:
ND-OIL 8 or equivalent

(c) Install the O-ring to the cap.

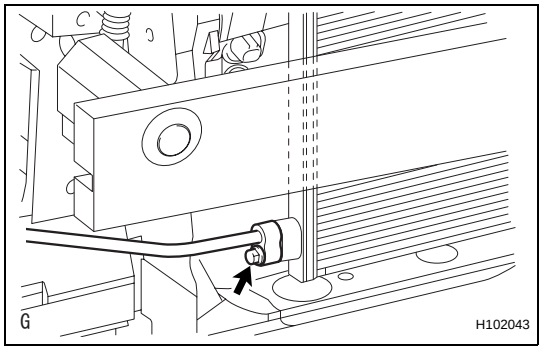


(d) Using a 14 mm socket hexagon wrench, install the cap to the modulator.
Torque: 2.9 N*m (29 kgf*cm, 25 in.*lbf)

2. INSTALL COOLER CONDENSER ASSEMBLY

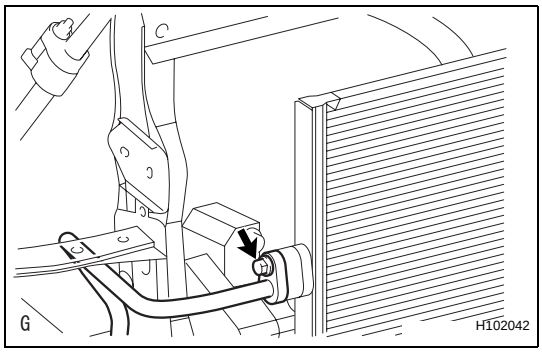


(a) Install the cooler condenser.



3. INSTALL NO. 2 FAN SHROUD

(a) Install the fan shroud with the 2 bolts.
Torque: 10.5 N*m (107 kgf*cm, 8 ft.*lbf)



AC

4. **INSTALL RADIATOR SUPPORT UPPER BRACKET**
   (a) Install the 2 brackets with the 2 bolts.
   Torque: 45 N*m (459 kgf*cm, 33 ft.*lbf)

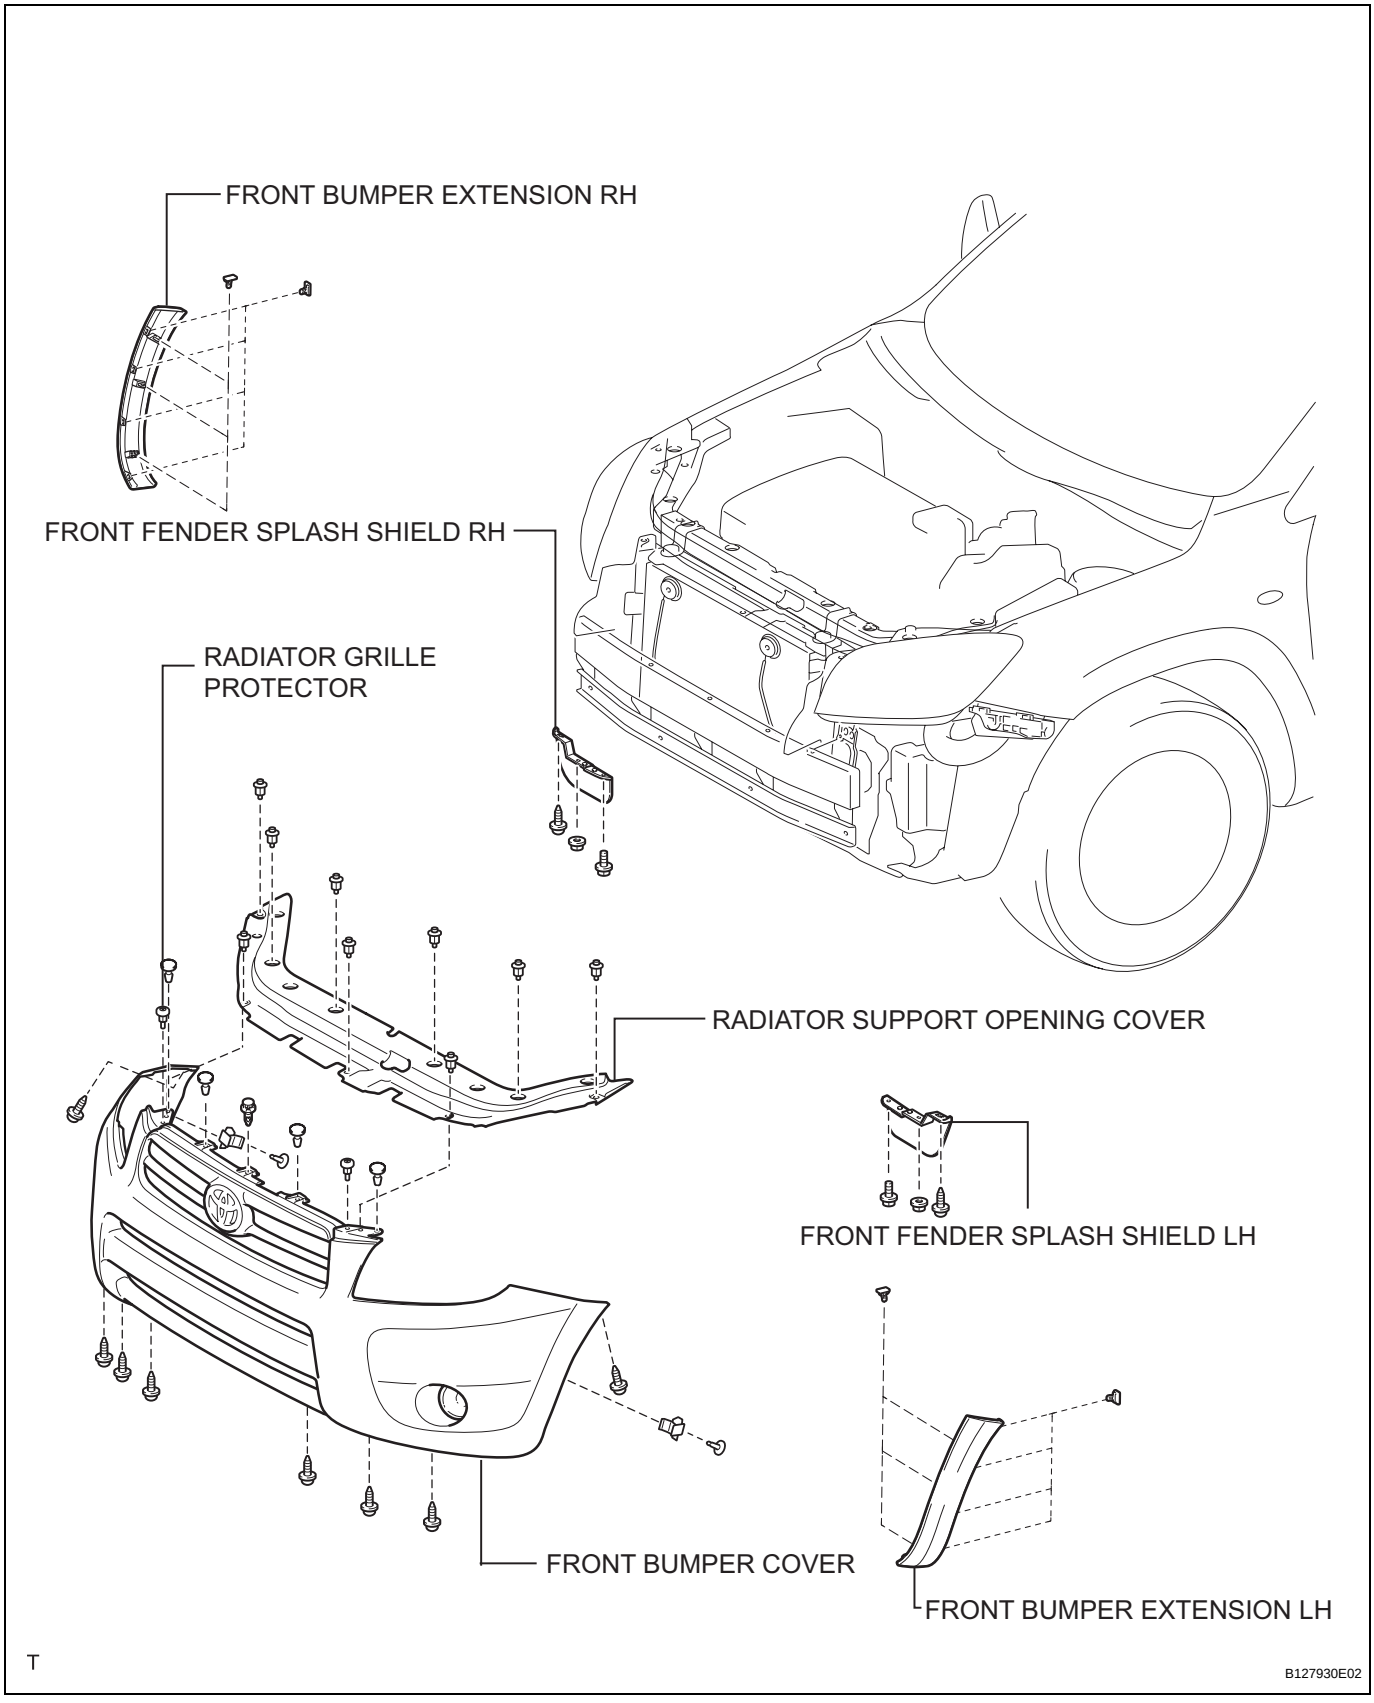
5. **INSTALL COOLER REFRIGERANT LIQUID PIPE**
   (a) Remove the attached vinyl tape from the pipe and the connecting part of the cooler condenser.
   (b) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the pipe joint.
   Compressor oil:
   ND-OIL 8 or equivalent
   (c) Install the O-ring on the cooler refrigerant liquid pipe.
   (d) Install the cooler refrigerant liquid pipe on the cooler condenser with the bolt.
   Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)

6. **INSTALL NO. 1 COOLER REFRIGERANT DISCHARGE HOSE**
   (a) Remove the attached vinyl tape from the hose and the connecting part of the cooler condenser.
   (b) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the hose joint.
   Compressor oil:
   ND-OIL 8 or equivalent
   (c) Install the O-ring on the cooler refrigerant discharge hose.
   (d) Install the cooler refrigerant discharge hose on the cooler condenser with the bolt.
   Torque: 9.8 N*m (100 kgf*cm, 7 ft.*lbf)

7. **ADJUST HOOD SUB-ASSEMBLY (See page ED-5)**

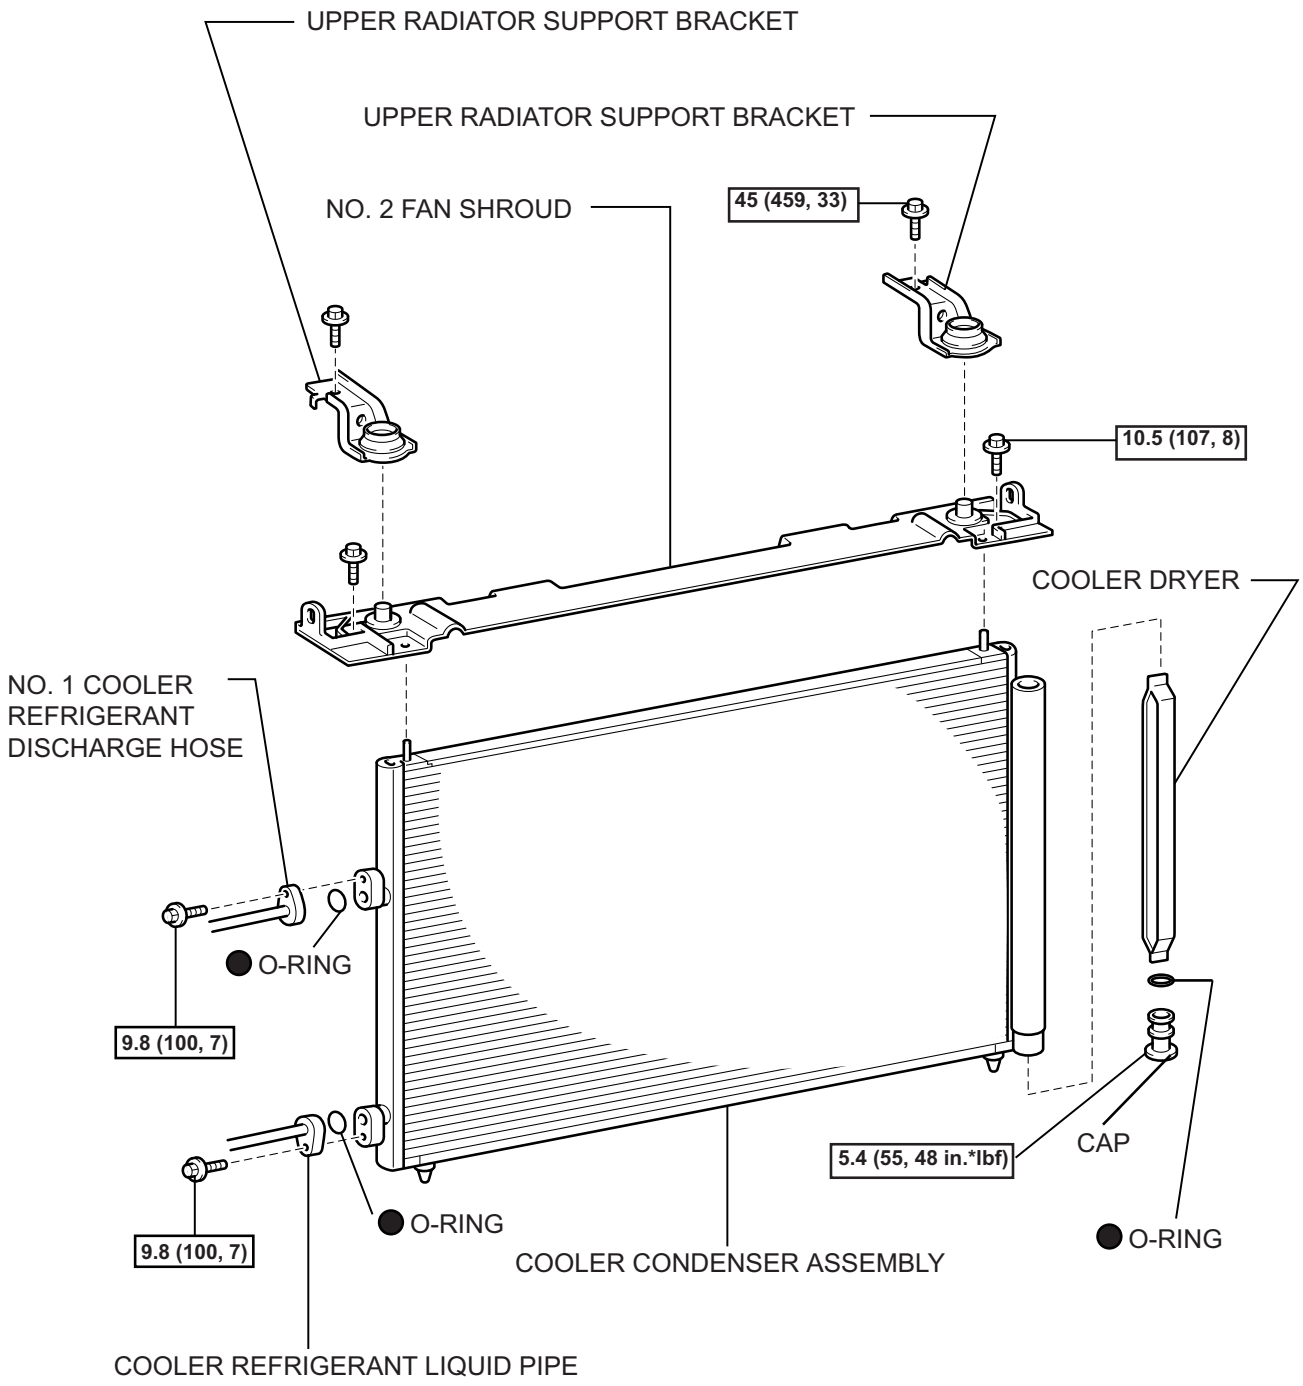
8. **INSTALL FRONT BUMPER COVER**
   (a) Install the front bumper cover (see page ET-10).

9. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**



10. **CHARGE REFRIGERANT (See page AC-172)**

11. **WARM UP ENGINE (See page AC-173)**



12. **CHECK FOR LEAKAGE OF REFRIGERANT (See page AC-173)**

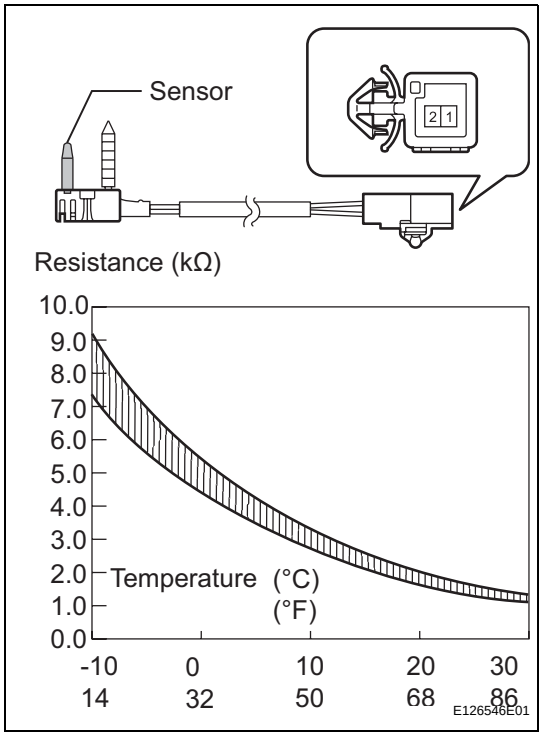
EVAPORATOR TEMPERATURE SENSOR



REMOVAL

1. **REMOVE AIR CONDITIONING UNIT**
   (a) Remove the air conditioning radiator (see page AC-185).

2. **REMOVE EVAPORATOR TEMPERATURE SENSOR (See page AC-193)**

INSPECTION

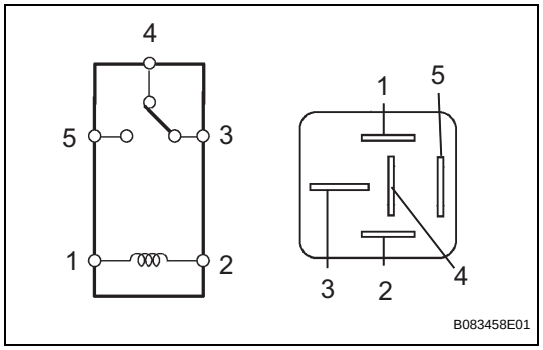
1. **INSPECT EVAPORATOR TEMPERATURE SENSOR**
   (a) Measure the resistance of the sensor.
   Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	-10°C (14°F)	7.30 to 9.10 kΩ
1 - 2	-5°C (23°F)	5.65 to 6.95 kΩ
1 - 2	0°C (32°F)	4.40 to 5.35 kΩ
1 - 2	5°C (41°F)	3.40 to 4.15 kΩ
1 - 2	10°C (50°F)	2.70 to 3.25 kΩ
1 - 2	15°C (59°F)	2.14 to 2.58 kΩ
1 - 2	20°C (68°F)	1.71 to 2.05 kΩ
1 - 2	25°C (77°F)	1.38 to 1.64 kΩ
1 - 2	30°C (86°F)	1.11 to 1.32 kΩ

NOTICE:

- **Even slightly touching the sensor may change the resistance value. Be sure to hold the connector of the sensor.**
- **When measuring, the sensor temperature must be almost the same as the ambient temperature.**

HINT:



As the temperature increases, the resistance decreases (see the graph).

If the result is not as specified, replace the sensor.

AC

INSTALLATION

1. **INSTALL EVAPORATOR TEMPERATURE SENSOR (See page AC-193)**
2. **INSTALL AIR CONDITIONING UNIT**
   (a) Install the air conditioning unit (see page AC-197).

HEATER RELAY

ON-VEHICLE INSPECTION

1. INSPECT RELAY (Marking: HTR)

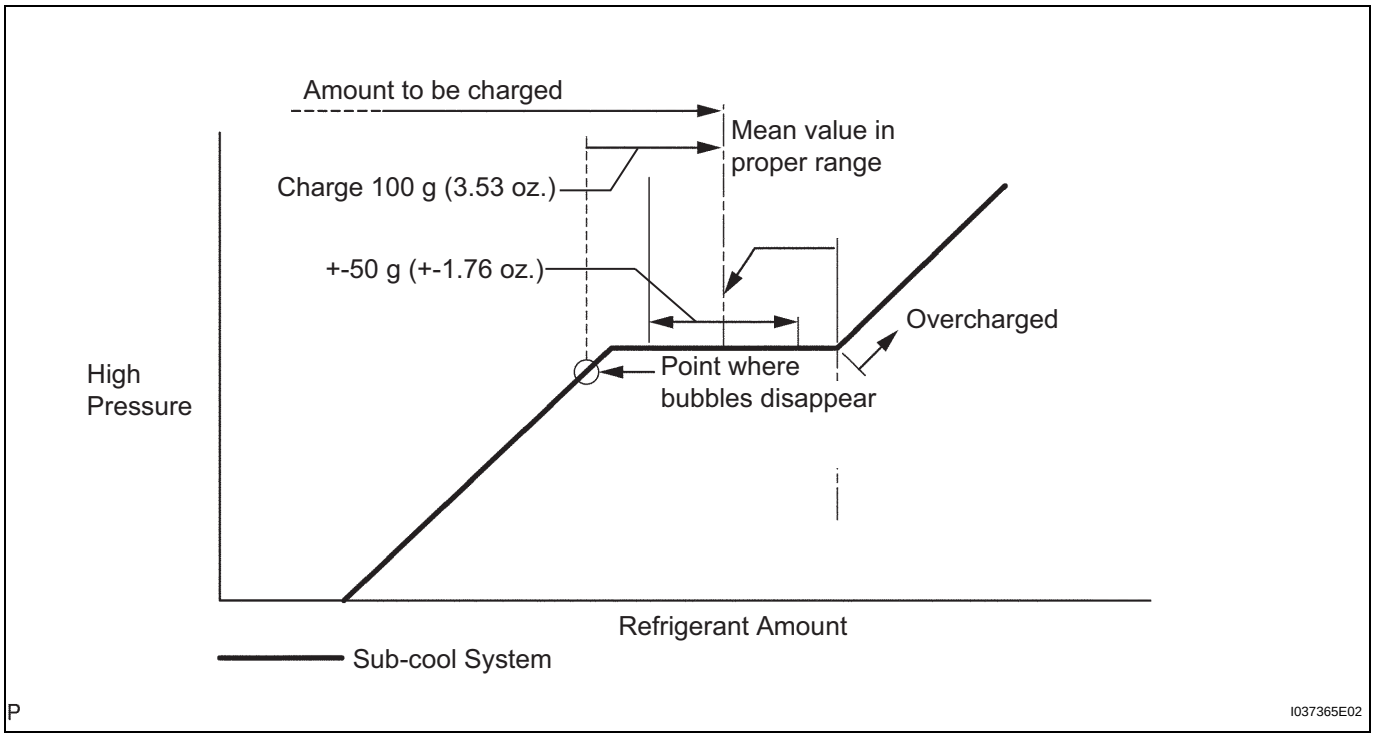
(a) Measure the resistance of the HTR relay.

Standard resistance

Tester Connection	Specified Condition
3 - 4	Below 1 Ω
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

If the result is not as specified, replace the relay.

AC



REPLACEMENT

1. DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM

(a) Start up the engine.
(b) Turn the A/C switch ON.
(c) Operate the cooler compressor with an engine speed of approximately 1,000 rpm for 5 to 6 minutes to circulate the refrigerant and collect the compressor oil remaining in each component into the cooler compressor.
(d) Stop the engine.
(e) Using SST, discharge the refrigerant gas.
SST 07110-58060 (07117-58060, 07117-58070, 07117-58080, 07117-58090, 07117-78050, 07117-88060, 07117-88070, 07117-88080)

2. CHARGE REFRIGERANT

(a) Perform vacuum purging using a vacuum pump.
(b) Charge refrigerant HFC-134a (R134a).
Standard:
430 +-30 g (15.2 +-1.1 oz.)
SST 07110-58060 (07117-58060, 07117-58070, 07117-58080, 07117-58090, 07117-78050, 07117-88060, 07117-88070, 07117-88080)

NOTICE:

- **Do not operate the cooler compressor before charging refrigerant as the cooler compressor will not work properly without any refrigerant, and will overheat.**

AC

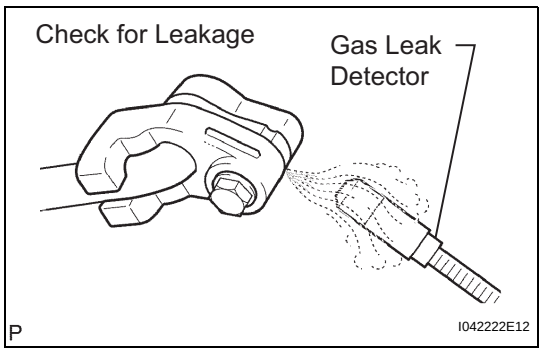
- **Approximately 100 g (3.53 oz.) of refrigerant may need to be charged after bubbles disappear. The refrigerant amount should be checked by measuring its quantity, and not with the sight glass.**

3. WARM UP ENGINE

(a) Warm up the engine at less than 1,850 rpm for 2 minutes or more after charging the refrigerant.
NOTICE:
Be sure to warm up the compressor when turning the A/C switch ON after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.

4. CHECK FOR LEAKAGE OF REFRIGERANT

(a) After recharging the refrigerant gas, check for refrigerant gas leakage using a halogen leak detector.



(b) Perform the operation under these conditions:
- Stop the engine.
- Secure good ventilation (the gas leak detector may react to volatile gases other than refrigerant, such as evaporated gasoline or exhaust gas).
- Repeat the test 2 or 3 times.
- Make sure that some refrigerant remains in the refrigeration system. When compressor is off: approximately 392 to 588 kPa (4 to 6 kgf/cm^2, 57 to 85 psi)

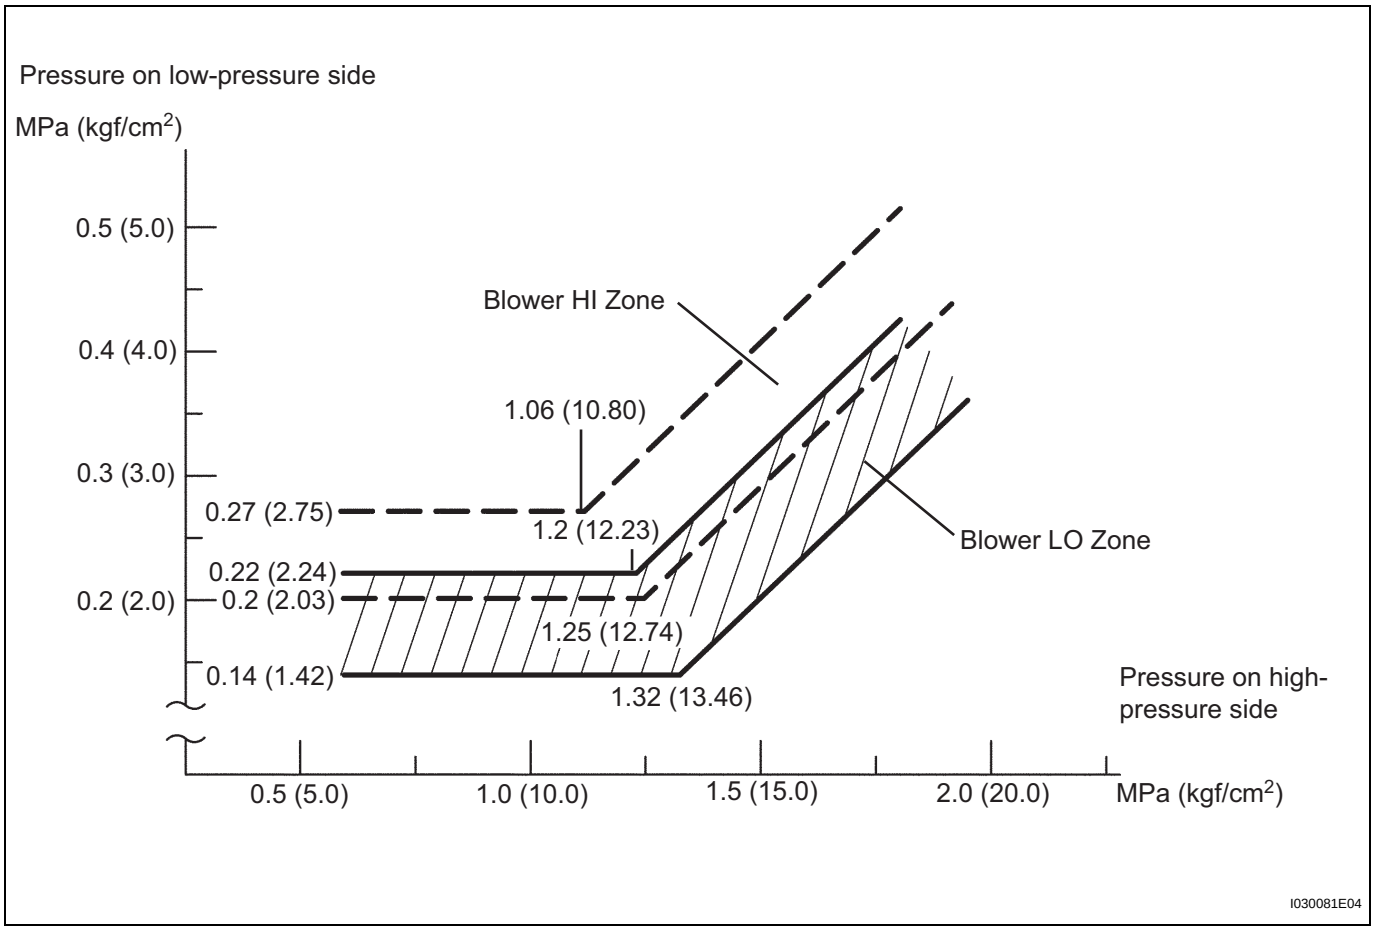
(c) Using a gas leak detector, check the refrigerant line for leakage.

(d) If a gas leak is not detected on the drain hose, remove the blower motor control (blower resistor) from the cooling unit. Insert the gas leak detector sensor into the unit and perform the test.

(e) Disconnect the connector and leave the pressure switch on for approximately 20 minutes. Bring the gas leak detector close to the pressure switch and perform the test.

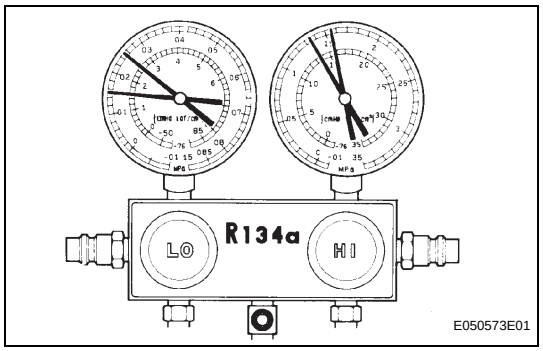
AC

REFRIGERANT



ON-VEHICLE INSPECTION

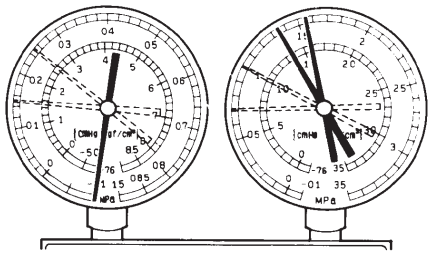
1. INSPECT REFRIGERANT PRESSURE WITH MANIFOLD GAUGE SET



(a) This method uses a manifold gauge set to locate problem areas. Read the manifold gauge pressure when these conditions are established. Test conditions:

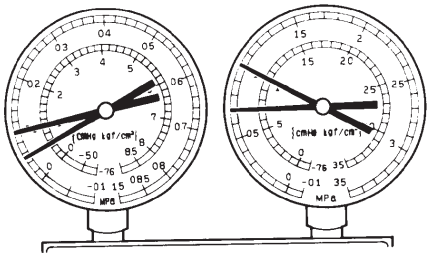
- Temperature at the air inlet is 30 to 35°C (86 to 95°F).
- Engine is running at 1,500 rpm.
- All doors are fully open.
- Blower speed control switch is at HI.
- A/C switch is ON.

Gauge readings (Reference).



AC

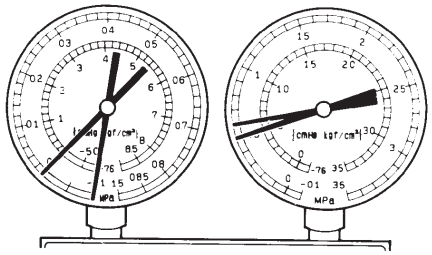
(1) Normally functioning refrigeration system
Gauge reading



Pressure side	Refrigerant volume
Low	0.15 to 0.25 MPa (1.5 to 2.5 kgf/cm2)
High	1.37 to 1.57 MPa (14 to 16 kgf/cm2)

(2) The A/C system periodically changes between normal and improper function due to moisture in the refrigerant system.

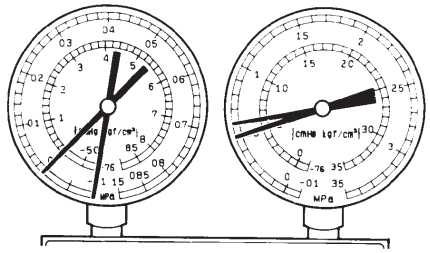
Symptoms	Probable Cause	Diagnosis	Corrective Actions
During operation, pressure on low pressure side cycles between normal and vacuum	Moisture in refrigeration system freezes at expansion valve orifice, causing temporary stop of cycle. However, when melted, normal state is restored.	- Drier is overly saturated - Moisture in refrigeration system freezes at expansion valve orifice and blocks refrigerant circulation	1. Replace cooler drier 2. Remove moisture from cycle by repeatedly evacuating air 3. Supply appropriate volume of new refrigerant



(3) The A/C system does not function effectively due to insufficient cooling.

Symptoms	Probable Cause	Diagnosis	Corrective Actions
- Pressure low on both low and high pressure sides - Cooling performance insufficient	Gas leakage from refrigeration system	- Insufficient refrigerant - Refrigerant leakage	1. Check for gas leakage and repair if necessary 2. Supply appropriate volume of new refrigerant 3. If indicated pressure value close to 0 when connected to gauge, create vacuum after inspecting and repairing the location of leakage

AC

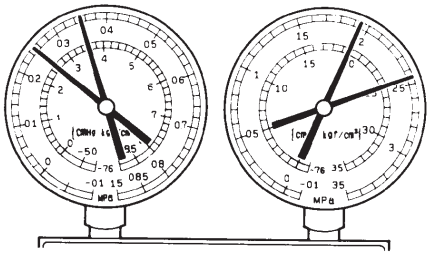


(4) The A/C system does not function effectively due to poor circulation of the refrigerant.

I022119E10

Symptoms	Probable Cause	Diagnosis	Corrective Actions
- Pressure low on both low and high pressure sides - Frost exists on piping from condenser to A/C unit	Refrigerant flow obstructed by dirt in condenser	Condenser clogged	Replace condenser

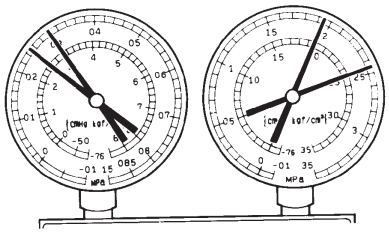
(5) The A/C system does not function intermittently because the refrigerant does not circulate.



I022120E09

AC

Symptoms	Probable Cause	Diagnosis	Corrective Actions
- Vacuum indicated on low pressure side, and extremely low pressure indicated on high pressure side - Frost or condensation seen on piping on both sides of condenser or expansion valve	- Refrigerant flow obstructed by moisture or dirt in refrigeration system - Refrigerant flow obstructed by gas leakage from expansion valve	Refrigerant does not circulate	1. Check expansion valve refrigerant 2. Clean expansion valve by blowing air 3. Replace condenser 4. Evacuate air and charge appropriate volume of new refrigerant 5. For gas leakage from expansion valve, replace expansion valve

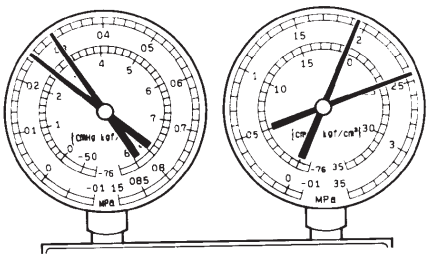


(6) The A/C system does not function effectively due to overcharged refrigerant or insufficient cooling of the condenser.

I022121E10

Symptoms	Probable Cause	Diagnosis	Corrective Actions
Pressure extremely high on both low and high-pressure sides	- Excessive refrigerant - Cooling performance of condenser insufficient	- Condenser is dirty - Condenser fan motor is malfunctioning - Excessive refrigerant	1. Clean condenser 2. Check condenser fan motor operation 3. If 1 and 2 normal, check the amount of refrigerant and supply appropriate volume of refrigerant

(7) The A/C system does not function due to air in the refrigeration system.
CAUTION:
The low-pressure piping may be very hot and cause serious burns.

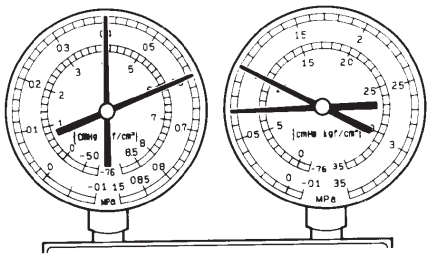


HINT: These gauge indications occur when the refrigeration system opens and the refrigerant is charged without vacuum purging

I022122E03

Symptoms	Probable Cause	Diagnosis	Corrective Actions
- Pressure extremely high on both low and high-pressure sides - Low-pressure piping is too hot to touch	Air in refrigeration system	- Air in refrigeration system - Vacuum purging insufficient	1. Check if compressor oil is dirty or insufficient 2. Evacuate air and charge new refrigerant

(8) The A/C system does not function effectively due to an expansion valve malfunction.

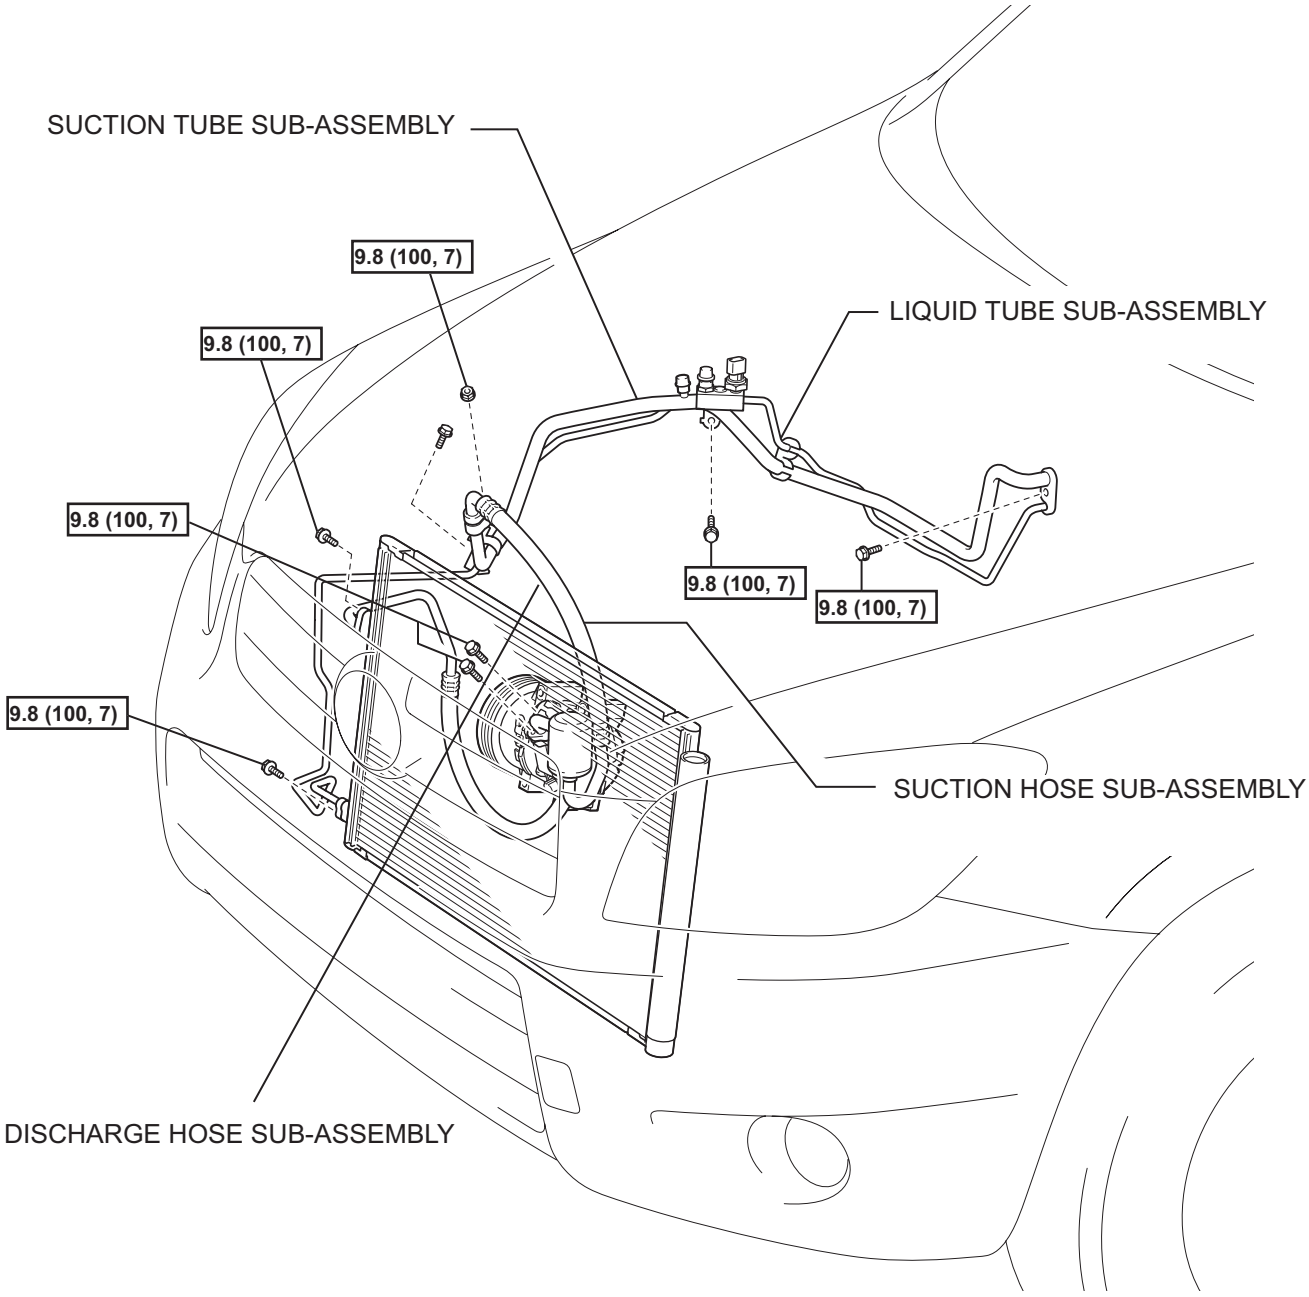


I022123E11

AC

Symptoms	Probable Cause	Diagnosis	Corrective Actions
- Pressure extremely high on both low and high-pressure sides - Frost or condensation on piping on low-pressure side	Problem with expansion valve	- Excessive refrigerant in low pressure piping - Expansion valve too wide open	Replace expansion valve

(9) The A/C system does not function due to a defective compressor.



I022124E10

Symptoms	Probable Cause	Diagnosis	Corrective Actions
- Pressure extremely high on both low and high-pressure sides - Pressure extremely low on high pressure side	Internal leakage in compressor	- Compression failure - Leakage from damaged valve or broken sliding parts	Repair or replace compressor

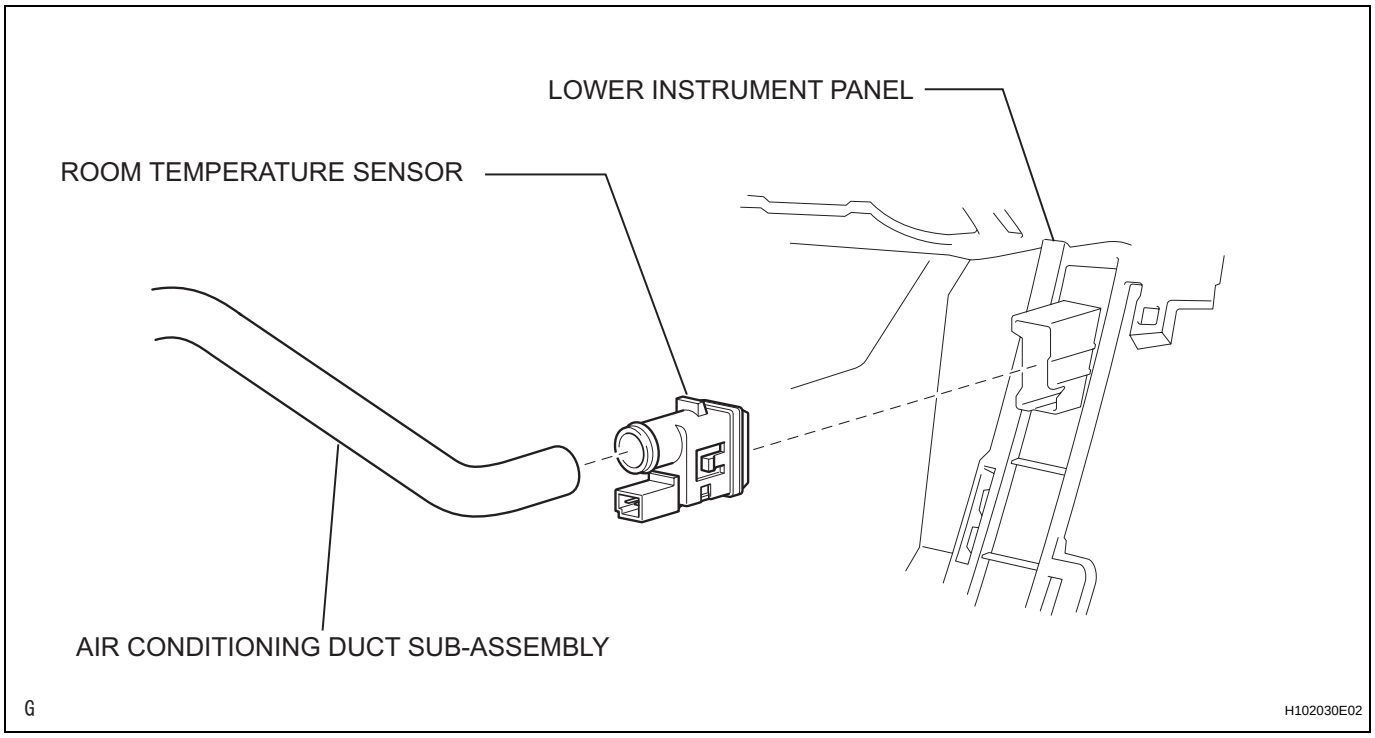
INSTALLATION

1. INSTALL ROOM TEMPERATURE SENSOR

(a) Attach the claws to install the sensor.

(b) Connect the connector.



(c) Connect the duct.

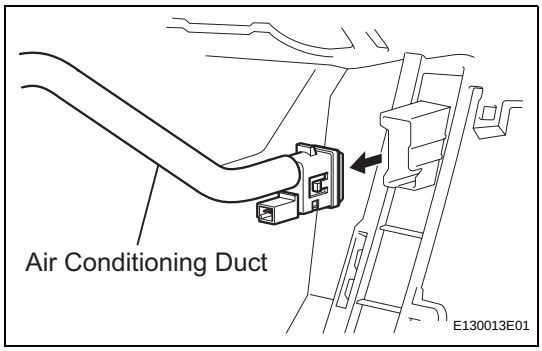
2. INSTALL LOWER INSTRUMENT PANEL

(a) Install the lower instrument panel (see page IP-23).

ROOM TEMPERATURE SENSOR (for Automatic Air Conditioning System)

COMPONENTS

AC



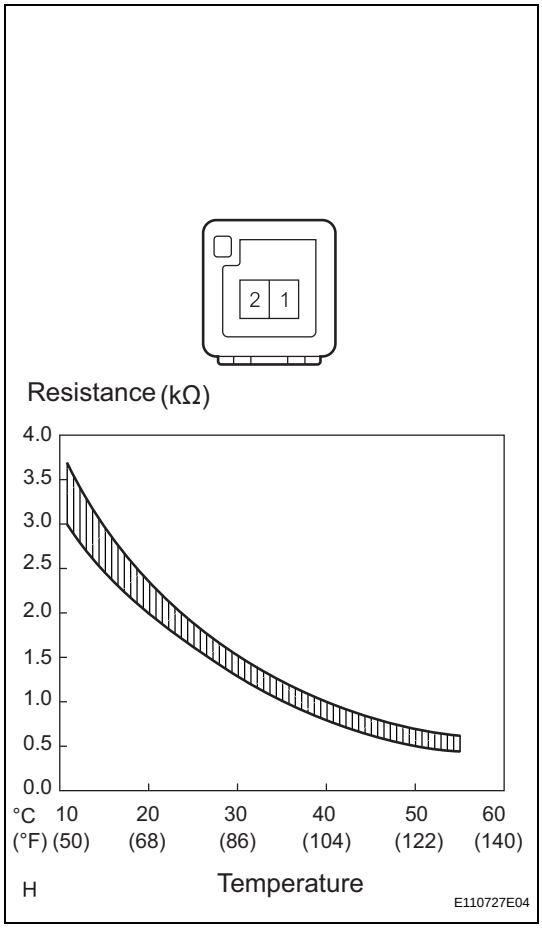
REMOVAL

1. REMOVE LOWER INSTRUMENT PANEL

(a) Remove the lower instrument panel (see page IP-16).

2. REMOVE ROOM TEMPERATURE SENSOR

(a) Disconnect the duct.
(b) Disconnect the connector.
(c) Detach the claws and remove the sensor.



INSPECTION

1. INSPECT ROOM TEMPERATURE SENSOR

(a) Measure the resistance of the sensor.
Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	10°C (50°F)	3.00 to 3.73 kΩ
1 - 2	15°C (59°F)	2.45 to 2.88 kΩ
1 - 2	20°C (68°F)	1.95 to 2.30 kΩ
1 - 2	25°C (77°F)	1.60 to 1.80 kΩ
1 - 2	30°C (86°F)	1.28 to 1.47 kΩ
1 - 2	35°C (95°F)	1.00 to 1.22 kΩ
1 - 2	40°C (104°F)	0.80 to 1.00 kΩ
1 - 2	45°C (113°F)	0.65 to 0.85 kΩ
1 - 2	50°C (122°F)	0.50 to 0.70 kΩ
1 - 2	55°C (131°F)	0.44 to 0.60 kΩ
1 - 2	60°C (140°F)	0.36 to 0.50 kΩ

NOTICE:

- **Touching the sensor even slightly may change the resistance value. Hold the connector of the sensor.**
- **When measuring the resistance, the sensor temperature must be the same as the ambient temperature.**

HINT:

As the temperature increases, the resistance decreases (see the graph).

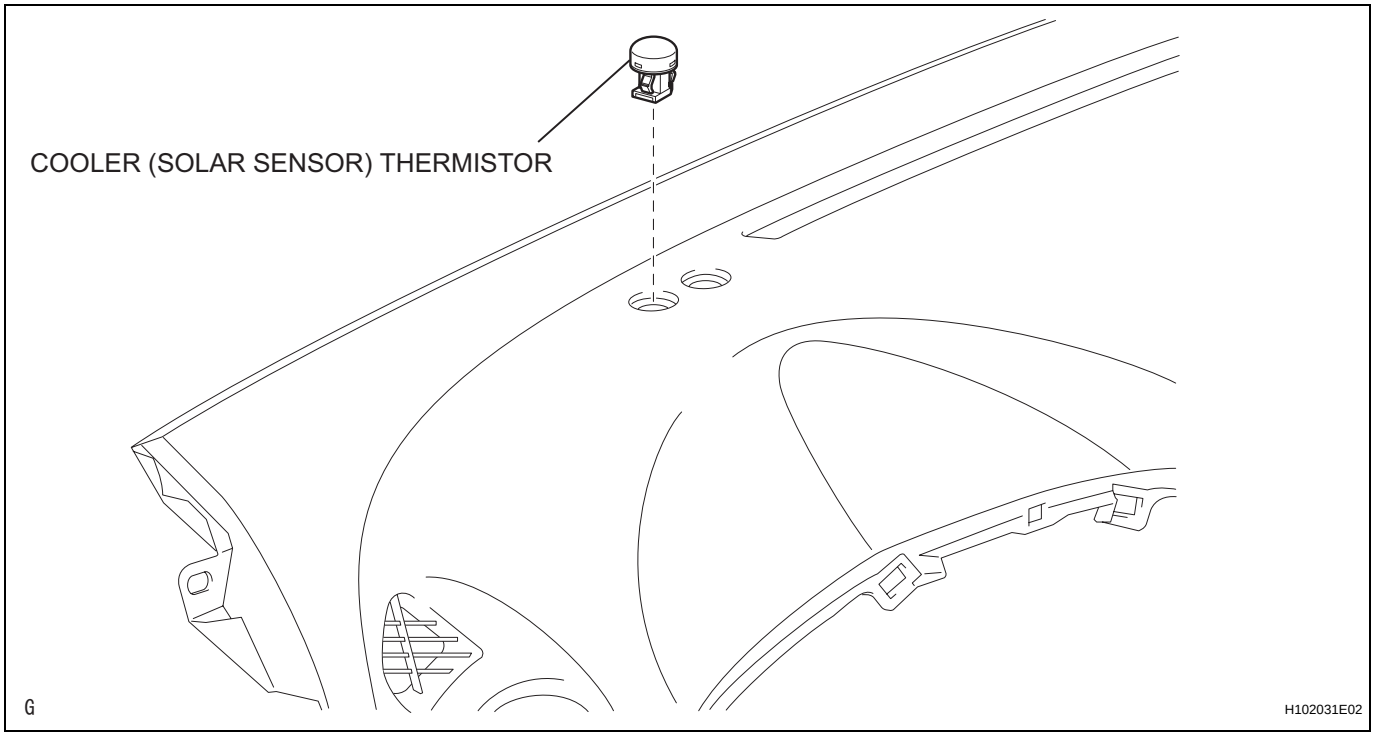
If the result is not as specified, replace the room temperature sensor.

AC

INSTALLATION

1. INSTALL SOLAR SENSOR

(a) Connect the connector, and then push in the solar sensor.



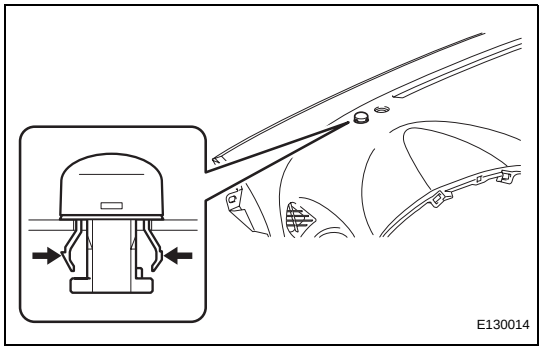
2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

3. CHECK SRS WARNING LIGHT

(a) Check the SRS warning light (see page RS-37).

SOLAR SENSOR (for Automatic Air Conditioning System)

COMPONENTS



REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

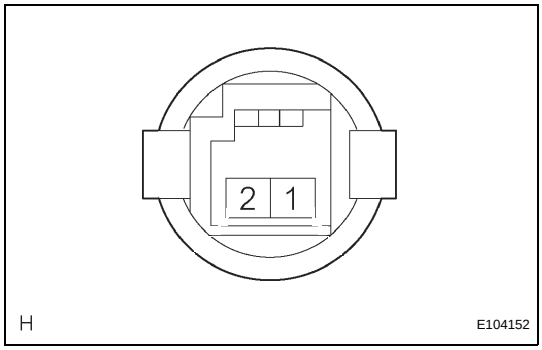
CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

2. REMOVE SOLAR SENSOR

(a) Using a screwdriver, pull out the solar sensor, then disconnect the connector.

HINT:



Tape the screwdriver tip before use.

INSPECTION

1. INSPECT SOLAR SENSOR

(a) Using an ohmmeter, connect the positive lead to terminal 2 and the negative lead to terminal 1, then measure the resistance between the terminals.

Standard resistance

Tester Connection	Connection	Specified Condition
1 - 2	Sensor subject to electric light	Except ∞ Ω
1 - 2	Sensor covered with a cloth	∞ Ω

NOTICE:

The connection procedure for using a digital tester such as a TOYOTA electrical tester is shown above. When using an analog tester, connect the positive (+) lead to terminal 1 and the negative (-) lead to terminal 2 of the A/C solar sensor.

HINT:

- As the inspection light is moved away from the sensor, the voltage increases.
- Use an incandescent lamp for inspection. Bring it within 30 cm (11.8 in.) of the A/C solar sensor.

If the result is not as specified, replace the solar sensor.

AC

AXLE SYSTEM

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Axle system

Symptom	Suspected area	See page
Wander or pulls	1. Tires (worn or improperly inflated)	TW-1
	2. Front wheel alignment (incorrect)	SP-3
	3. Rear wheel alignment (incorrect)	SP-7
	4. Steering linkage (loose or worn)	-
	5. Front hub bearings (loose or worn)	AH-6
	6. Rear hub bearings (loose or worn)	AH-15
	7. Steering gear (adjustment required or broken)	PS-44
	8. Suspension parts (worn out)	-
Front wheel shimmy	1. Tires (worn or improperly inflated)	TW-1
	2. Wheels (out of balance)	TW-1
	3. Shock absorber (worn out)	SP-10
	3. Shock absorber for sports package (worn out)	-
	4. Front wheel alignment (incorrect)	SP-3
	5. Lower ball joint (worn)	SP-27
	6. Axle hub bearings (loose or worn)	AH-6
	7. Steering linkage (loose or worn)	-
	8. Steering gear (adjustment required or broken)	PS-44
Rear wheel shimmy	1. Tires (worn or improperly inflated)	TW-1
	2. Wheels (out of balance)	TW-1
	3. Shock absorber (worn out)	SP-36
	4. Axle hub bearings	AH-15
	6. Rear wheel alignment (incorrect)	SP-7

ON-VEHICLE INSPECTION

1. CHECK FRONT AXLE HUB BEARING

(a) Remove the front wheel.

(b) Disconnect the front disc brake cylinder (see page BR-40).

(c) Remove the front disc.

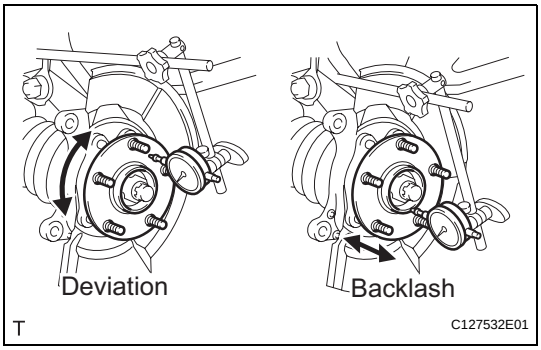
(d) Inspect the axle hub backlash.

(1) Using a dial indicator, check the backlash near the center of the axle hub.

Maximum backlash:

0.05 mm (0.0020 in.)

If the backlash is greater than the maximum, replace the bearing.



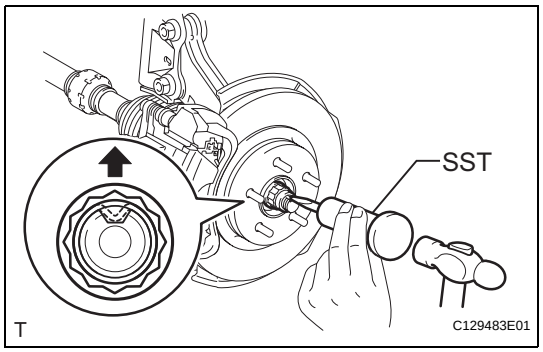
(e) Inspect the axle hub deviation.

(1) Using a dial indicator, check the deviation on the surface of the axle hub.

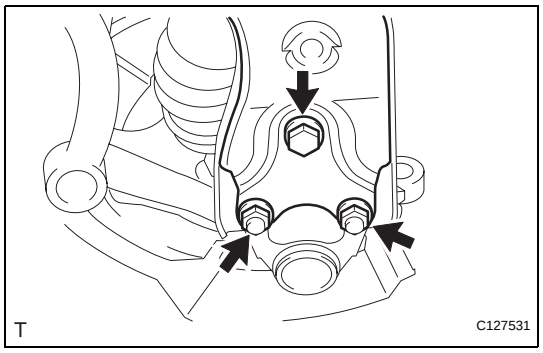
Maximum deviation:

0.05 mm (0.0020 in.)

If the deviation is greater than the maximum, replace the bearing.

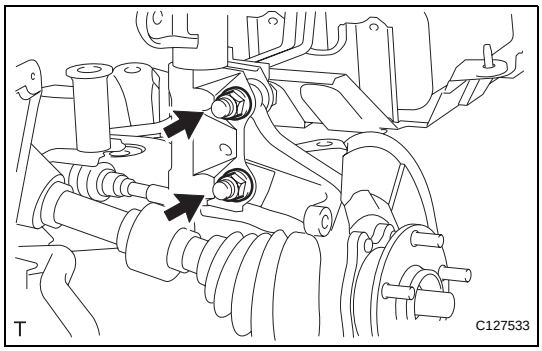


REMOVAL



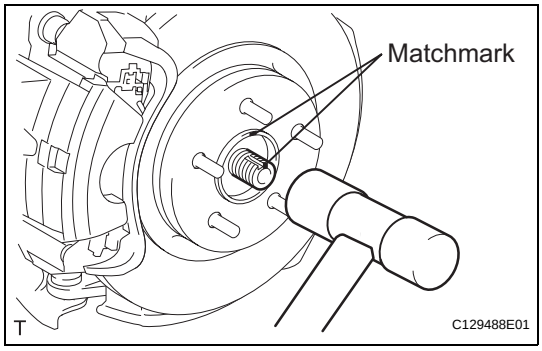
(2005/11-2006/01)
HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.



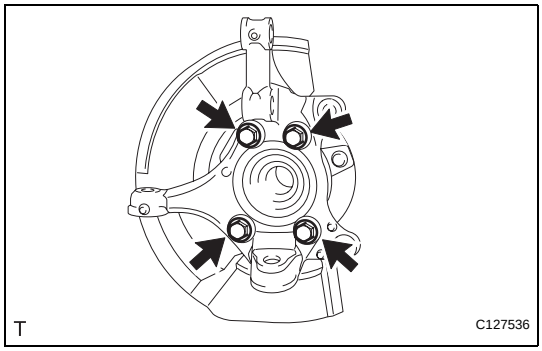
1. **REMOVE FRONT WHEEL**
2. **DRAIN AUTOMATIC TRANSAXLE FLUID**
   (a) Drain the automatic transaxle fluid for U140F (see page AX-147).
   (b) Drain the automatic transaxle fluid for U241E (see page AX-146).
3. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

4. **REMOVE FRONT AXLE HUB NUT**
   (a) Using SST and a hammer, unstake the staked part of the nut.
   SST 09930-00010
   NOTICE:
   Loosen the staked part of the nut completely, otherwise the screw of the drive shaft may be damaged.
   (b) While applying the brakes, remove the lock axle hub nut.
5. **REMOVE FRONT SPEED SENSOR LH (See page BC-191)**
6. **REMOVE FRONT DISC BRAKE CYLINDER ASSEMBLY LH (See page BR-40)**
7. **REMOVE FRONT DISC (See page BR-42)**
8. **DISCONNECT TIE ROD END SUB-ASSEMBLY LH (See page PS-42)**



9. **DISCONNECT FRONT SUSPENSION NO. 1 LOWER ARM SUB-ASSEMBLY LH**
   (a) Remove the bolt and 2 nuts.
   (b) Disconnect the lower arm from the ball joint.

10. REMOVE STEERING KNUCKLE WITH AXLE HUB



(a) Remove the 2 bolts and 2 nuts, and disconnect the shock absorber from the steering knuckle.
HINT:
While fixing the nuts in place, loosen and remove the bolts.

(b) Put matchmarks on the drive shaft and the axle hub.

(c) Using a plastic-faced hammer, remove the steering knuckle with axle hub.
NOTICE:
Be careful not to damage the boot and speed sensor rotor. Do not excessively push out the drive shaft from the axle assembly.

11. REMOVE FRONT LOWER BALL JOINT ASSEMBLY LH (See page SP-27)

12. REMOVE FRONT AXLE HUB SUB-ASSEMBLY LH

(a) Remove the 4 bolts and axle hub from the steering knuckle.
NOTICE:
Do not place the hub and bearing's magnet rotor side so that it is facing downward, and do not allow the magnet rotor side to become damaged or contact foreign matter.

(b) Remove the dust cover from the steering knuckle.

AH

REMOVAL

(2006/01-)

HINT:

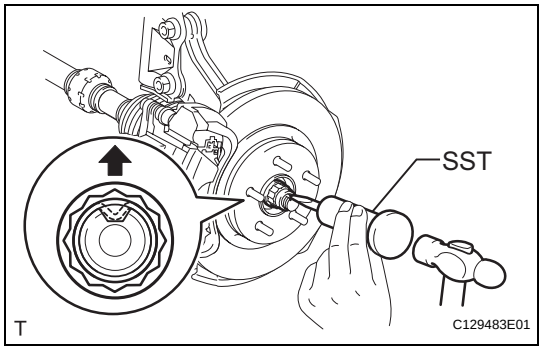
- Use the same procedures for the RH side and LH side.
- The procedures listed below are the LH side.

1. REMOVE FRONT WHEEL

2. DRAIN AUTOMATIC TRANSAXLE FLUID

(a) Drain the automatic transaxle fluid for U140F (see page AX-147).

(b) Drain the automatic transaxle fluid for U241E (see page AX-146).



(c) Drain the automatic transaxle fluid for U151E (see page AX-172).

(d) Drain the automatic transaxle fluid for U151F (see page AX-173).

3. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

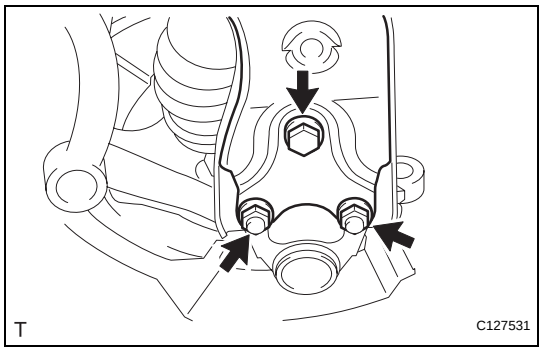
4. REMOVE FRONT AXLE HUB LH NUT

(a) Using SST and a hammer, unstake the staked part of the nut.

SST 09930-00010

NOTICE:

Loosen the staked part of the nut completely, otherwise the screw of the drive shaft may be damaged.



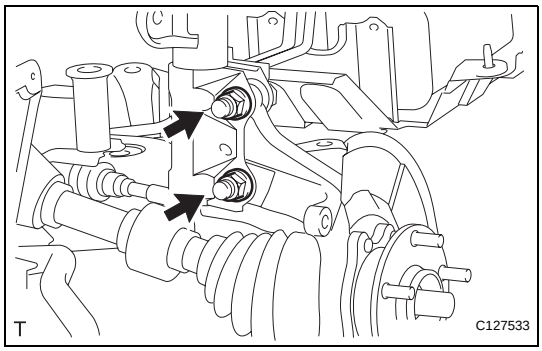
(b) While applying the brakes, remove the lock axle hub nut.

5. REMOVE FRONT SPEED SENSOR LH (See page BC-191)

6. REMOVE FRONT DISC BRAKE CYLINDER ASSEMBLY LH (See page BR-40)

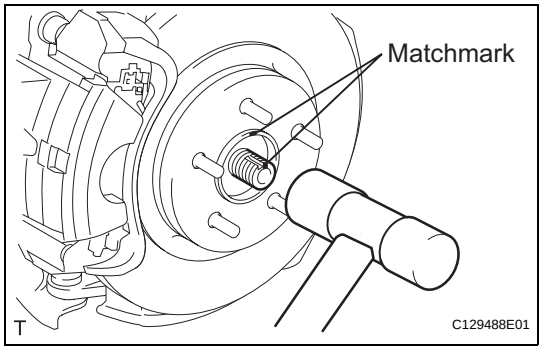
7. REMOVE FRONT DISC (See page BR-42)

8. DISCONNECT TIE ROD END SUB-ASSEMBLY LH (See page PS-42)



9. DISCONNECT FRONT SUSPENSION NO. 1 LOWER ARM SUB-ASSEMBLY LH

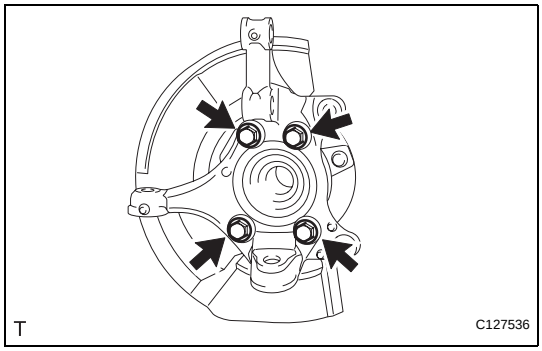
(a) Remove the bolt and 2 nuts.



(b) Disconnect the lower arm from the ball joint.

AH

10. REMOVE STEERING KNUCKLE WITH AXLE HUB



(a) Remove the 2 bolts and 2 nuts, and disconnect the shock absorber from the steering knuckle.
HINT:
While fixing the nuts in place, loosen and remove the bolts.

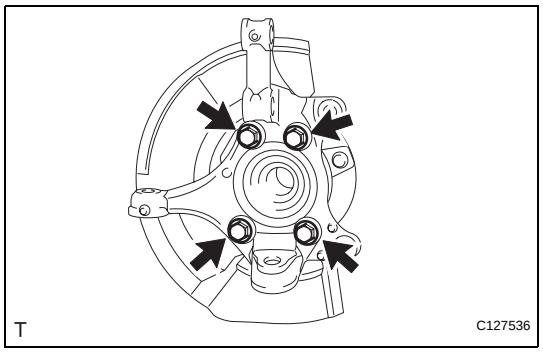
(b) Put matchmarks on the drive shaft and axle hub.

(c) Using a plastic-faced hammer, remove the steering knuckle with axle hub.
NOTICE:
Be careful not to damage the boot and speed sensor rotor. Do not excessively push out the drive shaft from the axle assembly.

11. REMOVE FRONT LOWER BALL JOINT ASSEMBLY LH (See page SP-27)

12. REMOVE FRONT AXLE HUB SUB-ASSEMBLY LH

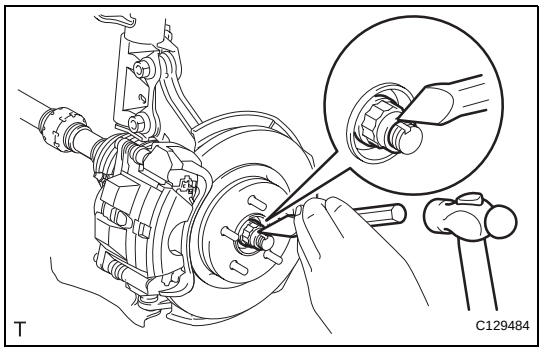
(a) Remove the 4 bolts and axle hub from the steering knuckle.
NOTICE:
Do not place the hub and bearing's magnet rotor side so that it is facing downward, and do not allow the magnet rotor side to become damaged or contact foreign matter.



(b) Remove the dust cover from the steering knuckle.

AH

INSTALLATION



(2005/11-2006/01)
HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. **INSTALL FRONT AXLE HUB SUB-ASSEMBLY LH**
   (a) Install the dust cover to the steering knuckle.
   (b) Install the axle hub with the 4 bolts.
   Torque: 96 N*m (979 kgf*cm, 1 ft.*lbf)
   NOTICE:
   Do not place the hub and bearing's magnet rotor side so that it is facing downward, and do not allow the magnet rotor side to become damaged or contact foreign matter.
2. **INSTALL FRONT LOWER BALL JOINT ASSEMBLY LH (See page SP-28)**
3. **INSTALL STEERING KNUCKLE WITH AXLE HUB**
   (a) Align the shaft splines and drive in the drive shaft.
   (b) Install the steering knuckle with axle hub with the 2 bolt and 2 nuts.
   Torque: 240 N*m (2,447 kgf*cm, 177 ft.*lbf)
   NOTICE:
   Do not tighten the nuts.
4. **CONNECT FRONT SUSPENSION NO. 1 LOWER ARM SUB-ASSEMBLY LH**
   (a) Connect the lower arm to the ball joint with the 2 bolts and nut.
   Torque: 92 N*m (938 kgf*cm, 68 ft.*lbf)
5. **CONNECT TIE ROD END SUB-ASSEMBLY LH (See page PS-45)**
6. **INSTALL FRONT SPEED SENSOR LH (See page BC-193)**
7. **CHECK FRONT AXLE HUB BEARING**
   (a) Check the axle hub bearing (see page AH-6).
8. **INSTALL FRONT DISC (See page BR-43)**
9. **INSTALL FRONT DISC BRAKE CYLINDER ASSEMBLY LH (See page BR-46)**
10. **INSTALL FRONT AXLE HUB NUT**
    (a) Install a new hub nut.
    Torque: 216 N*m (2,203 kgf*cm, 159 ft.*lbf)

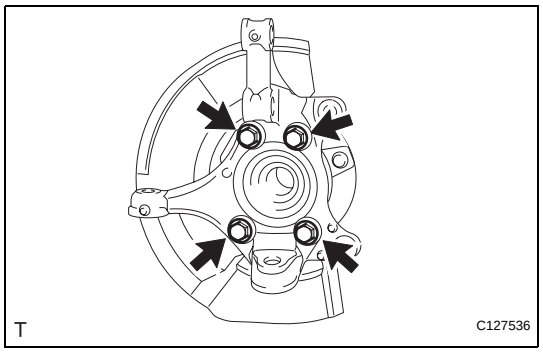
AH

(b) Using a chisel and hammer, stake the hub nut.

11. INSTALL FRONT WHEEL
Torque: 103 N*m (1,050 kgf*cm, 6 ft.*lbf)

12. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT
(a) Inspect and adjust the wheel alignment (see page SP-3).

13. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



14. CHECK SPEED SENSOR SIGNAL
(a) Check the speed sensor signal (see page BC-44).

INSTALLATION

(2006/01-)

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are the LH side.

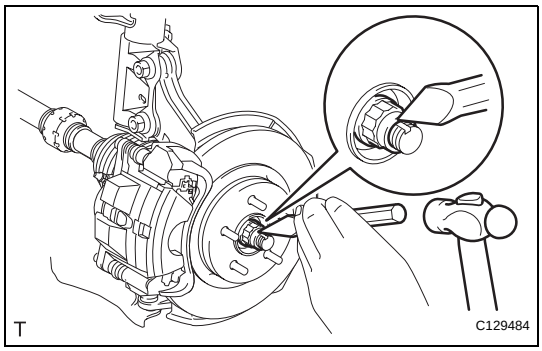
1. **INSTALL FRONT AXLE HUB SUB-ASSEMBLY LH**
   (a) Install the dust cover to the steering knuckle.
   (b) Install the axle hub with the 4 bolts.
   Torque: 96 N*m (979 kgf*cm, 71 ft.*lbf)
   NOTICE:
   Do not place the hub and bearing's magnet rotor side so that it is facing downward, and do not allow the magnet rotor side to become damaged or contact foreign matter.

2. **INSTALL FRONT LOWER BALL JOINT ASSEMBLY LH (See page SP-28)**

3. **INSTALL STEERING KNUCKLE WITH AXLE HUB**
   (a) Align the shaft splines and drive in the drive shaft.
   (b) Install the steering knuckle with axle hub with the 2 bolts and 2 nuts.
   Torque: 240 N*m (2,447 kgf*cm, 177 ft.*lbf)
   NOTICE:
   Do not tighten the bolts.

4. **CONNECT FRONT SUSPENSION NO. 1 LOWER ARM SUB-ASSEMBLY LH**
   (a) Connect the lower arm to the ball joint with the bolt and 2 nuts.
   Torque: 92 N*m (938 kgf*cm, 68 ft.*lbf)

5. **CONNECT TIE ROD END SUB-ASSEMBLY LH (See page PS-45)**



6. **INSTALL FRONT SPEED SENSOR LH (See page BC-193)**

7. **CHECK FRONT AXLE HUB BEARING**
   (a) Check the axle hub bearing (see page AH-6).

8. **INSTALL FRONT DISC (See page BR-43)**

9. **INSTALL FRONT DISC BRAKE CYLINDER ASSEMBLY LH (See page BR-46)**

10. **INSTALL FRONT AXLE HUB LH NUT**
    (a) Install a new hub nut.
    Torque: 216 N*m (2,203 kgf*cm, 159 ft.*lbf) for ϕ 26 for 2AZ-FE
    292 N*m (2,978 kgf*cm, 215 ft.*lbf) for ϕ 30 for 2GR-FE

(b) Using a chisel and hammer, stake the hub nut.

11. ADD AUTOMATIC TRANSAXLE FLUID

(a) Add the automatic transaxle for U140F (see page AX-152).

(b) Add the automatic transaxle for U241E (see page AX-151).

(c) Add the automatic transaxle for U151E (see page AX-177).

(d) Add the automatic transaxle for U151F (see page AX-178).

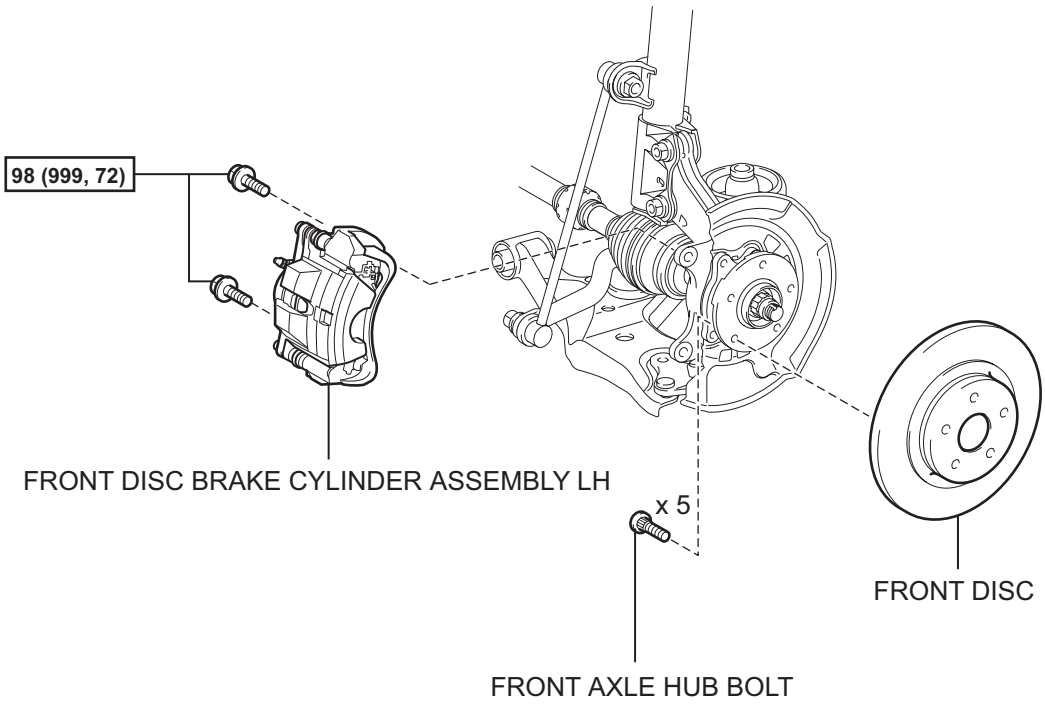
12. CHECK FOR AUTOMATIC TRANSAXLE FLUID LEAKAGE

13. INSTALL FRONT WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

14. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT

(a) Inspect and adjust the front wheel alignment (see page SP-3).

15. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



16. CHECK SPEED SENSOR SIGNAL

(a) Check the speed sensor signal (see page BC-44).

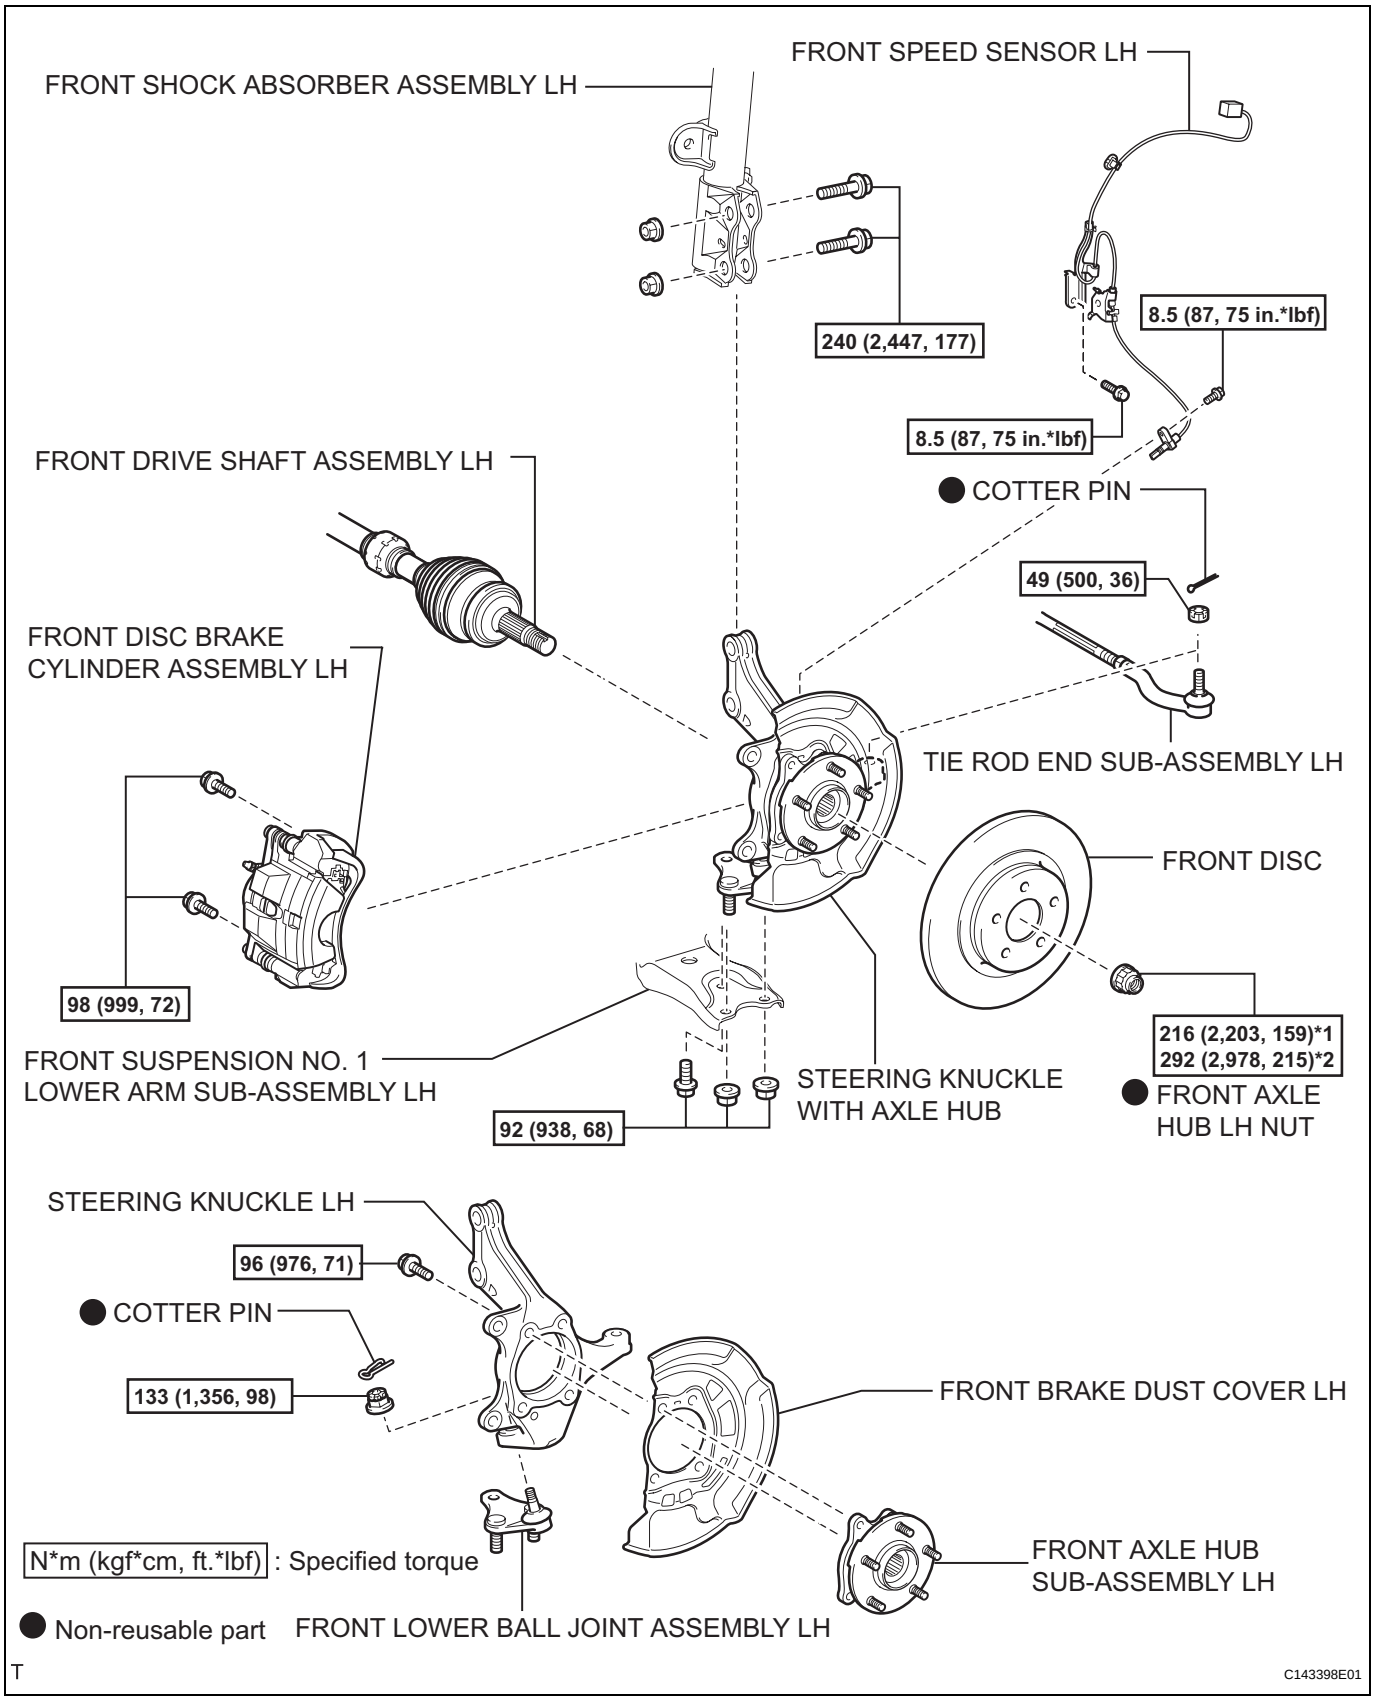
REPLACEMENT

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are the LH side.

1. **REMOVE FRONT WHEEL**
2. **REMOVE FRONT DISC BRAKE CYLINDER ASSEMBLY LH (See page BR-40)**
3. **REMOVE FRONT DISC (See page BR-42)**
4. **REMOVE FRONT AXLE HUB BOLT**
   (a) Using SST, remove the hub bolt that needs to be replaced.
   SST 09650-17011



5. **INSTALL FRONT AXLE HUB BOLT**
   (a) Insert a new hub bolt into the bolt hole. Set a plate washer and nut on the hub bolt end.
   (b) Using a brass bar or equivalent to hold the front axle, install the hub bolt by tightening the nut. Then remove the nut and plate washer.
6. **INSTALL FRONT DISC (See page BR-43)**
7. **INSTALL FRONT DISC BRAKE CYLINDER ASSEMBLY LH (See page BR-46)**
8. **INSTALL FRONT WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

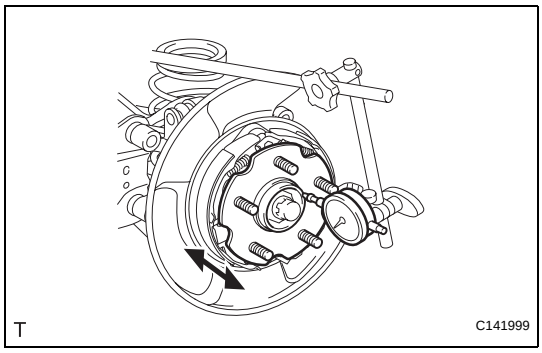
REPLACEMENT

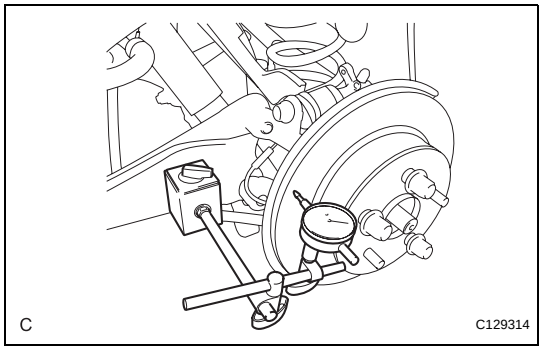
HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are the LH side.

1. **REMOVE FRONT WHEEL**
2. **REMOVE FRONT DISC BRAKE CYLINDER ASSEMBLY LH (See page BR-40)**
3. **REMOVE FRONT DISC (See page BR-42)**
4. **REMOVE FRONT AXLE HUB BOLT**
   (a) Using SST, remove the hub bolt that needs to be replaced.
   SST 09650-17011



5. **INSTALL FRONT AXLE HUB BOLT**
   (a) Insert a new hub bolt into the bolt hole. Set a plate washer and nut on the hub bolt end.
   (b) Using a brass bar or equivalent to hold the front axle, install the hub bolt by tightening the nut. Then remove the nut and plate washer.
6. **INSTALL FRONT DISC (See page BR-43)**
7. **INSTALL FRONT DISC BRAKE CYLINDER ASSEMBLY LH (See page BR-46)**
8. **INSTALL FRONT WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)



AH

ON-VEHICLE INSPECTION

1. **REMOVE REAR WHEEL**
2. **DISCONNECT REAR DRIVE SHAFT ASSEMBLY LH (for 4WD)**
   (a) Disconnect the drive shaft (see page DS-69).
3. **REMOVE REAR DISC BRAKE CYLINDER ASSEMBLY LH (See page BR-55)**
4. **REMOVE REAR DISC (See page BR-57)**
5. **CHECK BEARING BACKLASH AND AXLE HUB DEVIATION**
   (a) Using a dial indicator, measure the backlash near the center of the axle hub.
   Maximum backlash:
   0.05 mm (0.0020 in.)
   If the backlash is greater than the maximum, replace the axle hub.

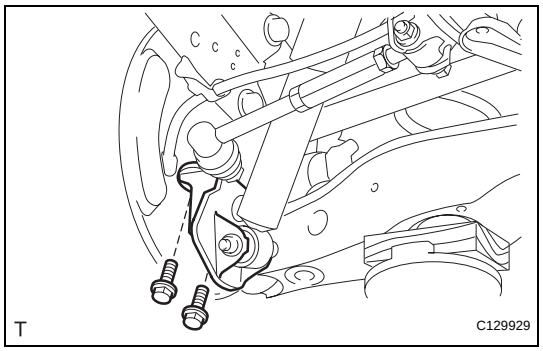
   (b) Using a dial indicator, measure the disc runout 10 mm (0.39 in.) inside the outer edge of the disc.
   Maximum deviation:
   0.08 mm (0.0031 in.) for 2WD
   0.06 mm (0.0024 in.) for 4WD
   NOTICE:
   If the runout exceeds the maximum, change the installation positions of the rear disc and axle hub so that the runout will be as low as possible. If the runout exceeds the maximum even when the installation positions are changed, shave the rear disc. If the rear disc needs to be shaved to less than the minimum, replace the rear disc. If the rear disc is replaced, perform the runout inspection again. If the runout still exceeds the maximum, replace the hub and bearing with a new one.

REMOVAL

1. **REMOVE REAR WHEEL**

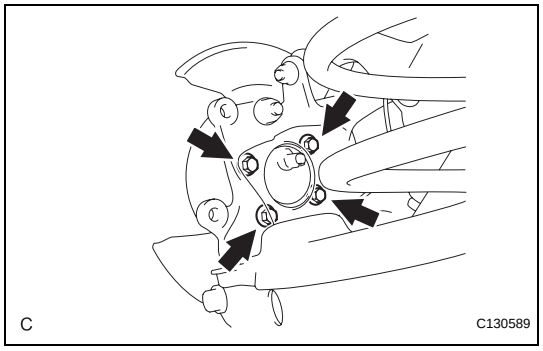
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

3. **REMOVE REAR AXLE SHAFT NUT (for 4WD)**
   (a) Using SST and hammer, unstake the staked part of the nut.
   SST 09930-00010
   NOTICE:
   Loosen the staked part of the nut completely, otherwise the screw of the drive shaft may be damaged.
   (b) While applying the brake, remove the lock axle hub nut.



4. **REMOVE REAR DISC BRAKE CYLINDER ASSEMBLY LH (See page BR-55)**

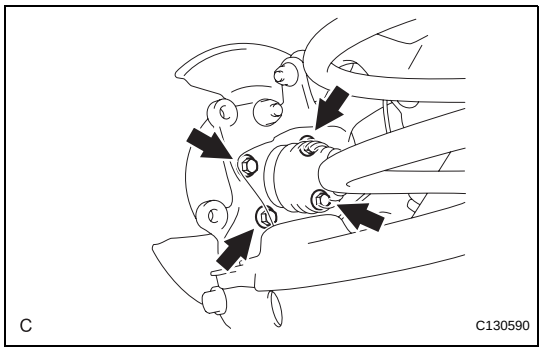
5. **REMOVE REAR DISC (See page BR-57)**

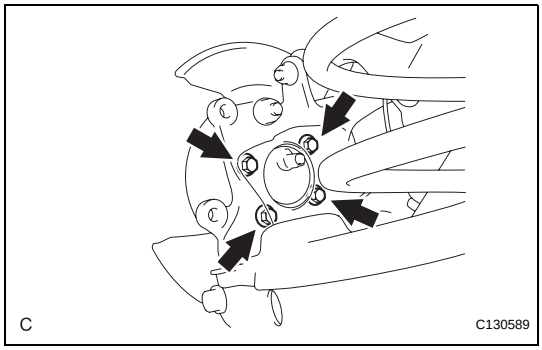


6. **REMOVE SKID CONTROL SENSOR WIRE (for 2WD) (See page BC-198)**

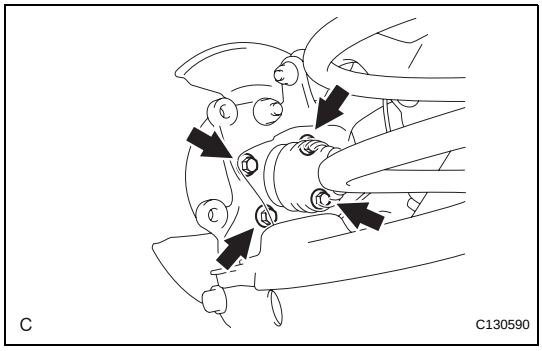
7. **REMOVE REAR SPEED SENSOR LH (for 4WD) (See page BC-205)**

8. **REMOVE REAR SUSPENSION NO. 1 ARM ASSEMBLY LH (See page SP-42)**





9. **DISCONNECT REAR SHOCK ABSORBER ASSEMBLY LH**
   (a) Remove the 2 bolts and disconnect the shock absorber with bracket from the axle carrier.



10. **REMOVE REAR AXLE HUB AND BEARING ASSEMBLY LH**
    (a) fro 2WD:
    (1) Remove the 4 bolts, and axle hub and the bearing from the axle carrier.
    NOTICE:
    Do not place the hub and bearing's magnet rotor side so that it is facing downward, and do not allow the magnet rotor side to become damaged or contact foreign matter.

AH

(b) for 4WD:
(1) Put matchmarks on the drive shaft and the axle hub and bearing.
(2) Remove the 4 bolts, and the axle hub and bearing from the axle carrier.
NOTICE:
Do not place the hub and bearing's magnet rotor side so that it is facing downward, and do not allow the magnet rotor side to become damaged or contact foreign matter.

INSTALLATION

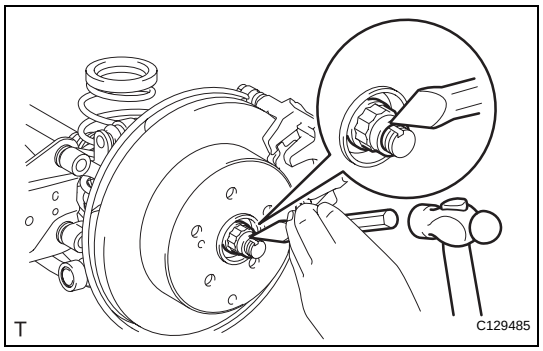
1. INSTALL REAR AXLE HUB AND BEARING ASSEMBLY LH

(a) for 2WD:
(1) Install the axle hub and bearing to the axle carrier with the 4 bolts.
Torque: 90 N*m (918 kgf*cm, 68 ft.*lbf)
NOTICE:
Do not place the hub and bearing's magnet rotor side so that it is facing downward, and do not allow the magnet rotor side to become damaged or contact foreign matter.

(b) fro 4WD:
(1) Align the shaft splines and drive in the drive shaft to the axle hub and bearing.
(2) Install the axle hub and bearing assembly to the axle carrier with the 4 bolts.
Torque: 90 N*m (918 kgf*cm, 68 ft.*lbf)
NOTICE:
Do not place the hub and bearing's magnet rotor side so that it is facing downward, and do not allow the magnet rotor side to become damaged or contact foreign matter.

2. CONNECT REAR SHOCK ABSORBER ASSEMBLY LH

(a) Install the shock absorber to the axle carrier with bracket with the 2 bolts.

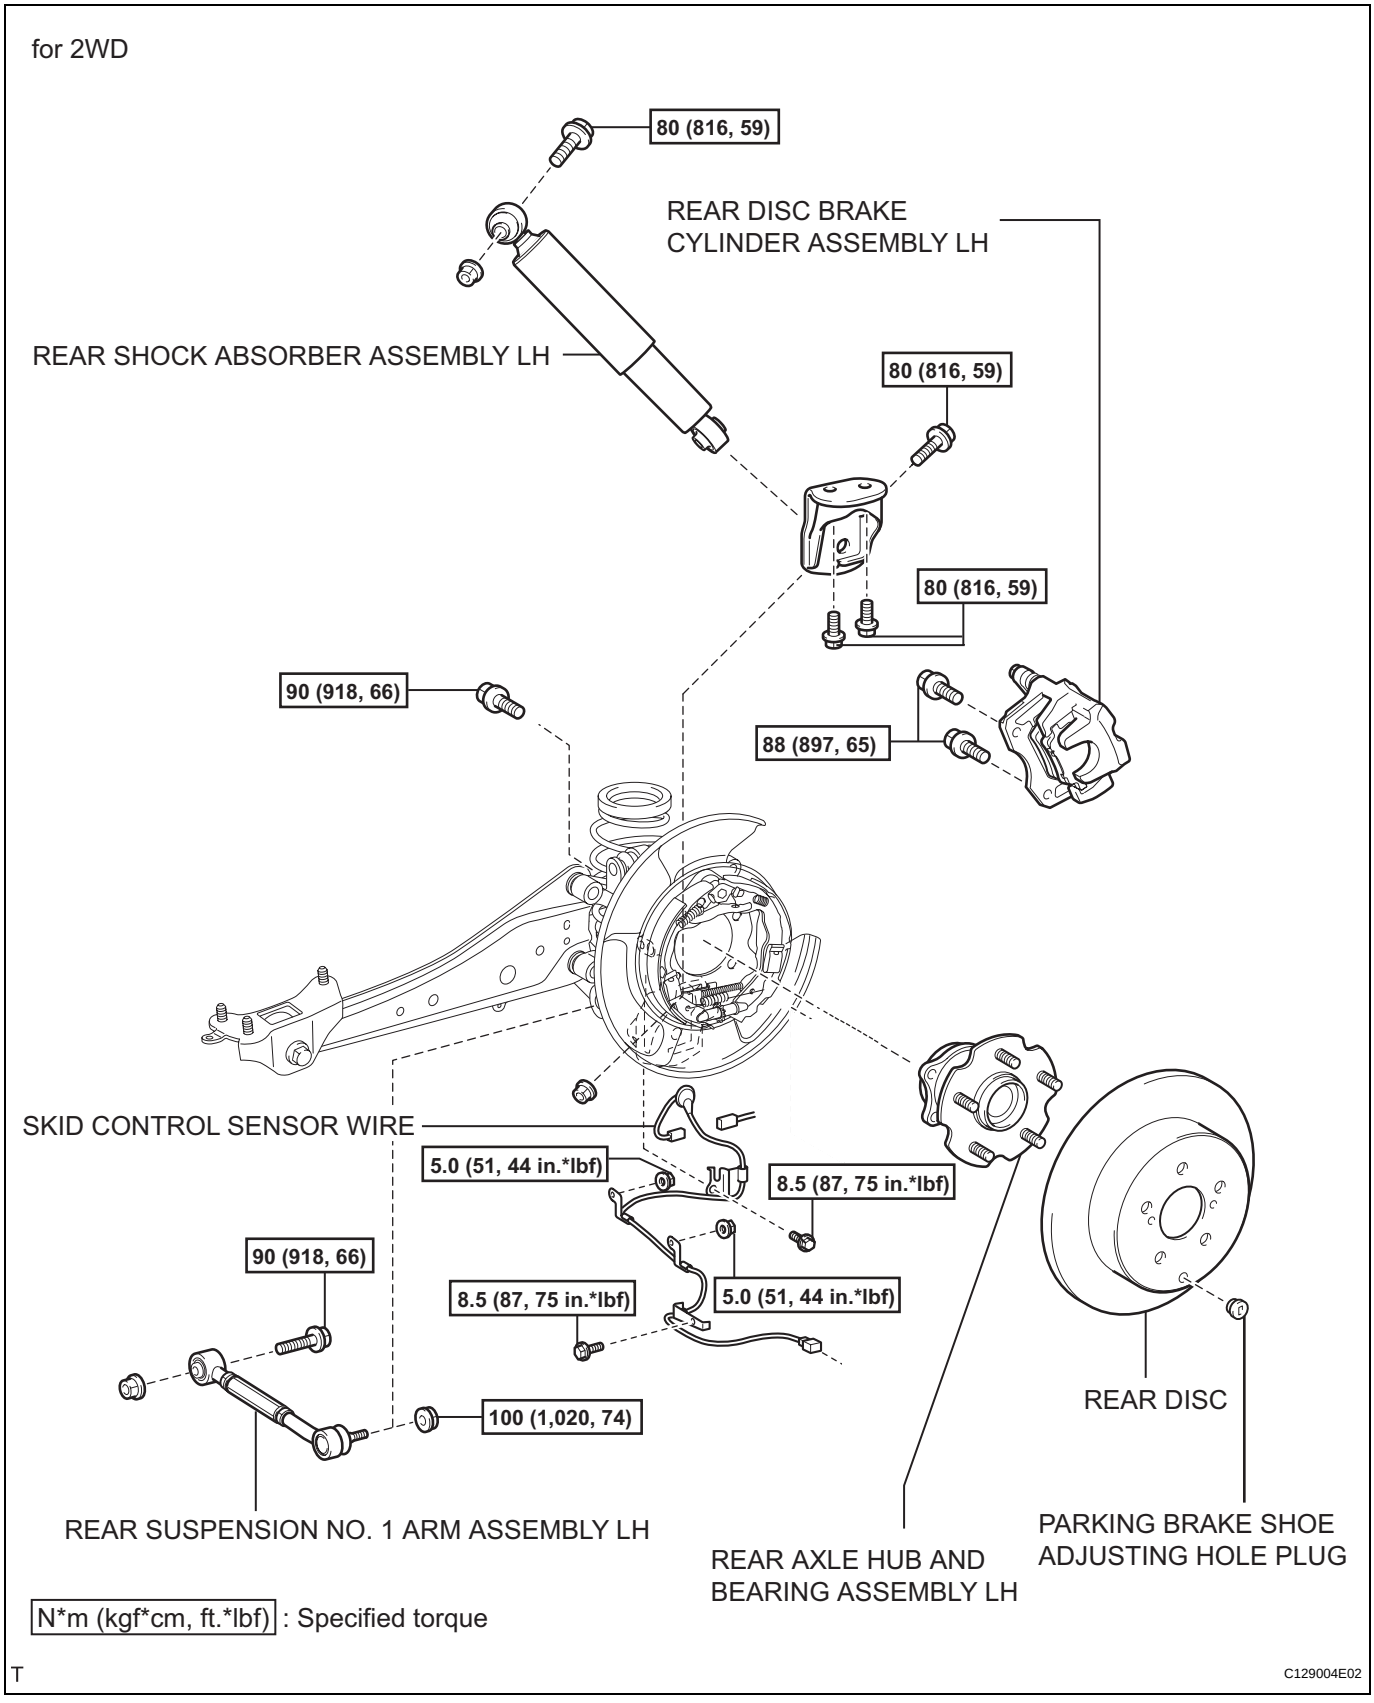


3. TEMPORARILY INSTALL REAR SUSPENSION NO. 1 ARM ASSEMBLY LH (See page SP-43)

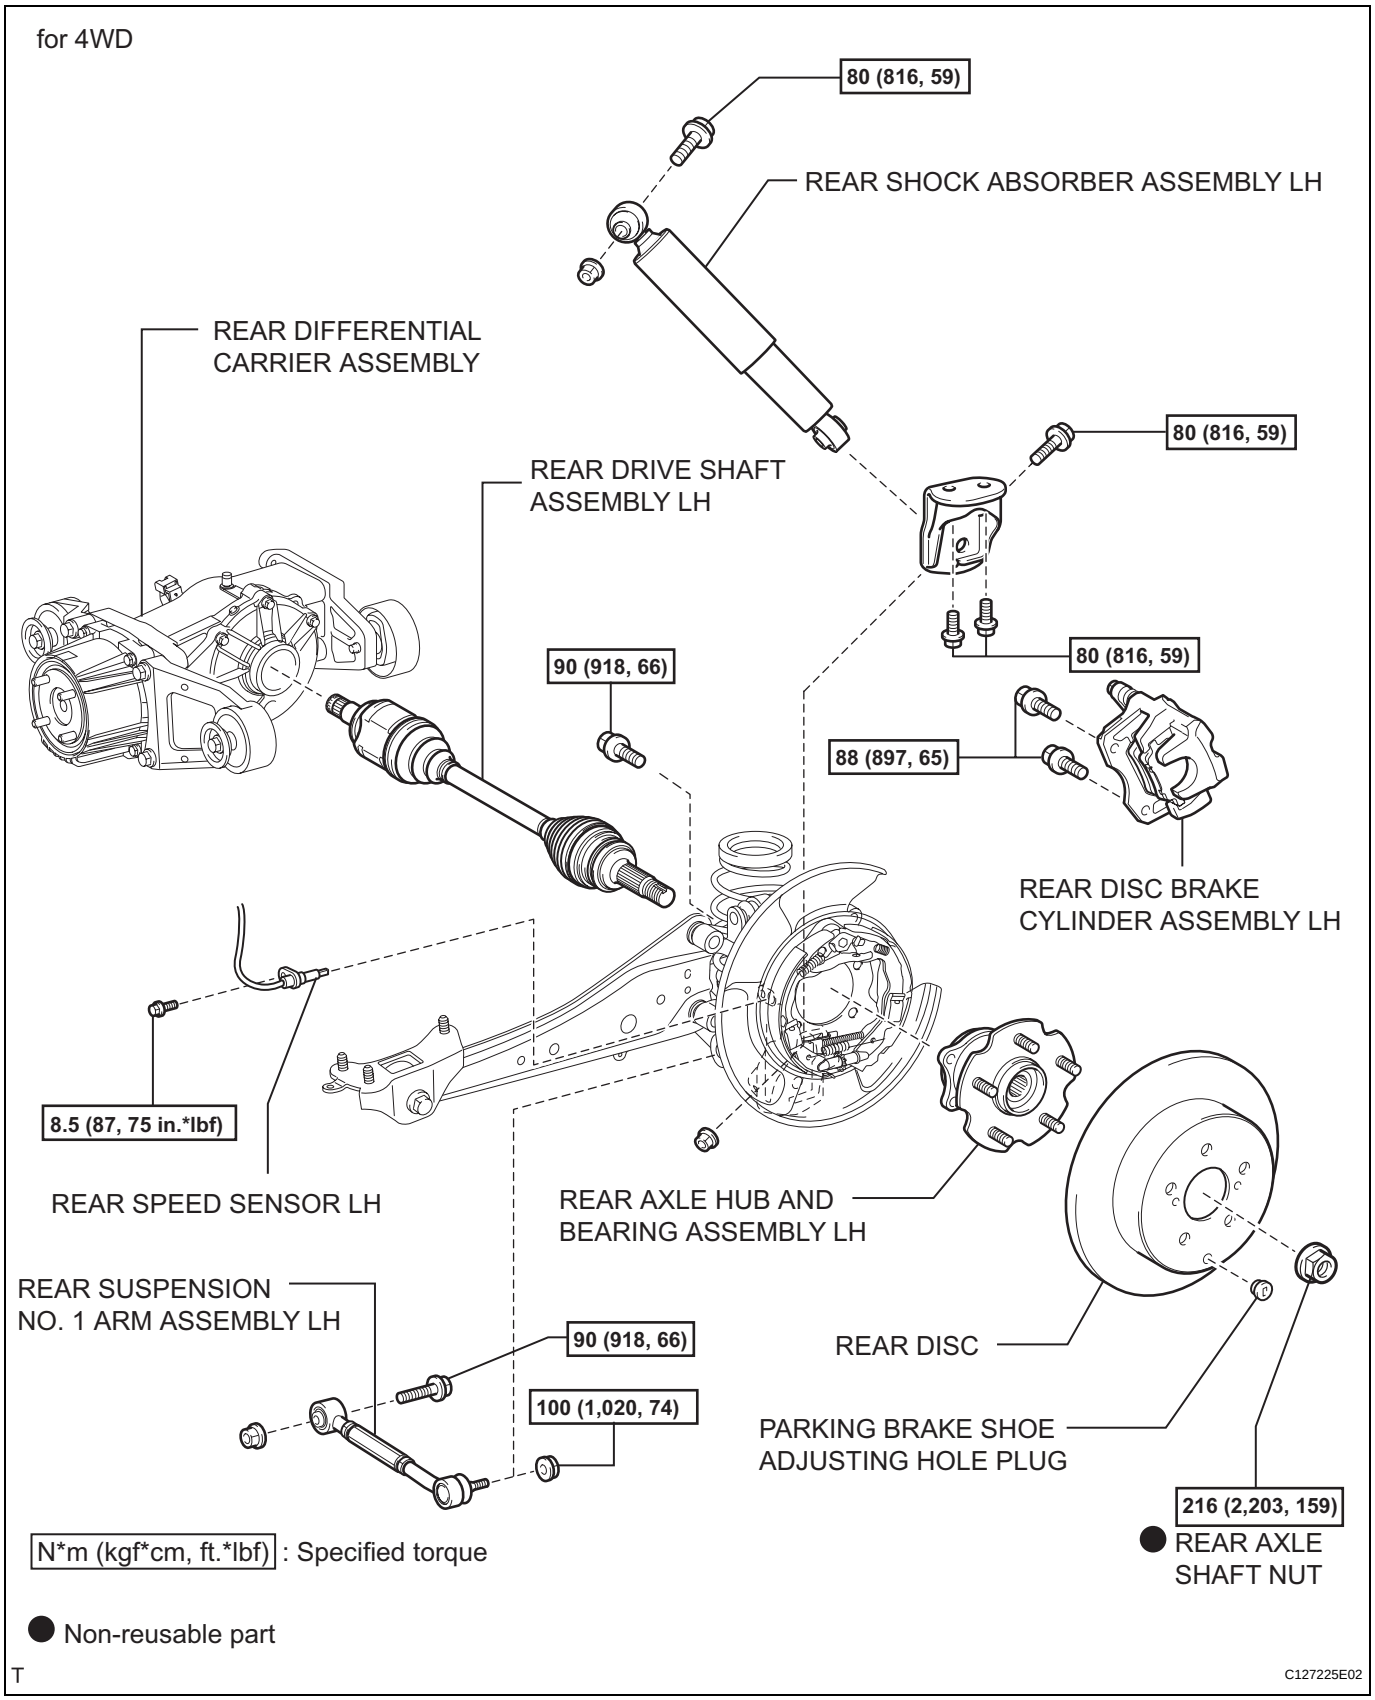
4. INSTALL SKID CONTROL SENSOR WIRE (for 2WD) (See page BC-201)

5. INSTALL REAR SPEED SENSOR LH (for 4WD) (See page BC-206)

6. INSTALL REAR DISC (See page BR-58)



7. INSTALL REAR BRAKE CYLINDER ASSEMBLY LH (See page BR-61)



8. **INSTALL REAR AXLE SHAFT NUT (for 4WD)**
   (a) Install a new hub nut.
   Torque: 216 N*m (2,203 kgf*cm, 159 ft.*lbf)
   (b) Using a chisel and hammer, stake the hub nut.
9. **INSTALL REAR WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
10. **STABILIZE SUSPENSION (See page SP-37)**
11. **TIGHTEN FRONT SHOCK ABSORBER ASSEMBLY LH (See page SP-37)**
12. **TIGHTEN REAR SUSPENSION NO. 1 ARM ASSEMBLY LH (See page SP-43)**
13. **INSPECT REAR WHEEL ALIGNMENT**
    (a) Inspect the rear wheel alignment (see page SP-7).
14. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
15. **CHECK SPEED SENSOR SIGNAL**
    (a) Check the speed sensor signal (see page BC-44).

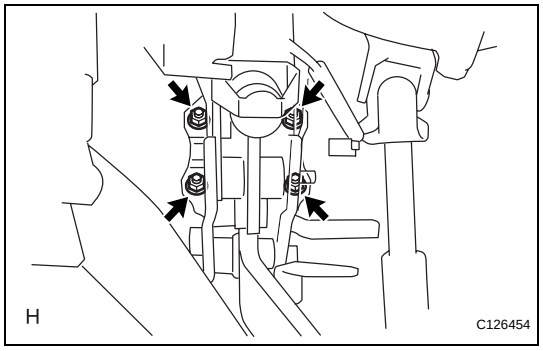
HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. **REMOVE REAR WHEEL**
2. **REMOVE REAR DISC BRAKE CYLINDER ASSEMBLY LH (See page BR-55)**
3. **REMOVE REAR DISC (See page BR-57)**
4. **REMOVE REAR AXLE HUB BOLT**
   (a) Using SST and a brass bar or equivalent to hold the axle shaft, remove the hub bolt that needs to be replaced.
   SST 09650-17011



5. **INSTALL REAR AXLE HUB BOLT**
   (a) Insert a new hub bolt into the bolt hole. Set a plate washer and nut on the hub bolt end.
   (b) Using a brass bar or equivalent to hold the rear axle, install the hub bolt by tightening the nut. Then remove the nut and plate washer.
6. **INSTALL REAR DISC (See page BR-58)**
7. **INSTALL REAR DISC BRAKE CYLINDER ASSEMBLY LH (See page BR-61)**
8. **INSTALL REAR WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

AH

REMOVAL

(2005/11-2006/01)

1. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY**
   (a) Remove the air cleaner case (see page EM-98).
   HINT:
   Refer to the procedures from the removal of the purge VSV up until the removal of the air cleaner case.
2. **DRAIN BRAKE FLUID**
   NOTICE:
   Wash off brake fluid immediately if it comes in contact with any painted surface.
3. **DISCONNECT BRAKE LINES (See page BC-181)**
4. **REMOVE ABS AND TRACTION ACTUATOR ASSEMBLY WITH BRACKET (See page BC-182)**
5. **REMOVE BRAKE MASTER CYLINDER SUB-ASSEMBLY (See page BR-21)**
6. **DISCONNECT VACUUM HOSE**
7. **REMOVE PUSH ROD PIN**
   (a) Remove the clip from the push rod pin.
   (b) Remove the push rod pin from the push rod clevis.
8. **REMOVE BRAKE MASTER CYLINDER PUSH ROD CLEVIS**
   (a) Loosen the push rod clevis lock nut.
   (b) Remove the push rod clevis.
9. **REMOVE BRAKE BOOSTER ASSEMBLY**
   (a) Remove the 4 nuts.
   (b) Pull out the booster with gasket.
10. **REMOVE BRAKE BOOSTER GASKET**
11. **REMOVE BRAKE VACUUM CHECK VALVE ASSEMBLY**
12. **REMOVE CHECK VALVE GROMMET**

BR

REMOVAL

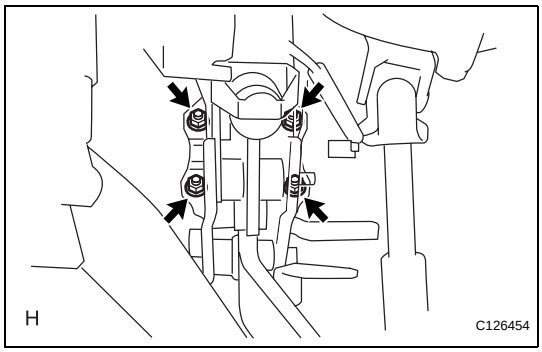
(2006/01-)

1. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (for 2AZ-FE)**
   (a) Remove the air cleaner case (see page EM-98).
   HINT:
   Refer to the procedures from the removal of the purge VSV up until the removal of the air cleaner case.

2. **REMOVE AIR CLEANER CASE (for 2GR-FE)**
   (a) Remove the air cleaner case (see page EM-21).
   HINT:
   Refer to the procedures from the removal of the air cleaner cap sub-assembly up until the removal of the air cleaner case.

3. **DRAIN BRAKE FLUID**
   NOTICE:
   Wash off brake fluid immediately if it comes in contact with any painted surface.

4. **DISCONNECT BRAKE LINES (See page BC-183)**



5. **REMOVE ABS AND TRACTION ACTUATOR ASSEMBLY WITH BRACKET (See page BC-184)**

6. **REMOVE BRAKE MASTER CYLINDER SUB-ASSEMBLY (See page BR-22)**

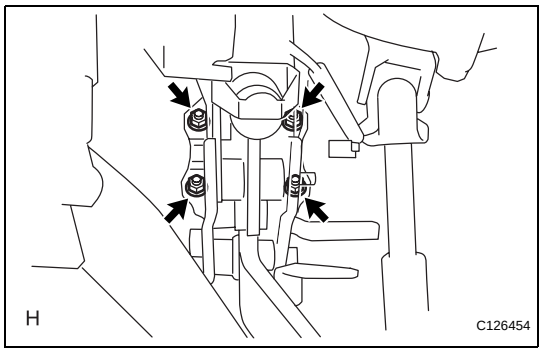
7. **DISCONNECT VACUUM HOSE**

8. **REMOVE PUSH ROD PIN**
   (a) Remove the clip from the push rod pin.
   (b) Remove the push rod pin from the push rod clevis.

9. **REMOVE BRAKE MASTER CYLINDER PUSH ROD CLEVIS**
   (a) Loosen the push rod clevis lock nut.
   (b) Remove the push rod clevis.

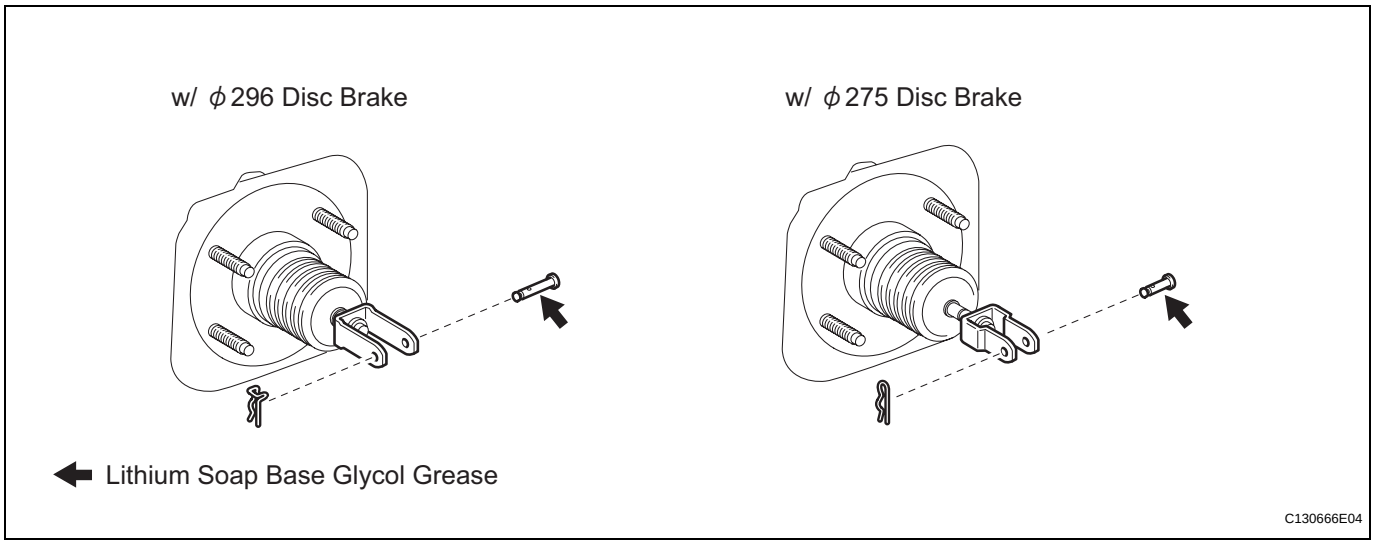
10. **REMOVE BRAKE BOOSTER ASSEMBLY**
    (a) Remove the 4 nuts.
    (b) Pull out the booster with gasket.

11. **REMOVE BRAKE BOOSTER GASKET**



12. **REMOVE BRAKE VACUUM CHECK VALVE ASSEMBLY**

13. **REMOVE CHECK VALVE GROMMET**



INSTALLATION

(2005/11-2006/01)

1. **INSTALL CHECK VALVE GROMMET**
   (a) Install the grommet to the booster.
2. **INSTALL BRAKE VACUUM CHECK VALVE ASSEMBLY**
   (a) Install the check valve to the grommet.
3. **INSTALL BRAKE BOOSTER GASKET**
   (a) Install a new gasket to the booster.
4. **INSTALL BRAKE MASTER CYLINDER PUSH ROD CLEVIS**
   (a) Install the push rod clevis to the booster.
   (b) Temporarily tighten the push rod clevis lock nut.
   HINT:
   The push rod clevis lock nut will be tightened to a torque specification in the "CHECK AND ADJUST BRAKE PEDAL HEIGHT" procedures.

5. **INSTALL BRAKE BOOSTER ASSEMBLY**
   (a) Install the booster with the 4 nuts.
   Torque: 12.7 N*m (130 kgf*cm, 9 ft.*lbf)
6. **INSTALL PUSH ROD PIN**

   (a) Apply lithium soap base glycol grease to the push rod pin.
   (b) Install the push rod pin to the push rod clevis.
   NOTICE:
   The push rod pin must be installed as shown in the illustration.

BR

(c) Install the clip to the push rod pin.
NOTICE:
The clip must be installed as shown in the illustration.

7. **CHECK AND ADJUST BRAKE BOOSTER PUSH ROD (See page BR-24)**
8. **CONNECT VACUUM HOSE**
   (a) Connect the vacuum hose to the check valve.
9. **INSTALL BRAKE MASTER CYLINDER SUB-ASSEMBLY (See page BR-25)**
10. **INSTALL ABS AND TRACTION ACTUATOR ASSEMBLY WITH BRACKET (See page BC-186)**
11. **CONNECT BRAKE LINES (See page BC-187)**
12. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-6)**
13. **BLEED AIR FROM BRAKE MASTER CYLINDER (See page BR-7)**
14. **BLEED AIR FROM BRAKE LINE (See page BR-7)**
15. **BLEED AIR FROM ABS AND TRACTION ACTUATOR ASSEMBLY (See page BR-8)**
16. **CHECK AND ADJUST BRAKE PEDAL HEIGHT (See page BR-13)**
17. **CHECK BRAKE PEDAL FREE PLAY (See page BR-14)**
18. **CHECK BRAKE PEDAL RESERVE DISTANCE (See page BR-14)**
19. **CHECK BRAKE FLUID LEVEL IN RESERVOIR (See page BR-6)**
20. **CHECK FOR BRAKE FLUID LEAKAGE**
21. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY**
    (a) Install the air cleaner case (see page EM-105).
    HINT:
    Refer to the procedures from the installation of the air cleaner case up until the installation of the purge VSV.

INSTALLATION

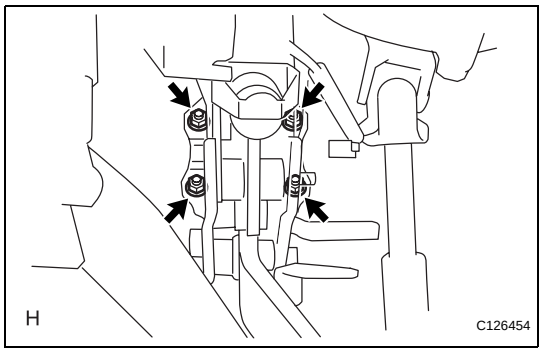
(2006/01-)

1. INSTALL CHECK VALVE GROMMET

(a) Install the grommet to the booster.

2. INSTALL BRAKE VACUUM CHECK VALVE ASSEMBLY

(a) Install the check valve to the grommet.

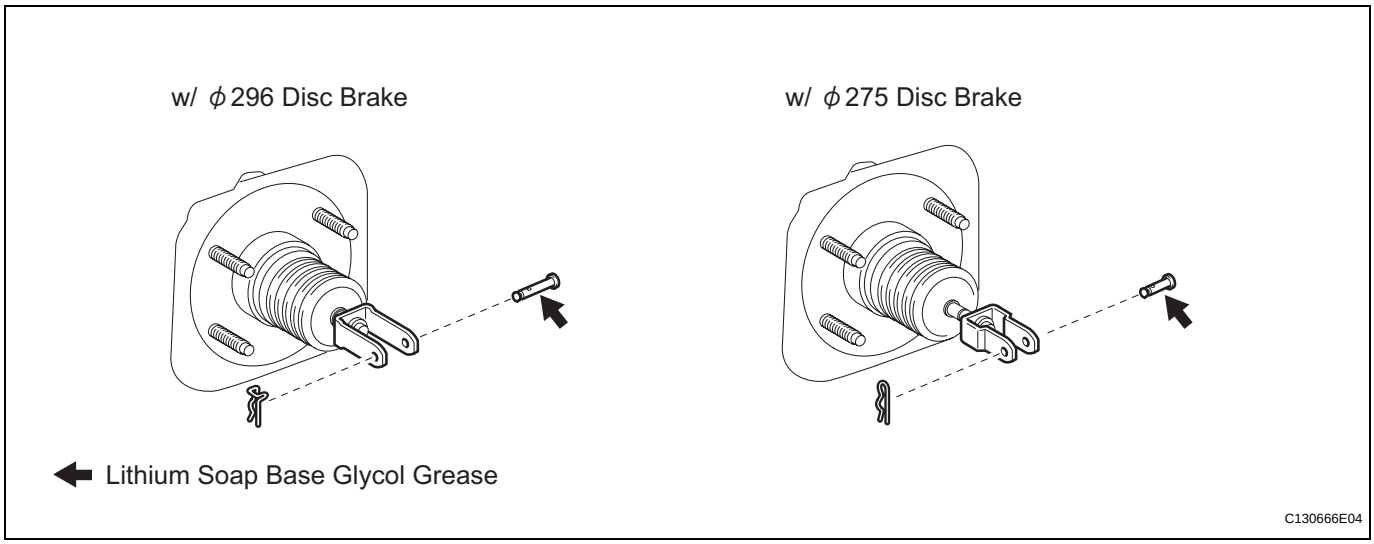


3. INSTALL BRAKE BOOSTER GASKET

(a) Install a new gasket to the booster.

4. INSTALL BRAKE MASTER CYLINDER PUSH ROD CLEVIS

(a) Install the push rod clevis to the booster.



(b) Temporarily tighten the push rod clevis lock nut.
HINT:
The push rod clevis lock nut will be tightened to a torque specification in the "CHECK AND ADJUST BRAKE PEDAL HEIGHT" procedures.

5. INSTALL BRAKE BOOSTER ASSEMBLY

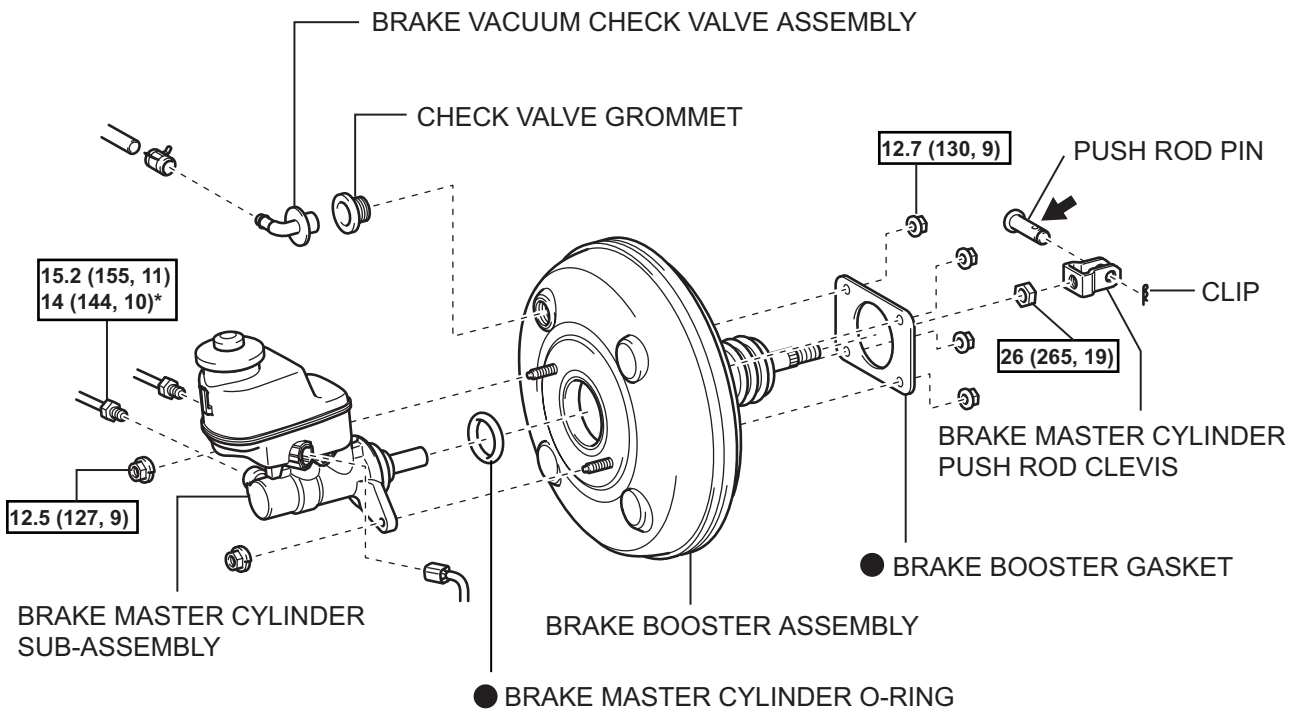
(a) Install the booster with the 4 nuts.
Torque: 12.7 N*m (130 kgf*cm, 9 ft.*lbf)

6. INSTALL PUSH ROD PIN

(a) Apply lithium soap base glycol grease to the push rod pin.

(b) Install the push rod pin to the push rod clevis.
NOTICE:
The push rod pin must be installed as shown in the illustration.

BR



(c) Install the clip to the push rod pin.
NOTICE:
The clip must be installed as shown in the illustration.

7. **CHECK AND ADJUST BRAKE BOOSTER PUSH ROD (See page BR-24)**
8. **CONNECT VACUUM HOSE**
   (a) Connect the vacuum hose to the check valve.
9. **INSTALL BRAKE MASTER CYLINDER SUB-ASSEMBLY (See page BR-26)**
10. **INSTALL ABS AND TRACTION ACTUATOR ASSEMBLY WITH BRACKET (See page BC-187)**
11. **CONNECT BRAKE LINES (See page BC-188)**
12. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-6)**
13. **BLEED AIR FROM BRAKE MASTER CYLINDER (See page BR-7)**
14. **BLEED AIR FROM BRAKE LINE (See page BR-7)**
15. **BLEED AIR FROM ABS AND TRACTION ACTUATOR ASSEMBLY (See page BR-8)**
16. **CHECK AND ADJUST BRAKE PEDAL HEIGHT (See page BR-15)**
17. **CHECK BRAKE PEDAL FREE PLAY (See page BR-15)**
18. **CHECK BRAKE PEDAL RESERVE DISTANCE (See page BR-16)**
19. **CHECK BRAKE FLUID LEVEL IN RESERVOIR (See page BR-6)**
20. **CHECK FOR BRAKE FLUID LEAKAGE**
21. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (for 2AZ-FE)**
    (a) Install the air cleaner case (see page EM-105).
    HINT:
    Refer to the procedures from the installation of the air cleaner case up until the installation of the purge VSV.
22. **INSTALL AIR CLEANER CASE (for 2GR-FE)**
    (a) Install the air cleaner case (see page EM-31).
    HINT:
    Refer to the procedures from the installation of the air cleaner case up until the installation of the air cleaner cap sub-assembly.

ON-VEHICLE INSPECTION

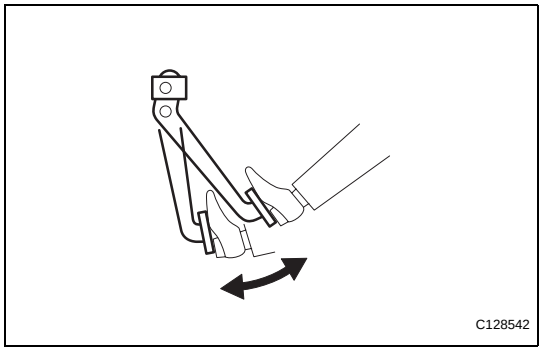
1. CHECK BRAKE BOOSTER ASSEMBLY

(a) Airtightness check.

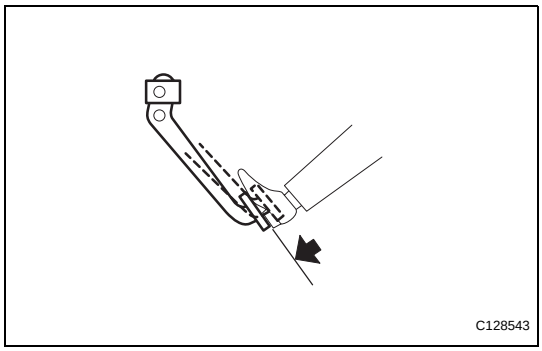
(1) Start the engine and stop it after 1 or 2 minutes. Slowly depress the brake pedal several times.

(2) Make sure the booster is airtight. Check that the distance the pedal can be depressed decreases gradually in correlation with each subsequent press of the pedal.
If the pedal is not as specified, check the check valve.
If the check valve is normal, replace the booster.

(3) Start the engine. Depress and hold down the pedal, and stop the engine.

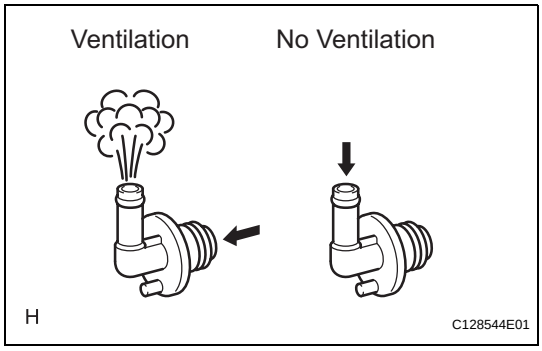


(4) Make sure the booster is airtight. Hold the pedal for 30 seconds and check that there is no change in the pedal reserve distance.
If the pedal is not as specified, check the check valve.



If the check valve is normal, replace the booster.

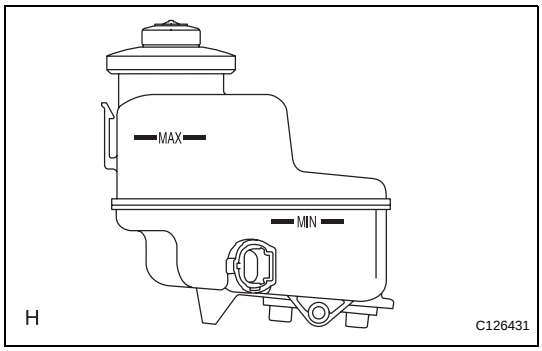
(b) Operation check.



(1) Stop the engine.

(2) Depress the pedal several times and check that there is no change in the pedal reserve distance.

(3) Depress and hold down the pedal, and start the engine. Check that the pedal can only be depressed slightly.
If the pedal is not as specified, check the check valve.
If the check valve is normal, replace the booster.



2. CHECK BRAKE VACUUM CHECK VALVE ASSEMBLY

(a) Check the check valve.

(1) Slide the clip and disconnect the vacuum hose.

(2) Remove the check valve from the booster.

(3) Check that there is ventilation from the booster to the engine, and no ventilation from the engine to the booster.
If the results are not as specified, replace the check valve assembly.

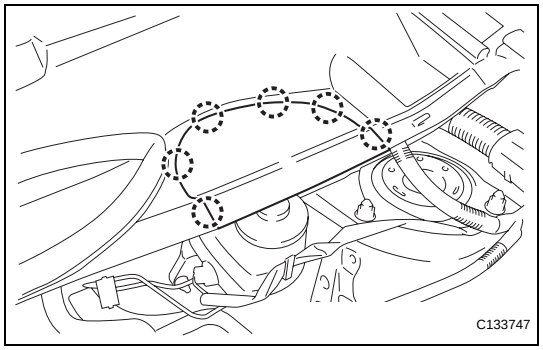
BRAKE FLUID

ON-VEHICLE INSPECTION

1. CHECK BRAKE FLUID LEVEL IN RESERVOIR

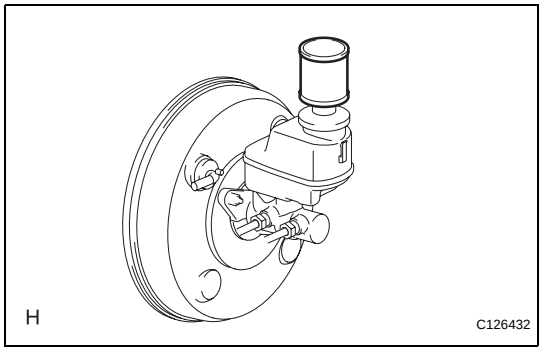
(a) Check the fluid level and add fluid if necessary.

Fluid:



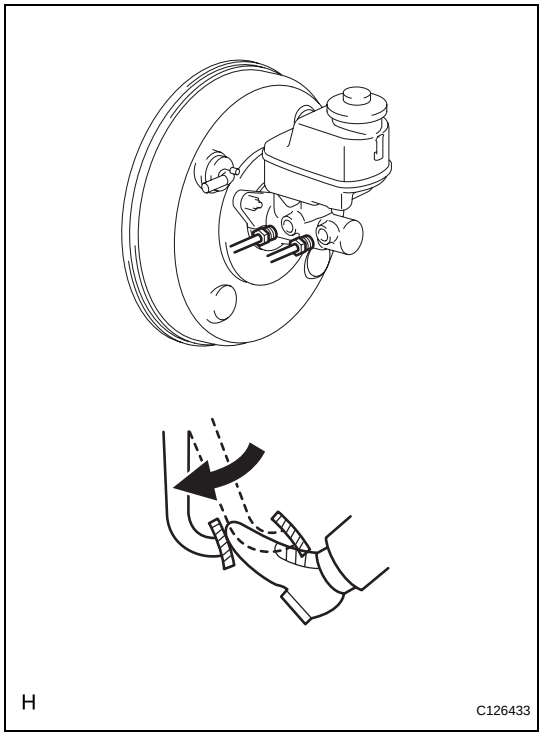
SAE J1703 or FMVSS No. 116 DOT3

HINT:



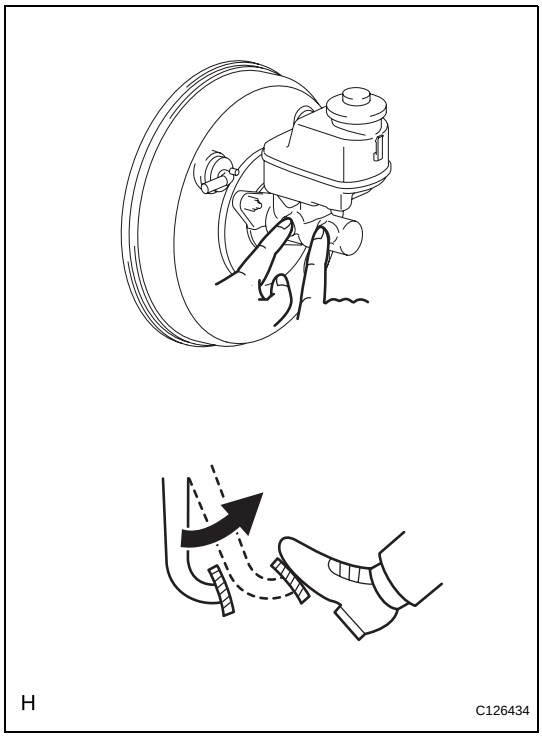
Add fluid to a level between the reservoir's MIN and MAX lines.

BLEEDING

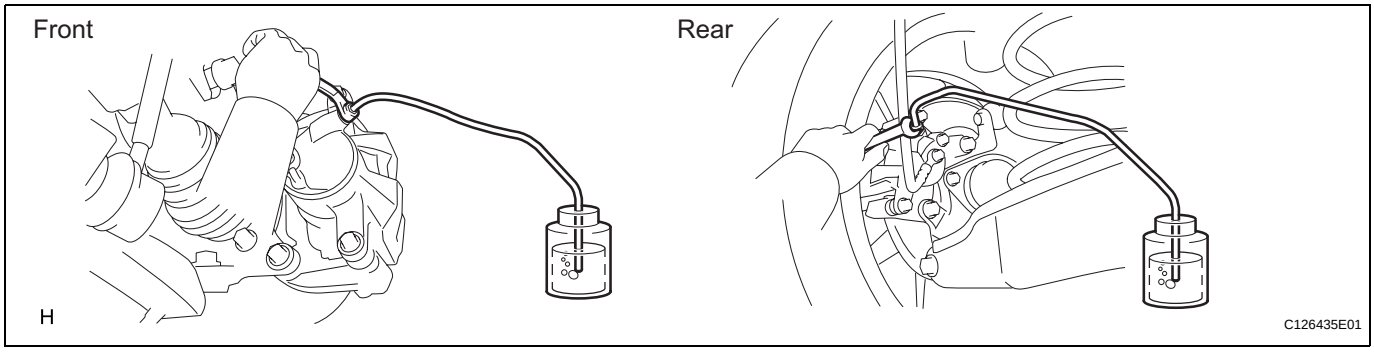


HINT:
If any work is performed on the brake system or if air in the brake lines is suspected, bleed air from the brake system.
NOTICE:
Wash off brake fluid immediately if it comes in contact with any painted surface.

1. REMOVE COWL TOP VENTILATOR LOUVER BRACKET LH
(a) Detach the 6 claws and remove the bracket.

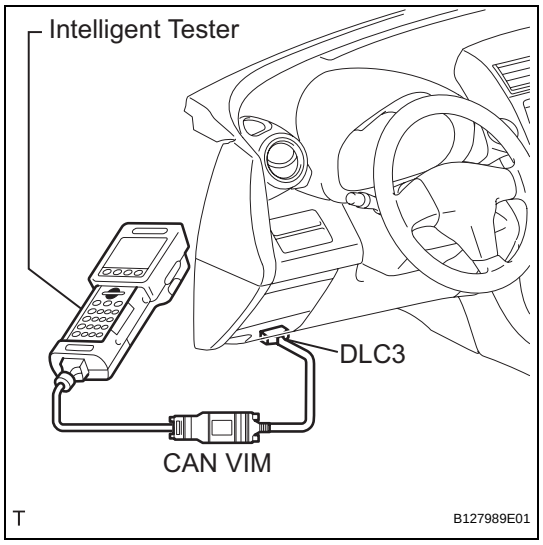


2. FILL RESERVOIR WITH BRAKE FLUID
(a) Set the brake fluid can upside down on the reservoir.
Fluid:
SAE J1703 or FMVSS No. 116 DOT3
NOTICE:
- **Make sure there is sufficient brake fluid in the can.**
- **After adding brake fluid, make sure the reservoir is sufficiently full.**



3. BLEED AIR FROM BRAKE MASTER CYLINDER
HINT:
If the master cylinder has been disassembled or if the reservoir becomes empty, bleed air from the master cylinder.
(a) Using SST, disconnect the 2 brake lines from the master cylinder.
SST 09023-00101
(b) Slowly depress and hold the brake pedal.

BR



(c) Block the outer holes with your fingers, and release the pedal.
(d) Repeat the 2 previous steps 3 or 4 times.
(e) Using SST, connect the 2 brake lines to the master cylinder.
SST 09023-00101
Torque: 15.2 N*m (155 kgf*cm, 11 ft.*lbf) without SST
14 N*m (144 kgf*cm, 10 ft.*lbf) with SST
HINT:
Use a torque wrench with a fulcrum length of 30 cm (11.81 in.).

4. BLEED AIR FROM BRAKE LINE

(a) Remove the bleeder plug cap.
(b) Connect the vinyl tube to the bleeder plugs.
(c) Depress the brake pedal several times, and then loosen the bleeder plug with the pedal depressed.
(d) When fluid stops coming out, immediately tighten the bleeder plug. Then release the pedal.
(e) Repeat the 2 previous steps until all the air in the brake fluid is gone.
(f) Tighten the bleeder plug.
Torque: 8.3 N*m (85 kgf*cm, 73 in.*lbf)
(g) Install the cap.
(h) Bleed air from the brake line for each wheel by repeating the above procedures.

5. BLEED AIR FROM ABS AND TRACTION ACTUATOR ASSEMBLY
NOTICE:
After bleeding the air from the brake system, if the height or feel of the brake pedal cannot be obtained, perform air bleeding of the brake actuator with the intelligent tester by following the procedure below.
(a) Depress the brake pedal more than 20 times with the engine off.

(b) Connect the intelligent tester to the DLC3, and turn the ignition switch ON.
NOTICE:
Do not start the engine.

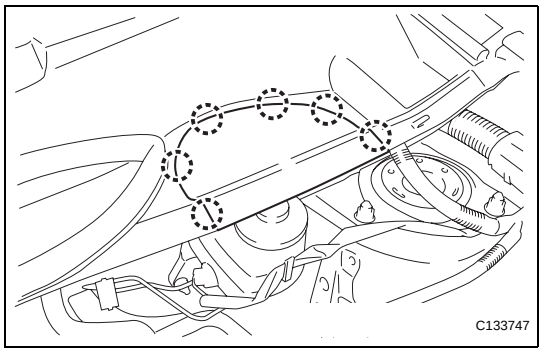
(c) Select AIR BLEEDING on the intelligent tester.
HINT:
Refer to the intelligent tester operator's manual for further details.

(d) Bleed the air out of the suction line.
NOTICE:
- **Perform the bleeding at the right front wheel and right rear wheel.**
- **Bleed the air by following the steps displayed on the intelligent tester.**

(1) Connect a vinyl tube to the bleeder plug at the right front wheel or the right rear wheel.
(2) Loosen the bleeder plug.
(3) Operate the brake actuator to bleed the air using the intelligent tester.
NOTICE:
Release the brake pedal at this time.
HINT:
This operation stops automatically after 4 seconds.
(4) Check if the operation has stopped by referring to the intelligent tester display.
(5) Temporarily tighten the bleeder plug.
(6) Repeat the 4 previous steps until all air in the fluid is completely bled out.
(7) Tighten the bleeder plug.
Torque: 8.3 N*m (85 kgf*cm, 73 in.*lbf)
(8) Repeat all of the above procedures for the right rear wheel to bleed the air out of the suction line.

(e) Bleed the air out of the pressure reduction line.
NOTICE:
- **Perform the bleeding at the 4 wheels.**
- **Bleed the air by following the steps displayed on the intelligent tester.**

(1) Connect a vinyl tube to either one of the bleeder plugs.
(2) Loosen the bleeder plug.
(3) Using the intelligent tester, operate the brake actuator assembly, completely depress the brake pedal and hold it there.
NOTICE:
- **During this procedure, the pedal will feel heavy, but completely depress it so that the brake fluid comes out of the bleeder plug.**
- **Depress and hold the brake pedal. Do not depress and release the pedal repeatedly.**



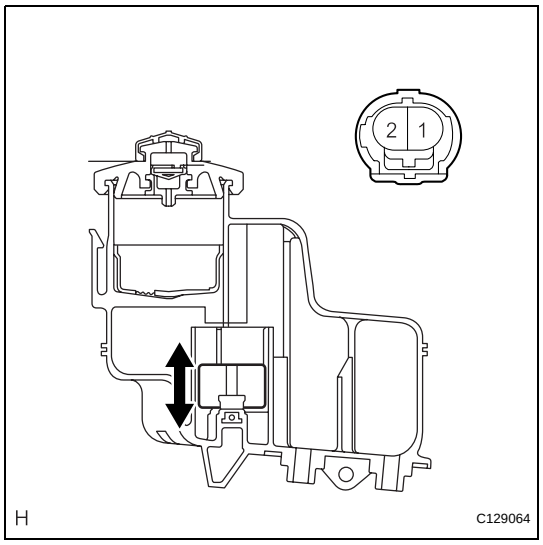
HINT:
The operation stops automatically after 4 seconds. When performing this procedure continuously, set an interval of at least 20 seconds.

(4) Tighten the bleeder plug, then release the brake pedal.
(5) Repeat the 3 previous steps until all air in the fluid is completely bled out.
(6) Tighten the bleeder plug.
Torque: 8.3 N*m (85 kgf*cm, 73 in.*lbf)
(7) Repeat all of the above procedures for the other wheels to bleed the air out of the pressure reduction line.

6. CHECK BRAKE FLUID LEVEL IN RESERVOIR (See page BR-6)

7. INSTALL COWL TOP VENTILATOR LOUVER BRACKET LH

(a) Attach the 6 claws to install the bracket.



ON-VEHICLE INSPECTION

1. CHECK BRAKE FLUID LEVEL WARNING SWITCH

(a) Remove the reservoir filler cap and strainer.

(b) Disconnect the brake fluid level warning switch connector.

(c) Measure the resistance of the switch.
HINT:
There is a float inside the reservoir. Its position can be changed by increasing or decreasing the brake fluid level.
Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Float up (Switch OFF)	10 kΩ or higher
1 - 2	Float down (Switch ON)	Below 1 Ω

If the value is not as specified, replace the brake master cylinder reservoir sub-assembly.

(d) Add brake fluid to the MAX level.

REMOVAL

(2005/11-2006/01)

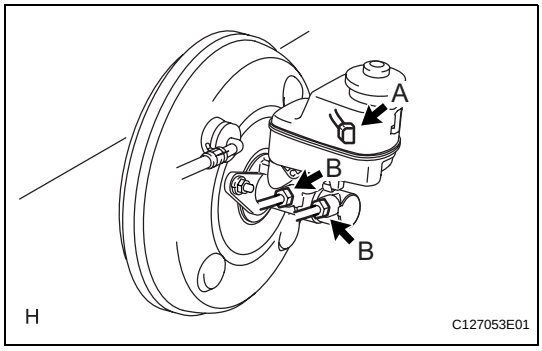
NOTICE:

- **The master cylinder and piston are designed so that the piston can easily fall out. Prevent this by making sure that the tip of the master cylinder points downward when handling the master cylinder.**
- **Make sure foreign matter does not attach to the master cylinder's piston. If foreign matter attaches, clean it off with a cloth. Then apply lithium soap base glycol grease to the entire outer circumference contact surface area of the piston.**

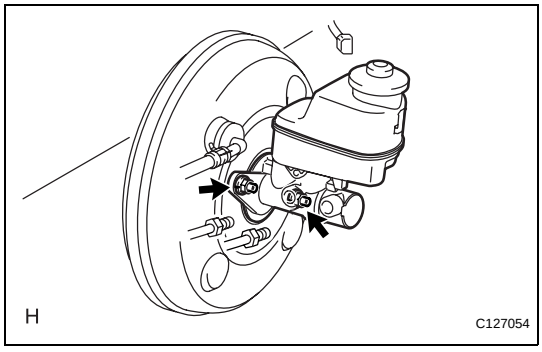
1. REMOVE AIR CLEANER CASE SUB-ASSEMBLY

(a) Remove the air cleaner case (see page EM-98).
HINT:
Refer to the procedures from the removal of the purge VSV up until the removal of the air cleaner case.

2. DRAIN BRAKE FLUID



NOTICE:
Wash off brake fluid immediately if it comes in contact with any painted surface.



3. REMOVE BRAKE MASTER CYLINDER SUB-ASSEMBLY

(a) Release the vacuum pressure in the brake booster as follows.
(1) Stop the engine.
(2) Depress the brake pedal several times.

(b) Disconnect the brake fluid level warning switch connector labeled A.

(c) Using SST, disconnect the 2 brake lines labeled B from the master cylinder.
SST 09023-00101

(d) Remove the 2 nuts.

(e) Pull out the master cylinder from the brake booster.
NOTICE:
- **The master cylinder and piston are designed so that the piston can easily fall out. Prevent this by making sure that the tip of the master cylinder points downward when handling the master cylinder.**

- **Make sure foreign matter does not attach to the master cylinder's piston. If foreign matter attaches, clean it off with a cloth. Then apply lithium soap base glycol grease to the entire outer circumference contact surface area of the piston.**

(f) Remove the O-ring from the master cylinder.

REMOVAL

(2006/01-)

NOTICE:

- **The master cylinder and piston are designed so that the piston can easily fall out. Prevent this by making sure that the tip of the master cylinder points downward when handling the master cylinder.**
- **Make sure foreign matter does not attach to the master cylinder's piston. If foreign matter attaches, clean it off with a cloth. Then apply lithium soap base glycol grease to the entire outer circumference contact surface area of the piston.**

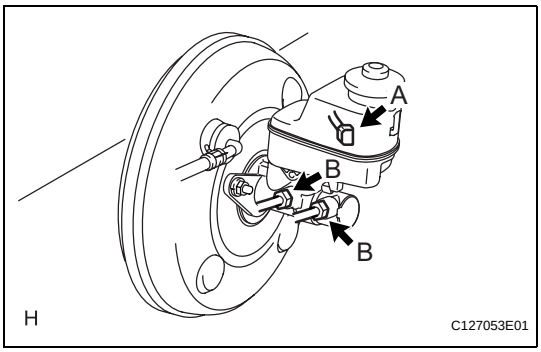
1. REMOVE AIR CLEANER CASE SUB-ASSEMBLY (for 2AZ-FE)

(a) Remove the air cleaner case (see page EM-98).
HINT:
Refer to the procedures from the removal of the purge VSV up until the removal of the air cleaner case.

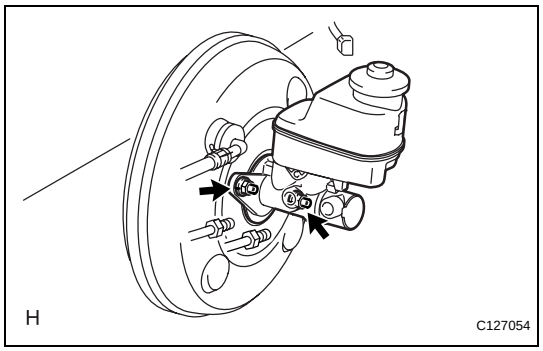
2. REMOVE AIR CLEANER CASE (for 2GR-FE)

(a) Remove the air cleaner case (see page EM-21).
HINT:
Refer to the procedures from the removal of the air cleaner cap sub-assembly up until the removal of the air cleaner case.

3. DRAIN BRAKE FLUID



NOTICE:
Wash off brake fluid immediately if it comes in contact with any painted surface.



4. REMOVE BRAKE MASTER CYLINDER SUB-ASSEMBLY

(a) Release the vacuum pressure in the brake booster as follows.
(1) Stop the engine.
(2) Depress the brake pedal several times.

(b) Disconnect the brake fluid level warning switch connector labeled A.

(c) Using SST, disconnect the 2 brake lines labeled B from the master cylinder.
SST 09023-00101

(d) Remove the 2 nuts.

(e) Pull out the master cylinder from the brake booster.

NOTICE:

- **The master cylinder and piston are designed so that the piston can easily fall out. Prevent this by making sure that the tip of the master cylinder points downward when handling the master cylinder.**
- **Make sure foreign matter does not attach to the master cylinder's piston. If foreign matter attaches, clean it off with a cloth. Then apply lithium soap base glycol grease to the entire outer circumference contact surface area of the piston.**

(f) Remove the O-ring from the master cylinder.

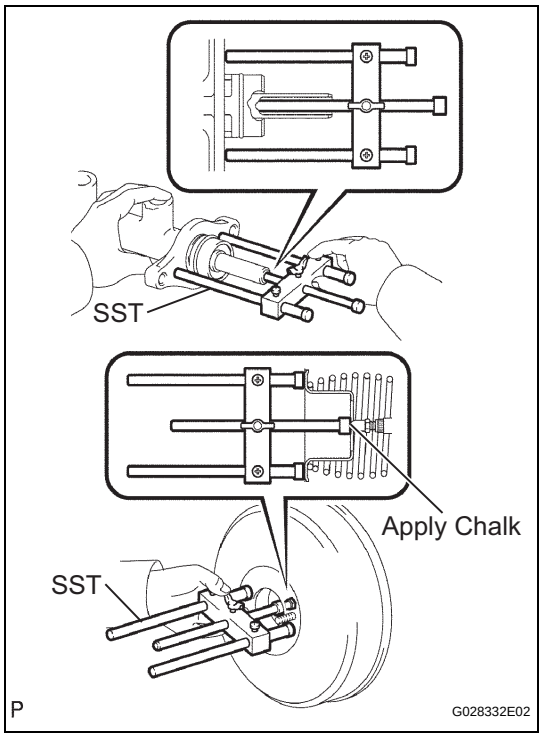
DISASSEMBLY

NOTICE:

- **The master cylinder and piston are designed so that the piston can easily fall out. Prevent this by making sure to tip of the master cylinder points downward when handling the master cylinder.**
- **Make sure foreign matter does not attach to the master cylinder's piston. If foreign matter attaches, clean it off with a cloth. Then apply lithium soap base glycol grease to the entire outer circumference contact surface area of the piston.**

1. **REMOVE BRAKE MASTER CYLINDER RING PIN**
2. **REMOVE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY**
3. **REMOVE MASTER CYLINDER RESERVOIR GROMMET**
4. **REMOVE BRAKE MASTER CYLINDER RESERVOIR FILLER CAP ASSEMBLY**
5. **REMOVE BRAKE MASTER CYLINDER RESERVOIR STRAINER**

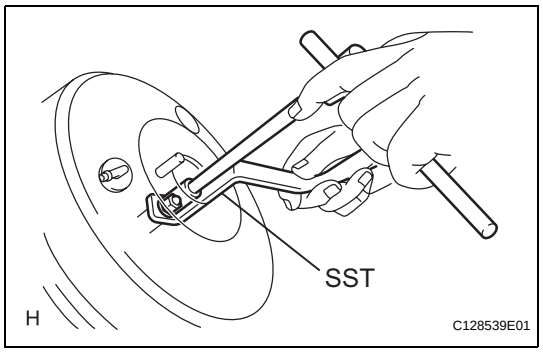
INSPECTION



NOTICE:

- **The master cylinder and piston are designed so that the piston can easily fall out. Prevent this by making sure that the tip of the master cylinder points downward when handling the master cylinder.**
- **Make sure foreign matter does not attach to the master cylinder's piston. If foreign matter attaches, clean it off with a cloth. Then apply lithium soap base glycol grease to the entire outer circumference contact surface area of the piston.**

1. INSPECT AND ADJUST BRAKE BOOSTER PUSH ROD



HINT:

Adjust the booster push rod when the master cylinder is replaced with a new one. Adjustment is not necessary when the master cylinder is reinstalled and the booster is replaced with a new one.

(a) Set SST on the master cylinder and lower the rod of SST until it just touches the piston.
SST 09737-00013

(b) Apply chalk to the flat tip of the SST rod. Turn SST upside down and measure the clearance between the brake booster push rod and SST.
Standard clearance:
-0.21 to 0 mm (-0.0083 to 0 in.)
If there is clearance between the SST main body and the shell of the brake booster, the push rod is protruding too far. If the chalk does not stick to the tip of the brake booster push rod, the push rod protrusion is insufficient.

(c) If the clearance is not within the standard, adjust the length by holding the rod using SST and turning the tip of the rod using a 7 mm socket driver.
SST 09737-00020
NOTICE:
Check the push rod clearance again after adjusting.

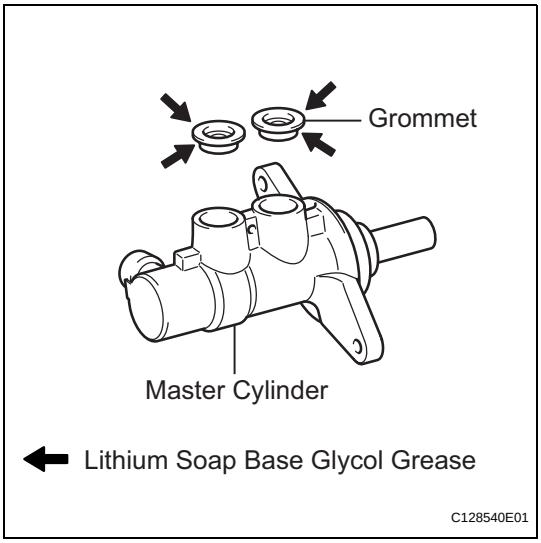
BR

REASSEMBLY

NOTICE:

- **The master cylinder and piston are designed so that the piston can easily fall out. Prevent this by making sure to tip of the master cylinder points downward when handling the master cylinder.**
- **Make sure foreign matter does not attach to the master cylinder's piston. If foreign matter attaches, clean it off with a cloth. Then apply lithium soap base glycol grease to the entire outer circumference contact surface area of the piston.**

1. INSTALL BRAKE MASTER CYLINDER RESERVOIR STRAINER



2. INSTALL BRAKE MASTER CYLINDER RESERVOIR FILLER CAP ASSEMBLY

3. INSTALL MASTER CYLINDER RESERVOIR GROMMET

(a) Apply lithium soap base glycol grease to 2 new grommets, and then install them to the master cylinder.

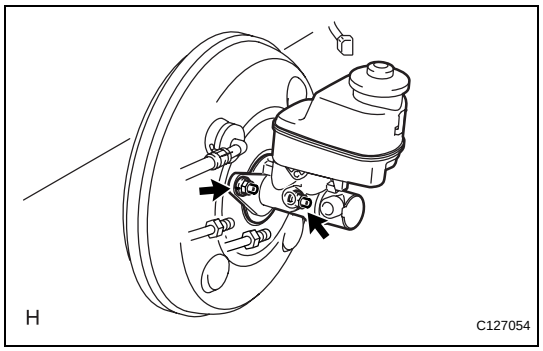
4. INSTALL BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY

5. INSTALL BRAKE MASTER CYLINDER RING PIN

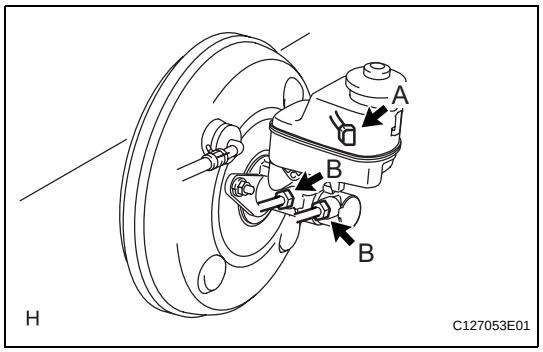
INSTALLATION

(2005/11-2006/01)

1. **INSTALL BRAKE MASTER CYLINDER SUB-ASSEMBLY**



NOTICE:



- **The master cylinder and piston are designed so that the piston can easily fall out. Prevent this by making sure that the tip of the master cylinder points downward when handling the master cylinder.**
- **Make sure foreign matter does not attach to the master cylinder's piston. If foreign matter attaches, clean it off with a cloth. Then apply lithium soap base glycol grease to the entire outer circumference contact surface area of the piston.**

(a) Install a new O-ring to the master cylinder.

(b) Install the master cylinder to the booster with the 2 nuts.

Torque: 12.5 N*m (127 kgf*cm, 9 ft.*lbf)

(c) Using SST, connect the 2 brake lines labeled B to the master cylinder.

SST 09023-00101

Torque: 15.2 N*m (155 kgf*cm, 11 ft.*lbf) without SST

14 N*m (144 kgf*cm, 10 ft.*lbf) with SST

HINT:

Use a torque wrench with a fulcrum length of 30 cm (11.81 in.).

(d) Connect the brake fluid level warning switch connector labeled A to the master cylinder.

2. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-6)**
3. **BLEED AIR FROM BRAKE MASTER CYLINDER (See page BR-7)**
4. **BLEED AIR FROM BRAKE LINE (See page BR-7)**
5. **BLEED AIR FROM ABS AND TRACTION ACTUATOR ASSEMBLY (See page BR-8)**
6. **CHECK BRAKE FLUID LEVEL IN RESERVOIR (See page BR-6)**
7. **CHECK FOR BRAKE FLUID LEAKAGE**

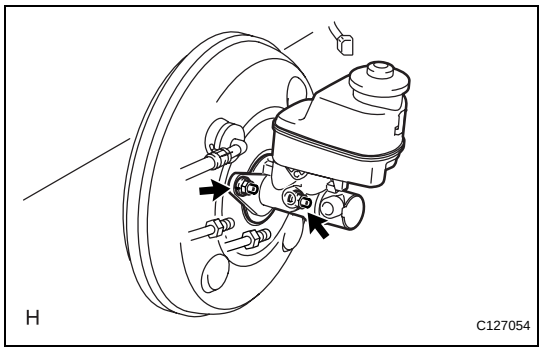
8. INSTALL AIR CLEANER CASE SUB-ASSEMBLY

(a) Install the air cleaner case (see page EM-105).
HINT:
Refer to the procedures from the installation of the air cleaner case up until the installation of the purge VSV.

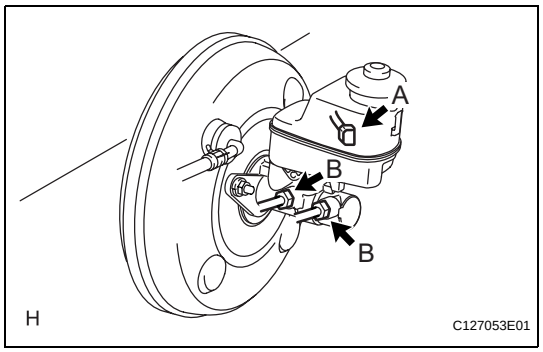
INSTALLATION

(2006/01-)

1. **INSTALL BRAKE MASTER CYLINDER SUB-ASSEMBLY**



NOTICE:



- **The master cylinder and piston are designed so that the piston can easily fall out. Prevent this by making sure that the tip of the master cylinder points downward when handling the master cylinder.**
- **Make sure foreign matter does not attach to the master cylinder's piston. If foreign matter attaches, clean it off with a cloth. Then apply lithium soap base glycol grease to the entire outer circumference contact surface area of the piston.**

(a) Install a new O-ring to the master cylinder.

(b) Install the master cylinder to the booster with the 2 nuts.

Torque: 12.5 N*m (127 kgf*cm, 9 ft.*lbf)

(c) Using SST, connect the 2 brake lines labeled B to the master cylinder.

SST 09023-00101

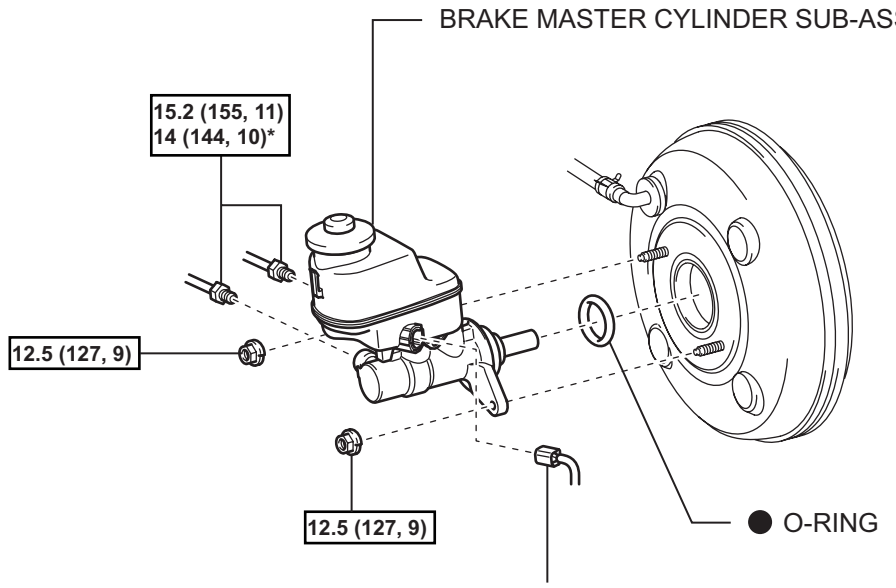
Torque: 15.2 N*m (155 kgf*cm, 11 ft.*lbf) without SST

14 N*m (144 kgf*cm, 10 ft.*lbf) with SST

HINT:

Use a torque wrench with a fulcrum length of 30 cm (11.81 in.).

(d) Connect the brake fluid level warning switch connector labeled A to the master cylinder.



2. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-6)**
3. **BLEED AIR FROM BRAKE MASTER CYLINDER (See page BR-7)**
4. **BLEED AIR FROM BRAKE LINE (See page BR-7)**
5. **BLEED AIR FROM ABS AND TRACTION ACTUATOR ASSEMBLY (See page BR-8)**
6. **CHECK BRAKE FLUID LEVEL IN RESERVOIR (See page BR-6)**
7. **CHECK FOR BRAKE FLUID LEAKAGE**

8. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (for 2AZ-FE)**
   (a) Install the air cleaner case (see page EM-105).
   HINT:
   Refer to the procedures from the installation of the air cleaner case up until the installation of the purge VSV.

9. **INSTALL AIR CLEANER CASE (for 2GR-FE)**
   (a) Install the air cleaner case (see page EM-31).
   HINT:
   Refer to the procedures from the installation of the air cleaner case up until the installation of the air cleaner cap sub-assembly.

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE INSTRUMENT PANEL SUB-ASSEMBLY**
   (a) Remove the instrument panel (see page IP-4).
3. **DISCONNECT CONNECTORS**
   (a) Disconnect the stop light switch connector.
   (b) w/ ϕ296 disc brake:
   Disconnect the brake pedal load sensing switch connector.
4. **REMOVE STOP LIGHT SWITCH ASSEMBLY**
   (a) Turn the switch counterclockwise and remove it.
5. **REMOVE PUSH ROD PIN**
   (a) Remove the clip from the push rod pin.
   (b) Remove the push rod pin from the push rod clevis.
6. **REMOVE BRAKE PEDAL SUPPORT ASSEMBLY**
   (a) Remove the bolt from the support.

   (b) Remove the 4 nuts and support.

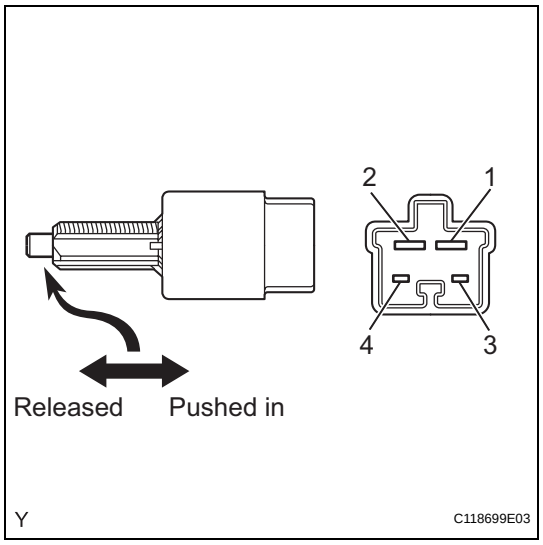
DISASSEMBLY

1. REMOVE STOP LIGHT SWITCH MOUNTING ADJUSTER

(a) Remove the adjuster from the support.

2. REMOVE BRAKE PEDAL PAD

(a) Remove the pad from the pedal.



INSPECTION

1. INSPECT STOP LIGHT SWITCH ASSEMBLY

(a) Measure the resistance of the switch.
Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 - 2	Switch pin released	Below 1 Ω
1 - 2	Switch pin pushed in	10 kΩ or higher

If the result is not as specified, replace the stop light switch assembly.

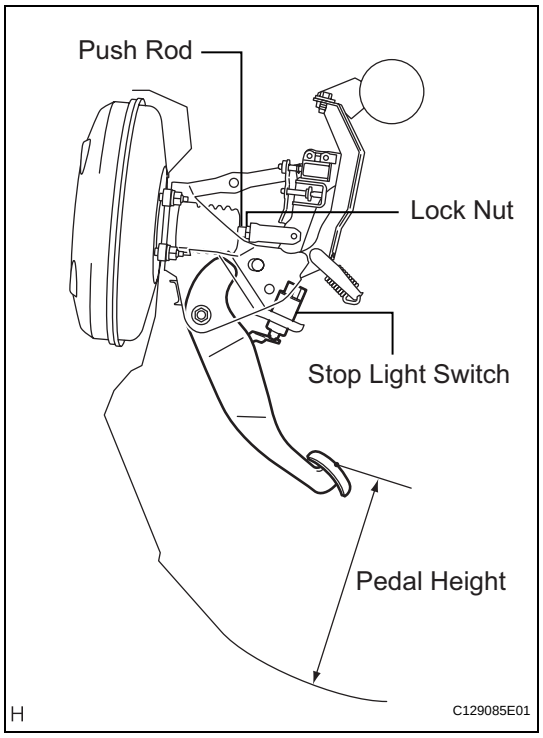
ADJUSTMENT

(2005/11-2006/01)

1. CHECK AND ADJUST BRAKE PEDAL HEIGHT

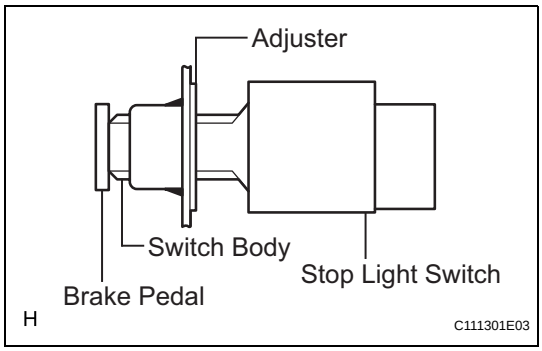
(a) Check the pedal height.
Standard pedal height from dash panel:
184.2 to 194.2 mm (7.252 to 7.646 in.)

(b) Adjust the pedal height.



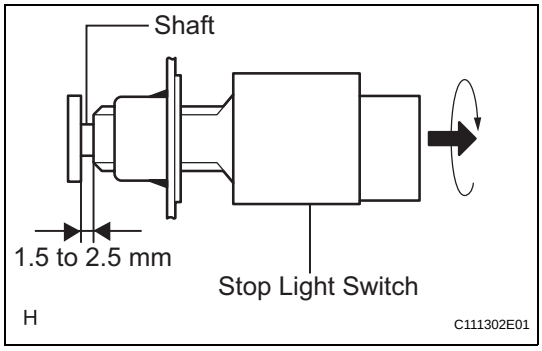
(1) Disconnect the connector from the stop light switch.

(2) Remove the switch.

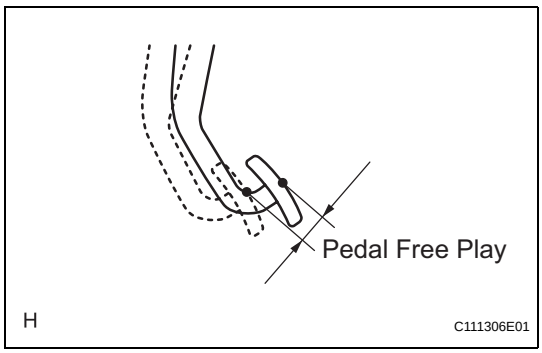


(3) Loosen the push rod clevis lock nut.

(4) Adjust the pedal height by turning the push rod.

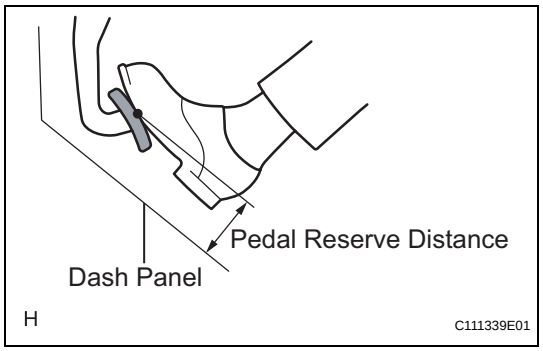


(5) Tighten the lock nut.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)



BR

(6) Insert the switch into the adjuster until the switch body touches the pedal.
NOTICE:
Do not depress the pedal.



(7) Turn the switch a quarter turn clockwise.
Torque: 1.5 N*m (15 kgf*cm, 13 in.*lbf) or less
NOTICE:
Do not depress the pedal.
(8) Connect the connector to the switch.
(9) Check the switch clearance.
Standard stop light switch clearance:
1.5 to 2.5 mm (0.059 to 0.098 in.)

2. CHECK BRAKE PEDAL FREE PLAY

(a) Stop the engine. Depress the pedal several times until there is no vacuum in the booster. Then release the pedal.
(b) Depress the pedal until resistance is felt.
(c) Check the pedal's free play by measuring the distance between the position in the previous step and the pedal's released position.
Standard pedal free play:
1.0 to 6.0 mm (0.039 to 0.236 in.)
If the free play is not as specified, check the switch clearance in the next step.
If the free play is as specified, proceed to the "CHECK BRAKE PEDAL RESERVE DISTANCE" procedure.
(d) Check the switch clearance.
Standard stop light switch clearance:
1.5 to 2.5 mm (0.059 to 0.098 in.)
If the clearance is not as specified, reinstall the switch and recheck the pedal's free play.
If the clearance is as specified, troubleshoot the brake system and proceed to the "CHECK BRAKE PEDAL RESERVE DISTANCE" procedure.

BR

3. CHECK BRAKE PEDAL RESERVE DISTANCE

(a) Release the parking brake lever. Start the engine.

(b) Depress the pedal and check the pedal reserve distance.

(1) Depress the pedal with a force of 490 N (50 kgf, 110 lbf).

(2) Measure the distance between the pedal and dash panel shown in the illustration.

Standard pedal reserve distance

Engine	Seat Type	Specified Condition
2AZ-FE	w/o 3rd seat	More than 95 mm (3.74 in.)
	w/ 3rd seat	More than 120 mm (4.72 in.)

If the distance is not as specified, troubleshoot the brake system.

ADJUSTMENT

(2006/01-)

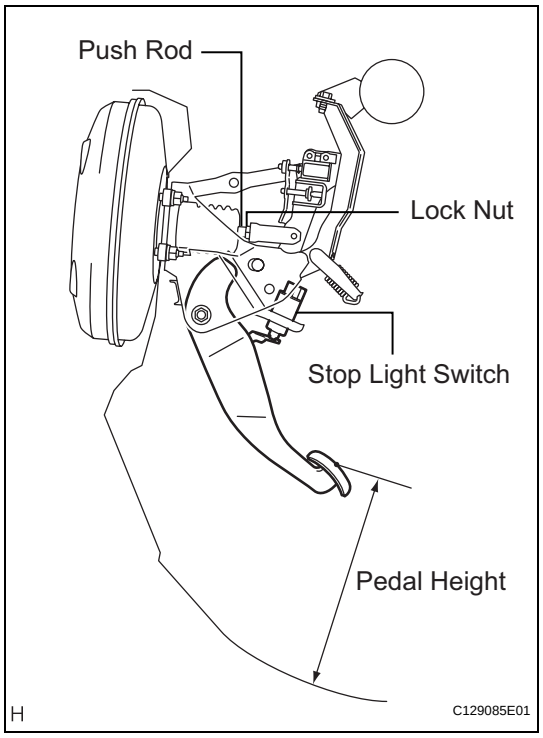
1. CHECK AND ADJUST BRAKE PEDAL HEIGHT

(a) Check the pedal height.

Standard pedal height from dash panel: 184.2 to 194.2 mm (7.252 to 7.646 in.)

(b) Adjust the pedal height.

(1) Disconnect the connector from the stop light switch.

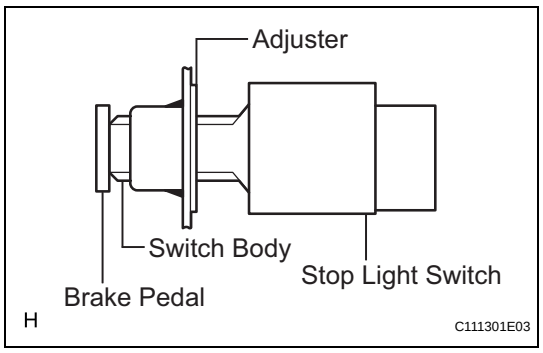


(2) Remove the switch.

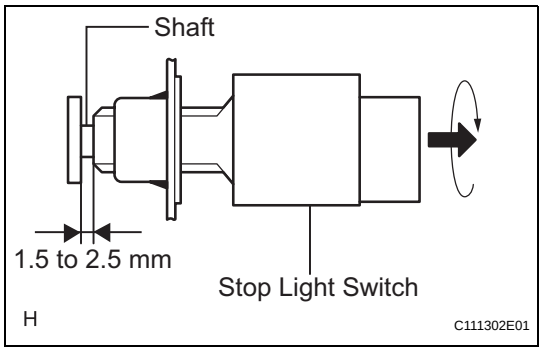
(3) Loosen the push rod clevis lock nut.

(4) Adjust the pedal height by turning the push rod.

(5) Tighten the lock nut.

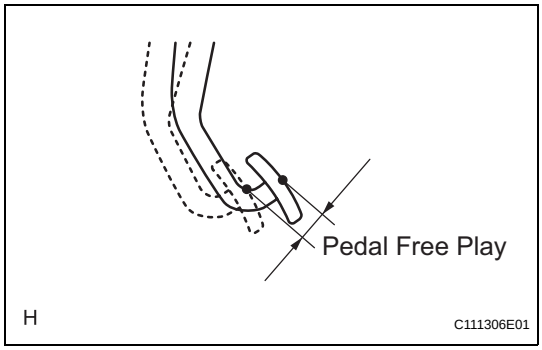


Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)

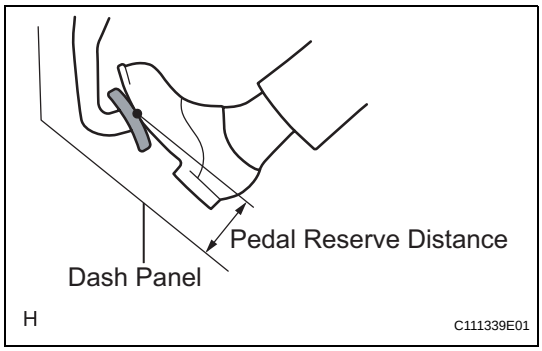


(6) Insert the switch into the adjuster until the switch body touches the pedal.

NOTICE:



Do not depress the pedal.



BR

(7) Turn the switch a quarter turn clockwise.
Torque: 1.5 N*m (15 kgf*cm, 13 in.*lbf) or less
NOTICE:
Do not depress the pedal.
(8) Connect the connector to the switch.
(9) Check the switch clearance.
Standard stop light switch clearance:
1.5 to 2.5 mm (0.059 to 0.098 in.)

2. CHECK BRAKE PEDAL FREE PLAY
(a) Stop the engine. Depress the pedal several times until there is no vacuum in the booster. Then release the pedal.
(b) Depress the pedal until resistance is felt.
(c) Check the pedal's free play by measuring the distance between the position in the previous step and the pedal's released position.
Standard pedal free play:
1.0 to 6.0 mm (0.039 to 0.236 in.)
If the free play is not as specified, check the switch clearance in the next step.
If the free play is as specified, proceed to the "CHECK BRAKE PEDAL RESERVE DISTANCE" procedure.
(d) Check the switch clearance.
Standard stop light switch clearance:
1.5 to 2.5 mm (0.059 to 0.098 in.)
If the clearance is not as specified, reinstall the switch and recheck the pedal's free play.
If the clearance is as specified, troubleshoot the brake system and proceed to the "CHECK BRAKE PEDAL RESERVE DISTANCE" procedure.

3. CHECK BRAKE PEDAL RESERVE DISTANCE
(a) Release the parking brake lever. Start the engine.
(b) Depress the pedal and check the pedal reserve distance.
(1) Depress the pedal with a force of 490 N (50 kgf, 110 lbf).
(2) Measure the distance between the pedal and dash panel shown in the illustration.
Standard pedal reserve distance

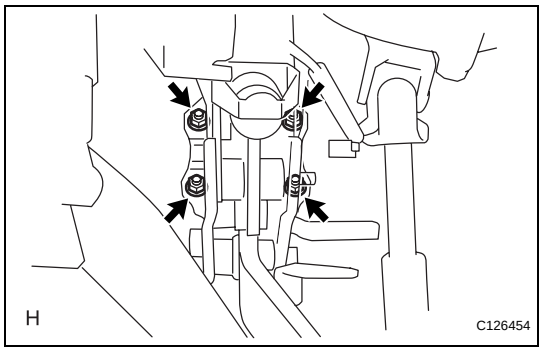
Engine	Specified Condition
2AZ-FE (w/o 3rd seat)	More than 95 mm (3.74 in.)
2AZ-FE (w/ 3rd seat)	More than 120 mm (4.72 in.)
2GR-FE	More than 120 mm (4.72 in.)

If the distance is not as specified, troubleshoot the brake system.

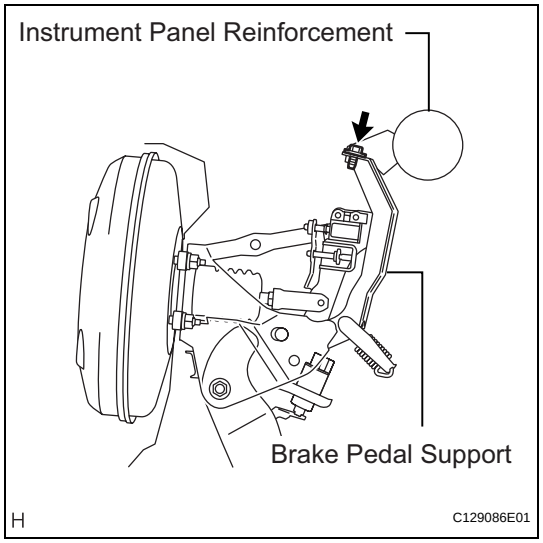
REASSEMBLY

1. INSTALL BRAKE PEDAL PAD

(a) Install the pad to the pedal.



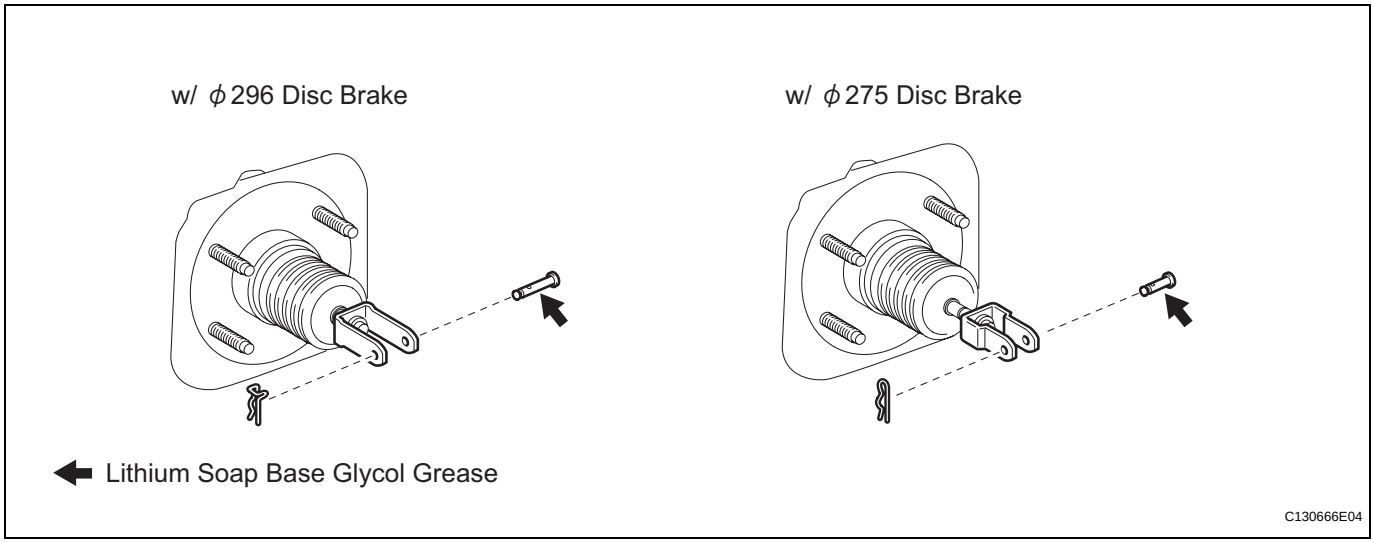
2. INSTALL STOP LIGHT SWITCH MOUNTING ADJUSTER



(a) Install a new adjuster to the support.

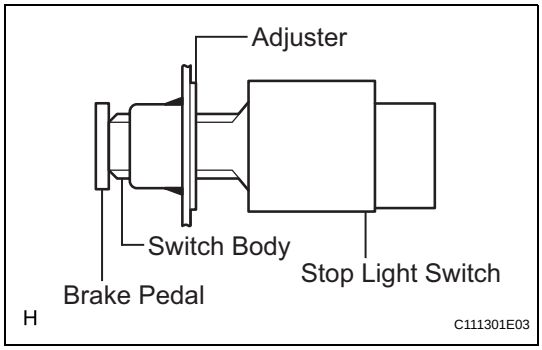
INSTALLATION

1. INSTALL BRAKE PEDAL SUPPORT ASSEMBLY

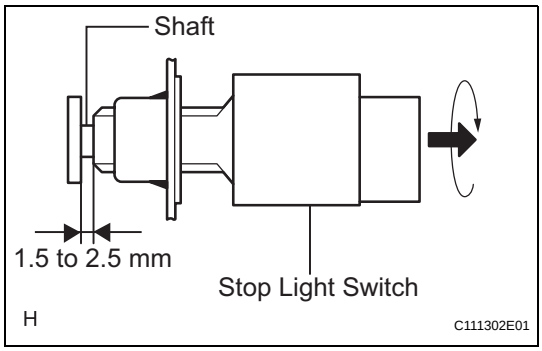


(a) Install the support with the 4 nuts.
Torque: 12.7 N*m (130 kgf*cm, 9 ft.*lbf)

(b) Install the bolt to the support.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)



2. INSTALL PUSH ROD PIN



(a) Apply lithium soap base glycol grease to the push rod pin.

BR

(b) Install the push rod pin to the push rod clevis.
NOTICE:
The push rod pin must be installed as shown in the illustration.
(c) Install the clip to the push rod pin.
NOTICE:
The clip must be installed as shown in the illustration.

3. INSTALL STOP LIGHT SWITCH ASSEMBLY
(a) Insert the switch into the adjuster until the switch body touches the pedal.
NOTICE:
Do not depress the pedal.

(b) Turn the switch a quarter turn clockwise.
Torque: 1.5 N*m (15 kgf*cm, 13 in.*lbf) or less
NOTICE:
Do not depress the pedal.
(c) Check the switch clearance.
Standard stop light switch clearance:
1.5 to 2.5 mm (0.059 to 0.098 in.)

4. CONNECT CONNECTORS
(a) w/ ϕ296 disc brake:
Connect the brake pedal load sensing switch connector.
(b) Connect the stop light switch connector.

5. CHECK AND ADJUST BRAKE PEDAL HEIGHT (See page BR-13)

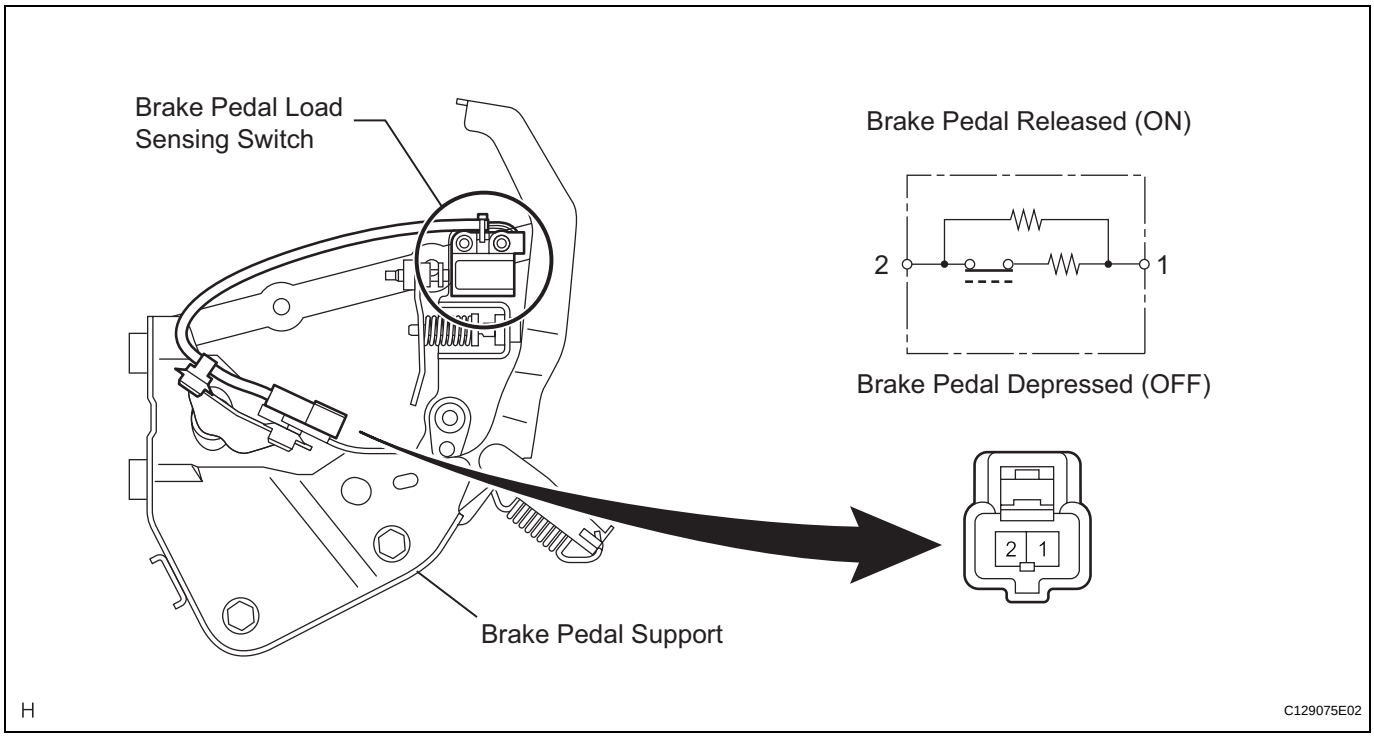
6. CHECK BRAKE PEDAL FREE PLAY (See page BR-14)

7. CHECK BRAKE PEDAL RESERVE DISTANCE (See page BR-14)

8. INSTALL INSTRUMENT PANEL SUB-ASSEMBLY
(a) Install the instrument panel (see page IP-9).

9. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

BRAKE PEDAL LOAD SENSING SWITCH



ON-VEHICLE INSPECTION

1. INSPECT BRAKE PEDAL LOAD SENSING SWITCH

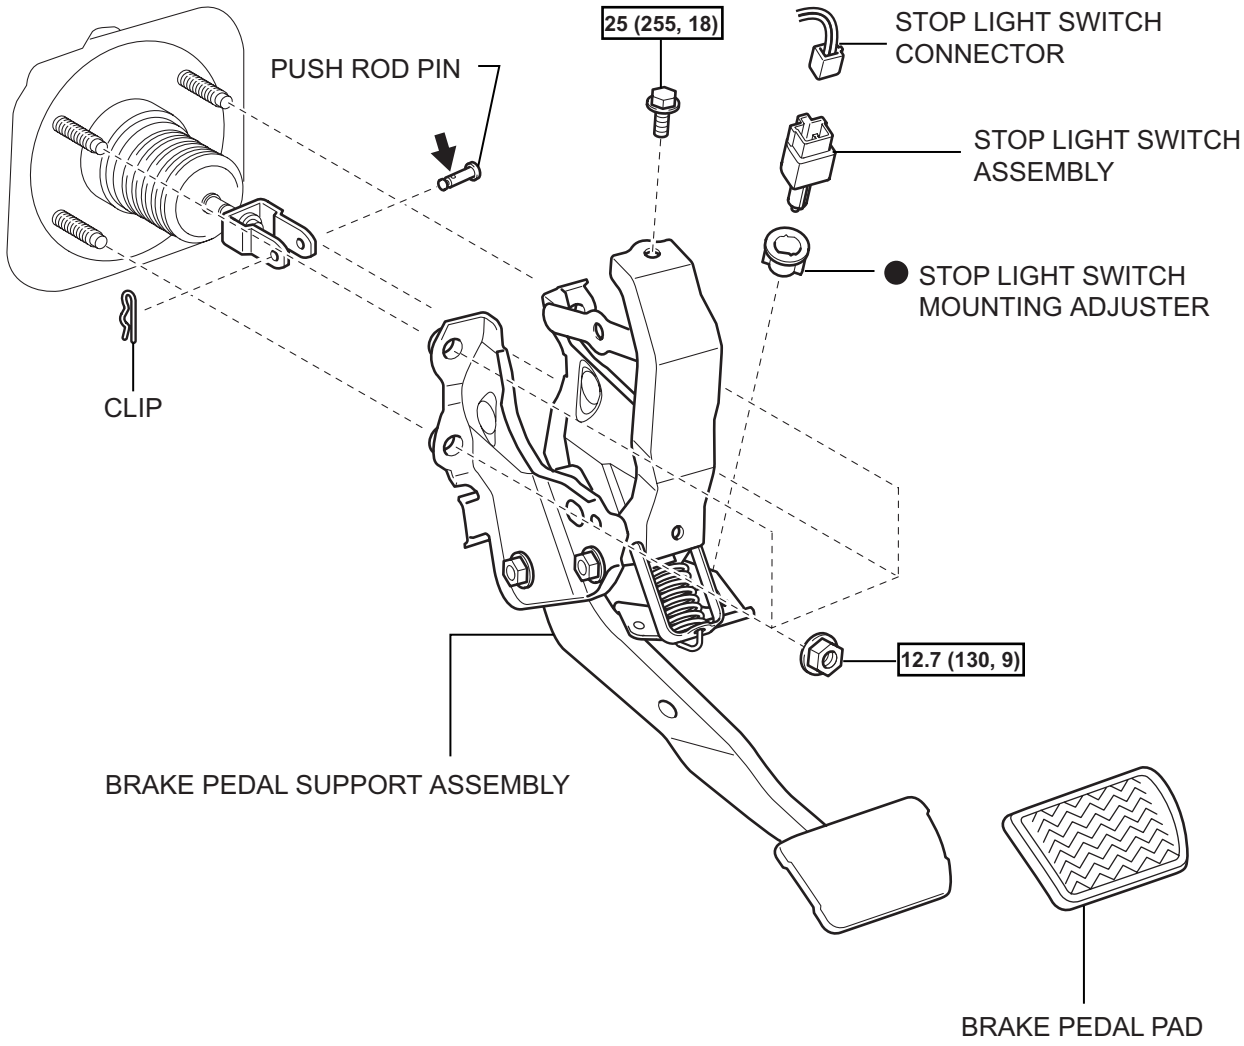
HINT:

- Do not remove the brake pedal load sensing switch from the brake pedal support.
- When there is a malfunction in the brake pedal load sensing switch, replace the brake pedal support.

(a) Disconnect the brake pedal load sensing switch connector.

(b) Measure the resistance of the switch.

Standard resistance



Tester Connection	Condition	Specified Condition
1 - 2	Brake pedal depressed	Approx. 1 kΩ
1 - 2	Brake pedal released	Approx. 213 Ω

If the value is not as specified, replace the brake pedal support assembly (see page BR-12).

PROBLEM SYMPTOMS TABLE

(2005/11-2006/01)
HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Brake system

Symptom	Suspected area	See page
Low pedal or spongy pedal	1. Fluid leaks in brake system	-
	2. Air in brake system	BR-6
	3. Front brake piston seals (worn or damaged)	BR-40
	4. Rear brake piston seals (worn or damaged)	BR-55
	5. Brake master cylinder (faulty)	BR-21
	6. Booster push rod (adjustment necessary)	BR-24
Brake drag	1. Brake pedal free play (minimum)	BR-14
	2. Parking brake lever travel (adjustment necessary)	PB-1
	3. Parking brake cable (sticking)	PB-8
	4. Parking brake shoe clearance (adjustment necessary)	PB-17
	5. Front brake pad (cracked or distorted)	BR-40
	6. Rear brake pad (cracked or distorted)	BR-55
	7. Parking brake lining (cracked or distorted)	PB-13
	8. Front brake piston (stuck or frozen)	BR-40
	9. Rear brake piston (stuck or frozen)	BR-55
	10. Parking brake shoe return tension spring	PB-13
	11. Booster push rod (adjustment necessary)	BR-24
	12. Vacuum leaks in booster system	BR-29
	13. Brake master cylinder (faulty)	BR-21
Brake pull	1. Front brake piston (stuck or frozen)	BR-40
	2. Rear brake piston (stuck or frozen)	BR-55
	3. Front brake pad (oily, cracked or distorted)	BR-40
	4. Rear brake pad (oily, cracked or distorted)	BR-55
	5. Parking brake lining (oily, cracked or distorted)	PB-13
	6. Front brake disc (uneven wear)	BR-40
	7. Rear brake disc (uneven wear)	BR-55
Hard pedal but braking inefficient	1. Front brake pad (worn, cracked, distorted, oily or glazed)	BR-40
	2. Rear brake pad (worn, cracked, distorted, oily or glazed)	BR-55
	3. Parking brake lining (worn, cracked, distorted, oily or glazed)	PB-13
	4. Front brake disc (uneven wear)	BR-40
	5. Rear brake disc (uneven wear)	BR-55
	6. Booster push rod (adjustment necessary)	BR-24
	7. Vacuum leaks in booster system	BR-29

Symptom	Suspected area	See page
Noise from brakes	1. Front brake pad (cracked, distorted, dirty or glazed)	BR-40
	2. Rear brake pad (cracked, distorted, dirty or glazed)	BR-55
	3. Front disc brake pad support plate (loose)	BR-40
	4. Rear disc brake pad support plate (loose)	BR-55
	5. Front disc brake cylinder slide pin (worn)	BR-40
	6. Rear disc brake cylinder slide pin (worn)	BR-55
	7. Front brake installation bolt (loose)	BR-45
	8. Rear brake installation bolt (loose)	BR-60
	9. Front brake disc (scored)	BR-40
	10. Rear brake disc (scored)	BR-55
	11. Parking brake shoe return tension spring (faulty)	PB-13
	12. Front brake anti-squeal shim (damaged)	BR-40
	13. Rear brake anti-squeal shim (damaged)	BR-55
	14. Parking brake shoe hold-down spring (damaged)	PB-13

PROBLEM SYMPTOMS TABLE

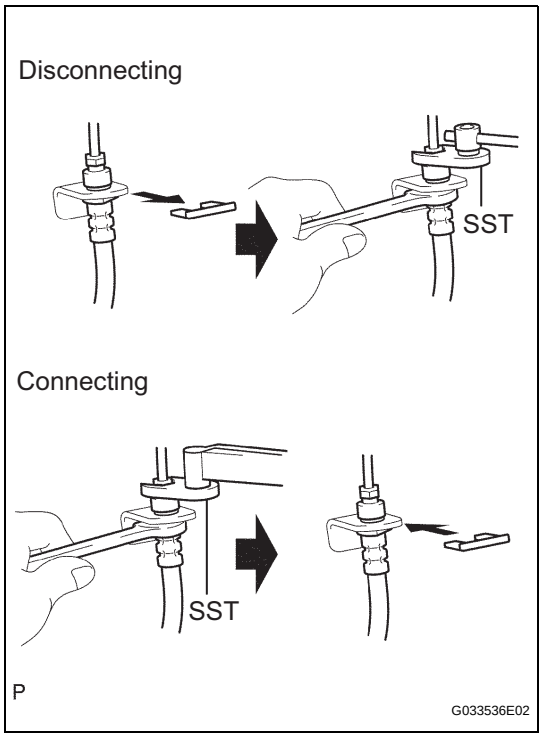
(2006/01-)

HINT:

Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

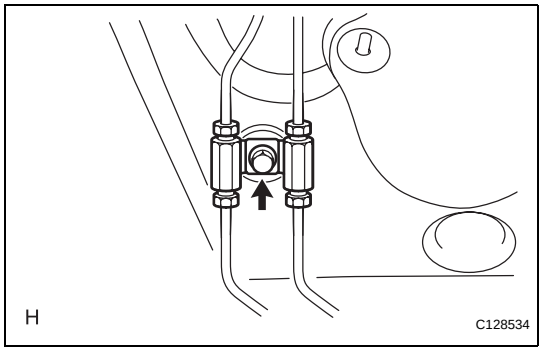
Brake system

Symptom	Suspected Area	See page
Low pedal or spongy pedal	1. Fluid leaks in brake system	-
	2. Air in brake system	BR-6
	3. Front brake piston seals (worn or damaged)	BR-40
	4. Rear brake piston seals (worn or damaged)	BR-55
	5. Brake master cylinder (faulty)	BR-22
	6. Booster push rod (adjustment necessary)	BR-24
Brake drag	1. Brake pedal free play (minimum)	BR-15
	2. Parking brake lever travel (adjustment necessary)	PB-1
	3. Parking brake cable (sticking)	PB-8
	4. Parking brake shoe clearance (adjustment necessary)	PB-17
	5. Front brake pad (cracked or distorted)	BR-40
	6. Rear brake pad (cracked or distorted)	BR-55
	7. Parking brake lining (cracked or distorted)	PB-13
	8. Front brake piston (stuck or frozen)	BR-40
	9. Rear brake piston (stuck or frozen)	BR-55
	10. Parking brake shoe return tension spring	PB-13
	11. Booster push rod (adjustment necessary)	BR-24
	12. Vacuum leaks in booster system	BR-29
	13. Brake master cylinder (faulty)	BR-22
Brake pull	1. Front brake piston (stuck or frozen)	BR-40
	2. Rear brake piston (stuck or frozen)	BR-55
	3. Front brake pad (oily, cracked or distorted)	BR-40
	4. Rear brake pad (oily, cracked or distorted)	BR-55
	5. Parking brake lining (oily, cracked or distorted)	PB-13
	6. Front brake disc (uneven wear)	BR-40
	7. Rear brake disc (uneven wear)	BR-55
Hard pedal but braking inefficient	1. Front brake pad (worn, cracked, distorted, oily or glazed)	BR-40
	2. Rear brake pad (worn, cracked, distorted, oily or glazed)	BR-55
	3. Parking brake lining (worn, cracked, distorted, oily or glazed)	PB-13
	4. Front brake disc (uneven wear)	BR-40
	5. Rear brake disc (uneven wear)	BR-55
	6. Booster push rod (adjustment necessary)	BR-24
	7. Vacuum leaks in booster system	BR-29



Symptom	Suspected Area	See page
Noise from brakes	1. Front brake pad (cracked, distorted, dirty or glazed)	BR-40
	2. Rear brake pad (cracked, distorted, dirty or glazed)	BR-55
	3. Front disc brake pad support plate (loose)	BR-40
	4. Rear disc brake pad support plate (loose)	BR-55
	5. Front disc brake cylinder slide pin (worn)	BR-40
	6. Rear disc brake cylinder slide pin (worn)	BR-55
	7. Front brake installation bolt (loose)	BR-45
	8. Rear brake installation bolt (loose)	BR-60
	9. Front brake disc (scored)	BR-40
	10. Rear brake disc (scored)	BR-55
	11. Parking brake shoe return tension spring (faulty)	PB-13
	12. Front brake anti-squeal shim (damaged)	BR-40
	13. Rear brake anti-squeal shim (damaged)	BR-55
	14. Parking brake shoe hold-down spring (damaged)	PB-13

BRAKE SYSTEM



PRECAUTION

NOTICE:

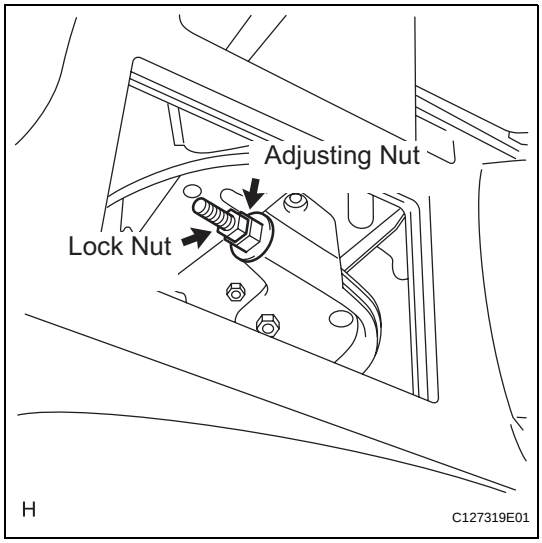
- **Take extra care to replace each part properly. Improper installation or repair could affect the performance of the brake system and cause a driving hazard.**
- **It is very important to keep the brake system parts and the work area clean when repairing the brake system.**
- **If the vehicle is equipped with a mobile communication system, refer to the Precautions in the INTRODUCTION section (see page IN-5).**
- **Care must be taken when using magnets as they could affect the performance of the speed sensors.**
- **Since the brake line is one of the critical safety-related parts, be sure to disassemble the components if a brake fluid leak is found. If any abnormality is found, replace the component with a new one.**
- **When removing brake components, cover the brake tube connections to prevent foreign matter such as dust or dirt from entering the tubes.**
- **Do not damage or deform the brake tubes when removing or installing them.**
- **When installing a brake tube grommet to the body, ensure that the brake tube passes through the center of the grommet.**
- **When installing a brake tube or flexible hose, ensure that it is not twisted or bent.**
- **If the fitting of the flexible hose does not match the groove on the bracket, twist the hose slightly to insert it.**
- **Flexible hoses must be free from absorber oil, grease, etc.**
- **When installing a brake tube to a plastic clamp, ensure that the brake tube is not loose or being pinched.**
- **Do not reuse a clip or plastic clamp removed from a flexible hose.**
- **After installing a brake tube and flexible hose, ensure that they do not interfere with any other components.**
- **Do not allow brake fluid to adhere to any painted surface such as the vehicle body. If brake fluid leaks onto any painted surface, immediately wash it off.**

- **Follow these procedures when disconnecting the flexible hose and brake tube.**
  (a) Remove the clip.
  (b) Hold the flexible hose with a wrench. Using SST, disconnect the brake tube without deforming the tube.
- **Follow these procedures when connecting the flexible hose and brake tube.**
  (a) Hold the flexible hose with a wrench. Using a union nut wrench, connect the brake tube without deforming the tube.
  (b) Install a new clip.

- **Follow these procedures when connecting the brake tube and 2-way.**
  (a) Support the 2-way to prevent deformation to the brake tube and connect the brake tube to the 2-way with a union nut wrench.
  (b) Support the 2-way to prevent deformation to the brake tube and install the bolt to fix the 2-way to the body.

PARKING BRAKE SYSTEM

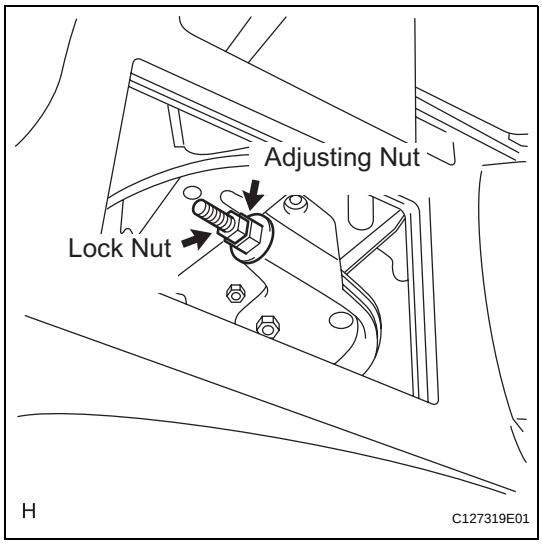
PROBLEM SYMPTOMS TABLE



HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Parking brake system

Symptom	Suspected area	See page
Parking brake drags	1. Parking brake lever travel (adjustment necessary)	PB-1
	2. No. 1 parking brake cable (sticking)	PB-4
	3. No. 2 parking brake cable (sticking)	PB-8
	4. No. 3 parking brake cable (sticking)	PB-8
	5. Parking brake shoe clearance (adjustment necessary)	PB-15
	6. Shoe return tension spring (damaged)	PB-13

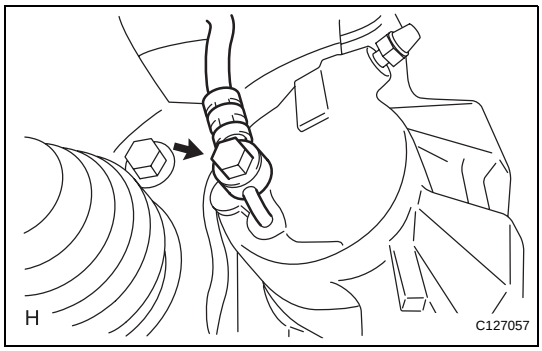


ADJUSTMENT

1. **CHECK PARKING BRAKE LEVER TRAVEL**
   (a) Pull the lever upward with a force of approximately 200 N (20 kgf, 44 lbf) and count the number of clicks.
   OK:
   7 to 9 clicks (without rear brake dragging)
2. **REMOVE UPPER REAR CONSOLE PANEL SUB-ASSEMBLY (See page IP-19)**
3. **LOOSEN LOCK NUT AND NO. 1 WIRE ADJUSTING NUT**

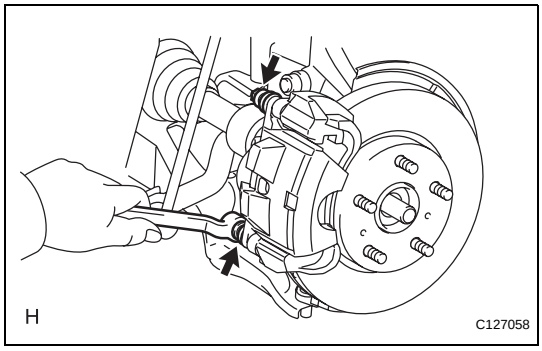
4. **REMOVE REAR WHEEL**
5. **ADJUST PARKING BRAKE SHOE CLEARANCE (See page PB-17)**
6. **INSTALL REAR WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

PB



7. **ADJUST PARKING BRAKE LEVER TRAVEL**
   (a) Turn the No. 1 wire adjusting nut until the lever travel is correct.
   OK:
   7 to 9 clicks (without rear brake dragging)
   <Lever pulling force: approximately 200 N (20 kgf, 44 lbf)>
   (b) Tighten the lock nut.
   Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)
   (c) Operate the parking brake lever 3 to 4 times, and check the parking brake lever travel.
   OK:
   7 to 9 clicks (without rear brake dragging)
   <Lever pulling force: approximately 200 N (20 kgf, 44 lbf)>
   (d) When operating the parking brake lever, check that the brake warning light illuminates at the first click.
   Standard condition:
   Brake warning light always illuminates at the first click.

REMOVAL



HINT:
- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.

1. REMOVE FRONT WHEEL

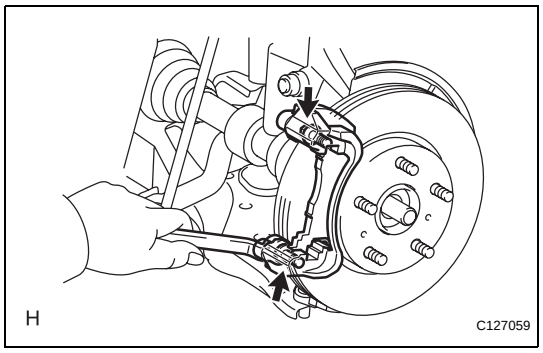
2. DRAIN BRAKE FLUID
NOTICE:
Wash off brake fluid immediately if it comes in contact with any painted surface.

3. DISCONNECT FRONT FLEXIBLE HOSE
(a) Remove the union bolt and gasket(s).
(b) Disconnect the flexible hose from the brake cylinder.

4. REMOVE DISC BRAKE CYLINDER ASSEMBLY LH
(a) Remove the 2 bolts and cylinder.

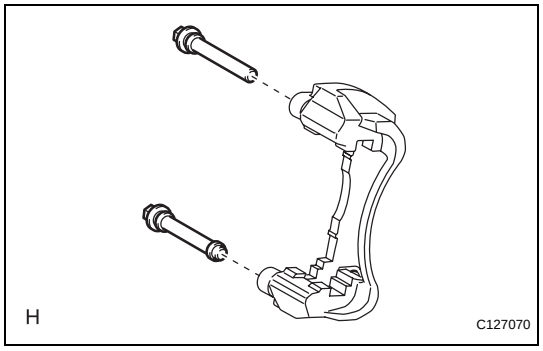
DISASSEMBLY

HINT:
- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.



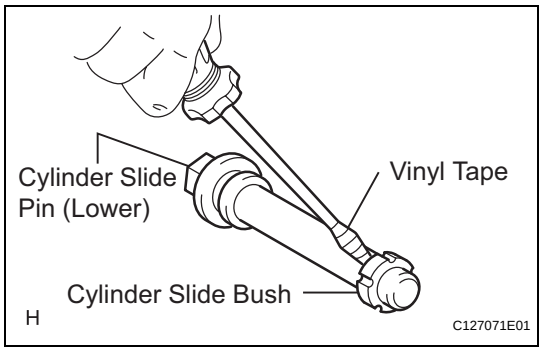
1. REMOVE FRONT DISC BRAKE PAD
(a) Remove the 2 disc brake pads.

2. REMOVE ANTI-SQUEAL SHIM KIT FRONT
(a) Remove the shims from each pad.

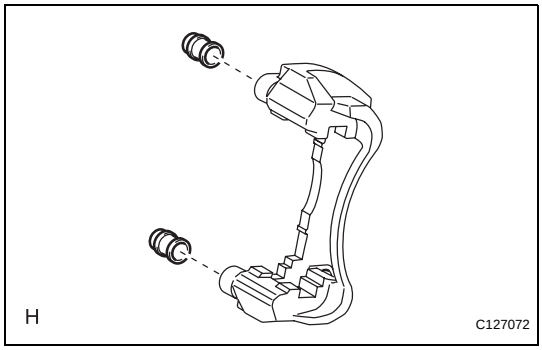


3. REMOVE NO. 1 PAD WEAR INDICATOR PLATE
(a) Remove the indicator plates from each pad.

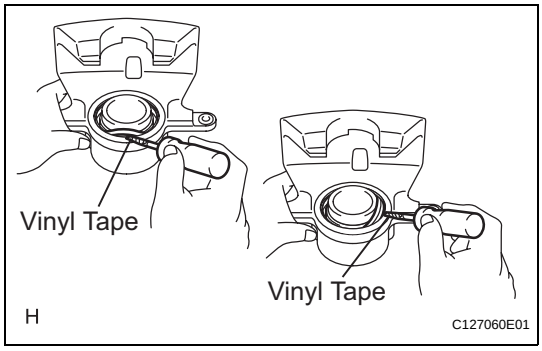
4. REMOVE FRONT DISC BRAKE PAD SUPPORT PLATE
(a) Remove the 4 plates from the brake cylinder mounting.



5. REMOVE FRONT DISC BRAKE CYLINDER MOUNTING LH
(a) Remove the 2 bolts and cylinder mounting.



6. REMOVE FRONT DISC BRAKE CYLINDER SLIDE PIN
(a) Remove the 2 pins (upper and lower) from the mounting.

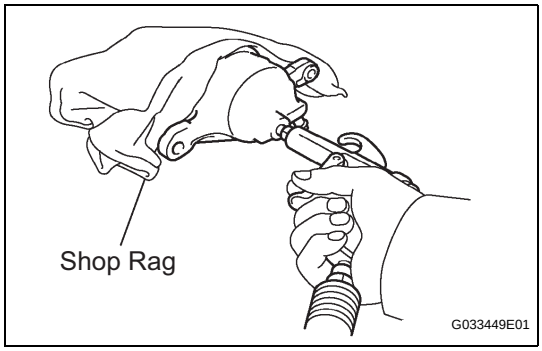


(b) Using a screwdriver, remove the slide bush from the pin (lower).
NOTICE:
Be careful not to damage the pin.
HINT:
Tape the screwdriver tip before use.

7. REMOVE FRONT DISC BRAKE BUSH DUST BOOT

(a) Remove the 2 boots from the mounting.

8. REMOVE CYLINDER BOOT



(a) Using a screwdriver, pry out the set ring and boot.

NOTICE:

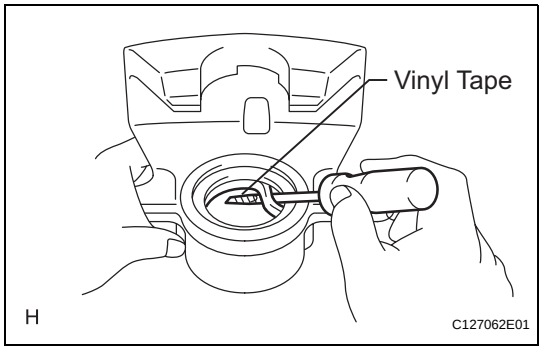
Be careful not to damage the brake piston and cylinder.

HINT:

Tape the screwdriver tip before use.

9. REMOVE FRONT DISC BRAKE PISTON

(a) Place a shop rag or piece of cloth between the piston and disc brake cylinder.



(b) Apply compressed air to remove the piston from the disc brake cylinder.

CAUTION:

Do not place your fingers in front of the piston when applying compressed air.

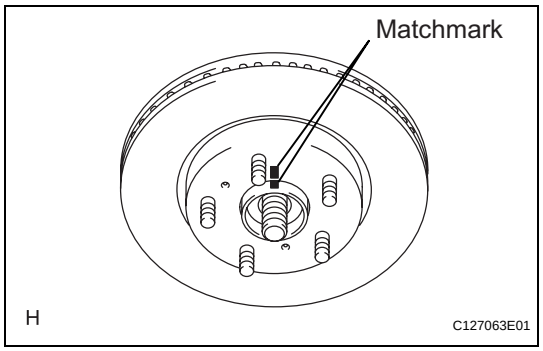
NOTICE:

Be careful not to spatter the brake fluid.

10. REMOVE PISTON SEAL

(a) Using a screwdriver, pry out the seal from the cylinder.

NOTICE:



Be careful not to damage the inner cylinder and piston seal groove.

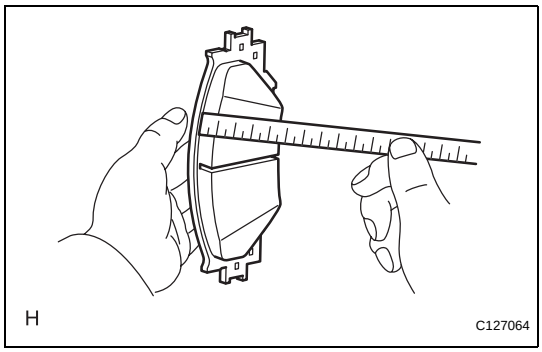
HINT:

Tape the screwdriver tip before use.

11. REMOVE FRONT DISC BRAKE BLEEDER PLUG

(a) Remove the bleeder plug cap and bleeder plug from the cylinder.

12. REMOVE FRONT DISC



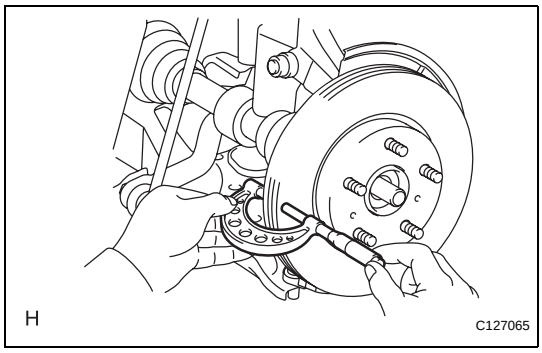
(a) Put matchmarks on the disc and axle hub.

(b) Remove the disc.

INSPECTION

1. CHECK BRAKE CYLINDER AND PISTON

(a) Check the cylinder bore and piston for rust or scoring.
If necessary, replace the cylinder and piston.



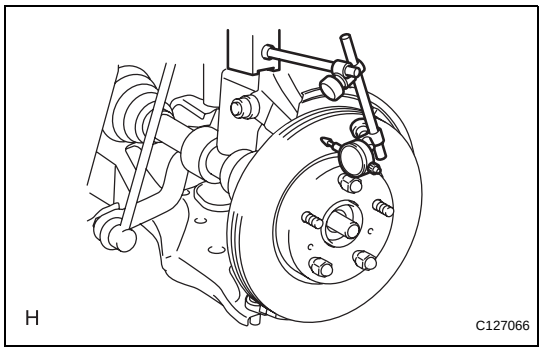
2. CHECK PAD LINING THICKNESS

(a) Using a ruler, measure the pad lining thickness.
Standard thickness:
12.0 mm (0.472 in.)
Minimum thickness:
1.0 mm (0.039 in.)
If the pad lining thickness is equal to or less than the minimum, replace the pad.

3. CHECK FRONT DISC BRAKE PAD SUPPORT PLATE

(a) Check the 4 plates as follows. If necessary, replace the plates.
(1) Use brake cleaner to clean the pad support plate's pad and cylinder mounting contact surface. Inspect for deformation, cracks, rust and foreign matter that is difficult to remove.
(2) Use brake cleaner to clean the cylinder mounting's pad support plate contact surface. After installing the pad support plate to the cylinder mounting, inspect for looseness and deformation.
(3) After installing the pad, inspect if the pad falls off easily (due to the spring force of the pad support plate).

4. CHECK DISC THICKNESS



(a) Using a micrometer, measure the disc thickness.
Standard thickness

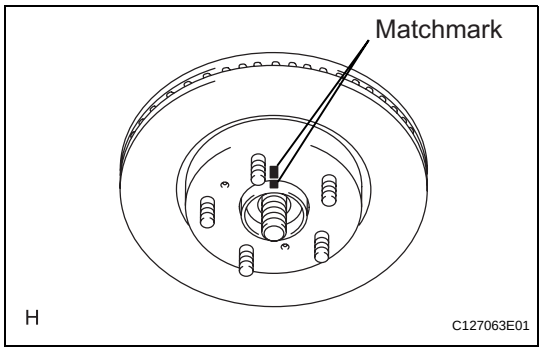
Model	Specified Condition
With ϕ275 disc	25.0 mm (0.984 in.)
With ϕ296 disc	28.0 mm (1.102 in.)

Minimum thickness

Model	Specified Condition
With ϕ275 disc	22.0 mm (0.866 in.)
With ϕ296 disc	25.0 mm (0.984 in.)

If the disc thickness is less than the minimum, replace the disc.

5. CHECK DISC RUNOUT



(a) Check the axle hub bearing (see page AH-6).
(b) Tighten the disc with the 3 hub nuts.
(c) Using a dial indicator, measure the disc runout 10.0 mm (0.39 in.) from the outer edge of the disc.
Maximum disc runout:
0.05 mm (0.0020 in.)

If the runout is greater than the maximum, change the installation positions of the disc and axle so that the runout will become minimal. If the runout is greater than the maximum even when the installation positions are changed, grind the disc. If the disc thickness is less than the minimum, replace the disc.

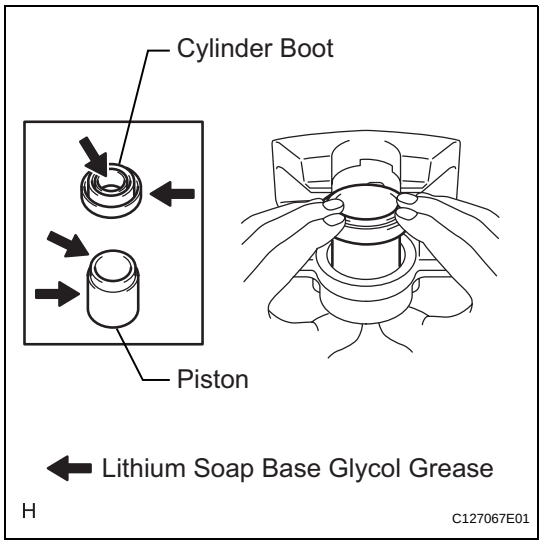
(d) Remove the 3 hub nuts.

REASSEMBLY

HINT:
- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.

1. INSTALL FRONT DISC

(a) Align the matchmarks and install the disc.
HINT:
When replacing the disc with a new one, select the installation position where the disc has the minimum runout.

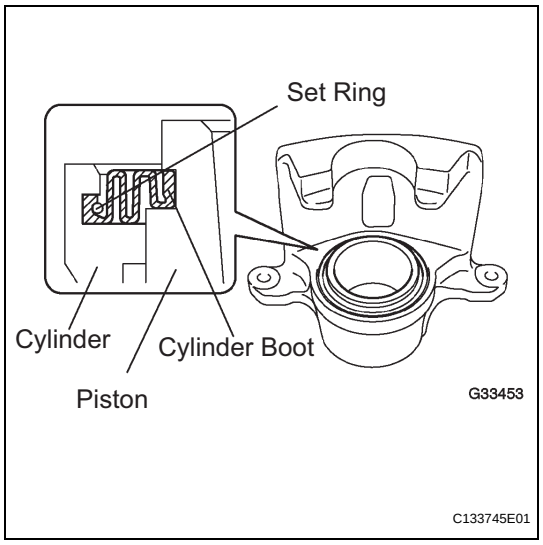


2. CHECK DISC RUNOUT (See page BR-43)

3. TEMPORARILY TIGHTEN FRONT DISC BRAKE BLEEDER PLUG

(a) Install the bleeder plug to the cylinder.
HINT:
The bleeder plug will be tightened to a torque specification in the "BLEED AIR FROM BRAKE LINE" procedures.
(b) Install the bleeder plug cap.

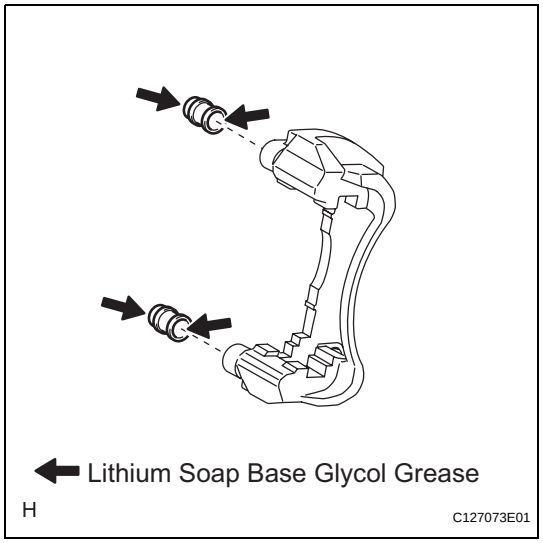
4. INSTALL PISTON SEAL



(a) Apply lithium soap base glycol grease to a new seal.
(b) Install the seal to the cylinder.
NOTICE:
Securely install the piston seal into the groove of the disc brake cylinder.

5. INSTALL FRONT DISC BRAKE PISTON

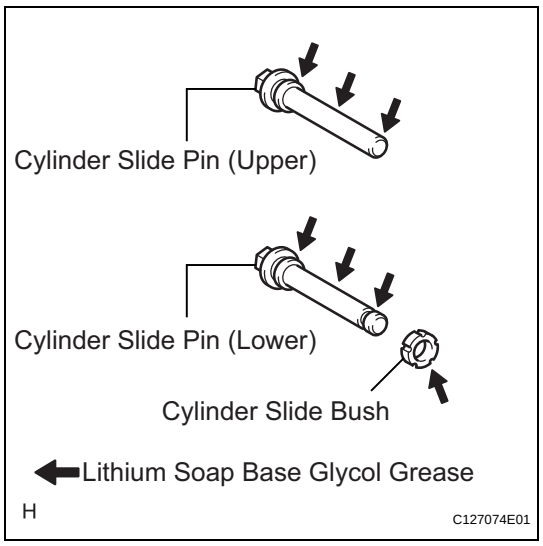
(a) Apply lithium soap base glycol grease to the piston and a new cylinder boot.
(b) Install the boot to the piston.
(c) Install the piston (with boot) to the cylinder.
NOTICE:
Do not forcibly install the piston to the cylinder.



BR

6. INSTALL CYLINDER BOOT

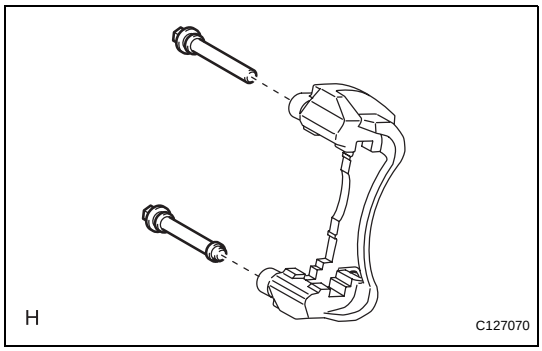
(a) Install the cylinder boot to the cylinder.
NOTICE:
Securely install the cylinder boot into the groove of the disc brake cylinder.



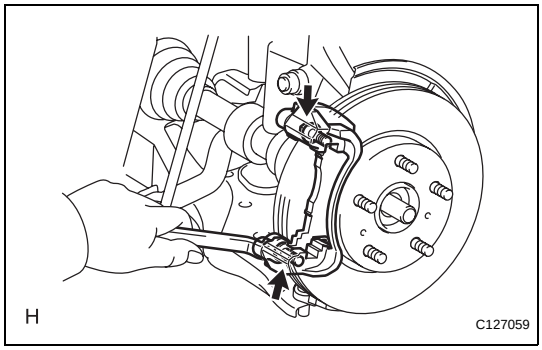
(b) Using a screwdriver, install a new set ring.
NOTICE:
Do not damage the cylinder boot.
HINT:
Tape the screwdriver tip before use.

7. INSTALL FRONT DISC BRAKE BUSH DUST BOOT

(a) Apply lithium soap base glycol grease to 2 new boots.



(b) Install the 2 boots to the mounting.



8. INSTALL FRONT DISC BRAKE CYLINDER SLIDE PIN

(a) Apply lithium soap base glycol grease to the pins and a new bush as shown in the illustration.

(b) Install the bush to the pin (lower).

(c) Install the 2 pins (upper and lower) to the mounting.

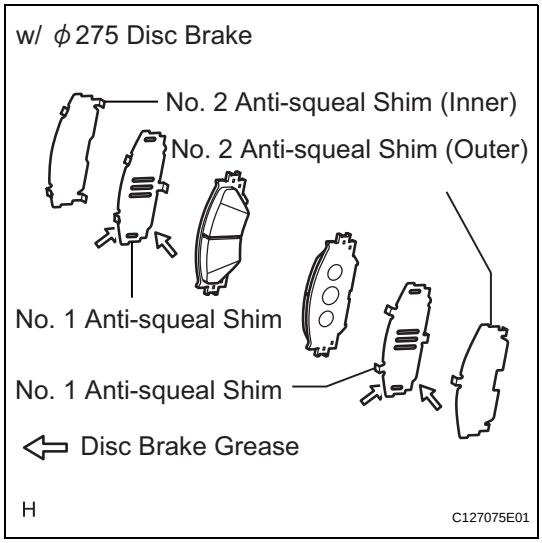
9. INSTALL FRONT DISC BRAKE CYLINDER MOUNTING LH

(a) Install the cylinder mounting with the 2 bolts.
Torque: 98 N*m (999 kgf*cm, 72 ft.*lbf)

10. INSTALL FRONT DISC BRAKE PAD SUPPORT PLATE

(a) Install the 4 plates to the mounting.

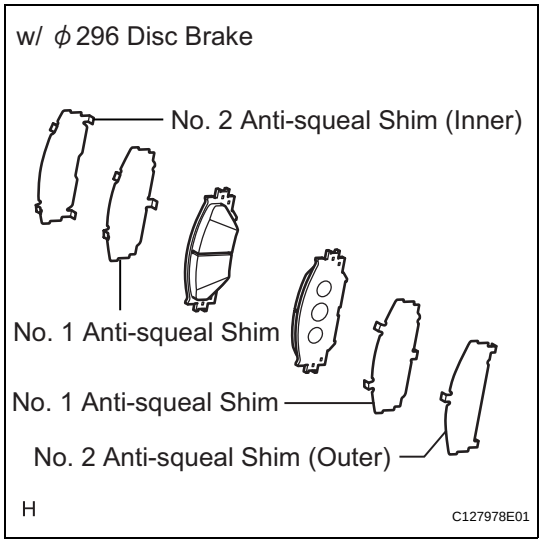
11. INSTALL NO. 1 PAD WEAR INDICATOR PLATE



(a) Install the 2 indicator plates to the upper side of each pad.

12. INSTALL ANTI-SQUEAL SHIM KIT FRONT

(a) w/ ϕ275 disc brake:

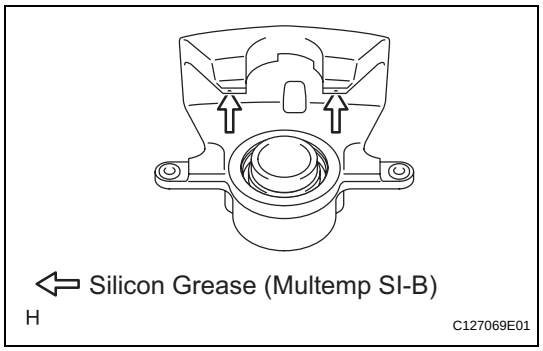


(1) Apply disc brake grease to both sides of each No. 1 shim.

(2) Install the No. 1 and No. 2 shims to each pad.
NOTICE:
- **When replacing a worn pad, the shims must be replaced together with the pads.**
- **Install the shims in the correct positions and direction as shown in the illustration.**

(b) w/ ϕ296 disc brake:

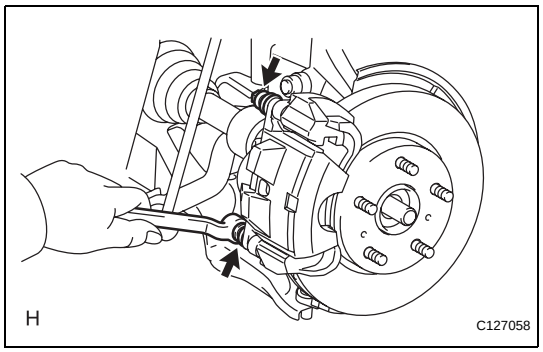
(1) Install the No. 1 and No. 2 shims to each pad.
NOTICE:
- **When replacing a worn pad, the shims must be replaced together with the pads.**
- **Install the shims in the correct positions and direction as shown in the illustration.**



13. INSTALL FRONT DISC BRAKE PAD

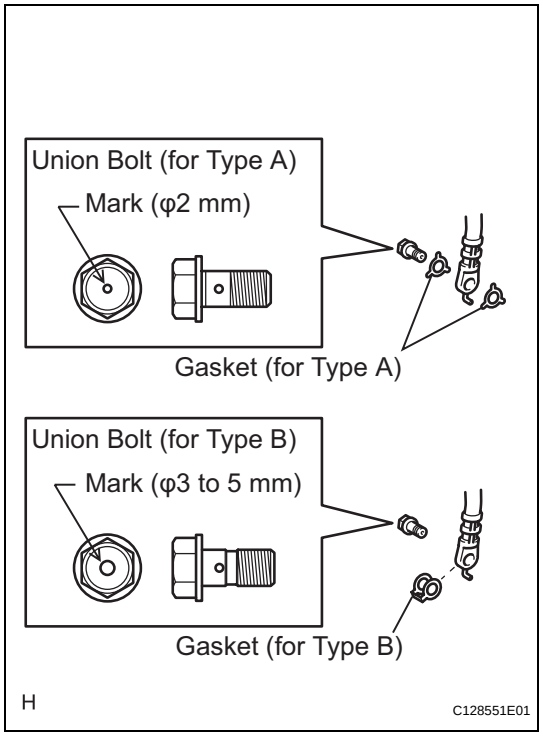
(a) Install the 2 disc brake pads to the mounting.
NOTICE:
There should be no oil or grease on the friction surface of the pads and disc.

INSTALLATION



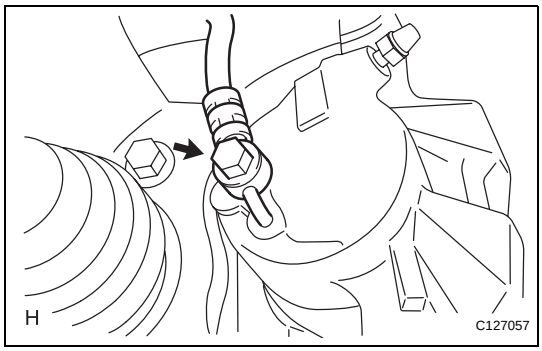
HINT:

- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.



1. INSTALL DISC BRAKE CYLINDER ASSEMBLY LH

(a) Apply silicon grease (Multemp SI-B) on the contact surfaces of the cylinder parts indicated by the arrows.



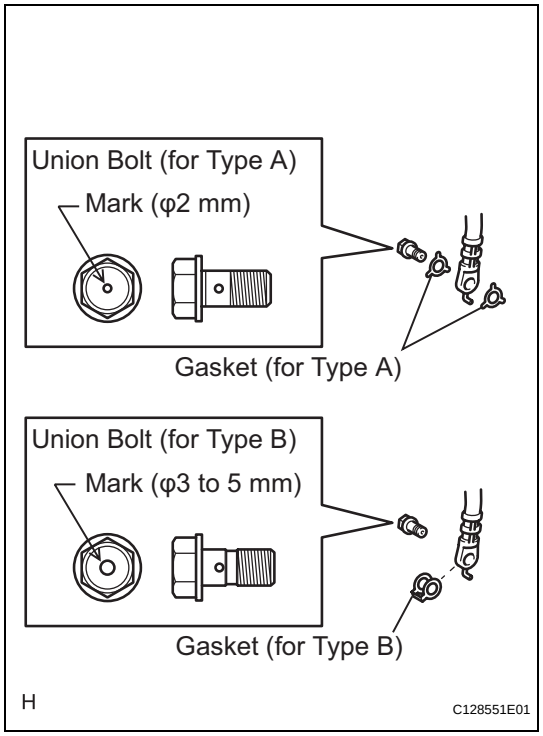
(b) Install the cylinder with the 2 bolts.
Torque: 34.3 N*m (350 kgf*cm, 25 ft.*lbf)

2. CONNECT FRONT FLEXIBLE HOSE
NOTICE:
The gasket and union bolt must be used as a set, as shown in the illustration.

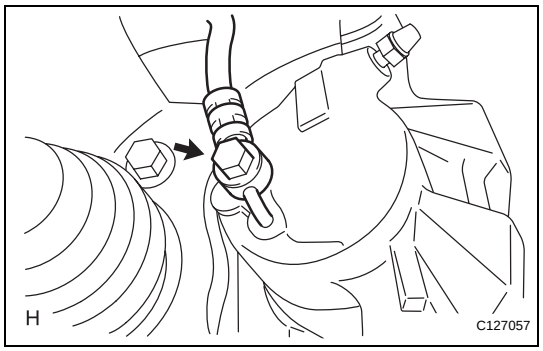
BR

(a) Connect the flexible hose with new gasket(s) and the union bolt.
Torque: 29.4 N*m (300 kgf*cm, 22 ft.*lbf)
HINT:
Install the flexible hose lock securely in the lock hole in the cylinder.

3. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-6)**
4. **BLEED AIR FROM BRAKE MASTER CYLINDER (See page BR-7)**
5. **BLEED AIR FROM BRAKE LINE (See page BR-7)**
6. **BLEED AIR FROM ABS AND TRACTION ACTUATOR ASSEMBLY (See page BR-8)**
7. **CHECK BRAKE FLUID LEVEL IN RESERVOIR (See page BR-6)**
8. **CHECK FOR BRAKE FLUID LEAKAGE**
9. **INSTALL FRONT WHEEL**
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)



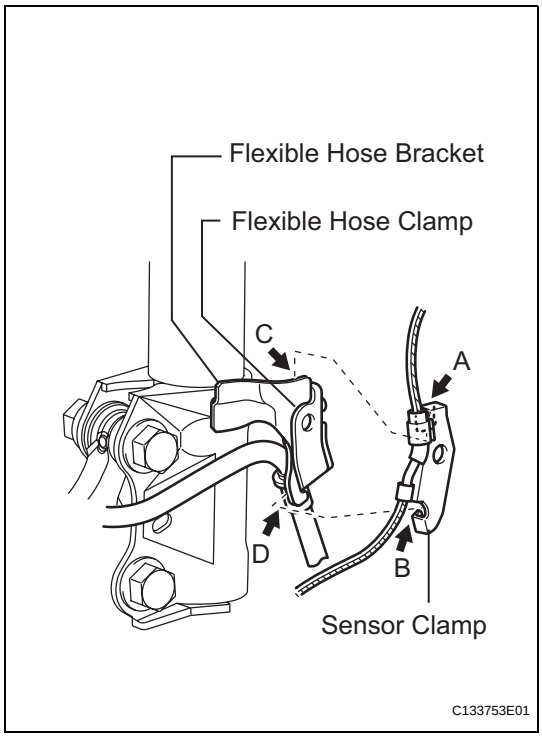
INSTALLATION



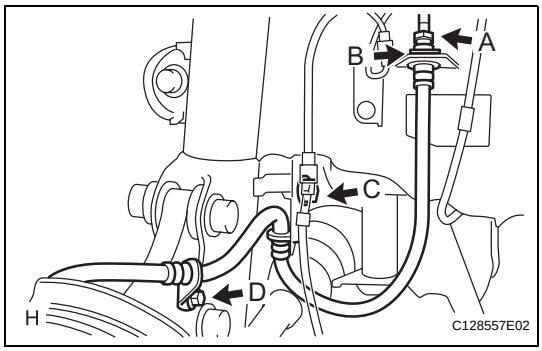
HINT:
- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.

1. INSTALL FRONT FLEXIBLE HOSE
NOTICE:
- **The flexible hose has an identification color. Make sure of the identification color when installing the flexible hose.**

Item	Identification color
Flexible hose LH	Green
Flexible hose RH	Orange



- **The gasket and union bolt must be used as a set, as shown in the illustration.**

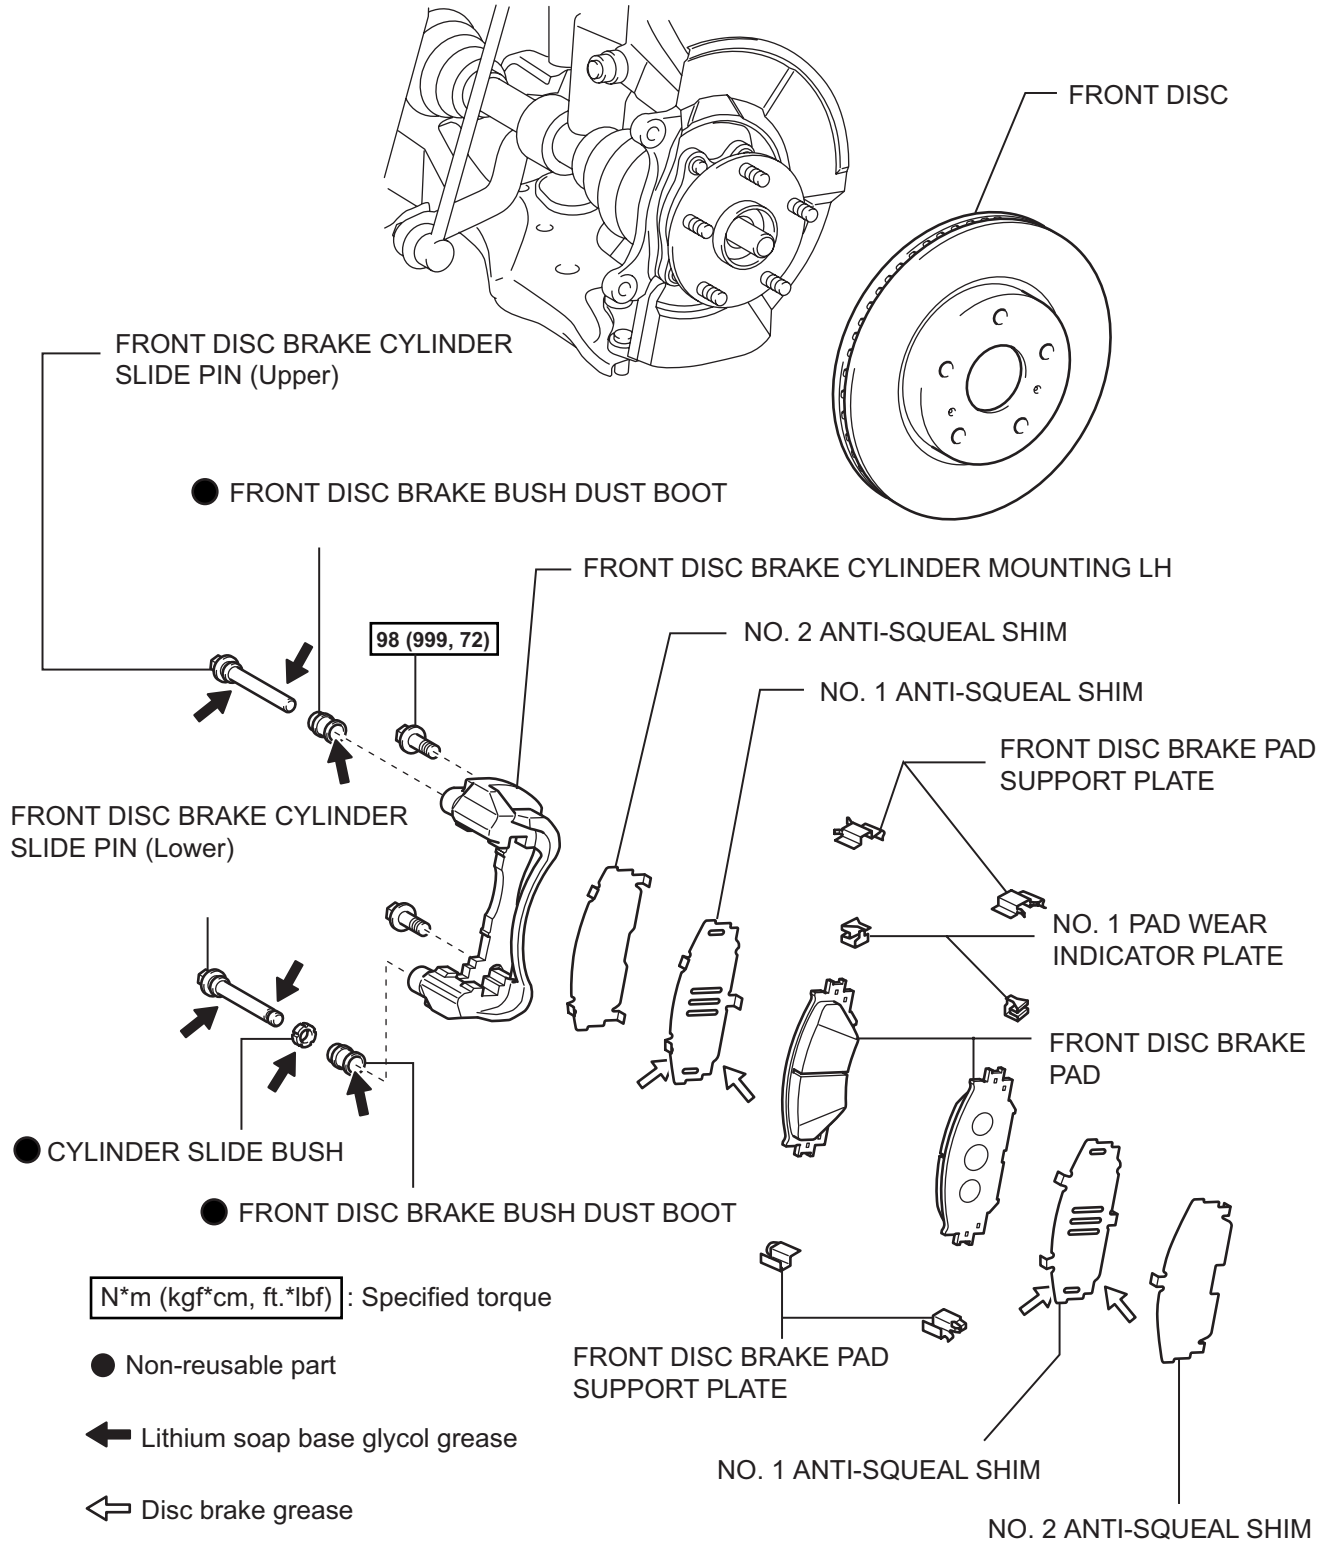


(a) Connect the flexible hose with new gasket(s) and the union bolt to the disc brake cylinder.
Torque: 29.4 N*m (300 kgf*cm, 22 ft.*lbf)
HINT:
Install the flexible hose lock securely in the lock hole in the cylinder.

BR

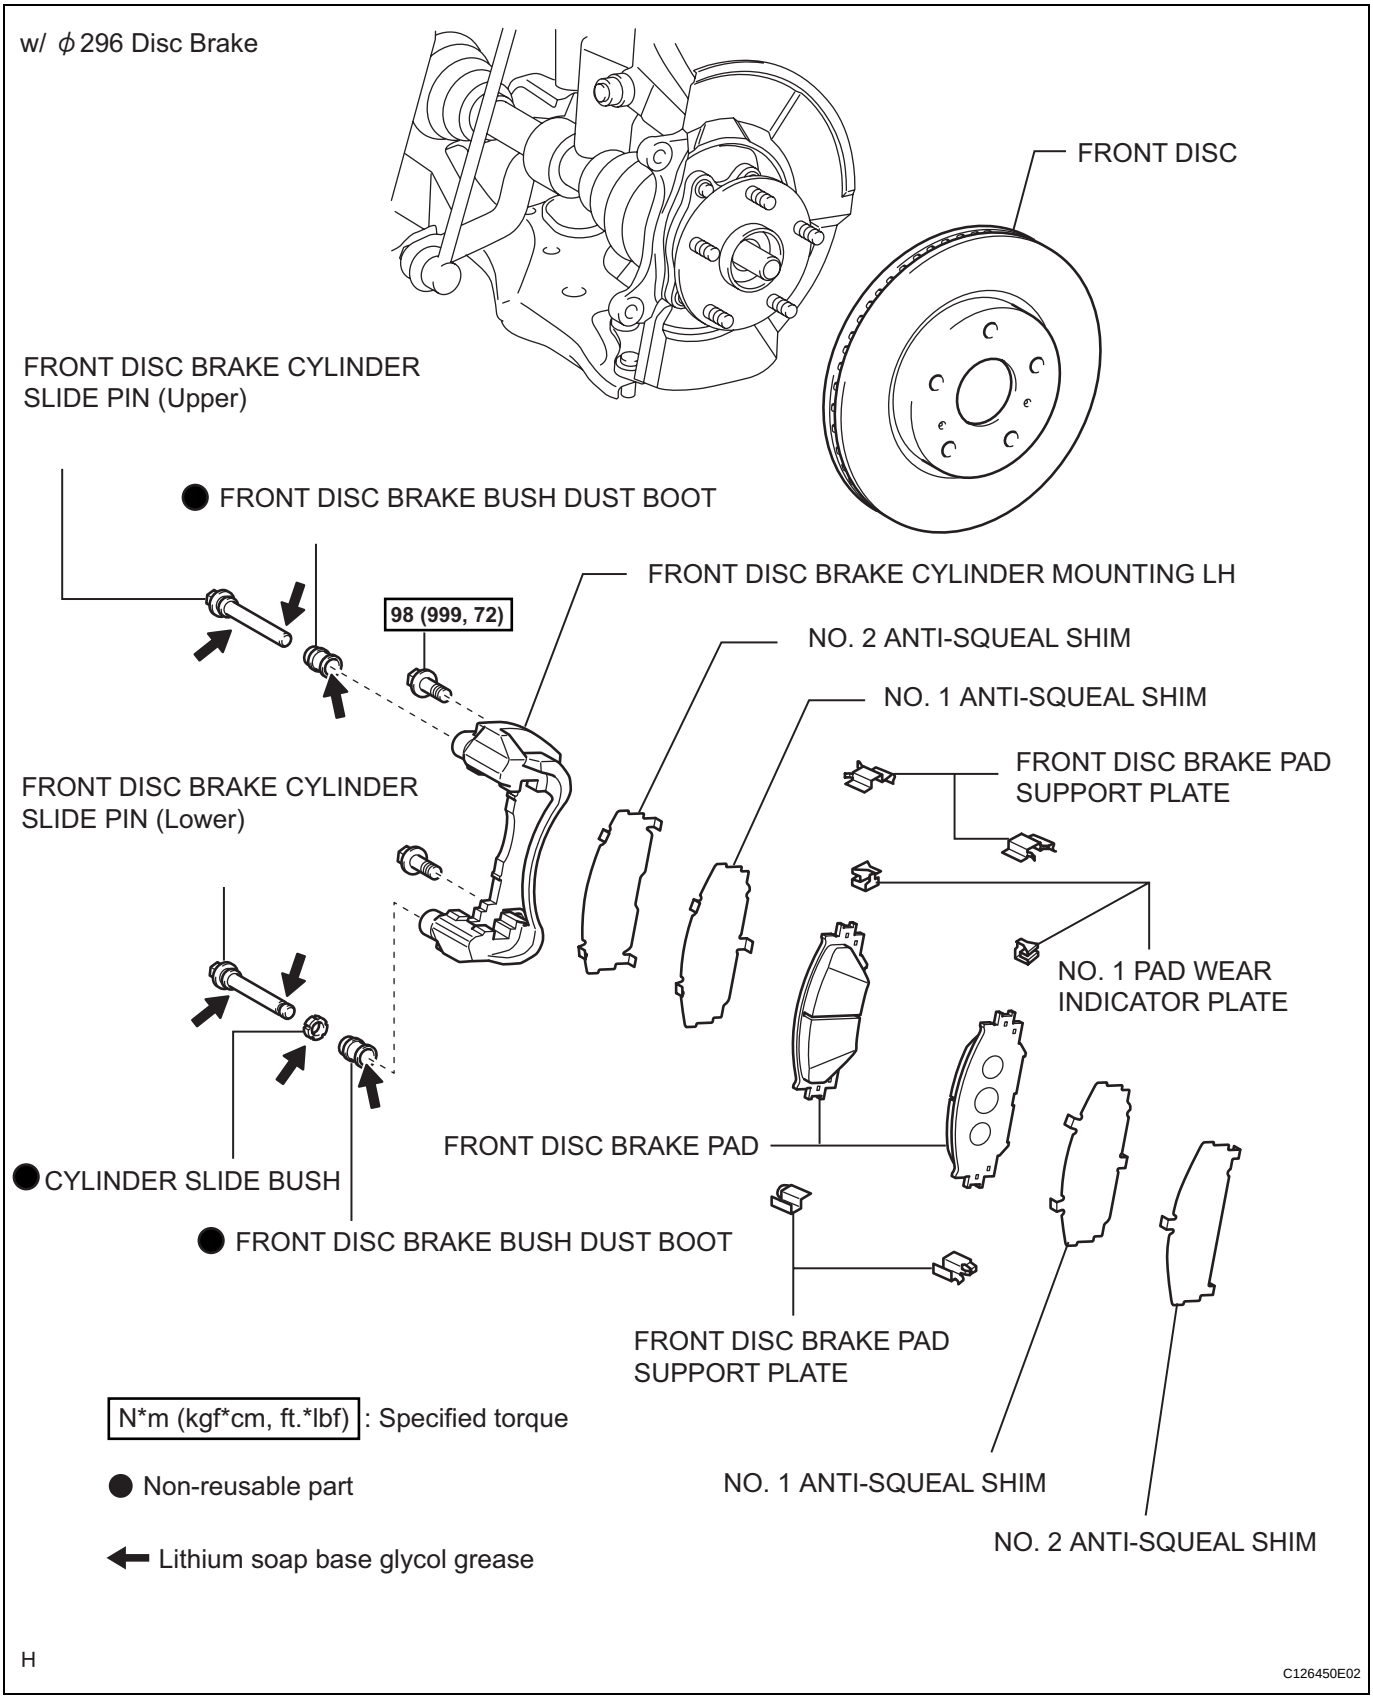
(b) Set the flexible hose clamp on the flexible hose bracket.
(c) Simultaneously perform the following: 1) hang the hook part of the sensor clamp (labeled A) on the flexible hose bracket (labeled C); and 2) insert the hook part of the sensor clamp (labeled B) into the flexible hose bracket (labeled D).

BR



(d) Tighten the bolt (labeled C) to fix the flexible hose clamp and sensor clamp.
Torque: 18.5 N*m (189 kgf*cm, 14 ft.*lbf)
(e) Install the flexible hose with the bolt (labeled D).
Torque: 18.5 N*m (189 kgf*cm, 14 ft.*lbf)
(f) Set the flexible hose to the connecting point with the brake tube (labeled A), and then attach a new clip (labeled B).
(g) Using SST, connect the flexible hose to the brake tube (labeled A) while holding the flexible hose with a wrench.
SST 09023-00101
Torque: 15.2 N*m (155 kgf*cm, 11 ft.*lbf) without SST
14 N*m (144 kgf*cm, 10 ft.*lbf) with SST
HINT:
Use a torque wrench with a fulcrum length of 30 cm (11.81 in.).
NOTICE:
- **Do not bend or damage the brake tube.**
- **Do not allow any foreign matter such as dirt and dust to enter the brake tube from the connecting point.**

2. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-6)**
3. **BLEED AIR FROM BRAKE MASTER CYLINDER (See page BR-7)**
4. **BLEED AIR FROM BRAKE LINE (See page BR-7)**
5. **BLEED AIR FROM ABS AND TRACTION ACTUATOR ASSEMBLY (See page BR-8)**



6. **CHECK BRAKE FLUID LEVEL IN RESERVOIR (See page BR-6)**
7. **CHECK FOR BRAKE FLUID LEAKAGE**
8. **INSTALL FRONT WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

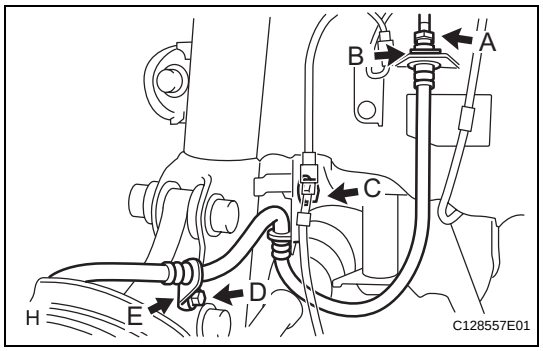
REMOVAL

HINT:



- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.

1. REMOVE FRONT WHEEL

2. DRAIN BRAKE FLUID

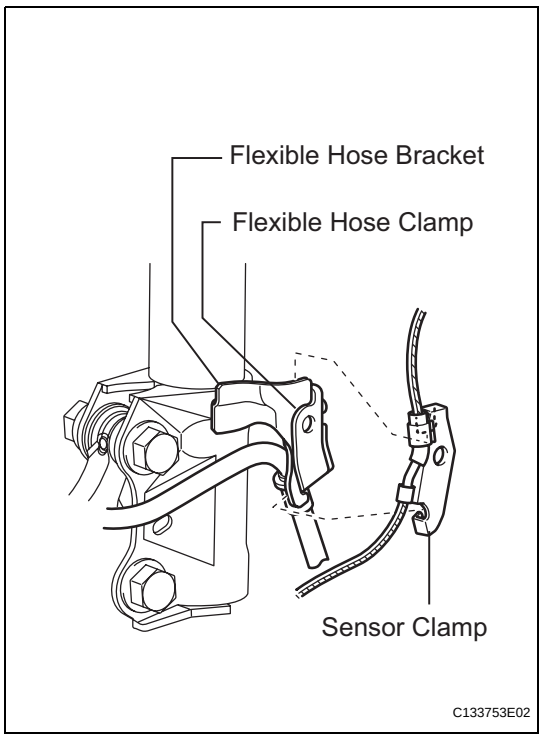
NOTICE:

Wash off brake fluid immediately if it comes in contact with any painted surface.

3. REMOVE FRONT FLEXIBLE HOSE

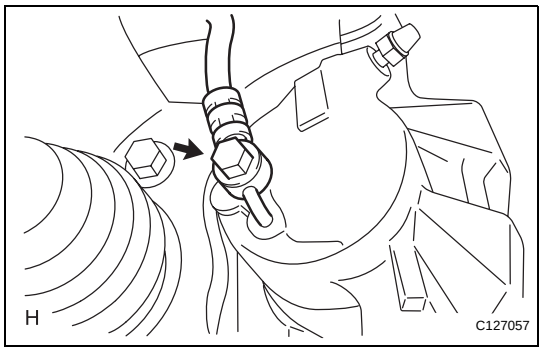
(a) Disconnect the brake tube (labeled A) from the flexible hose with SST while holding the flexible hose with a wrench.

SST 09023-00101



NOTICE:

- **Do not bend or damage the brake tube.**
- **Do not allow any foreign matter such as dirt and dust to enter the brake tube from the connecting point.**



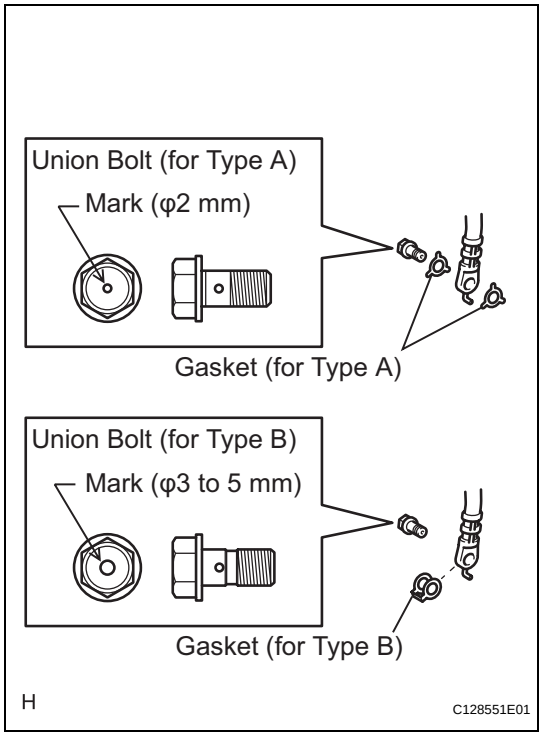
(b) Remove the clip (labeled B).

(c) Remove the 2 bolts (labeled C, D) and then remove the flexible hose clamp (labeled E) from the knuckle.

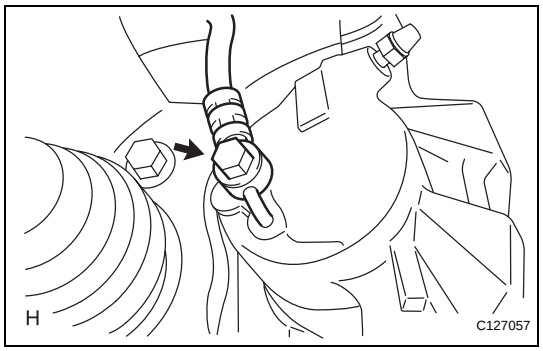
(d) Remove the sensor clamp and flexible hose clamp from the flexible hose bracket.

BR

(e) Remove the union bolt and gasket(s), and then remove the flexible hose from the disc brake cylinder.



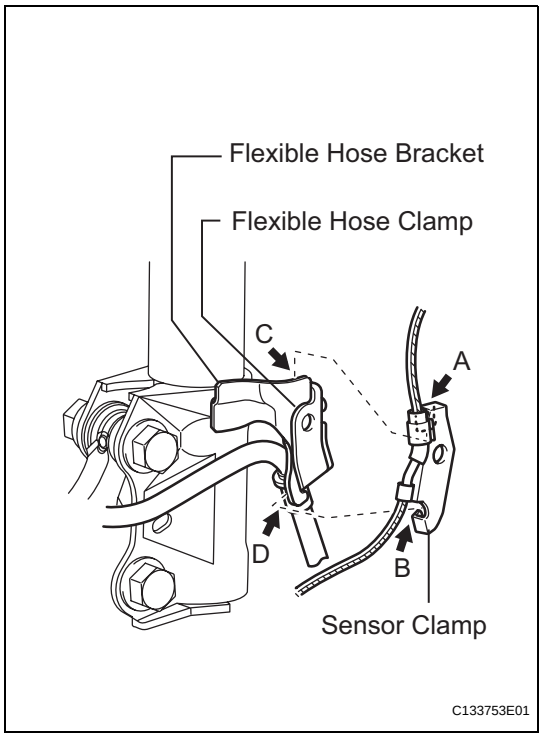
INSTALLATION



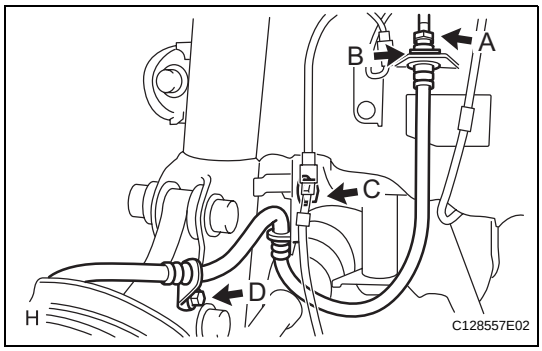
HINT:
- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.

1. INSTALL FRONT FLEXIBLE HOSE
NOTICE:
- **The flexible hose has an identification color. Make sure of the identification color when installing the flexible hose.**

Item	Identification color
Flexible hose LH	Green
Flexible hose RH	Orange



- **The gasket and union bolt must be used as a set, as shown in the illustration.**

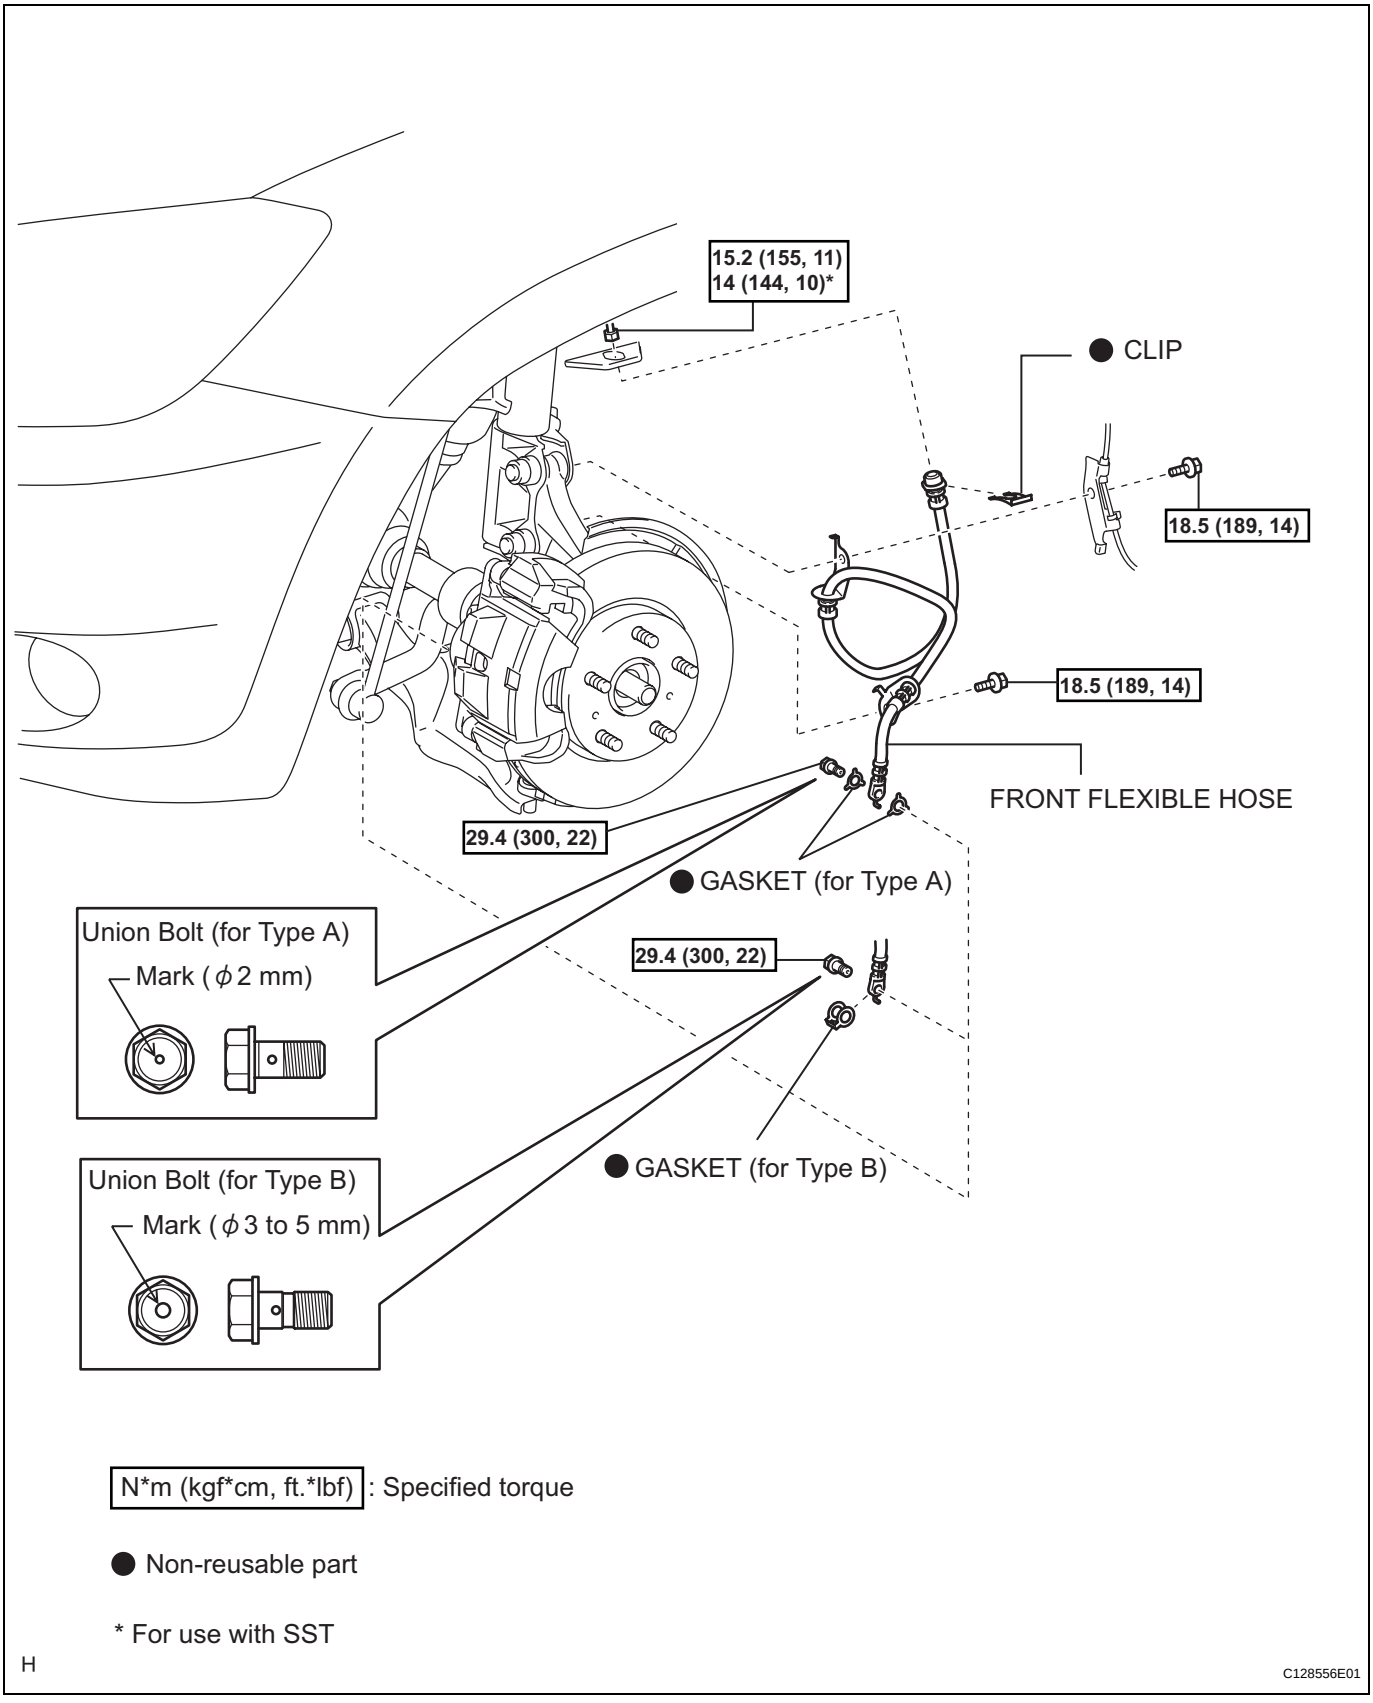


(a) Connect the flexible hose with new gasket(s) and the union bolt to the disc brake cylinder.
Torque: 29.4 N*m (300 kgf*cm, 22 ft.*lbf)
HINT:
Install the flexible hose lock securely in the lock hole in the cylinder.

BR

(b) Set the flexible hose clamp on the flexible hose bracket.
(c) Simultaneously perform the following: 1) hang the hook part of the sensor clamp (labeled A) on the flexible hose bracket (labeled C); and 2) insert the hook part of the sensor clamp (labeled B) into the flexible hose bracket (labeled D).

BR



(d) Tighten the bolt (labeled C) to fix the flexible hose clamp and sensor clamp.

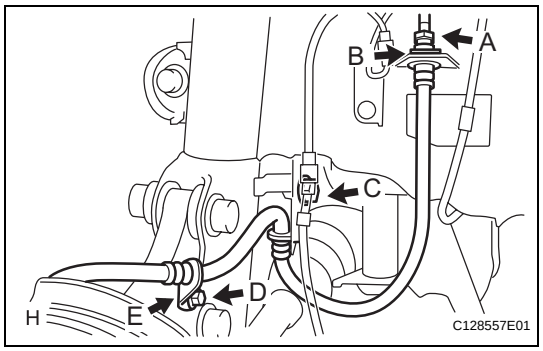
REMOVAL

HINT:



- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.

1. REMOVE FRONT WHEEL

2. DRAIN BRAKE FLUID

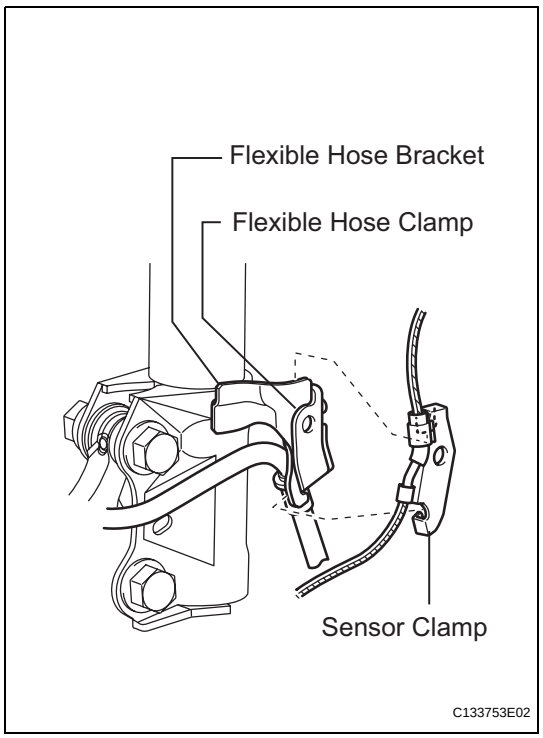
NOTICE:

Wash off brake fluid immediately if it comes in contact with any painted surface.

3. REMOVE FRONT FLEXIBLE HOSE

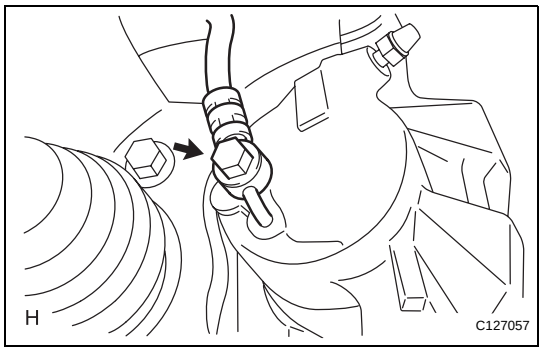
(a) Disconnect the brake tube (labeled A) from the flexible hose with SST while holding the flexible hose with a wrench.

SST 09023-00101



NOTICE:

- **Do not bend or damage the brake tube.**
- **Do not allow any foreign matter such as dirt and dust to enter the brake tube from the connecting point.**

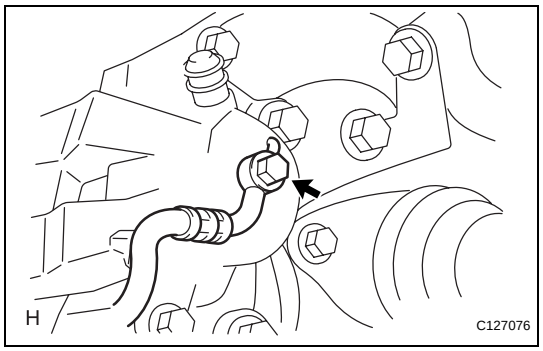


(b) Remove the clip (labeled B).

(c) Remove the 2 bolts (labeled C, D) and then remove the flexible hose clamp (labeled E) from the knuckle.

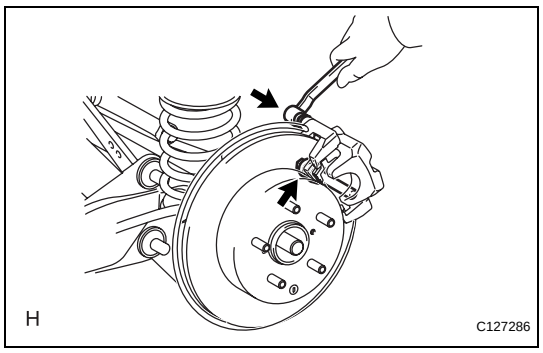
(d) Remove the sensor clamp and flexible hose clamp from the flexible hose bracket.

BR



(e) Remove the union bolt and gasket(s), and then remove the flexible hose from the disc brake cylinder.

REMOVAL



HINT:
- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.

1. REMOVE REAR WHEEL

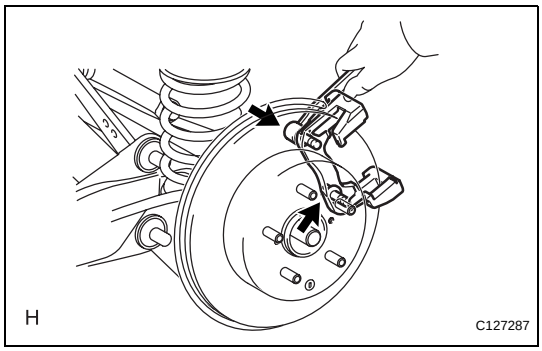
2. DRAIN BRAKE FLUID
NOTICE:
Wash off brake fluid immediately if it comes in contact with any painted surface.

3. DISCONNECT REAR FLEXIBLE HOSE LH
(a) Remove the union bolt and gasket(s).
(b) Disconnect the flexible hose from the brake cylinder.

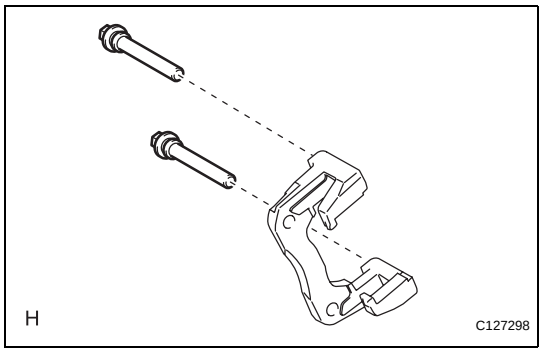
4. REMOVE REAR DISC BRAKE CYLINDER ASSEMBLY LH
(a) Remove the 2 bolts and cylinder.

DISASSEMBLY

HINT:
- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.

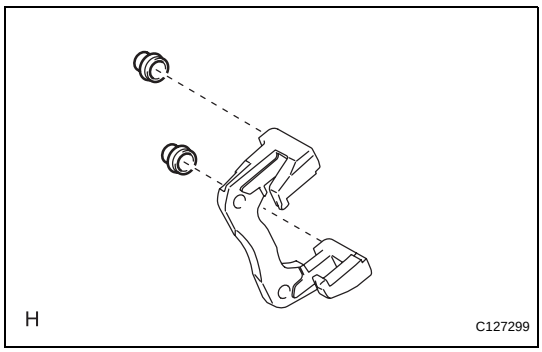


1. REMOVE REAR DISC BRAKE PAD
(a) Remove the 2 disc brake pads.



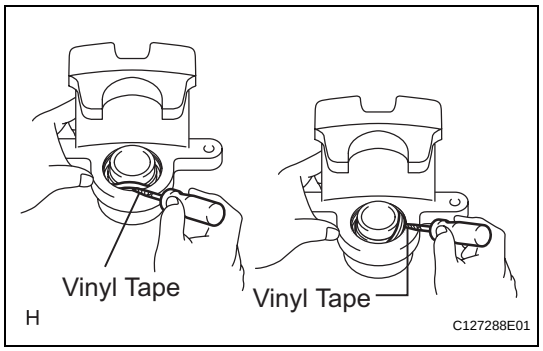
2. REMOVE ANTI-SQUEAL SHIM
(a) Remove the shims from each pad.

3. REMOVE PAD WEAR INDICATOR PLATE
(a) Remove the indicator plates from each pad.



4. REMOVE REAR DISC BRAKE PAD SUPPORT PLATE
(a) Remove the 2 plates from the brake cylinder mounting.

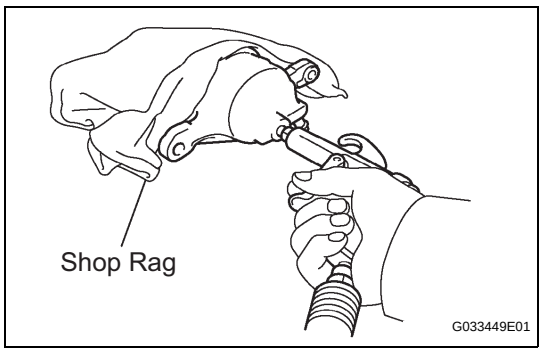
5. REMOVE REAR DISC BRAKE CYLINDER MOUNTING LH
(a) Remove the 2 bolts and cylinder mounting.



6. REMOVE REAR DISC BRAKE CYLINDER SLIDE PIN
(a) Remove the 2 pins (upper and lower) from the mounting.

7. REMOVE REAR DISC BRAKE BUSH DUST BOOT
(a) Remove the 2 boots from the mounting.

8. REMOVE CYLINDER BOOT



(a) Using a screwdriver, pry out the set ring and boot.

NOTICE:

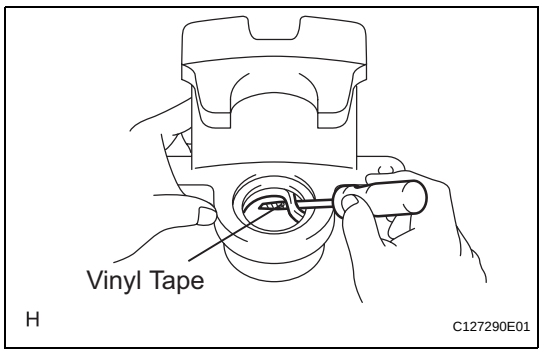
Be careful not to damage the brake piston and cylinder.

HINT:

Tape the screwdriver tip before use.

9. REMOVE REAR DISC BRAKE PISTON

(a) Place a shop rag or piece of cloth between the piston and disc brake cylinder.



(b) Apply compressed air to remove the piston from the disc brake cylinder.

CAUTION:

Do not place your fingers in front of the piston when applying compressed air.

NOTICE:

Be careful not to spatter the brake fluid.

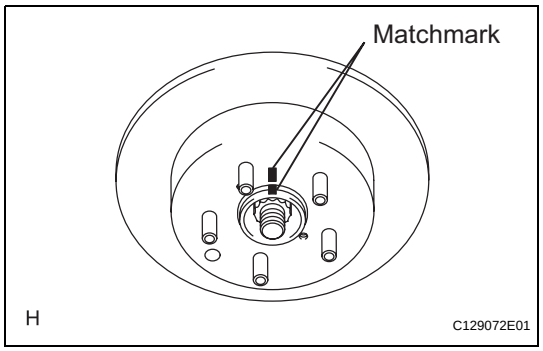
10. REMOVE PISTON SEAL

(a) Using a screwdriver, pry out the seal from the cylinder.

NOTICE:

Be careful not to damage the inner cylinder and piston seal groove.

HINT:

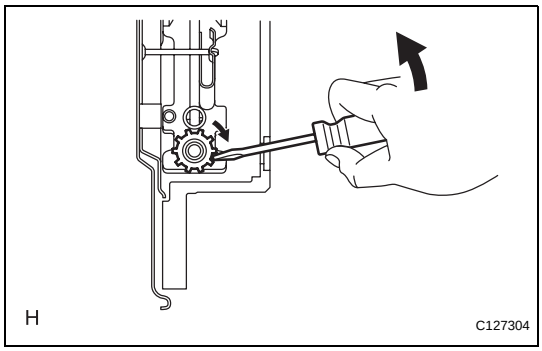


Tape the screwdriver tip before use.

11. REMOVE REAR DISC BRAKE BLEEDER PLUG

(a) Remove the bleeder plug cap and bleeder plug from the cylinder.

12. REMOVE PARKING BRAKE SHOE ADJUSTING HOLE PLUG

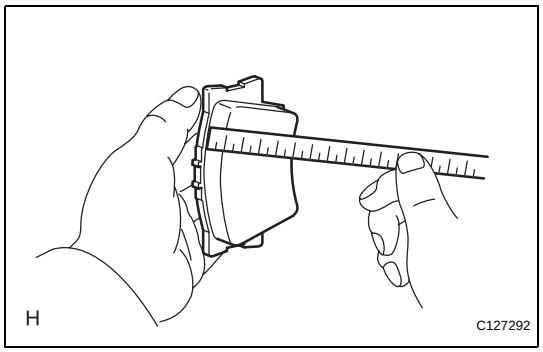


(a) Remove the shoe adjusting hole plug from the rear disc.

13. REMOVE REAR DISC

(a) Put matchmarks on the disc and axle hub.

(b) Release the parking brake.

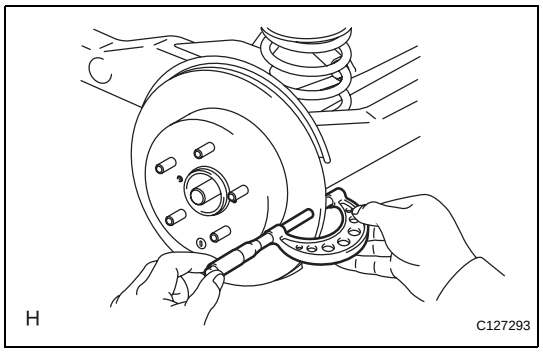


(c) Turn the shoe adjuster until the disc turns freely, and then remove the disc.
(d) Install the shoe adjusting hole plug from the rear disc.

INSPECTION

1. CHECK BRAKE CYLINDER AND PISTON

(a) Check the cylinder bore and piston for rust or scoring.
If necessary, replace the cylinder and piston.

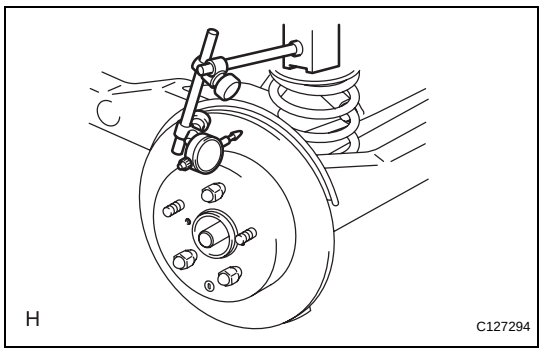


2. CHECK PAD LINING THICKNESS

(a) Using a ruler, measure the pad lining thickness.
Standard thickness:
10.5 mm (0.413 in.)
Minimum thickness:
1.0 mm (0.039 in.)
If the pad lining thickness is equal to or less than the minimum, replace the pad.

3. CHECK REAR DISC BRAKE PAD SUPPORT PLATE

(a) Check the 2 plates as follows. If necessary, replace the plates.
(1) Use brake cleaner to clean the pad support plate's pad and cylinder mounting contact surface. Inspect for deformation, cracks, rust and foreign matter that is difficult to remove.
(2) Use brake cleaner to clean the cylinder mounting's pad support plate contact surface. After installing the pad support plate to the cylinder mounting, inspect for looseness and deformation.
(3) After installing the pad, inspect if the pad falls off easily (due to the spring force of the pad support plate).



4. CHECK DISC THICKNESS

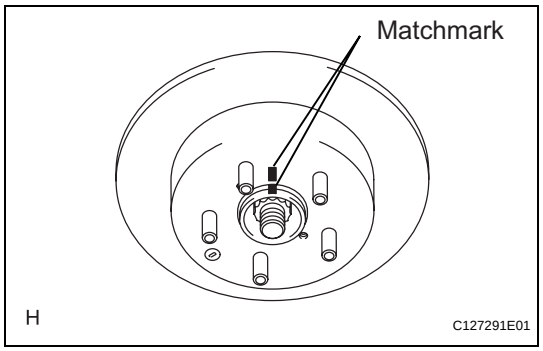
(a) Using a micrometer, measure the disc thickness.
Standard thickness:
12.0 mm (0.472 in.)
Minimum thickness:
10.5 mm (0.413 in.)
If the disc thickness is less than the minimum, replace the disc.

5. CHECK DISC RUNOUT

(a) Check the bearing backlash and axle hub deviation (see page AH-16).

(b) Tighten the disc with the 3 hub nuts.
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

(c) Using a dial indicator, measure the disc runout 10 mm (0.39 in.) from the outer edge of the disc.
Maximum disc runout:
0.15 mm (0.0059 in.)
If the runout is greater than the maximum, change the installation positions of the disc and axle so that the runout will become minimal.
If the runout is greater than the maximum even when the installation positions are changed, grind the disc.



If the disc thickness is less than the minimum, replace the disc.

(d) Remove the 3 hub nuts.

REASSEMBLY

HINT:

- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.

1. INSTALL REAR DISC

(a) Align the matchmarks and install the disc.
HINT:
When replacing the disc with a new one, select the installation position where the disc has the minimum runout.

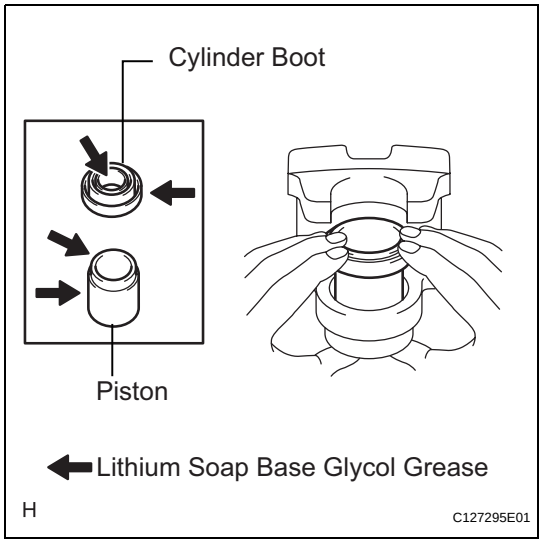
2. INSTALL PARKING BRAKE SHOE ADJUSTING HOLE PLUG

(a) Install the adjusting hole plug to the rear disc.

3. CHECK DISC RUNOUT (See page BR-58)

4. ADJUST PARKING BRAKE SHOE CLEARANCE (See page PB-17)

5. TEMPORARILY TIGHTEN REAR DISC BRAKE BLEEDER PLUG



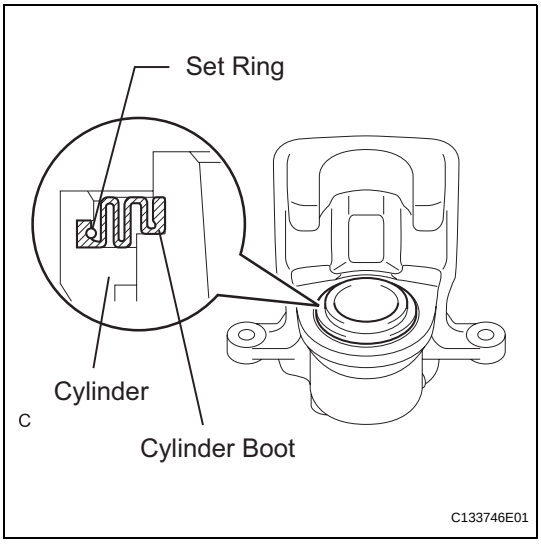
(a) Install the bleeder plug to the brake cylinder.
HINT:
The bleeder plug will be tightened to a torque specification in the "BLEED AIR FROM BRAKE LINE" procedures.

(b) Install the bleeder plug cap to the bleeder plug.

6. INSTALL PISTON SEAL

(a) Apply lithium soap base glycol grease to a new piston seal.

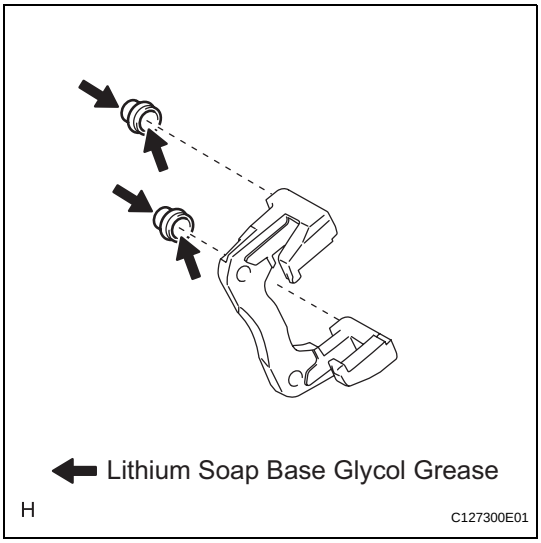
(b) Install the piston seal to the brake cylinder.
NOTICE:
Securely install the piston seal into the groove of the disc brake cylinder.



7. INSTALL REAR DISC BRAKE PISTON

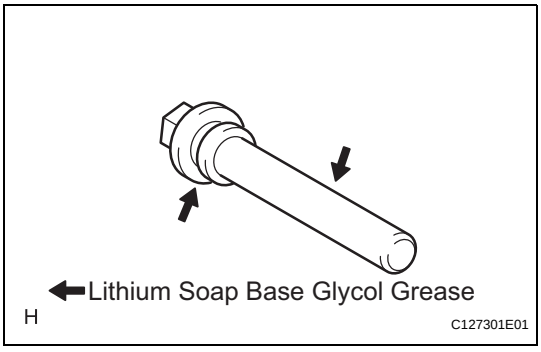
(a) Apply lithium soap base glycol grease to the brake piston and a new cylinder boot.

(b) Install the cylinder boot to the brake piston.



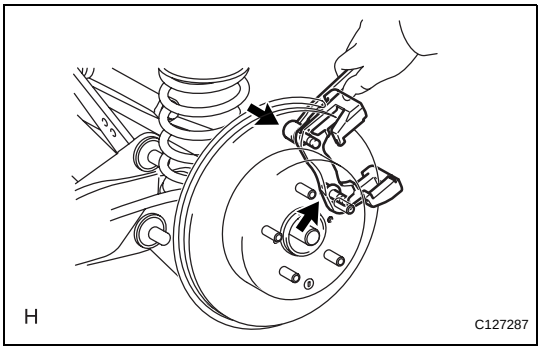
(c) Install the brake piston (with the cylinder boot) to the brake cylinder.
NOTICE:
Do not forcibly install the brake piston to the brake cylinder.

8. INSTALL CYLINDER BOOT



(a) Install the cylinder boot to the cylinder.
NOTICE:
- **Install the boot securely into the grooves of the brake cylinder and brake piston.**
- **Be careful not to damage the boot.**

(b) Using a screwdriver, install a new set ring.
NOTICE:
Be careful not to damage the boot.
HINT:
Tape the screwdriver tip before use.



9. INSTALL REAR DISC BRAKE BUSH DUST BOOT

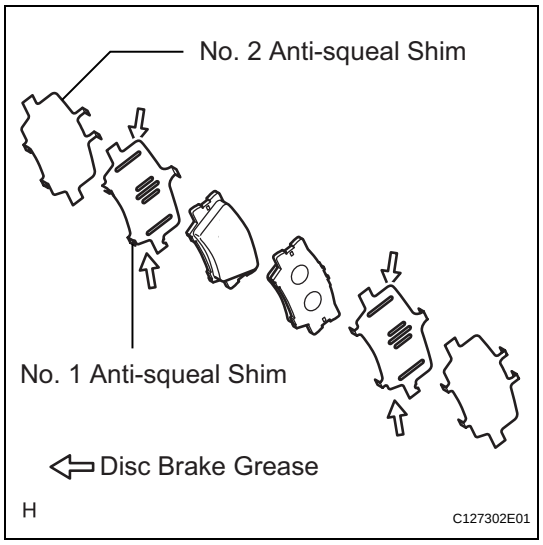
(a) Apply lithium soap base glycol grease to 2 new boots.
(b) Install the 2 boots to the mounting.

10. INSTALL REAR DISC BRAKE CYLINDER SLIDE PIN

(a) Apply lithium soap base glycol grease to the pins.
(b) Install the 2 pins (upper and lower) to the mounting.

11. INSTALL REAR DISC BRAKE CYLINDER MOUNTING LH

(a) Install the cylinder mounting with the 2 bolts.
Torque: 88 N*m (897 kgf*cm, 65 ft.*lbf)



12. INSTALL REAR DISC BRAKE PAD SUPPORT PLATE

(a) Install the 2 plates to the mounting.

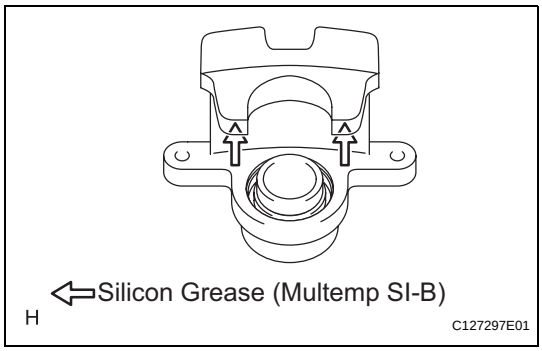
13. INSTALL PAD WEAR INDICATOR PLATE

(a) Install the 2 indicator plates to the lower side of each pad.

BR

14. INSTALL ANTI-SQUEAL SHIM

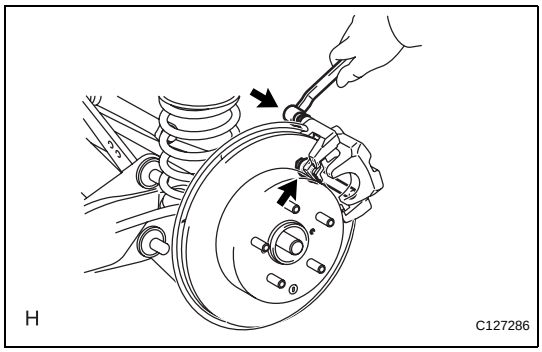
(a) Apply disc brake grease to both sides of each No. 1 shim.



(b) Install the No. 1 and No. 2 shims to each pad.
NOTICE:
- **When replacing a worn pad, the shims must be replaced together with the pads.**
- **Install the shims in the correct positions and direction.**

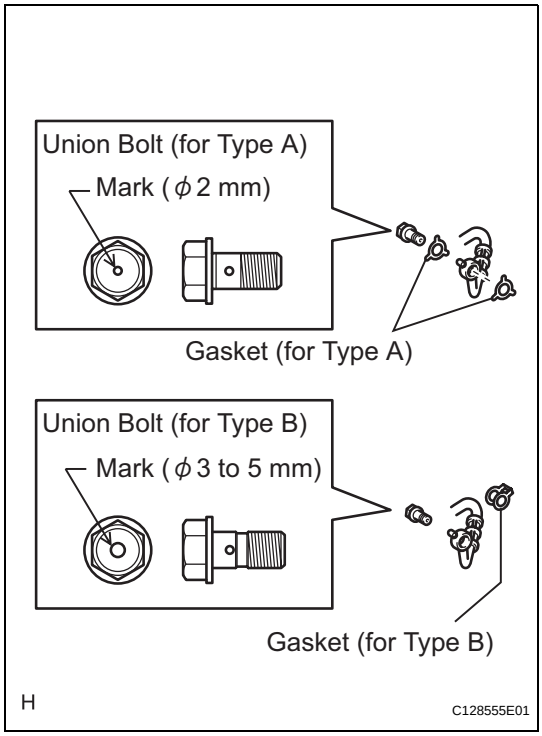
15. INSTALL REAR DISC BRAKE PAD

(a) Install the 2 disc brake pads to the mounting.
NOTICE:
There should be no oil or grease on the friction surface of the pads and disc.

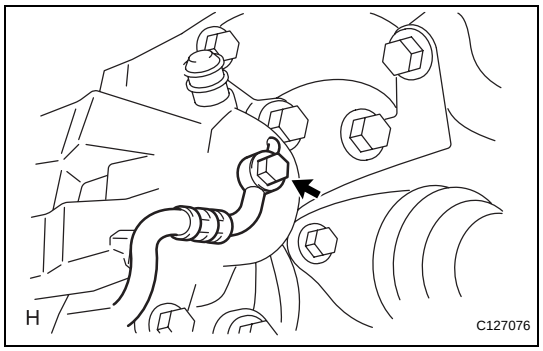


INSTALLATION

HINT:
- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.



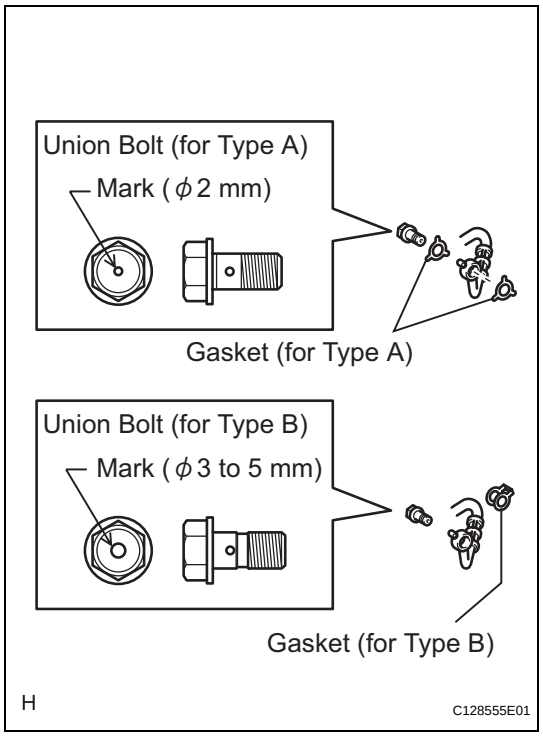
1. INSTALL REAR DISC BRAKE CYLINDER ASSEMBLY LH



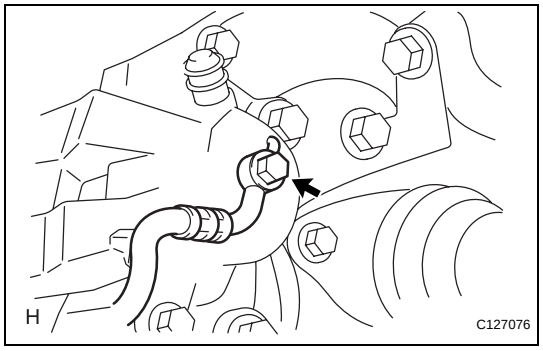
(a) Apply silicon grease (Multemp SI-B) on the contact surfaces of the cylinder parts indicated by the arrows.

(b) Install the cylinder with the 2 bolts.
Torque: 26.5 N*m (270 kgf*cm, 20 ft.*lbf)

2. CONNECT REAR FLEXIBLE HOSE LH
NOTICE:
The gasket and union bolt must be used as a set, as shown in the illustration.

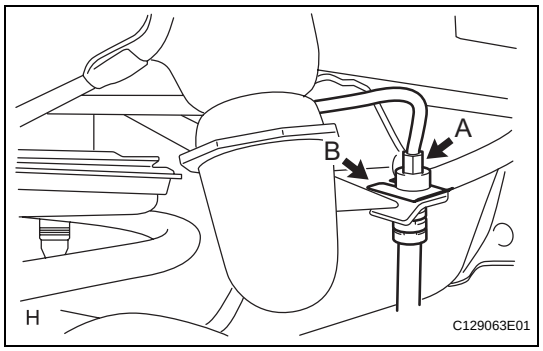


(a) Connect the flexible hose with new gasket(s) and the union bolt.
Torque: 30.4 N*m (310 kgf*cm, 22 ft.*lbf)
HINT:
Install the flexible hose lock securely in the lock hole in the cylinder.



3. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-6)**
4. **BLEED AIR FROM BRAKE MASTER CYLINDER (See page BR-7)**
5. **BLEED AIR FROM BRAKE LINE (See page BR-7)**
6. **BLEED AIR FROM ABS AND TRACTION ACTUATOR ASSEMBLY (See page BR-8)**
7. **CHECK BRAKE FLUID LEVEL IN RESERVOIR (See page BR-6)**
8. **CHECK FOR BRAKE FLUID LEAKAGE**
9. **INSTALL REAR WHEEL**
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

INSTALLATION



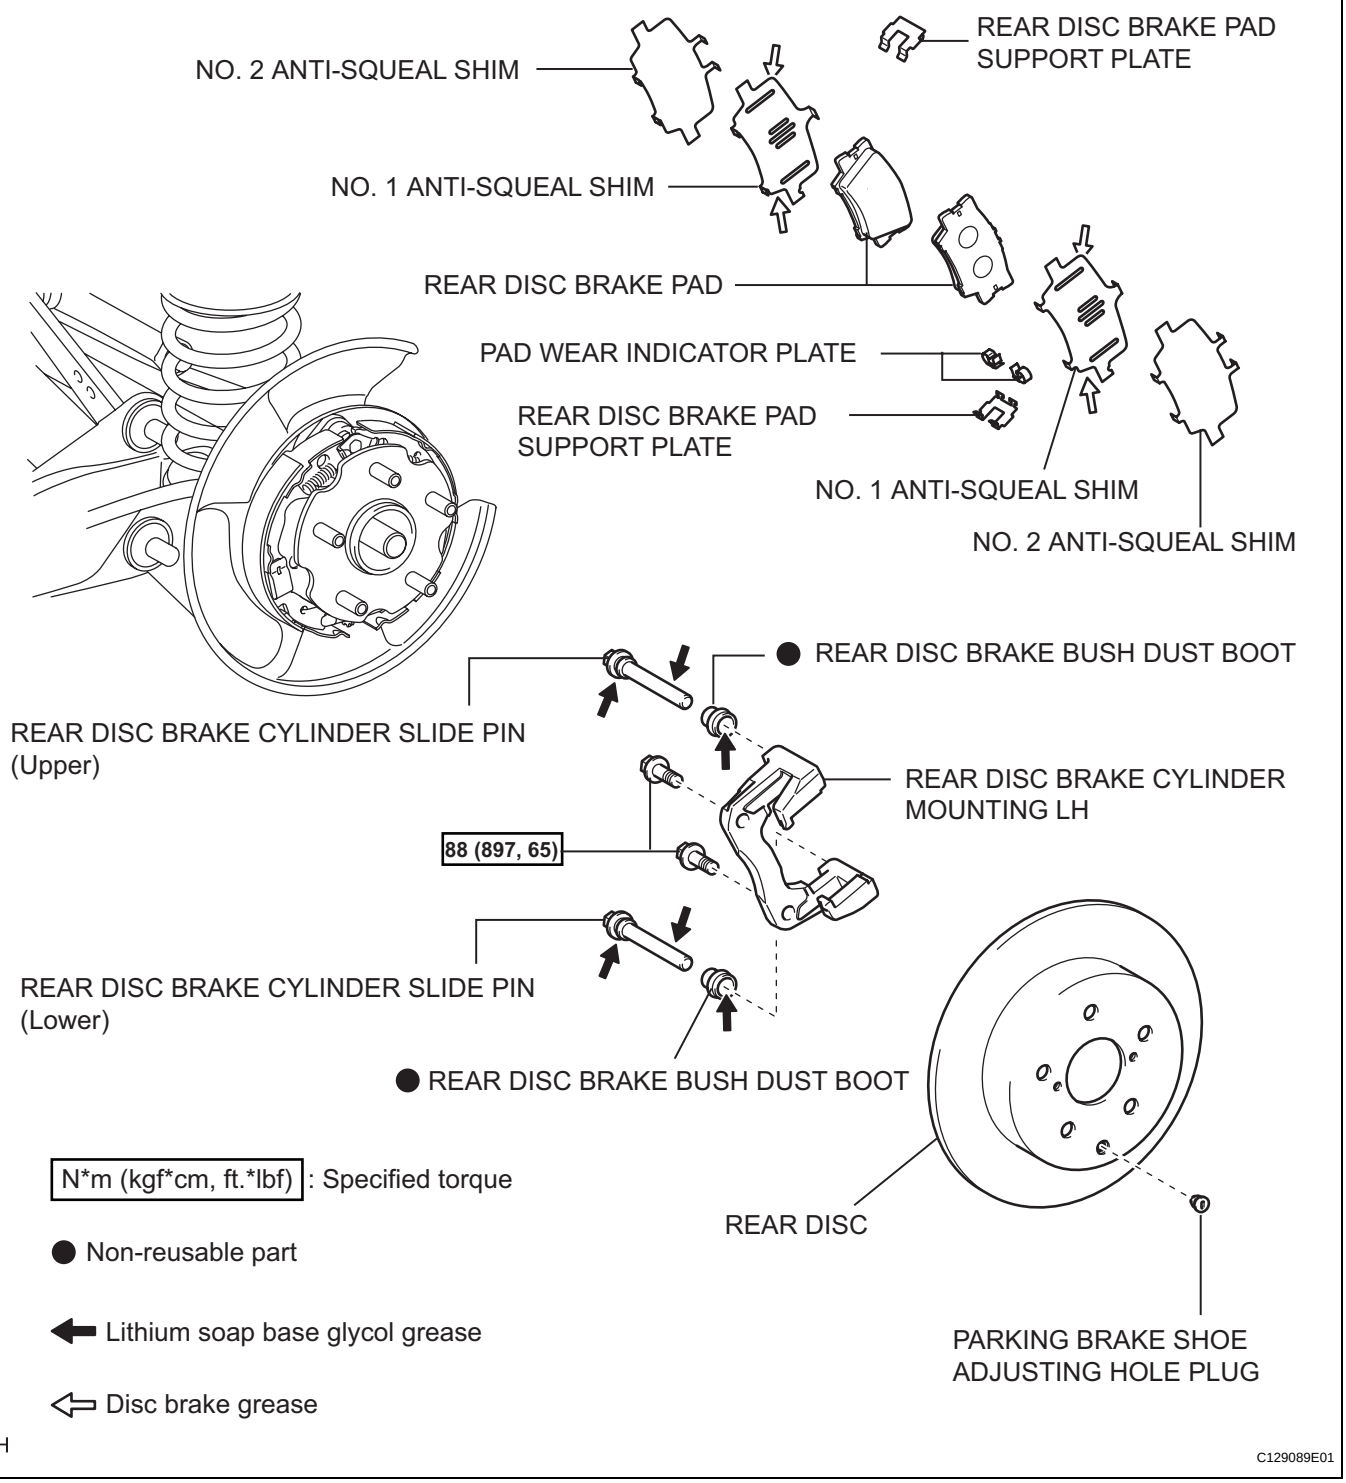
HINT:
- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.

1. INSTALL REAR BRAKE TUBE FLEXIBLE HOSE
NOTICE:
The gasket and union bolt must be used as a set, as shown in the illustration.

(a) Connect the flexible hose with new gasket(s) and the union bolt to the disc brake cylinder.
Torque: 30.4 N*m (310 kgf*cm, 22 ft.*lbf)
HINT:
Install the flexible hose lock securely in the lock hole in the cylinder.

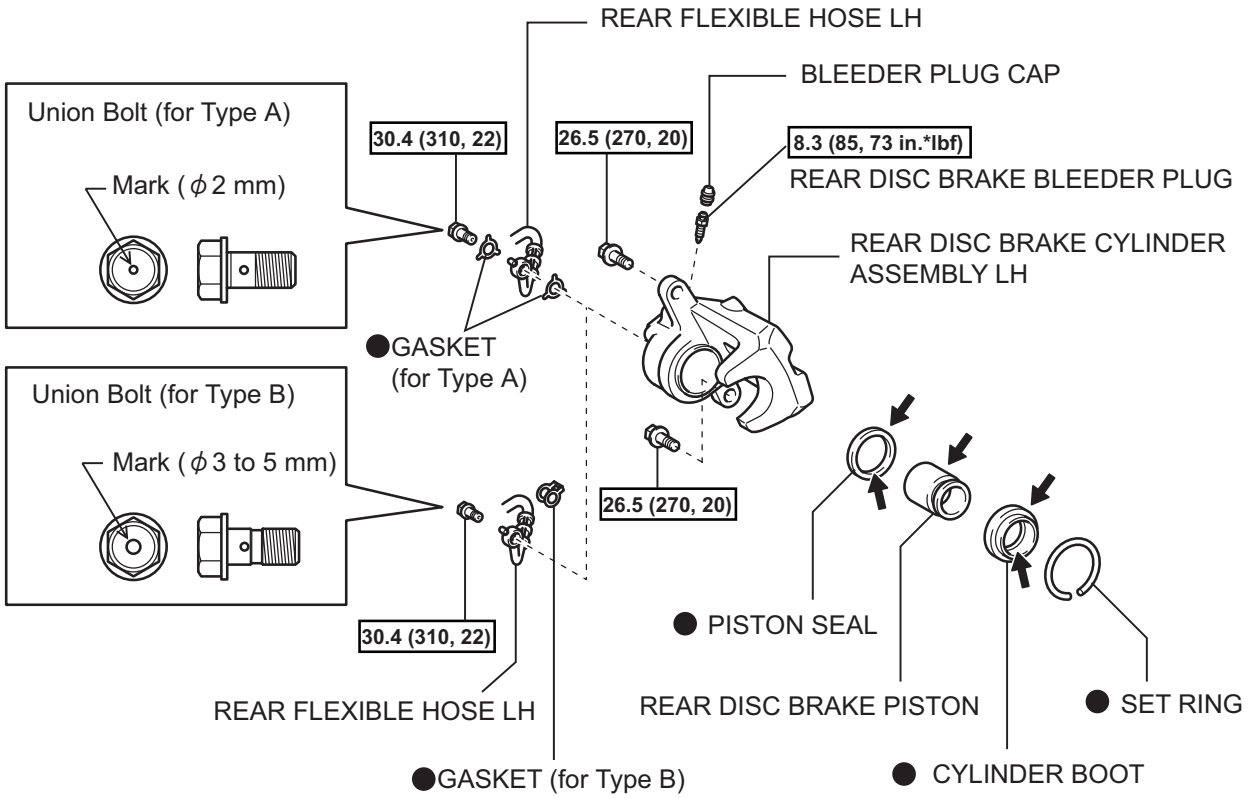
(b) Set the flexible hose to the connecting point with the brake tube (labeled A), and then attach a new clip (labeled B).

(c) Using SST, connect the flexible hose to the brake tube (labeled A) while holding the flexible hose with a wrench.
SST 09023-00101
Torque: 15.2 N*m (155 kgf*cm, 11 ft.*lbf) without SST
14 N*m (144 kgf*cm, 10 ft.*lbf) with SST
HINT:
Use a torque wrench with a fulcrum length of 30 cm (11.81 in.).
NOTICE:
- **Do not bend or damage the brake tube.**



BR

- **Do not allow any foreign matter such as dirt and dust to enter the brake tube from the connecting point.**



2. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-6)**
3. **BLEED AIR FROM BRAKE MASTER CYLINDER (See page BR-7)**
4. **BLEED AIR FROM BRAKE LINE (See page BR-7)**
5. **BLEED AIR FROM ABS AND TRACTION ACTUATOR ASSEMBLY (See page BR-8)**
6. **CHECK BRAKE FLUID LEVEL IN RESERVOIR (See page BR-6)**
7. **CHECK FOR BRAKE FLUID LEAKAGE**
8. **INSTALL REAR WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

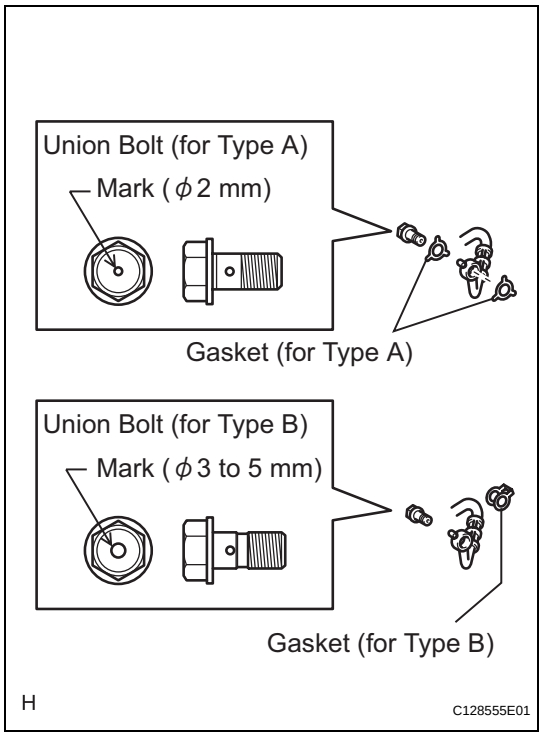
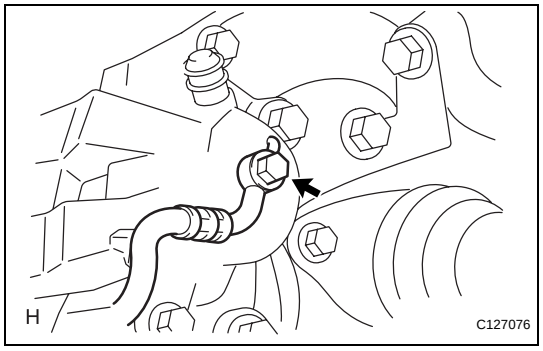
(b) Remove the clip (labeled B).



(c) Remove the union bolt and gasket(s), and then remove the flexible hose from the disc brake cylinder.



BR

REMOVAL

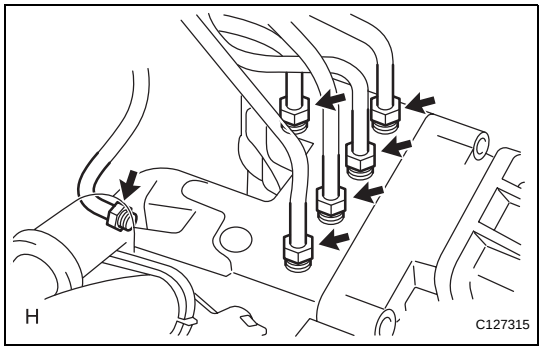
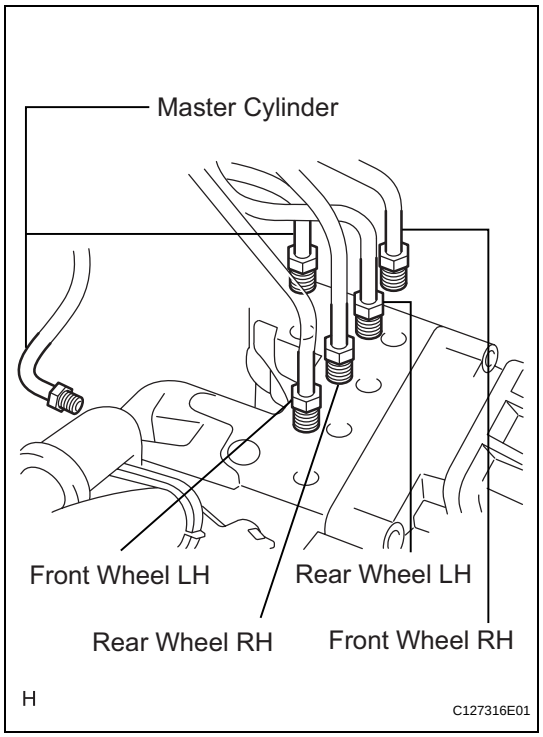
(2006/01-)

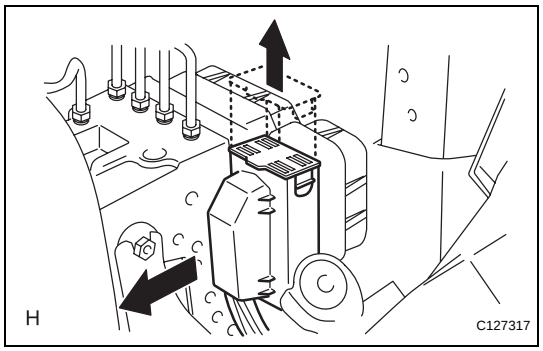


1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.



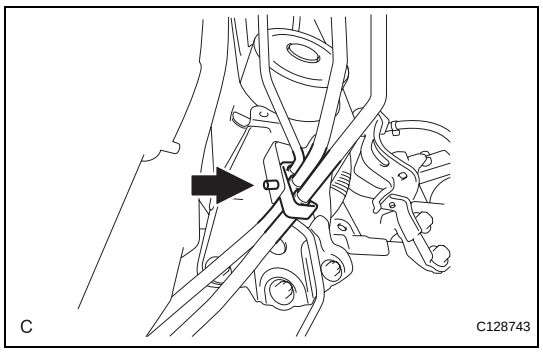
2. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (for 2AZ-FE)**
   (a) Remove the air cleaner case (see page EM-98).
   HINT:
   Refer to the procedures from the removal of the purge VSV up until the removal of the air cleaner case.

3. **REMOVE AIR CLEANER CASE (for 2GR-FE)**
   (a) Remove the air cleaner case (see page EM-21).
   HINT:
   Refer to the procedures from the removal of the air cleaner cap sub-assembly up until the removal of the air cleaner case.

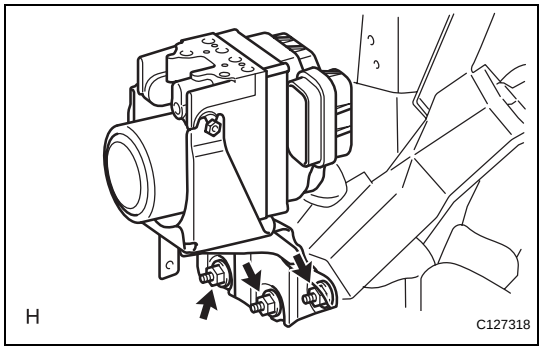


4. **DRAIN BRAKE FLUID**
   NOTICE:
   Wash off brake fluid immediately if it comes in contact with any painted surface.

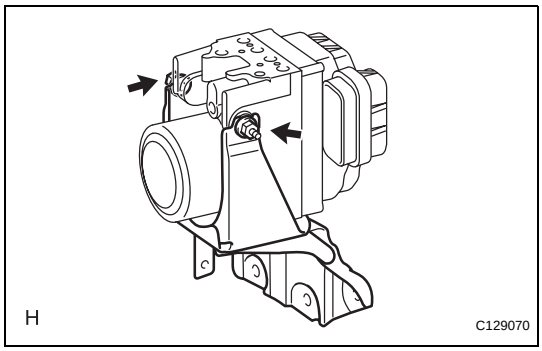
5. **DISCONNECT BRAKE LINES**
   (a) Using SST, disconnect the 6 brake lines from the actuator.
   SST 09023-00101



(b) Place tags or marks to identify the installation locations of each brake line.



6. REMOVE ABS AND TRACTION ACTUATOR ASSEMBLY WITH BRACKET



(a) Pull the lock lever upward and disconnect the connector.

(b) Disconnect the brake tube clamp from the bracket.

(c) Remove the 3 nuts and actuator with bracket.
NOTICE:
Be careful not to damage the brake tubes.

DISASSEMBLY

1. REMOVE ABS AND TRACTION ACTUATOR ASSEMBLY

(a) Remove the 2 nuts and actuator from the bracket.

2. REMOVE BRAKE ACTUATOR BOLT HOLDER

(a) Remove the 2 bolt holders from the actuator.

3. REMOVE BRAKE ACTUATOR BOLT CUSHION

(a) Remove the 3 cushions from the actuator.

REASSEMBLY

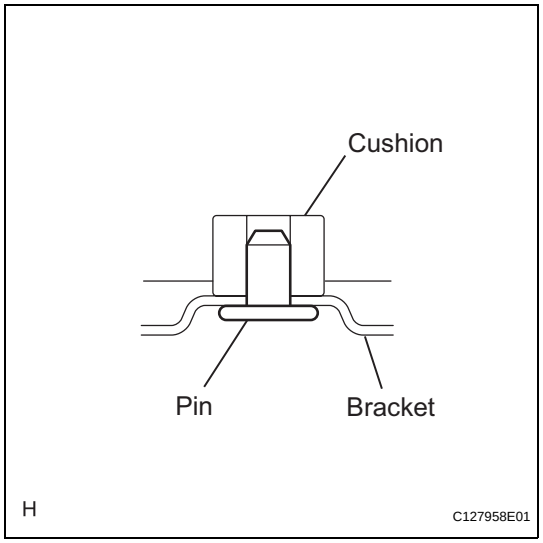
1. INSTALL BRAKE ACTUATOR BOLT CUSHION

(a) Install the 3 cushions to the actuator.

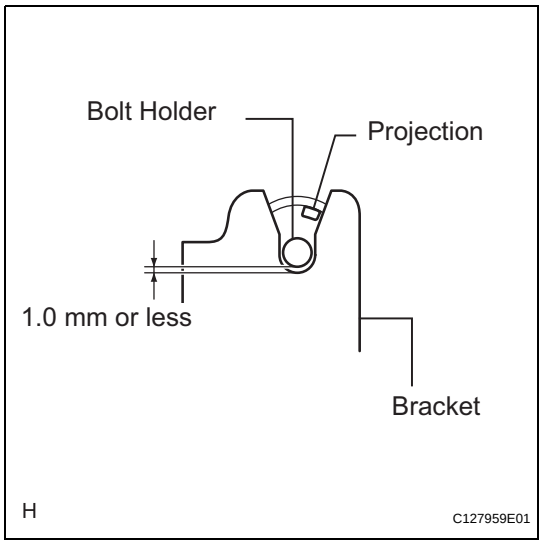
2. INSTALL BRAKE ACTUATOR BOLT HOLDER

(a) Install the 2 bolt holders to the actuator.

3. INSTALL ABS AND TRACTION ACTUATOR ASSEMBLY



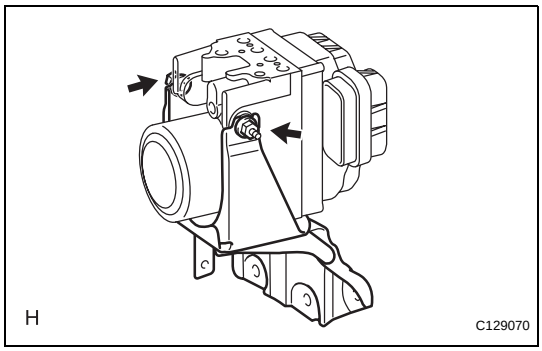
NOTICE:



Do not remove the hole plug before connecting the brake tube. New actuators are filled with brake fluid.

(a) Set the actuator on the bracket.

NOTICE:

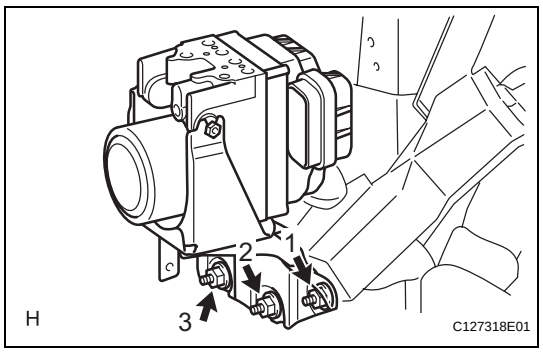


- **Insert the cushion to the pin of the bracket securely.**

- **The clearance between the bolt holder and bracket is less than 1.0 mm (0.039 in.).**
- **The projection should be set as shown in the illustration.**

BC

(b) Install the 2 nuts to assemble the actuator and bracket.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



INSTALLATION

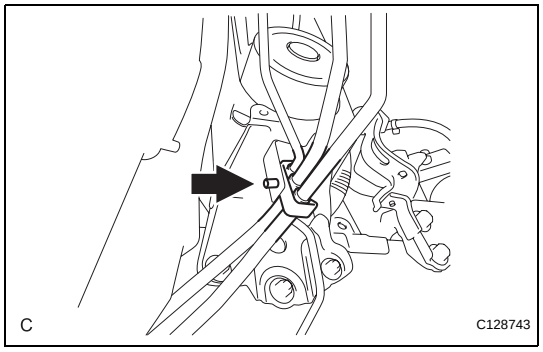
(2005/11-2006/01)

1. INSTALL ABS AND TRACTION ACTUATOR ASSEMBLY WITH BRACKET

NOTICE:

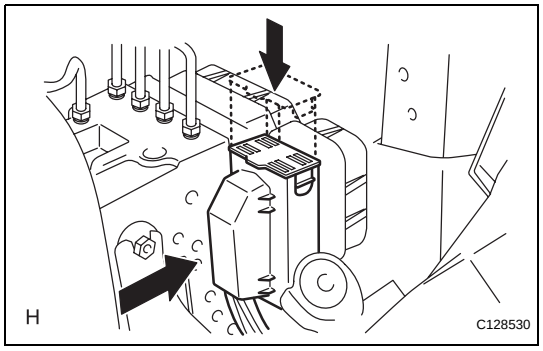
Do not remove the hole plug before connecting the brake tube. New actuators are filled with brake fluid.

(a) Install the actuator with bracket with the 3 nuts.



Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)

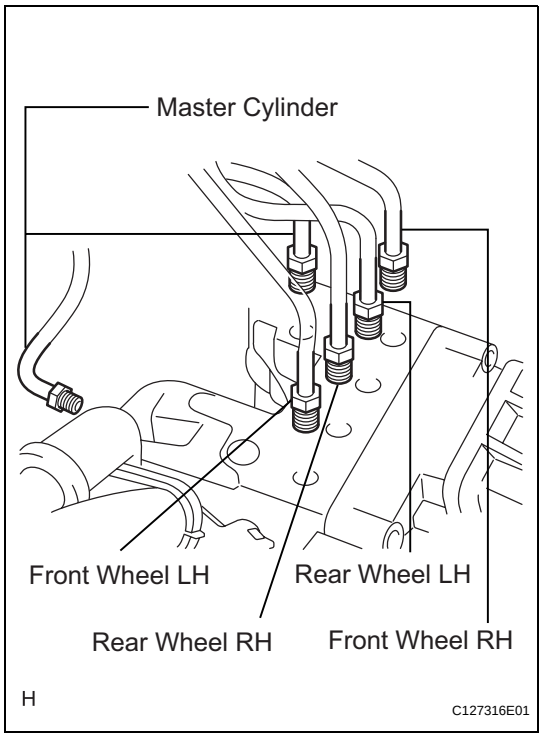
HINT:



The nuts should be tightened in order from 1 to 3 as shown in the illustration.

NOTICE:

Be careful not to damage the brake tubes.



(b) Connect the brake tube clamp to the bracket.

(c) Connect the connector and push the lock lever downward.

BC

BC

2. **CONNECT BRAKE LINES**
   (a) Using SST, connect the 6 brake lines to the correct locations on the actuator, as shown in the illustration.
   SST 09023-00101
   Torque: 15.2 N*m (155 kgf*cm, 11 ft.*lbf) without SST
   14 N*m (144 kgf*cm, 10 ft.*lbf) with SST
   HINT:
   Use a torque wrench with a fulcrum length of 30 cm (11.81 in.).

3. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-6)**

4. **BLEED AIR FROM BRAKE MASTER CYLINDER (See page BR-7)**

5. **BLEED AIR FROM BRAKE LINE (See page BR-7)**

6. **BLEED AIR FROM ABS AND TRACTION ACTUATOR ASSEMBLY (See page BR-8)**

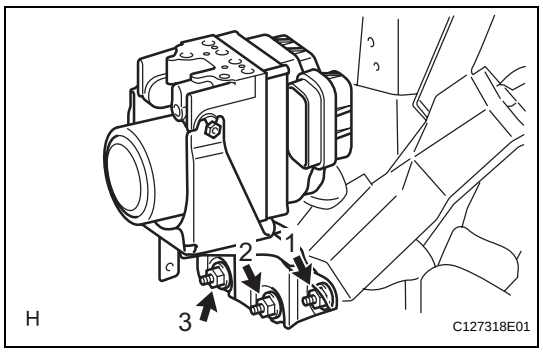
7. **CHECK BRAKE FLUID LEVEL IN RESERVOIR (See page BR-6)**

8. **CHECK FOR BRAKE FLUID LEAKAGE**

9. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY**
   (a) Install the air cleaner case (see page EM-105).
   HINT:
   Refer to the procedures from the installation of the air cleaner case up until the installation of the purge VSV.

10. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

11. **CHECK ABS AND TRACTION ACTUATOR ASSEMBLY WITH INTELLIGENT TESTER**
   (a) Check the ABS and traction actuator with the intelligent tester (see page BC-180).



INSTALLATION

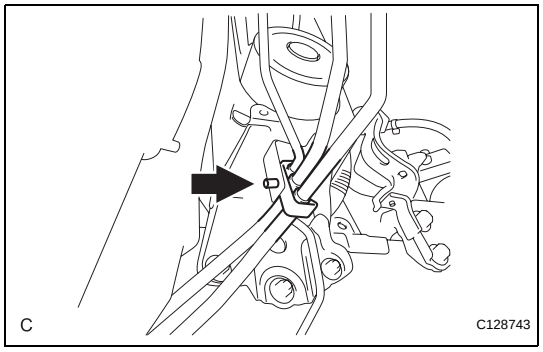
(2006/01-)

1. INSTALL ABS AND TRACTION ACTUATOR ASSEMBLY WITH BRACKET

NOTICE:

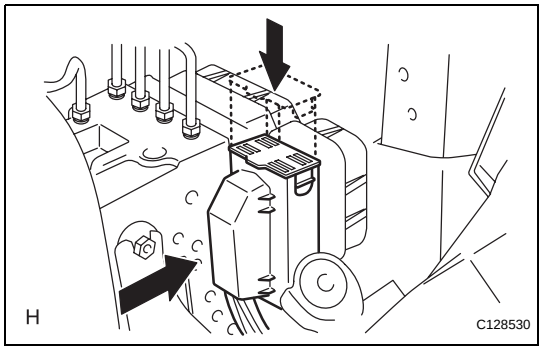
Do not remove the hole plug before connecting the brake tube. New actuators are filled with brake fluid.

(a) Install the actuator with bracket with the 3 nuts.



Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)

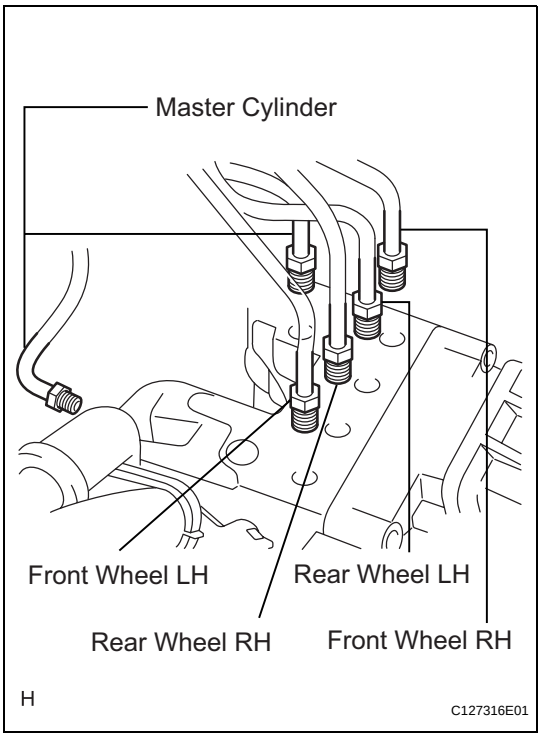
HINT:



The nuts should be tightened in order from 1 to 3 as shown in the illustration.

NOTICE:

Be careful not to damage the brake tubes.



(b) Connect the brake tube clamp to the bracket.

(c) Connect the connector and push the lock lever downward.

BC

2. CONNECT BRAKE LINES

(a) Using SST, connect the 6 brake lines to the correct locations on the actuator, as shown in the illustration.

SST 09023-00101

Torque: 15.2 N*m (155 kgf*cm, 11 ft.*lbf) without SST
14 N*m (144 kgf*cm, 10 ft.*lbf) with SST

HINT:
Use a torque wrench with a fulcrum length of 30 cm (11.81 in.).

3. FILL RESERVOIR WITH BRAKE FLUID (See page BR-6)

4. BLEED AIR FROM BRAKE MASTER CYLINDER (See page BR-7)

5. BLEED AIR FROM BRAKE LINE (See page BR-7)

6. BLEED AIR FROM ABS AND TRACTION ACTUATOR ASSEMBLY (See page BR-8)

7. CHECK BRAKE FLUID LEVEL IN RESERVOIR (See page BR-6)

8. CHECK FOR BRAKE FLUID LEAKAGE

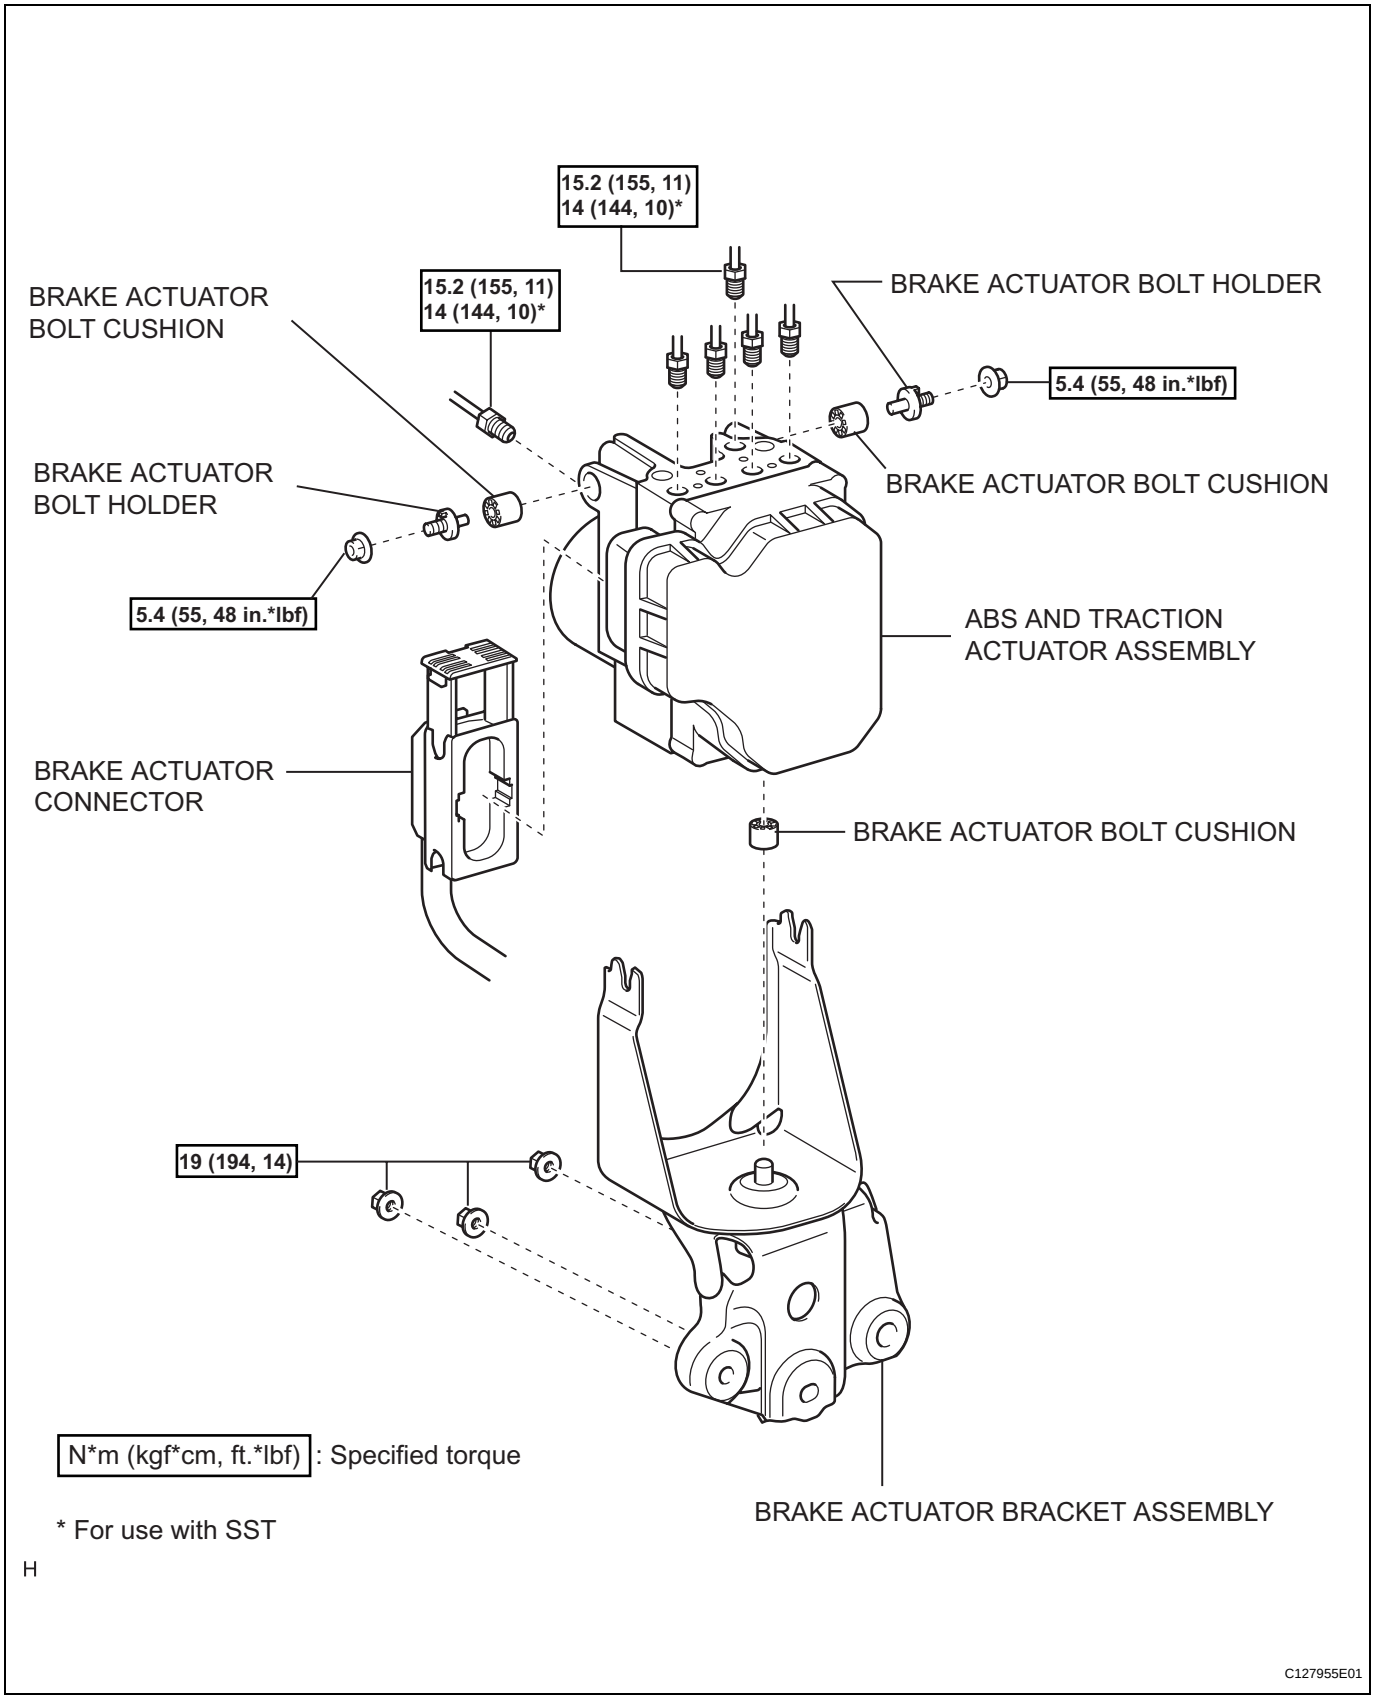
9. INSTALL AIR CLEANER CASE SUB-ASSEMBLY (for 2AZ-FE)

(a) Install the air cleaner case (see page EM-105).
HINT:
Refer to the procedures from the installation of the air cleaner case up until the installation of the purge VSV.

10. INSTALL AIR CLEANER CASE (for 2GR-FE)

(a) Install the air cleaner case (see page EM-31).
HINT:
Refer to the procedures from the installation of the air cleaner case up until the installation of the air cleaner cap sub-assembly.

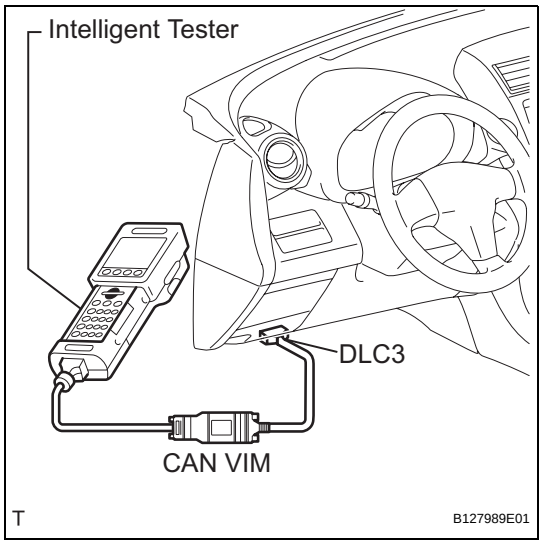
11. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



12. CHECK ABS AND TRACTION ACTUATOR ASSEMBLY WITH INTELLIGENT TESTER

(a) Check the ABS and traction actuator with the intelligent tester (see page BC-180).

BC



ABS AND TRACTION ACTUATOR

COMPONENTS

BC

H

ON-VEHICLE INSPECTION

1. CONNECT INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and idle it.
(c) Select the Active Test mode on the intelligent tester.
HINT:
Please refer to the intelligent tester operator's manual for further details.

2. CHECK ACTUATOR MOTOR OPERATION

NOTICE:
Do not keep a motor relay ON for more than 5 seconds. When operating it consecutively, wait 20 seconds between each operation.

(a) Turn the motor relay ON and check the actuator motor operation noise.
(b) Turn the motor relay OFF.
(c) Fully depress the brake pedal and hold it for approximately 15 seconds. Check that the pedal's initial depth is maintained for the entire 15 seconds.
(d) Turn the motor relay ON and check that the pedal does not pulsate.
(e) Turn the motor relay OFF and release the pedal.

3. CHECK BRAKE ACTUATOR SOLENOID (for Front Right Wheel)

NOTICE:
- **Be sure to follow the procedures below when turning ON a solenoid.**
- **Do not keep a solenoid ON for more than 10 seconds. When operating it consecutively, wait 20 seconds between each operation.**
- **Do not keep a motor relay ON for more than 5 seconds. When operating it consecutively, wait 20 seconds between each operation.**

(a) With the pedal depressed as much as possible, perform the following operations.
(1) Turn the SFRH and SFRR solenoids ON simultaneously, and check that the pedal cannot be depressed further.
(2) Turn the SFRH and SFRR solenoids OFF simultaneously, and check that the pedal can be depressed further.
(3) Turn the motor relay ON. Check that the pedal returns to the "depressed as much as possible" position.
(b) Turn the motor relay OFF and release the pedal.

4. CHECK BRAKE ACTUATOR SOLENOID (for Front Left Wheel)

(a) Use the same procedures described for the front right wheel to check the solenoids of the front left wheel.
HINT:
Front left wheel: SFLH, SFLR

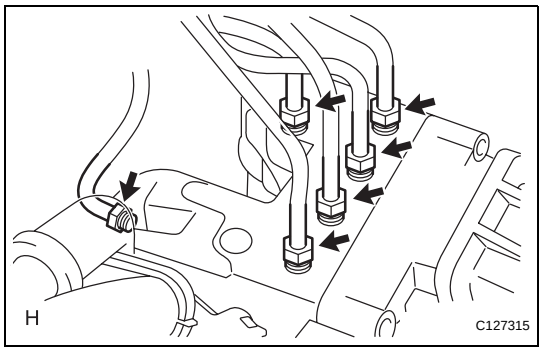
BC

5. **CHECK BRAKE ACTUATOR SOLENOID (for Rear Right Wheel)**
   (a) Use the same procedures described for the front right wheel to check the solenoids of the rear right wheel.
   HINT:
   Rear right wheel: SRRH, SRRR

6. **CHECK BRAKE ACTUATOR SOLENOID (for Rear Left Wheel)**
   (a) Use the same procedures described for the front right wheel to check the solenoids of the rear left wheel.
   HINT:
   Rear left wheel: SRLH, SRLR

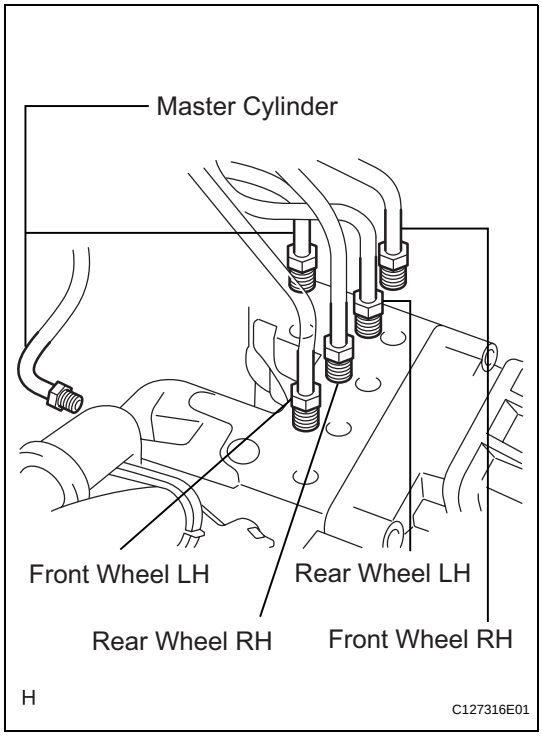
7. **CHECK AND CLEAR DTC**
   (a) Check and clear the DTC (see page BC-47).

REMOVAL

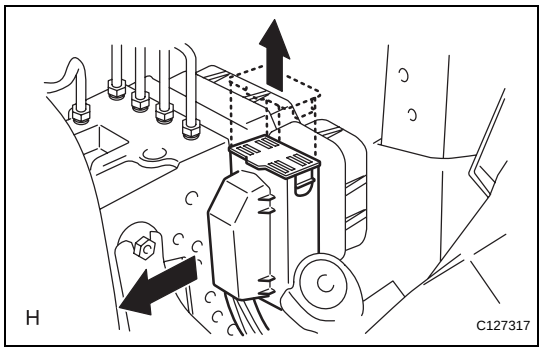


(2005/11-2006/01)

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

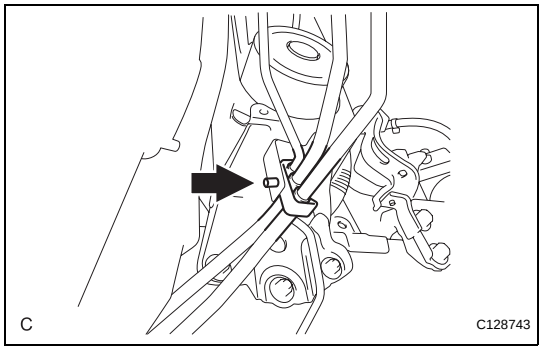


2. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY**
   (a) Remove the air cleaner case (see page EM-98).
   HINT:
   Refer to the procedures from the removal of the purge VSV up until the removal of the air cleaner case.

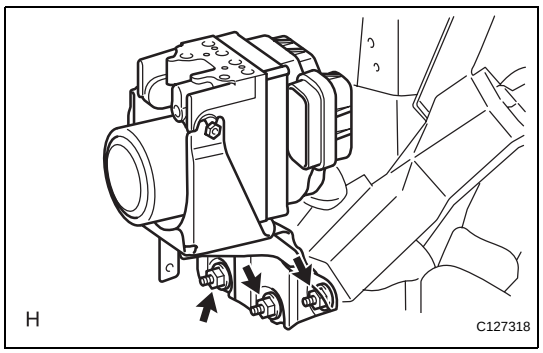


3. **DRAIN BRAKE FLUID**
   NOTICE:
   Wash off brake fluid immediately if it comes in contact with any painted surface.

4. **DISCONNECT BRAKE LINES**
   (a) Using SST, disconnect the 6 brake lines from the actuator.
   SST 09023-00101



(b) Place tags or marks to identify the installation locations of each brake line.



5. REMOVE ABS AND TRACTION ACTUATOR ASSEMBLY WITH BRACKET

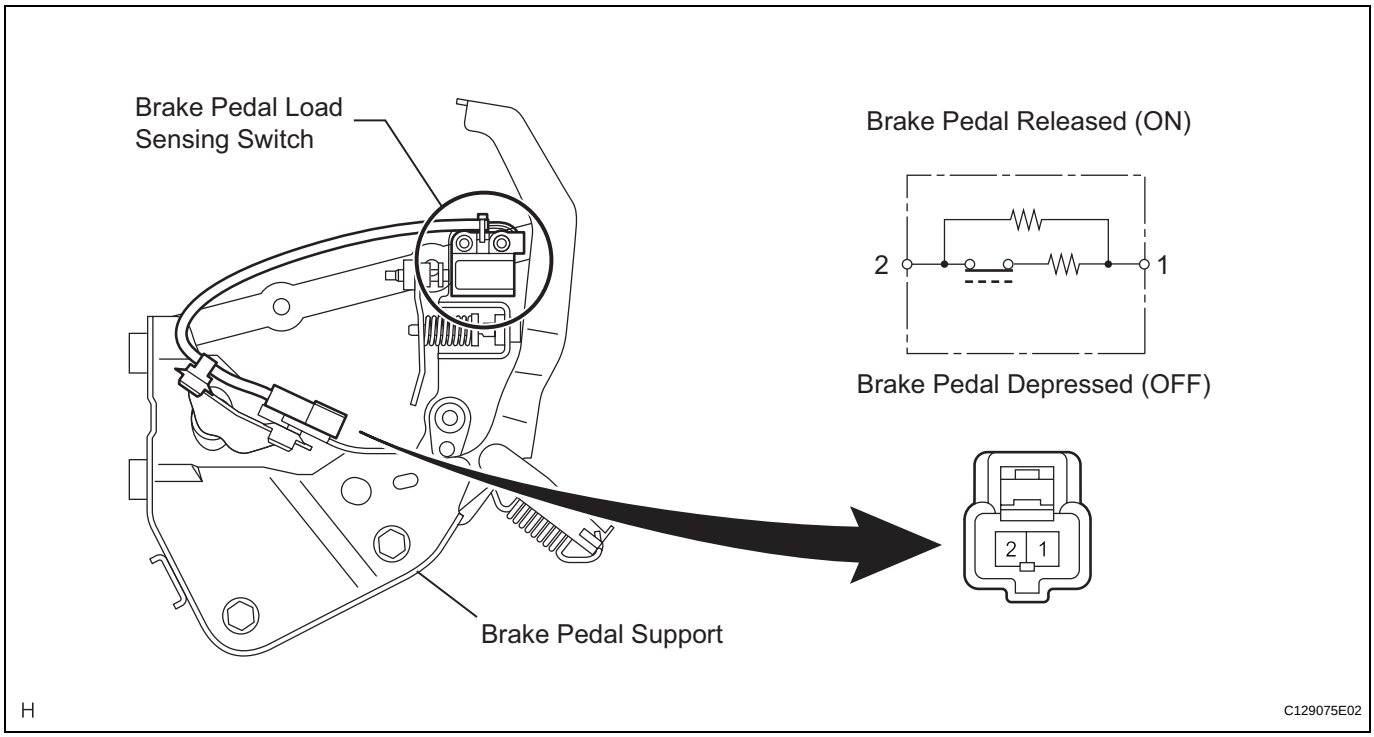
(a) Pull the lock lever upward and disconnect the connector.

(b) Disconnect the brake tube clamp from the bracket.

(c) Remove the 3 nuts and actuator with bracket.
NOTICE:
Be careful not to damage the brake tubes.

BC

BRAKE PEDAL LOAD SENSING SWITCH



ON-VEHICLE INSPECTION

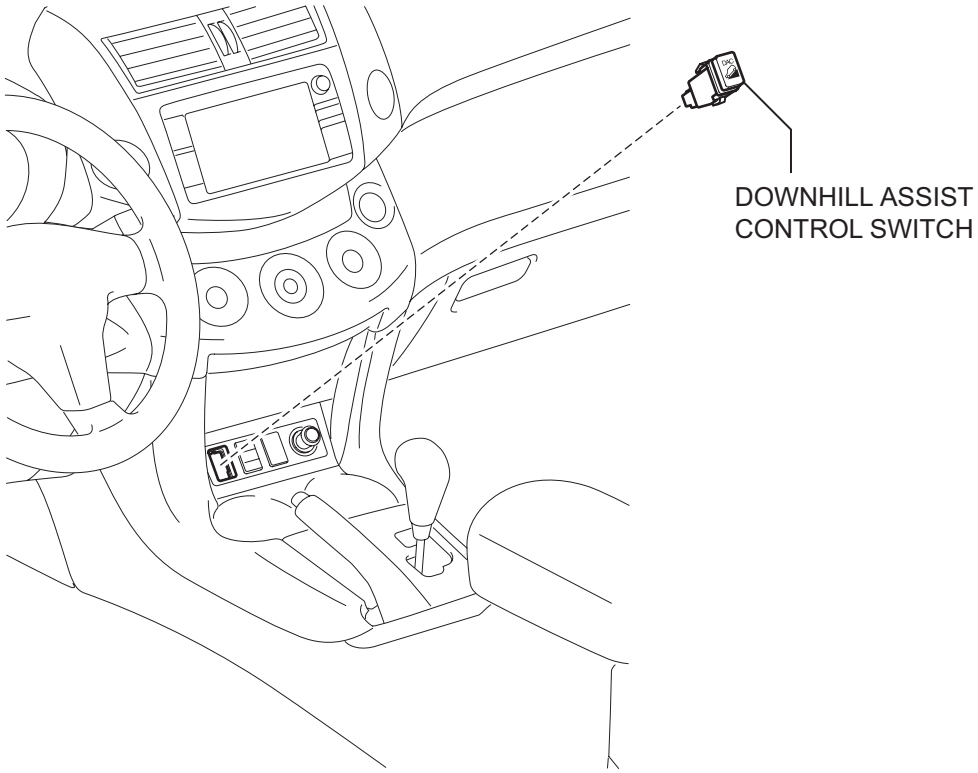
1. INSPECT BRAKE PEDAL LOAD SENSING SWITCH

HINT:

- Do not remove the brake pedal load sensing switch from the brake pedal support.
- When there is a malfunction in the brake pedal load sensing switch, replace the brake pedal support.

(a) Disconnect the brake pedal load sensing switch connector.

(b) Measure the resistance of the switch.



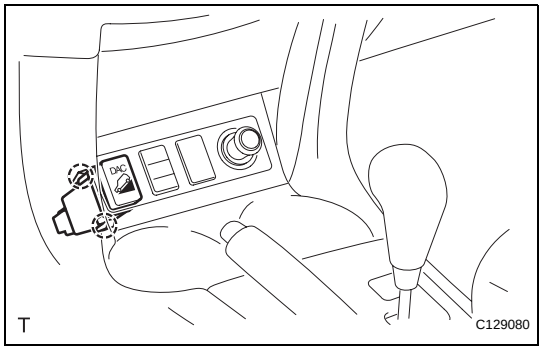
Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Brake pedal depressed	Approx. 1 kΩ
1 - 2	Brake pedal released	Approx. 213 Ω

If the value is not as specified, replace the brake pedal support assembly (see page BR-12).

DOWNHILL ASSIST CONTROL SWITCH

COMPONENTS

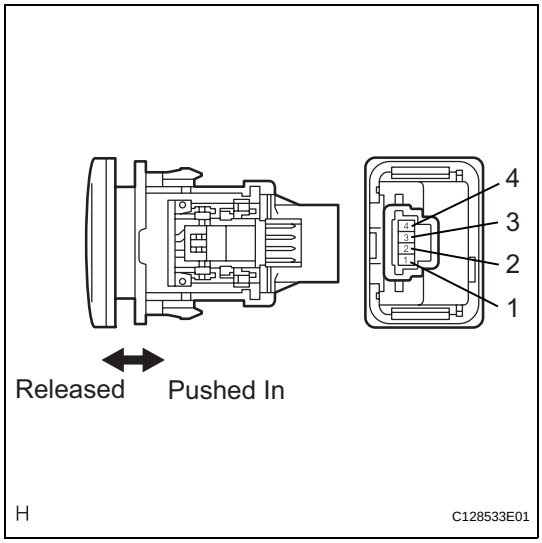


T

C129079E01

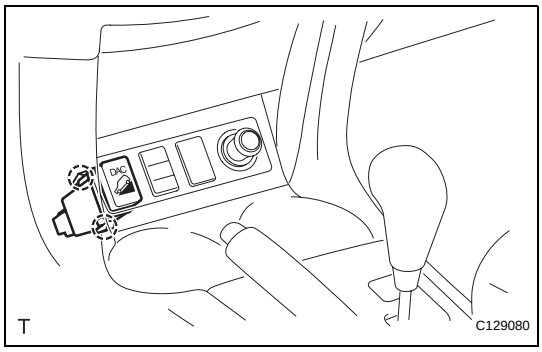
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE DOWNHILL ASSIST CONTROL SWITCH**
   (a) Detach the 2 claws and remove the switch.



INSPECTION

1. **CHECK DOWNHILL ASSIST CONTROL SWITCH**
   (a) Measure the resistance of the switch.
   Standard resistance



Tester Connection	Switch Condition	Specified Condition
1 - 4	Released	10 kΩ or higher
1 - 4	Pushed in	Below 25 Ω

   If the result is not as specified, replace the switch.
   (b) Check illumination operation.
   (1) Connect the battery's positive (+) lead to terminal 3 and negative (-) lead to terminal 2. Then check that the bulb illuminates.
   OK:
   Bulb illuminates.
   If the result is not as specified, replace the switch.

INSTALLATION

1. **INSTALL DOWNHILL ASSIST CONTROL SWITCH**
   (a) Attach the 2 claws to install the switch.
2. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

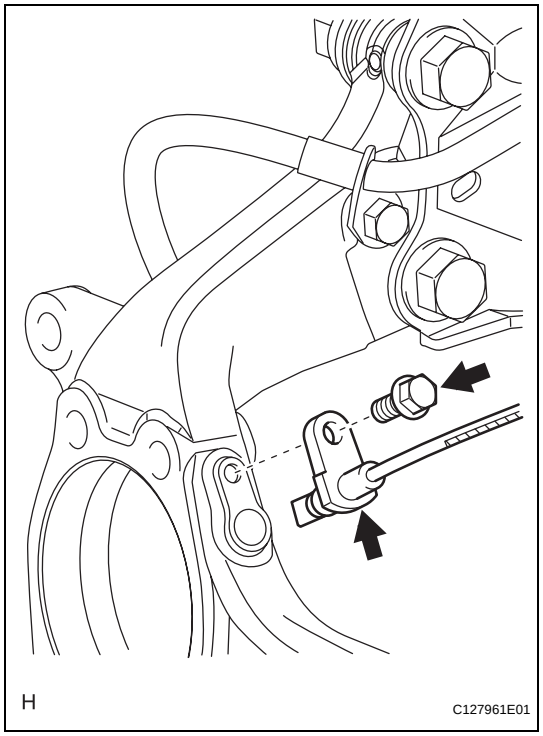
INSPECTION

1. INSPECT FRONT SPEED SENSOR

(a) Check the speed sensor. If any of the following occurs, replace the speed sensor with a new one.

- The surface of the speed sensor is cracked, dented, or chipped.
- The connector or wire harness is scratched, cracked, or damaged.
- The speed sensor has been dropped.

INSTALLATION



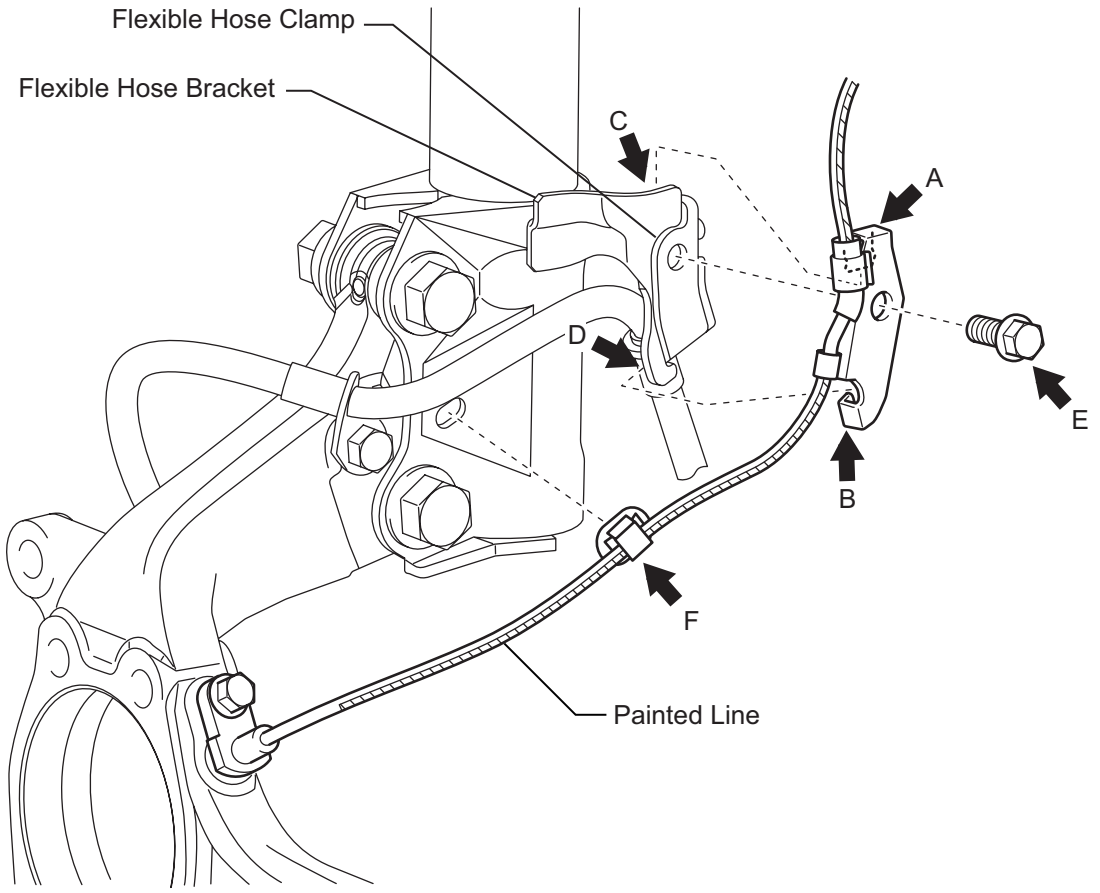
HINT:

- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.

1. INSTALL SPEED SENSOR FRONT LH

NOTICE:

To prevent interference with other parts, do not twist the sensor wire's painted line areas when installing it.



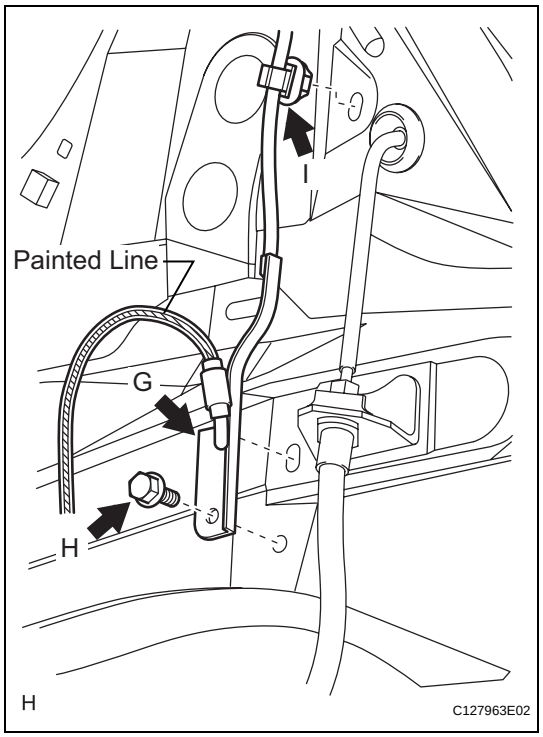
(a) Set the sensor body to the knuckle, and then install the sensor with the bolt.

Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)

NOTICE:

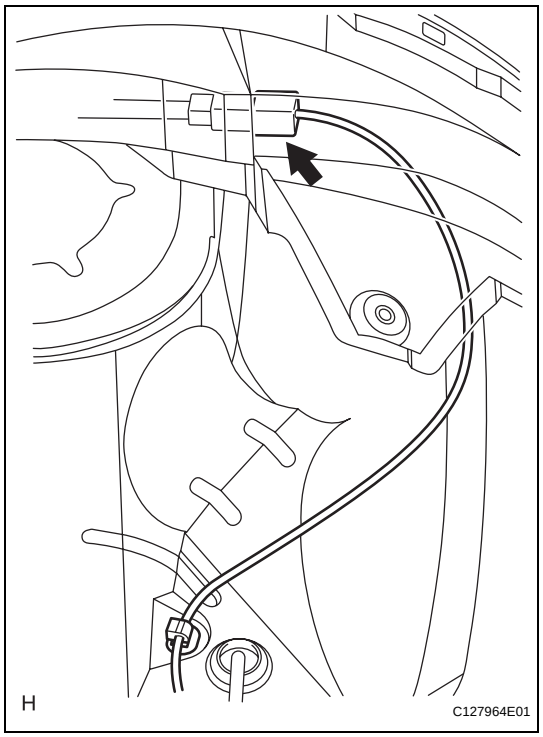
- **Keep the sensor tip and sensor installation hole free from foreign matter.**
- **Firmly insert the sensor body into the knuckle before tightening the bolt.**
- **After installing the sensor to the knuckle, make sure that there is no clearance between the sensor stay and knuckle. Also make sure that no foreign matter is stuck between the parts.**
- **To prevent interference between the sensor and magnetic rotor, do not rotate the sensor body during or after the insertion of the sensor body to the knuckle.**

(b) Install the sensor clamp and sensor clip as follows.



(1) Set the flexible hose clamp on the flexible hose bracket.

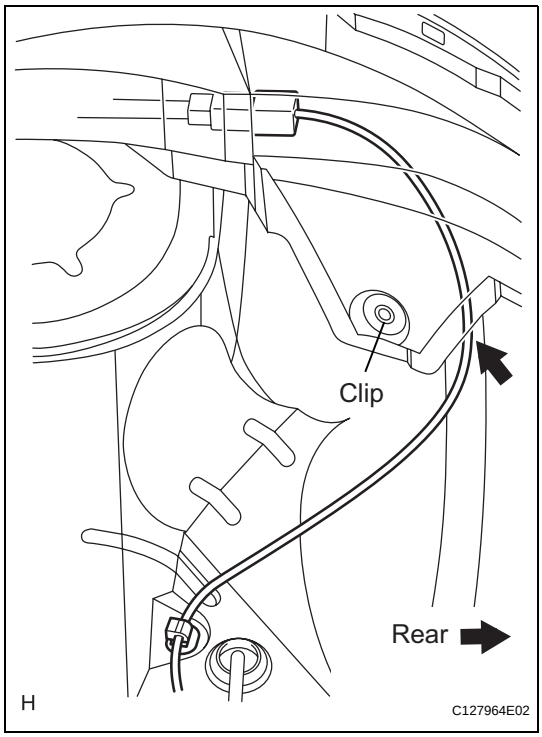
(2) Simultaneously perform the following: 1) hang the hook part of the sensor clamp (labeled A) on the flexible hose bracket (labeled C); and 2) insert the hook part of the sensor clamp (labeled B) into the flexible hose bracket (labeled D).
NOTICE:
Do not twist the sensor wire when installing the clamp.



(3) Tighten together the sensor clamp, flexible hose clamp and flexible hose bracket with the bolt (labeled E).
Torque: 18.5 N*m (189 kgf*cm, 14 ft.*lbf)

(4) Insert the sensor clip (labeled F) into the hole on the absorber lower bracket.

BC

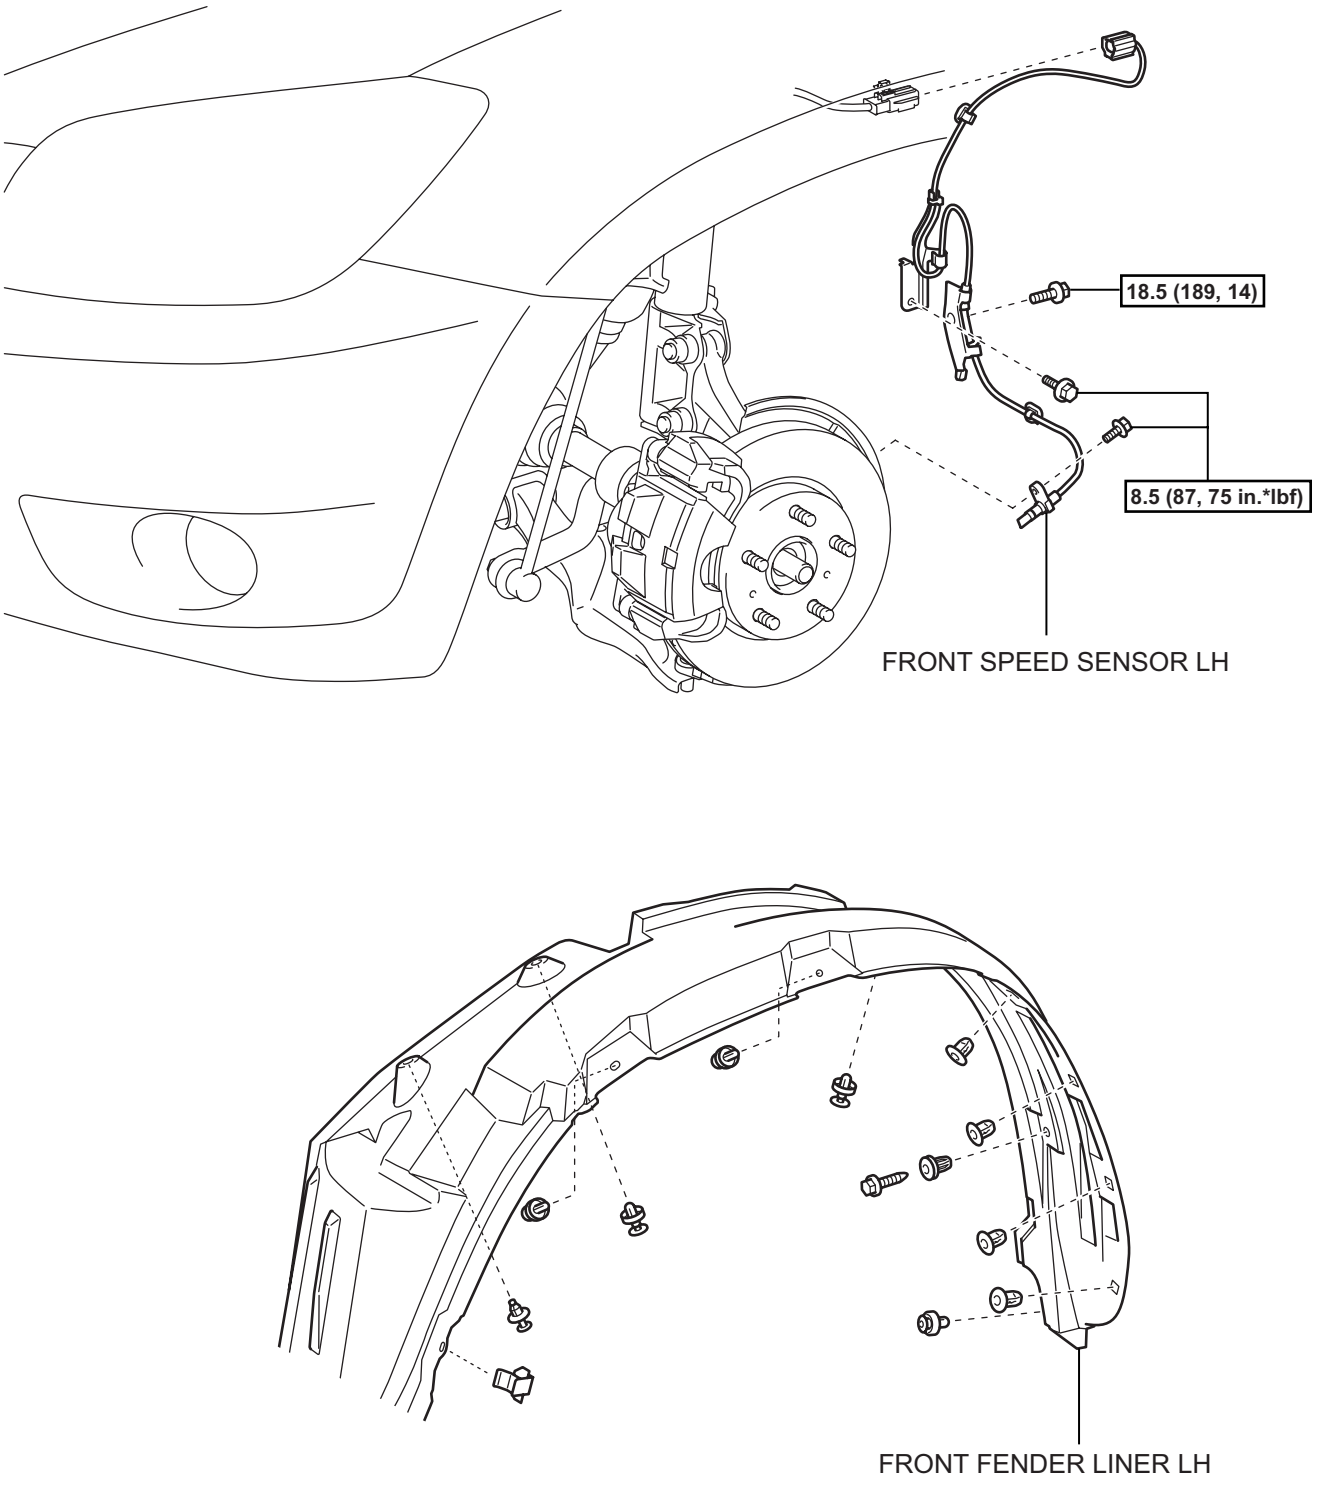


(c) Install the sensor clamp, and sensor clip as follows.
  (1) Set the sensor clamp (labeled G) on the side member, and then tighten it with the bolt (labeled H).
  Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)
  NOTICE:
  Do not twist the sensor wire when installing the clamp.
  (2) Insert the sensor clip (labeled I) into the hole on the apron.

(d) Connect the sensor connector.

BC

2. **INSTALL FRONT FENDER LINER LH**
   HINT:
   Install the fender liner so that the sensor wire harness passes beyond the fender liner installation clip towards the rear side of the vehicle.



3. **INSTALL FRONT WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

5. **CHECK ABS SPEED SENSOR SIGNAL**
   (a) Check the speed sensor signal (see page BC-28).

FRONT SPEED SENSOR

COMPONENTS

N*m (kgf*cm, ft.*lbf) : Specified torque

H

C127325E01

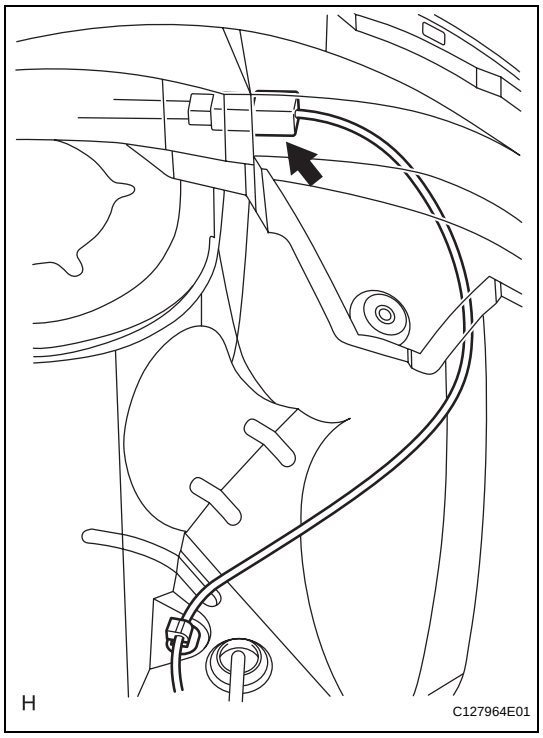
REMOVAL

HINT:

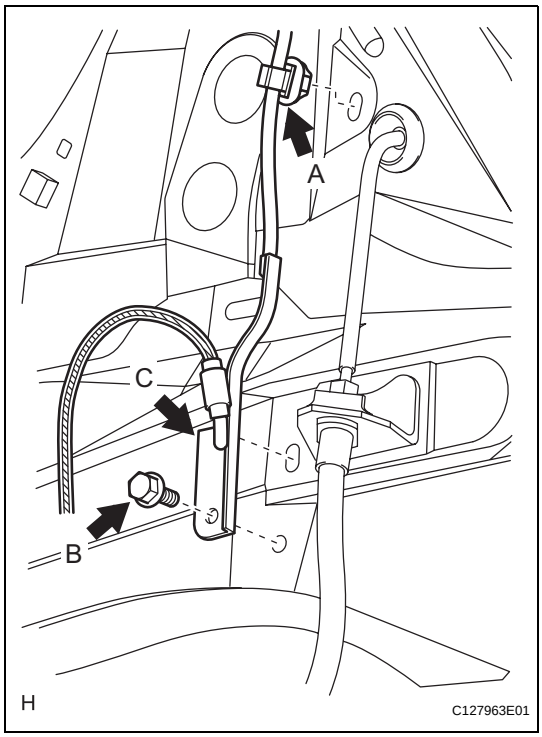
- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:



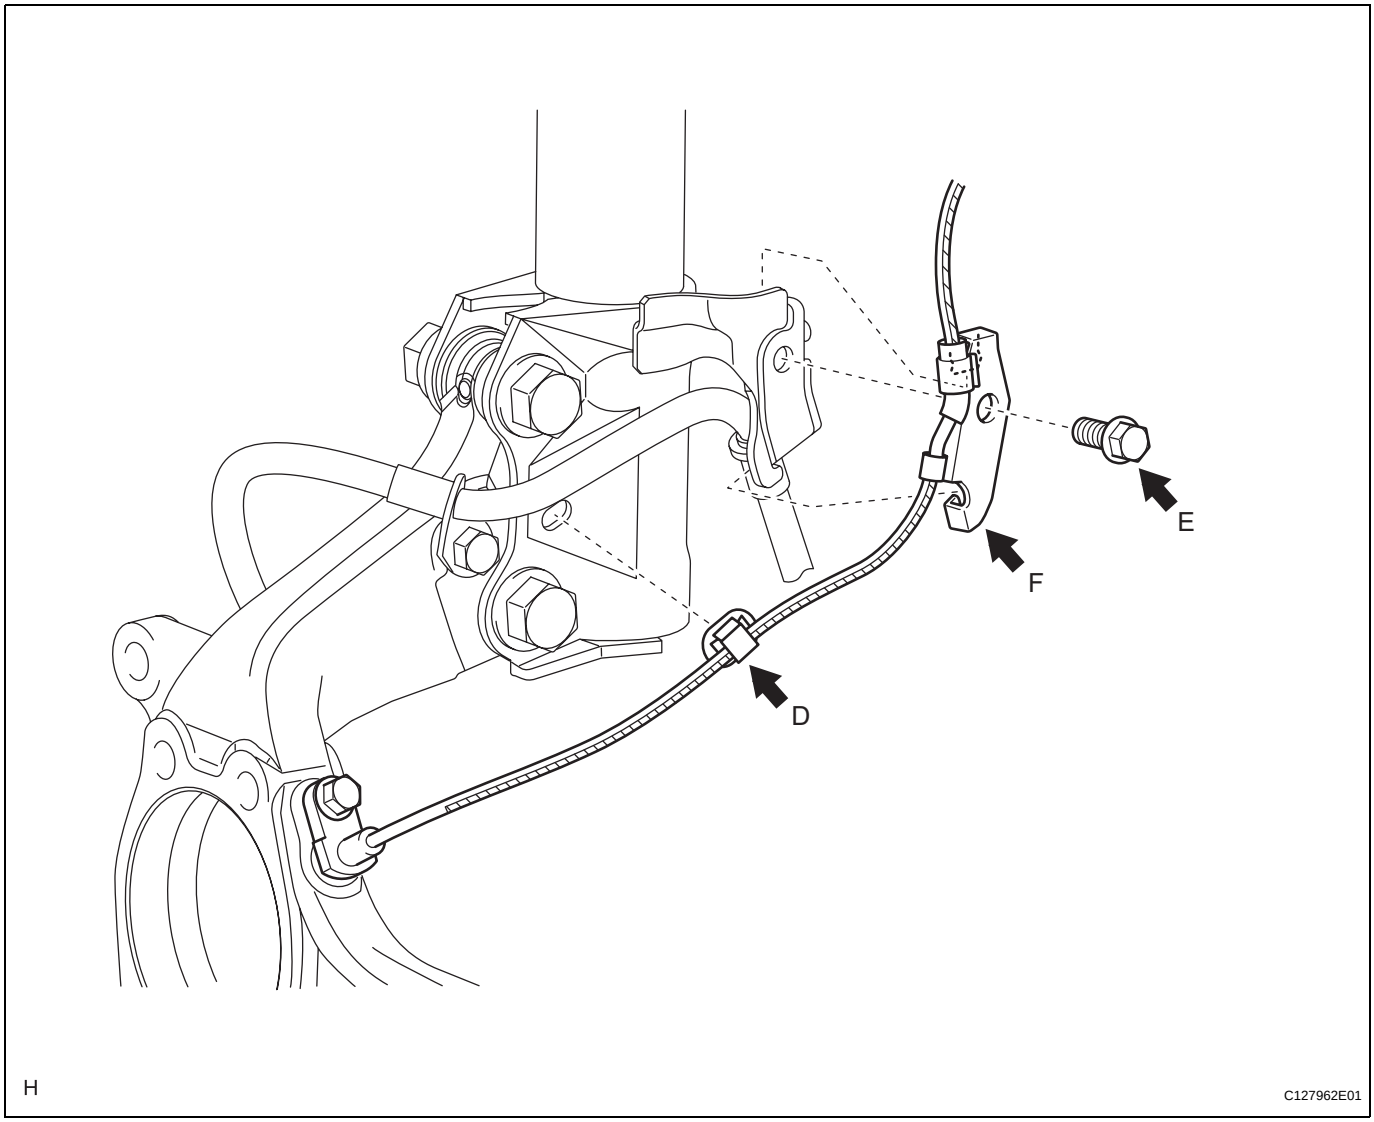
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.



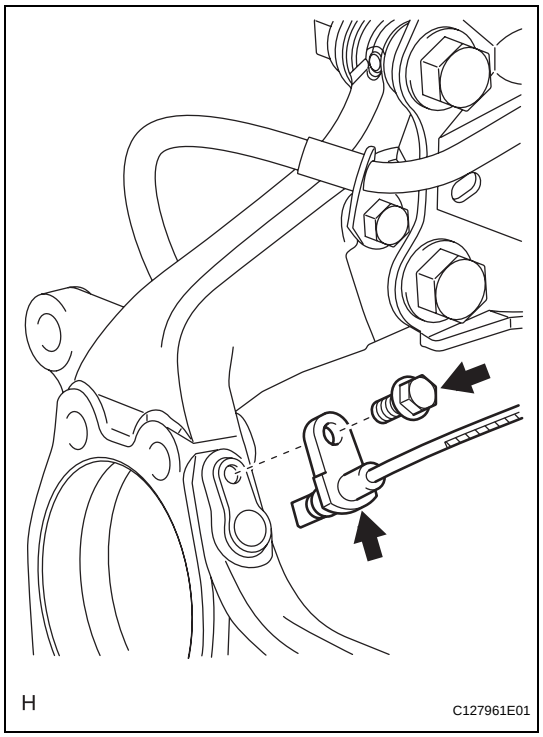
2. REMOVE FRONT WHEEL

3. REMOVE FRONT FENDER LINER LH

4. REMOVE FRONT SPEED SENSOR LH



(a) Disconnect the sensor connector.



(b) Remove the sensor clip (labeled A), bolt (labeled B) and sensor clamp (labeled C).
(c) Remove the sensor clip (labeled D), bolt (labeled E) and sensor clamp (labeled F).

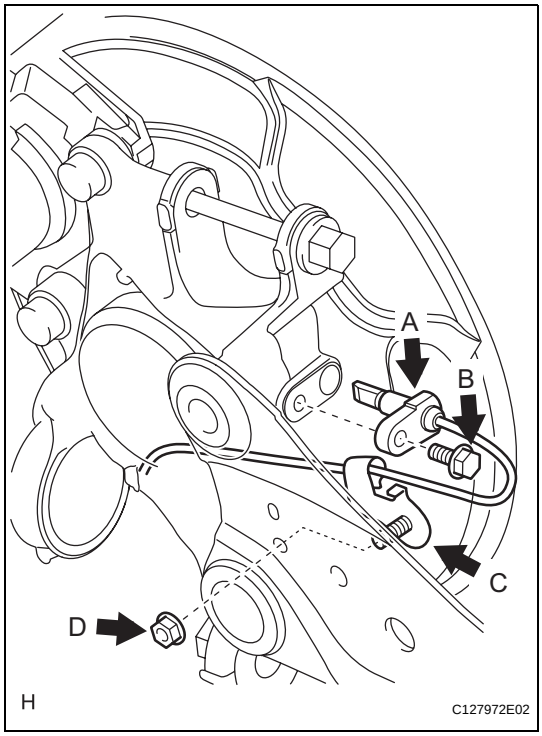
BC

(d) Remove the bolt and sensor body from the knuckle.
NOTICE:
Keep the sensor tip and sensor installation hole free from foreign matter.

INSPECTION

1. INSPECT REAR SPEED SENSOR

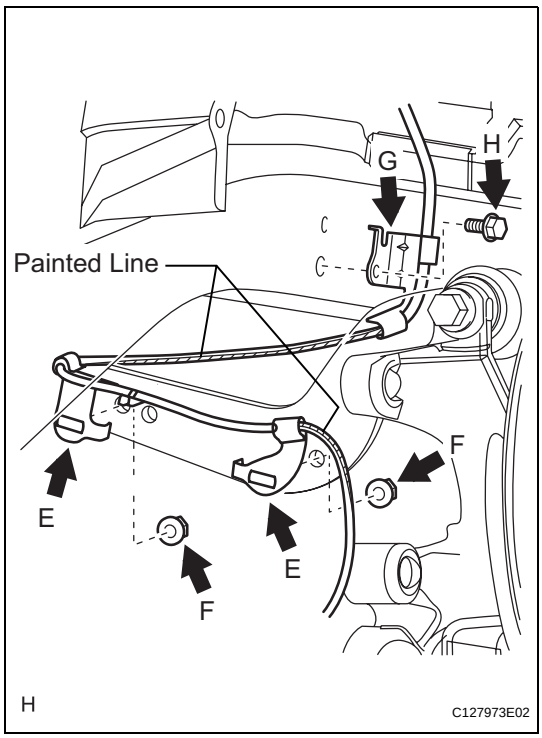
(a) Check the speed sensor. If any of the following occurs, replace the speed sensor with a new one.



- The surface of the speed sensor is cracked, dented, or chipped off.
- The connector or wire harness is scratched, cracked, or damaged.
- The speed sensor has been dropped.

INSTALLATION

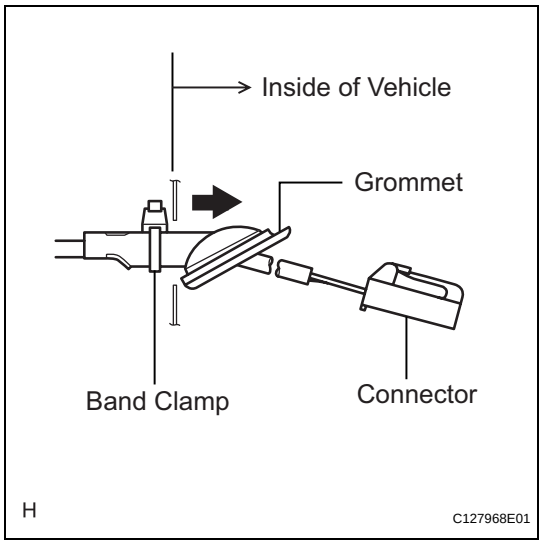
HINT:
- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.



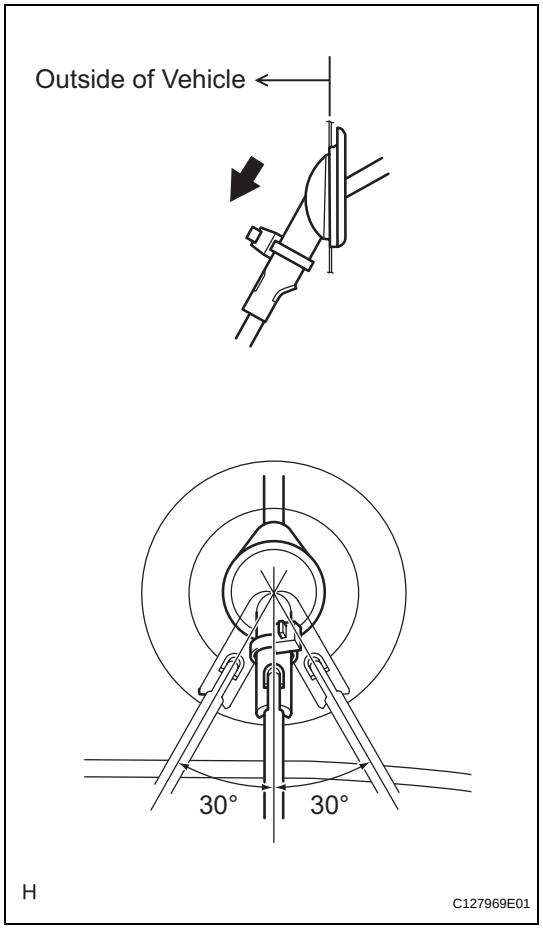
1. INSTALL REAR SPEED SENSOR LH

NOTICE:
To prevent interference with other parts, do not twist the sensor wire's painted line areas when installing it.

(a) Install the sensor (labeled A) with the bolt (labeled B).
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)
NOTICE:
- **Keep the sensor tip and sensor installation hole free from foreign matter.**
- **To prevent interference with the bearing rotor, do not rotate the sensor body when inserting the sensor body or after inserting the sensor body.**



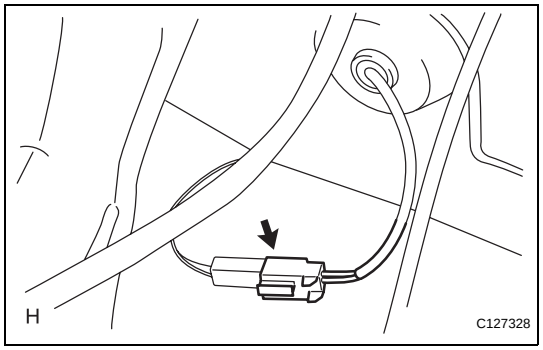
(b) Install the sensor clamp (labeled C) with the nut (labeled D).
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)



(c) Install the sensor clamps (labeled E) with the 2 nuts (labeled F).
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
NOTICE:
Do not twist the sensor wire when installing the clamps.

(d) Install the sensor clamp (labeled G) with the bolt (labeled H).
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)
NOTICE:
Do not twist the sensor wire when installing the clamp.

BC



(e) Insert the connector and grommet to the inside of the vehicle through the passage hole in the wheel house.
NOTICE:
Make sure the grommet's band clamp remains on the outside of the vehicle.

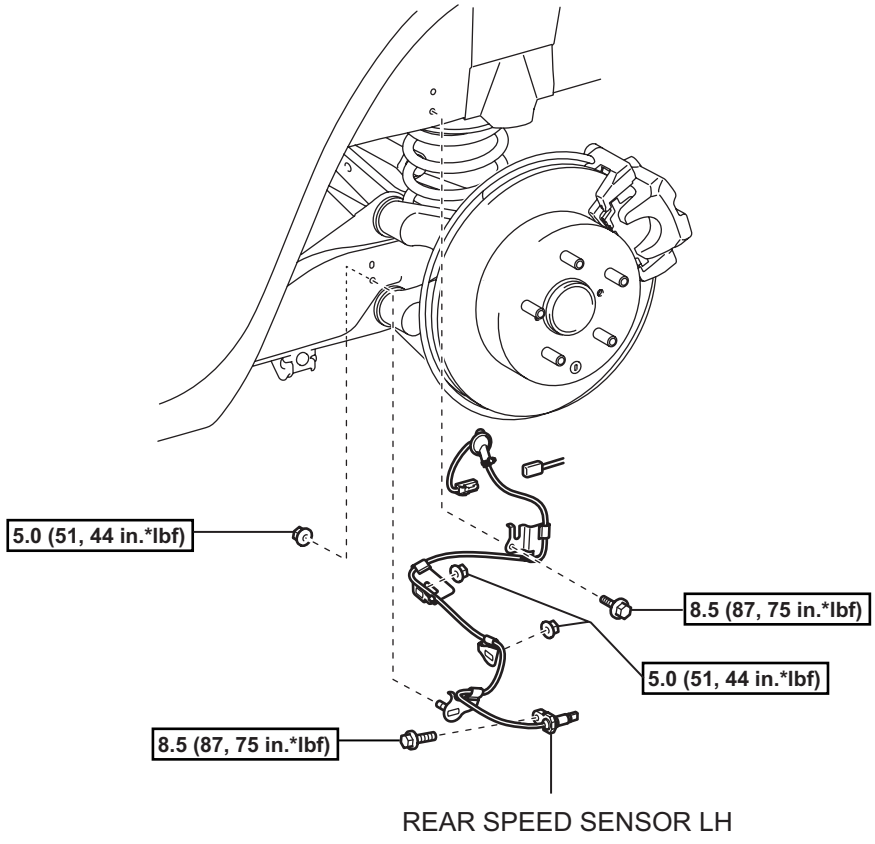
(f) Hold the grommet and pull it from the inside of the vehicle to the outside of the vehicle. Then fix it in place so that it is not tilted.
NOTICE:
- **When pulling out the grommet, do not grip the sensor wire.**
- **Fix the grommet in place within the range shown in the illustration.**

BC

(g) Connect the speed sensor connector.

2. INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH

(a) Install the deck trim side panel LH (see page IR-49).
HINT:
Refer to the procedures from the installation of the deck trim side panel LH up until the installation of the rear door scuff plate LH.



3. INSTALL REAR WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

5. **CHECK SPEED SENSOR SIGNAL**
   (a) Check the speed sensor signal (see page BC-28).

REAR SPEED SENSOR (for 4WD)

COMPONENTS

N*m (kgf*cm, ft.*lbf) : Specified torque

H

C128536E01

REMOVAL

HINT:

- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.

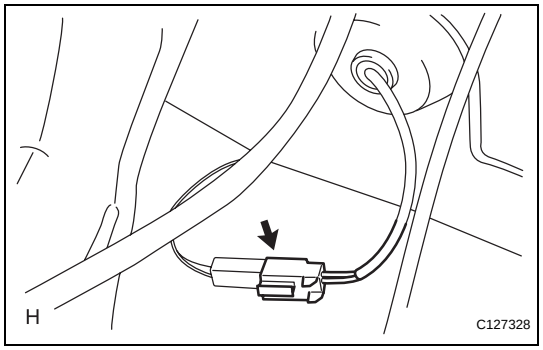
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

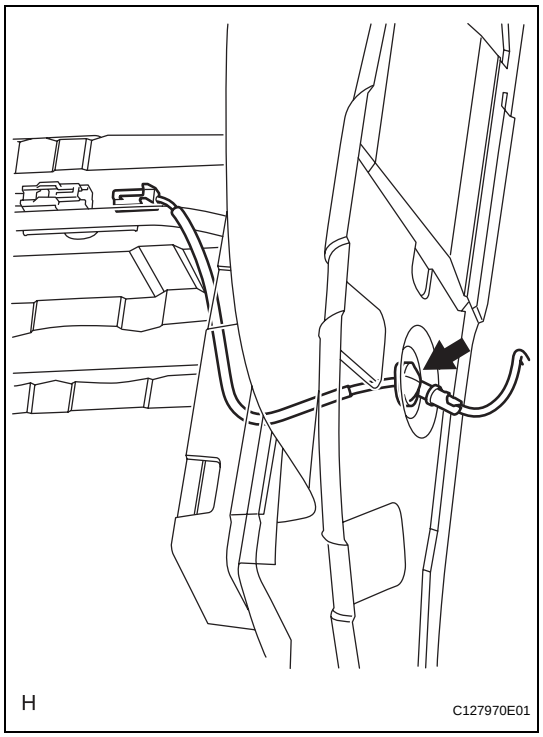
2. REMOVE REAR WHEEL

3. REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH



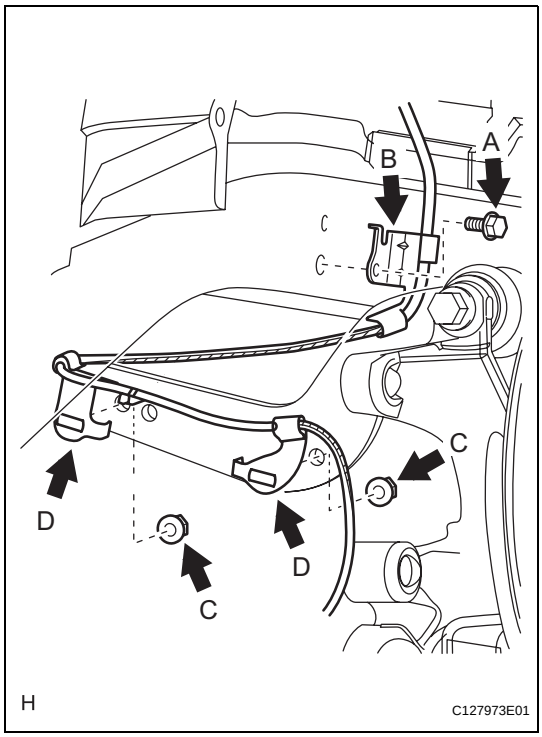
(a) Remove the deck trim side panel LH (see page IR-26).

HINT:



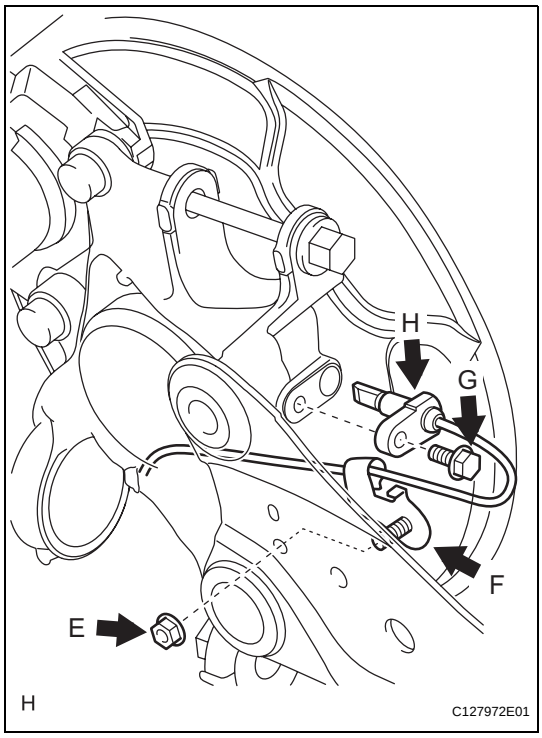
Refer to the procedures from the removal of the rear door scuff plate LH up until the removal of the deck trim side panel assembly LH.

4. REMOVE REAR SPEED SENSOR LH



(a) Disconnect the speed sensor connector.

(b) Disconnect the grommet of the speed sensor wire from the hole of the wheel house.



BC

(c) Remove the bolt (labeled A) and sensor clamp (labeled B) from the side member.
(d) Remove the 2 nuts (labeled C) and sensor clamps (labeled D) from the upper arm.

BC

(e) Remove the nut (labeled E) and sensor clamp (labeled F) from the trailing arm.
(f) Remove the bolt (labeled G) and sensor body (labeled H) from the carrier.
NOTICE:
Keep the sensor tip and sensor installation hole free from foreign matter.

INSPECTION

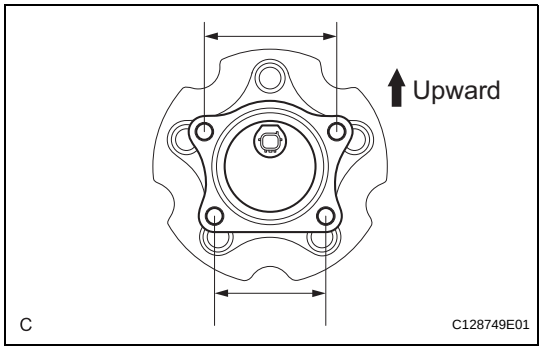
1. INSPECT SKID CONTROL SENSOR

(a) Check the speed sensor. If any of the following occurs, replace the speed sensor with a new one.

- The surface of the speed sensor is cracked, dented, or chipped.
- The speed sensor has been dropped.

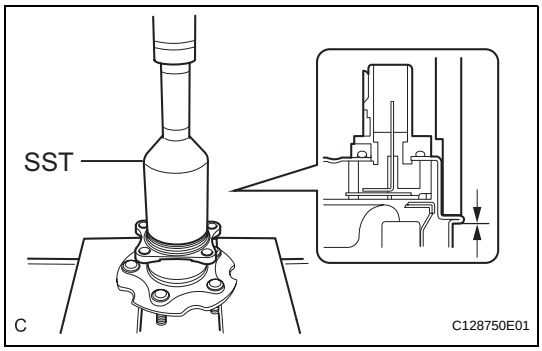
2. INSPECT SKID CONTROL SENSOR WIRE

(a) Check the sensor wire. If any of the following occurs, replace the sensor wire with a new one.
The connector or wire harness is scratched, cracked, or damaged.



INSTALLATION

HINT:
- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.



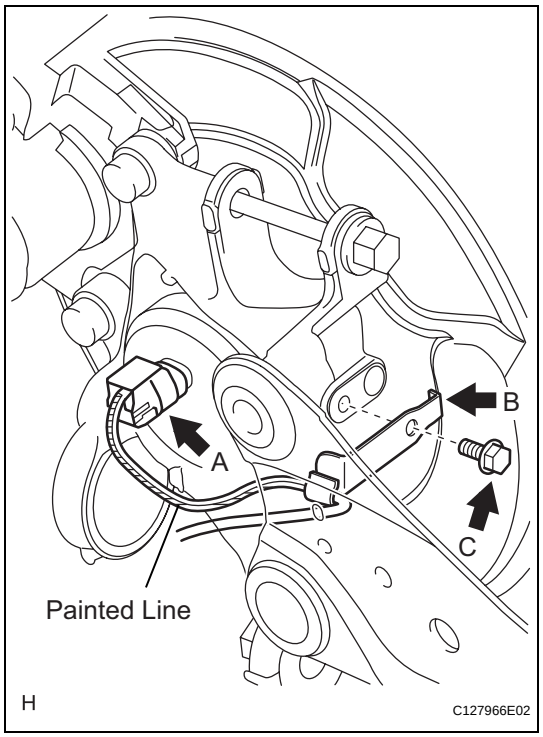
1. INSTALL SKID CONTROL SENSOR LH

(a) Clean the contact surfaces of the axle hub and speed sensor.
NOTICE:
Make sure the sensor rotor is clean.

(b) Place the speed sensor on the axle hub so that the connector position is as high as possible when the axle hub is installed to the vehicle.

BC

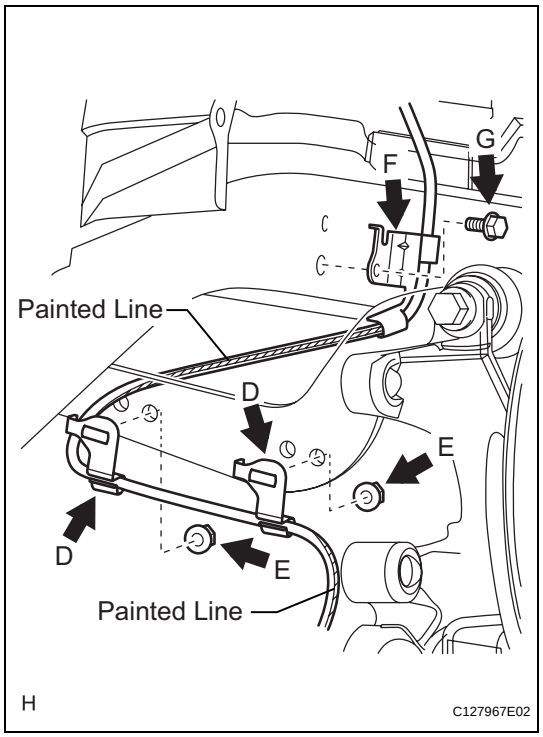
(c) Using SST and a press, press the speed sensor into the hub and bearing.
SST 09214-76011
NOTICE:
- **Do not tap the speed sensor directly with a hammer.**
- **Check that the speed sensor detection part is clean.**
- **Press in the speed sensor straight and slowly.**



2. INSTALL REAR AXLE HUB AND BEARING ASSEMBLY LH

(a) Install the rear axle hub and bearing LH (see page AH-18).

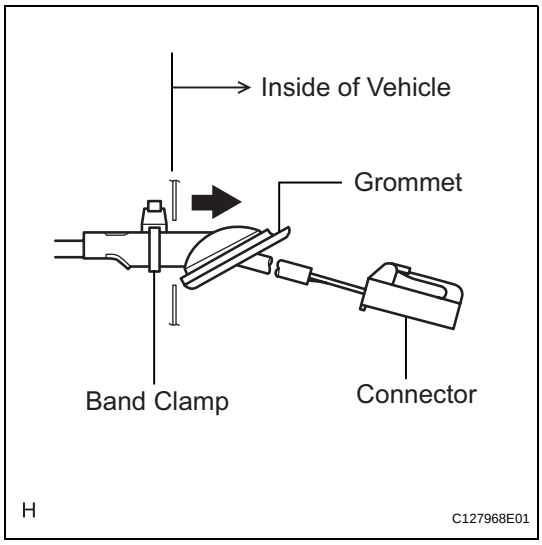
3. INSTALL REAR DISC (See page BR-58)



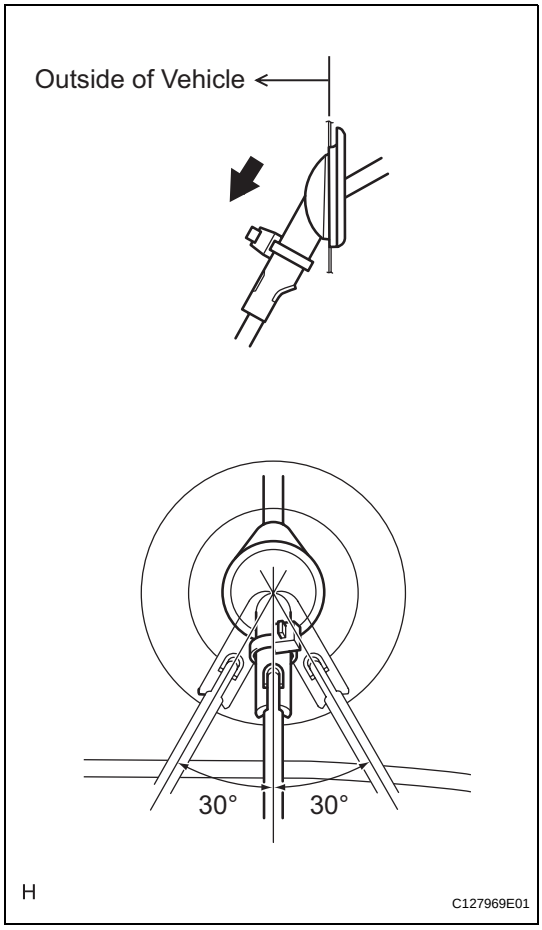
4. INSTALL REAR DISC BRAKE CYLINDER MOUNTING LH (See page BR-60)

5. INSTALL SKID CONTROL SENSOR WIRE
NOTICE:
To prevent interference with other parts, do not twist the sensor wire's painted line areas when installing it.

(a) Connect the skid control sensor wire connector (labeled A) to the speed sensor.

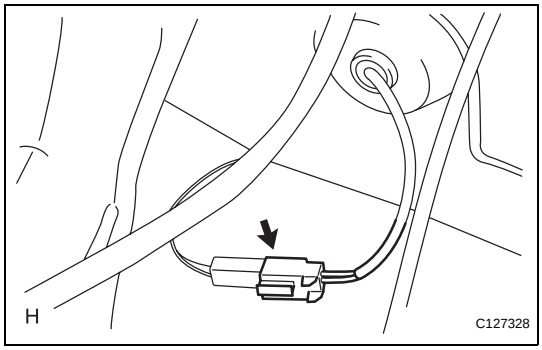


(b) Install the sensor clamp (labeled B) with the bolt (labeled C).
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)
NOTICE:
Do not twist the sensor wire when installing the clamp.



(c) Install the 2 sensor clamps (labeled D) with the 2 nuts (labeled E).
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
NOTICE:
Do not twist the sensor wire when installing the clamps.

(d) Install the sensor clamp (labeled F) with the bolt (labeled G).
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)
NOTICE:
Do not twist the sensor wire when installing the clamp.



BC

(e) Insert the connector and grommet to the inside of the vehicle through the hole in the wheel house.
NOTICE:
Make sure the grommet's band clamp remains on the outside of the vehicle.

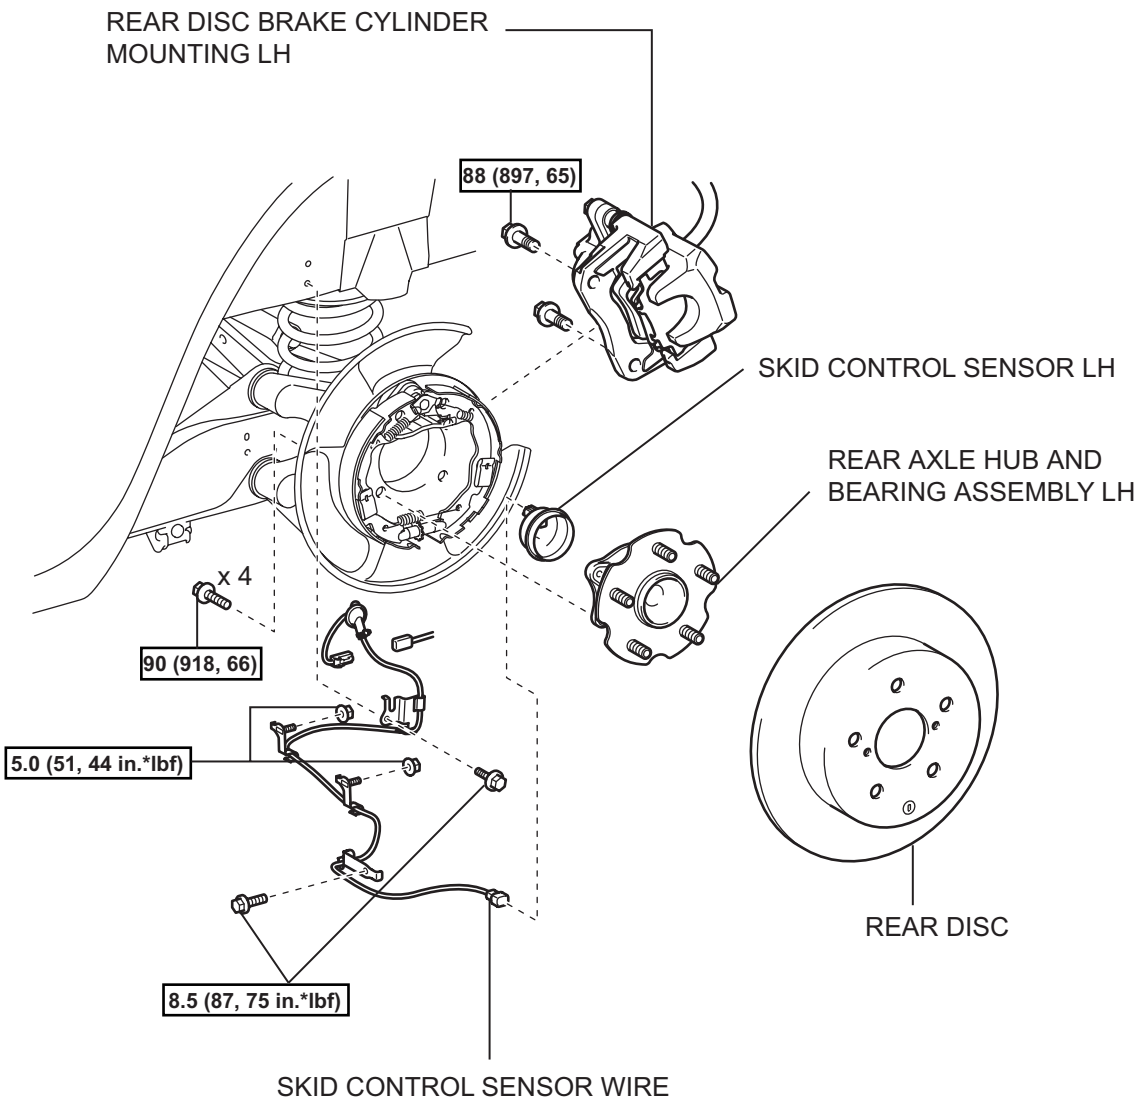
(f) Hold the grommet and pull it from the inside of the vehicle to the outside of the vehicle. Then fix it in place so that it is not tilted.
NOTICE:
- **When pulling out the grommet, do not grip the sensor wire.**
- **Fix the grommet in place within the range shown in the illustration.**

(g) Connect the skid control sensor wire connector.

6. INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH

(a) Install the deck trim side panel LH (see page IR-49).
HINT:
Refer to the procedures from the installation of the deck trim side panel LH up until the installation of the rear door scuff plate LH.

7. INSTALL REAR WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)



8. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

9. CHECK SPEED SENSOR SIGNAL

(a) Check the speed sensor signal (see page BC-28).

SKID CONTROL SENSOR (for 2WD)

COMPONENTS

N*m (kgf*cm, ft.*lbf) : Specified torque

H

C128535E01

BC

REMOVAL

HINT:

- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.

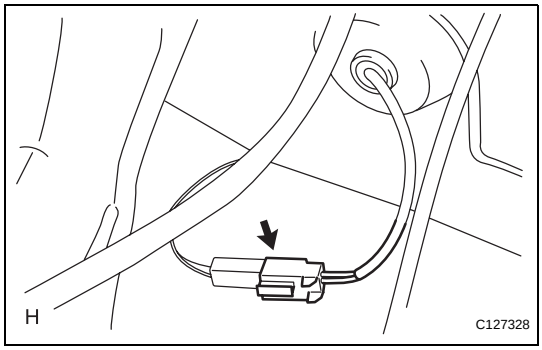
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

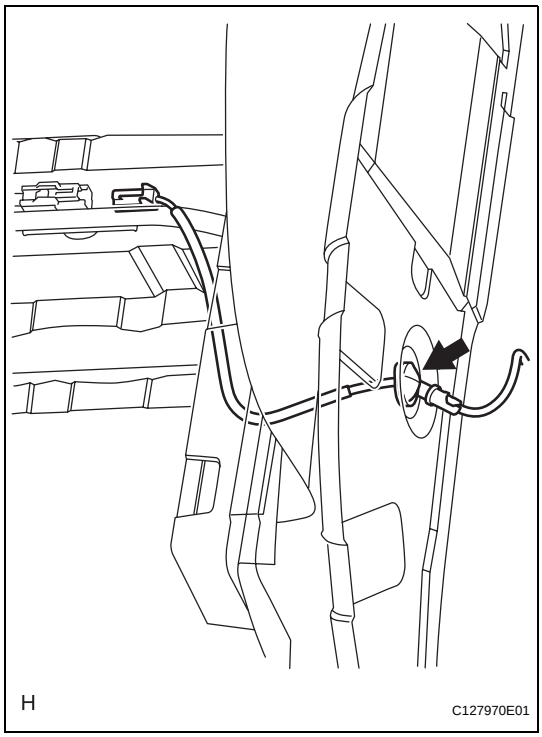
2. REMOVE REAR WHEEL

3. REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH

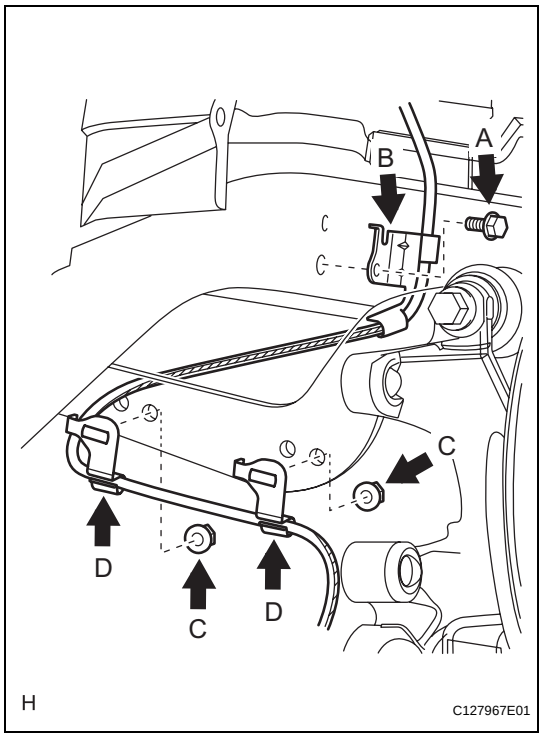


(a) Remove the deck trim side panel LH (see page IR-26).

HINT:

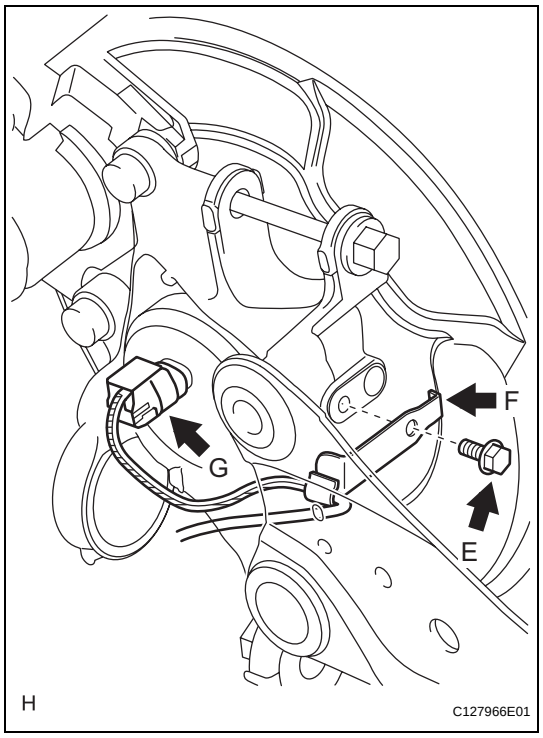


Refer to the procedures from the removal of the rear door scuff plate LH up until the removal of the deck trim side panel LH.



4. REMOVE SKID CONTROL SENSOR WIRE

(a) Disconnect the skid control sensor wire connector.



(b) Disconnect the grommet of the skid control sensor wire from the hole of the wheel house.

H C127967E01

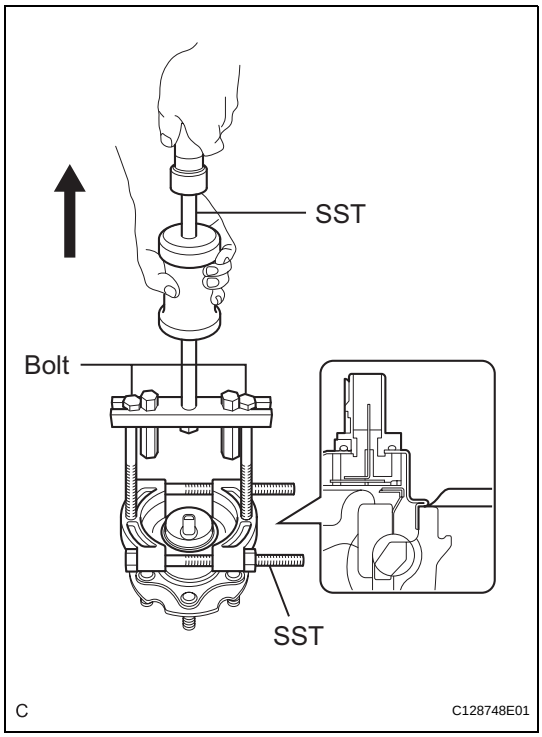
(c) Remove the bolt (labeled A) and sensor clamp (labeled B) from the side member.
(d) Remove the 2 nuts (labeled C) and sensor clamps (labeled D) from the upper arm.

H C127966E01

(e) Remove the bolt (labeled E) and sensor clamp (labeled F) from the carrier.
(f) Disconnect the skid control sensor wire connector (labeled G) from the speed sensor.

5. REMOVE REAR DISC BRAKE CYLINDER MOUNTING LH (See page BR-55)

6. REMOVE REAR DISC (See page BR-57)



7. REMOVE REAR AXLE HUB AND BEARING ASSEMBLY LH

(a) Remove the rear axle hub and bearing LH (see page AH-16).

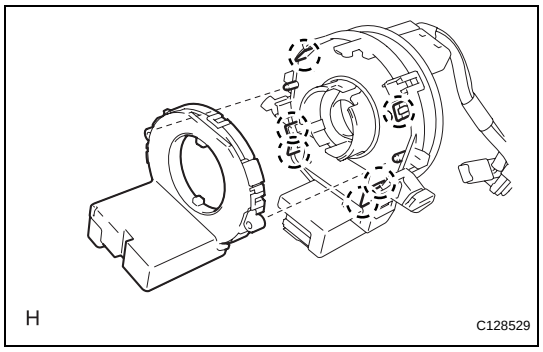
8. REMOVE SKID CONTROL SENSOR LH

(a) Mount the front axle hub in a soft jaw vise.
NOTICE:
Replace the hub and bearing if it is dropped or receives a strong shock.
(b) Using a pin punch and hammer, tap out the 2 pins and remove the 2 attachments from SST.

BC

(c) Using SST and the 2 bolts (diameter: 12 mm; pitch: 1.5 mm), remove the skid control sensor from the hub and bearing.

SST 09520-00031 (09520-00040), 09521-00020, 09950-00020

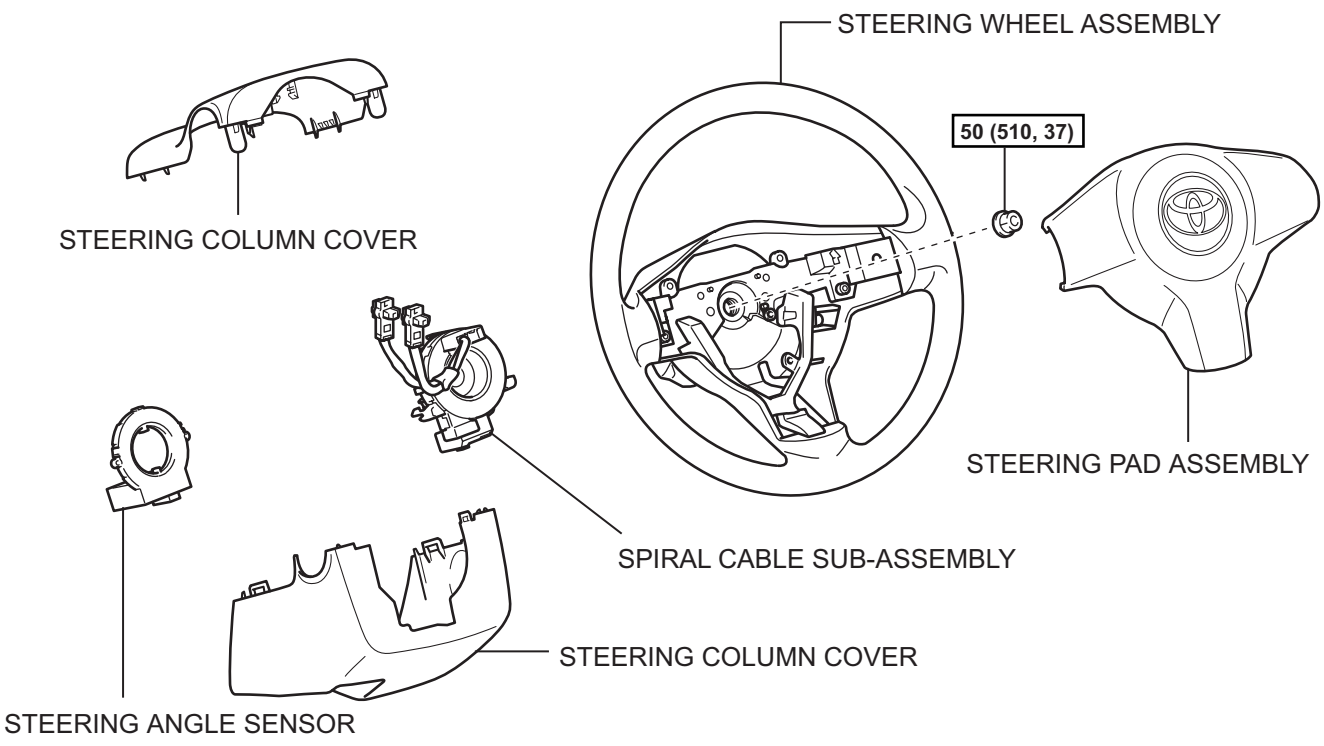


NOTICE:

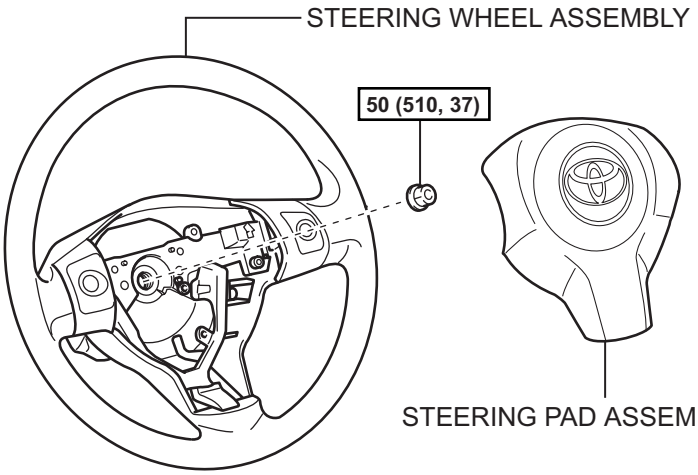
- **If the sensor rotor is damaged, replace the axle hub.**
- **Do not scratch the contacting surface of the hub and bearing and skid control sensor.**

INSPECTION

1. **INSPECT STEERING ANGLE SENSOR**
   (a) Inspect the sensor. If any of the following occurs, replace the sensor with a new one:
   - The surface of the sensor is cracked, dented, or chipped.
   - The connector or wire harness is scratched, cracked, or damaged.
   - The sensor has been dropped.



INSTALLATION



1. **INSTALL STEERING ANGLE SENSOR**
   (a) Align the locating pins, attach the 6 claws and install the sensor to the spiral cable.
2. **INSTALL SPIRAL CABLE SUB-ASSEMBLY (See page SR-20)**
3. **INSTALL STEERING COLUMN COVER (See page SR-20)**
4. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-21)**
5. **INSTALL STEERING PAD ASSEMBLY (See page RS-336)**
6. **INSPECT STEERING WHEEL CENTER POINT**
7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   NOTICE:
   When reconnecting the cable to the negative (-) battery terminal after installing the steering angle sensor, check that the front tires and steering wheel are kept aligned straight ahead before and after connecting the cable to the negative (-) battery terminal.
8. **INSPECT STEERING PAD ASSEMBLY (See page RS-337)**
9. **CHECK SRS WARNING LIGHT**
   (a) Check the SRS warning light (see page RS-37).

STEERING ANGLE SENSOR

COMPONENTS

w/ Steering Pad Switch

N*m (kgf*cm, ft.*lbf) : Specified torque

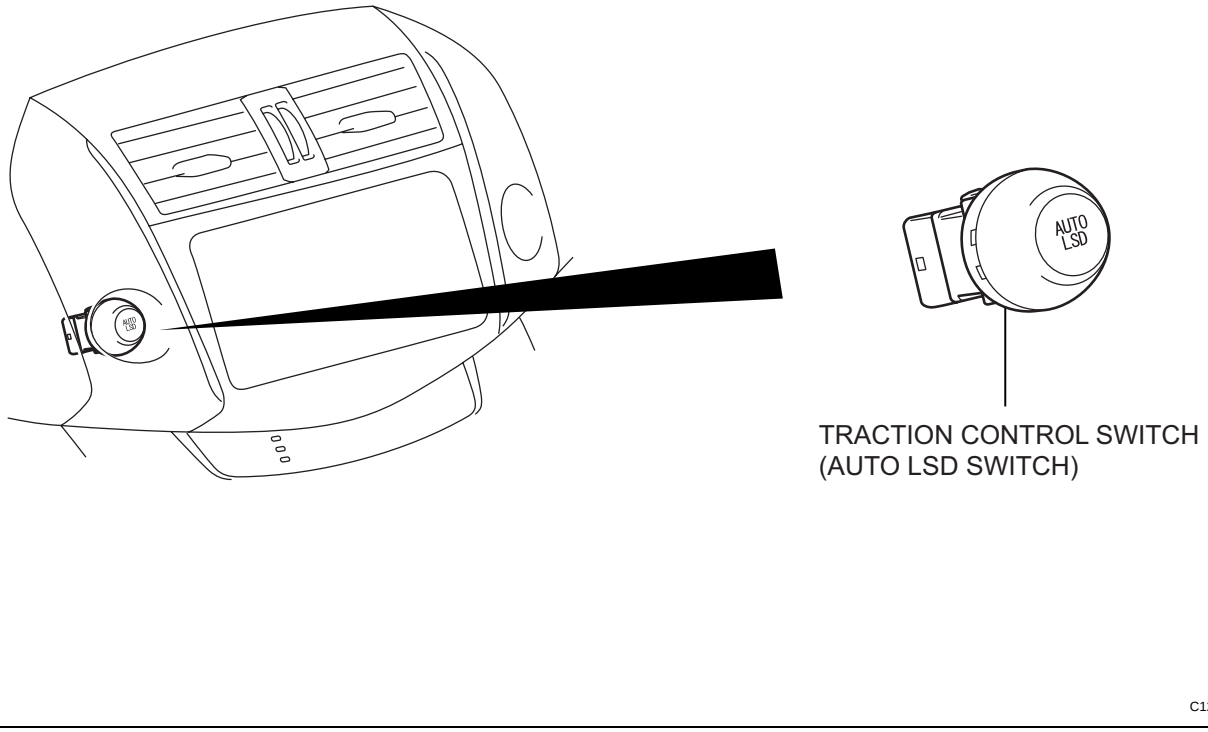
C127336E01

BC

REMOVAL

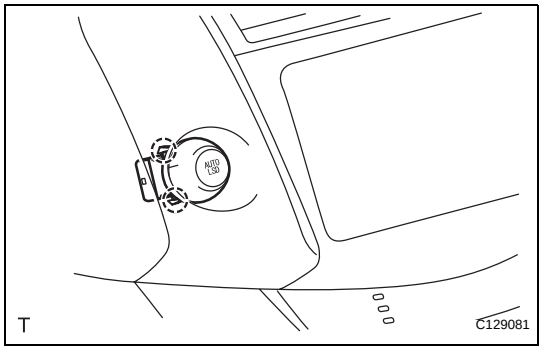


1. **PRECAUTION**
   CAUTION:
   Be sure to read the "PRECAUTION" thoroughly before servicing (see page RS-1).
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
3. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
4. **REMOVE STEERING PAD ASSEMBLY (See page RS-336)**
5. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-12)**
6. **REMOVE STEERING COLUMN COVER (See page SR-12)**
7. **REMOVE SPIRAL CABLE SUB-ASSEMBLY (See page SR-13)**
8. **REMOVE STEERING ANGLE SENSOR**
   (a) Detach the 6 claws and remove the sensor from the spiral cable.

BC

TRACTION CONTROL SWITCH (for 2WD)

COMPONENTS



REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

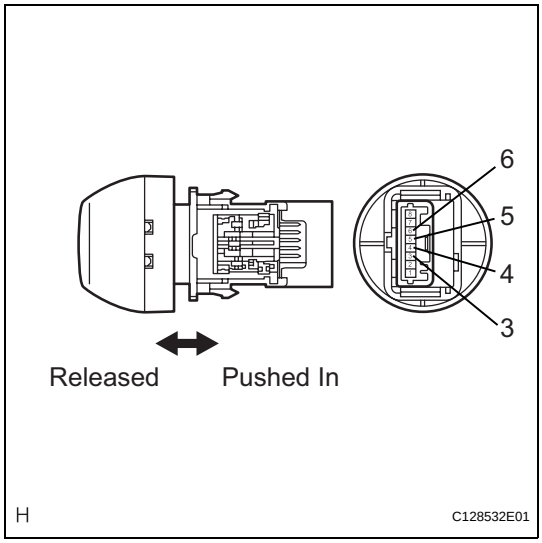
CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

2. REMOVE TRACTION CONTROL SWITCH (AUTO LSD SWITCH)

(a) Detach the 2 claws and remove the switch.

INSPECTION



1. CHECK TRACTION CONTROL SWITCH (AUTO LSD SWITCH)

(a) Measure the resistance of the switch.

Standard resistance

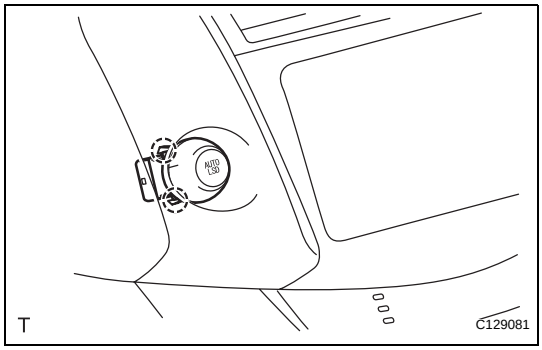
Tester Connection	Switch Condition	Specified Condition
3 - 6	Released	10 kΩ or higher
3 - 6	Pushed in	Below 25 Ω

If the result is not as specified, replace the switch.

(b) Check illumination operation.

(1) Connect the battery's positive (+) lead to terminal 5 and negative (-) lead to terminal 4. Then check that the bulb illuminates.

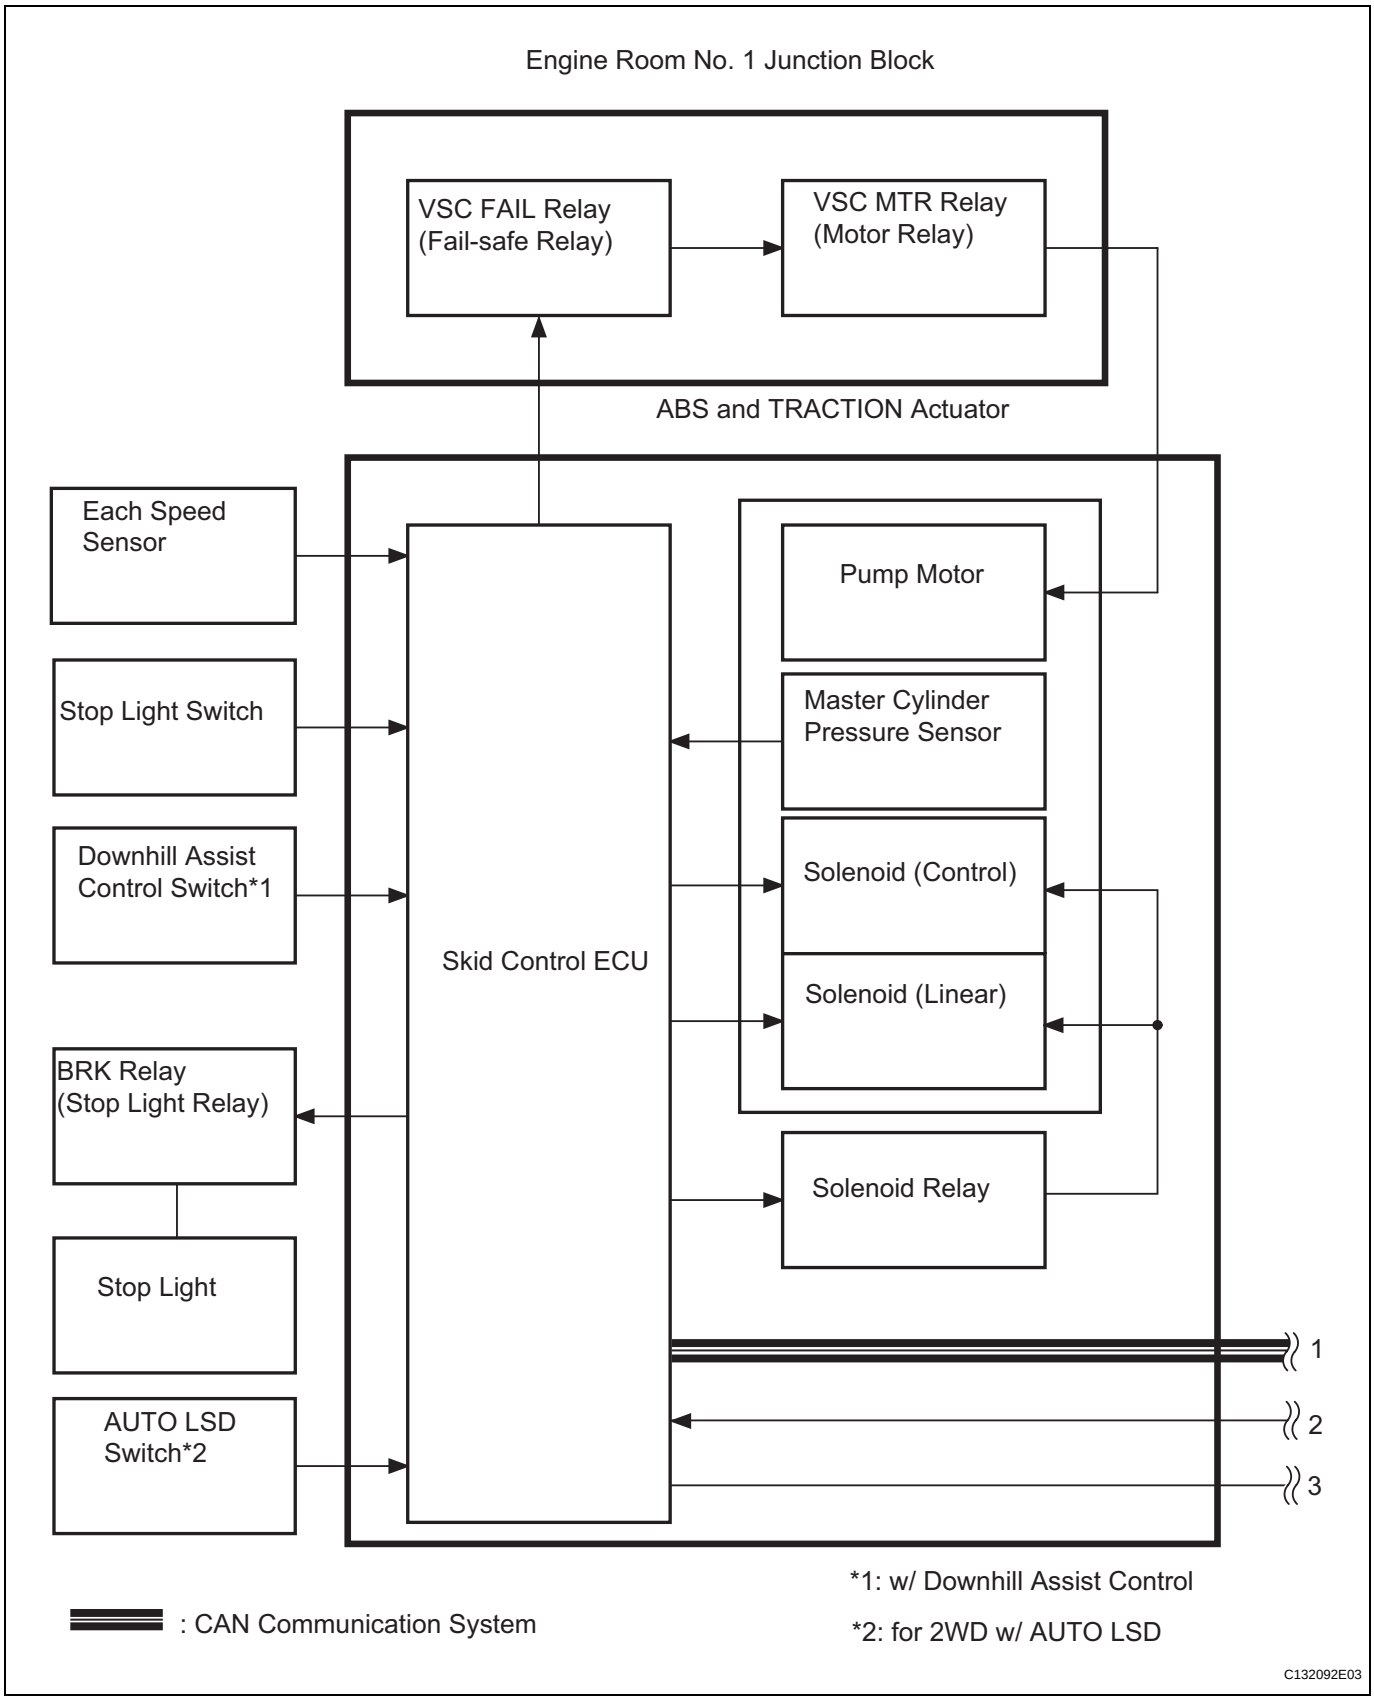
OK:



Bulb illuminates.

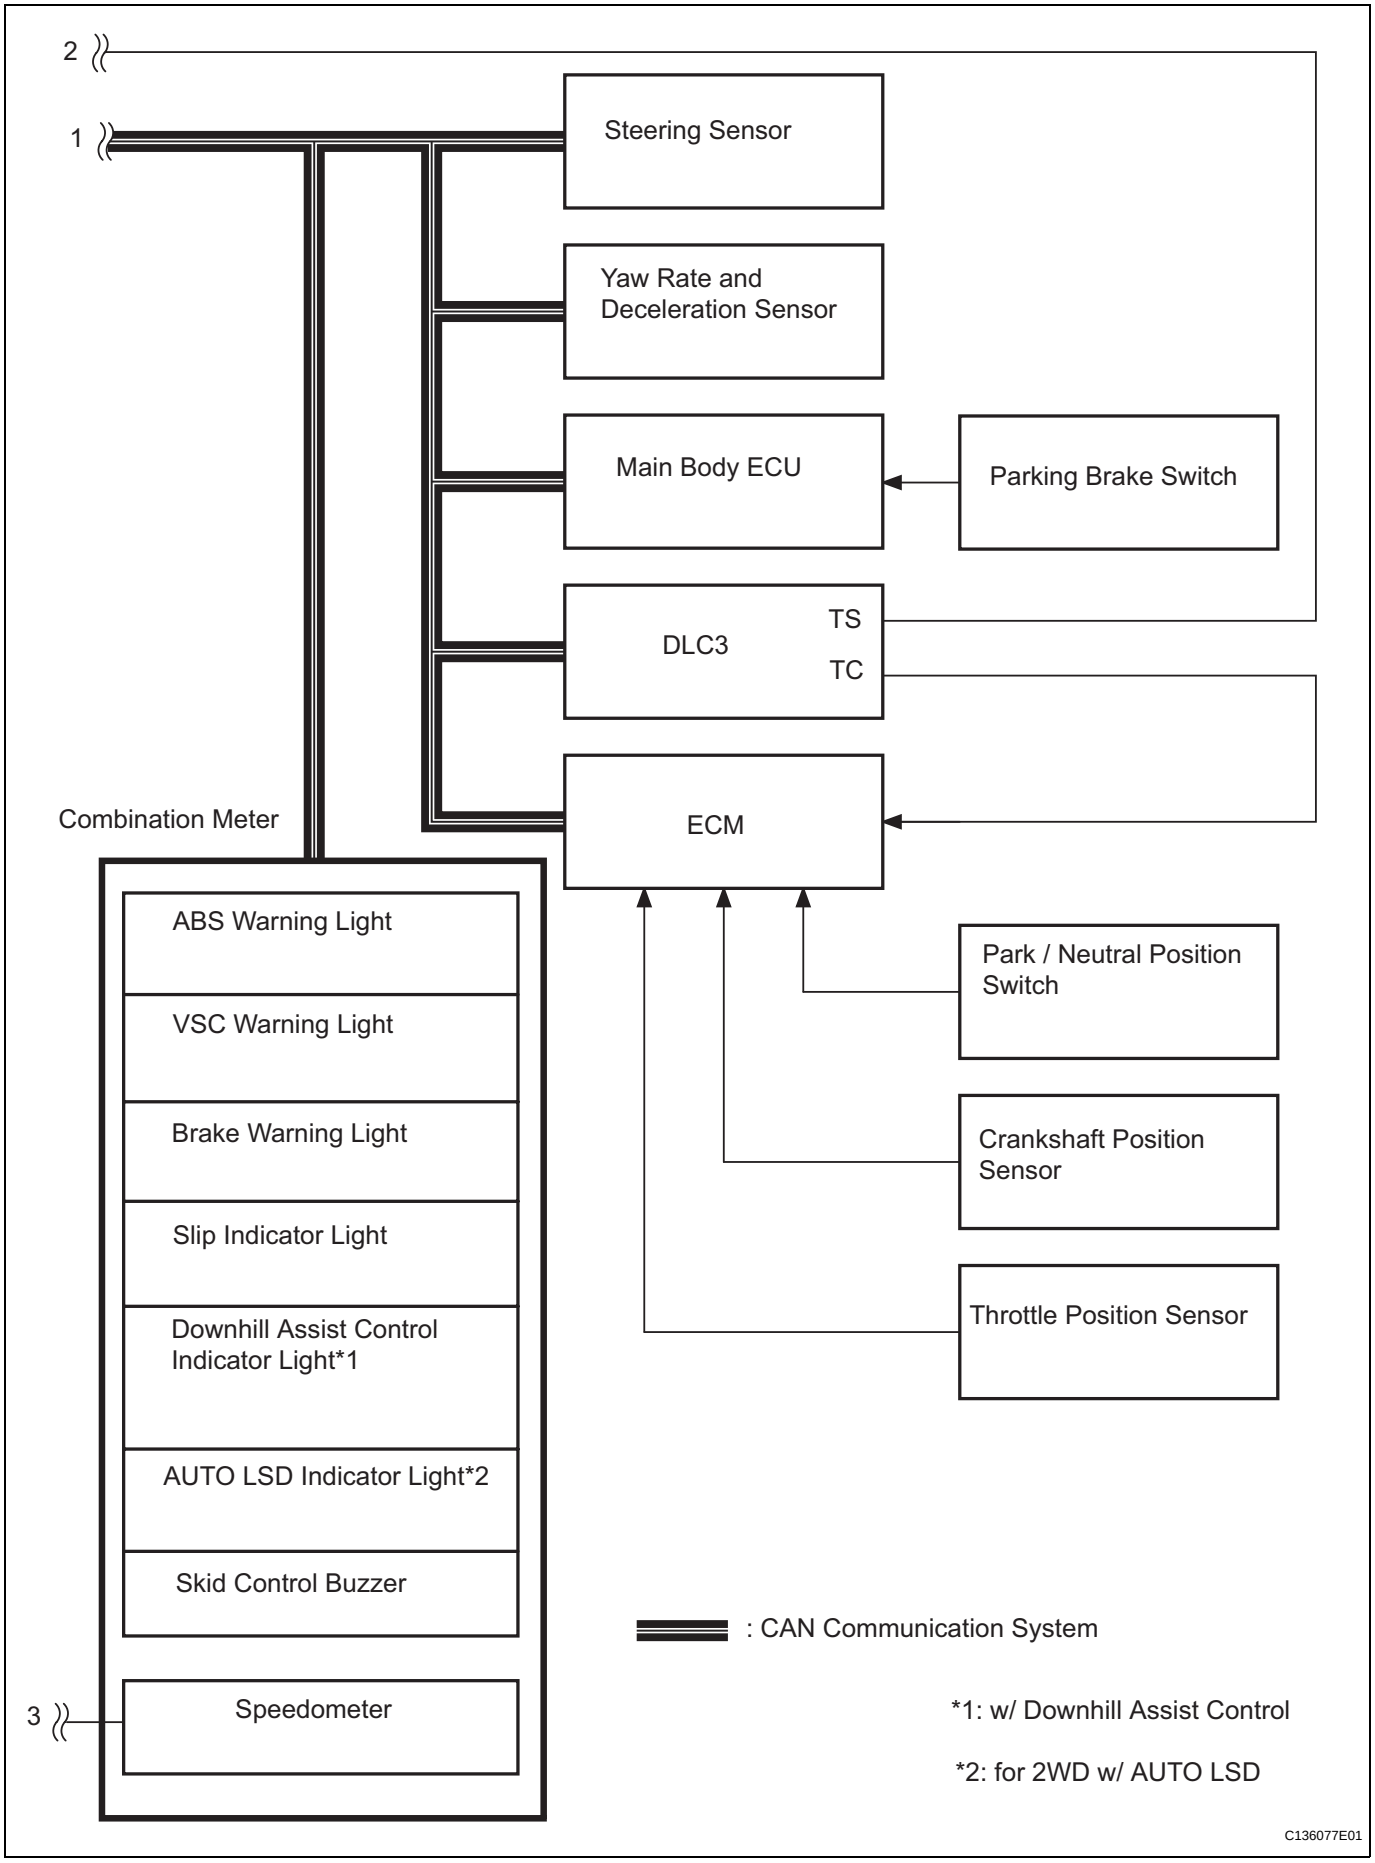
If the result is not as specified, replace the switch.

INSTALLATION



1. INSTALL TRACTION CONTROL SWITCH (AUTO LSD SWITCH)

(a) Attach the 2 claws to install the switch.



2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

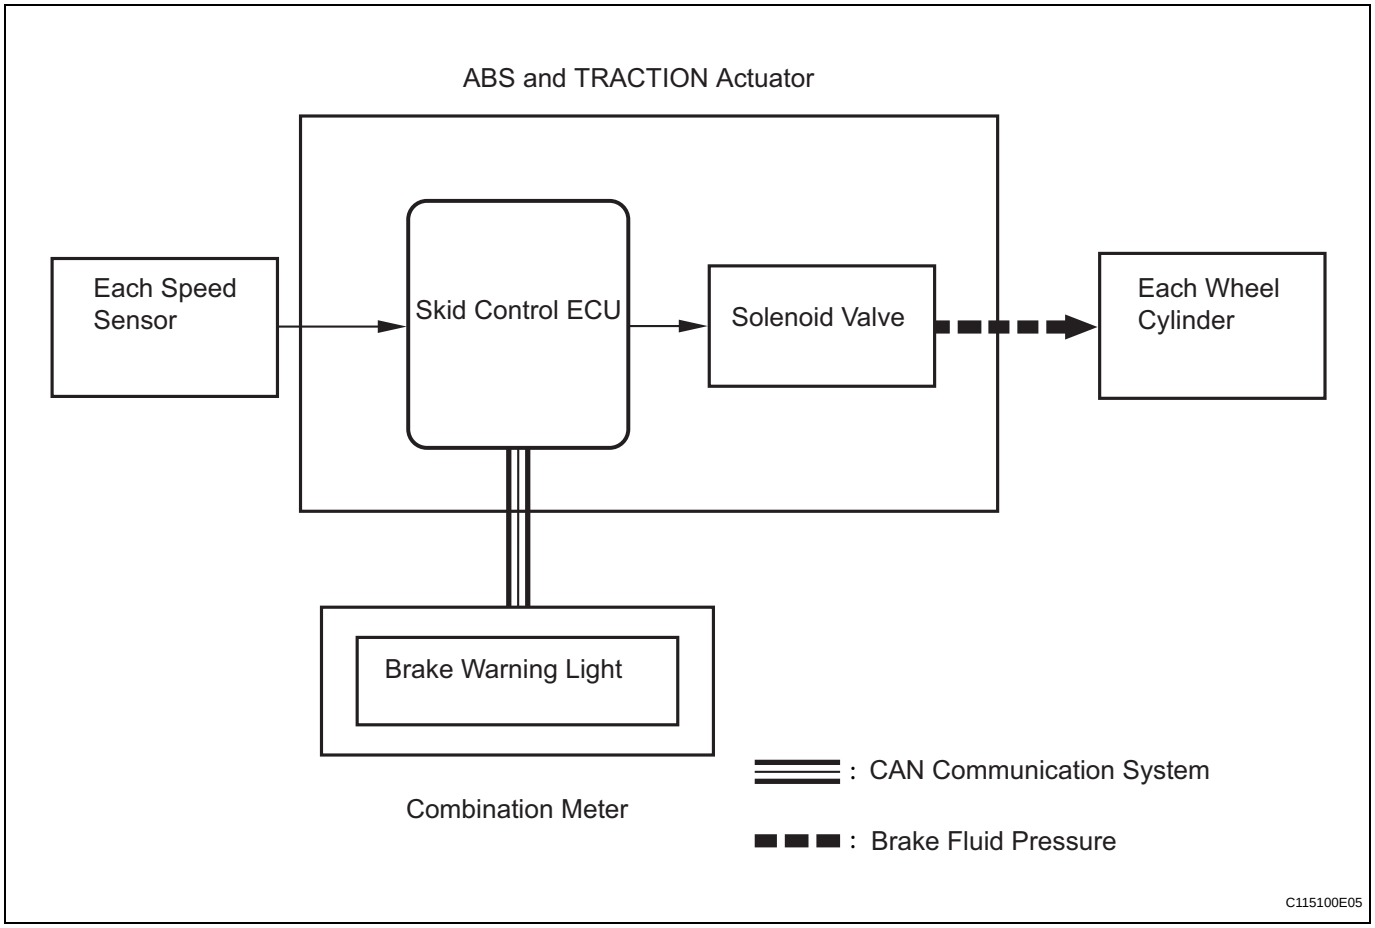
SYSTEM DESCRIPTION

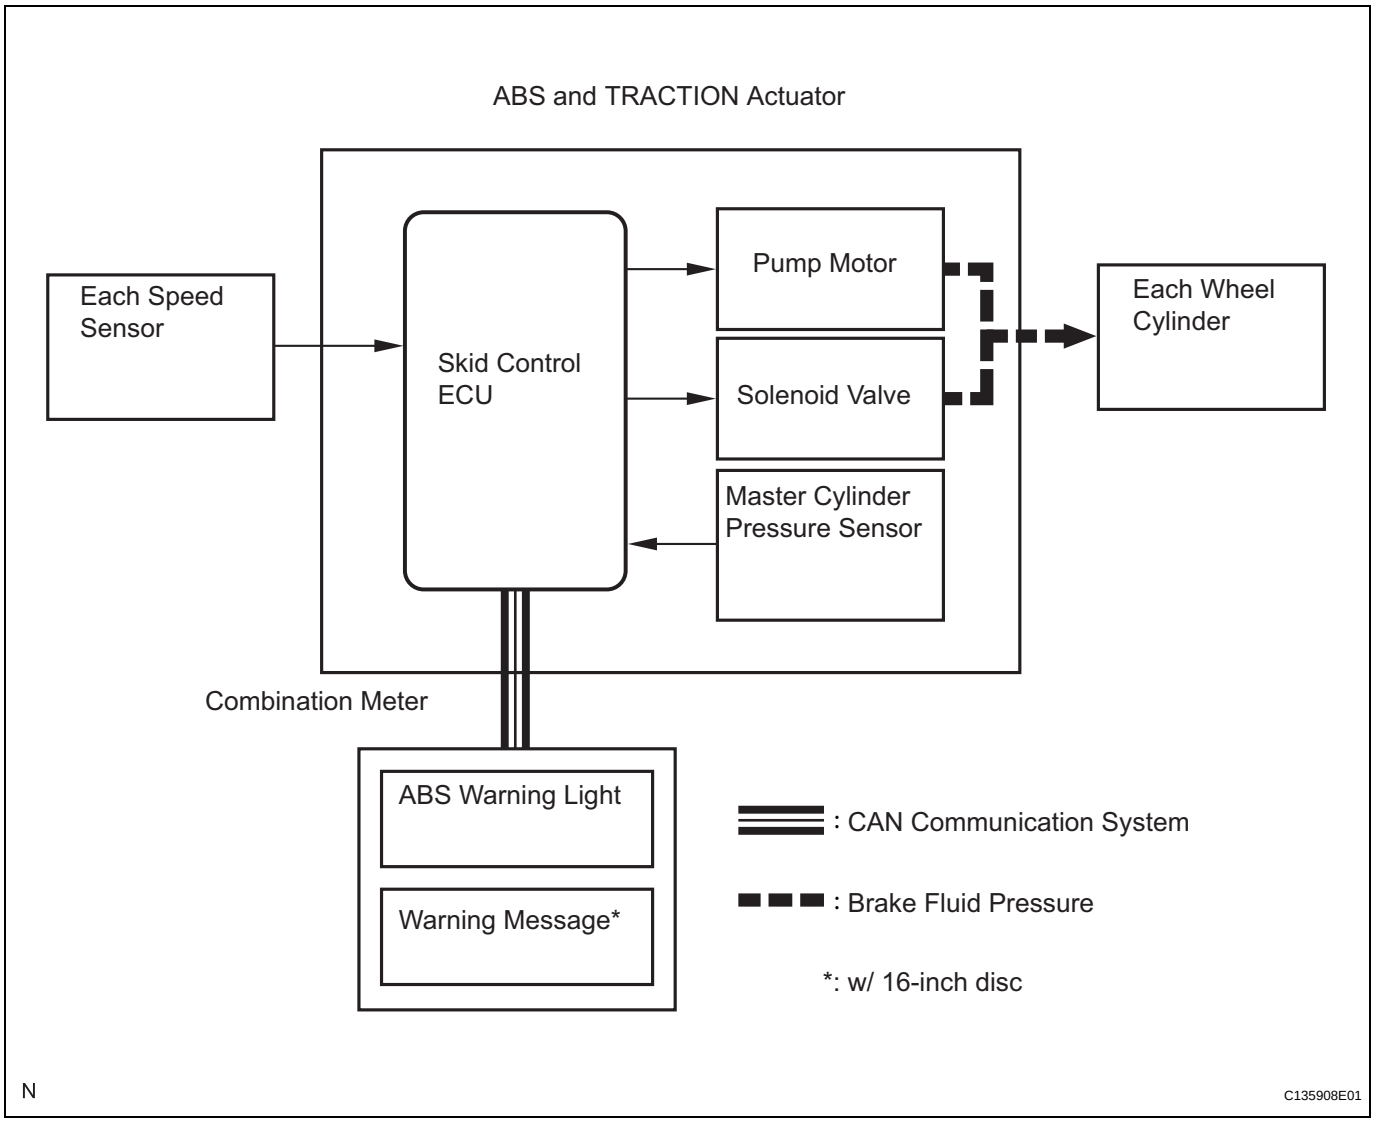
1. SYSTEM DESCRIPTION



HINT:
The skid control ECU forms a single unit with the ABS and TRACTION actuator.

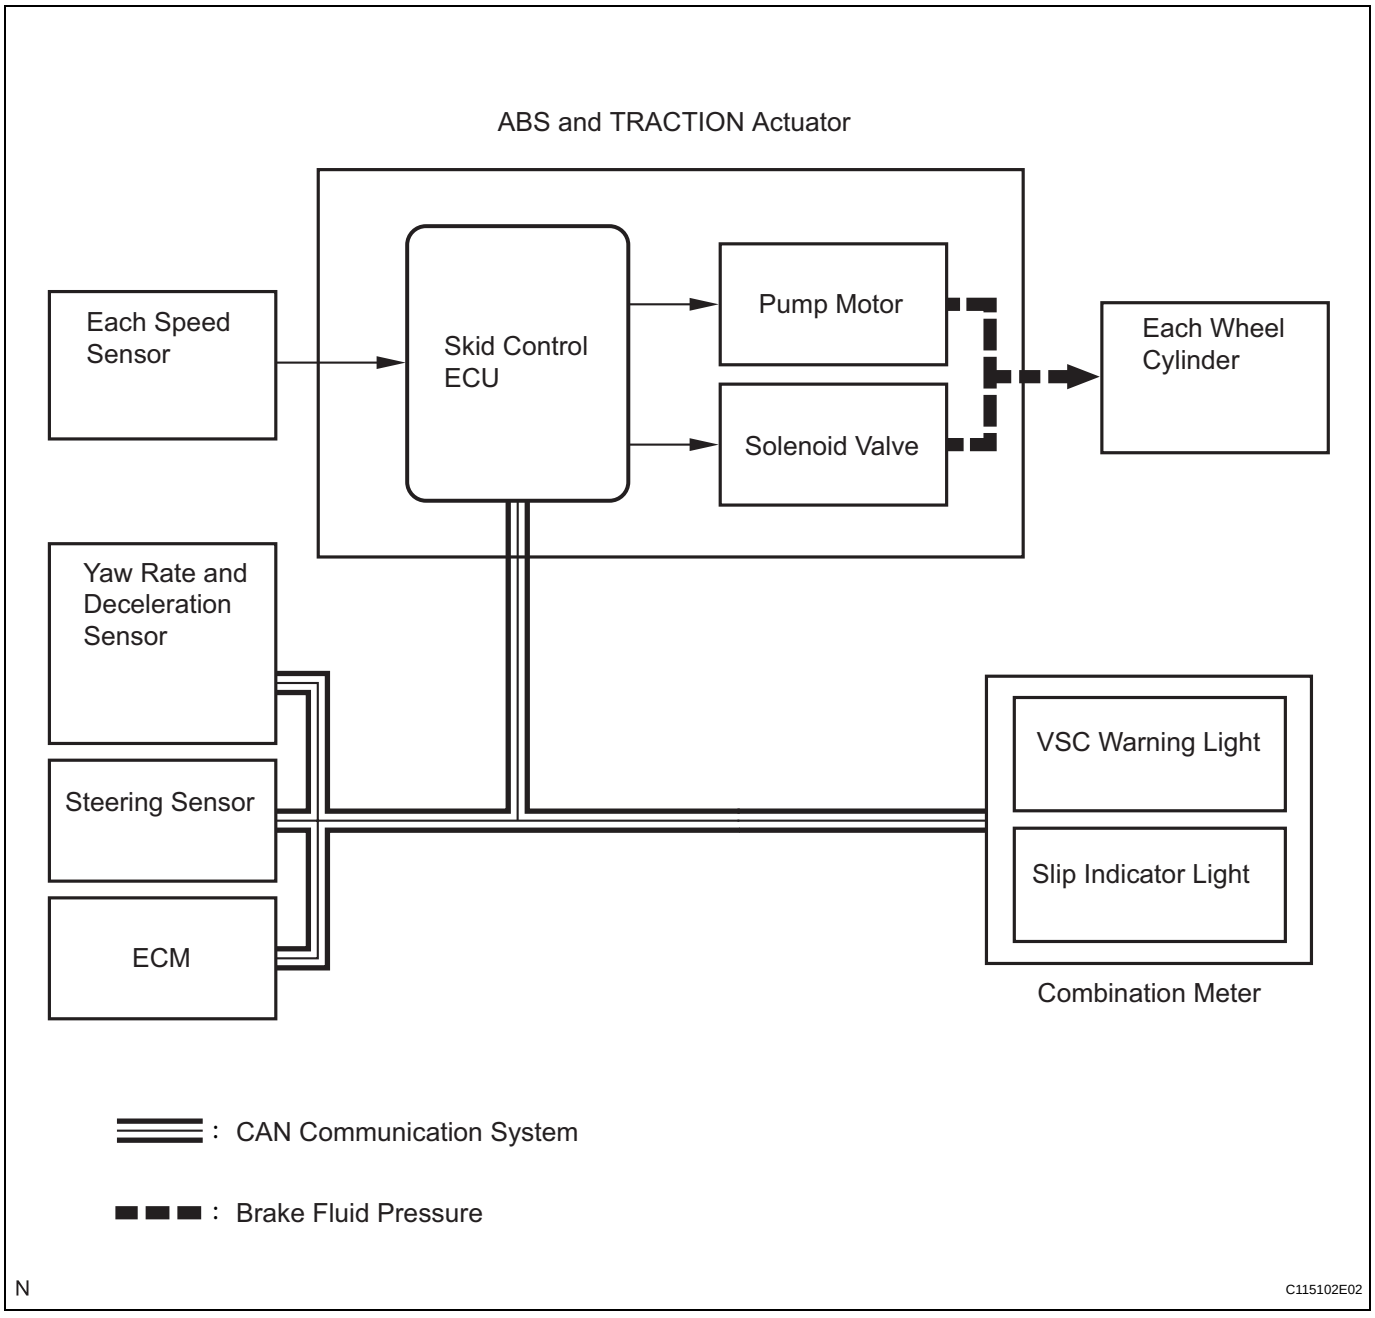
(a) ABS (Anti-lock Brake System):
The ABS helps prevent the wheels from locking when the brakes are applied firmly or on a slippery surface.

(1) Operation description:
The skid control ECU detects wheel lock conditions by receiving vehicle speed signals from each speed sensor, and sends control signals to the pump motor and solenoid valve to prevent wheels from locking by controlling the brake fluid pressure of each wheel cylinder.
The ABS warning light comes on when the ABS system malfunctions.



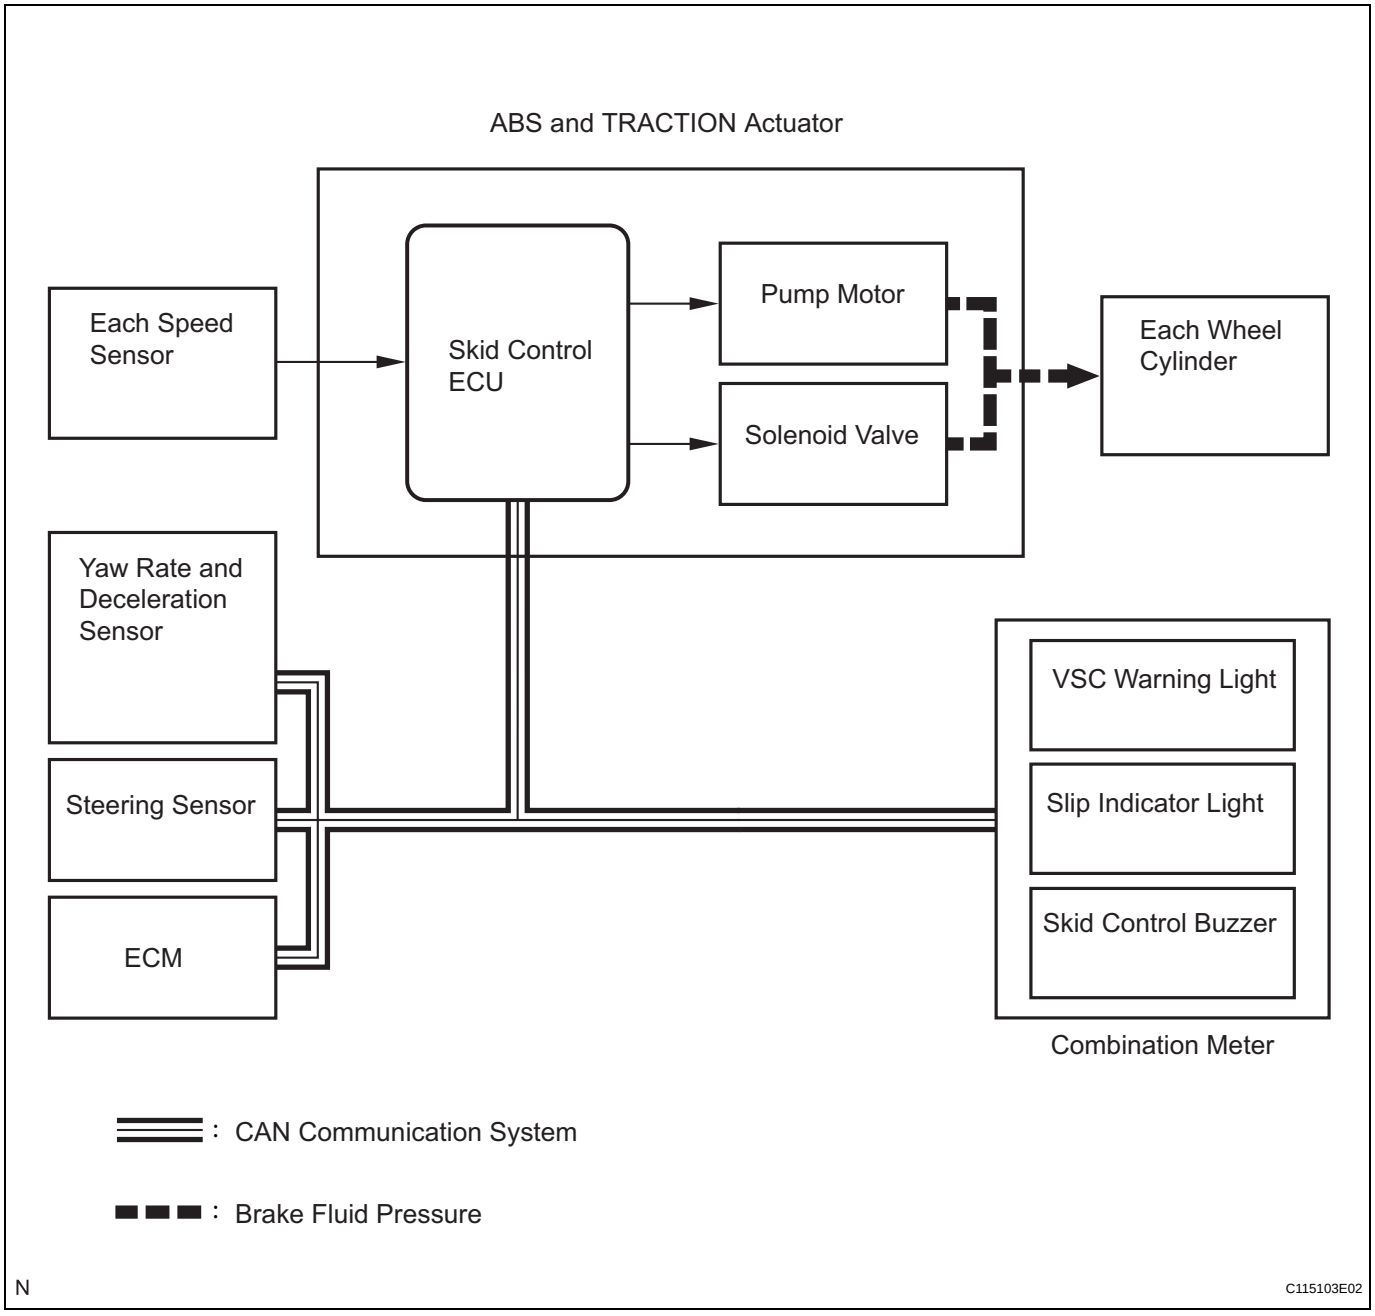
(b) EBD (Electronic Brake Force Distribution):
The EBD control utilizes the ABS to create the proper brake force distribution between the front and rear wheels in accordance with the driving conditions and vehicle load. In addition, when the brakes are applied while cornering, it also controls the braking forces of the right and left wheels, helping to maintain vehicle stability.

(1) Operation description:
The skid control ECU receives speed signals from each speed sensor to detect the slip conditions of the wheels and sends control signals to the solenoid.
The solenoid valve controls the brake fluid pressure of each wheel cylinder and divides the control power properly between the front and rear wheels and the right and left wheels.
The brake warning light comes on to indicate malfunctions in the EBD system.



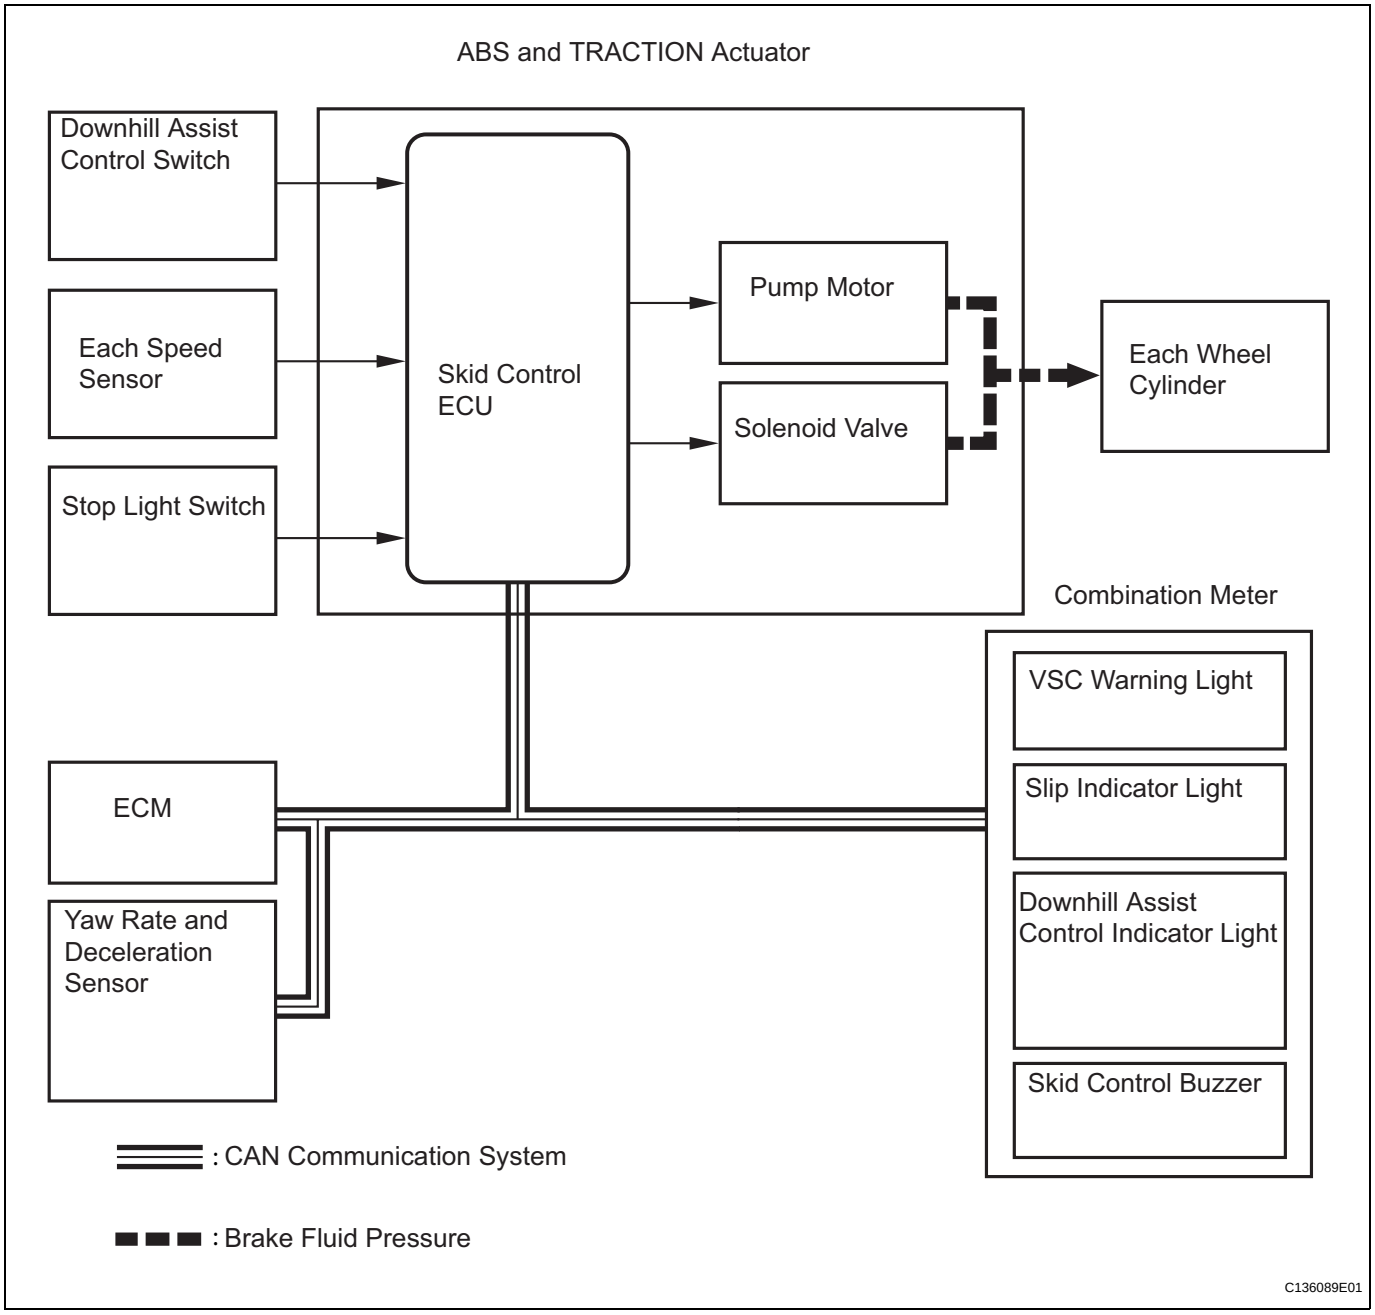
BC

(c) BA (Brake Assist):
The primary purpose of the brake assist system is to provide auxiliary brake force to assist drivers who cannot generate a large enough brake force during emergency braking, thus helping to maximize the vehicle's braking performance.



(1) Operation description:
The skid control ECU receives speed signals from each speed sensor and the fluid pressure signal from the master cylinder pressure sensor to determine whether brake assist is necessary. If brake assist is deemed necessary, the skid control ECU sends control signals to the pump motor and solenoid. The pump and the solenoid valve then control the pressure applied to each wheel cylinder. The ABS warning light comes on to indicate malfunctions in the BA (brake assist) system.
w/ 16-inch disc: The brake warning light and ABS warning light come on to indicate malfunctions in the BA system.

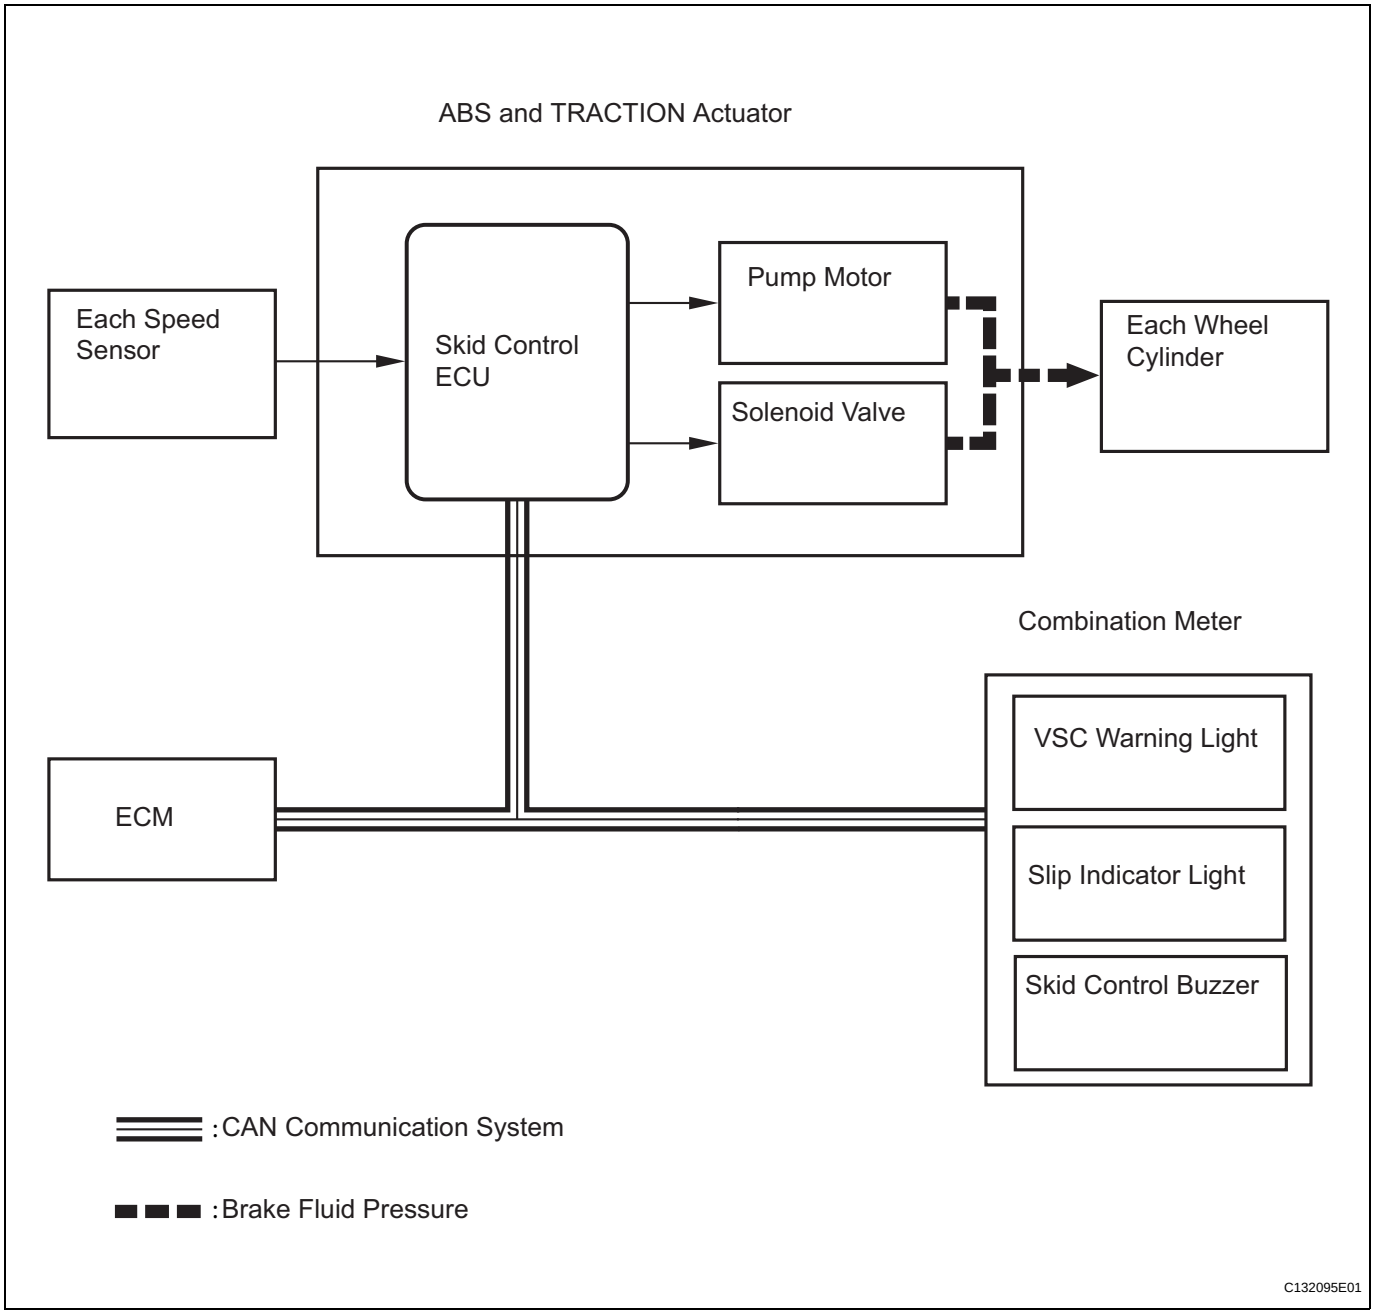
(d) TRC (Traction Control):
The TRC system helps prevent the drive wheels from slipping if the driver presses down on the accelerator pedal excessively when starting off or accelerating on a slippery surface.



(1) Operation description:
The skid control ECU detects the vehicle's slip condition by receiving signals from each speed sensor and the ECM via CAN communication. The skid control ECU controls engine torque with the ECM via CAN communication and brake fluid pressure through the pump and solenoid valve. The slip indicator light blinks when the system is operating.
for 4WD: The VSC warning light comes on when the TRC system malfunctions.
for 2WD: The VSC warning light and SLIP indicator light comes on when the TRC system malfunctions.

(e) VSC (Vehicle Stability Control):
The VSC system helps prevent the vehicle from slipping sideways when front or rear wheel skidding occurs while cornering.

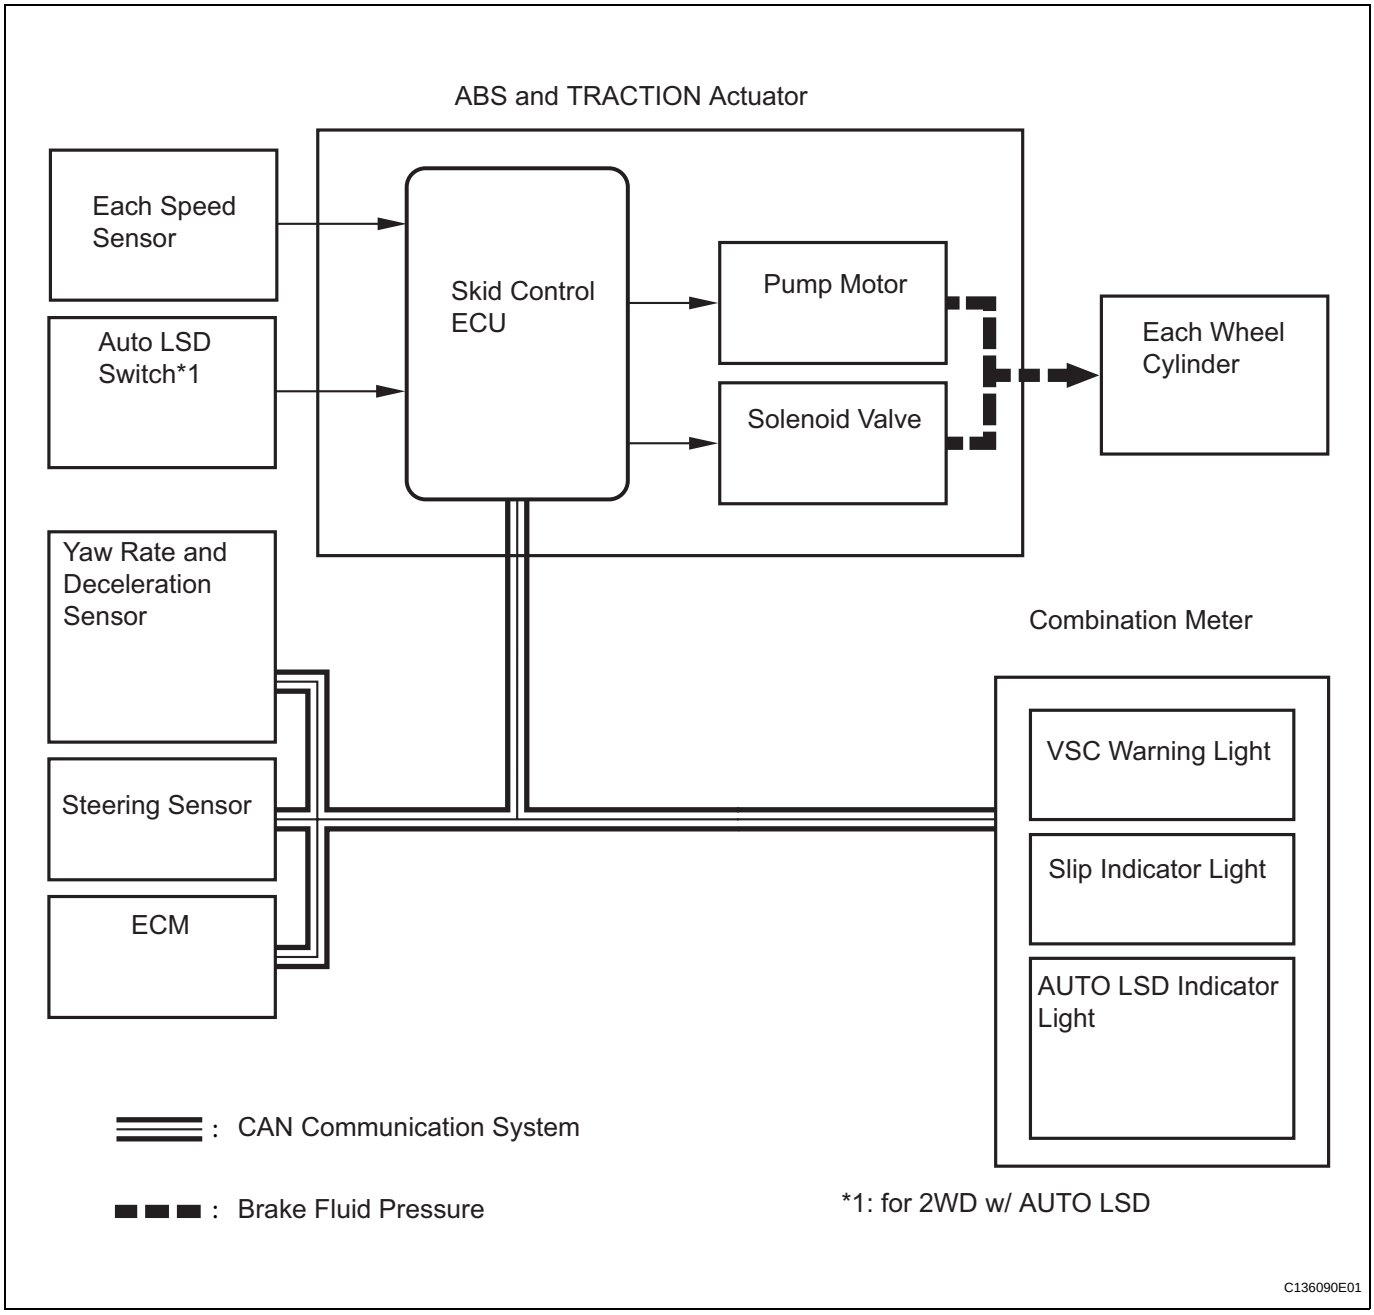
(1) Operation description:
The skid control ECU determines the vehicle condition by receiving signals from the speed sensor, the yaw rate and deceleration sensor and the steering sensor. The skid control ECU controls engine torque with the ECM via CAN communication and brake fluid pressure through the pump and solenoid valve. The slip indicator light blinks and the skid control buzzer sounds when the system is operating.
for 4WD: The VSC warning light comes on when the TRC system malfunctions.
for 2WD: The VSC warning light and slip indicator light come on when the TRC system malfunctions.



(f) Downhill Assist Control:
When the downhill assist control switch is pressed with the shift lever on L or R range and the accelerator and brake pedals not depressed, downhill assist control is activated. When activated, 4-wheel hydraulic pressure control occurs in order to maintain a constant low vehicle speed without causing the wheels to become locked. Thus, the vehicle can descend a steep hill in a stable manner.
HINT:
- Depressing the accelerator and brake pedal cancels control of the downhill assist control.
- Downhill assist control begins operating when driving down on a slope at a speed of 25 km/h (16 mph) or less with the engine brake applied.

(1) Operation description:
The slip indicator light blinks and the downhill assist control indicator light and brake light come on when the system is in operation.
The VSC warning light comes on and the downhill assist control indicator light blinks to indicate a malfunction in the downhill assist control.

BC



(g) Hill-start assist control:
When the vehicle starts off on a steep hill, hill-start assist control effects 4-wheel hydraulic pressure control to prevent the vehicle from rolling backwards.
After a maximum of 2 seconds after the control has started, fluid pressure is gradually released and control will be complete.
HINT:
- Depressing the brake pedal cancels control of the hill-start assist control.
- Hill-start assist control does not operate when the shift lever is in the P position, or when the vehicle is running, the parking brake lever is set, or the accelerator pedal is depressed.

(1) Operation description:
When the system is in operation, the following occurs: 1) the slip indicator light blinks; 2) the VSC light comes on; and 3) when hill-start assist control operation starts, the skid control buzzer sounds once; when hill-start assist control operation ends, the skid control buzzer sounds twice.
The VSC warning light comes on when the hill-start assist control is malfunctioning.

(h) AUTO LSD (Auto Limited Slip Differential) for 2WD:
The AUTO LSD achieves the equivalent functions of an LSD (Limited Slip Differential) through the use of a traction control system. When the driver presses the AUTO LSD switch, this system achieves the LSD effect by regulating the hydraulic pressure that acts on the drive wheels and controlling the engine output in accordance with the amount of pedal effort applied on the accelerator. The AUTO LSD operates with the AUTO LSD switch on and the accelerator pedal depressed.
Auto LSD restrains brake pressure and reduces differential movement, thus transmitting the drive torque to the other drive wheel to ensure stability under the following conditions:
- Wheels run off the road.
- Drive wheels spin in place when starting on a slope with one wheel on snow/ice.

HINT:
Releasing the accelerator pedal cancels control of the AUTO LSD system.

BC

(1) Operation description:
The skid control ECU determines that the vehicle is in a state in which the AUTO LSD can operate by using various sensors and switches to detect the operating conditions of the AUTO LSD switch, shift position, accelerator pedal, and brake pedal. When the vehicle is in a state in which the AUTO LSD can operate, the skid control ECU effects hydraulic pressure control of the wheel cylinder at the wheel with the faster wheel speed so that the wheel speeds of the right and left drive wheels will become equal. The slip indicator light blinks and the AUTO LSD indicator light comes on when the system is operating. Both the VSC warning light and SLIP indicator light come on when the AUTO LSD system malfunctions.

2. COOPERATIVE CONTROL FUNCTION

(a) Description

(1) Braking when Surface Resistance Differs Between Left and Right Wheels
If the driver suddenly applies the brakes on a road surface with a considerable difference in friction coefficient between the right and left wheels, the difference in the brake force between the right and left wheels will cause the vehicle posture to become unstable and create a yaw movement. In this state, the skid control ECU controls the VSC to stabilize the vehicle posture. At the same time, it effects cooperative control with the EPS to provide steering torque assist, which facilitates the driver's steering maneuvers to stabilize the vehicle posture.

(2) Accelerating when Surface Resistance Differs Between Left and Right Wheels
If the driver suddenly starts off or accelerates on a road surface with a considerable difference in friction coefficient between the right and left wheels, the slippage of a drive wheel will cause the vehicle posture to become unstable and negatively affect its acceleration performance. In this state, the skid control ECU causes the TRC to control the hydraulic brake of the slipping drive wheel, and requests the engine ECU to effect engine output control. At the same time, it effects cooperative control with the EPS to provide steering torque assist, which facilitates the driver's steering maneuvers to stabilize the vehicle posture.

(3) Front Wheel Skid Tendency
When the skid control ECU determines that there is a front wheel skid tendency, it controls the VSC to dampen the front wheel skid. At the same time, it effects cooperative control with the EPS to provide steering torque assist, which facilitates the driver's steering maneuvers to stabilize the vehicle posture. To prevent excessive steering maneuvers, it provides a steering torque assist. This assist increases the resistance to counter the driver's steering effort, if the driver turns the steering wheel excessively.

(4) Rear Wheel Skid Tendency
When the skid control ECU determines that there is a rear wheel skid tendency, it controls the VSC to dampen the rear wheel skid. At the same time, it effects cooperative control with the EPS to provide steering torque assist, which facilitates the driver's steering maneuvers in the direction to correct the rear wheel skid.

(5) Acceleration During Cornering
A sudden acceleration of the vehicle during cornering may cause a drive wheel to freewheel, which could cause the front wheels or rear wheels to skid. If the skid control ECU determines that there is freewheeling of a drive wheel, a front wheel skid tendency, or a rear wheel skid tendency, it effects cooperative control with the 4WD system to optimally control the drive torque distribution to the front and rear wheels. Furthermore, it controls the TRC and the VSC as needed to ensure driving stability and acceleration performance.

(b) Operation
The operation of the solenoid valves under the cooperative control is the same as the TRC or VSC operation.

3. ABS WITH EBD, BA, TRC AND VSC OPERATION

(a) The skid control ECU calculates vehicle stability tendency based on the signals from the 4 wheel speed sensors, the yaw rate and deceleration sensor and the steering sensor. In addition, it evaluates the results of the calculations to determine whether any control actions (control of the engine output torque by electronic throttle control and of the brake fluid pressure by the ABS and TRACTION actuator) should be implemented.

(b) The slip indicator blinks and the skid control buzzer sounds to inform the driver that the VSC system is operating. The slip indicator also blinks when traction control is operating, and the operation being performed is displayed.

4. FAIL SAFE FUNCTION

(a) When a failure occurs in the ABS with BA, TRC and VSC systems, the ABS and VSC warning lights illuminate, the slip indicator light comes on*1 or remains off*2, and the operations of those systems are prohibited. In addition to this, when a failure which disables the EBD operation occurs, the brake warning light comes on and its operation is prohibited.
HINT:
*1: for 2WD
*2: for 4WD

(b) If control is prohibited due to a malfunction during operation, control is disabled gradually to avoid sudden vehicle instability.

5. INITIAL CHECK

(a) When the vehicle speed first reaches approximately 6 km/h (4 mph) or more after the ignition switch is turned ON, each solenoid valve and the motor of the ABS and TRACTION actuator are sequentially activated to perform electrical checks. During the initial check, the operating sound of the solenoid valve and motor can be heard from the engine compartment, but this does not indicate a malfunction.

BC

6. SERVICE MODE

(a) VSC operation can be disabled by operating the intelligent tester.
HINT:
Refer to the intelligent tester operator's manual for further details.

7. FUNCTION OF COMPONENTS

Components	Functions
Speed Sensor (Semiconductor Type)	Detects the wheel speed and sends the signal to skid control ECU
Skid Control ECU (Housed in ABS and TRACTION Actuator)	• Processes the signals from each sensor to control the ABS, BA, TRC, and VSC • Sends and receives control signals to and from the ECM, yaw rate and deceleration sensor, steering sensor, etc. via CAN communication.
ABS and TRACTION Actuator	• Consists of the master cylinder cut solenoid valve, holding solenoid valve, pressure reduction solenoid valve, pump motor, and reservoir, and adjusts the brake fluid pressure applied to each wheel cylinder • Houses the skid control ECU
Solenoid Relay	• Supplies power to each solenoid • Housed in the skid control ECU
Motor Relay (VSC MTR Relay)	• Supplies power to the pump motor • Installed in engine room No. 1 relay block
Fail-safe Relay (VSC FAIL Relay)	• Cuts off power to the motor when the pump motor circuit malfunctions • Installed in engine room No. 1 relay block

Components		Functions
Steering Sensor		• Detects the steering extent and direction and sends signals to the skid control ECU via CAN communication • Has a magnetic resistance element which detects the rotation of the magnet housed in the detection gear in order to detect the changes in magnetic resistance and the steering amount and direction
Yaw Rate and Deceleration Sensor		• Yaw rate sensor detects the vehicle's angular velocity (yaw rate) in the vertical direction based on the extent and direction of the deflection of the piezoelectric ceramics • Deceleration sensor measures the capacity of the condenser that changes the distance between the electrodes depending on G force, which occurs when the vehicle is accelerated, and converts the measured value into electrical signals • Sends signals to the skid control ECU via CAN communication
Master Cylinder Pressure Sensor		• Detects the brake fluid pressure in the master cylinder • Housed in the ABS and TRACTION actuator
ECM		• Controls the engine output when TRC and VSC are operating with the skid control ECU via CAN communication
Downhill Assist Control switch*1		Allows the driver to turn downhill assist control ON and OFF
AUTO LSD switch*2		Allows the driver to turn AUTO LSD ON and OFF
Combination Meter	ABS Warning Light	• Illuminates to inform the driver that a malfunction in the ABS has occurred • Blinks to indicate DTCs that relate to the ABS
	VSC Warning Light	• Illuminates to inform the driver that a malfunction in the VSC system has occurred • Blinks to indicate DTCs that relate to the VSC
	Brake Warning light	• Illuminates to inform the driver that the parking brake is ON when the system is normal, and when the brake fluid has decreased • Illuminates to inform the driver that a malfunction in the EBD has occurred
	Slip Indicator Light	• Blinks to inform the driver that TRC, VSC, downhill assist control and hill-start assist control are operating • Illuminates to inform the driver that a malfunction has occurred in the TRC or VSC system
	AUTO LSD Indicator Light*2	Lights up to inform the driver when AUTO LSD operation is possible
	Downhill Assist Control Indicator Light*1	Lights up to inform the driver when downhill assist control operation is possible
	Skid Control Buzzer	• Intermittently sounds to inform the driver that the VSC is operating • Housed in the combination meter

HINT:
*1: w/ Downhill assist control
*2: for 2WD w/ AUTO LSD

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the vehicle stability control system.
- *: Use the intelligent tester.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3	CHECK AND CLEAR DTC*

NEXT

4	PROBLEM SYMPTOM CONFIRMATION

Result

Result	Proceed to
Symptom does not occur	A
Symptom occurs	B

B → Go to step 7

A

5	SYMPTOM SIMULATION

NEXT

6	CHECK COMMUNICATION FUNCTION OF CONTROLLER AREA NETWORK (CAN)*

(a) Use the intelligent tester to check for normal functioning of the CAN communication system.
  (1) Perform bus check (communication malfunction DTC).

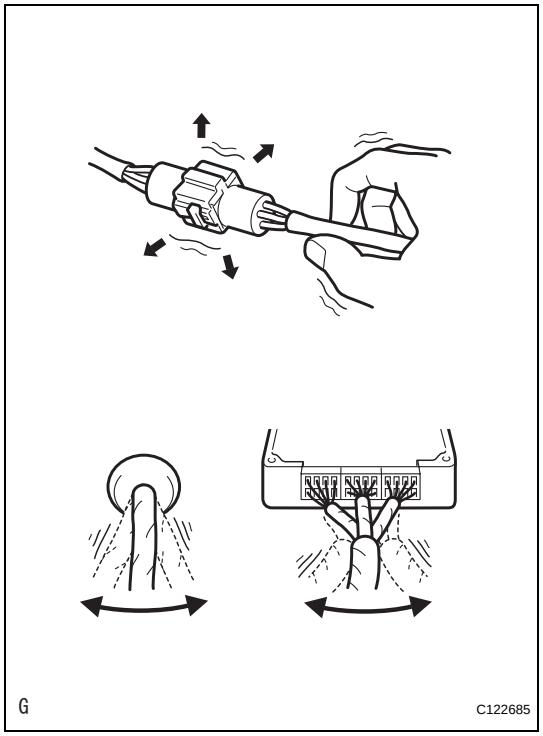
CHECK FOR INTERMITTENT PROBLEMS

1. CHECK FOR INTERMITTENT PROBLEMS

HINT:
A momentary interruption (open circuit) in the connectors and/or wire harness between the sensors and ECUs can be detected by using the ECU DATA LIST function of an intelligent tester.

(a) Turn the ignition switch OFF and connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON.



(c) Follow the prompts on the intelligent tester to display the DATA LIST and select areas where a momentary interruption should be monitored.
HINT:
- A momentary interruption (open circuit) cannot be detected for 3 seconds after the ignition switch is turned ON (initial check).
- If the status remains on the ERROR display, check for continuity between the ECU and the sensors, or between ECUs.
- The ERROR display on the intelligent tester remains on for 1 second after the harness signal changes from a momentary interruption (open circuit) to normal condition.

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
FR SPD OPN	FR speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
FL SPD OPN	FL speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
RR SPD OPN	RR speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
RL SPD OPN	RL speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
EFI COM OPN	EFI communication open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
YAW RATE OPN	Yaw rate sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
DECELERAT OPN	Deceleration sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
STEERING OPN	Steering angle sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
M/C OPN	Master cylinder pressure sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-

(d) While observing the screen, gently jiggle the connector or wire harness between the ECU and sensors, or between ECUs.

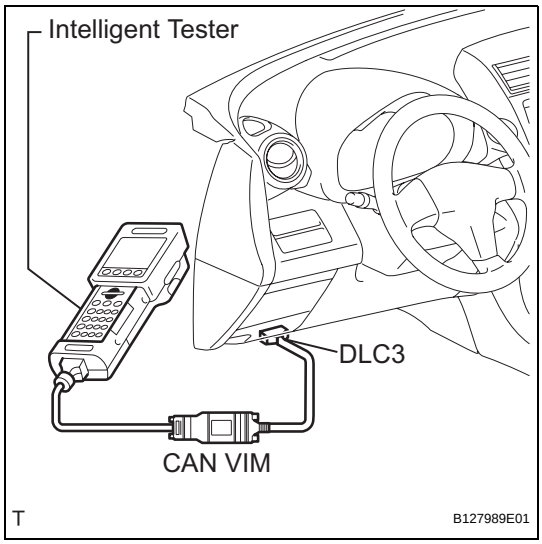
OK:

ERROR display does not change.

HINT:

The connector and/or wire harness have a momentary interruption (open circuit) if the display changes. Repair or replace the connector and wire harness if either of them is faulty.

BC



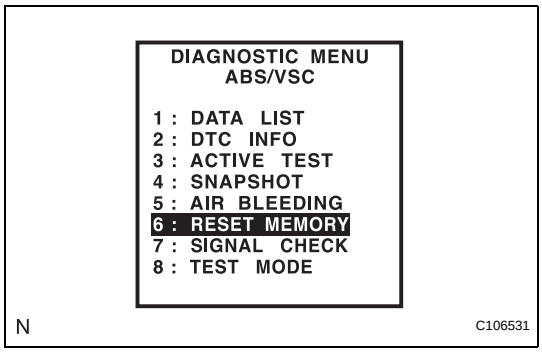
CALIBRATION

1. DESCRIPTION

(a) After replacing components relating to the VSC or performing "Front wheel alignment adjustment", clear and read the sensor calibration data.

(b) Follow the chart to perform calibration.

Replacing Parts / Operation	Necessary Operation
Skid Control ECU	Yaw rate and deceleration sensor zero point calibration.
Yaw Rate Sensor	1. Clearing zero point calibration data 2. Yaw rate and deceleration sensor zero point calibration
Front Wheel Alignment Adjustment	1. Clearing zero point calibration data 2. Yaw rate and deceleration sensor zero point calibration



2. CLEAR ZERO POINT CALIBRATION DATA (When Using Intelligent Tester)

(a) Clear the zero point calibration data.

(1) Connect the intelligent tester (with CAN VIM) to the DLC3.

(2) Turn the ignition switch ON.

(3) Operate the intelligent tester to erase the codes (select "Reset Memory").
HINT:
Refer to the intelligent tester operator's manual for further details.

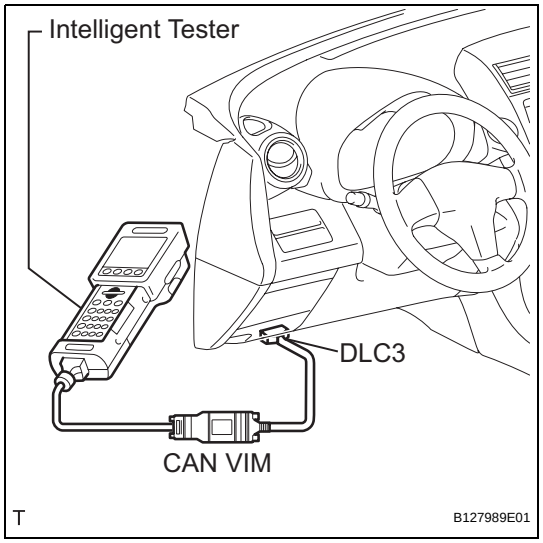
(4) Using the intelligent tester, perform the zero point calibration of the yaw rate and deceleration sensor.
CAUTION:
If the ignition switch is turned ON for more than 15 seconds with the shift lever in the P position after zero point of the yaw rate and acceleration sensor has been cleared, only the zero point of the yaw rate sensor will be stored. If the vehicle is driven under this condition, the skid control ECU will recognize that zero point calibration of the acceleration sensor is not completed and will indicate that there is a malfunction in the VSC system using the indicator light.

3. PREFORM ZERO POINT CALIBRATION OF YAW RATE AND DECELERATION SENSOR (When Using Intelligent Tester)

NOTICE:

- **While obtaining the zero point, do not vibrate the vehicle by tilting, moving or shaking it and keep it stationary. (Do not start the engine.)**
- **Perform this on a level surface (with an inclination of less than 1°).**

(a) Procedures for Test Mode.



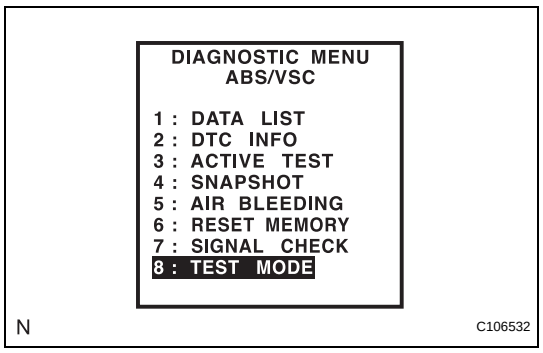
(1) Check that the shift lever is in the P position and apply the parking brake.

NOTICE:

DTCs C1210/36 and C1336/39 will be recorded if the shift lever is not the P position (see page BC-88).

(2) Connect the intelligent tester (with CAN VIM) to the DLC3.

(3) Turn the ignition switch ON.

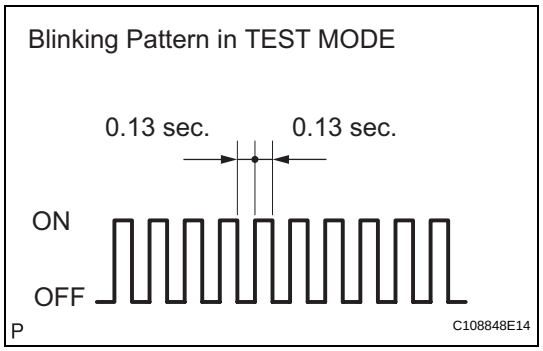


(4) Set the intelligent tester to test mode (select "Test Mode").

HINT:

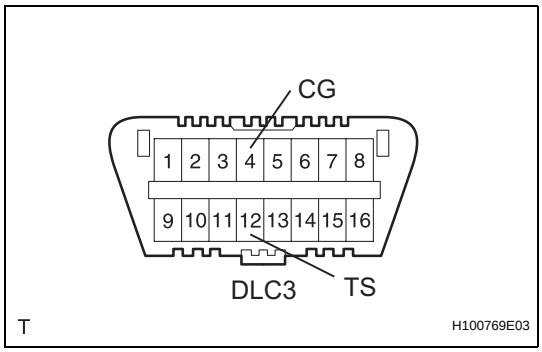
Refer to the intelligent tester operator's manual for further details.

(b) Obtain the zero point of the yaw rate and deceleration sensor.



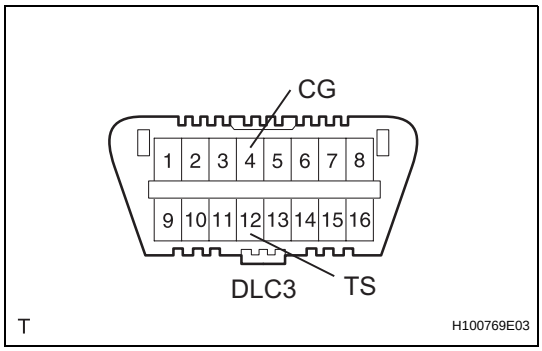
(1) Keep the vehicle stationary on a level surface for 2 seconds or more.

(2) Check that the VSC warning light blinks as shown in the illustration.

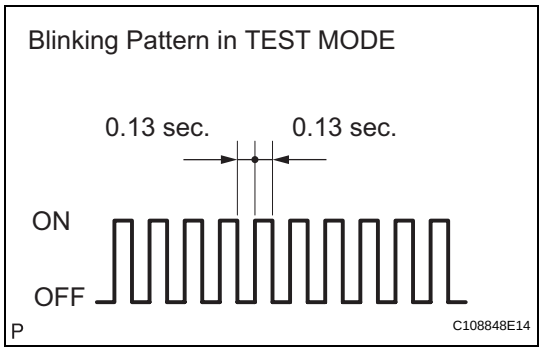


HINT:

- If the VSC warning light does not blink, perform the zero point calibration again.
- The zero point calibration is performed only once after the system enters test mode.
- Calibration cannot be performed again until the stored data is cleared once.



(3) Turn the ignition switch OFF.



BC

4. **CLEAR ZERO POINT CALIBRATION DATA (When not Using Intelligent Tester)**
   (a) Clear the zero point calibration data.
      (1) Turn the ignition switch ON.
      (2) The warning light and indicator light come on for 3 seconds to indicate that the initial check is completed.
      (3) Using SST, connect and disconnect terminals 12 (TS) and 4 (CG) of the DLC3 4 times or more within 8 seconds.
      SST 09843-18040
      (4) Check that the VSC warning light comes on.
      (5) Remove SST from the terminals of the DLC3.
      (6) Using a check wire, perform the zero point calibration of the yaw rate and deceleration sensor.
      CAUTION:
      If the ignition switch is turned ON for more than 15 seconds with the shift lever in the P position after zero point of the yaw rate and acceleration sensor has been cleared, only the zero point of the yaw rate sensor will be stored. If the vehicle is driven under this condition, the skid control ECU will recognize that zero point calibration of the acceleration sensor is not completed and will indicate that there is a malfunction in the VSC system using the indicator light.

5. **PERFORM ZERO POINT CALIBRATION OF YAW RATE AND DECELERATION SENSOR (When not Using Intelligent Tester)**
   NOTICE:
   - **While obtaining the zero point, do not vibrate the vehicle by tilting, moving or shaking it and keep it stationary. (Do not start the engine.)**
   - **Perform this on a level surface (with an inclination of less than 1°).**
   (a) Procedures for Test Mode.
      (1) Turn the ignition switch OFF.
      (2) Using SST, connect terminals 12 (TS) and 4 (CG) of the DLC3.
      SST 09843-18040
      (3) Check that the shift lever is in the P position and apply the parking brake.
      NOTICE:
      DTCs C1210/36 and C1336/39 will be recorded if the shift lever is not the P position (see page BC-88).
   (b) Obtain the zero point of the yaw rate and deceleration sensor.
      (1) Turn the ignition switch ON.
      (2) Keep the vehicle stationary on a level surface for 2 seconds or more.

(3) Check that the VSC warning light blinks as shown in the illustration.
HINT:
- If the VSC warning light does not blink, perform the zero point calibration again.
- The zero point calibration is performed only once after the system enters test mode.
- Calibration cannot be performed again until the stored data is cleared once.

(4) Turn the ignition switch OFF.

TEST MODE PROCEDURE

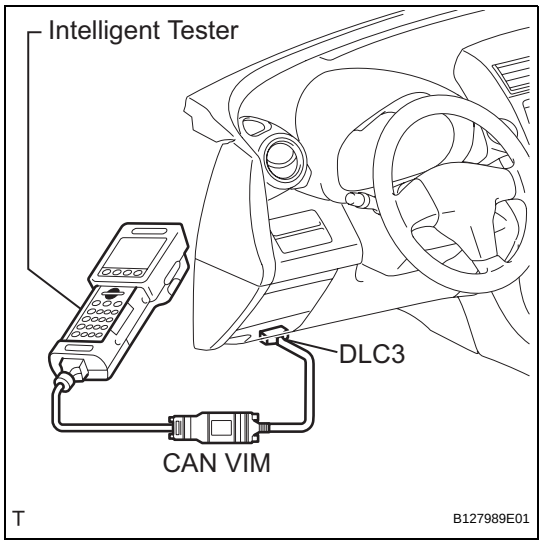
HINT:

- By switching the skid control ECU from normal mode to test mode, abnormality detection sensitivity is enhanced and troubleshooting can be conducted efficiently.
- Perform a sensor check in test mode after the speed sensor or sensor rotor has been repaired or replaced.
- If the ignition switch is turned from ON to ACC or OFF during test mode, DTCs related to the signal check function will be erased.
- During test mode, the skid control ECU stores all DTCs related to the signal check function, and the DTCs are erased if normality is confirmed. Any remaining DTCs are those indicating abnormalities that were found.

1. CHECK SENSOR SIGNAL BY TEST MODE (When Using Intelligent Tester)

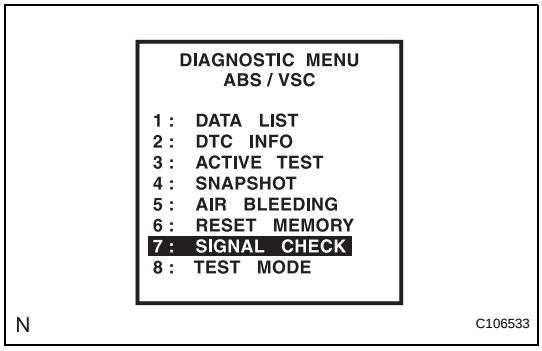
(a) Procedures for test mode:

(1) Turn the ignition switch OFF.

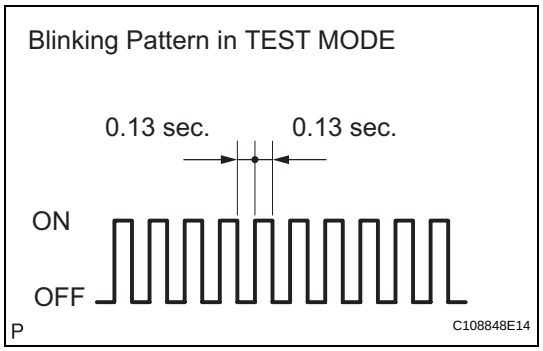


(2) Check that the steering wheel is in the centered position.

(3) Check that the shift lever is in the P position and apply the parking brake.



(4) Connect the intelligent tester (with CAN VIM) to the DLC3.

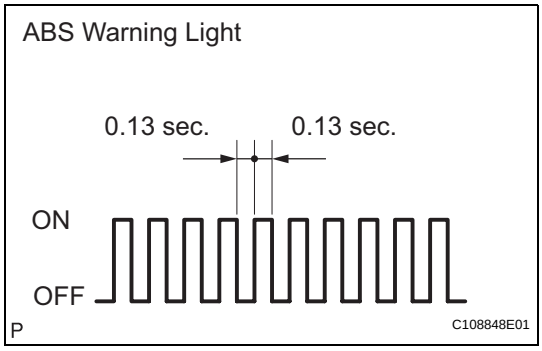


(5) Turn the ignition switch ON.

(6) Turn the tester on.

(7) Set the intelligent tester to Test Mode (select "Signal Check").
HINT:
Refer to the intelligent tester operator's manual for further details.

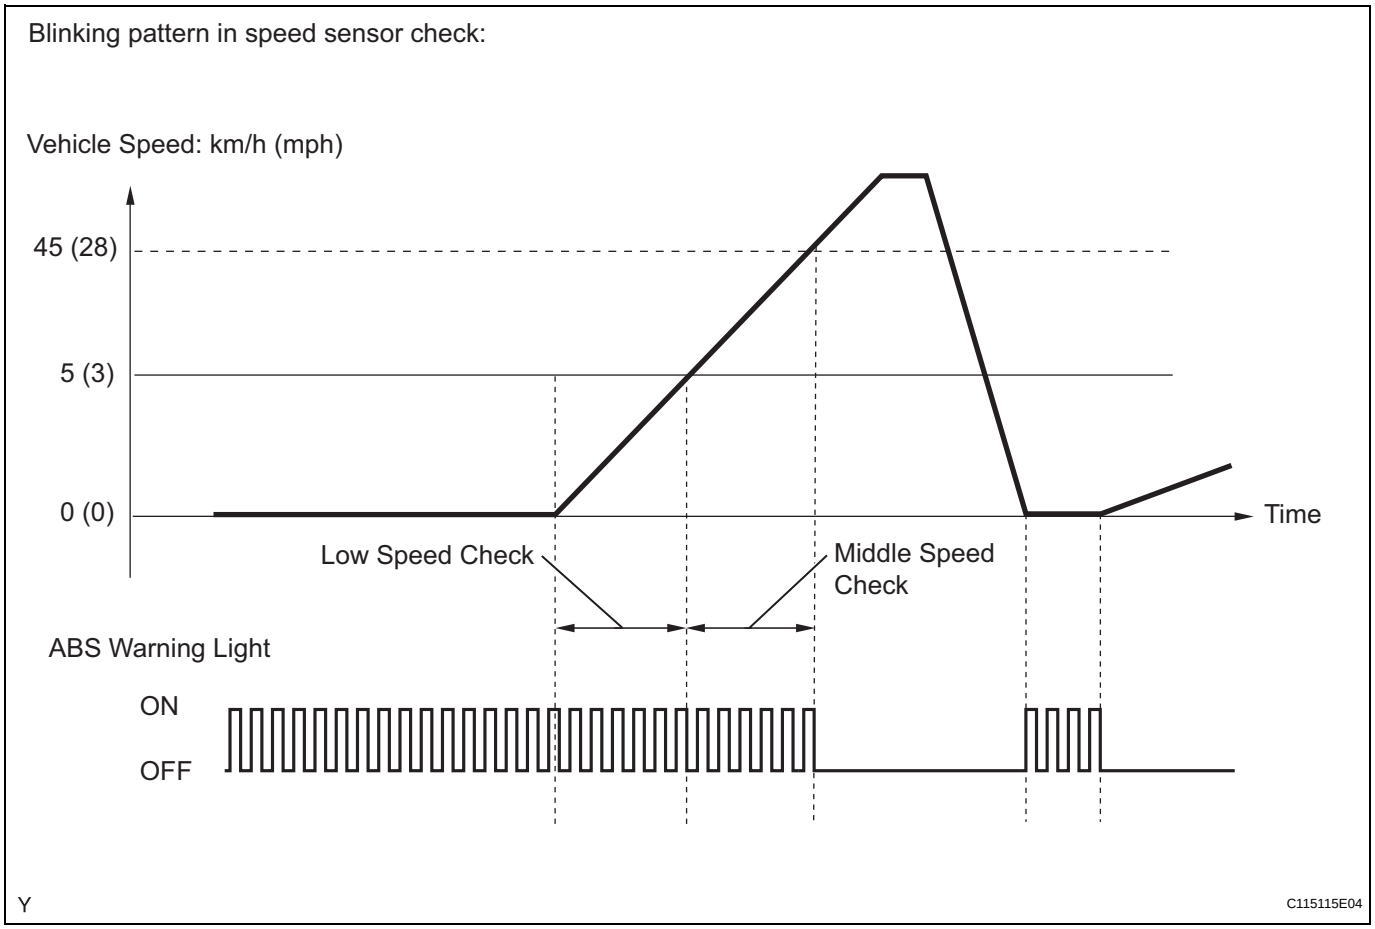
(8) Check that the ABS warning light and VSC warning light blink as shown in the illustration.
HINT:
If the ABS warning light and VSC warning warning light do not blink, check the TS and CG terminal circuit, and ABS and VSC warning light circuits.



Section Title	See procedure
ABS Warning Light does not Come ON	BC-138
VSC Warning Light does not Come ON	BC-142
TS and CG Terminal Circuit	BC-177

(9) Start the engine.

(b) w/ 16-inch disc only:
Check the lost booster pressure judgment and perform the master cylinder pressure sensor zero point calibration.
NOTICE:
Preform the check in the lost booster pressure state (negative pressure in the booster is depressurized).
(1) Turn the ignition switch ON.
(2) Check that the brake warning light comes on when depressing the brake pedal with a force of 59 N (6 kgf, 13.2 lbf) or more for 1 second or more. (The lost booster pressure state is judged normal.)
(3) Start the engine depressing the brake pedal with a force of 59 N (6 kgf, 13.2 lbf) or more for 1 second or more.
(4) Check that the brake warning light goes off when quickly releasing the brake pedal. (The lost booster pressure state is judged normal.)
(5) Leave the vehicle for 1 second or more. (Master cylinder pressure sensor zero point calibration.)
NOTICE:
- **If you slowly depress the brake pedal or depress it again, master cylinder pressure sensor zero point calibration is not performed normally.**
- **If the lost booster pressure judgment check is not completed normally, the master cylinder pressure sensor check is not judged.**
- **If a recheck is performed after the engine has started, end the Test Mode, enter Test Mode again, and release the vacuum in the booster by pumping the brake pedal prior to the recheck.**

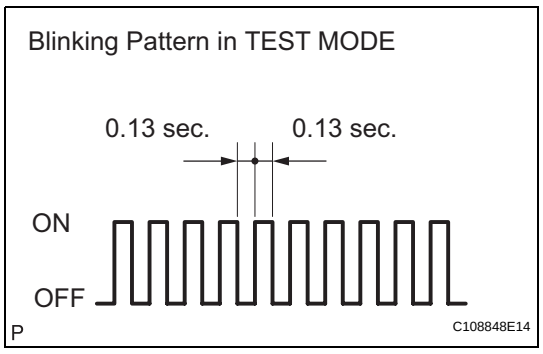


(c) Check the deceleration sensor.
(1) Keep the vehicle stationary on a level surface for 1 second or more.
HINT:
The deceleration sensor check can be performed together with the following master cylinder pressure sensor check.

(d) Check the master cylinder pressure sensor.
(1) Leave the vehicle in a stationary condition and release the brake pedal for 1 second or more, and quickly depress the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more for 1 second. Check that the ABS warning light remains illuminated for 3 seconds.
HINT:
- Ensure that the ABS warning light comes on.
- While the ABS warning light remains illuminated, continue depressing the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more.
- The ABS warning light comes on for 3 seconds every time the brake pedal operation above is performed.

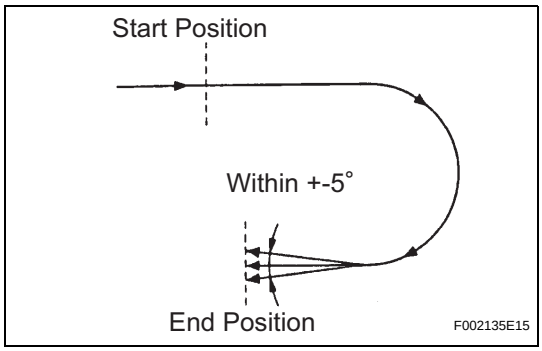
(e) Check the speed sensor.
(1) Check that the ABS warning light is blinking as shown in the illustration.
(2) Check the speed sensor signal.
1. Drive the vehicle straight forward at a speed of 45 km/h (28 mph) or more for several seconds.
2. Check that the ABS warning light goes off.
NOTICE:
- **The speed sensor check may not be completed if the sensor check is started with the steering wheel turned or one or more wheels spinning.**
- **If the speed sensor check is commenced while the steering wheel is turned, the ABS warning light may come on after the low speed check is finished.**
- **The ABS warning light comes on immediately when an abnormality is detected.**
- **When the speed sensor signal is normal, the ABS warning light goes off while driving at 45 km/h (28 mph) or more, and blinks in the test mode pattern while the vehicle is stationary.**

- **Do not drive the vehicle at a speed of 80 km/h (50 mph) or more after the ABS warning light turns off, because test mode DTCs are set again when the vehicle speed exceeds 80 km/h (50 mph).**



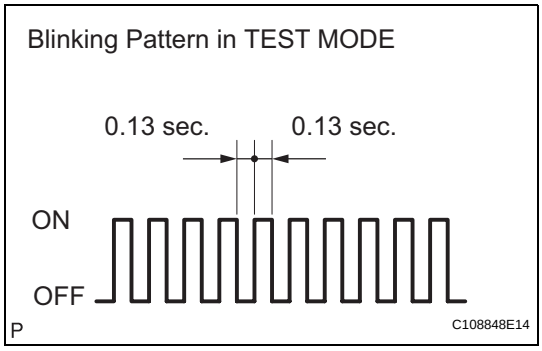
3. Stop the vehicle.

(f) Check the yaw rate sensor.



(1) Move the shift lever to P and set the parking brake lever.

(2) Check that the VSC warning light is blinking as shown in the illustration.



(3) Keep the vehicle stationary on a level surface for 1 second or more.

BC

(4) Shift the shift lever to the D position and drive the vehicle at a speed of approximately 5 km/h (3 mph), and turn the steering wheel either to the left or right 90° or more to turn the vehicle through 180°.
(5) Stop the vehicle, move the shift lever into the P position, and then apply the parking brake.
(6) Check that the skid control buzzer sounds for 3 seconds.
HINT:
- If the skid control buzzer sounds, the signal check has been completed normally.
- If the skid control buzzer does not sound, check the skid control buzzer circuit (see page BC-172).
- If the skid control buzzer still does not sound, there is a malfunction in the yaw rate sensor, so check for DTCs.
- Drive the vehicle in a 180° semi circle. At the end of the turn, the direction of the vehicle should be within 180 +-5° of its start position.
- Complete the vehicle turn within 20 seconds.
- Do not spin the wheels.

(g) w/ Downhill assist control only:
Check the downhill assist control operation switch.
(1) Check that the VSC warning light is blinking as shown in the illustration.
(2) Check the downhill assist control switch.
1. Push the downhill assist control switch on.
2. Push the downhill assist control switch off.

(h) w/ Auto LSD only:
(1) Check that the AUTO LSD light illuminates only when the AUTO LSD switch is pressed.

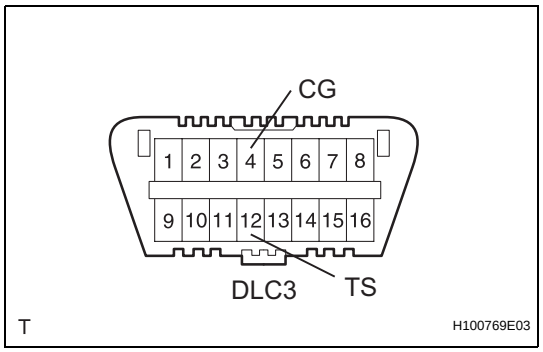
(i) Check the end of sensor.
(1) When the sensor check is successfully completed, the ABS warning light blinks in the test mode pattern when the vehicle is stopped, and goes off when the vehicle is driven.
NOTICE:
If the sensor check is not completed, the ABS warning light blinks even while the vehicle is driving and the ABS does not operate.

(j) Read the DTCs of signal check function.
(1) Read the DTC(s) by following the instructions on the tester screen.
NOTICE:
- **If only the DTCs are displayed, repair the malfunction area and clear the DTCs.**
- **If the DTCs or Test Mode codes (DTC of signal check function) are displayed, repair the malfunction area, clear the DTCs and perform the Test Mode inspection.**

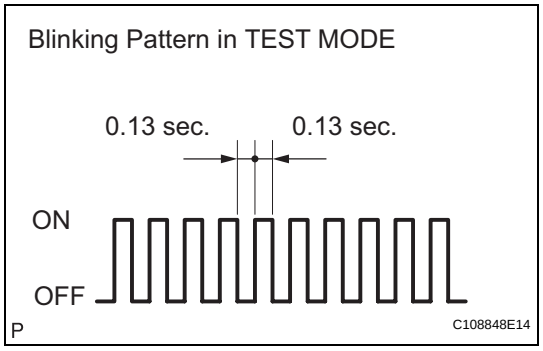
HINT:
See the list of the DTCs (refer to "DTC OF TEST MODE FUNCTION (SIGNAL CHECK)" below).

2. CHECK SENSOR SIGNAL BY TEST MODE (When not Using Intelligent Tester)

(a) Procedures for test mode:



(1) Turn the ignition switch OFF.



(2) Check that the steering wheel is in the centered position.

(3) Check that the shift lever is in the P position and apply the parking brake.

(4) Using SST, connect terminals 12 (TS) and 4 (CG) of the DLC3.
SST 09843-18040

(5) Turn the ignition switch ON.

(6) Check that the ABS warning light and VSC warning light blink as shown in the illustration.
HINT:
If the ABS warning light and VSC warning warning light and multi information display and master caution indicator light do not blink, check the TS and CG terminal circuit, and ABS and VSC warning light circuits.

Section Title	See procedure
ABS Warning Light does not Come ON	BC-138
VSC Warning Light does not Come ON	BC-142
TS and CG Terminal Circuit	BC-177

(7) Start the engine.

(b) w/ 16-inch disc:
Check the lost booster pressure judgment and perform the master cylinder pressure sensor zero point calibration.
NOTICE:
Preform the check in the lost booster pressure state (negative pressure in the booster is depressurized).

(1) Turn the ignition switch ON.

(2) Check that the BRAKE warning light comes on when depressing the brake pedal with a force of 59 N (6 kgf, 13.2 lbf) or more for 1 second or more. (The lost booster pressure state is judged normal.)

(3) Start the engine depressing the brake pedal with a force of 59 N (6 kgf, 13.2 lbf) or more for 1 second or more.

BC

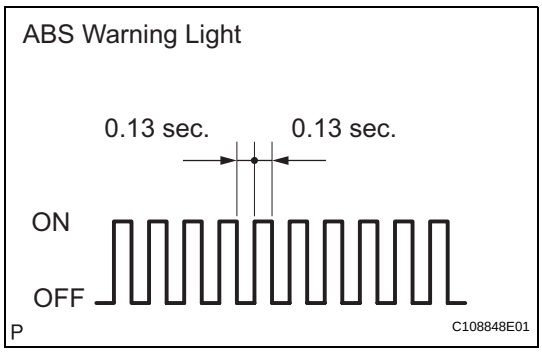
(4) Check that the brake warning light goes off when quickly releasing the brake pedal. (The lost booster pressure state is judged normal.)

(5) Leave the vehicle for 1 second or more. (Master cylinder pressure sensor zero point calibration.)
NOTICE:
- **If you slowly depress the brake pedal or depress it again, master cylinder pressure sensor zero point calibration is not performed normally.**
- **If the lost booster pressure judgment check is not completed normally, the master cylinder pressure sensor check is not judged.**
- **If a recheck is performed after the engine has started, end the Test Mode, enter Test Mode again, and release the vacuum in the booster by pumping the brake pedal prior to the recheck.**

(c) Check the deceleration sensor.

(1) Keep the vehicle stationary on a level surface for 1 second or more.
HINT:
The deceleration sensor check can be performed together with the following master cylinder pressure sensor check.

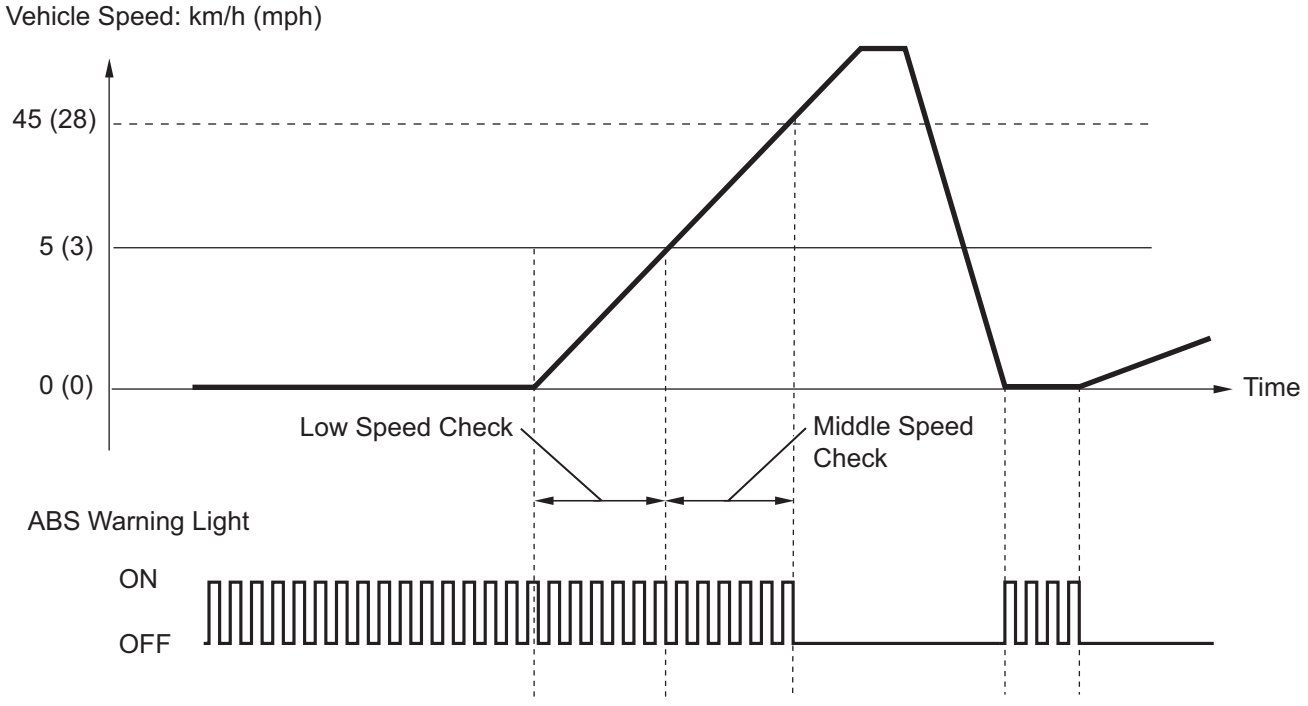
(d) Check the master cylinder pressure sensor.



(1) Leave the vehicle in a stationary condition and release the brake pedal for 1 second or more, and quickly depress the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more for 1 second. Check that the ABS warning light remains illuminated for 3 seconds.
HINT:
- Ensure that the ABS warning light comes on.
- While the ABS warning light remains illuminated, continue depressing the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more.
- The ABS warning light comes on for 3 seconds every time the brake pedal operation above is performed.

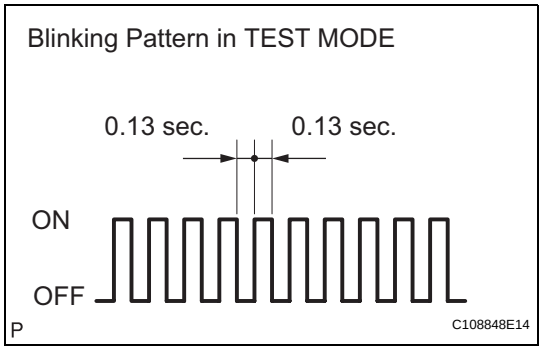
(e) Check the speed sensor.

(1) Check that the ABS warning light is blinking as shown in the illustration.



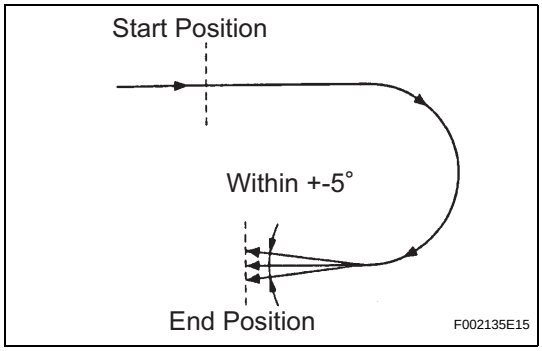
(2) Check the speed sensor signal.

1. Drive the vehicle straight forward at a speed of 45 km/h (28 mph) or more for several seconds.



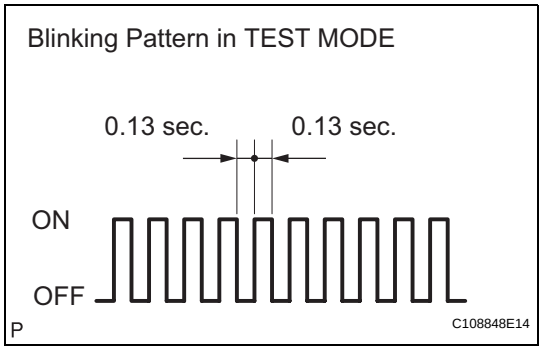
2. Check that the ABS warning light goes off.
   NOTICE:
   - **The speed sensor check may not be completed if the sensor check is started with the steering wheel turned or one or more wheels spinning.**
   - **If the speed sensor check is commenced while the steering wheel is turned, the ABS warning light may come on after the low speed check is finished.**
   - **The ABS warning light comes on immediately when an abnormality is detected.**
   - **When the speed sensor signal is normal, the ABS warning light goes off while driving at 45 km/h (28 mph) or more, and blinks in the test mode pattern while the vehicle is stationary.**
   - **Do not drive the vehicle at a speed of 80 km/h (50 mph) or more after the ABS warning light turns off, because test mode DTCs are set again when the vehicle speed exceeds 80 km/h (50 mph).**

Blinking pattern in speed sensor check:



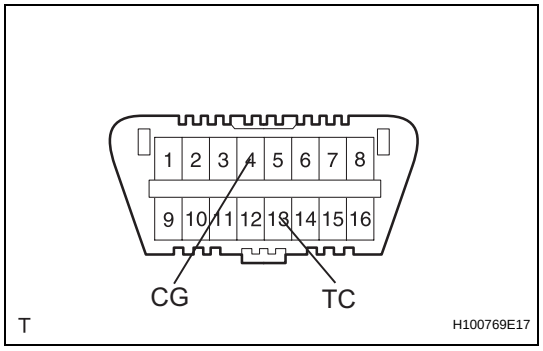
3. Stop the vehicle.

(f) Check the yaw rate sensor.
(1) Move the shift lever to P and set the parking brake lever.



(2) Check that the VSC warning light is blinking as shown in the illustration.
(3) Keep the vehicle stationary on a level surface for 1 second or more.

(4) Shift the shift lever to the D position and drive the vehicle at a speed of approximately 5 km/h (3 mph), and turn the steering wheel either to the left or right 90° or more to turn the vehicle through 180°.
(5) Stop the vehicle, move the shift lever into the P position, and then apply the parking brake.
(6) Check that the skid control buzzer sounds for 3 seconds.
HINT:
- If the skid control buzzer sounds, the signal check has been completed normally.
- If the skid control buzzer does not sound, check the skid control buzzer circuit (see page BC-172).
- If the skid control buzzer still does not sound, there is a malfunction in the yaw rate sensor, so check for DTCs.
- Drive the vehicle in a 180° semi circle. At the end of the turn, the direction of the vehicle should be within 180 +-5° of its start position.
- Complete the vehicle turn within 20 seconds.
- Do not spin the wheels.

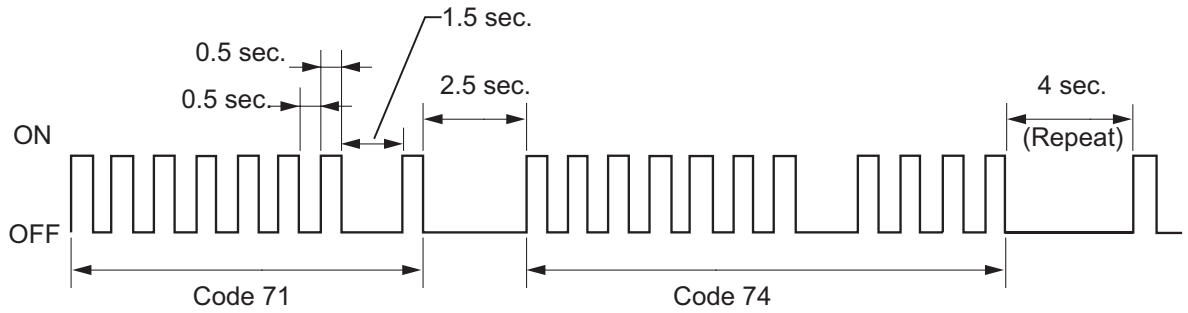


(g) w/ Downhill assist control only:
Check the downhill assist control operation switch.
(1) Check that the VSC warning light is blinking as shown in the illustration.

(2) Check the downhill assist control switch.
1. Push the downhill assist control switch on.
2. Push the downhill assist control switch off.

BC

(h) w/ Auto LSD only:
Check the end of the sensor.
(1) When the sensor check is successfully completed, the ABS warning light blinks in the test mode pattern when the vehicle is stopped, and goes off when the vehicle is driven.
NOTICE:
If the sensor check is not completed, the ABS warning light blinks even while the vehicle is driving and the ABS does not operate.



(i) Read the DTCs of the signal check function.
(1) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.
SST 09843-18040
(2) Turn the ignition switch ON.
(3) Count the number of blinks of the ABS and VSC warning light.
HINT:
As an example, the blinking patters of DTCs 71 and 74 are shown below.

BC

ABS and VSC Warning Light

Trouble Code of ABS (Example Codes 71 and 72):

NOTICE:
- **If only DTCs are displayed, repair the malfunctioning area and clear the DTCs.**
- **If the DTCs or test mode codes (DTC of signal check function) are displayed, repair the malfunctioning area, clear the DTCs and perform the test mode inspection.)**

HINT:
- If more than 1 malfunction is detected at the same time, the lowest numbered code will be displayed first.
- See the list of DTCs (refer to "DTC OF TEST MODE FUNCTION (SIGNAL CHECK)" below).

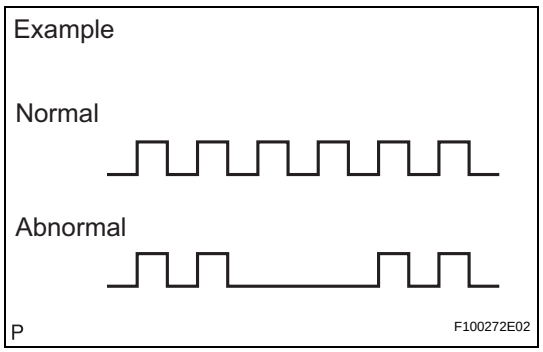
- If all sensors are normal, a normal system code is output (the light comes on for 0.25 seconds at intervals of 0.25 seconds).

(4) After the check, disconnect SST from terminals 13 (TC) and 4 (CG) of the DLC3.

(5) Turn the ignition switch OFF.

3. DTC OF TEST MODE FUNCTION (SIGNAL CHECK)

DTC of ABS sensor check function:



DTC No.	Diagnosis	Trouble Areas
C1271/71	Low output signal of front speed sensor RH	• Front speed sensor RH • Speed sensor circuit • Sensor installation
C1272/72	Low output signal of front speed sensor LH	• Front speed sensor LH • Speed sensor circuit • Sensor installation
C1273/73	Low output signal of rear speed sensor RH	• Rear speed sensor RH (for 4WD) • Skid control sensor RH (for 2WD) • Speed sensor circuit • Sensor installation
C1274/74	Low output signal of rear speed sensor LH	• Rear speed sensor LH (4WD) • Skid control sensor LH (2WD) • Speed sensor circuit • Sensor installation
C1275/75	Abnormal change in output signal of front speed sensor RH	• Sensor installation • Speed sensor rotor • Foreign matter on sensor tip or sensor rotor
C1276/76	Abnormal change in output signal of front speed sensor LH	• Sensor installation • Speed sensor rotor • Foreign matter on sensor tip or sensor rotor
C1277/77	Abnormal change in output signal of rear speed sensor RH	• Sensor installation • Speed sensor rotor • Foreign matter on sensor tip or sensor rotor
C1278/78	Abnormal change in output signal of rear speed sensor LH	• Sensor installation • Speed sensor rotor • Foreign matter on sensor tip or sensor rotor
C1279/79	Deceleration sensor output voltage malfunction	• Yaw rate sensor • Sensor installation
C1281/81	Master cylinder pressure sensor output malfunction	• Master cylinder pressure sensor • Brake pedal load sensing switch (w/ 16-inch disc)

DTC of VSC sensor check function:

DTC No.	Diagnosis	Trouble Areas
C0371/71	Yaw rate sensor	Yaw rate sensor
C1379/74*	Downhill assist control operation switch	Downhill assist control switch

HINT:

- *: w/ Downhill assist control
- The DTCs in this table are only output in Test Mode.
- The detection of DTCs from C1271/71 to C1274/74 is completed before the vehicle speed reaches 5 km/h (3 mph).
- The detection of DTCs from C1275/75 to C1278/78 is completed before the vehicle speed reaches 45 km/h (28 mph).

- C1271/71 to C1274/74: The speed output from only one wheel is extremely low despite other wheel speed outputs reaching 5 km/h (3 mph).
- C1275/75 to C1278/78: The abnormal speed sensor output frequency is as shown in the illustration.

PROBLEM SYMPTOMS TABLE

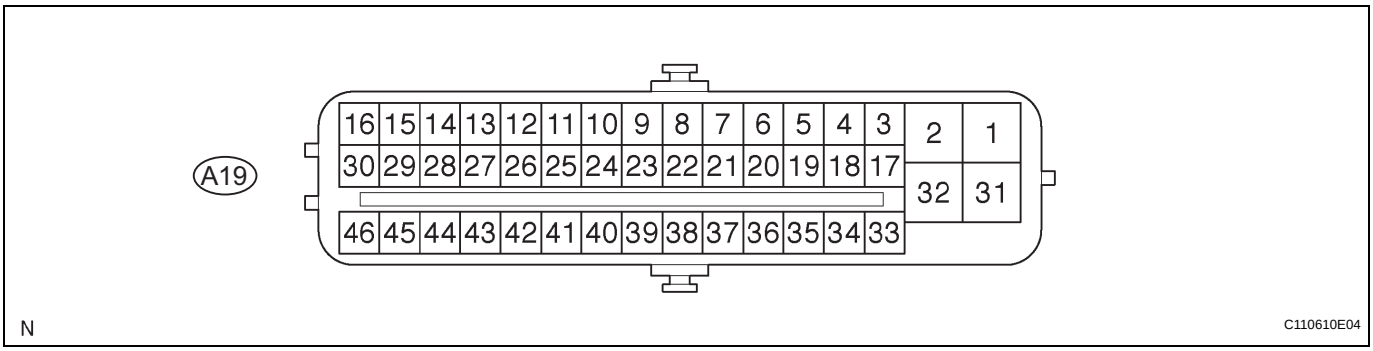
HINT:

- Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

NOTICE:

When replacing the ABS and TRACTION actuator or sensor, turn the ignition switch OFF.

Vehicle stability control system

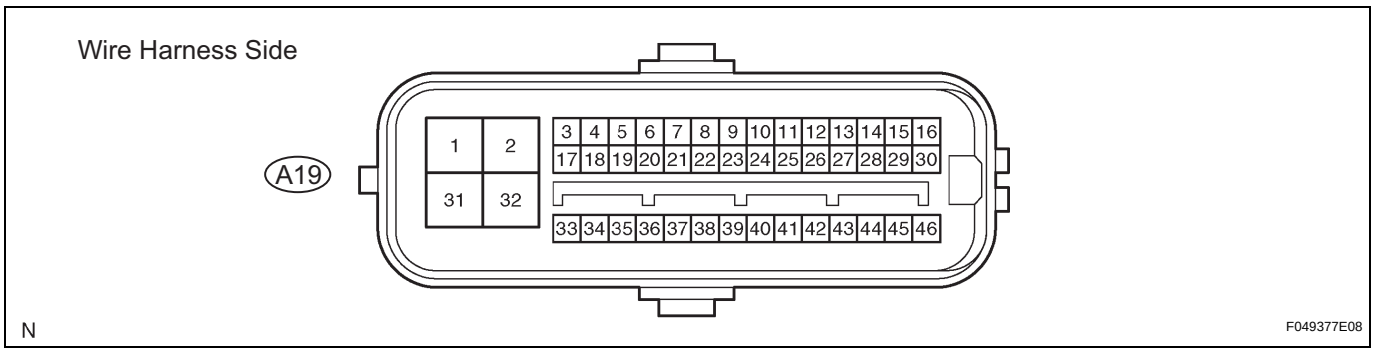


Symptom	Suspected area	See page
ABS, BA and/or EBD does not operate	1. Check for DTCs again and make sure that normal system code displayed	BC-47
	2. IG power source circuit	BC-99
	3. Front speed sensor circuit	BC-62
	4. Rear speed sensor circuit	BC-69
	5. Check ABS and TRACTION actuator using intelligent tester (Check ABS and TRACTION actuator operation using ACTIVE TEST function). If abnormal, check hydraulic circuit for leakage.	BC-180
	6. If symptoms still occur even after above circuits in suspected areas inspected and proved to be normal, replace ABS and TRACTION actuator (skid control ECU)	BC-181
ABS, BA and/or EBD does not operate efficiently	1. Check for DTCs again and make sure that normal system code displayed	BC-47
	2. Front speed sensor circuit	BC-62
	3. Rear speed sensor circuit	BC-69
	4. Stop light switch circuit	BC-105
	5. Check ABS and TRACTION actuator using intelligent tester (Check ABS and TRACTION actuator operation using ACTIVE TEST function). If abnormal, check hydraulic circuit for leakage.	BC-180
	6. If symptoms still occur even after above circuits in suspected areas inspected and proved to be normal, replace ABS and TRACTION actuator (skid control ECU)	BC-181
VSC and/or TRC does not operate	1. Check for DTCs again and make sure that normal system code displayed	BC-47
	2. IG power source circuit	BC-99
	3. Check hydraulic circuit for leakage	-
	4. Front speed sensor circuit	BC-62
	5. Rear speed sensor circuit	BC-69
	6. Yaw rate sensor circuit	BC-96
	7. Steering angle sensor circuit	BC-92
	8. If symptoms still occur even after above circuits in suspected areas inspected and proved to be normal, replace ABS and TRACTION actuator (skid control ECU)	BC-181
Sensor signal check cannot be performed	1. TS and CG terminal circuit	BC-177
	2. ABS and TRACTION actuator (skid control ECU)	BC-181

Symptom	Suspected area	See page
DTC check cannot be performed	1. Check for DTCs again and make sure that normal system code displayed	BC-47
	2. TC and CG terminal circuit	BC-174
	3. If symptoms still occur even after above circuits in suspected areas inspected and proved to be normal, replace ABS and TRACTION actuator (skid control ECU)	BC-181
ABS warning light abnormal (Remains on)	1. ABS warning light circuit	BC-134
	2. ABS and TRACTION actuator (skid control ECU)	BC-181
ABS warning light abnormal (Does not come on)	1. ABS warning light circuit	BC-138
	2. ABS and TRACTION actuator (skid control ECU)	BC-181
VSC warning light abnormal (Remains on)	1. VSC warning light circuit	BC-139
	2. ABS and TRACTION actuator (skid control ECU)	BC-181
VSC warning light abnormal (Does not come on)	1. VSC warning light circuit	BC-142
	2. ABS and TRACTION actuator (skid control ECU)	BC-181
BRAKE warning light abnormal (Remains on)	1. BRAKE warning light circuit	-
	2. ABS and TRACTION actuator (skid control ECU)	BC-144
BRAKE warning light abnormal (Does not come on)	1. BRAKE warning light circuit	BC-151
	2. ABS and TRACTION actuator (skid control ECU)	BC-181
SLIP indicator light abnormal (Remains on)	1. SLIP indicator light circuit	BC-152
	2. ABS and TRACTION actuator (skid control ECU)	BC-181
SLIP indicator light abnormal (Does not come on)	1. SLIP indicator light circuit	BC-154
	2. ABS and TRACTION actuator (skid control ECU)	BC-181
Skid control buzzer abnormal	1. Skid control buzzer circuit	BC-172
	2. ABS and TRACTION actuator (skid control ECU)	BC-181
Downhill assist control does not operate*1	1. Check for DTCs again and make sure that normal system code displayed	BC-47
	2. Downhill assist control switch circuit	BC-119
	3. Downhill assist control indicator light circuit	BC-161
	4. If symptoms still occur even after above circuits in suspected areas inspected and proved to be normal, replace ABS and TRACTION actuator (skid control ECU)	BC-181
Downhill assist control indicator light abnormal (Remains on)*1	1. Downhill assist control indicator light circuit	BC-156
	2. ABS and TRACTION actuator (skid control ECU)	BC-181
Downhill assist control indicator light abnormal (Does not come on)*1	1. Downhill assist control indicator light circuit	BC-161
	2. ABS and TRACTION actuator (skid control ECU)	BC-181
Hill-start assist control does not operate*2	1. ABS and TRACTION actuator (skid control ECU)	BC-181
AUTO LSD does not operate*3	1. Check for DTCs again and make sure that normal system code displayed	BC-47
	2. Auto LSD switch circuit	BC-169
	3. AUTO LSD indicator circuit	BC-169
	4. If symptoms still occur even after above circuits in suspected areas inspected and proved to be normal, replace ABS and TRACTION actuator (skid control ECU)	BC-181
AUTO LSD indicator light abnormal (Remains on)*3	1. AUTO LSD indicator circuit	BC-164
	2. ABS and TRACTION actuator (skid control ECU)	BC-181
AUTO LSD indicator light abnormal (Does not come on)*3	1. AUTO LSD indicator circuit	BC-169
	2. ABS and TRACTION actuator (skid control ECU)	BC-181

HINT:
*1: w/ Downhill assist control
*2: w/ Hill-start assist contol
*3: for 2WD w/ AUTO LSD

TERMINALS OF ECU



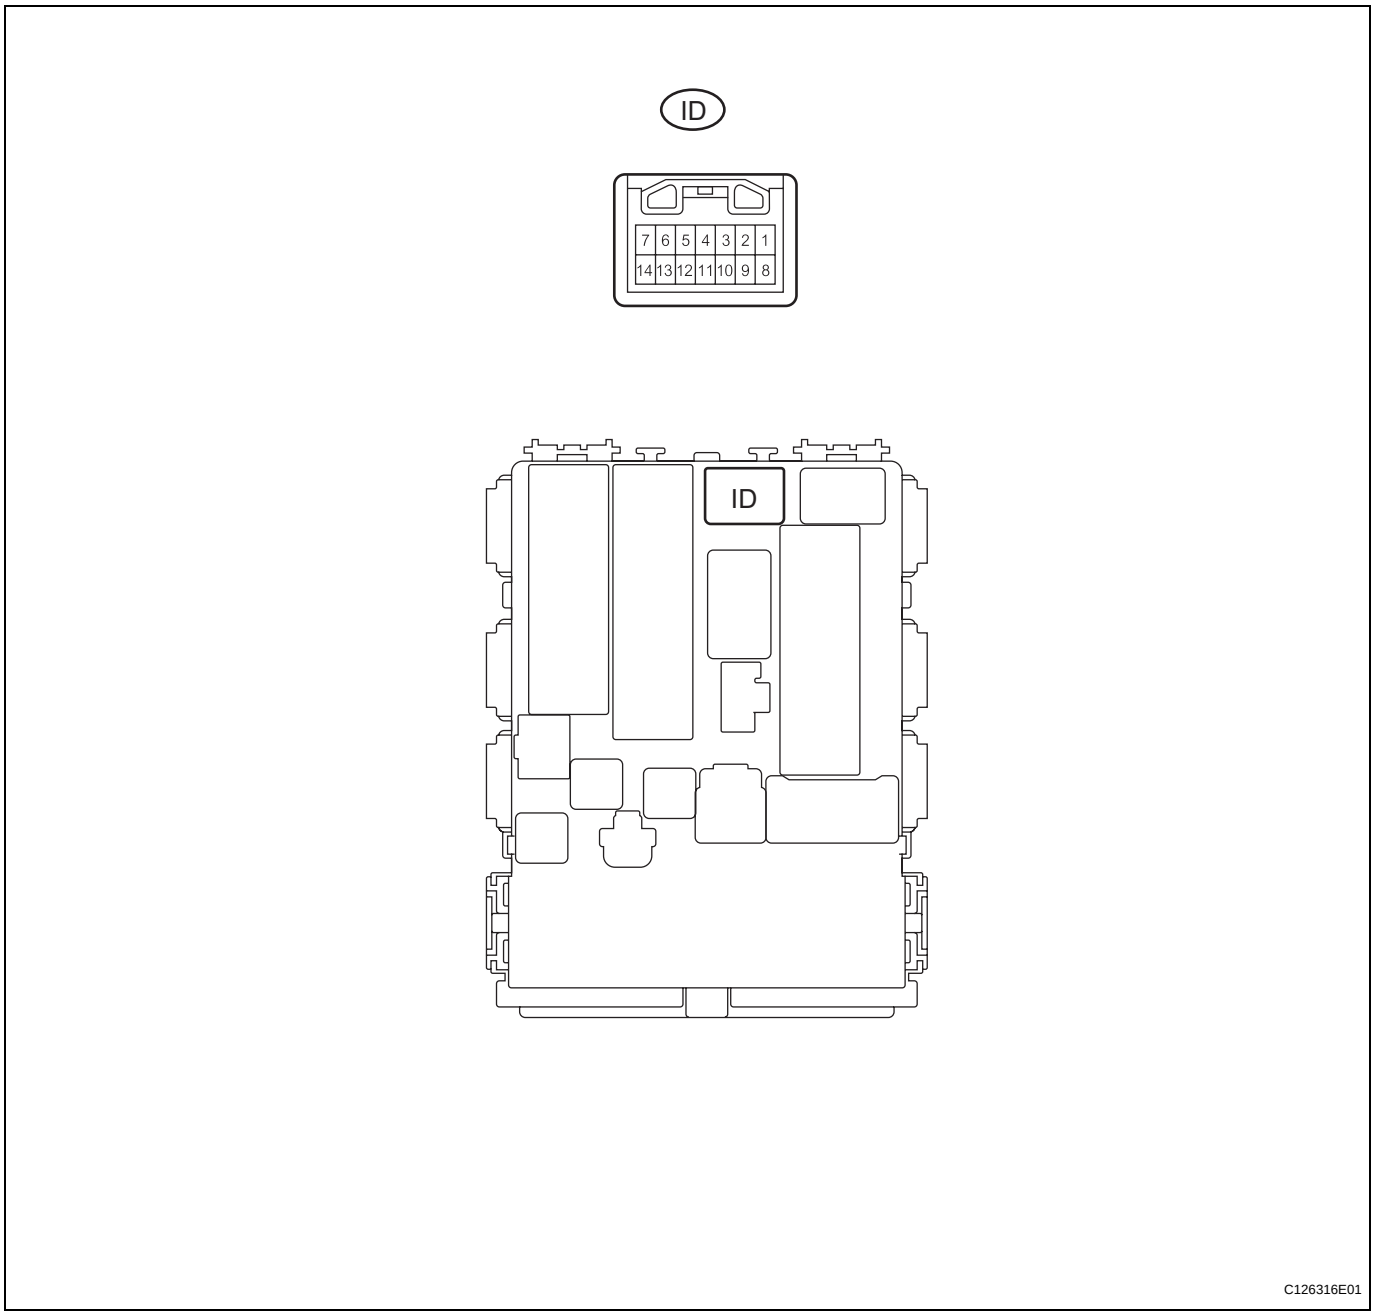
1. SKID CONTROL ECU

Symbols (Terminal No.)	Terminal Description
GND2 (A19-1)	Motor ground
BM (A19-2)	Motor relay input
FR+ (A19-3)	Front RH wheel speed sensor power supply
FL- (A19-4)	Front LH wheel speed signal input
RR+ (A19-5)	Rear RH wheel speed signal power supply
RL- (A19-6)	Rear LH wheel speed signal input
FSW+ (A19-7)*1	Brake pedal load sensing switch input
CANH (A19-11)	CAN communication line H
SP1 (A19-12)	Speed signal output for combination meter
MRF (A19-14)	Fail safe motor relay output
MR (A19-15)	Motor relay output
STPO (A19-16)	Stop light relay output
FR- (A19-17)	Front RH wheel speed signal input
FL+ (A19-18)	Front LH wheel speed sensor power supply
RR- (A19-19)	Rear RH wheel speed signal input
RL+ (A19-20)	Rear LH wheel speed sensor power supply
STP2 (A19-21)	Stop light relay input
TS (A19-24)	Sensor diagnosis check input
CANL (A19-25)	CAN communication line L
STP1 (A19-27)	Stop light switch input
HDCS (A19-28)*2	Downhill assist control switch input
+BS (A19-31)	Solenoid valve power supply
GND1 (A19-32)	Skid control ECU ground
CSW (A19-43)*3	AUTO LSD switch input
R+ (A19-45)	Power supply for motor relay
IG1 (A19-46)	ECU power supply

HINT:
*1: w/ 16-inch disc
*2: w/ Downhill assist control
*3: for 2WD (w/ AUTO LSD)

2. CHECK SKID CONTROL ECU

(a) Disconnect the A19 ECU connector.
(b) Measure the voltage and resistance of the wire harness side connector.
HINT:
The voltage cannot be measured with the connector connected to the skid control ECU as the connector is water resistant.



Skid control ECU:

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND2 (A19-1) - Body ground	W-B - Body ground	Skid control ECU ground	Always	Below 1 Ω
STP1 (A19-27) - Body ground	L - Body ground	Stop light switch input	Stop light switch OFF Brake pedal released	Below 1.5 V
STP1 (A19-27) - Body ground	L - Body ground	Stop light switch input	Stop light switch ON Brake pedal depressed	8 to 16 V
STP2 (A19-21) - Body ground	L - Body ground	Stop light relay input	Stop light switch OFF Brake pedal released	Below 1.5 V
STP2 (A19-21) - Body ground	L - Body ground	Stop light relay input	Stop light switch ON Brake pedal depressed	8 to 16 V
STPO (A19-16) - Body ground	W - Body ground	Stop light relay output	Always	10 to 14 V
+BS (A19-31) - Body ground	W - Body ground	Solenoid relay power supply	Always	10 to 14 V
IG1 (A19-46) - Body ground	L - Body ground	ECU power supply	Ignition switch ON	10 to 14 V
HDCS (A19-28)*2	Y - Body ground	Downhill assist control switch input	Downhill assist control switch ON	Below 1 Ω
HDCS (A19-28)*2	Y - Body ground	Downhill assist control switch input	Downhill assist control switch OFF	10 kΩ or higher
FSW+ (A19-7)*1	P - Body ground	Brake pedal load sensing switch input	Brake pedal load sensing switch ON Brake pedal released	202.4 to 223.7 Ω
FSW+ (A19-7)*1	P - Body ground	Brake pedal load sensing switch input	Brake pedal load sensing switch OFF Brake pedal released	0,95 to 1.05 kΩ
CSW (A19-43)*3	L - Body ground	AUTO LSD switch input	AUTO LSD switch ON	Below 1 Ω
CSW (A19-43)*3	L - Body ground	AUTO LSD switch input	AUTO LSD switch OFF	10 kΩ or higher

HINT:
*1: w/ 16-inch disc
*2: w/ Downhill assist control
*3: for 2WD (w/ AUTO LSD)
If the result is not as specified, there may be a malfunction on the wire harness side.

BC

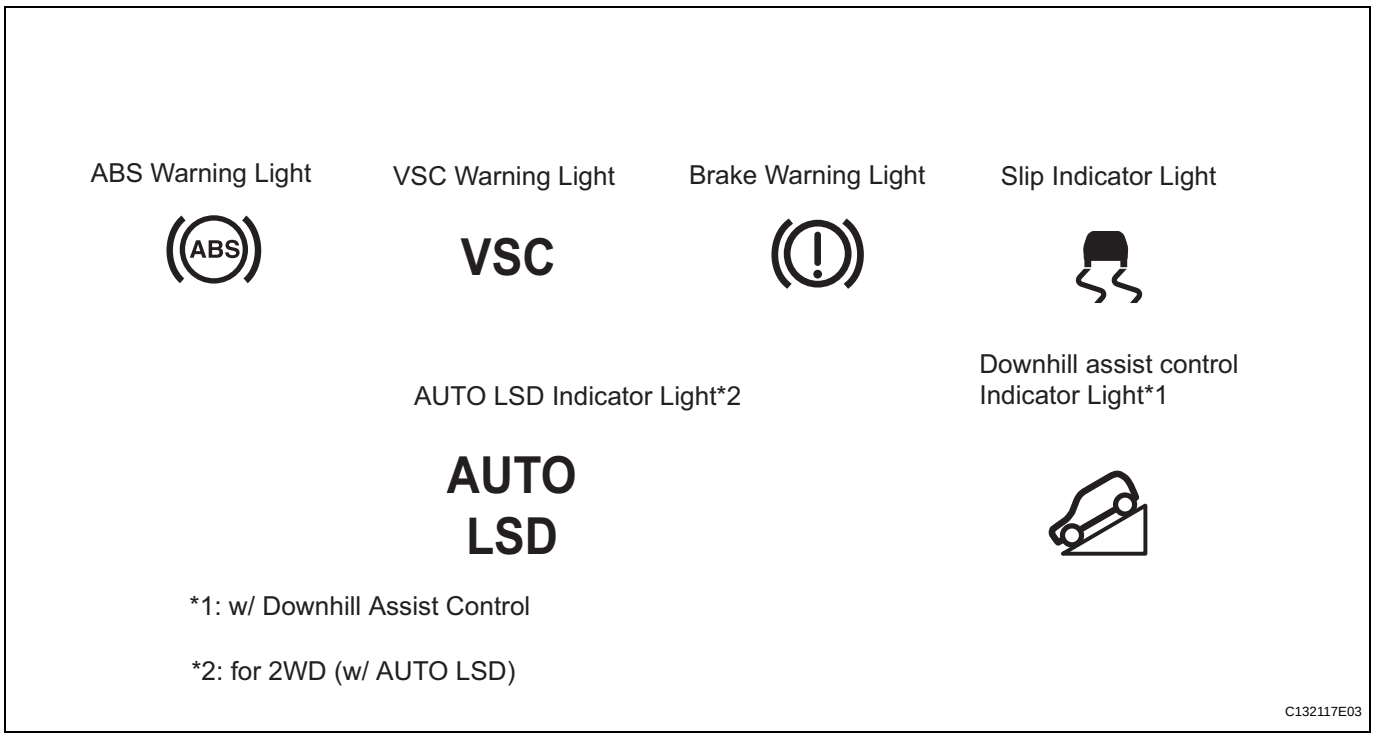
3. CHECK INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

(a) Disconnect the ID junction block connector.
(b) Measure the resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
PKB (ID-4) - Body ground	B - Body ground	Parking brake switch input	Parking brake switch ON	Below 1 Ω
PKB (ID-4) - Body ground	B - Body ground	Parking brake switch input	Parking brake switch OFF	10 kΩ or higher

If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the ID junction block connector.

(d) Measure the voltage of the wire harness side connector.



Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
PKB (ID-4) - Body ground	B - Body ground	Parking brake switch input	Parking brake switch ON	Below 1 V
PKB (ID-4) - Body ground	B - Body ground	Parking brake switch input	Parking brake switch OFF	10 to 14 V

If the result is not as specified, the junction block (ECU) may be a malfunction.

DIAGNOSIS SYSTEM

1. DIAGNOSIS

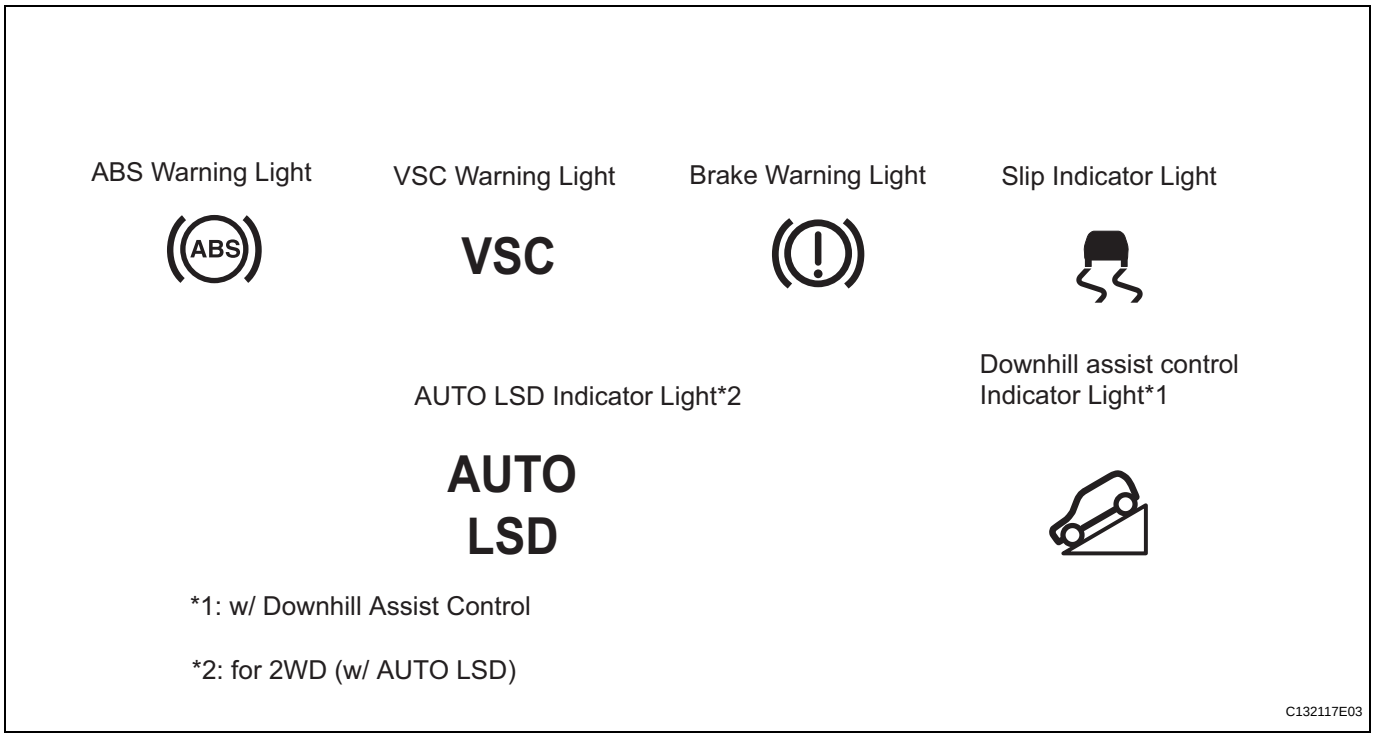
If the skid control ECU detects a malfunction, the ABS, VSC and brake warning lights and the slip, downhill assist control and AUTO LSD indicator lights come on in accordance with the trouble area to warn the driver. The table below indicates which lights come on when there are malfunctions in particular functions.

BC

Item / Trouble Area	ABS	EBD	BA (Brake Assist)	TRC	VSC	Downhill assist control*1	Hill-start assist control*2	AUTO LSD*3
ABS warning light	○	○	○	-	-	-	-	-
Brake warning light	-	○	○*4	-	-	-	-	-
VSC warning light	○	○	○	○	○	○	○	○
Slip indicator light	○	○	○	○	○	○	○	○
Downhill assist control indicator light*1	● (Downhill assist control switch ON)	● (Downhill assist control switch ON)	● (Downhill assist control switch ON)	● (Downhill assist control switch ON)	● (Downhill assist control switch ON)	● (Downhill assist control switch ON)	● (Downhill assist control switch ON)	● (Downhill assist control switch ON)
AUTO LSD indicator light*3	-	-	-	-	-	-	-	-

○: Light ON
●: Light ON (Blinking)
-: Light OFF
HINT:
- *1: w/ Downhill assist control
- *2: w/ Hill-start assist control
- *3: for 2WD w/ AUTO LSD

- *4: w/ 16-inch disc
- The DTCs can be read by connecting SST (09843-18040) between the TC and CG terminals of the DLC3 and observing the blinking pattern of the ABS and VSC warning lights, or by using an intelligent tester (see page BC-47).
- This system has a sensor signal check function (see page BC-28).



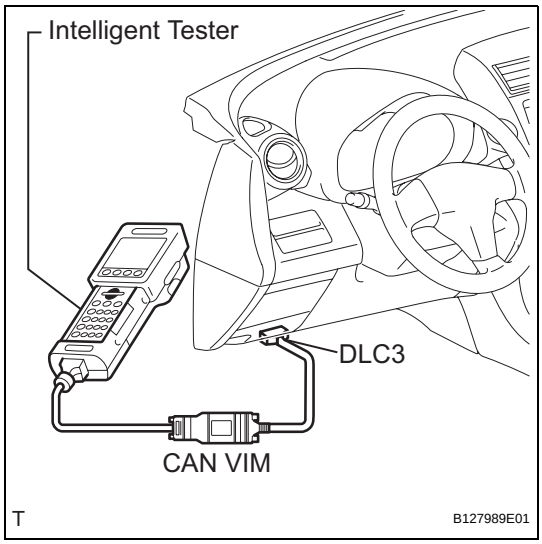
2. CHECK WARNING LIGHT AND INDICATOR LIGHT

(a) Release the parking brake lever.

NOTICE:
Before releasing the parking brake lever, set chocks to hold the vehicle for safety.

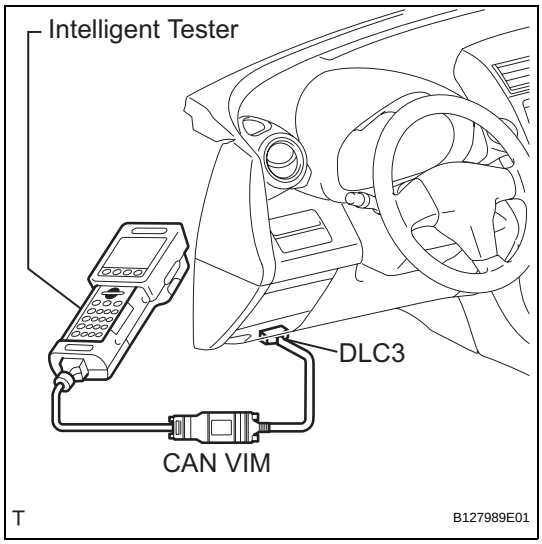
HINT:
When the parking brake is applied or the brake fluid level is low, the brake warning light comes on.

(b) When the ignition switch is turned ON, check that the ABS, VSC and brake warning lights and the slip, downhill assist control and AUTO LSD indicator lights come on and go off in about 3 seconds.



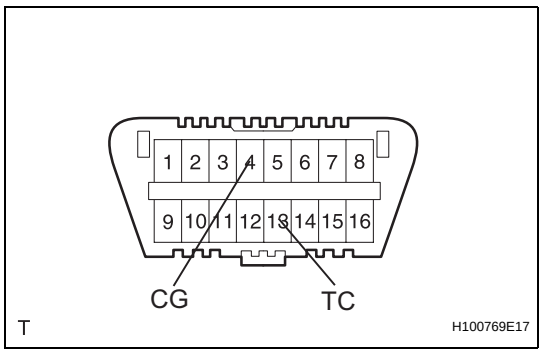
HINT:
If the warning lights do not illuminate, confirm whether the bulbs have burned out, and also check for CAN communication system DTCs, since the skid control ECU and combination meter are connected by the CAN communication line.
If the warning light remains on, perform relevant troubleshooting procedures. The relevant troubleshooting procedures are in the sections listed in the table below.

Section Title	See procedure
ABS Warning Light Remains ON	BC-134



Section Title	See procedure
VSC Warning Light Remains ON	BC-139
Brake Warning Light Remains ON	BC-144
Slip Indicator Light Remains ON	BC-152
Downhill assist control Indicator Light Remains ON	BC-156
AUTO LSD Indicator Light Remains ON	BC-164

DTC CHECK / CLEAR

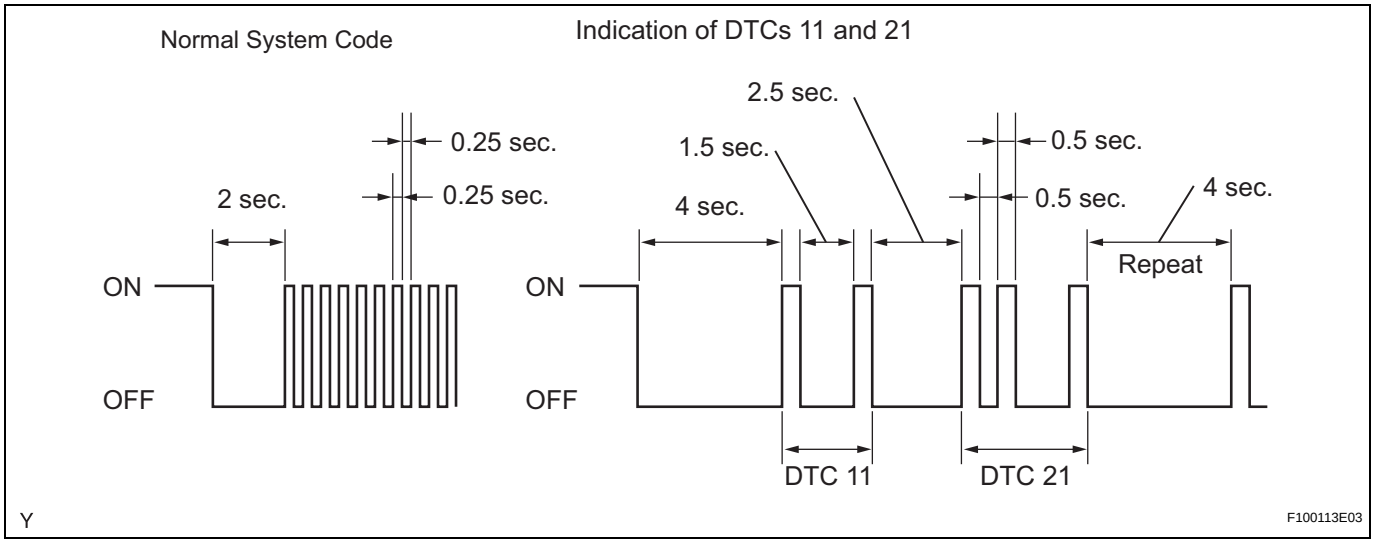


1. CHECK DTC (When Using Intelligent Tester)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON.
(c) Turn the tester on.
(d) Read the DTCs by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

2. CLEAR DTC (When Using Intelligent Tester)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON.
(c) Turn the tester on.
(d) Operate the intelligent tester to clear the codes.
HINT:
Refer to the intelligent tester operator's manual for further details.



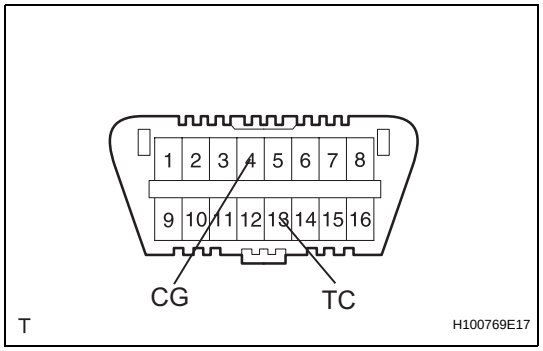
3. CHECK DTC (When not Using Intelligent Tester)

(a) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.
SST 09843-18040
(b) Turn the ignition switch ON.
(c) Read DTCs from the ABS warning light on the combination meter.
HINT:
- If the ABS warning light does not blink, perform relevant troubleshooting procedures. The relevant troubleshooting procedures are in the sections listed in the table below.

Trouble Area	See Procedure
ABS warning light circuit	BC-134 or BC-138

Trouble Area	See Procedure
VSC warning light circuit	BC-139 or BC-142
TC and CG terminal circuit	BC-174

- As an example, the blinking patterns of the normal system code and DTCs 11 and 21 are shown below.

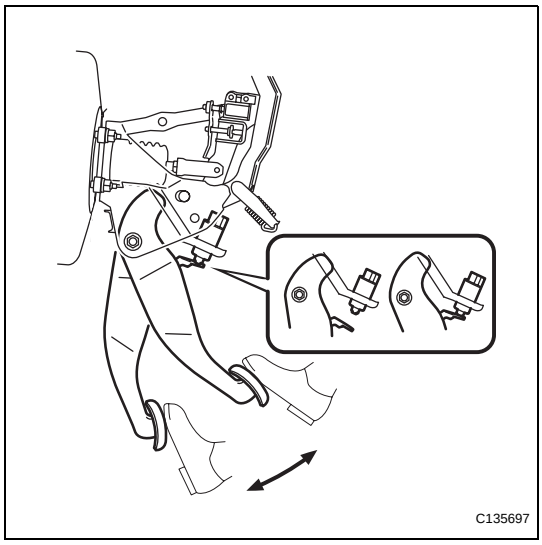


- DTCs are explained in the "DIAGNOSTIC TROUBLE CODE CHART" (see page BC-57).

(d) After completing the check, disconnect SST from terminals 13 (TC) and 4 (CG) of the DLC3, and turn the ignition switch OFF.

HINT:

- If 2 or more malfunctions are detected at the same time, the lowest numbered DTC is displayed first.



4. CLEAR DTC (When not Using Intelligent Tester)

(a) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

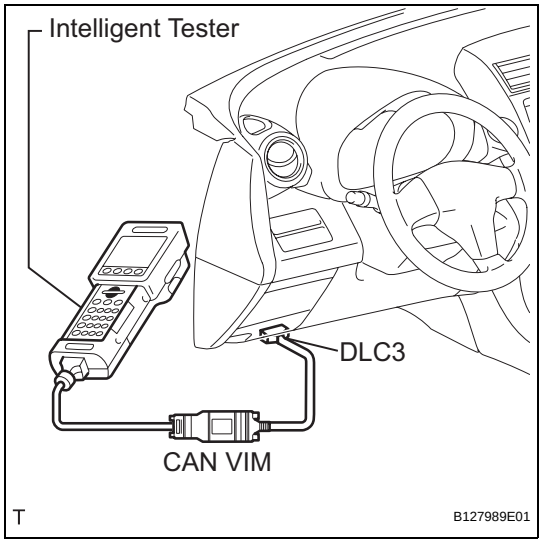
SST 09843-18040

(b) Turn the ignition switch ON.

BC

(c) Clear the DTCs stored in the skid control ECU by depressing the brake pedal 8 times or more within 5 seconds.
(d) Check that the ABS and VSC warning lights come on.
(e) Remove SST from the terminals of the DLC3.
(f) Turn the ignition switch OFF.
HINT:
Clearing the DTCs cannot be performed by removing the cable from the negative (-) battery terminal or the ECU-IG1 fuse.

5. END OF DTC CHECK/CLEAR



(a) Turn the ignition switch ON.
(b) Check that the ABS and VSC warning lights go off within approximately 3 seconds.
(c) Turn the ignition switch OFF.

FREEZE FRAME DATA

1. FREEZE FRAME DATA

HINT:

- Whenever a DTC is detected or the ABS operates, the skid control ECU stores the current vehicle (sensor) state as freeze frame data.
- The skid control ECU stores the number of times (maximum: 31) the ignition switch has been turned from OFF to ON since the last time the ABS was activated. However, if the vehicle was stationary or running at a low speed (7 km/h [4.3 mph] or less), or if a DTC is detected, the skid control ECU stops counting.
- Freeze frame data at the time the ABS operates: The skid control ECU stores and updates the data whenever the ABS system operates.
  When the ECU stores data at the time a DTC is detected, the data stored when the ABS operated is erased.
- Freeze frame data at the time a DTC is detected: When the skid control ECU stores data at the time a DTC is detected, no updates will be performed until the data is cleared.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON.
(c) Turn the tester on.
(d) From the display on the tester, select "FREEZE FRAME DATA".

Item (Display)	Measurement Item	Reference Values
FREEZE TIME	Elapsed time after freeze frame data recorded	Min.: 0 ms Max.: 500 ms
#IG ON	Number of ignition switch ON operations since freeze frame data stored	1 to 31
BUZZER	Skid control buzzer signal	ON: Skid control buzzer ON OFF: Skid control buzzer OFF
STOP LAMP SW	Stop light switch signal	ON: Stop light switch ON OFF: Stop light switch OFF
PARKING BRAKE SW	Parking brake switch signal	ON: Parking brake switch ON OFF: Parking brake switch OFF
BRK PEDAL SW	Brake pedal load sensing switch signal	ON: Brake pedal released OFF: Brake pedal depressed

Item (Display)	Measurement Item	Reference Values
GEAR POSITION	Gear position information	FAIL 1st 2nd 3rd 4th 5th 6th P, N R NOT R
LEVER POSITION	Shift lever position information	FAIL 1st 2nd 3rd 4th 5th 6th/B D/M P, N R
OPERATED SYSTEM	Operated system status	ABS: ABS activated VSC: VSC activated TRC: TRC activated BA: BA activated FAIL: Fail safe mode activated HA-CTRL: Hill-start assist control activated SYS: System prohibited NON: No system activated
MAS CYL PRESS 1	Master cylinder pressure sensor reading	Brake pedal released: 0.3 V to 0.9 V Brake pedal depressed: 0.8 V to 4.5 V
M/C Sensor Grade	Master cylinder pressure sensor change	Min.: -30 MPa/s Max.: 225 MPa/s
YAW RATE	Yaw rate sensor reading	Min.: -128 deg/s Max.: 127 deg/s
STEERING SEN	Steering sensor reading	Left turn: Increase Right turn: Decrease
LATERAL G	Lateral G	Min.: -25.11 m/s^2 Max.: 24.91 m/s^2
FORWARD&REA G	Forward and backward G	Min.: -25.11 m/s^2 Max.: 24.91 m/s^2
FR WHEEL SPD	FR wheel speed	Min.: 0 km/h (0 mph) Max.: 326.4 km/h (202.8 mph)
FL WHEEL SPD	FL wheel speed	Min.: 0 km/h (0 mph) Max.: 326.4 km/h (202.8 mph)
RR WHEEL SPD	RR wheel speed	Min.: 0 km/h (0 mph) Max.: 326.4 km/h (202.8 mph)
RL WHEEL SPD	RL wheel speed	Min.: 0 km/h (0 mph) Max.: 326.4 km/h (202.8 mph)
VEHICLE SPD	Vehicle speed	Min.: 0 km/h (0 mph) Max.: 326.4 km/h (202.8 mph)
SPD GARDE	Vehicle speed grade	Min.: -25.11 m/s^2 Max.: 24.91 m/s^2
ENGINE TORQUE	Real engine torque	Min.: -1024 Nm Max.: 1023 Nm
ACCELERATOR %	Accelerator pedal opening angle %	Min.: 0% Max.: 128%
INSPECTION MODE	Inspection mode	OTHER: Normal INSPECT: Service

FAIL-SAFE CHART

1. FAIL SAFE OPERATION

- If there is a problem with any sensor signals or actuator systems, the skid control ECU prohibits the power supply to the ABS and TRACTION actuator and informs the ECM of VSC system failure.
  The ABS and TRACTION actuator turns off the solenoids and the ECM shuts off VSC control (traction control signal) from the skid control ECU accordingly, the result being that it is as if the ABS, TRC and VSC systems were not installed.
- ABS control is prohibited, but EBD control continues as far as possible. If EBD control is impossible, the BRAKE warning light comes on to warn the driver (see page BC-44).
- If system components have any malfunctions before starting control, the operation stops immediately. If system components have any malfunctions during control, the control stops gradually so as not to trigger a sudden change in vehicle conditions.
  If it is impossible to control the systems, the warning light comes on to inform the driver of malfunctions in the systems (see page BC-44).

HINT:

- If the ABS system malfunctions, the brake system operates normally without the ABS system.
- If the brake actuator malfunctions, a gradual loss of brake performance is expected, and ABS system control is prohibited.

BC

ABS, EBD and BA system

Malfunction Area	Fail-Safe Operation
ABS system	ABS, BA, TRC and VSC control prohibited
BA system	ABS, BA, TRC and VSC control prohibited
EBD system	ABS, EBD, BA, TRC and VSC control prohibited

TRC and VSC system:

Malfunction Area	Fail-Safe Operation
Engine control system (TRC and VSC systems)	Before control: Disables control During control: Uses only the brakes to effect control
Brake control system (VSC system)	Before control: Disables control During control: Uses only the engine to effect control
Brake control system (TRC system)	Before control: Disables control During control: Disables control (by gradually ending control)

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without out removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON.
(c) Turn the intelligent tester on.
(d) Read the DATA LIST according to the display on the tester.

Skid control ECU

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ABS WARN LAMP	ABS warning light / ON or OFF	ON: ABS warning light ON OFF: ABS warning light OFF	-
VSC WARN LAMP	VSC warning light / ON or OFF	ON: VSC warning light ON OFF: VSC warning light OFF	-
BRAKE WARN LAMP	Brake warning light / ON or OFF	ON: Brake warning light ON OFF: Brake warning light OFF	-
SLIP INDI LAMP	Slip indicator light / ON or OFF	ON: Slip indicator light ON OFF: Slip indicator light OFF	-

2. PARFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON.
(c) Turn the intelligent tester on.
(d) Perform the ACTIVE TEST according to the display on the tester.

HINT:

- The ignition switch must be turned ON to proceed to the ACTIVE TEST using the intelligent tester.
- The ACTIVE TESTs of the ABS solenoid, ABS motor relay, ABS warning light and BRAKE warning light are available when the vehicle is stopped.
- The motors stop automatically after 5 seconds of activation to prevent them from being damaged. When the motors are driven repeatedly, certain intervals are required.
- Each solenoid stops automatically after 2 seconds of activation to prevent them from being damaged, and can be operated again after a certain interval.
- Do not depress the brake pedal while only the pressure reduction solenoid valves are on.
- Do not drive 2 or more solenoids simultaneously except to operate the pressure holding solenoid valves and pressure reduction solenoid valves of each wheel.

DIAGNOSTIC TROUBLE CODE CHART

HINT:

- If no abnormality is found when inspecting parts, check the skid control ECU and check for poor contact at the ground points.
- If a DTC is displayed during the DTC check, check the circuit for the DTC listed in the table below. For details of each DTC, refer to the page indicated.
- When 2 or more DTCs are detected, perform circuit inspections one by one until the problem is identified.
- All DTCs in the table below are detected in accordance with 1 trip detection logic.

BC

Even after the trouble areas are repaired, the ABS warning light will not go off unless the following operations are performed.

- *1:
  (a) Drive the vehicle at 20 km/h (12 mph) for 30 seconds or more and check that the ABS warning light goes off.
  (b) Clear the DTC(s).
- *2:
  (a) Keep the vehicle stationary for 5 seconds or more and depress the brake pedal lightly 2 or 3 times.
  (b) Drive the vehicle at a vehicle speed of 50 km/h (31 mph) and keep depressing the brake pedal firmly for approximately 3 seconds.
  (c) Repeat the above operation 3 times or more and check that the ABS warning light goes off.
  (d) Clear the DTC(s).
- *3: 16-inch disc

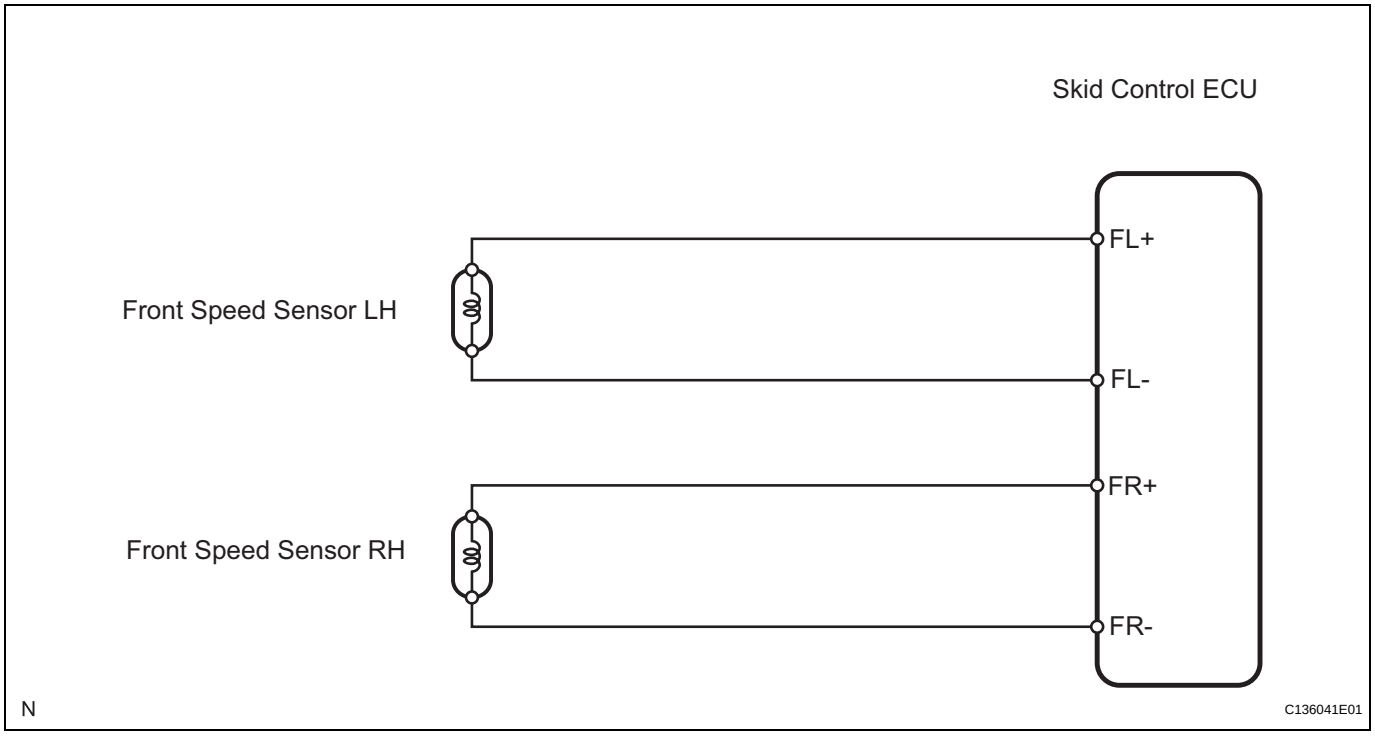
DESCRIPTION

The speed sensors detect the wheel speeds and send appropriate signals to the skid control ECU. Speed sensor rotors have rows of alternating N and S magnetic poles, and their magnetic fields change as the rotors turn.

The speed sensors detect those magnetic changes and send pulse signals to the skid control ECU. The ECU monitors the wheel speeds through these pulse signals to control the ABS control system.

DTCs C1271/71, C1272/72, C1275/75 and C1276/76 can be deleted when the speed sensor sends a vehicle speed signal or the test mode ends. DTCs C1271/71, C1272/72, C1275/75/75 and C1276/76 are output only in the test mode.



BC

DTC No.	DTC Detection Condition	Trouble Area
C0200/31 C0205/32	When one of following conditions is met: 1. At vehicle speed of 10 km/h (6 mph) or more, open or short in sensor signal circuit continues for 1 second or more. 2. Momentary interruption of sensor signal from abnormal wheel occurs 255 times or more. 3. Open in speed sensor signal circuit continues for 0.5 seconds or more. 4. With IG1 terminal voltage 9.5 V or more, sensor power supply voltage decreases for 0.5 seconds or more.	• Front speed sensor • Front speed sensor circuit • Sensor installation • Foreign matter on sensor rotor
C1235/35 C1236/36	When either of following is detected: 1. At vehicle speed of 20 km/h (12 mph) or more, noise in malfunctioning wheel sensor signal condition continues for 5 seconds or more. 2. At vehicle speed of 10 km/h (6 mph) or more, noise input occurs once per rotor rotation for 15 seconds or more.	• Front speed sensor • Front speed sensor circuit • Sensor installation
C1271/71 C1272/72	Detected only during test mode.	• Front speed sensor • Front speed sensor circuit • Sensor installation • Foreign matter on sensor rotor
C1275/75 C1276/76	Detected only during test mode.	• Front speed sensor • Front speed sensor circuit • Sensor installation

HINT:

- DTCs C0200/31 and C1235/35 relate to the front speed sensor RH.
- DTCs C0205/32 and C1236/36 relate to the front speed sensor LH.

WIRING DIAGRAM

BC

INSPECTION PROCEDURE

NOTICE:

Check the speed sensor signal in test mode after cleaning or replacement (see page BC-28).

1	CHECK HARNESS AND CONNECTOR (MOMENTARY INTERRUPTION)

(a) Using the DATA LIST of the intelligent tester, check for any momentary interruption in the wire harness and connector corresponding to a DTC (see page BC-23).

Skid control ECU

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
FR SPD OPN	FR speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
FL SPD OPN	FL speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-

OK:

There are no momentary interruptions.

HINT:

Perform the above inspection before removing the sensor and connector.

NG → **CHECK AND REPAIR HARNESS AND CONNECTOR (SPEED SENSOR CIRCUIT)**

OK

2	READ VALUE OF DATA LIST (FRONT SPEED SENSOR)

(a) Check the DATA LIST for proper functioning of the front speed sensor.

Skid control ECU

Item (Display)	Measurement Item / Range (Display)	Normal Condition
FR WHEEL SPD	Wheel speed sensor (FR) reading / min.: 0 km/h (0 mph), max.: 326 km/h (202.8 mph)	Similar to speed indicated on speedometer
FL WHEEL SPD	Wheel speed sensor (FL) reading / min.: 0 km/h (0 mph), max.: 326 km/h (202.8 mph)	Similar to speed indicated on speedometer

OK:

There is almost no difference between actual wheel speed and displayed speed value.

HINT:

There is a tolerance of +-10% in the speedometer indication.

NG → **Go to step 5**

OK

BC

3	PERFORM TEST MODE INSPECTION (SIGNAL CHECK)

(a) Perform a TEST MODE inspection and check for DTCs (see page BC-28).

OK:

No DTC output.

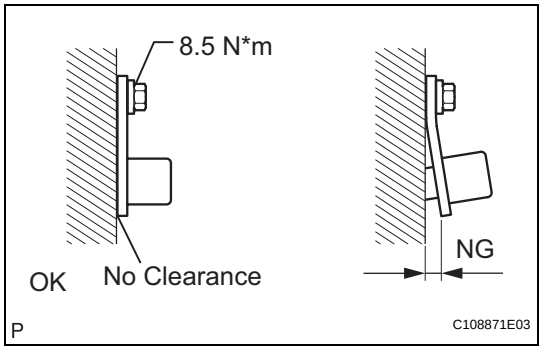
NG → **CHECK AND REPAIR HARNESS AND CONNECTOR (SPEED SENSOR CIRCUIT)**

OK

4	RECONFIRM DTC

(a) Clear the DTC(s) (see page BC-47).
(b) Start the engine.
(c) Drive the vehicle at a speed of 20 km/h (12 mph) or more for at least 60 seconds.
(d) Check if the same DTC(s) is output (see page BC-47).

Result



Result	Proceed to
DTC is not output	A
DTC is output	B

B → **Go to step 10**

A

END

5	INSPECT FRONT SPEED SENSOR (INSTALLATION)

(a) Check that the speed sensor installation bolt is tightened properly.
OK:
The installation bolt is tightened properly, and there is no clearance between the sensor and front steering knuckle.

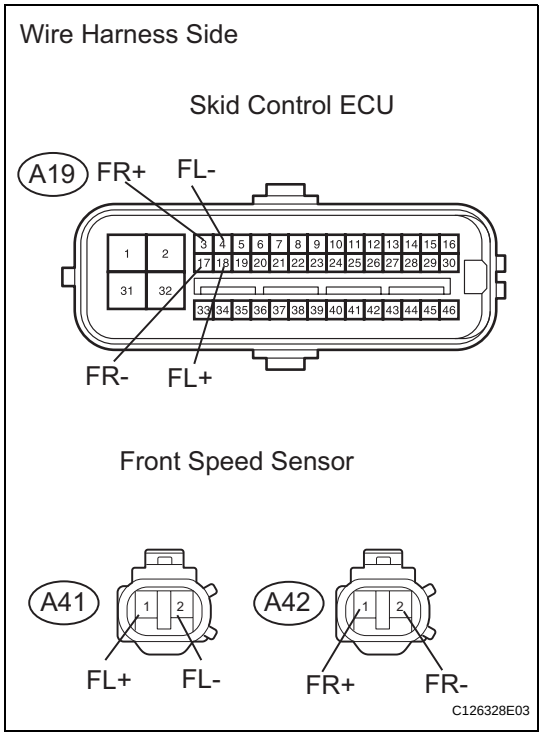
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)

HINT:
If the installation portion of the sensor is dirty, clean it and reinstall the sensor.
Check the speed sensor after the speed sensor replacement (see page BC-28).

NG → **TIGHTEN BOLT PROPERLY OR REPLACE FRONT SPEED SENSOR**

OK

6	CHECK SPEED SENSOR (TIP)



(a) Remove the front speed sensor.
(b) Check the sensor tip.
OK:
No scratches or foreign matter on the sensor tip.
HINT:
Check the speed sensor signal after the speed sensor clearing or replacement (see page BC-28).

NG → **CLEAN OR REPLACE FRONT SPEED SENSOR**

OK

BC

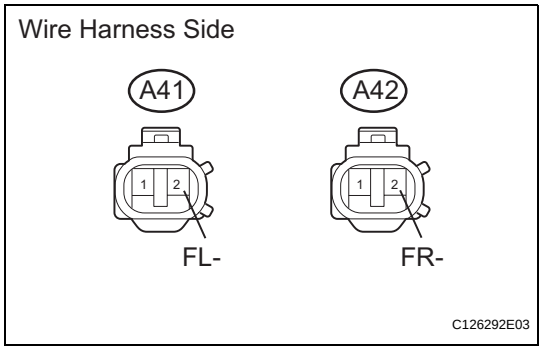
7 CHECK WIRE HARNESS (SKID CONTROL ECU - FRONT SPEED SENSOR)

(a) Disconnect the A19 ECU connector.
(b) Disconnect the A41 and A42 sensor connectors.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance:

for LH

Tester Connection	Specified Condition
A19-18 (FL+) - A41-1 (FL+)	Below 1 Ω
A19-4 (FL-) - A41-2 (FL-)	Below 1 Ω
A19-18 (FL+) - Body ground	10 kΩ or higher
A19-4 (FL-) - Body ground	10 kΩ or higher



for RH

Tester Connection	Specified Condition
A19-3 (FR+) - A42-1 (FR+)	Below 1 Ω
A19-17 (FR-) - A42-2 (FR-)	Below 1 Ω
A19-3 (FR+) - Body ground	10 kΩ or higher
A19-17 (FR-) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

8 CHECK SKID CONTROL ECU (SENSOR INPUT VOLTAGE)

(a) Disconnect the A41 and A42 sensor connectors.
(b) Measure the voltage of the wire harness side connector.

Standard voltage

Tester Connection	Condition	Specified Condition
A41-2 (FL-) - Body ground	Ignition switch ON	5.7 to 17.3 V
A42-2 (FR-) - Body ground	Ignition switch ON	5.7 to 17.3 V

NG → **REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY**

OK

9 RECONFIRM DTC

(a) Clear the DTC(s) (see page BC-47).
(b) Start the engine.
(c) Drive the vehicle at a speed of 20 km/h (12 mph) or more for at least 60 seconds.

(d) Check if the same DTC(s) is output (see page BC-47).

Result

Result	Proceed to
DTC is output	A
DTC is not output	B

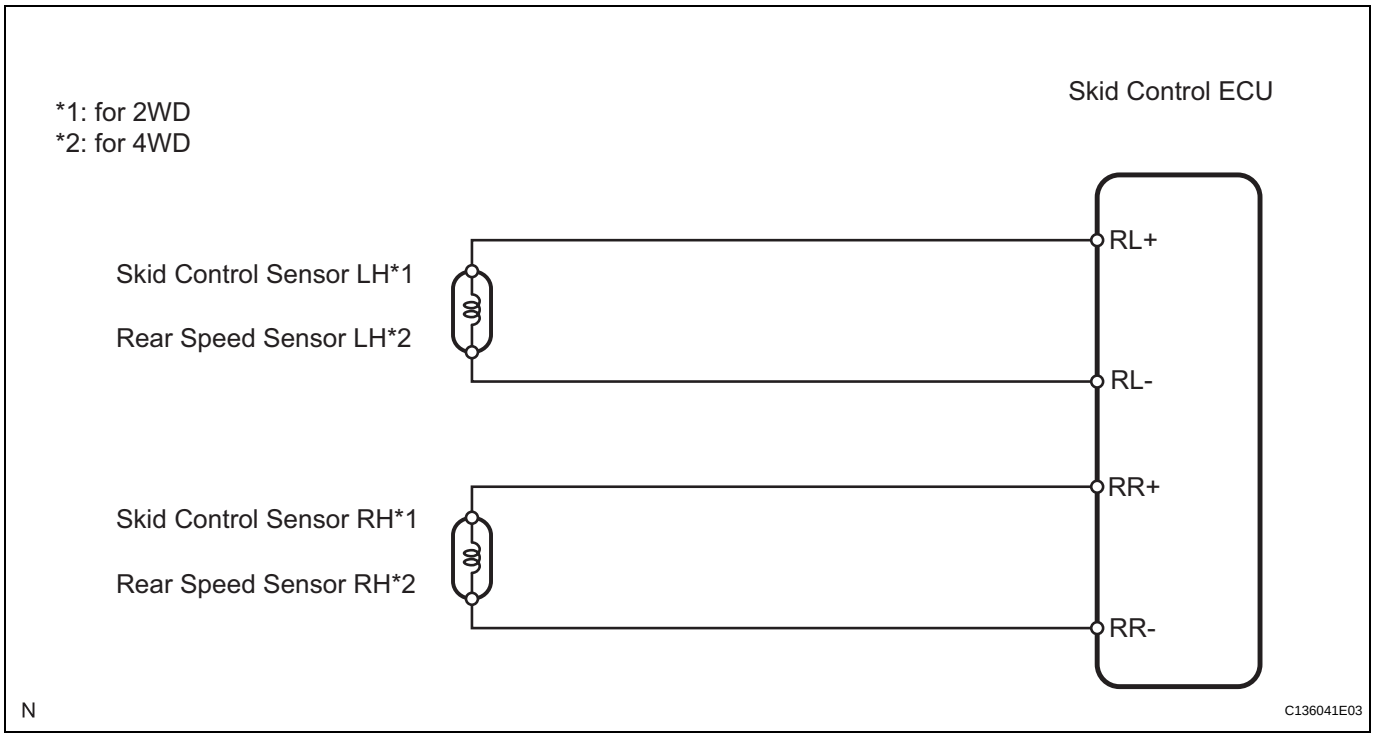
REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

DTC	C0210/33	Right Rear Wheel Speed Sensor Signal
DTC	C0215/34	Left Rear Wheel Speed Sensor Signal
DTC	C1238/38	Foreign Object is Attached on Tip of Rear Speed Sensor RH
DTC	C1239/39	Foreign Object is Attached on Tip of Rear Speed Sensor LH
DTC	C1273/73	Low Output Signal of Rear Speed Sensor RH (Test Mode DTC)
DTC	C1274/74	Low Output Signal of Rear Speed Sensor LH (Test Mode DTC)
DTC	C1277/77	Abnormal Change in Output Signal of Rear Speed Sensor RH (Test Mode DTC)
DTC	C1278/78	Abnormal Change in Output Signal of Rear Speed Sensor LH (Test Mode DTC)

DESCRIPTION

Refer to DTC C0200/31 (see page BC-62).



DTCs C1273/73, C1274/74, C1277/77 and C1278/78 can be deleted when the speed sensor sends a vehicle speed signal or the test mode ends. DTCs C1273/73, C1274/74, C1277/77 and C1278/78 are output only in the test mode.

DTC No.	DTC Detection Condition	Trouble Area
C0210/33 C0215/34	When one of following conditions is met: 1. At vehicle speed of 10 km/h (6 mph) or more, open or short in sensor signal circuit continues for 1 second or more. 2. Momentary interruption of sensor signal from abnormal wheel occurs 255 times or more. 3. Open in speed sensor signal circuit continues for 0.5 seconds or more. 4. With IG1 terminal voltage 9.5 V or more, sensor power supply voltage decreases for 0.5 seconds or more.	• Skid control sensor (for 2WD) • Rear speed sensor (for 4WD) • Skid control sensor circuit (for 2WD) • Rear speed sensor circuit (4WD) • Sensor installation • Foreign matter on sensor rotor
C1238/38 C1239/39	When either condition below is met: 1. At vehicle speed of 20 km/h (12 mph) or more, noise in malfunctioning wheel sensor signal condition continues for 5 seconds or more. 2. At vehicle speed of 10 km/h (6 mph) or more, noise input occurs once per rotor rotation for 15 seconds or more.	• Skid control sensor (for 2WD) • Rear speed sensor (for 4WD) • Skid control sensor circuit (for 2WD) • Rear speed sensor circuit (for 4WD) • Sensor installation
C1273/73 C1274/74	Detected only during test mode.	• Skid control sensor (for 2WD) • Rear speed sensor (for 4WD) • skid control sensor circuit (for 2WD) • Rear speed sensor circuit (for 4WD) • Sensor installation • Foreign matter on sensor rotor

DTC No.	DTC Detection Condition	Trouble Area
C1277/77 C1278/78	Detected only during test mode.	• Skid control sensor (for 2WD) • Rear speed sensor (for 4WD) • Skid control sensor circuit (for 2WD) • Rear speed sensor circuit (for 4WD) • Sensor installation

HINT:
- DTC C0210/33 and C1238/38 relate to the skid control sensor RH.
- DTC C0215/34 and C1239/39 relate to the skid control sensor LH.

WIRING DIAGRAM

BC

INSPECTION PROCEDURE

NOTICE:
Check the speed sensor signal in test mode after cleaning or replacement (see page BC-28).

1	CHECK HARNESS AND CONNECTOR (MOMENTARY INTERRUPTION)

(a) Using the DATA LIST of the intelligent tester, check for any momentary interruption in the wire harness corresponding to a DTC (see page BC-23).

Skid control ECU

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
RR SPD OPN Open	RR speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
RL SPD OPN	RL speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-

OK:
There are no momentary interruptions.

HINT:
Perform this inspection before removing the sensor and connector.

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

2 READ VALUE OF INTELLIGENT TESTER (REAR SPEED SENSOR)

(a) Check the DATA LIST for proper functioning of the rear speed sensor.

Skid control ECU

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
RR WHEEL SPD	Wheel speed sensor (RR) reading : min.: 0 km/h (0 mph), max.: 326 km/h (202.8 mph)	Similar to speed indicated on speedometer	-
RL WHEEL SPD	Wheel speed sensor (RL) reading : min.: 0 km/h (0 mph), max.: 326 km/h (202.8 mph)	Similar to speed indicated on speedometer	-

BC

OK:
There is almost no difference between actual wheel speed and displayed speed value.

HINT:
There is a tolerance of +-10% in the speedometer indication.

NG → **Go to step 5**

OK

3 PERFORM TEST MODE INSPECTION (SIGNAL CHECK)

(a) Perform a TEST MODE inspection and check for DTCs (see page BC-28).

OK:
No DTCs output.

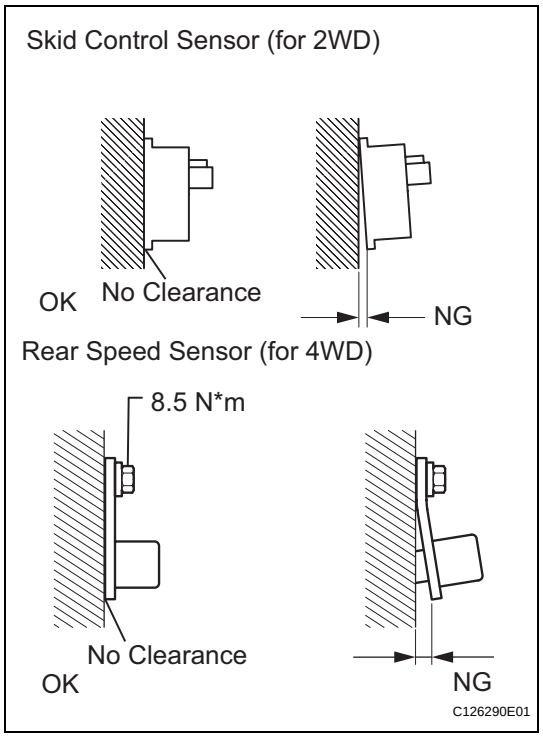
NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

4 RECONFIRM DTC

(a) Clear the DTC(s) (see page BC-47).
(b) Start the engine.
(c) Drive the vehicle at a speed of 20 km/h (12 mph) or more for at least 60 seconds.

(d) Check if the same DTC(s) is output (see page BC-47).
Result



Result	Proceed to
DTC is not output	A
DTC is output	B

B → **Go to step 11**

A

END

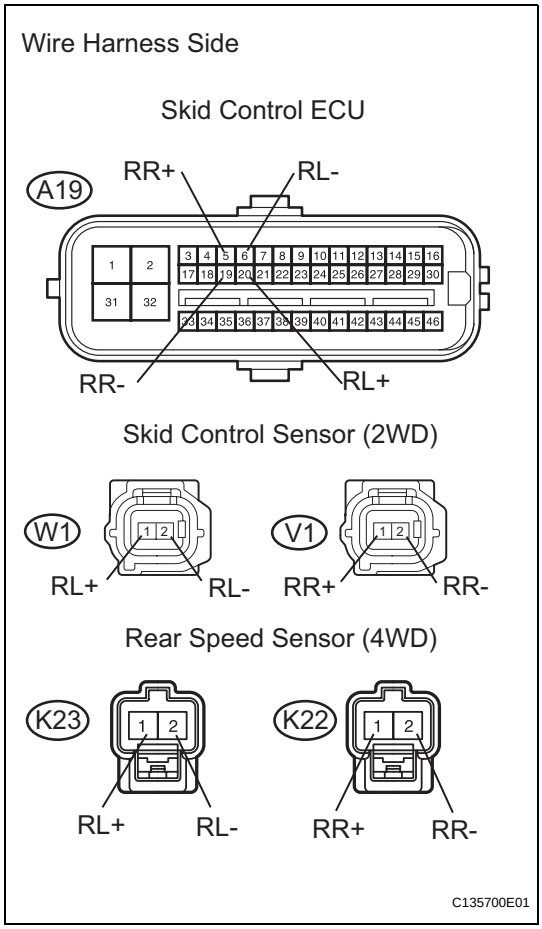
5 INSPECT SKID CONTROL SENSOR OR REAR SPEED SENSOR (INSTALLATION)

(a) Check the speed sensor installation.
OK:
for 2WD
There is no clearance between the sensor and rear axle carrier.
for 4WD
The installation bolt is tightened properly and there is no clearance between the sensor and rear axle carrier.
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)
HINT:
Check the speed sensor signal after the replacement (see page BC-28).

NG → **CHECK AND REPLACE SKID CONTROL SENSOR OR REAR SPEED SENSOR**

OK

6 CHECK SKID CONTROL SENSOR OR REAR SPEED SENSOR (TIP)



(a) Remove the skid control sensor (for 2WD) or rear speed sensor (for 4WD).
(b) Check the sensor tip.
OK:
No scratches or foreign matter on the sensor tip.

NG → **CLEAR OR REPLACE SKID CONTROL SENSOR OR REAR SPEED SENSOR**

OK

BC

7	CHECK WIRE HARNESS (SKID CONTROL ECU - REAR SPEED SENSOR)

(a) Disconnect the A19 ECU connector.
(b) Disconnect W1 and V1 sensor connectors for 2WD. Disconnect K23 and K22 sensor connectors for 4WD.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance:

for 2WD (LH Side)

Tester Connection	Specified Condition
A19-20 (RL+) - W1-1 (RL+)	Below 1 Ω
A19-6 (RL-) - W1-2 (RL-)	Below 1 Ω
A19-20 (RL+) - Body ground	10 kΩ or higher
A19-6 (RL-) - Body ground	10 kΩ or higher

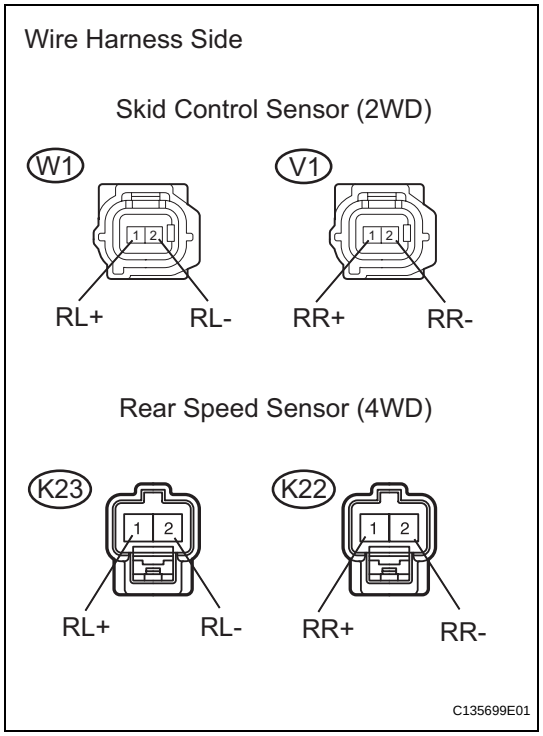
for 2WD (RH Side)

Tester Connection	Specified Condition
A19-5 (RR+) - V1-1 (RR+)	Below 1 Ω
A19-19 (RR-) - V1-2 (RR-)	Below 1 Ω
A19-5 (RR+) - Body ground	10 kΩ or higher
A19-19 (RR-) - Body ground	10 kΩ or higher

for 4WD (LH Side)

Tester Connection	Specified Condition
A19-20 (RL+) - K23-1 (RL+)	Below 1 Ω
A19-6 (RL-) - K23-2 (RL-)	Below 1 Ω
A19-20 (RL+) - Body ground	10 kΩ or higher
A19-6 (RL-) - Body ground	10 kΩ or higher

for 4WD (RH Side)



Tester Connection	Specified Condition
A19-5 (RR+) - K22-1 (RR+)	Below 1 Ω
A19-19 (RR-) - K22-2 (RR-)	Below 1 Ω
A19-5 (RR+) - Body ground	10 kΩ or higher
A19-19 (RR-) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

BC

8 CHECK SKID CONTROL ECU (SENSOR INPUT VOLTAGE)

(a) Disconnect the W1 and V1 sensor connectors for 2WD. Disconnect the K23 and K22 sensor connectors for 4WD.

(b) Measure the voltage of the wire harness side connectors.

Standard voltage:

for 2WD

Tester Connection	Condition	Specified Condition
W1-1 (RL+) - Body ground	Ignition switch ON	5.7 to 17.3 V
V1-1 (RR+) - Body ground	Ignition switch ON	5.7 to 17.3 V

for 4WD

Tester Connection	Condition	Specified Condition
K23-1 (RL+) - Body ground	Ignition switch ON	5.7 to 17.3 V
K22-1 (RR+) - Body ground	Ignition switch ON	5.7 to 17.3 V

NG → **REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY**

OK

9 RECONFIRM DTC

(a) Clear the DTC(s) (see page BC-47).

(b) Start the engine.

(c) Drive the vehicle at a speed of 20 km/h (12 mph) or more for at least 60 seconds.

(d) Check if the same DTC(s) is output (see page BC-47).

Result

Result	Proceed to
DTC is output	A
DTC is not output	B

A → **REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY**

DTC	C0226/21	SFR Solenoid Circuit

DTC	C0236/22	SFL Solenoid Circuit

DTC	C0246/23	SRR Solenoid Circuit

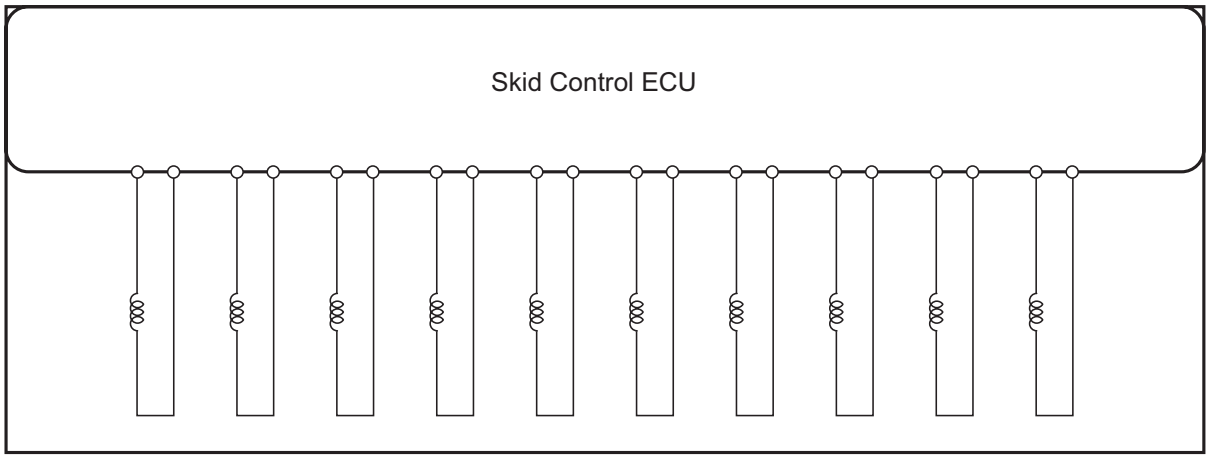
DTC	C0256/24	SRL Solenoid Circuit

DTC	C1225/25	SM Solenoid Circuit

DESCRIPTION

This solenoid is turned on in accordance with signals from the skid control ECU and controls the pressure on the wheel cylinders to control the braking force.

The solenoid and solenoid relay are built into the ABS and TRACTION actuator.



DTC No.	DTC Detection Condition	Trouble Area
C0226/21 C0236/22 C0246/23 C0256/24	Open or short in solenoid circuit continues for 0.05 seconds or more.	ABS and TRACTION actuator
C1225/25	When one of following conditions is met: 1. During switching solenoid (SM1 or SM2) ON signal input, overcurrent continues for 0.05 seconds or more. 2. During switching solenoid (SM1 or SM2) OFF signal input, open circuit continues for 0.05 seconds or more. 3. During switching solenoid (SM1 or SM2) OFF signal input, current continues to be applied for 0.1 second or more. 4. Short to GND in switching solenoid (SM1 or SM2) continues for 0.1 second or more. 5. Switching solenoids SM1 and SM2 are shorted for 0.1 second or more. 6. Switch solenoids (SM1 or SM2) ON signal output occurs for 0.1 seconds or more.	ABS and TRACTION actuator

HINT:

DTCs C0226/21, C0236/22, C0246/23, C0256/24 and C1225/25:

The skid control ECU begins to detect these DTCs when the vehicle speed exceeds 6 km/h (4 mph).

WIRING DIAGRAM

BC

INSPECTION PROCEDURE

1	RECONFIRM DTC

(a) Clear the DTC(s) (see page BC-47).
(b) Start the engine.
(c) Drive the vehicle at 6 km/h (4 mph) or more to activate the initial check.
(d) Check if the same DTC(s) is output (see page BC-47).

Result

Result	Proceed to
DTC is output	A
DTC is not output	B

HINT:
The DTCs may be stored due to a malfunction in the connector terminal.

B → **END**

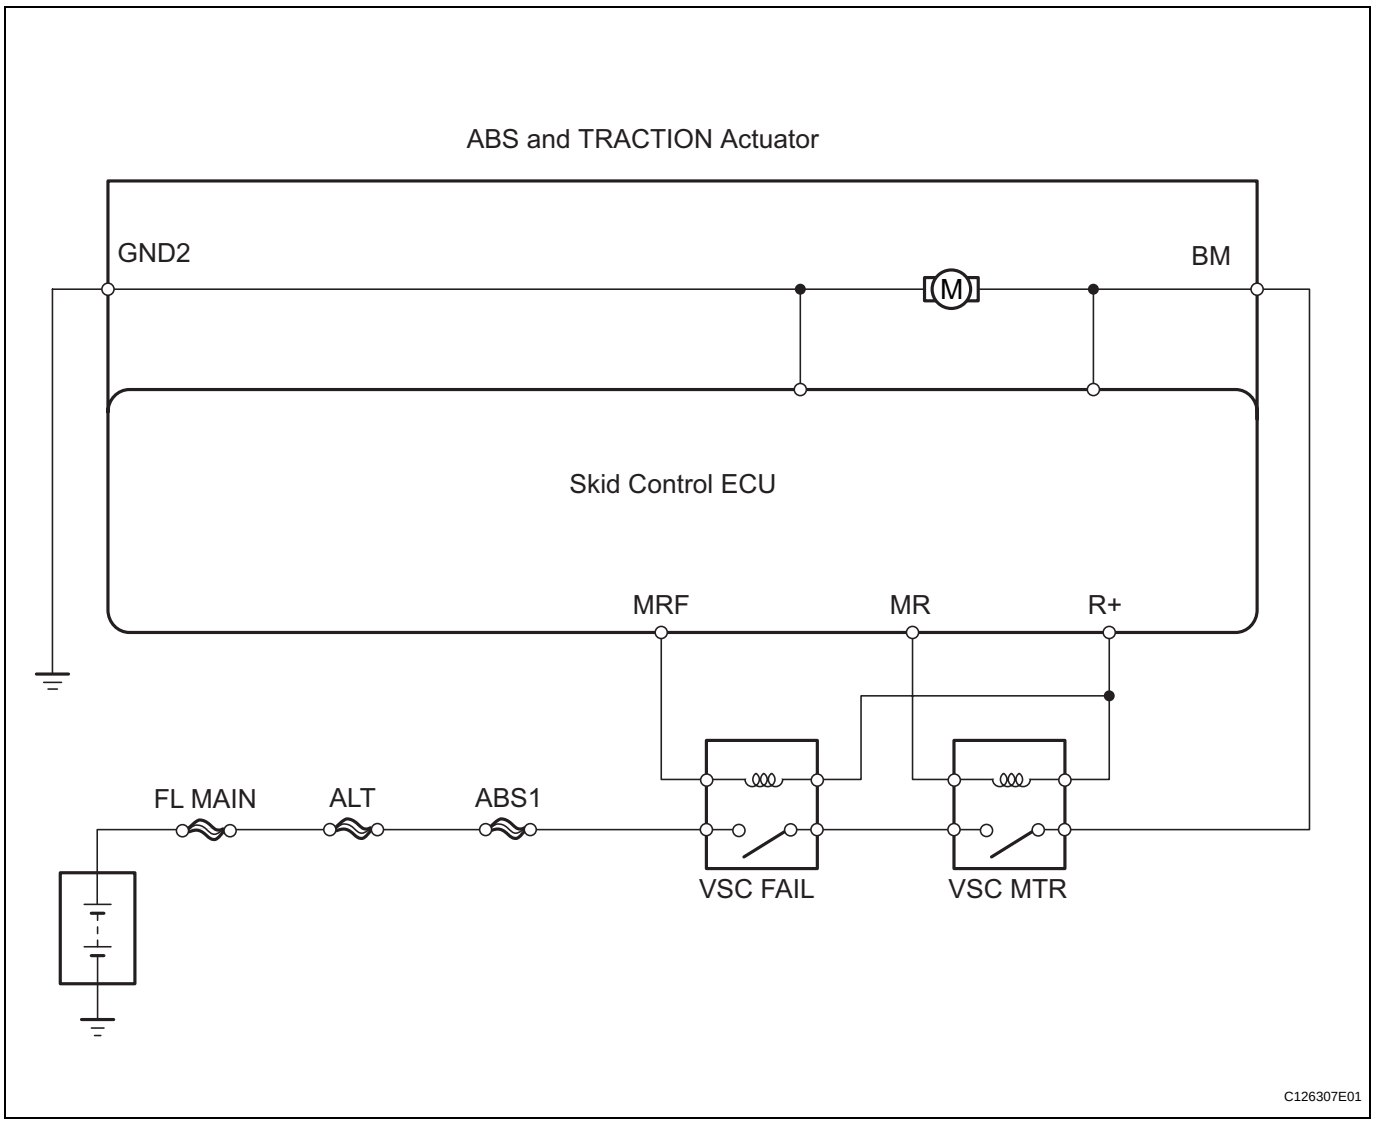
A

REPLACE ABS AND TRACTION ACTUATOR

DTC	C0273/13	Open in ABS Motor Relay Circuit

DTC	C0274/14	Short to B+ in ABS Motor Relay Circuit

DTC	C1361/91	Short Circuit in ABS Motor Fail Safe Relay Circuit



DESCRIPTION

If a DTC related to the motor line is stored, the VSC FAIL (fail-safe) relay cuts off the power supply to the VSC MTR relay and performs the fail-safe operation.
While the ABS, TRC, VSC, or BA is operating, the skid control ECU turns the VSC FAIL relay on and activates the pump motor in the ABS and TRACTION actuator.
These DTCs may be stored if the motor relay (+BM) voltage becomes lower than the DTC detecting condition due to insufficient output from the battery or alternator.

DTC No.	DTC Detection Condition	Trouble Area
C0273/13	When either condition below is met: 1. All of following conditions continue for 0.12 seconds or more. (a) IG1 terminal voltage between 9.5 V and 17.2 V. (b) During initial check or ABS/TRC/VSC/BA. (c) Relay contact open when relay on. 2. Both of following conditions continue for 0.12 seconds or more. (a) IG1 terminal voltage 9.5 V or less. (b) Relay contact remains open when relay on.	• ABS1 H-fuse • VSC MTR relay • VSC MTR relay circuit • VSC FAIL relay • VSC FAIL relay circuit • ABS and TRACTION actuator
C0274/14	Despite motor relay (VSC MTR relay) off, motor relay remains closed for 4 seconds or more.	• ABS1 H-fuse • VSC MTR relay • VSC MTR relay circuit • VSC FAIL relay • VSC FAIL relay circuit • ABS and TRACTION actuator
C1361/91	Immediately after ignition switch ON, motor fail-safe relay (VSC FAIL relay) contact closed for 4 seconds when motor fail-safe relay (VSC FAIL relay) off.	• ABS1 H-fuse • VSC MTR relay • VSC MTR relay circuit • VSC FAIL relay • VSC FAIL relay circuit • ABS and TRACTION actuator

HINT:
DTCs C0273/13, C0274/14 and C1361/91: The skid control ECU begins to detect these DTCs when the vehicle speed exceeds 6 km/h (4 mph).

WIRING DIAGRAM

BC

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (MOTOR RELAY)

(a) Select the ACTIVE TEST, generate a control command, and then check that the ABS motor relay operates.

Skid control ECU

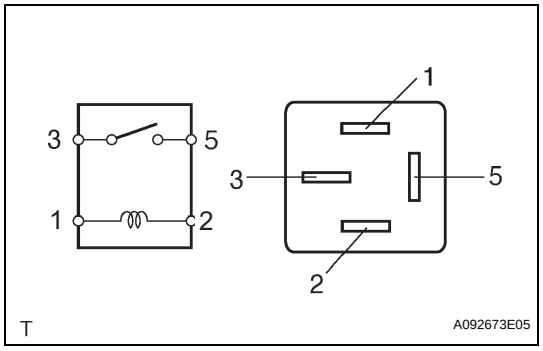
Item (Display)	Test Details	Diagnostic Note
MOTOR RELAY	Turns ABS motor relay ON / OFF	Operating sound of motor can be heard

OK:

The operation sound of the ABS motor can be heard.

OK	**Go to step 8**

NG



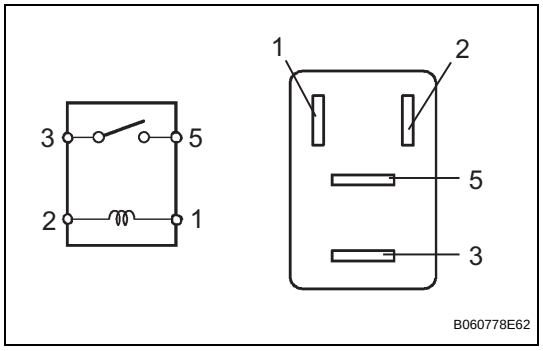
2 **INSPECT FUSE (ABS1)**

(a) Remove the ABS1 H-fuse from the engine room No. 1 relay block.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

3 **INSPECT VSC MOTOR RELAY (Marking: VSC MTR)**



(a) Remove the VSC motor relay from the engine room No. 1 relay block.
(b) Measure the resistance of the relay.
Standard resistance

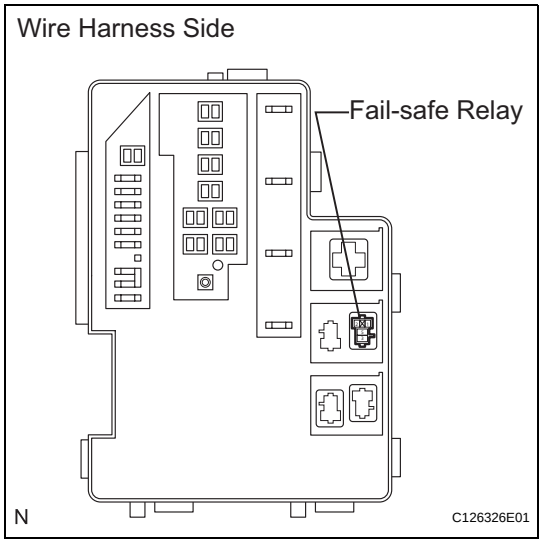
Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

NG → **REPLACE VSC MOTOR RELAY**

OK

4 **INSPECT FAIL-SAFE RELAY (Marking: VSC FAIL)**

(a) Remove the faile-safe relay from the engine room No. 1 relay block.
(b) Measure the resistance of the relay.
Standard resistance



Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

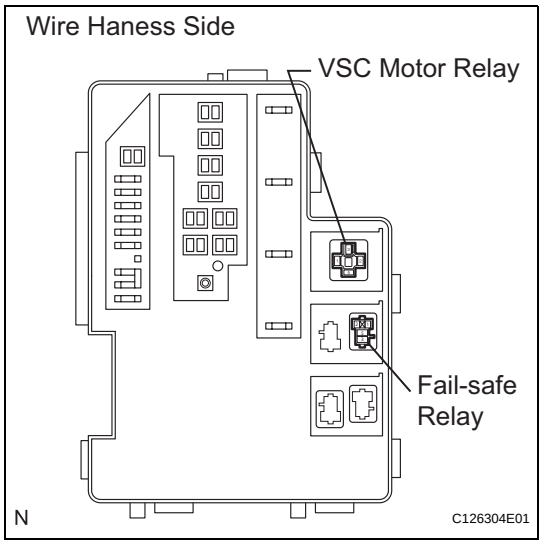
NG → **REPLACE FAIL-SAFE RELAY**

OK

BC

5	CHECK WIRE HARNESS (FAIL-SAFE RELAY - BATTERY)

(a) Remove the fail-safe relay from the engine room No. 1 relay block.
(b) Measure the voltage of the wire harness side connector.
Standard voltage



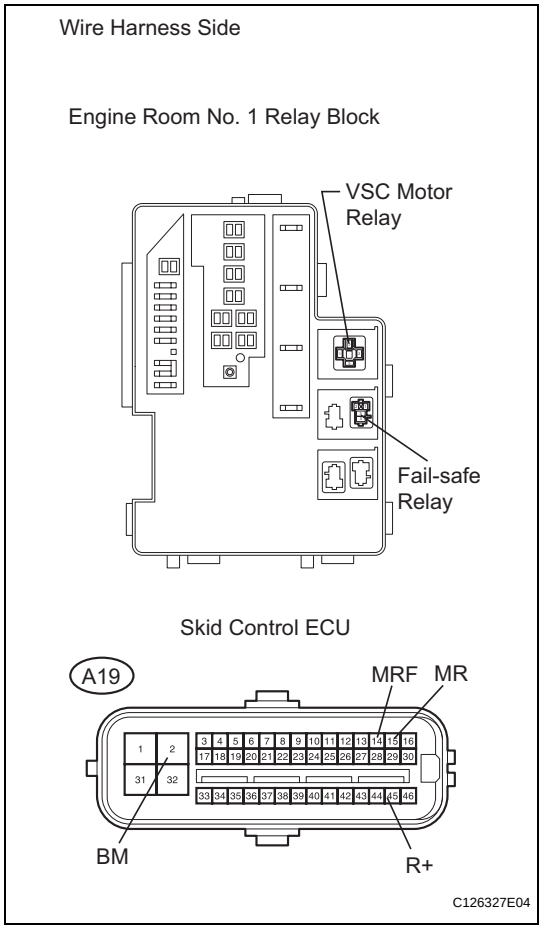
Tester Connection	Specified Condition
VSC FAIL relay terminal 5 - Body ground	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

BC

6	CHECK ENGINE ROOM NO. 1 RELAY BLOCK (FAIL-SAFE RELAY - VSC MOTOR RELAY AND BODY GROUND)



(a) Remove the fail-safe and VSC motor relays from the engine room No. 1 relay block.
(b) Measure the resistance of the relay terminals.
Standard resistance

Tester Connection	Specified Condition
VSC FAIL relay terminal 3 - VSC MTR relay terminal 5	Below 1 Ω
VSC FAIL relay terminal 3 - Body ground	10 kΩ or higher

NG → **REPLACE ENGINE ROOM NO. 1 RELAY BLOCK**

OK

7 CHECK WIRE HARNESS (ENGINE ROOM NO. 1 RELAY BLOCK - SKID CONTROL ECU)

(a) Disconnect the A19 ECU connector.
(b) Remove the fail-safe and VSC motor relays from the engine room No. 1 relay block.
(c) Measure the resistance of the wire harness connectors.

Standard resistance

Tester Connection	Specified Condition
A19-2 (BM) - VSC MTR relay terminal 3	Below 1 Ω
A19-14 (MRF) - VSC FAIL relay terminal 2	Below 1 Ω
A19-15 (MR) - VSC MTR relay terminal 2	Below 1 Ω
A19-45 (R+) - VSC FAIL relay terminal 1	Below 1 Ω
A19-2 (BM) - Body ground	10 kΩ or higher
A19-14 (MRF) - Body ground	10 kΩ or higher
A19-15 (MR) - Body ground	10 kΩ or higher
A19-45 (R+) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

8 RECONFIRM DTC

(a) Clear the DTC(s) (see page BC-47).
(b) Start the engine.
(c) Drive the vehicle at 6 km/h (4 mph) or more to activate the initial check.
(d) Check if the same DTC(s) is output (see page BC-47).

Result

Result	Proceed to
DTC is output	A
DTC is not output	B

B → **END**

A

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

BC

DTC	C0278/11	Open in ABS Solenoid Relay Circuit

DTC	C0279/12	Short to B+ in ABS Solenoid Relay Circuit

DESCRIPTION

The solenoid relay supplies power to the ABS solenoid and TRC solenoid.
After the ignition switch is turned ON, the vehicle speed has reached 6 km/h (4 mph) and the solenoid is determined to be normal by the initial check self-diagnosis, the relay switches on. If any open or short circuits are detected, the relay switches off.
These DTCs may be set if the voltage supply to the solenoid relay (+BS) falls below the DTC detection threshold due to the battery or alternator outputs being insufficient.

DTC No.	DTC Detection Condition	Trouble Area
C0278/11	When either condition below is met: 1. Both of following conditions continue for 0.2 seconds or more. (a) IG1 terminal voltage between 9.5 V and 17.2 V. (b) Solenoid relay contact open when relay on. 2. Both of following conditions continue for 0.2 seconds or more. (a) IG1 terminal voltage becomes lower than 9.5 V when relay turned on. (b) Relay contact remains open.	• ABS2 H-fuse • Wire harness (+BS circuit) • ABS and TRACTION actuator
C0279/12	Immediately after ignition switch turned ON, solenoid relay contact closed for 0.2 seconds or more when relay off.	• ABS2 H-fuse • Wire harness (+BS circuit) • ABS and TRACTION actuator

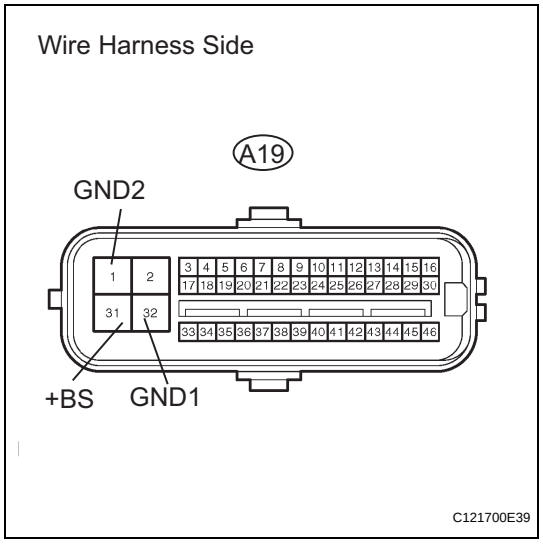
BC

HINT:
DTCs C0278/11 and C0279/12: The skid control ECU begins to detect these DTCs when the vehicle speed exceeds 6 km/h (4 mph).

WIRING DIAGRAM

Refer to DTC C0273/13, C0274/14, C1361/91 (see page BC-79).

INSPECTION PROCEDURE



1	INSPECT FUSES (ABS2)

(a) Remove the ABS2 H-fuse from the engine room No. 1 relay block.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

2 CHECK WIRE HARNESS (SKID CONTROL ECU - BATTERY AND BODY GROUND)

(a) Disconnect the A19 ECU connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Specified Condition
A19-31 (+BS) - Body ground	10 to 14 V

(c) Measure the resistance of the wire harness side connector.
Standard resistance

Tester Connection	Specified Condition
A19-32 (GND1) - Body ground	Below 1 Ω
A19-1 (GND2) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

3 RECONFIRM DTC

(a) Clear the DTCs (see page BC-47).
(b) Start the engine.
(c) Drive the vehicle at 6 km/h (4 mph) or more to activate the initial check.
(d) Check if the same DTCs is output (see page BC-47).
Result

Result	Proceed to
DTC is output	A
DTC is not output	B

A

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

BC

DTC	C1201/51	Engine Control System Malfunction

DESCRIPTION

If a malfunction in the engine control system is detected, the operations of VSC and TRC are prohibited by the fail-safe function. When the signals from the engine are input normally, the fail-safe is canceled and the DTC is not stored.

DTC No.	DTC Detection Condition	Trouble Area
C1201/51	Engine control system malfunction signal continues for 5 seconds.	Engine control system

INSPECTION PROCEDURE

1 CHECK HARNESS AND CONNECTOR (MOMENTARY INTERRUPTION)

(a) Using the DATA LIST of the intelligent tester, check for any momentary interruption in the wire harness corresponding to the DTC (see page BC-23).

Skid control ECU

Item	Measurement Item / Range (Display)	Normal Condition
EFI COM OPN	EFI communication open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal

OK:

There are no momentary interruptions.

HINT:

Perform the above inspection before removing the sensor and connector.

NG → **Go to step 3**

OK ↓

2 CHECK DTC FOR ENGINE CONTROL SYSTEM

(a) Clear the DTC (engine control system).

(b) Check the DTC (engine control system).

Result

Result	Proceed to
DTC is output	A
DTC is not output	B

4	RECONFIRM DTC

(a) Clear the DTC (see page BC-47).
(b) Perform a road test.
(c) Check if the same DTC is recorded (see page BC-47).

Result

Result	Proceed to
DTC is not output	A
DTC C1201/51 is output	B

B → **Go to step 2**

A

END

DTC	C1203/53	ECM Communication Circuit Malfunction

DESCRIPTION

The circuit is used to send TRC and VSC control information from the skid control ECU to the ECM, and engine control information from the ECM to the skid control ECU.

DTC No.	DTC Detection Condition	Trouble Area
C1203/53	Information relating to engine, drive source or destination stored in ECM does not match information stored in skid control ECU.	ECM

INSPECTION PROCEDURE

HINT:
Check that the part numbers of the installed ECM and skid control ECU are correct before performing the following procedure.

1 RECONFIRM DTC

(a) Clear the DTC (see page BC-47).
(b) Start the engine.
(c) Check if the same DTC is output (see page BC-47).

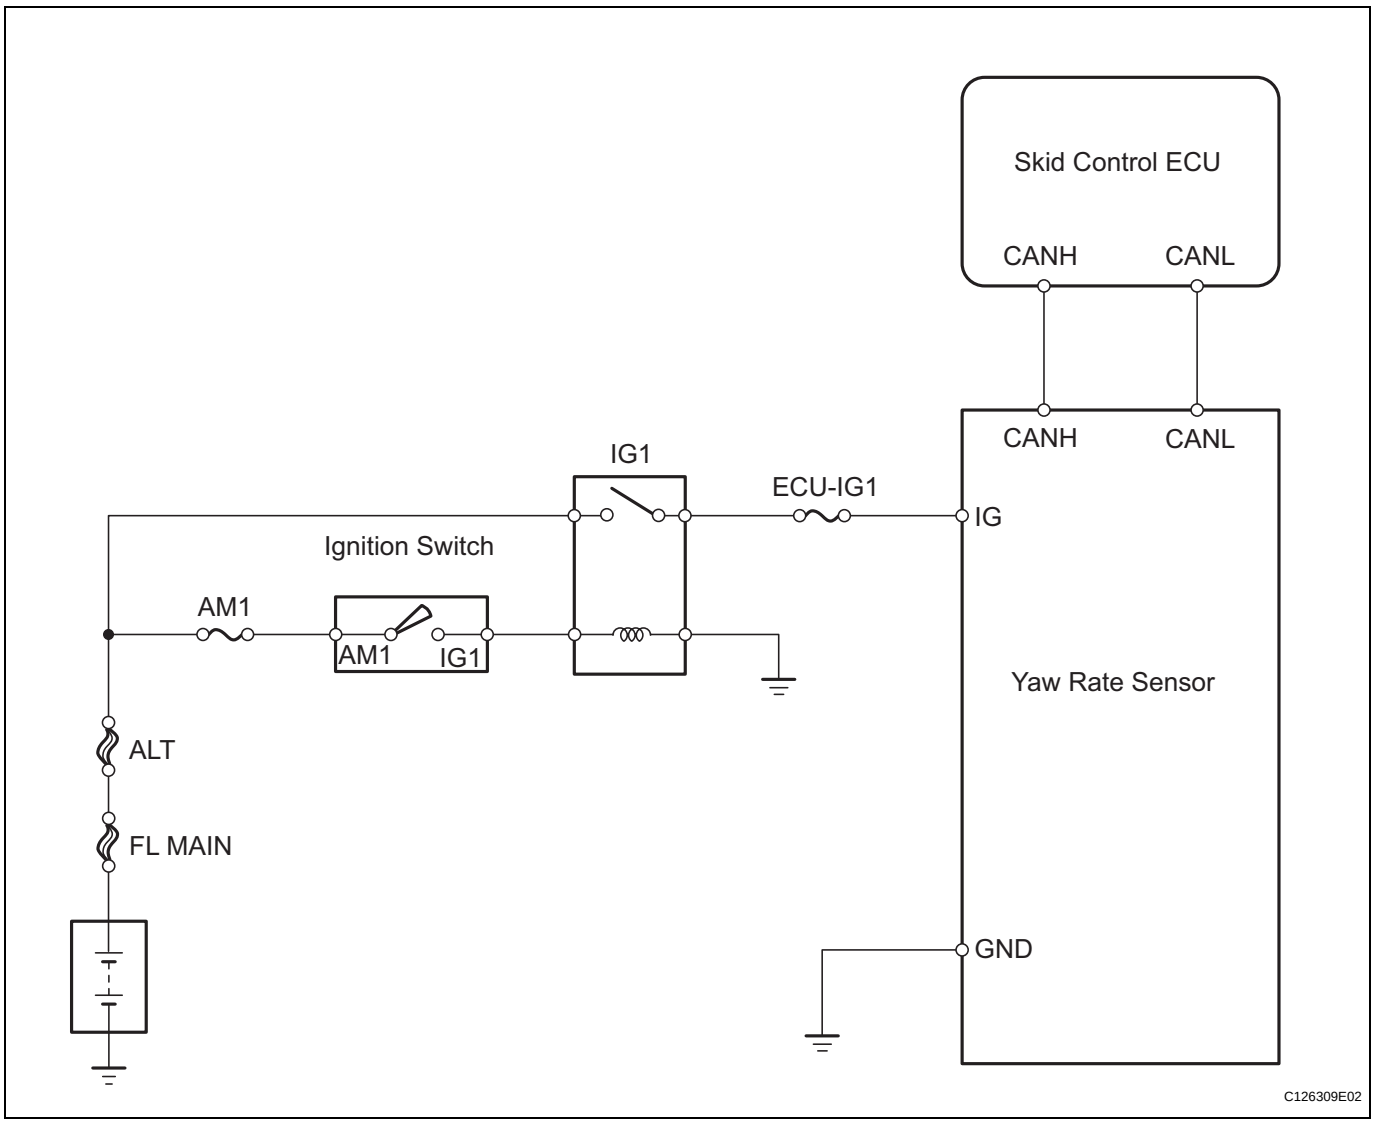
Result

Result	Proceed to
DTC is output	A
DTC is not output	B

B → **END**

A → **REPLACE ECM**

DTC	C1210/36	Zero Point Calibration of Yaw Rate Sensor Undone



DTC	C1336/39	Zero Point Calibration of Acceleration Sensor Undone

DESCRIPTION

The ABS and TRACTION actuator (Skid control ECU) receives signals from the yaw rate and deceleration sensor via the CAN communication system. The yaw rate sensor has a built-in deceleration sensor and detects the vehicle's condition using 2 circuits (GL1, GL2). If there are problems in the bus lines between the yaw rate and deceleration sensor and the CAN communication system, DTCs U0123/62 (yaw rate sensor communication trouble) and U0124/95 (deceleration sensor communication trouble) are output. The DTCs are also output when the calibration has not been completed.

DTC No.	DTC Detection Condition	Trouble Area
C1210/36	Zero point calibration of yaw rate sensor not completed	• ABS and TRACTION actuator (skid control ECU) • Zero point calibration incomplete • Yaw rate sensor
C1336/39	When either condition below is met: • Vehicle driven without completion of zero point calibration • After zero point has been obtained, zero point voltage of sensor not between 2.38 V and 2.62 V	• ABS and TRACTION actuator (skid control ECU) • Zero point calibration incomplete • Yaw rate sensor

WIRING DIAGRAM

BC

INSPECTION PROCEDURE

NOTICE:

When replacing the ABS and TRACTION actuator, perform the zero point calibration (see page BC-24).

HINT:

When DTC U0123/62, U0124/95 or U0126/63 is output together with DTC C1210/36 or C1336/39, inspect and repair trouble areas indicated by DTC U0123/62, U0124/95 or U0126/63 first.

1	CHECK YAW RATE SENSOR INSTALLATION

(a) Check that the yaw rate sensor has been installed properly (see page BC-211).

OK:

The sensor is tightened to the specified torque.
The sensor is not tilted.

NG	INSTALL YAW RATE SENSOR CORRECTLY

OK

2	PERFORM ZERO POINT CALIBRATION OF YAW RATE SENSOR

(a) Perform zero point calibration of the yaw rate and deceleration sensor (see page BC-24).

NEXT

3	RECONFIRM DTC

(a) Clear the DTC(s) (see page BC-47).
(b) Start the engine.
(c) Drive the vehicle and turn the steering wheel to the right and left at a speed of 45 km/h (28 mph) or more.
(d) Check if the same DTC(s) is recorded (See page BC-47).

Result

Result	Proceed to
DTC is output	A
DTC is not output	B

HINT:
- The DTC(s) is set if the zero point calibration has not been completed successfully.
- End the procedure when the same DTC(s) is not set after completion of the zero point calibration.

B → END

A

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

DTC	C1223/43	ABS Control System Malfunction

DESCRIPTION

This DTC is output when the VSC system detects a malfunction in the ABS system.

DTC No.	DTC Detecting Condition	Trouble Area
C1223/43	Malfunction in ABS control system	Skid control ECU

INSPECTION PROCEDURE

1	CHECK DTC FOR ABS SYSTEM

(a) Clear the DTC (see page BC-47).
(b) Turn the ignition switch ON.
(c) Check if the same DTC is recorded (see page BC-47).

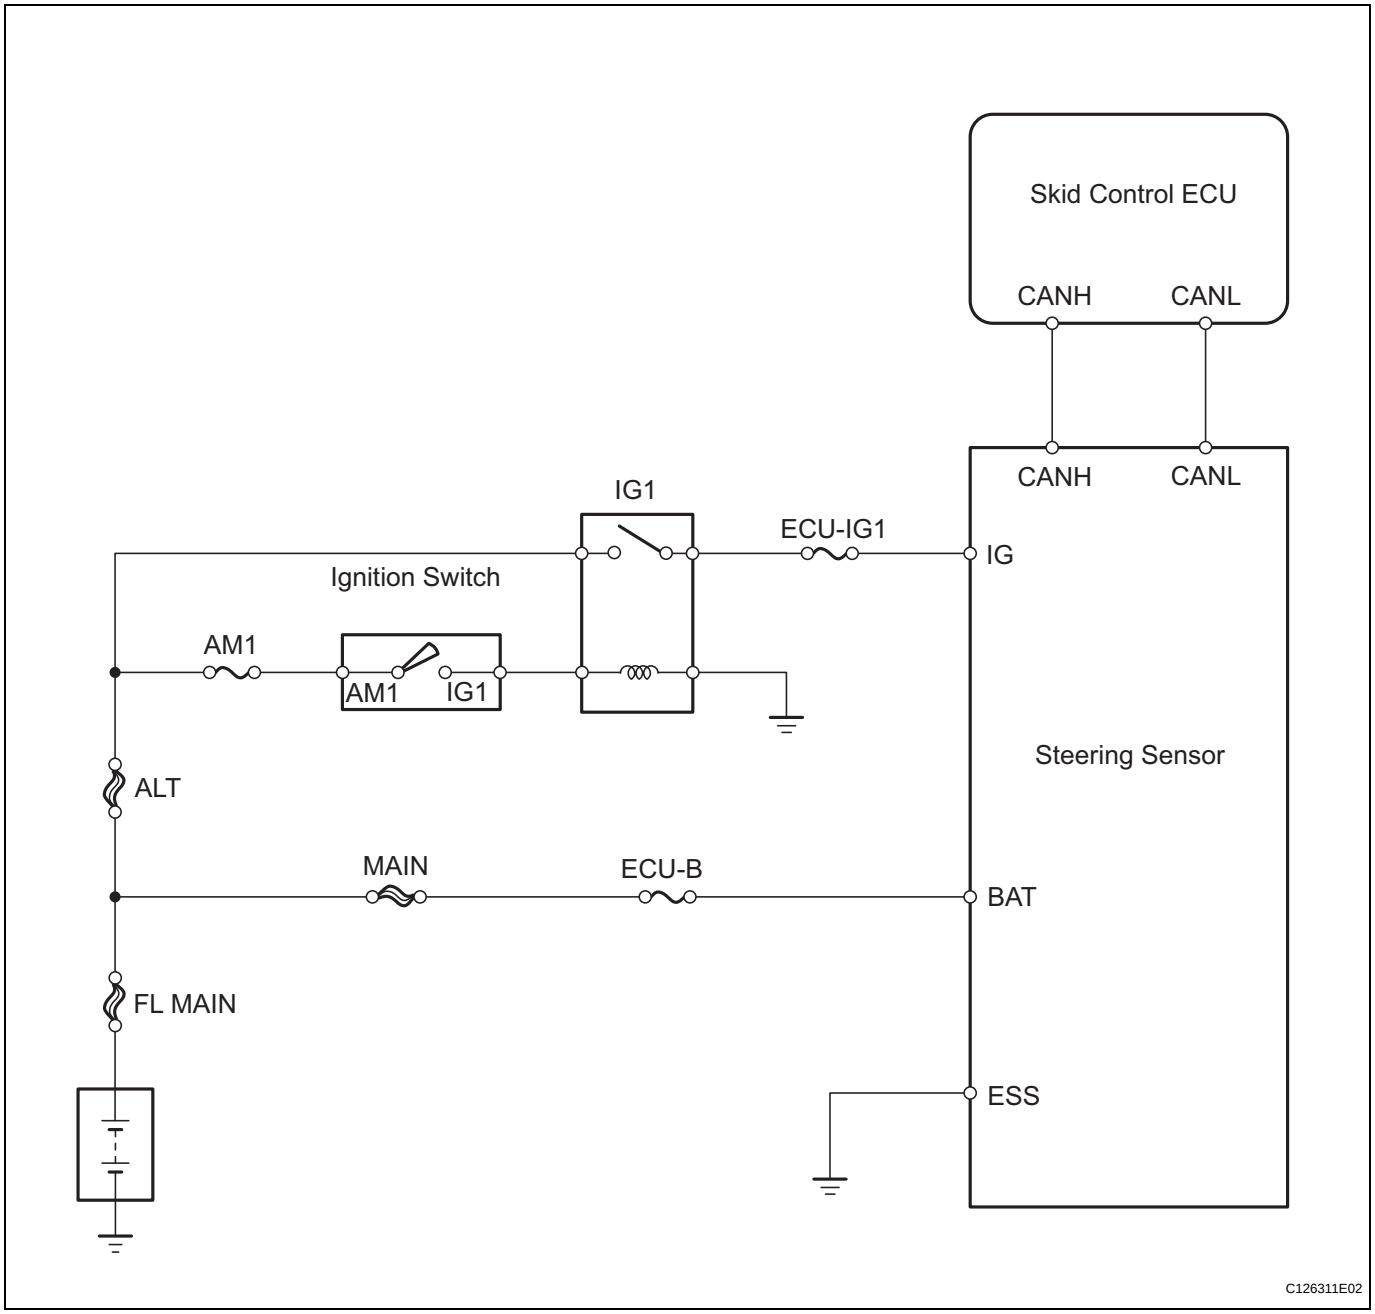
REPAIR CIRCUIT INDICATED BY OUTPUT DTC



DTC	C1231/31	Steering Angle Sensor Circuit Malfunction

DESCRIPTION

The steering sensor signal is sent to the skid control ECU via the CAN communication system. When there is a malfunction in the CAN communication system, it is detected by the steering sensor zero point malfunction diagnostic function.

DTC No.	DTC Detection Condition	Trouble Area
C1231/31	When IG1 terminal voltage 9.5 V or more, steering angle sensor malfunction signal received.	• Steering sensor • Steering sensor circuit • Steering sensor power supply • CAN communication system

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- When U0073/94, U0123/62, U0124/95 or U0126/63 is output together with C1231/31, inspect and repair the trouble areas indicated by U0073/94, U0123/62, U0124/95 or U0126/63 first.
- When there are problems with the speed sensor or the yaw rate sensor, DTCs for the steering sensor may be output even when the steering sensor is normal. When DTCs for the speed sensor or yaw rate sensor are output together with other DTCs for the steering sensor, inspect and repair the speed sensor and yaw rate sensor first, and then inspect and repair the steering sensor.

1 CHECK HARNESS AND CONNECTOR (MOMENTARY INTERRUPTION)

(a) Using the DATA LIST of the intelligent tester, check for any momentary interruptions in the wire harness and connectors between the skid control ECU and the steering sensor (see page BC-23).

Skid control ECU

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
STEERING OPN	Steering angle sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-

OK:

There are no momentary interruptions.

HINT:

Perform the above inspection before removing the sensor and connector.

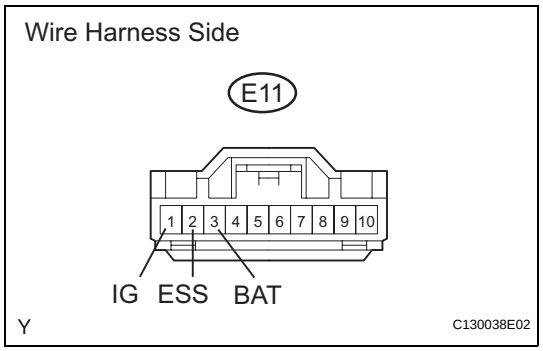
NG → **Go to step 4**

OK

2 CHECK DTC

(a) Clear the DTC (see page BC-47).
(b) Turn the ignition switch OFF.
(c) Turn the ignition switch ON again and check that no CAN communication system DTC is output.
(d) Drive the vehicle and turn the steering wheel to the right and left at a speed of 35 km/h (24 mph) and check that no speed and yaw rate sensor DTCs are output.

Result



Result	Proceed to
DTC is not output	A
CAN communication system DTC is output	B
Speed sensor or yaw rate sensor DTC is output	C

B → **CHECK CAN COMMUNICATION SYSTEM**

C → **REPAIR CIRCUIT INDICATED BY OUTPUT DTC**

A

3	CHECK WIRE HARNESS (STEERING SENSOR - BATTERY AND BODY GROUND)

(a) Remove the steering wheel assembly and the column cover.
(b) Disconnect the E11 sensor connector.
(c) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Condition	Specified Condition
E11-1(IG) - Body ground	Ignition switch ON	10 to 14 V
E11-3 (BAT) - Body ground	Always	10 to 14 V

(d) Measure the resistance of the wire harness side connector.
Standard resistance

Tester Connection	Specified Condition
E11-2 (ESS) - Body ground	Below 1Ω

NG → REPAIR OR REPLACE HARNESS AND CONNECTOR

BC

OK

REPLACE STEERING SENSOR

4	REPAIR OR REPLACE HARNESS AND CONNECTOR (STEERING SENSOR TO SKID CONTROL ECU)

NEXT

5	RECONFIRM DTC

(a) Clear the DTC (see page BC-47).
(b) Start the engine.
(c) Drive the vehicle and turn the steering wheel to the right and left at a speed of 45 km/h (28 mph) or more for several seconds.
(d) Check if the same DTC is recorded (see page BC-47).
Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → Go to step 2

A

END

DTC	**C1232/32**	**Stuck in Deceleration Sensor**
DTC	**C0371/71**	**Yaw Rate Sensor (Test Mode DTC)**
DTC	**C1234/34**	**Yaw Rate Sensor Malfunction**
DTC	**C1243/43**	**Acceleration Sensor Stuck Malfunction**
DTC	**C1244/44**	**Open or Short in Deceleration Sensor Circuit**
DTC	**C1245/45**	**Acceleration Sensor Output Malfunction**
DTC	**C1279/79**	**Deceleration Sensor Output Voltage Malfunction (Test Mode DTC)**
DTC	**C1381/97**	**Yaw Rate and / or Acceleration Sensor Power Supply Voltage Malfunction**

BC

DESCRIPTION

The skid control ECU receives signals from the yaw rate and deceleration sensor via the CAN communication system.
The yaw rate sensor has a built-in deceleration sensor and detects the vehicle's condition using 2 circuits (GL1: G sensor 1, GL2: G sensor 2).
If there is trouble in the bus lines between the yaw rate and deceleration sensor and the CAN communication system, DTC U0123/62 (malfunction in CAN communication with the yaw rate sensor) and U0124/95 (malfunction in CAN communication with the deceleration sensor) are output.
These DTCs are also output when the calibration has not been completed.
DTCs C0371/71 and C1279/79 are deleted when the yaw rate and deceleration sensor sends a yaw rate and/or deceleration signal or test mode ends. DTCs C0371/71 and C1279/79 are output only in test mode.

DTC No.	DTC Detection Condition	Trouble Area
C1232/32	At vehicle speed of 10 km/h (6 mph) or more, either GL1 or GL2 (input signal) does not change for 30 seconds or more.	• Yaw rate sensor • Yaw rate sensor circuit
C0371/71	Detected only during test mode	• Yaw rate sensor • Yaw rate sensor circuit
C1234/34	Sensor malfunction signal received from yaw rate sensor.	• Yaw rate sensor • Yaw rate sensor circuit
C1243/43	While vehicle speed changes from 30 km/h (19 mph) to 0 km/h (0 mph), condition that values of GL1 and GL2 do not change occurs 16 times or more.	• Yaw rate sensor • Yaw rate sensor circuit
C1244/44	When either condition below is met: 1. IG terminal voltage is 9.5 V to 17.2 V and YD1 malfunction signal from yaw rate sensor is received. 2. After difference between GL1 and GL2 becomes 0.6 G or more with vehicle stationary, difference remains 0.4 G or more for 60 seconds or more.	• Yaw rate sensor • Yaw rate sensor circuit

DTC No.	DTC Detection Condition	Trouble Area
C1245/45	At vehicle speed of 30 km/h (19 mph) or more, difference between forward and backward G calculated from deceleration sensor value and that calculated from vehicle speed sensor value exceeds 0.35 G for 60 seconds or more.	• Yaw rate sensor • Yaw rate sensor circuit
C1279/79	Detected only during test mode.	• Yaw rate sensor • Yaw rate sensor circuit
C1381/97	At vehicle speed of more than 3 km/h (2 mph), deceleration sensor power source malfunction signal received for 10 seconds or more.	• Yaw rate sensor • Yaw rate sensor circuit

WIRING DIAGRAM

Refer to DTC C1210/23, C1336/39 (see page BC-89).

INSPECTION PROCEDURE

NOTICE:

When replacing yaw rate and deceleration sensor, perform zero point calibration (see page BC-24).

HINT:

When DTC U0123/62, U0124/95 or U0126/63 is output together with DTC C1232/32, C1234/34, C1243/43, C1244/44, C1245/45, or C1387/97, inspect and repair the trouble areas indicated by DTC U0123/62, U0124/95 or U0126/63 first.

BC

1 CHECK DTC

(a) Clear the DTC (see page BC-47).
(b) Turn the ignition switch OFF.
(c) Turn the ignition switch ON again and check that no CAN communication system DTC(s) is output.
(d) Drive the vehicle at a speed of 30 km/h (19 mph) or more and check that no DTCs are output.

Result

Result	Proceed to
DTC is output (relating to yaw rate and deceleration sensor)	A
DTC is output (relating to CAN communication system)	B
DTC is not output	C

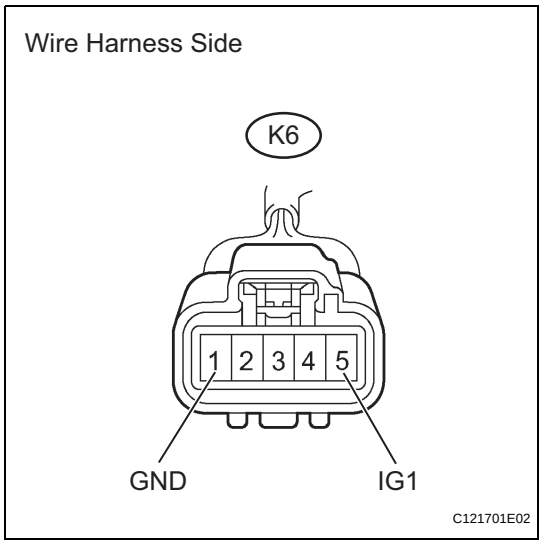
B → **REPAIR CAN COMMUNICATION SYSTEM**

C → **END**

A

2 CHECK YAW RATE SENSOR INSTALLATION

(a) Check that the yaw rate sensor has been installed correctly (see page BC-211).



OK:

The sensor is tightened to the specified torque.
The sensor is not tilted.

NG → **INSTALL YAW RATE SENSOR CORRECTLY**

OK

3	**CHECK WIRE HARNESS (YAW RATE SENSOR - BATTERY AND BODY GROUND)**

(a) Disconnect the K6 sensor connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Condition	Specified Condition
K6-5 (IG) - Body ground	Ignition switch ON	10 to 14 V

(c) Measure the resistance of the wire harness side connector.
Standard resistance

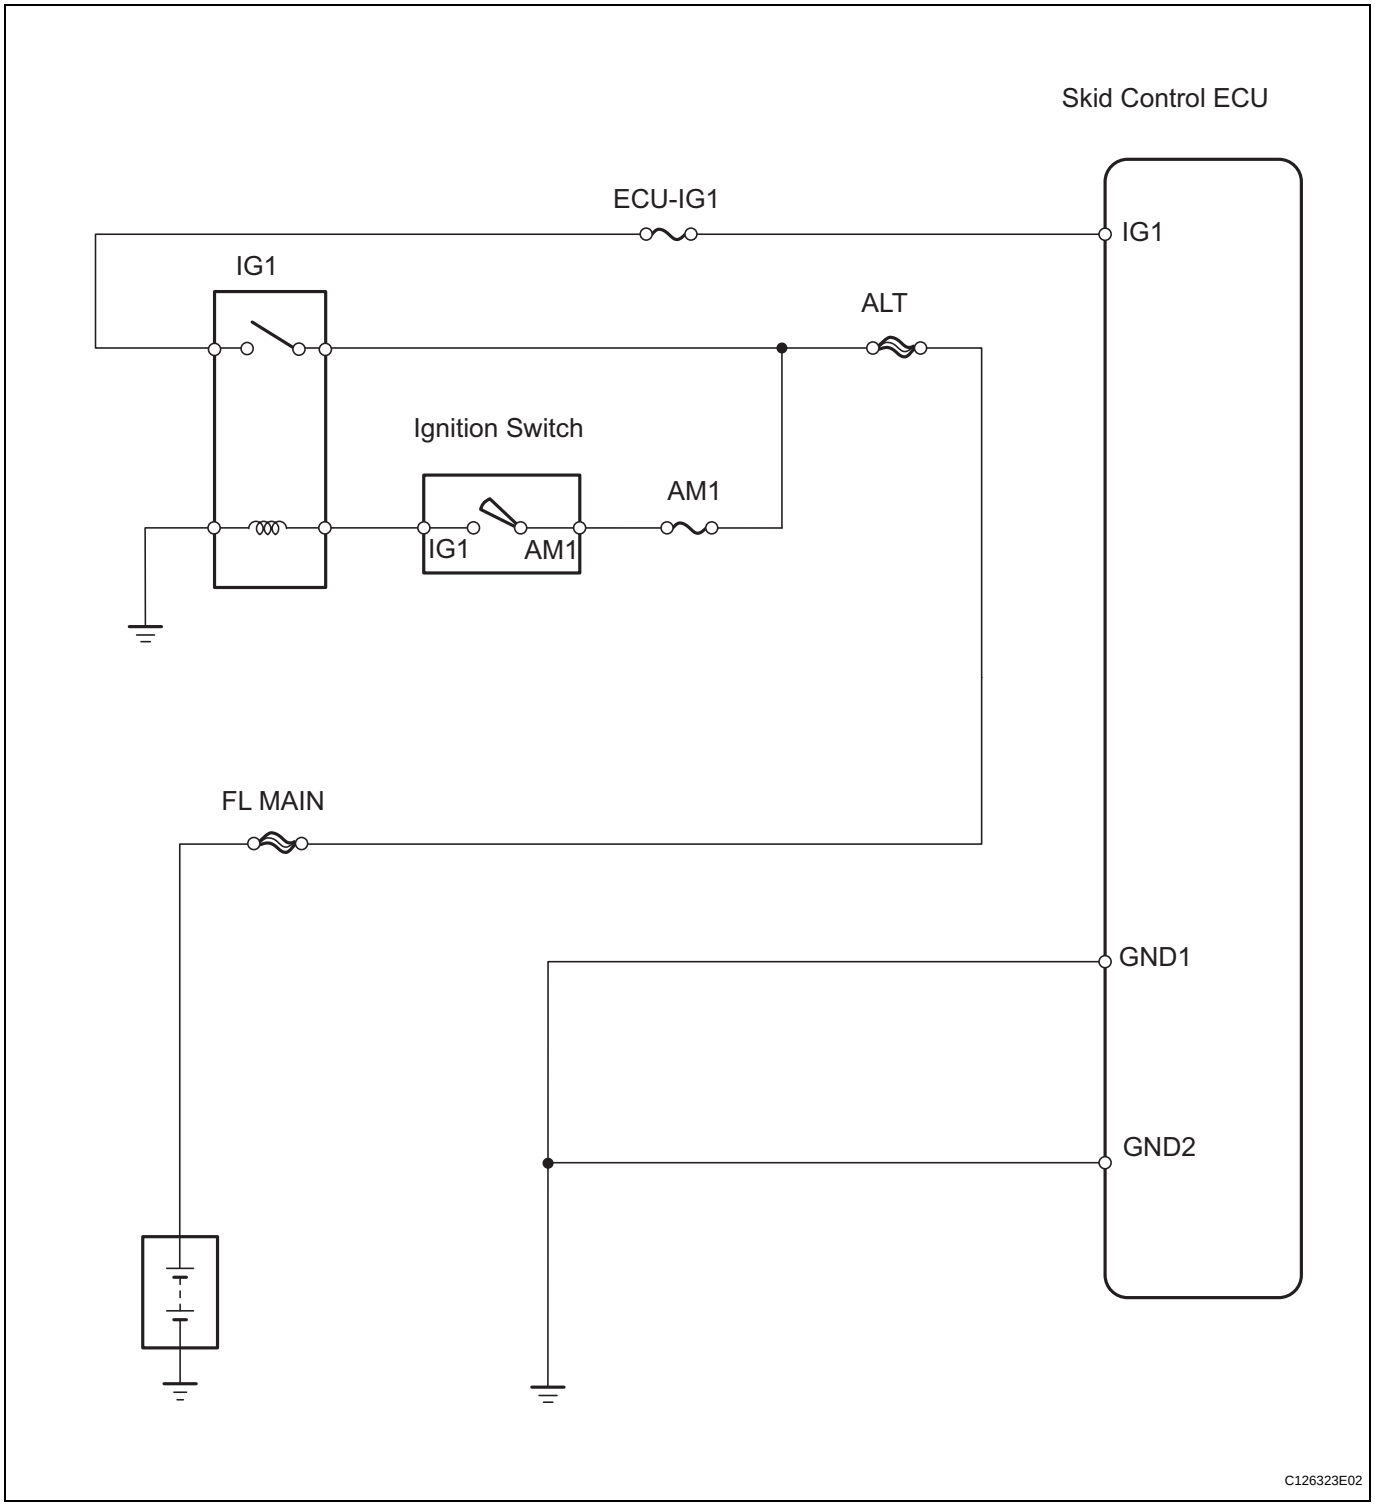
Tester Connection	Specified Condition
K6-1 (GND) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE YAW RATE SENSOR

BC



DTC	C1241/41	Low Battery Positive Voltage

DESCRIPTION

When there is an abnormality in the power supply circuit of the brake actuator (skid control ECU), the skid control ECU sets a DTC and the operation is prohibited by the fail-safe function. This DTC is set when the voltage supplied to terminal IG1 is outside the DTC detection threshold, due to abnormalities of the battery, power source circuits or charging circuits such as the alternator circuit.
The fail-safe function is canceled when the voltage to terminal IG1 returns to normal.

DTC No.	DTC Detection Condition	Trouble Area
C1241/41	When one of following conditions is met: 1. At vehicle speed of 3 km/h (2 mph) or more, IG1 terminal voltage 9.5 V or less for 10 seconds or more. 2. When solenoid relay remains ON and IG1 terminal voltage 9.5 V or less, relay contact open for 0.2 seconds or more. 3. When motor relay terminals ON and IG terminal voltage 9.5 V or less, actuator pump activation motor OFF status continues for 0.1 seconds or more. 4. When IG1 terminal voltage 9.5 V or less, vehicle speed sensor power supply decreases for 60 seconds or more.	• Battery • Charging system • Power source circuit • Internal power supply circuit of skid control ECU

WIRING DIAGRAM

BC

INSPECTION PROCEDURE

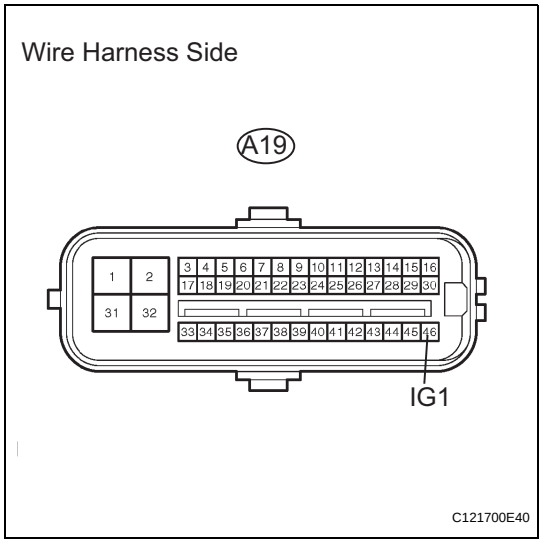
1	**INSPECT FUSE (ECU-IG1)**

(a) Remove the ECU-IG1 fuse from the instrument panel junction block.
(b) Measure the resistance of the fuse.

Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK



2	INSPECT BATTERY

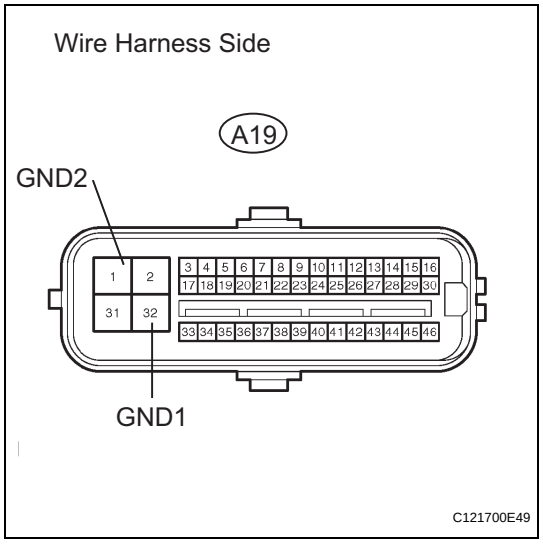
(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **CHECK CHARGING SYSTEM**

OK

3	CHECK WIRE HARNESS (SKID CONTROL ECU - BATTERY)

(a) Disconnect the A19 ECU connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage



Tester Connection	Condition	Specified Condition
A19-46 (IG1) - Body ground	Ignition switch ON	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

BC

4 CHECK WIRE HARNESS (SKID CONTROL ECU - BODY GROUND)

(a) Disconnect the A19 ECU connector.
(b) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
A19-32 (GND1) - Body ground	Below 1 Ω
A19-1 (GND2) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

5 RECONFIRM DTC

(a) Clear the DTC (see page BC-47).
(b) Drive the vehicle at 3 km/h (2 mph) or more for several seconds.
(c) Check if the same DTC is output (see page BC-47).

Result

Result	Proceed to
DTC is output	A
DTC is not output	B

A

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

BC

DTC	C1246/46	Master Cylinder Pressure Sensor Malfunction

DTC	C1281/81	Master Cylinder Pressure Sensor Output Malfunction (Test Mode DTC)

DESCRIPTION

The master cylinder pressure sensor is connected to the skid control ECU in the ABS and TRACTION actuator.
DTC C1281/81 can be detected when the master cylinder pressure sensor sends a master cylinder pressure signal or test mode ends. DTC C1281/81 is output only in test mode.

DTC No.	DTC Detection Condition	Trouble Area
C1246/46	When one of following conditions is met: 1. At vehicle speed of 7 km/h (4.3 mph) or more, when PMC terminal voltage over 0.86 V, voltage does not change by 0.005 V or more for 30 seconds. 2. Noise occurs in the PMC terminal 7 times or more within 5 seconds. 3. When stop light switch OFF, PMC terminal voltage more than 0.86 V or less than 0.3 V for 5 seconds or more. 4. With IG1 terminal voltage between 9.5 V and 17.2 V, VCM terminal voltage not between 4.4 V and 5.6 V for 1.2 seconds or more. 5. When VCM terminal voltage between 4.4 V and 5.6 V, PCM terminal voltage not between 0.14 V and 4.85 V for 1.2 seconds or more.	• Master cylinder pressure sensor • Master cylinder pressure sensor circuit • Stop light switch circuit • ABS and TRACTION actuator
C1281/81	Detected only during test mode.	• Master cylinder pressure sensor • Master cylinder pressure sensor circuit • Stop light switch circuit • ABS and TRACTION actuator

BC

INSPECTION PROCEDURE

NOTICE:
When replacing the ABS and TRACTION actuator, perform zero point calibration (see page BC-24).

1	READ VALUE OF INTELLIGENT TESTER (STOP LIGHT SWITCH)

(a) Check the DATA LIST for proper functioning of the stop light switch.

Skid control ECU

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
STOP LAMP SW	Stop light switch / ON or OFF	ON: Brake pedal applied OFF: Brake pedal released	-

OK:
ON (brake pedal is depressed) appears on the screen.

NG → **CHECK STOP LIGHT SWITCH CIRCUIT**

OK

2	READ VALUE OF INTELLIGENT TESTER (MASTER CYLINDER PRESSURE SENSOR)

(a) Check the DATA LIST for proper functioning of the master cylinder pressure sensor.

Skid control ECU

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
MAS CYL PRESS 1	Master cylinder pressure sensor 1 reading / min.: 0 V, max.: 5 V	When brake pedal released: 0.3 to 0.9 V	-

OK:
When the pedal is depressed, the sensor output voltage increases.

NG → **REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY**

OK

3	RECONFIRM DTC

(a) Clear the DTC(s) (see page BC-47).
(b) Drive the vehicle at a speed of 30 km/h (18 mph) or more and perform a braking test (decelerate the vehicle by depressing the brake pedal).
(c) Check if the same DTC(s) is recorded (see page BC-47).

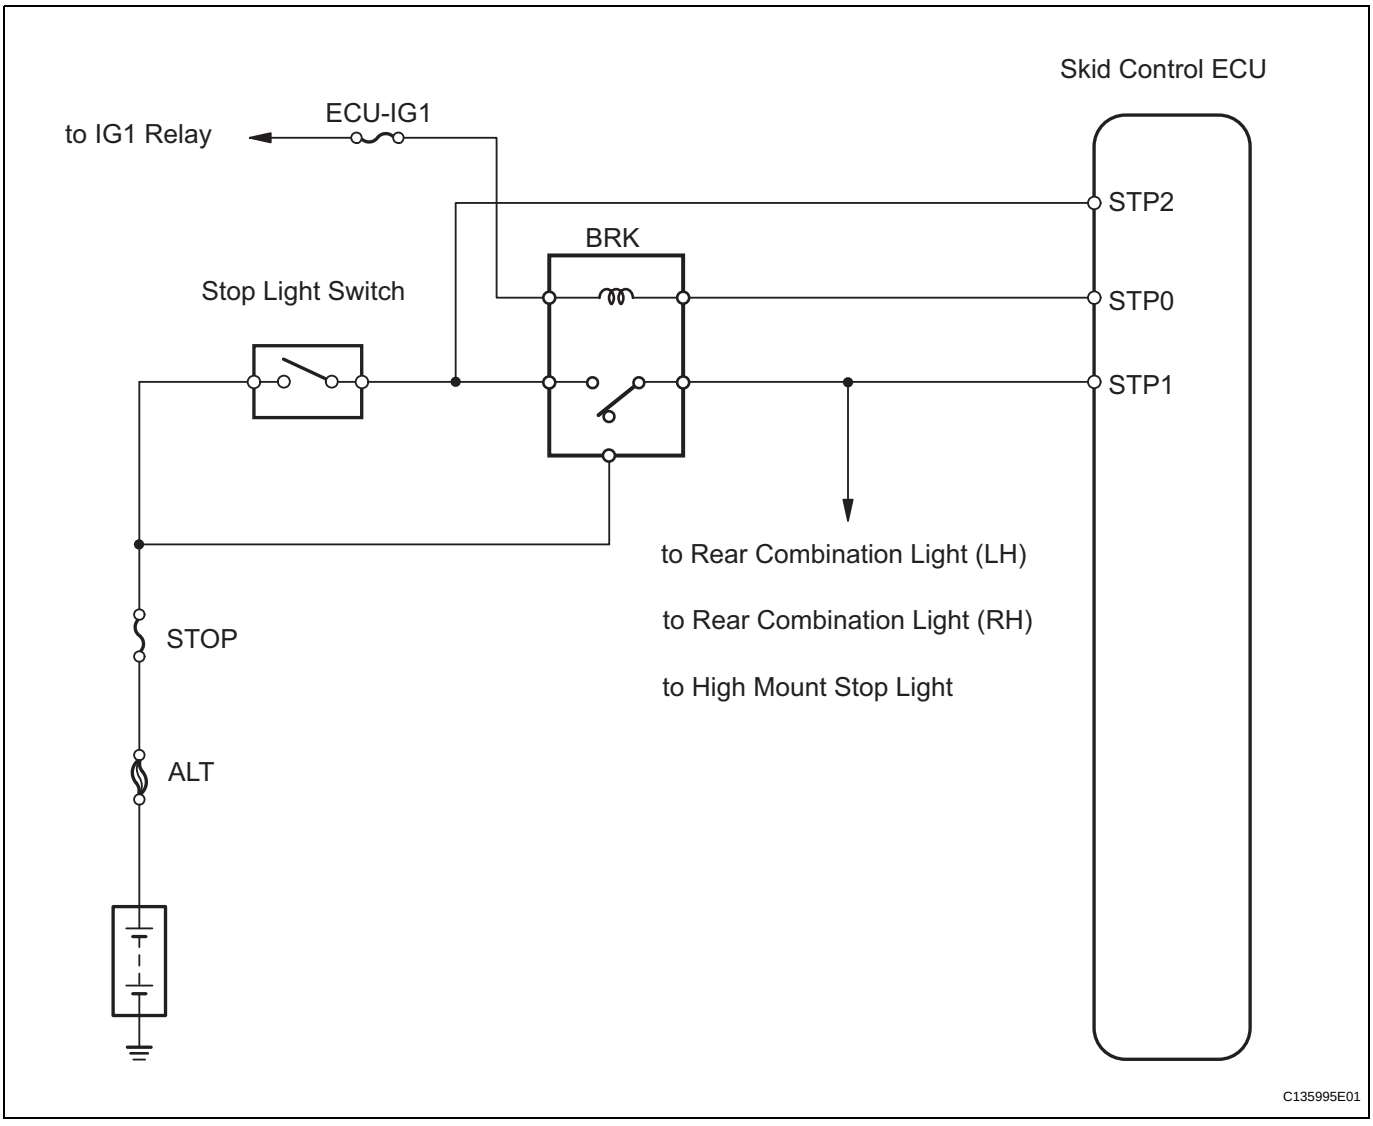
REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

BC

DTC	C1249/49	Open in Stop Light Switch Circuit

DESCRIPTION



The skid control ECU detects the brake operating conditions through a signal transmitted by the stop light switch. The skid control ECU incorporates an open circuit detection circuit. This DTC is set under either of the following conditions:

- An open is detected in the stop light signal input line when the stop light switch is off.
- An open is detected in the stop light circuit lead to the ground when the stop light switch is off.

DTC No.	DTC Detection Condition	Trouble Area
C1249/49	When either condition below is met: 1. When IG1 terminal voltage 9.5 to 17.2 V, open circuit of stop light switch continues for 0.3 seconds more. 2. w/ 16-inch disc: With brake pedal load sensing switch ON, master pressure 2 MPa or more, vehicle deceleration 0.2 G or more (calculated based on vehicle speed), stop switch OFF condition continues for 2 seconds or more.	• ECU-IG1 fuse • STOP fuse • BRK relay • Stop light switch • Stop light switch circuit • ABS and TRACTION actuator

WIRING DIAGRAM

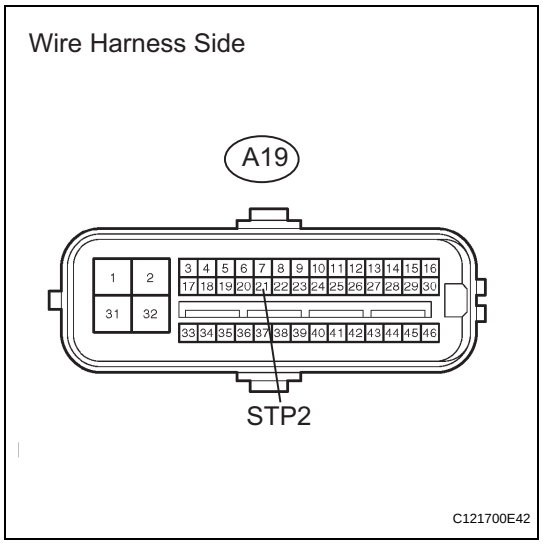
BC

INSPECTION PROCEDURE

1 **READ VALUE OF INTELLIGENT TESTER (STOP LIGHT SWITCH)**

(a) Check the DATA LIST for proper functioning of the stop light switch.

Skid control ECU



Item (Display)	Measurement Item / Range (Display)	Normal Conditions	Diagnostic Note
STOP LAMP SW	Stop light switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-

OK:
ON (brake pedal is depressed) appears on the screen.

NG → **Go to step 3**

OK

2 **CHECK WIRE HARNESS (STP VOLTAGE)**

(a) Disconnect the A19 ECU connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

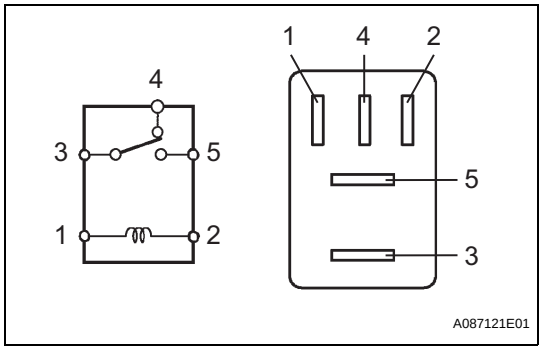
Tester Connection	Switch Condition	Specified Condition
A19-21 (STP2) - Body ground	Brake pedal depressed	8 to 14 V
A19-21 (STP2) - Body ground	Brake pedal released	Below 4.0 V

NG → **Go to step 6**

OK

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

3 **INSPECT FUSE (STOP, ECU-IG1)**



(a) Remove the STOP fuse and ECU-IG1 fuse from the instrument panel junction block.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

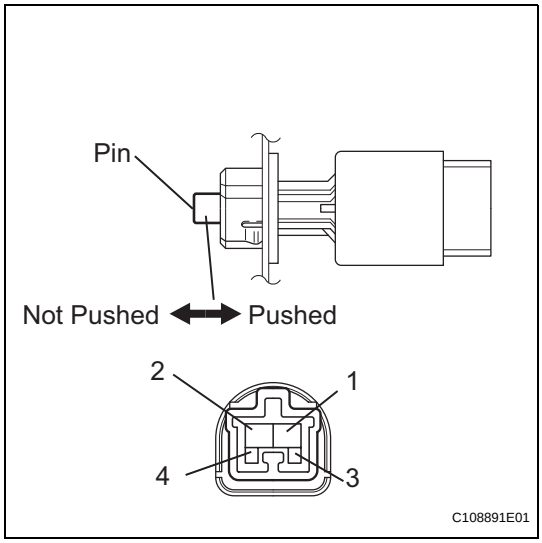
NG → **REPLACE FUSE**

BC

OK

4	INSPECT STOP LIGHT CONTROL RELAY (Marking: BRK)

(a) Remove the stop light control relay from the engine room No. 1 relay block.
(b) Measure the resistance of the relay.



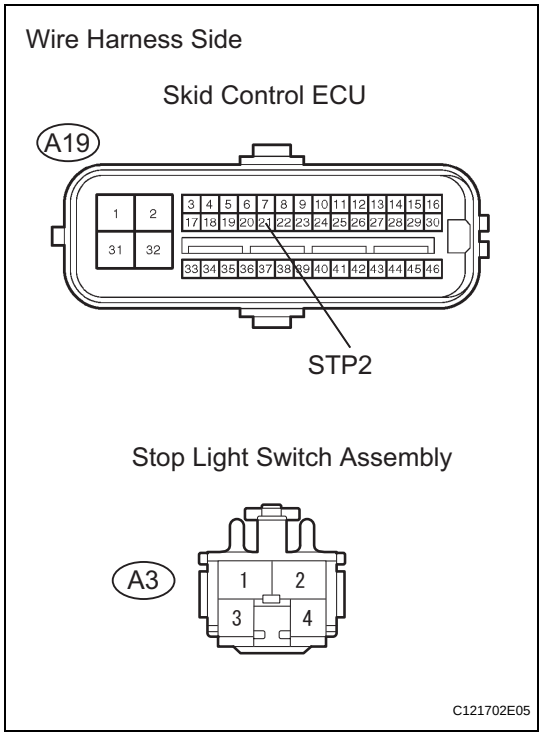
Tester Connection	Specified Condition
3 - 4	Below 1 Ω
3 - 5	10 kΩ or higher
3 - 4	10 kΩ or higher (when battery voltage is applied to terminals 1 and 2)
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

NG → REPLACE STOP LIGHT CONTROL RELAY

BC

OK

5	INSPECT STOP LIGHT SWITCH ASSEMBLY



(a) Disconnect the stop light switch connector.
(b) Measure the resistance of the switch.
Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 - 2	Pin not pushed	Below 1 Ω
1 - 2	Pin pushed	10 kΩ or higher
3 - 4	Pin not pushed	10 kΩ or higher
3 - 4	Pin pushed	Below 1 Ω

NG → REPLACE STOP LIGHT SWITCH ASSEMBLY

OK

6 CHECK WIRE HARNESS (SKID CONTROL ECU - STOP LIGHT SWITCH)

(a) Disconnect the A19 ECU connector.
(b) Disconnect the A3 switch connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
A19-21 (STP2) - A3-1	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

7 RECONFIRM DTC

(a) Clear the DTC (see page BC-47).
(b) Check if the same DTC is output (see page BC-47).

Result

Result	Proceed to
DTC is output	A
DTC is not output	B

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

BC

DTC	C1251/51	Open in Pump Motor Circuit

DESCRIPTION

The motor relay drives the pump motor based on a signal from the skid control ECU.

DTC No.	DTC Detection Condition	Trouble Area
C1251/51	When either condition below is met: 1. Actuator pump motor does not operate properly. 2. Open in actuator pump motor circuit continues for at least 2 seconds.	• Wire harness • ABS and TRACTION actuator

WIRING DIAGRAM

Refer to DTC C0273/13, C0274/14, C1361/91 (see page BC-79).

INSPECTION PROCEDURE

1 PERFORM ACTIVE TEST BY INTELLIGENT TESTER (MOTOR RELAY)

(a) Select the ACTIVE TEST, generate a control command, and then check that the ABS motor relay operates.

BC

Skid control ECU

Item	Test Details	Diagnosis Note
MOTOR RELAY	Turn ABS motor relay ON / OFF	Operation sound of motor can be heard

OK:

Operation sound of ABS motor is heard.

NG → **Go to step 3**

OK

2 RECONFIRM DTC

(a) Clear the DTC (see page BC-47).
(b) Start the engine.
(c) Drive the vehicle at a speed of 6 km/h (4 mph) or more for several seconds.
(d) Check if the same DTC is output (see page BC-47).

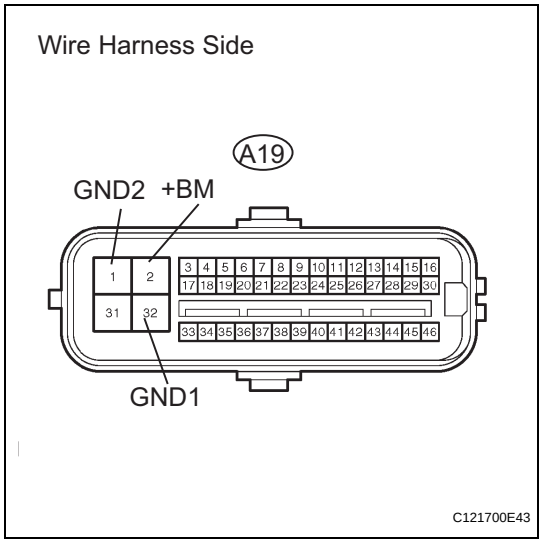
Result

Result	Proceed to
DTC is output	A
DTC is not output	B

B → **END**

A

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY



3	INSPECT FUSE (ABS1)

(a) Remove the ABS1 H-fuse from the engine room No. 1 relay block.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

4	CHECK WIRE HARNESS (SKID CONTROL ECU - BATTERY AND BODY GROUND)

(a) Disconnect the A19 connector.
(b) Measure the resistance of the wire harness side connector.
Standard resistance

Tester Connection	Specified Condition
A19-32 (GND1) - Body ground	Below 1 Ω
A19-1 (GND2) - Body ground	Below 1 Ω

(c) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Specified Condition
A19-2 (BM) - Body ground	10 to 14 V

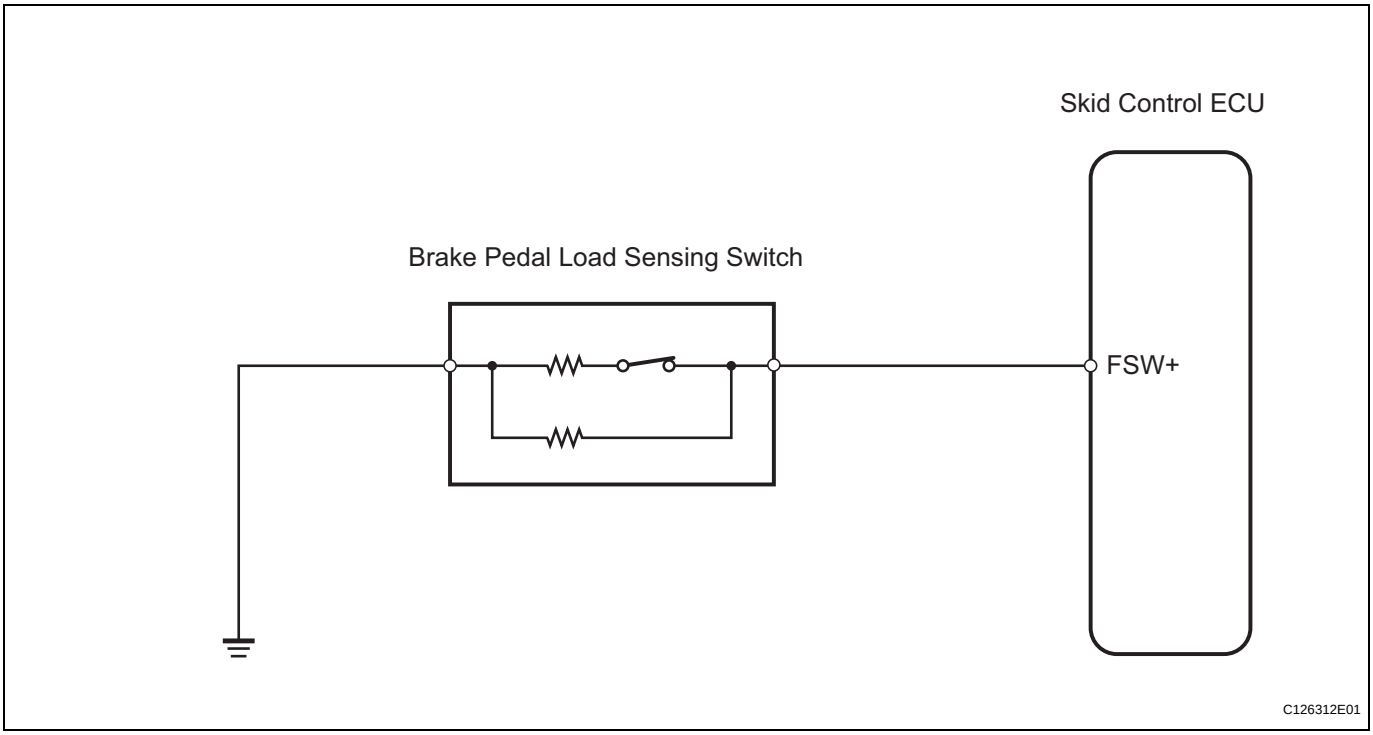
NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

BC

DTC C1267/67 Brake Pedal Load Sensing Switch



DESCRIPTION

The brake pedal load sensing switch is turned on when the brake pedal is depressed with force exceeding a predetermined level.
The skid control ECU detects if the brake pedal is depressed or not via this circuit.

DTC No.	DTC Detection Condition	Trouble Area
C1267/67	When one of following conditions is met: 1. An open or short in the brake pedal load sensing switch continues for 0.3 seconds or more. 2. Immediately after the ignition switch is turned ON, the brake pedal load sensing switch is ON and the stop light switch is OFF for 10 seconds or more. 3. While the vehicle speed change from 0 mph (0 km/h) to 18 mph (30 km/h), the condition that the brake pedal load sensing switch remains ON occurs 5 times in succession. 4. With the stop light switch ON, the brake pedal load sensing switch OFF, and the master cylinder pressure 6 Mpa or more, the deceleration is 0.4 G or more for 1 second or more. 5. With the stop light switch ON, the brake pedal load sensing switch OFF, and the master cylinder pressure 6 Mpa or more, the vehicle speed is 0 mph (0 km/h) for 5 seconds or more.	• Brake pedal load sensing switch • Brake pedal load sensing switch circuit

BC

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (see page BC-24).

HINT:

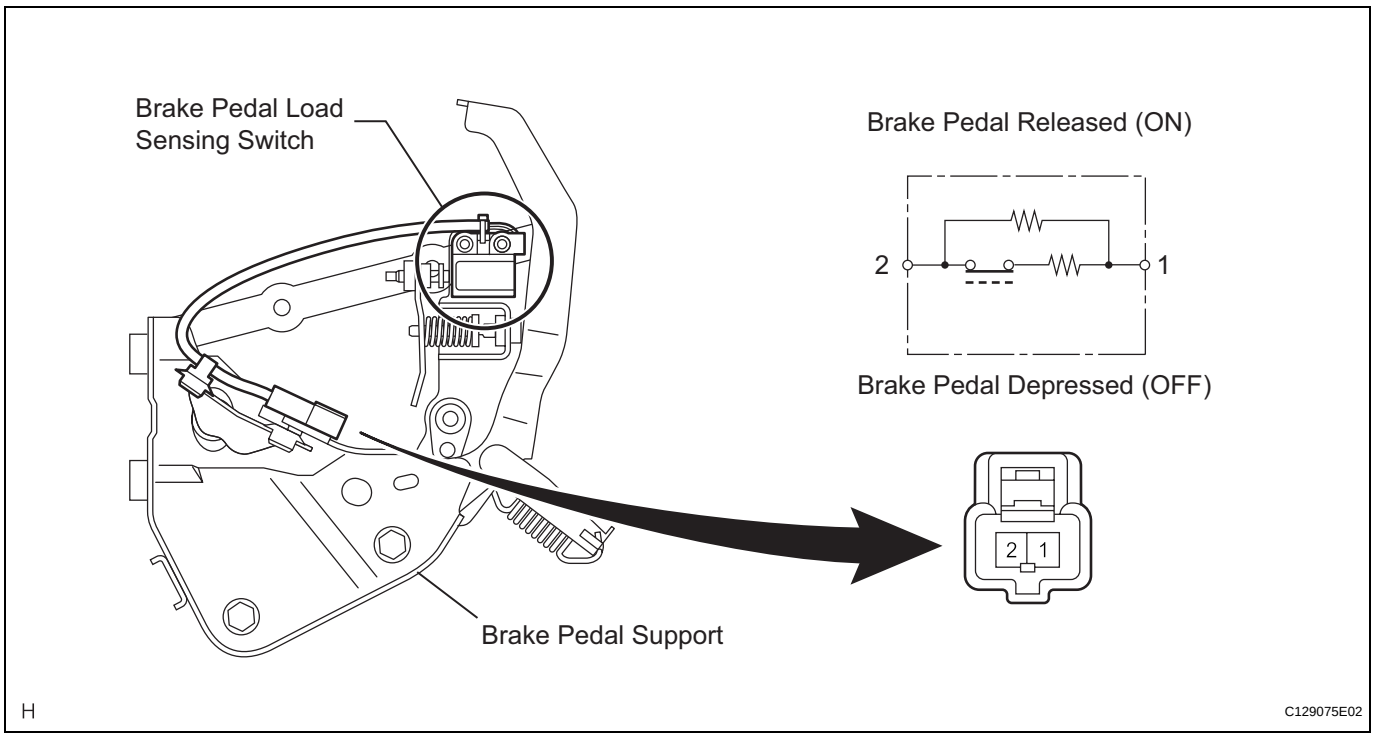
If DTC C1249/49 is output, repair it before repairing DTC C1267/67 based on the flowchart below.

1	READ VALUE OF INTELLIGENT TESTER (BRAKE PEDAL LOAD SENSING SWITCH)

(a) Check the DATA LIST for proper functioning of the brake pedal load sensing switch.

Skid control ECU

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
BRAKE PEDAL SW	Brake pedal load sensing switch / ON or OFF	ON: Depressed brake pedal OFF: Released brake pedal	-



OK:

ON (brake pedal is depressed) appears on the screen.

OK → **Go to step 4**

NG

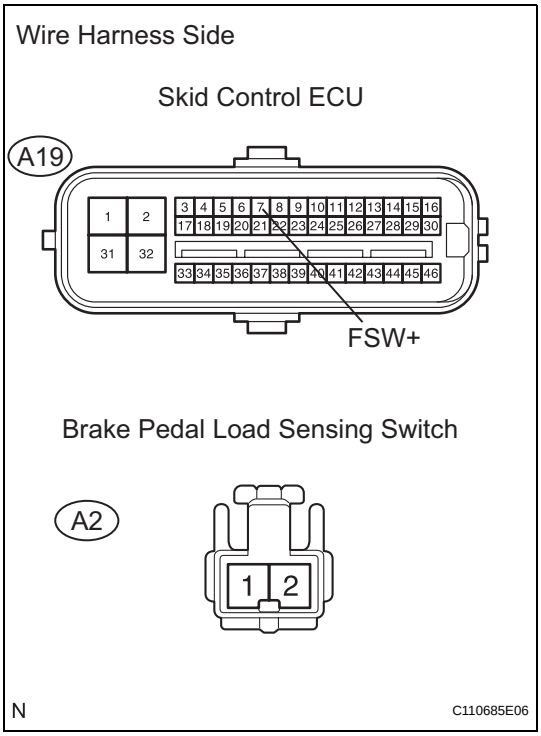
2	INSPECT BRAKE PEDAL LOAD SENSING SWITCH

NOTICE:

- **Do not remove the brake pedal load sensing switch from the brake pedal.**
- **When there is a malfunction in the brake pedal load sensing switch, replace the brake pedal.**

(a) Turn the ignition switch OFF.

(b) Disconnect the brake pedal load sensing switch connector.
(c) Measure the resistance of the switch.



Standard resistance

Tester Connection	Condition	Specified Condition
2 - 1	Brake pedal depressed (OFF)	0.95 to 1.05 kΩ
2 - 1	Brake pedal released (ON)	202.4 to 223.7 Ω

NG → **REPLACE BRAKE PEDAL SUPPORT ASSEMBLY**

OK

3 CHECK WIRE HARNESS (SKID CONTROL ECU - BRAKE PEDAL LOAD SENSING SWITCH)

(a) Disconnect the A19 ECU connector.
(b) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
A19-7 (FSW+) - A2-2	Below 1 Ω
19-7 (FSW+) - Body ground	10 kΩ or higher
A2-1 - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

4 RECONFIRM DTC

(a) Clear the DTC (see page BC-47).
(b) Check if the same DTC is recorded (see page BC-47).

Result

Result	Proceed to
DTC (C1267/67) is not output	A
DTC (C1267/67) is output	B

B → **REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY**

A

USE SIMULATION METHOD TO CHECK

DTC	C1290/66	Steering Angle Sensor Zero Point Malfunction

DESCRIPTION

The skid control ECU learns the steering sensor zero point every time the ignition switch is turned ON and the vehicle is driven at 35 km/h (22 mph) or more for approximately 5 seconds. The ECU also stores the previous zero point.
If front wheel alignment or the steering wheel position is adjusted without disconnecting the negative battery terminal, or if the yaw rate and deceleration sensor zero point is not set after the adjustments have been completed, the skid control ECU detects the difference between the previously stored zero point and the newly learned zero point and outputs this DTC to indicate a poor adjustment.
Indication of the steering sensor zero point malfunction is canceled by turning the ignition switch OFF.

DTC No.	DTC Detection Condition	Trouble Area
C1290/66	Steering sensor zero point calibration position differs significantly from recorded value	• Yaw rate and deceleration sensor zero point calibration incomplete • Poor adjustment of centered position of steering wheel • Poor adjustment of front wheel alignment

INSPECTION PROCEDURE

NOTICE:

BC

When replacing the ABS and TRACTION actuator, perform zero point calibration (see page BC-24).

1	PERFORM YAW RATE AND DECELERATION SENSOR ZERO POINT CALIBRATION

(a) Perform the zero point calibration of the yaw rate and deceleration sensor (see page BC-24).
HINT:
- When the stored zero point of the yaw rate and deceleration sensor is erased, the steering sensor zero point is also erased.
- If the zero point and output value of the yaw rate and deceleration sensor and the output values of the speed sensors are not normal, the steering sensor zero point cannot be learned normally even if the vehicle is driven straight ahead at 35 km/h (22 mph) or more.

NEXT

2	CHECK STEERING SENSOR

(a) Drive the vehicle straight ahead at 35 km/h (22 mph) or more for 5 seconds or more.
(b) Check that the centered position of the steering wheel is correctly set while driving straight ahead.
HINT:
If the front wheel alignment and steering position are adjusted due to an incorrectly centered position of the steering wheel, set the yaw rate and deceleration sensor zero point again after the adjustments are completed.

OK:
The center position of the steering wheel is correctly set.

NG → **ADJUST FRONT WHEEL ALIGNMENT**

OK ↓

3	RECONFIRM DTC

(a) Turn the ignition switch OFF.
(b) Clear the DTC (see page BC-47).
(c) Check if the same DTC is recorded (see page BC-47).

Result

Result	Proceed to
DTC (C1290/66) is not output	A
DTC (C1290/66) is output	B

B → **REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY**

A ↓

USE SIMULATION METHOD TO CHECK

DTC	C1337/37	Different Diameter Tire Malfunction

DESCRIPTION

The skid control ECU measures the speed of each wheel by receiving signals from the speed sensor. These signals are used for recognizing that all 4 wheels are operating properly. Therefore, all wheel signals must be equal.

DTC No.	DTC Detection Condition	Trouble Area
C1337/37	With vehicle speed at 20 km/h (12 mph), condition that difference in average speed between front wheels and rear wheels is 20% or more continues for 20 seconds, and occurs consecutively 3 times each time the vehicle is driven.	Tire size

INSPECTION PROCEDURE

1 CHECK TIRE SIZE

(a) Check the diameter of all 4 tires.
OK:
Diameter of all 4 tires are equal.

NG → **REPLACE TIRES WITH 4 EQUAL SIZE TIRES**

OK ↓

2 CHECK SPEED SENSOR ROTOR

(a) Remove the drive shaft, and check around the speed sensor rotor.
OK:
No scratches or foreign matter on the sensor tip.

NG → **REPLACE SPEED SENSOR ROTOR**

OK ↓

3 CHECK SPEED SENSOR

(a) Check the speed sensor circuit (see page BC-64 or BC-70).

NG → **REPLACE SPEED SENSOR**

OK ↓

4 CHECK WIRE HARNESS (SKID CONTROL ECU - EACH SPEED SENSOR)

(a) Check the speed sensor circuit (see page BC-69 or BC-70).

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

5 RECONFIRM DTC

(a) Clear the DTCs (see page BC-47).
(b) Drive the vehicle at more than 20 km/h (12 mph) for more than 60 seconds.
(c) Check if the same DTCs are detected.

Result

Result	Proceed to
DTC is output	A
DTC is not output	B

B → **END**

A

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

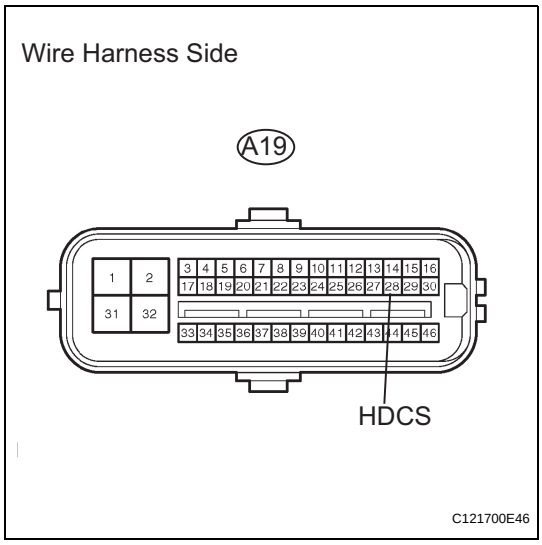
DTC	C1379/74	Downhill Assist Control Operation Switch (Test Mode DTC)

DESCRIPTION

The downhill assist control switch is connected to the skid control ECU in the ABS and TRACTION actuator.
DTC C1379/74 can be detected when the downhill assist control switch sends the downhill assist control switch signal or test mode ends. DTC C1379/74 is output only in test mode.

DTC No. DTC	DTC Detection Condition	Trouble Area
C1379/74	Detected only during test mode.	Downhill assist control switch

WIRING DIAGRAM



Refer to downhill assist control switch circuit (see page BC-157).

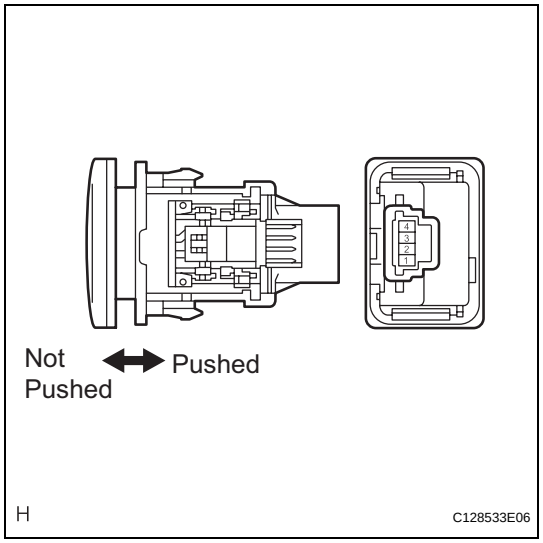
INSPECTION PROCEDURE

NOTICE:
When replacing the ABS and TRACTION actuator, perform zero point calibration (see page BC-24).

BC

1	CHECK WIRE HARNESS (SKID CONTROL ECU - BODY GROUND)

(a) Disconnect the A19 ECU.
(b) Measure the resistance of the wire harness side connector.



Standard resistance

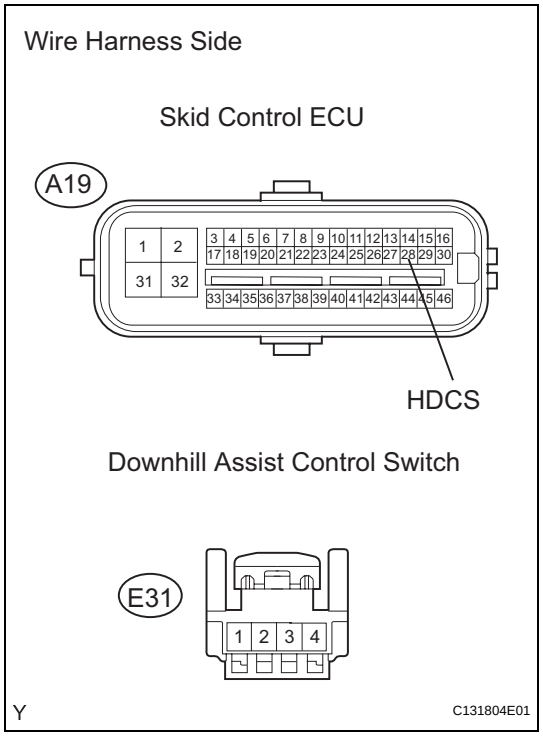
Tester Connection	Switch Condition	Specified Condition
A19-28 (HDCS) - Body ground	Downhill assist control switch is not pushed	10 kΩ or higher

OK → **REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY**

NG

2 INSPECT DOWNHILL ASSIST CONTROL SWITCH

(a) Remove the downhill assist control switch.
(b) Measure the resistance of the switch.
Standard resistance



Tester Connection	Switch Condition	Specified Condition
4 - 1	Switch is pushed	Below 1 Ω
4 - 1	Switch is not pushed	10 kΩ or higher

NG → **REPLACE DOWNHILL ASSIST CONTROL SWITCH**

OK

BC

3 CHECK WIRE HARNESS (SKID CONTROL ECU - DOWNHILL ASSIST CONTROL SWITCH)

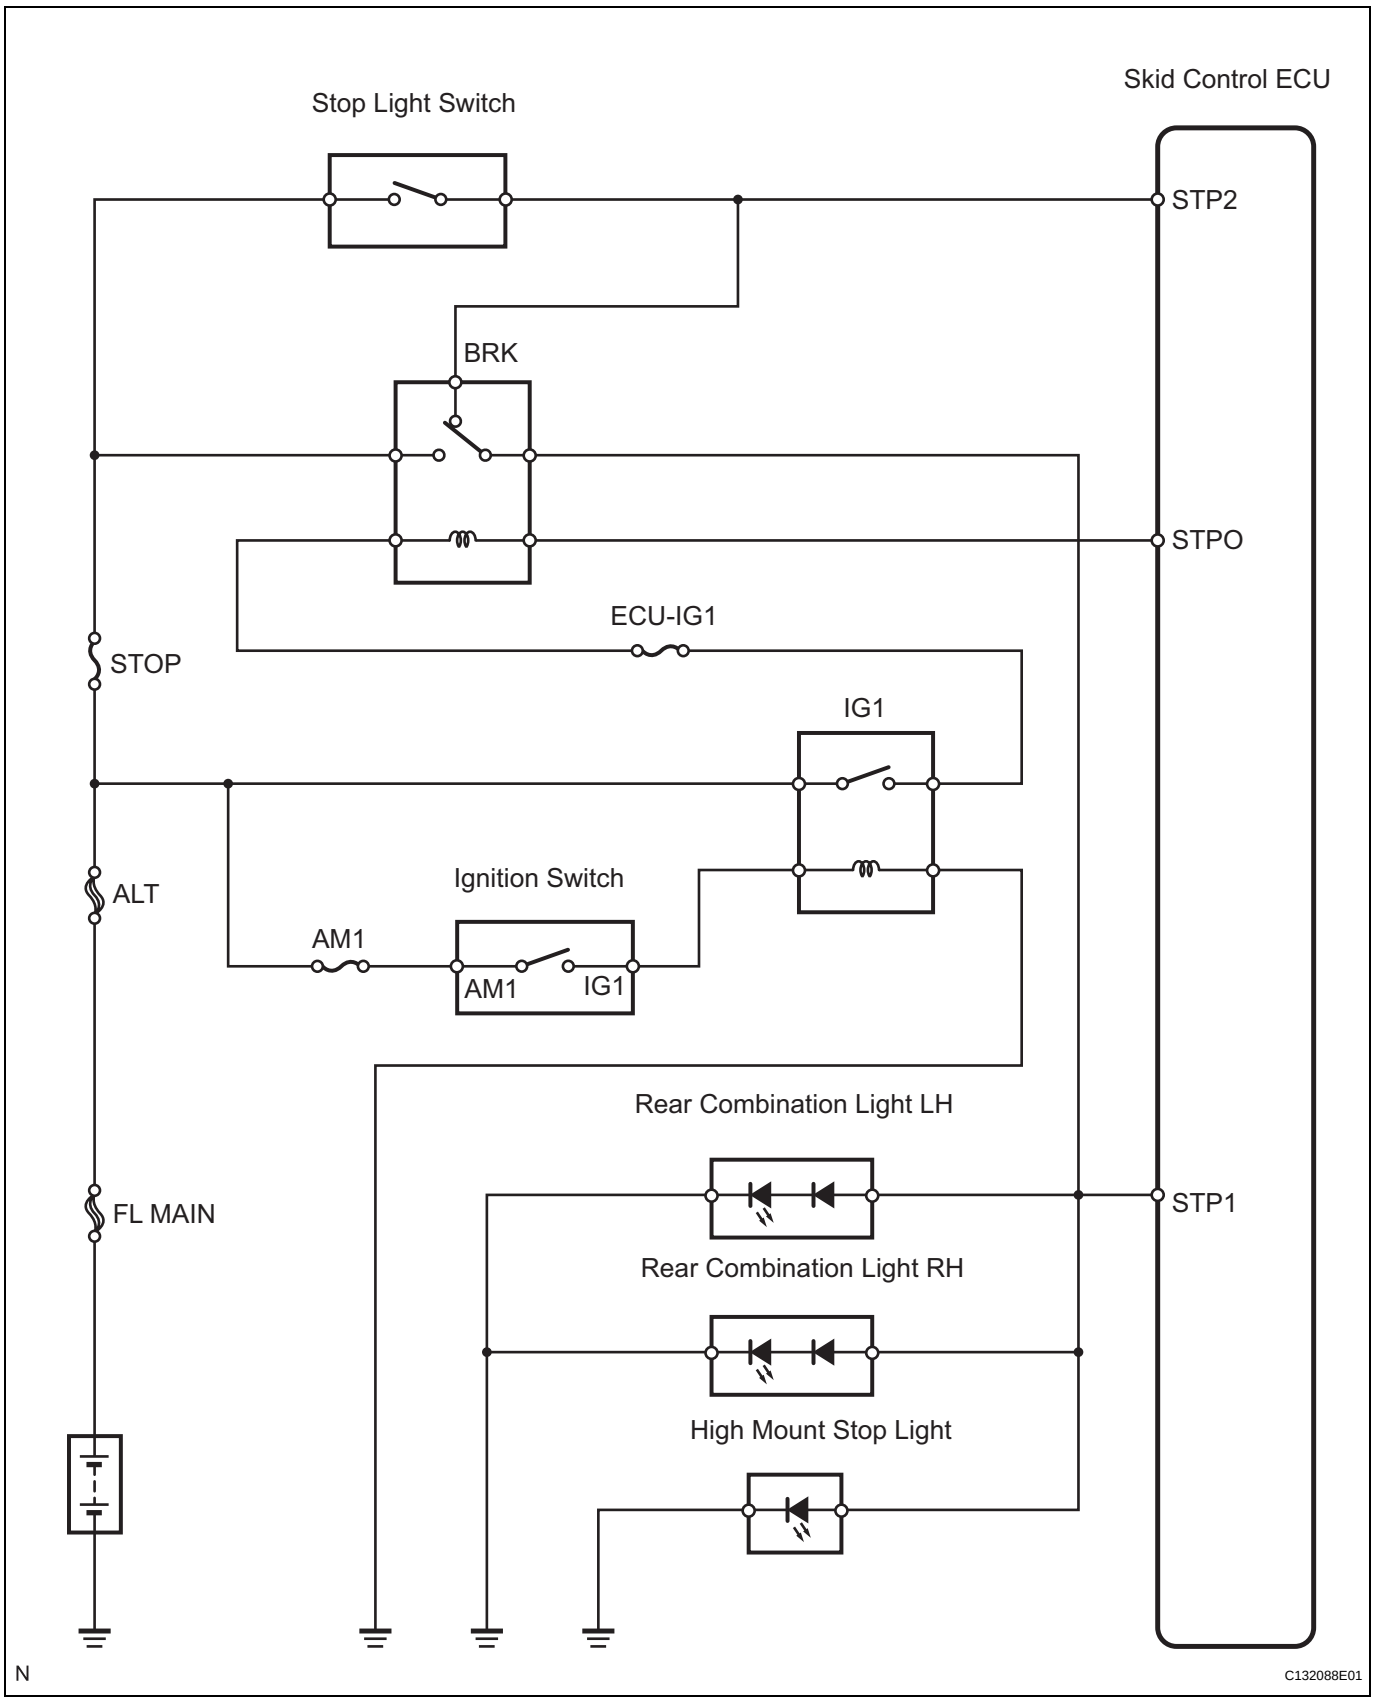
(a) Disconnect the A19 ECU connector.
(b) Disconnect the E31 switch connector.
(c) Measure the resistance of the wire harness side connectors.
Standard resistance

Tester Connection	Specified Condition
A19-28 (HDCS) - E31-4	Below 1 Ω
E31-4 - Body ground	Below 1 Ω
A19-28 (HDCS) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY



DTC	C1380/64	Stop Light Control Relay Malfunction

DESCRIPTION

The skid control ECU inputs the stop light switch signal and detects the status of the brake operation.

DTC No.	DTC Detection Condition	Trouble Area
C1380/64	When one of following conditions is met: 1. When stop light control relay is ON, relay OFF condition continues for 5 seconds or more. 2. When stop light control relay is OFF, relay ON condition continues for 5 seconds. 3. When stop light control relay is OFF, stop switch monitor (STP2) OFF condition continues for 5 seconds or more.	• Stop light • Stop light switch circuit • Stop light control (BRK) relay • ABS and TRACTION actuator (skid control ECU)

WIRING DIAGRAM

BC

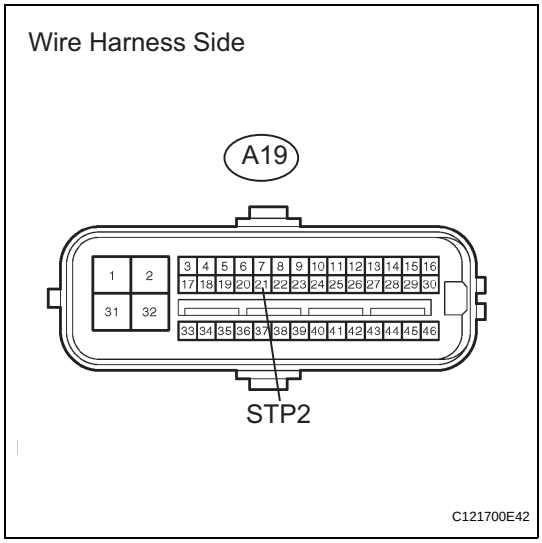
INSPECTION PROCEDURE

NOTICE:

When replacing the ABS and TRACTION actuator, perform zero point calibration (see page BC-24).

1	CHECK STOP LIGHT (OPERATION)

(a) Check that the light illuminates when the brake pedal is depressed, and turns off when the brake pedal is released.



OK

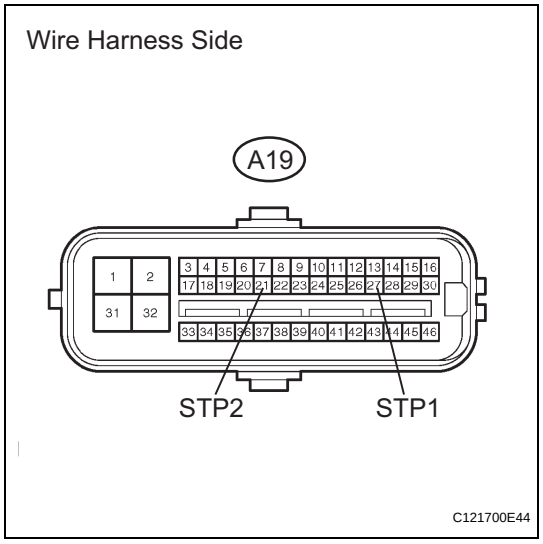
Condition	Stop Light Condition
Brake pedal depressed	Illuminates
Brake pedal released	Turn off

NG → **Go to step 9**

OK

2	CHECK WIRE HARNESS (SKID CONTROL ECU - BATTERY)

(a) Disconnect the A19 ECU connector.
(b) Measure the voltage of the wire harness side connector.



Standard voltage

Tester Connection	Switch Condition	Specified Condition
A19-21 (STP2) - Body ground	Brake pedal depressed	8 to 16 V
A19-21 (STP2) - Body ground	Brake pedal released	Below 1.5 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

3 CHECK WIRE HARNESS (SKID CONTROL ECU)

(a) Disconnect the A19 ECU connector.
(b) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
A19-21 (STP2) - A19-27 (STP1)	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

4 PERFORM ACTIVE TEST BY INTELLIGENT TESTER (STOP LIGHT RELAY)

(a) Select the ACTIVE TEST, generate a control command, and then check that the stop light relay operates.

Skid control ECU

Item	Test Details	Diagnosis Note
STP LAMP RELAY	Turn stop light relay ON / OFF	Observe stop light

OK:
The stop lights illuminate or turn off.

NG → **Go to step 6**

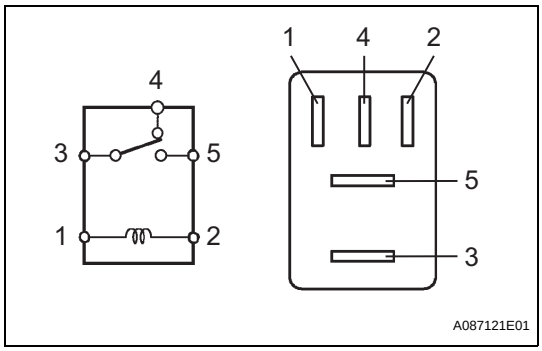
OK

5 RECONFIRM DTC

(a) Clear the DTC (see page BC-47).
(b) Start the engine.
(c) Drive the vehicle at a speed of 5 km/h (3 mph) or more for several seconds.
(d) Check if the same DTC is output (see page BC-47).

Result

Result	Proceed to
DTC is not output	A
DTC is output	B



B → **END**

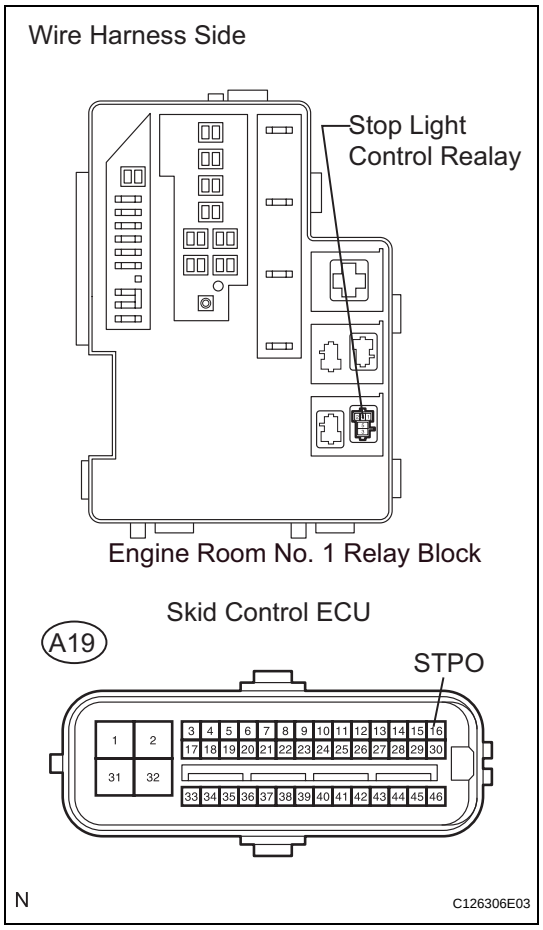
BC

A

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

6 INSPECT STOP LIGHT CONTROL RELAY (Marking: BRK)

(a) Remove the stop light control relay from the engine room No. 1 relay block.
(b) Measure the resistance of the relay.
Standard resistance



Tester Connection	Specified Condition
3 - 4	Below 1 Ω
3 - 5	10 kΩ or higher
3 - 4	10 kΩ or higher (when battery voltage is applied to terminals 1 and 2)
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

NG → **REPLACE STOP LIGHT CONTROL RELAY**

OK

BC

7 CHECK WIRE HARNESS (ENGINE ROOM NO. 1 RELAY BLOCK - SKID CONTROL ECU AND BATTERY)

(a) Remove the stop light control relay.
(b) Disconnect the A19 ECU connector.
(c) Measure the voltage of the wire harness side connector.

Standard voltage

Tester Connection	Condition	Specified Condition
BRK relay terminal 5 - Body ground	Always	8 to 16 V
BRK relay terminal 2- Body ground	Ignition switch ON	8 to 16 V

(d) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
BRK relay terminal 1 - A19-16 (STPO)	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

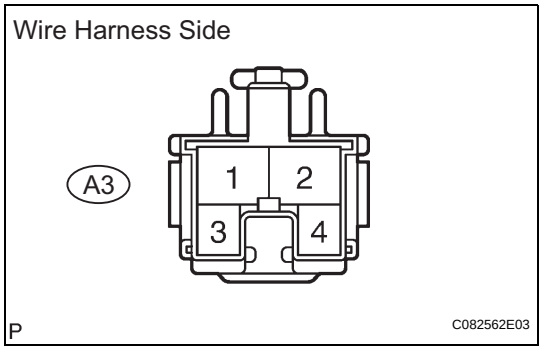
OK

8 RECONFIRM DTC

(a) Clear the DTC (see page BC-47).
(b) Start the engine.
(c) Drive the vehicle at a speed of 5 km/h (3 mph) or more for several seconds.
(d) Check if the same DTC is output (see page BC-47).

Result

Result	Proceed to
DTC is not output	A
DTC is output	B



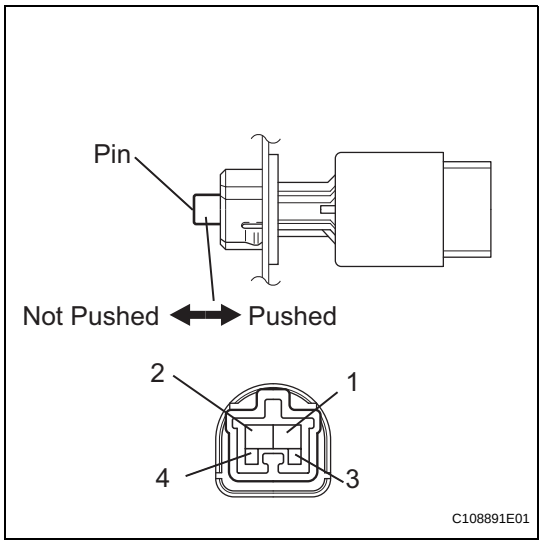
B → **END**

A

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

BC

9	CHECK WIRE HARNESS (STOP LIGHT SWITCH - BATTERY)



(a) Disconnect the A3 switch connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

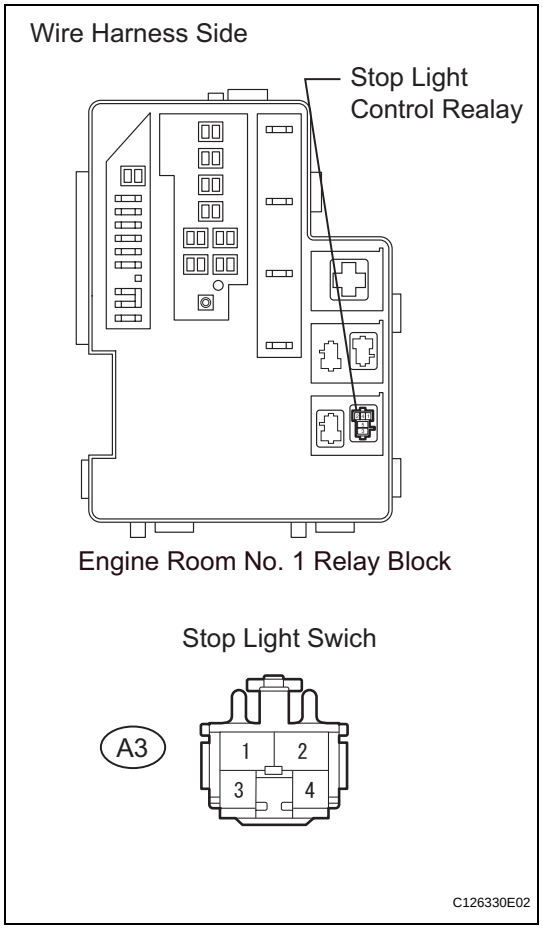
Tester Connection	Specified Condition
A3-2 - Body ground	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

10	INSPECT STOP LIGHT SWITCH ASSEMBLY

(a) Remove the stop light switch connector.
(b) Measure the resistance of the switch.
Standard resistance



Tester Connection	Switch Condition	Specified Condition
1 - 2	Switch pin not pushed	Below 1 Ω
1 - 2	Switch pin pushed	10 kΩ or higher
3 - 4	Switch pin not pushed	10 kΩ or higher
3 - 4	Switch pin pushed	Below 1 Ω

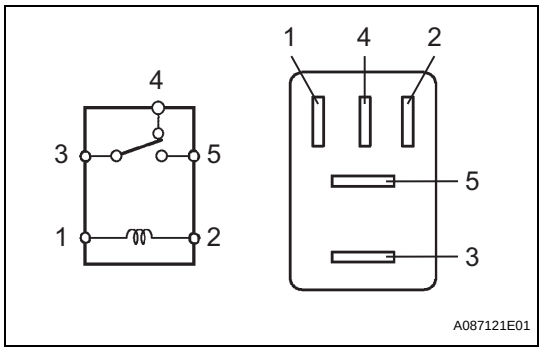
NG → **REPLACE STOP LIGHT SWITCH ASSEMBLY**

OK

BC

11 CHECK WIRE HARNESS (STOP LIGHT SWITCH - STOP LIGHT CONTROL RELAY)

(a) Disconnect the A3 switch connector.
(b) Remove the stop light control relay.
(c) Measure the resistance of the wire harness side connectors.



Standard resistance

Tester Connection	Specified Condition
A3-1 - BKR relay terminal 4	Below 1 Ω
A3-1 - Body ground	10 kΩ or higher

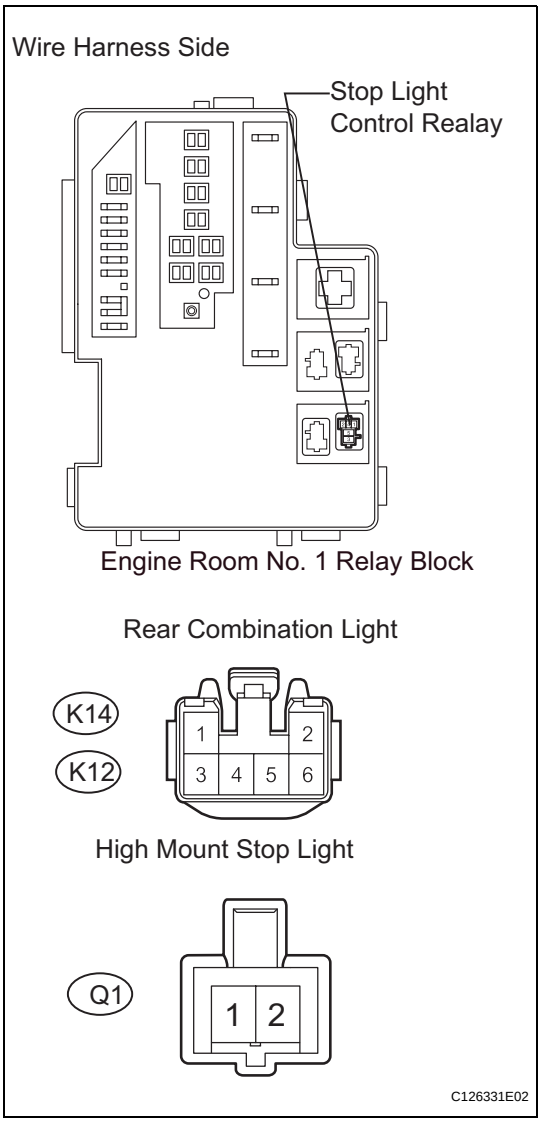
NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

12 INSPECT STOP LIGHT CONTROL RELAY (Marking: BRK)

(a) Remove the stop light control relay from the engine room No. 1 relay block.
(b) Measure the resistance of the relay.

Standard resistance



Tester Connection	Specified Condition
3 - 4	Below 1 Ω
3 - 5	10 kΩ or higher
3 - 4	10 kΩ or higher (when battery voltage is applied to terminals 1 and 2)
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

NG → **REPLACE STOP LIGHT CONTROL RELAY**

OK

BC

13	CHECK WIRE HARNESS (STOP LIGHT AND REAR COMBINATION LIGHT - CONTROL RELAY)

(a) Disconnect the Q1, K12 and K14 light connectors.
(b) Remove the stop light control relay.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
K14-4 - BKR relay terminal 3	Below 1 Ω
K14-4 - Body ground	10 kΩ or higher
K14-1 - Body ground	Below 1 Ω
K12-4 - BKR relay terminal 3	Below 1 Ω
K12-4 - Body ground	10 kΩ or higher
K12-1 - Body ground	Below 1 Ω
Q1-2 - BKR relay terminal 3	Below 1 Ω
Q1-2 - Body ground	10 kΩ or higher
Q1-1 - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

CHECK FOR INTERMITTENT PROBLEMS

DTC	U0073/94	Control Module Communication Bus OFF

DTC	U0100/65	Lost Communication with ECM / PCM

DTC	U0123/62	Lost Communication with Yaw Rate Sensor Module

DTC	U0124/95	Lost Communication with Lateral Acceleration Sensor Module

DTC	U0126/63	Lost Communication with Steering Angle Sensor Module

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
U0073/94	When one of following conditions is met: 1. With the IG1 terminal voltage 10 V or more, after the output of data from the skid control ECU is completed, the sending continues for 5 seconds or more. 2. The condition that bus OFF state occurs once or more within 100 ms occurs 10 times in succession. (Sent signals cannot be received.) 3. With the IG1 terminal voltage 10 V or more, a delay in receiving data from the yaw rate and acceleration sensor and steering angle sensor continues for 1 second or more. 4. With the IG1 terminal voltage 10 V or more, the condition that a delay in receiving data from the yaw rate and acceleration sensor occurs more than once within 5 seconds occurs 10 times in succession.	CAN communication system
U0100/65	When either condition below is met: 1. With the IG1 terminal voltage 10 V or more and the vehicle speed 15 km/h (9 mph) or more, data cannot be sent to the ECM for 2 seconds or more. 2. With the IG1 terminal voltage 10 V or more and the vehicle speed 15 km/h (9 mph) or more for 2 seconds or more.	CAN communication system (Skid control ECU to ECM)
U0123/62	When either condition below is met: 1. With the IG1 terminal voltage 10 V or more, data from the acceleration sensor cannot be received for 1 second or more. 2. With the IG1 terminal voltage 10 V or more, the following occurs 10 times in succession within 60 seconds. (a) The condition that data from the acceleration sensor cannot be received occurs once or more within 5 seconds.	CAN communication system (Skid control ECU to yaw rate and acceleration sensor)
U0124/95	When either condition below is met: 1. With the IG1 terminal voltage 10 V or more, data from the acceleration sensor cannot be received for 1 second or more. 2. With the IG1 terminal voltage 10 V or more, the following occurs 10 times in succession within 60 seconds. (a) The condition that data from the acceleration sensor cannot be received occurs once or more within 5 seconds.	CAN communication system (Skid control ECU to yaw rate and acceleration sensor)

DTC No.	DTC Detection Condition	Trouble Area
U0126/63	When either of following conditions detected: 1. When IG1 terminal voltage 10 V or more, data from steering sensor cannot be received for 1 second or more. 2. When IG1 terminal voltage 10 V or more, following condition occurs 10 times in succession.	CAN communication system

INSPECTION PROCEDURE

The skid control ECU inputs the signals from the ECM, steering angle sensor, and yaw rate and acceleration sensor via CAN communication system.

1 CHECK HARNESS AND CONNECTOR (MOMENTARY INTERRUPTION)

(a) Using the DATA LIST of the intelligent tester, check for any momentary interruption in the wire harness and connector corresponding to a DTC (see page BC-23).

Skid control ECU:

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
EFI COM OPN	EFI communication open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
STEERING OPN	Steering sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
YAW RATE OPN	Yaw rate sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-

Result

Condition	Proceed to
There is a constant open circuit	A
There are no momentary interruptions	B
There are momentary interruptions	C

HINT:
Perform the above inspection before removing the sensor and connector.

B → **Go to step 3**

C → **Go to step 4**

A

2 CHECK IF EACH SENSOR AND ECM CONNECTOR IS SECURELY CONNECTED

(a) Check if each sensor or ECM connector is securely connected.

OK:

The connector should be securely connected.

NG → **CONNECT CONNECTOR TO EACH SENSOR OR ECM CORRECTLY**

OK

3	RECONFIRM DTC

(a) Record the output DTCs (for ABS, VSC and CAN communication) (see page BC-47).
HINT:
If the CAN communication system DTC and the relevant sensor DTCs are output simultaneously, troubleshoot the relevant sensor DTCs (for ABS and VSC) after the CAN communication system returns to normal.

Result

Condition	Proceed to
DTC (CAN communication system DTC) is not output	A
DTC (ABS and/or VSC DTC) is output	B
DTC is not output	C

B → **REPAIR CIRCUIT INDICATED BY OUTPUT CODE**

C → **USE SIMULATION METHOD TO CHECK**

BC

A

INSPECT CAN COMMUNICATION SYSTEM

4	REPAIR OR REPLACE HARNESS AND CONNECTOR

(a) Repair or replace the harness or connector.
(b) Check for any momentary interruption between the skid control ECU and each sensor or ECM (see page BC-23).
(c) Check that there is no momentary interruption.

NEXT

5	RECONFIRM DTC

(a) Clear the DTC (see page BC-47).
(b) Turn the ignition switch ON.
(c) Drive the vehicle and turn the steering wheel to the right and left at a speed of 15 km/h (9 mph) or more.
(d) Check that no CAN communication system DTC is output (see page BC-47).
(e) If ABS and/or VSC DTCs are output, record them.

Result

Condition	Proceed to
DTC for the CAN communication system is not output	A
No DTC is output (ABS and/or VSC DTC are output)	B

Condition	Proceed to
No DTC is output (No ABS and/or VSC DTC are output)	C

HINT:
The CAN communication system must be normal when repairing the sensor DTCs (for ABS and VSC).

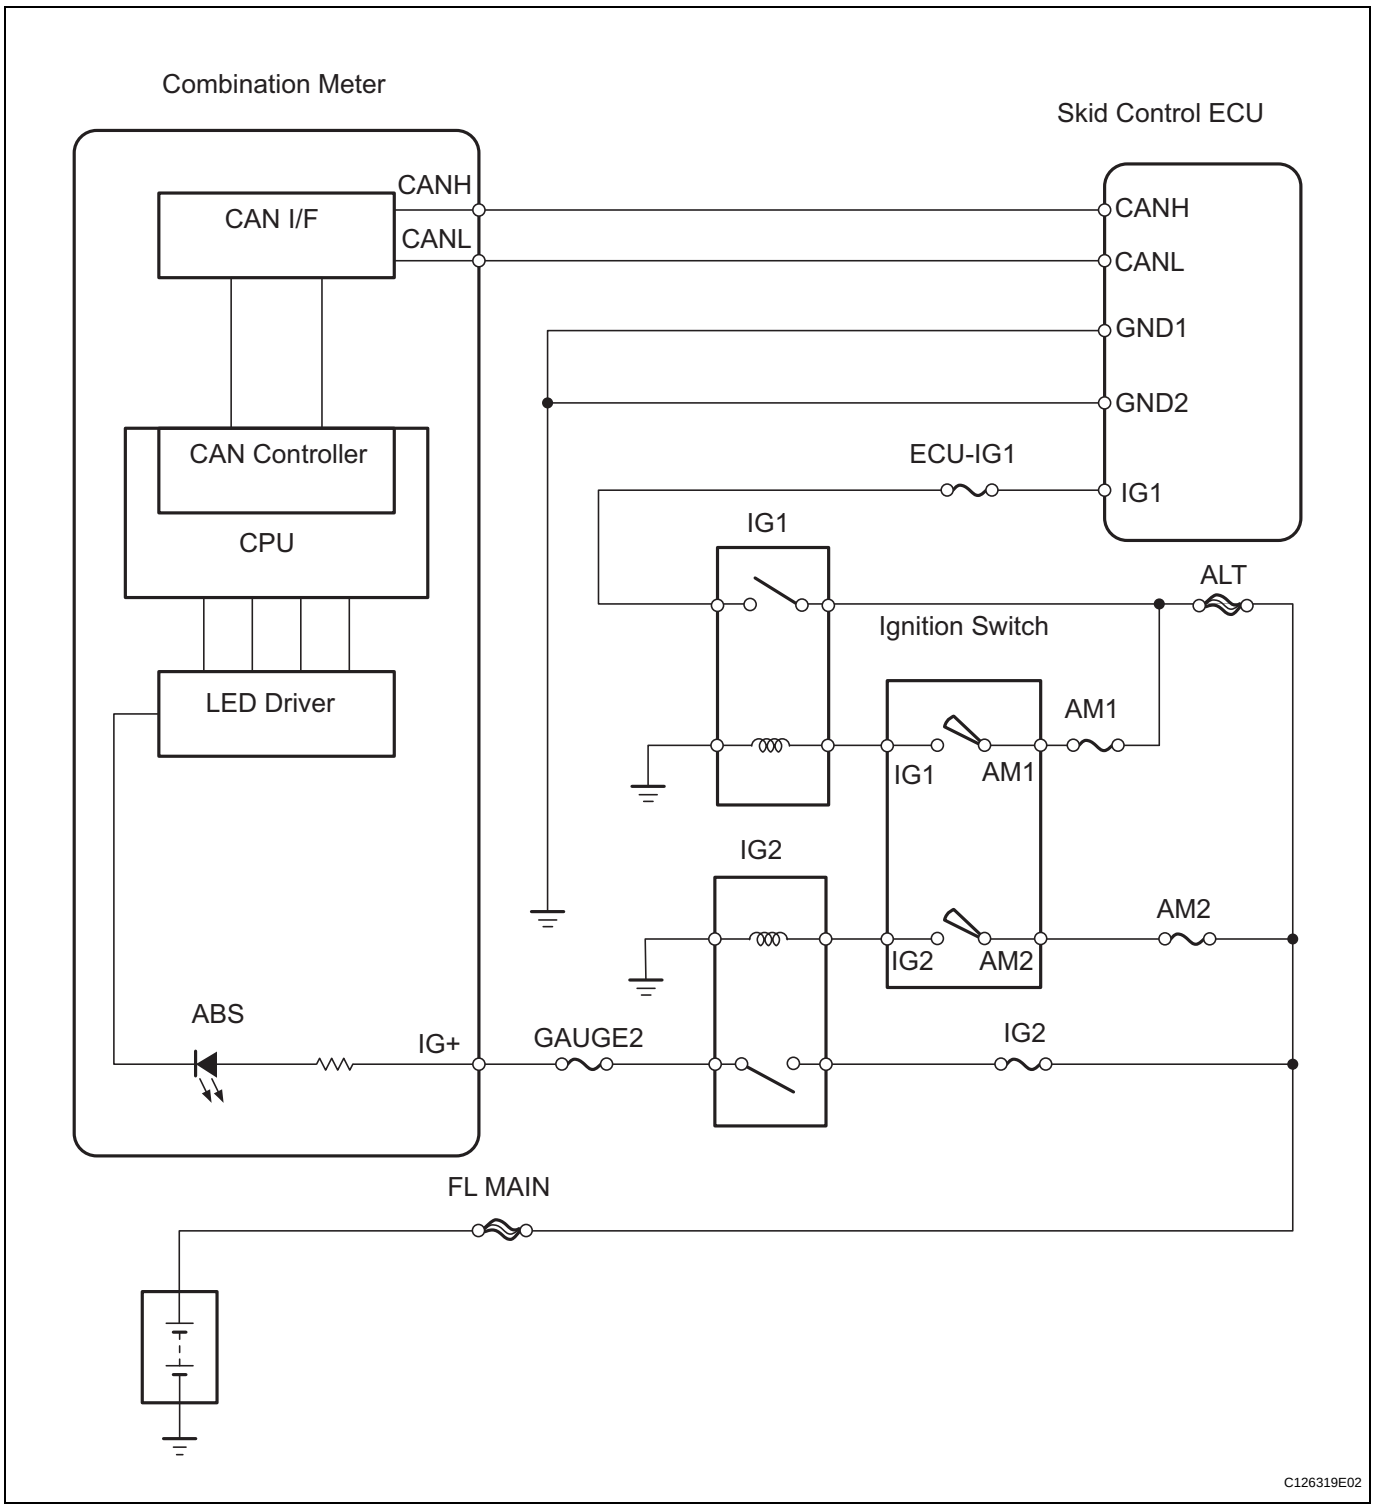
B	**REPAIR CIRCUIT INDICATED BY OUTPUT CODE**
C	**END**

A

INSPECT CAN COMMUNICATION SYSTEM

ABS Warning Light Remains ON

DESCRIPTION



If any of the following conditions are detected, the ABS warning light remains on:

1. The ECU connectors are disconnected from the skid control ECU.
2. There is a malfunction in the skid control ECU internal circuit.
3. There is an open or short in the wire harness between the combination meter and the skid control ECU.

HINT:

The intelligent tester may not be used when there is a malfunction in the skid control ECU.

WIRING DIAGRAM

BC

INSPECTION PROCEDURE

1 CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (see page CA-34).

Result

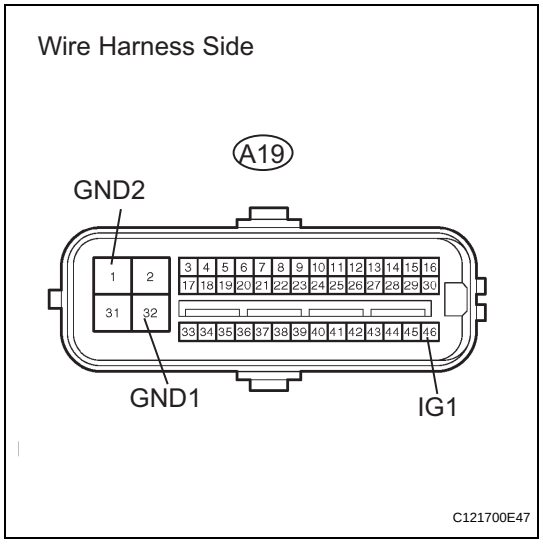
Result	Proceed to
DTC is not output	A
DTC is output	B

B → **REPAIR CAN COMMUNICATION SYSTEM**

A

2 INSPECT SKID CONTROL ECU CONNECTOR

(a) Check if the skid control ECU connector is properly installed.



OK:

The skid control ECU connector is properly installed.

NG → **CONNECT CONNECTOR TO ECU SECURELY**

OK

3 CHECK WIRE HARNESS (SKID CONTROL ECU - BATTERY AND BODY GROUND)

(a) Disconnect the A19 ECU connector.

(b) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
A19-32 (GND1) - Body ground	Below 1 Ω
A19-1 (GND2) - Body ground	Below 1 Ω

(c) Measure the voltage of the wire harness side connector.

Standard voltage

Tester Connection	Condition	Specified Condition
A19-46 (IG1) - Body ground	Ignition switch ON	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

BC

4	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (ABS WARNING LIGHT)

(a) Select the ACTIVE TEST, generate a control command, and then check that the ABS warning light operates.

Skid control ECU

Item (Display)	Test Details	Diagnostic Note
ABS WARN LAMP	Turns ABS warning light / ON or OFF	Observe combination meter

OK:

The ABS warning light is turned on or off.

HINT:

When the ABS warning light remains illuminated, opens in the wire harness of the combination meters or abnormalities in the meter circuit should be considered.

NG → **CHECK METER / GAUGE SYSTEM**

OK

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

BC

ABS Warning Light does not Come ON

WIRING DIAGRAM

Refer to the ABS warning light circuit (see page BC-135).

INSPECTION PROCEDURE

1 **CHECK CAN COMMUNICATION SYSTEM**

(a) Check if the CAN communication system DTC is output (see page CA-34).

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → **REPAIR CAN COMMUNICATION SYSTEM**

A

2 **PERFORM ACTIVE TEST BY INTELLIGENT TESTER (ABS WARNING LIGHT)**

(a) Select the ACTIVE TEST, generate a control command, and then check that the ABS warning light operates.

Skid control ECU

Item (Display)	Test Details	Diagnostic Note
ABS WARN LAMP	Turns ABS warning light / ON or OFF	Observe combination meter

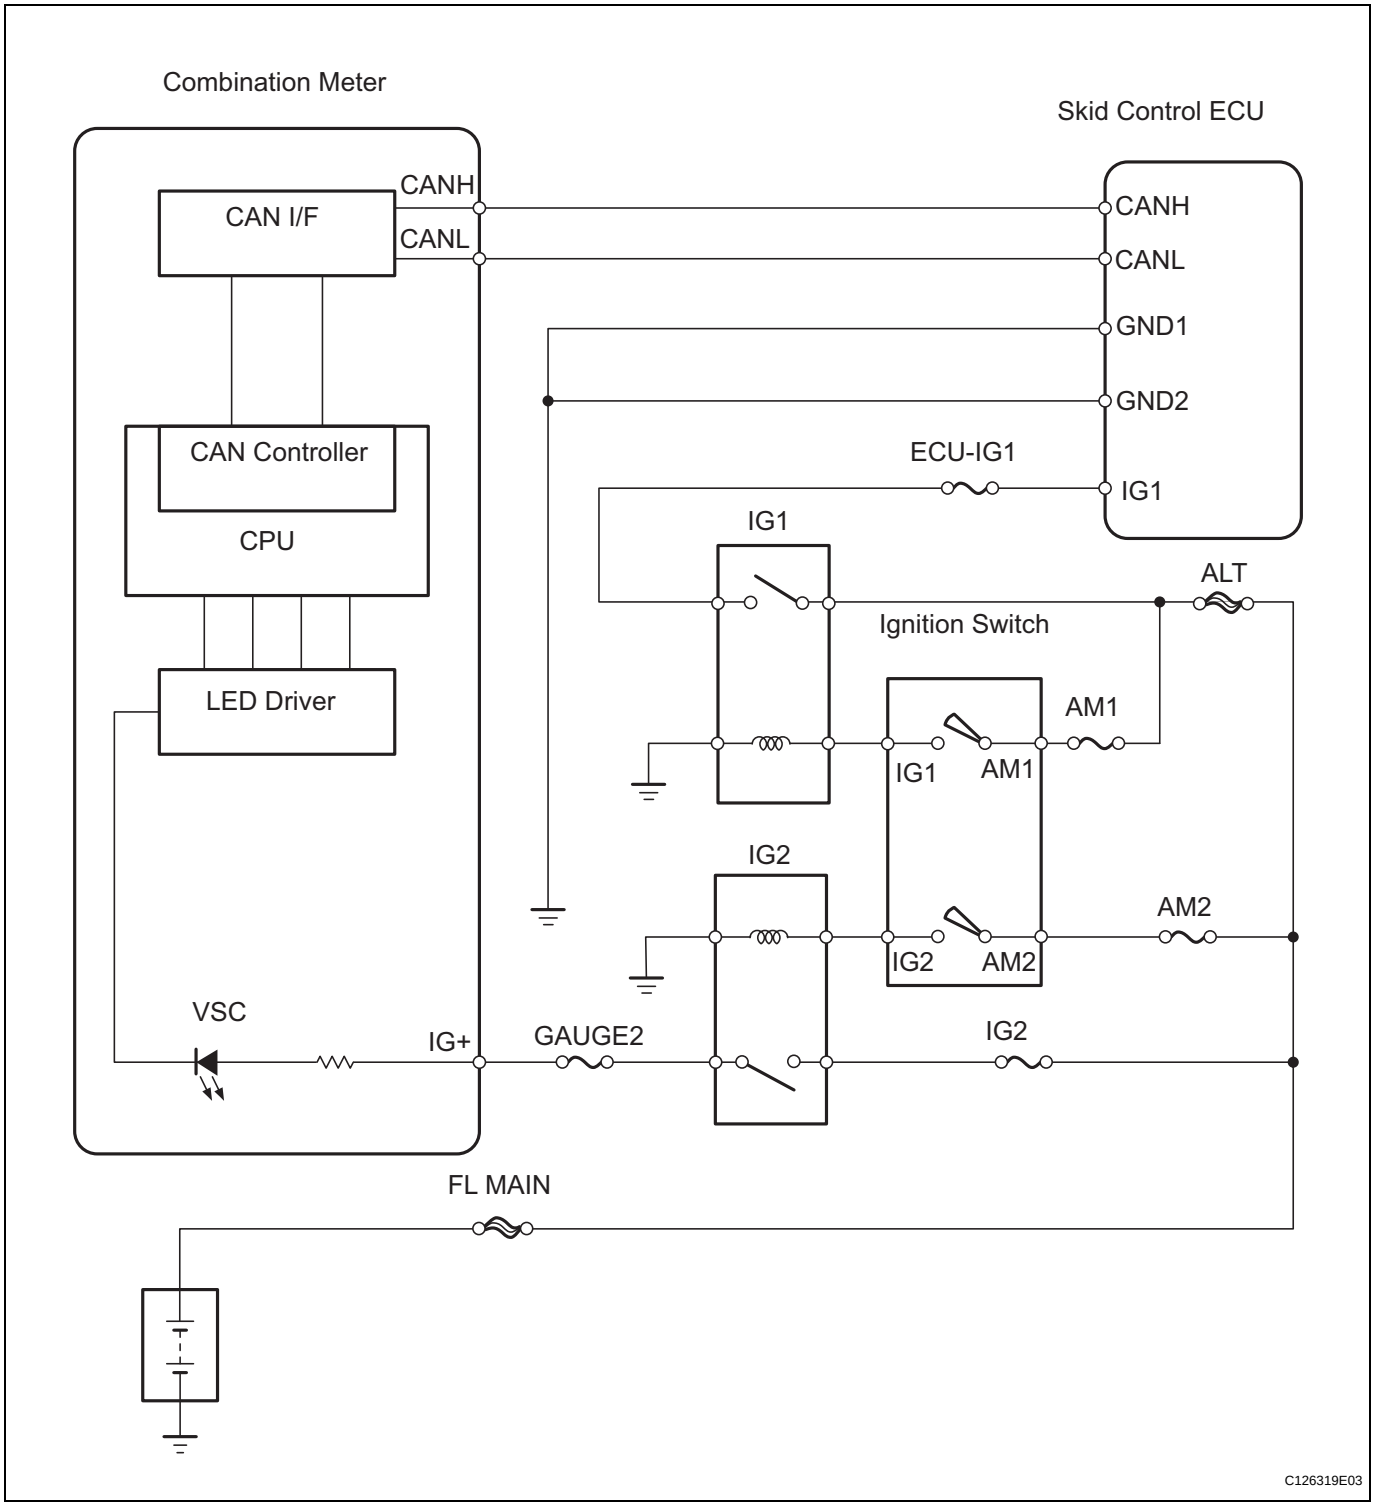
OK:

The ABS warning light turns on or off.

NG → **CHECK METER / GAUGE SYSTEM**

OK

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY



BC

VSC Warning Light Remains ON

DESCRIPTION

The skid control ECU is connected to the combination meter via the CAN communication system.
w/o Multi information display:
If the skid control ECU stores any DTCs which relate to the VSC system, the VSC warning light comes on in the combination meter.
w/ Multi information display:
If the skid control ECU stores any DTCs which relate to the VSC system, the master caution indicator light comes on and the warning message is displayed on the multi information display in the combination meter.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When replacing the ABS and TRACTION actuator, perform the zero point calibration (see page BC-24).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (see page BC-47).

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

NG → **REPAIR CAN COMMUNICATION SYSTEM**

OK

2	INSPECT SKID CONTROL ECU CONNECTOR

(a) Check if the skid control ECU connector is securely connected.

OK:

The connector is securely connected.

NG → **CONNECT CONNECTOR CORRECTLY**

OK

3	CHECK COMBINATION METER ASSEMBLY

(a) Check the combination meter (see page ME-15).

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

VSC Warning Light does not Come ON

DESCRIPTION

Refer to the description of "VSC Warning Light Remains ON" (see page BC-139).

WIRING DIAGRAM

Refer to the VSC warning light circuit (see page BC-140).

INSPECTION PROCEDURE

NOTICE:

When replacing the ABS and TRACTION actuator, perform the zero point calibration (see page BC-24).

1	INSPECT CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (see page BC-47).

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → **REPAIR CAN COMMUNICATION SYSTEM**

A

2	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (VSC WARNING LIGHT)

(a) Select the ACTIVE TEST, generate a control command, and then check that the VSC warning light operates.

Skid control ECU

Item (Display)	Test Details	Diagnostic Note
VSC WARN LAMP	Turn VSC warning light ON / OFF	Observe combination meter

OK:

The VSC warning light turns on or off.

OK → **REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY**

NG

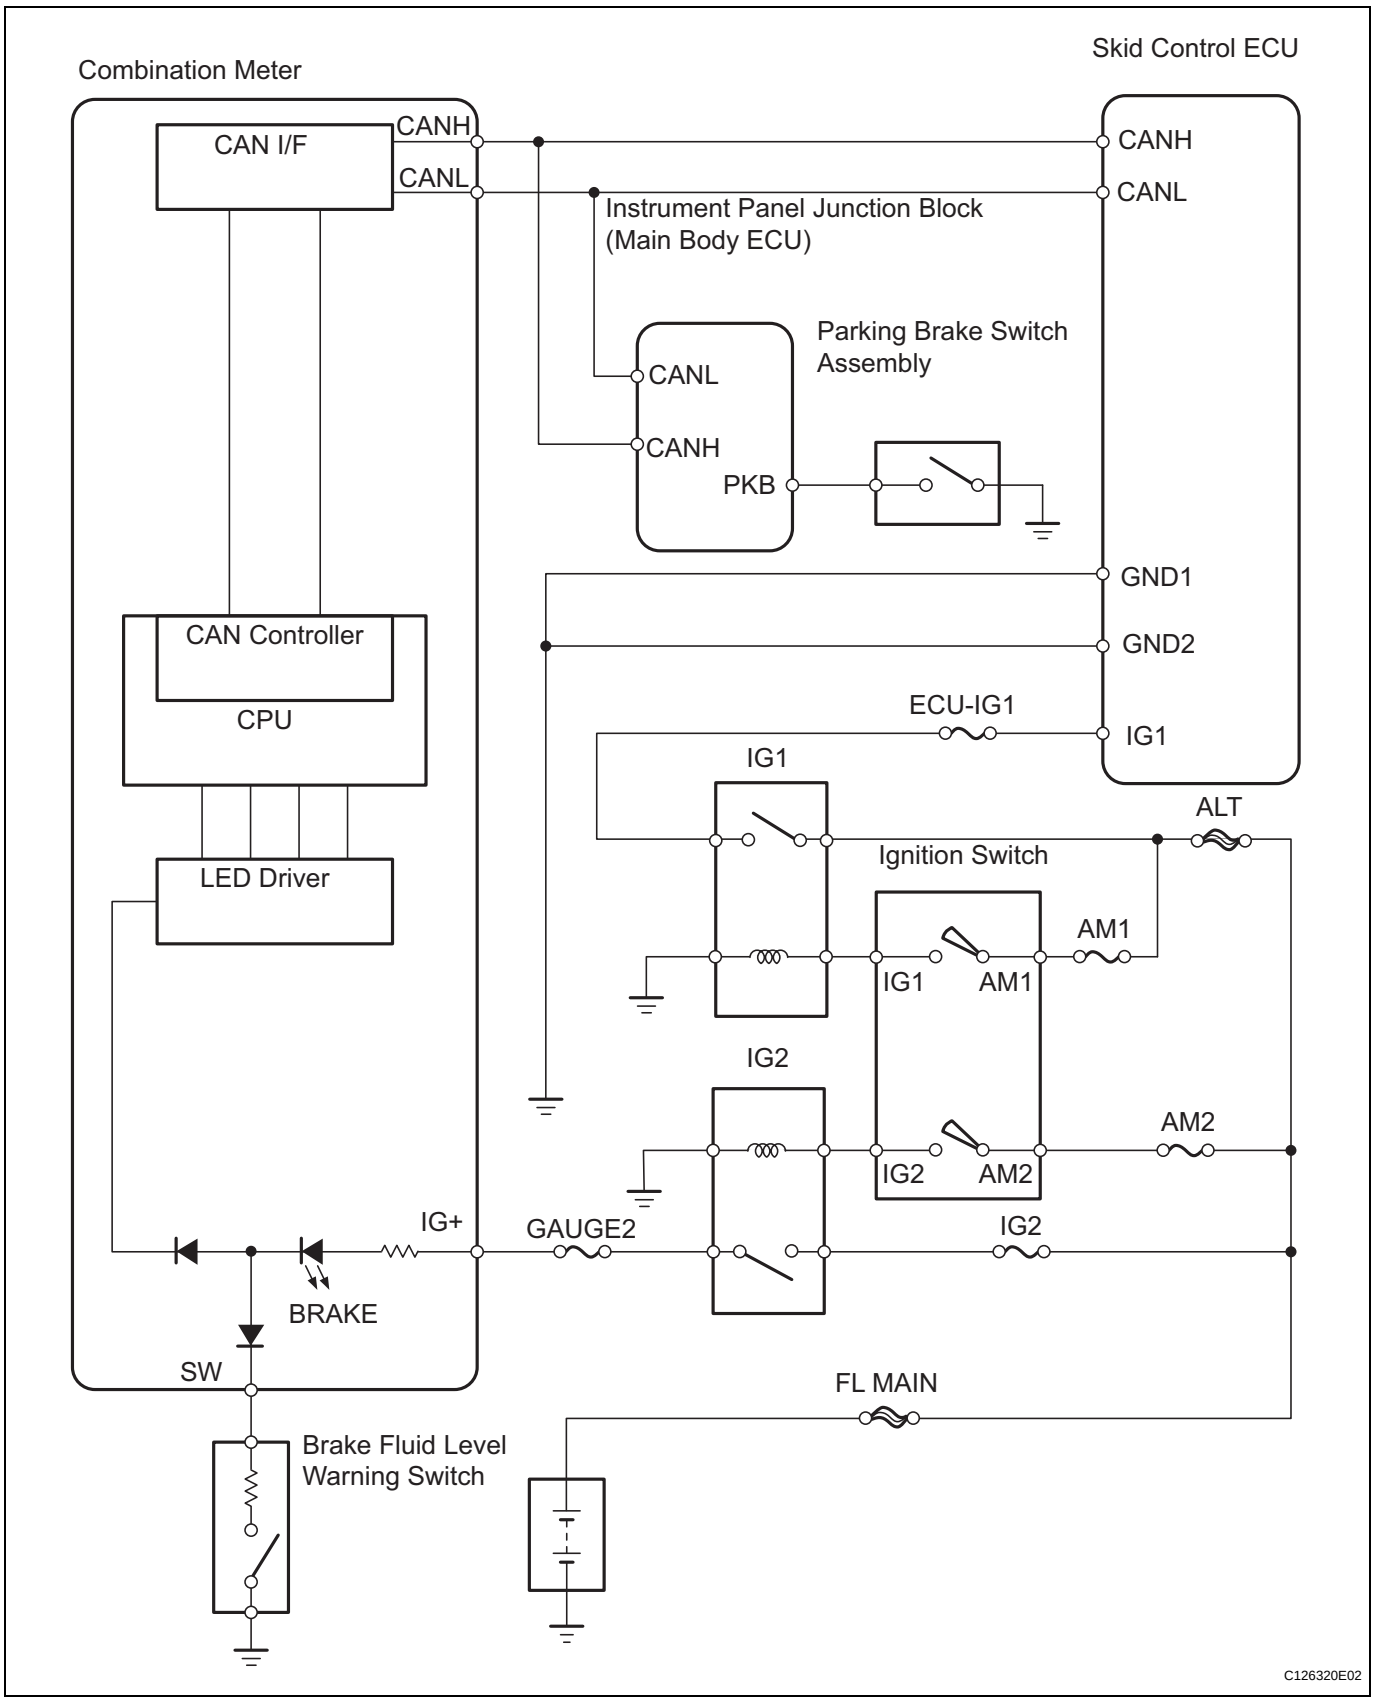
3	CHECK COMBINATION METER ASSEMBLY

(a) Check the combination meter (see page CA-34).

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY



Brake Warning Light Remains ON

DESCRIPTION

If any of the following conditions are detected, the brake warning light remains on:

1. The ECU connectors are disconnected from the skid control ECU.
2. The brake fluid level is insufficient.
3. The parking brake is applied.
4. The EBD is defective.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 PREPARE FOR INSPECTION

(a) Check that both of the following conditions are satisfied.
- The brake fluid level in the brake master cylinder reservoir is correct.
- The parking brake is released.

HINT:
When the ABS warning light remains illuminated, repair the malfunctions in the ABS system first.

NEXT

2 CHECK DTC FOR ABS

(a) Check if any ABS DTCs are output (see page BC-47).
Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS**

A

3 CHECK CAN COMMUNICATION SYSTEM

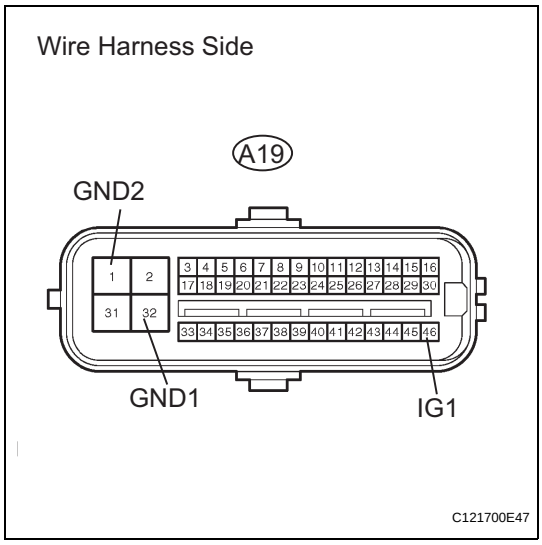
(a) Check if the CAN communication system DTC is output (see page CA-34).
Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → **REPAIR CAN COMMUNICATION SYSTEM**

A

4 INSPECT SKID CONTROL ECU CONNECTOR



(a) Check if the skid control ECU connector is properly installed.
OK:
The skid control ECU connector is properly installed.

NG → **CONNECT CONNECTOR TO ECU SECURELY**

BC

OK

5	CHECK WIRE HARNESS (SKID CONTROL ECU - BATTERY AND BODY GROUND)

(a) Disconnect the A19 ECU connector.
(b) Measure the resistance of the wire harness side connector.
Standard resistance

Tester Connection	Specified Condition
A19-32 (GND1) - Body ground	Below 1 Ω
A19-1 (GND2) - Body ground	Below 1 Ω

(c) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Condition	Specified Condition
A19-46 (IG1) - Body ground	Ignition switch ON	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

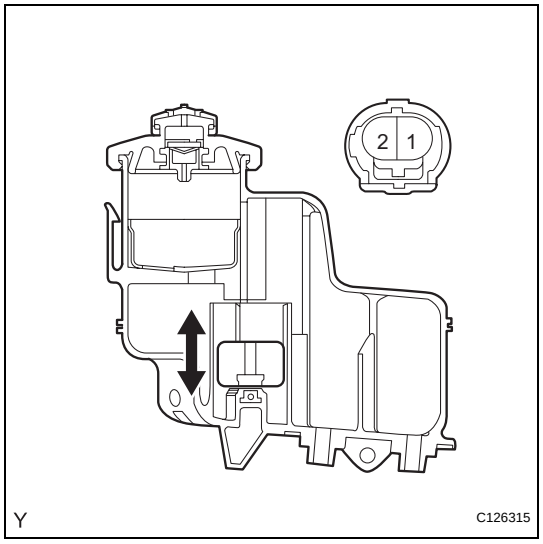
BC

OK

6	READ VALUE OF INTELLIGENT TESTER (PARKING BRAKE SWITCH)

(a) Using the DATA LIST, check for proper functioning of the parking brake switch.

Skid control ECU



Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
PARKING BRAKE SW	Parking brake switch / ON or OFF	ON: Parking brake applied OFF: Parking brake released	-

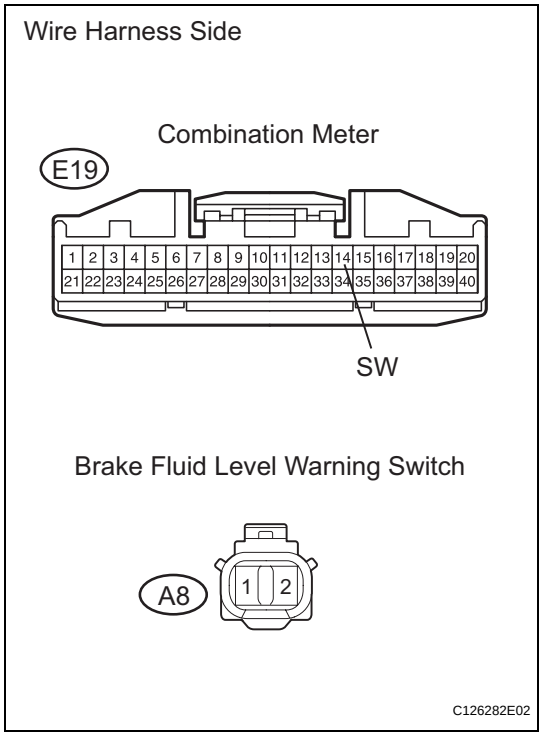
OK:
When the parking brake lever is operated, the display changes as shown above.

NG → **Go to step 10**

OK

7 INSPECT BRAKE FLUID LEVEL WARNING SWITCH

(a) Remove the reservoir tank cap and strainer.
(b) Disconnect the brake fluid level warning switch connector.
(c) Measure the resistance of the switch.
HINT:
A float is placed inside the reservoir. Its position can be changed by increasing or decreasing the brake fluid level.
Standard resistance



Tester Connection	Condition	Specified Condition
1 - 2	Float up (Switch OFF)	10 kΩ or higher
1 - 2	Float down (Switch ON)	Below 1 Ω

HINT:
If there is no problem after the above check is finished, adjust the brake fluid level to the MAX level.

NG → **REPLACE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY**

OK

8 CHECK WIRE HARNESS (LEVEL WARNING SWITCH - COMBINATION METER AND BODY GROUND)

(a) Disconnect the E19 combination meter connector.
(b) Disconnect the A8 switch connector.
(c) Measure the resistance of the wire harness side connectors.
Standard resistance

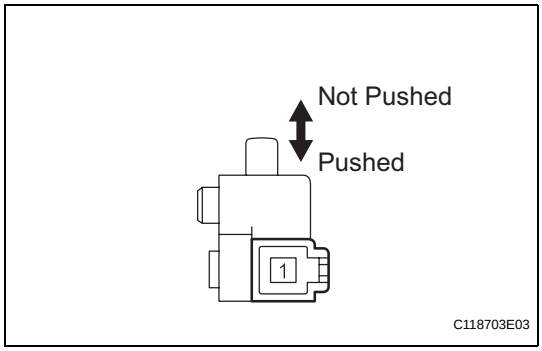
Tester Connection	Specified Condition
E19-14 (SW) - A8-1	Below 1 Ω
E19-14 (SW) - Body ground	10 kΩ or higher
A8-2 - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

BC

9	INSPECT COMBINATION METER



(a) Inspect the combination meter (see page ME-15).

NG → REPLACE COMBINATION METER

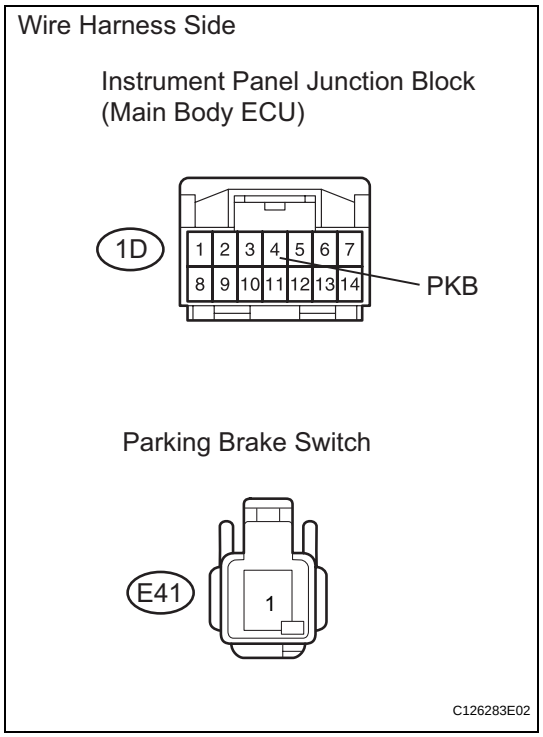
OK

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

10	INSPECT PARKING BRAKE SWITCH ASSEMBLY

(a) Remove the parking brake switch.
(b) Measure the resistance of the switch.

Standard resistance



Tester Connection	Condition	Specified Condition
1 - Body ground	Parking brake switch ON (Switch pin not pushed)	Below 1 Ω
1 - Body ground	Parking brake switch OFF (Switch pin pushed)	10 kΩ or higher

NG → REPLACE PARKING BRAKE SWITCH ASSEMBLY

OK

BC

11	CHECK WIRE HARNESS (JUNCTION BLOCK - PARKING BRAKE SWITCH AND BODY GROUND)

(a) Disconnect the 1D junction block connector.
(b) Disconnect the E41 switch connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
1D-4 (PKB) - E41-1	Below 1 Ω
1D-4 (PKB) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK

BC

Brake Warning Light does not Come ON

WIRING DIAGRAM

Refer to the brake warning light circuit (see page BC-145).

INSPECTION PROCEDURE

1 CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (see page CA-34).

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → **REPAIR CAN COMMUNICATION SYSTEM**

A

2 PERFORM ACTIVE TEST BY INTELLIGENT TESTER (BRAKE WARNING LIGHT)

(a) Select the ACTIVE TEST, generate a control command, and then check that BRAKE warning light operates.

Skid control ECU

Item (Display)	Test Details	Diagnostic Note
BRAKE WARN LAMP	Turns BRAKE warning light / ON or OFF	Observe combination meter

OK:

The BRAKE warning light turns on or off.

OK → **REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY**

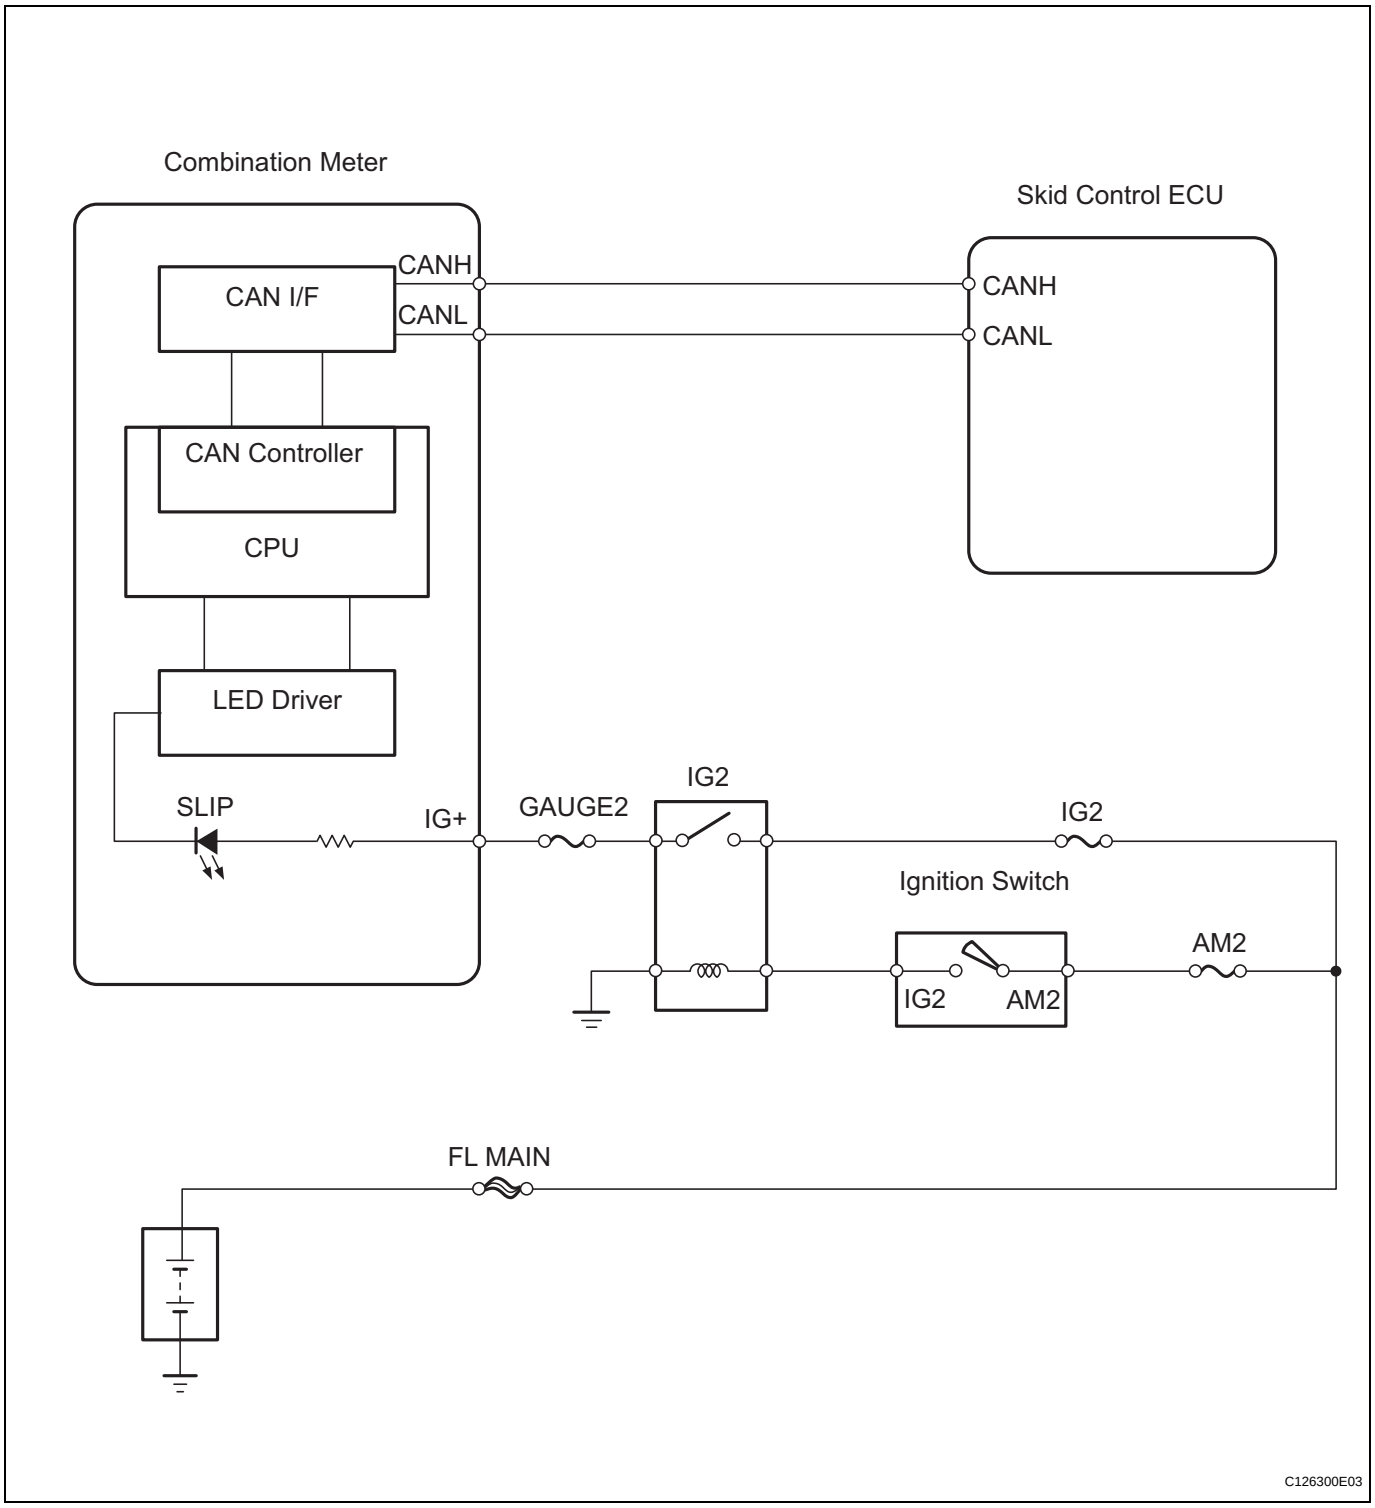
NG

3 INSPECT COMBINATION METER

(a) Inspect the combination meter (see page ME-15).

NG → **REPLACE COMBINATION METER**

OK



REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

Slip Indicator Light Remains ON

DESCRIPTION

The slip indicator blinks during VSC and/or TRC operation.
When the system fails, the slip indicator comes on to warn the driver.
For 2WD: With Auto LSD switch ON, when the hydraulic brake booster is at a high temperature, the slip indicator illuminates.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When replacing the ABS and TRACTION actuator, perform the zero point calibration (see page BC-24).

1 CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (see page CA-34).

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → **REPAIR CAN COMMUNICATION SYSTEM**

A

2 CHECK SKID CONTROL ECU CONNECTOR

(a) Check if the skid control ECU connector is securely connected.

OK:

The connector is securely connected.

NG → **CONNECT CONNECTOR CORRECTLY**

OK

3 CHECK COMBINATION METER

(a) Check the combination meter (see page ME-15).

NG → **REPLACE COMBINATION METER**

OK

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

Slip Indicator Light does not Come ON

DESCRIPTION

Refer to the description of "Slip Indicator Light Remains ON" (see page BC-152).

WIRING DIAGRAM

Refer to the SLIP indicator light circuit (see page BC-152).

INSPECTION PROCEDURE

NOTICE:

When replacing the ABS and TRACTION actuator, perform the zero point calibration (see page BC-24).

1 CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (see page CA-34).

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → **REPAIR CAN COMMUNICATION SYSTEM**

A

2 PERFORM ACTIVE TEST BY INTELLIGENT TESTER (SLIP INDICATOR LIGHT)

(a) Using the intelligent tester's ACTIVE TEST, generate a control command, and then check that the SLIP indicator light operates.

Skid control ECU

Item (Display)	Test Details	Diagnostic Note
SLIP INDI LAMP	Turn slip indicator light ON / OFF	Observe combination meter

OK:

The SLIP indicator light turns ON and OFF.

NG → **Go to step 3**

OK

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

3 CHECK COMBINATION METER

(a) Inspect the combination meter (see page ME-15).

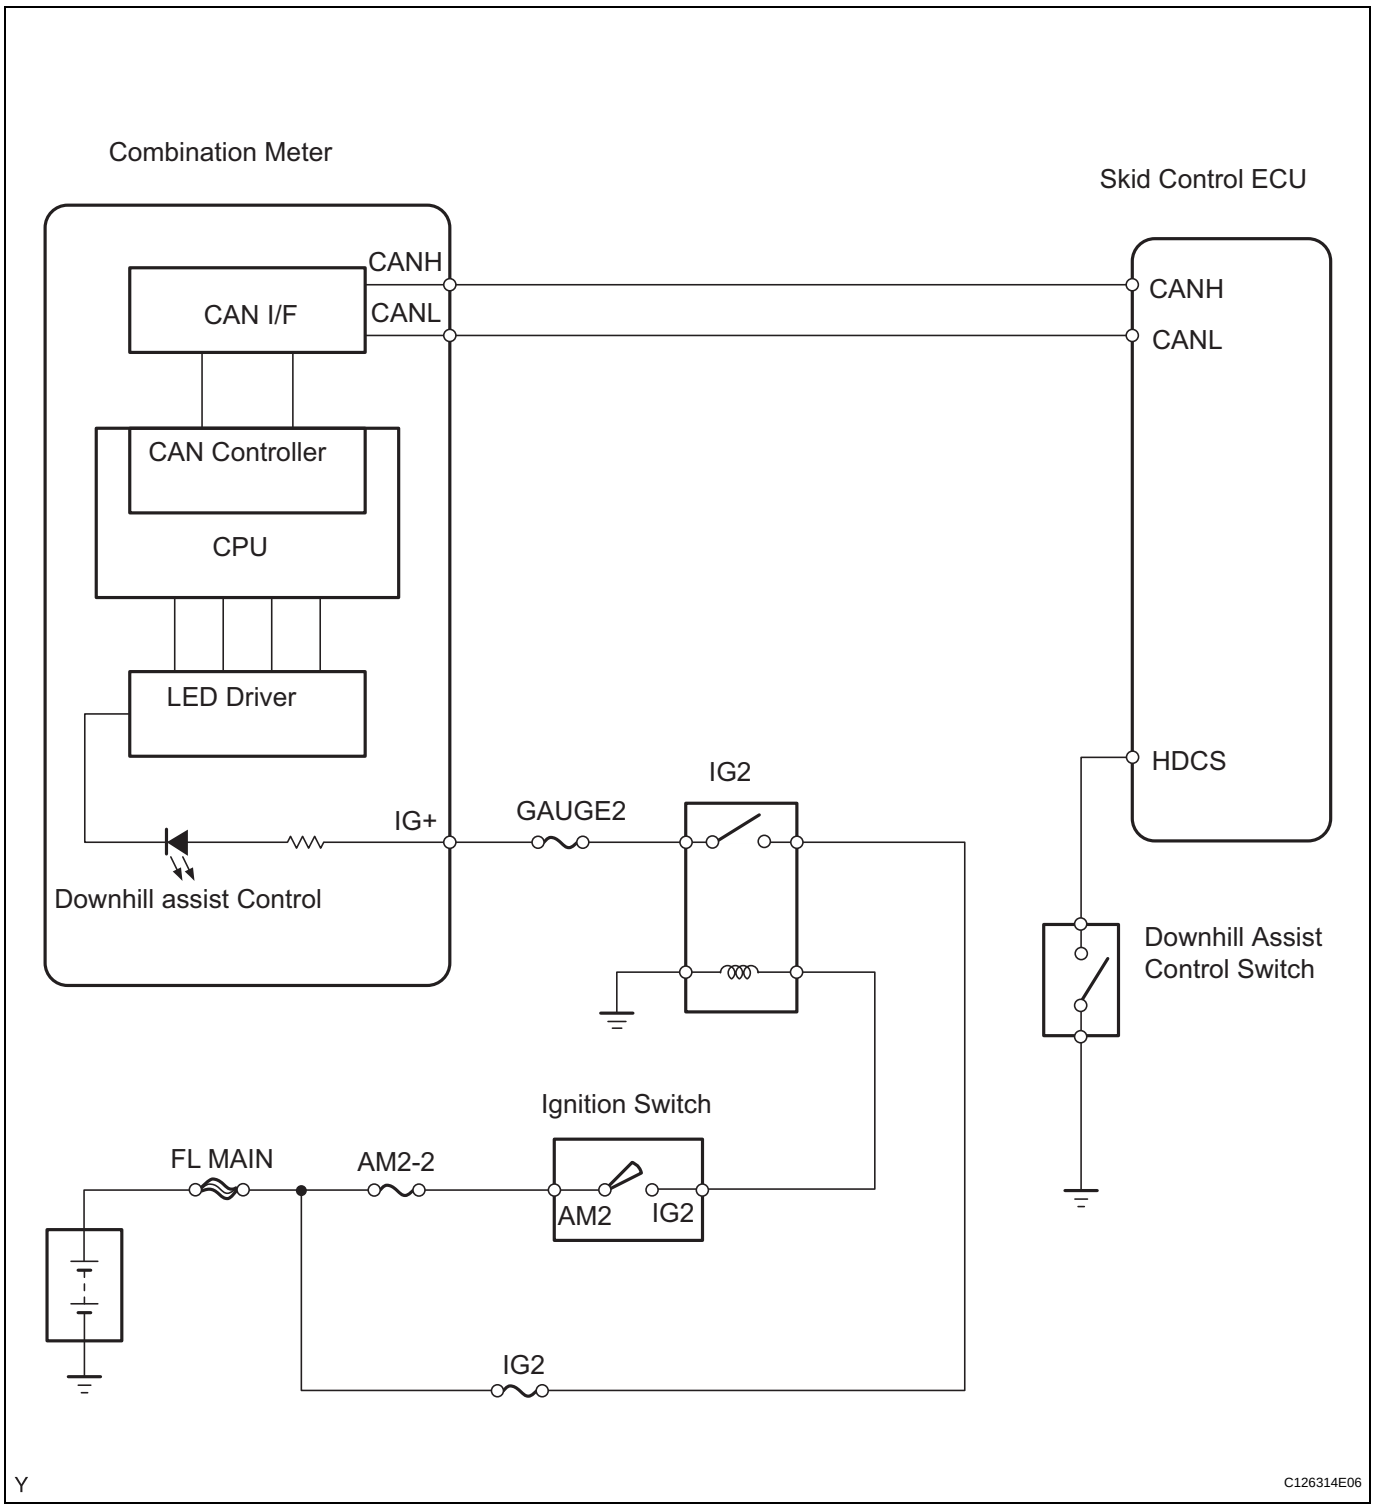
NG → **REPLACE COMBINATION METER**

OK

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

Downhill Assist Control Indicator Light Remains ON

DESCRIPTION



When the downhill assist control switch is pushed on, the downhill assist control function is available and the downhill assist control indicator light illuminates.

HINT:

Even if the downhill assist control switch is pressed, the downhill assist control indicator light will blink and downhill assist control will not be activated under the following conditions:

- Gear position is not L or R.
- The system is malfunctioning.
- Temperature of the hydraulic brake booster increases and downhill assist control is temporarily canceled.
- The vehicle speed is 25 km/h (15 mph) or more.

WIRING DIAGRAM

BC

INSPECTION PROCEDURE

1 CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (see page CA-34).

Result

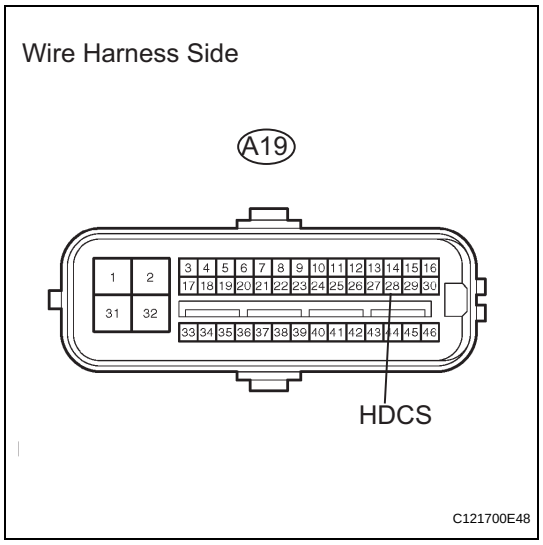
Result	Proceed to
DTC not output	A
DTC output	B

B → **REPAIR CAN COMMUNICATION SYSTEM**

A

2 CHECK SKID CONTROL ECU CONNECTOR

(a) Check if the skid control ECU connector is securely connected.



OK:

The connector is securely connected.

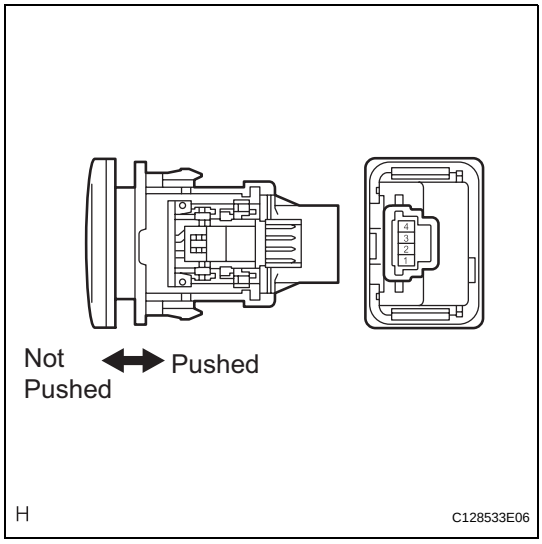
NG → **CONNECT CONNECTOR CORRECTLY**

OK

3 CHECK WIRE HARNESS (SKID CONTROL ECU - BODY GROUND)

(a) Disconnect the A19 ECU connector.

(b) Measure the resistance of the wire harness side connector.



Standard resistance

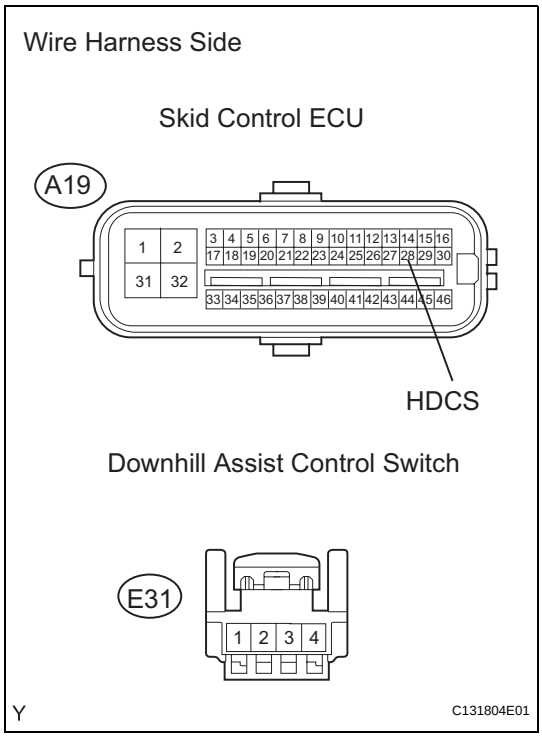
Tester Connection	Switch Condition	Specified Condition
A19-28 (HDCS) - Body ground	Downhill assist control switch is pushed	Below 1 Ω
A19-28 (HDCS) - Body ground	Downhill assist control switch is not pushed	10 kΩ or higher

OK → **Go to step 6**

NG

4 INSPECT DOWNHILL ASSIST CONTROL SWITCH

(a) Remove the downhill assist control switch.
(b) Measure the resistance of the switch.
Standard resistance



Tester Connection	Switch Condition	Specified Condition
1 - 4	Switch is pushed	Below 1 Ω
1 - 4	Switch is not pushed	10 kΩ or higher

NG → **REPLACE DOWNHILL ASSIST CONTROL SWITCH**

OK

BC

5 CHECK WIRE HARNESS (CONTROL SWITCH - SKID CONTROL ECU AND BODY GROUND)

(a) Disconnect the A19 ECU connector.
(b) Disconnect the E31 switch connector.
(c) Measure the resistance of the wire harness side connectors.
Standard resistance

Tester Connection	Specified Condition
A19-28 (HDCS) - E31-4	Below 1 Ω
E31-1 - Body ground	Below 1 Ω
A19-28 (HDCS) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

6 CHECK COMBINATION METER

(a) Check the combination meter (see page ME-15).

NG → **REPLACE COMBINATION METER**

OK

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

Downhill Assist Control Indicator Light does not Come ON

DESCRIPTION

Refer to the description of "Downhill Assist Control Indicator Light Remains ON" (see page BC-156).

WIRING DIAGRAM

Refer to the downhill assist control indicator light circuit (see page BC-157).

INSPECTION PROCEDURE

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (see page CA-34)

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → REPAIR CAN COMMUNICATION SYSTEM

A

2	READ VALUE OF INTELLIGENT TESTER (DOWNHILL ASSIST CONTROL SWITCH)

(a) Check the DATA LIST for proper functioning of the downhill assist control switch.

Skid control ECU

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
Downhill assist control SW	Downhill assist control switch / ON or OFF	ON: Downhill assist control switch is ON OFF: Downhill assist control switch is OFF	-

OK:

ON (downhill assist control switch is ON) appears on the screen.

NG → **Go to step 5**

OK

3	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (DAC INDICATOR LIGHT)

(a) Select the ACTIVE TEST, generate a control command, and then check that the downhill assist control indicator light operates.

Skid control ECU

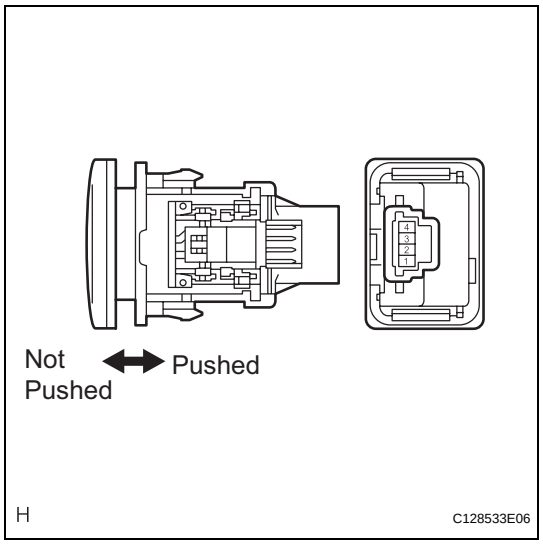
Item (Display)	Test Details	Diagnostic Note
Downhill assist control INDI LAMP	Turn downhill assist control indicator light ON / OFF	Observe combination meter

OK:
The downhill assist control indicator light turns ON and OFF.

OK → **REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY**

NG

4	INSPECT COMBINATION METER



(a) Inspect the combination meter (see page ME-15).

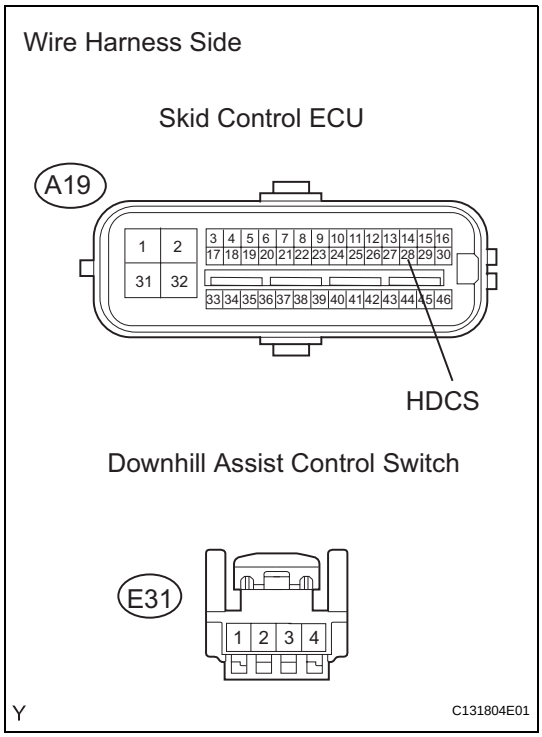
NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

5	INSPECT DOWNHILL ASSIST CONTROL SWITCH

(a) Remove the downhill assist control switch.
(b) Measure the resistance of the switch.
Standard resistance



Tester Connection	Switch Condition	Specified Condition
4 - 1	Switch is pushed	Below 1 Ω
4 - 1	Switch is not pushed	10 kΩ or higher

NG → **REPLACE DOWNHILL ASSIST CONTROL SWITCH**

OK

BC

6	CHECK WIRE HARNESS (CONTROL SWITCH - SKID CONTROL ECU AND BODY GROUND)

(a) Disconnect the A19 ECU connector.
(b) Disconnect the E31 switch connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
A19-28 (HDCS) - E31-4	Below 1 Ω
E31-1 - Body ground	Below 1 Ω
A19-28 (HDCS) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

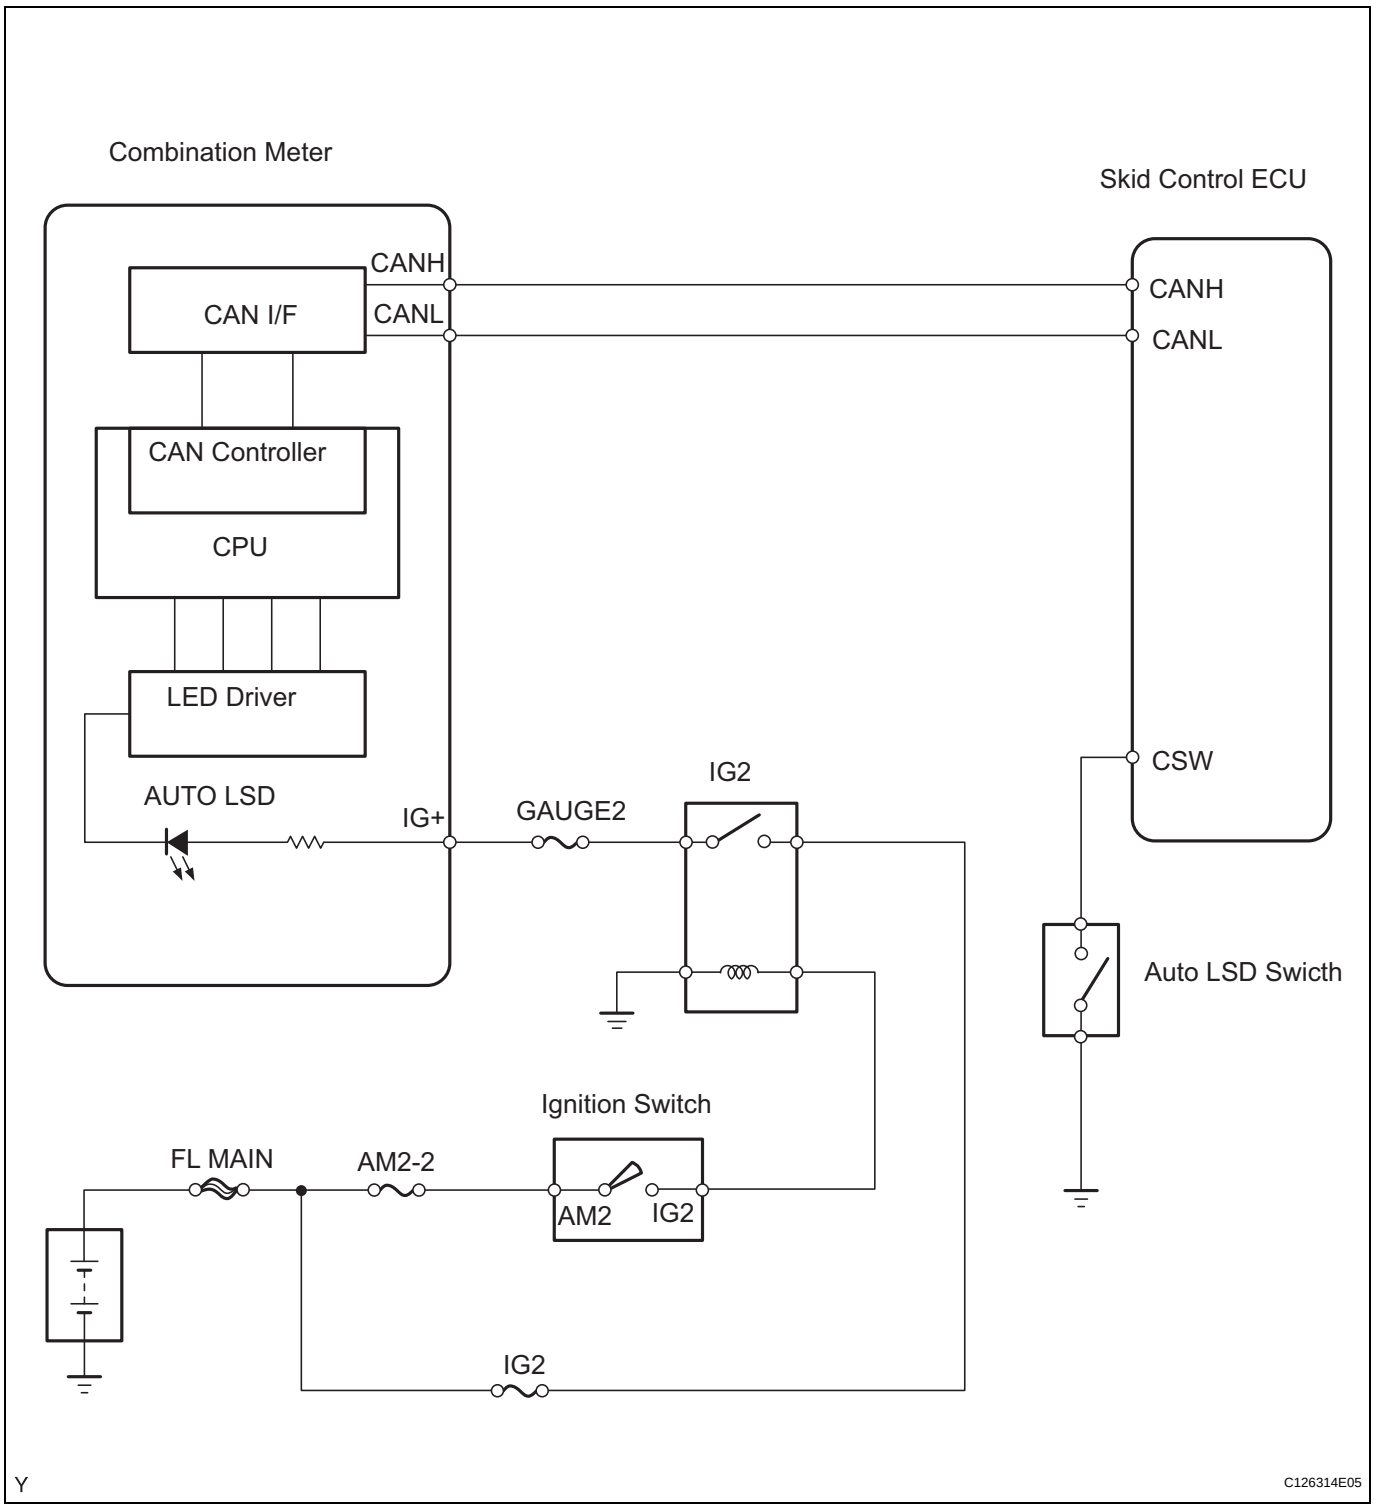
OK

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

BC

AUTO LSD Indicator Light Remains ON

DESCRIPTION



This is the auto LSD switch for 2WD. When the auto LSD switch is pushed on, the auto LSD function is available and the auto LSD indicator light illuminates.

HINT:

The auto LSD does not operate even if the auto LSD switch is pressed under the following conditions:

- The TRC or VSC system is faulty.
- The temperature inside the hydraulic brake booster increases and the auto LSD operation is suspended.

WIRING DIAGRAM

BC

INSPECTION PROCEDURE

1	**CHECK CAN COMMUNICATION SYSTEM**

(a) Check if the CAN communication system DTC is output (see page CA-34).

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

OK:

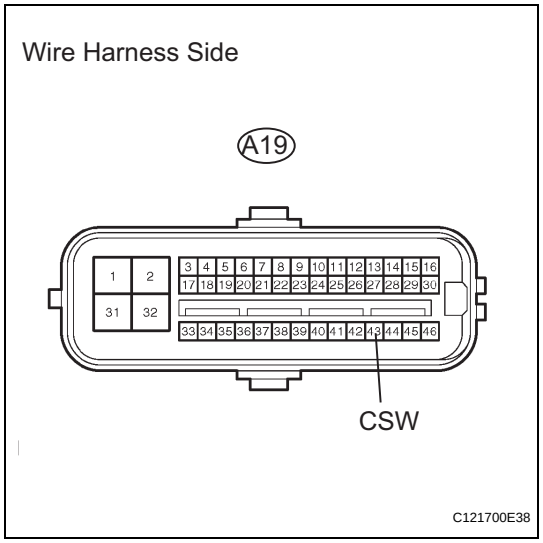
The connector is securely connected.

B → **REPAIR CAN COMMUNICATION SYSTEM**

A

2 CHECK SKID CONTROL ECU CONNECTOR

(a) Check if the skid control ECU connector is securely connected.



OK:

The connector is securely connected.

NG → **CONNECTOR CORRECTLY**

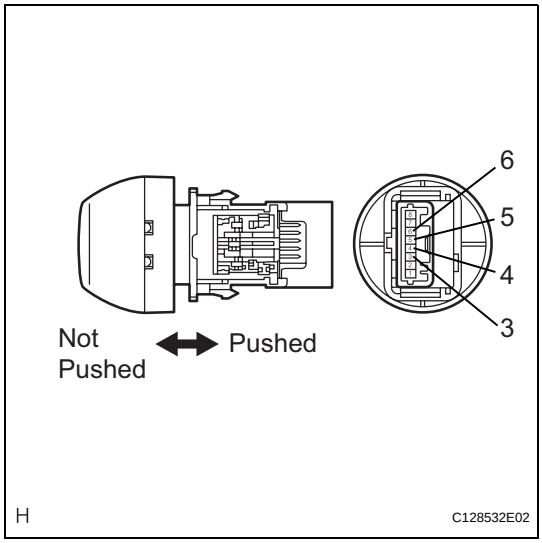
OK

3 CHECK WIRE HARNESS (SKID CONTROL ECU - BODY GROUND)

(a) Disconnect the A19 ECU connector.

(b) Measure the resistance of the wire harness side connector.

Standard resistance



Tester Connection	Switch Condition	Specified Condition
A19-43 (CSW) - Body ground	AUTO LSD switch is not pushed	10 kΩ or higher
A19-43 (CSW) - Body ground	AUTO LSD switch is pushed	Below 1Ω

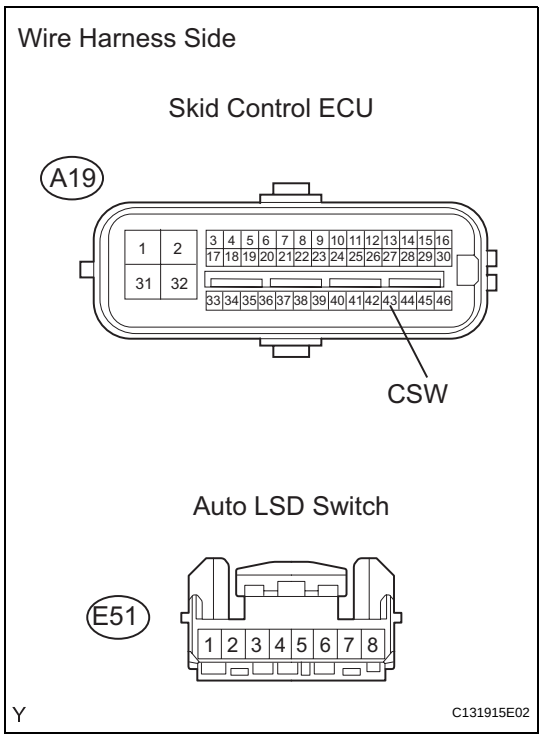
OK → **Go to step 6**

NG

BC

4 INSPECT AUTO LSD SWITCH

(a) Remove the auto LSD switch.
(b) Measure the resistance of the switch.
Standard resistance



Tester Connection	Switch Condition	Specified Condition
3 - 6	Not pushed	10 kΩ or higher
3 - 6	Pushed	Below 1Ω

NG → **REPLACE TRACTION CONTROL SWITCH**

OK

BC

5 CHECK WIRE HARNESS (SKID CONTROL ECU - TRACTION CONTROL SWITCH)

(a) Disconnect the A19 ECU connector.
(b) Disconnect the E51 switch connector.
(c) Measure the resistance of the wire harness side connectors.
Standard resistance

Tester Connection	Specified Condition
A19-43 (CSW) - E51-6	Below 1 Ω
E51-3 - Body ground	Below 1 Ω
A19-43 (CSW) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

6 CHECK COMBINATION METER

(a) Check the combination meter (see page ME-15).

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

AUTO LSD Indicator Light does not Come ON

DESCRIPTION

Refer to the description of "AUTO LSD Indicator Light Remains ON" (see page BC-164).

WIRING DIAGRAM

Refer to the AUTO LSD indicator light circuit (see page BC-165).

INSPECTION PROCEDURE

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (see page CA-34).

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → REPAIR CAN COMMUNICATION SYSTEM

A

2	READ VALUE OF INTELLIGENT TESTER (AUTO LSD SWITCH)

(a) Check the Data List for proper functioning of the Auto LSD switch.

Skid control ECU

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
AUTO LSD SW	Auto LSD switch (AUTO LSD switch) / ON or OFF	ON: Auto LSD switch is ON OFF: Auto LSD switch is OFF	-

OK:

ON (downhill assist control switch is ON) appears on the screen.

NG → **Go to step 5**

OK

3	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (AUTO LSD INDICATOR LIGHT)

(a) Select the ACTIVE TEST, generate a control command, and then check that the AUTO LSD indicator light operates.

Skid control ECU

Item (Display)	Test Details	Diagnostic Note
AUTO LSD LAMP	Turn AUTO LSD indicator light ON / OFF	Observe combination meter

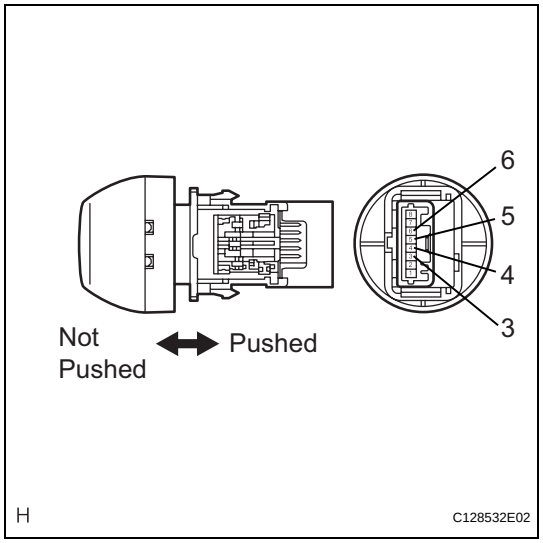
OK:

The AUTO LSD indicator light turns ON and OFF.

NG → REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

OK

4 INSPECT COMBINATION METER ASSEMBLY



(a) Inspect the combination meter (see page ME-15).

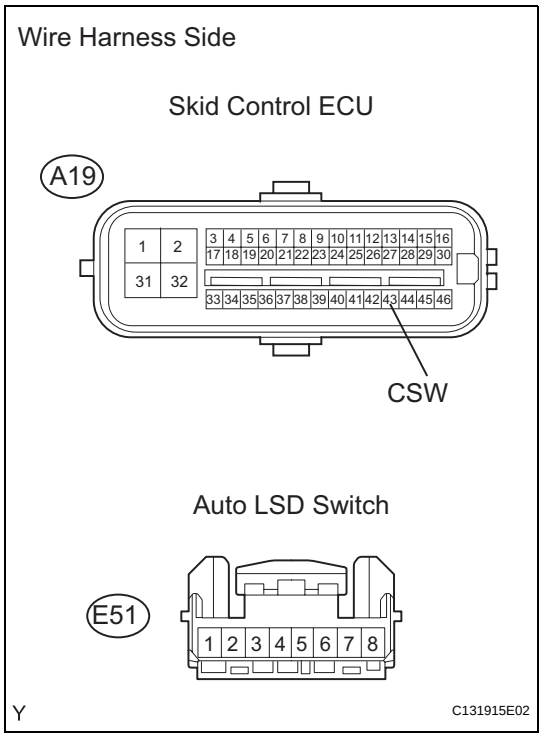
NG → REPLACE COMBINATION METER ASSEMBLY

OK

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

5 INSPECT AUTO LSD SWITCH

(a) Disconnect the auto LSD switch switch.
(b) Measure the resistance of the switch.
Standard resistance



Tester Connection	Switch Condition	Specified Condition
3 - 6	Not pushed	10 kΩ or higher
3 - 6	Pushed	Below 1Ω

NG → REPLACE AUTO LSD SWITCH

OK

BC

6	CHECK WIRE HARNESS (AUTO LSD SWITCH - SKID CONTROL ECU AND BODY GROUND)

(a) Disconnect the A19 ECU connector.
(b) Disconnect the E51 switch connector.
(c) Measure the resistance of the wire harness side connectors.

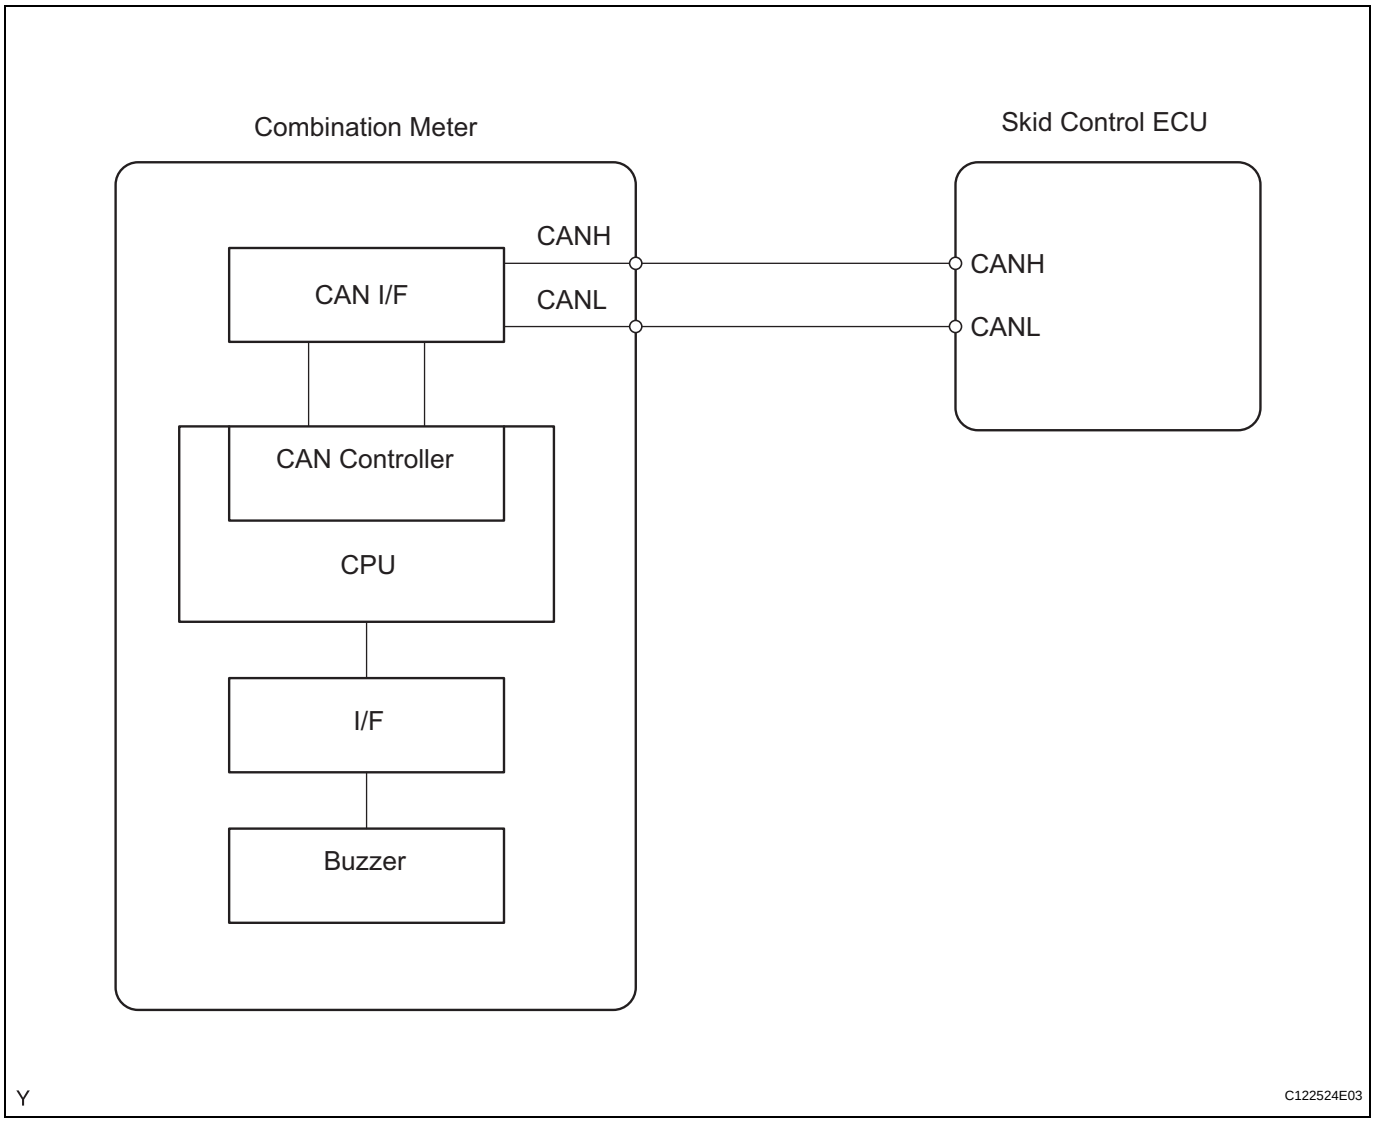
Standard resistance

Tester Connection	Specified Condition
A19-43 (CSW) - E51-6	Below 1 Ω
E51-3 - Body ground	Below 1 Ω
A19-43 (CSW) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY



BC

Skid Control Buzzer Circuit

DESCRIPTION

The skid control buzzer sounds while the VSC is activated.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When replacing the ABS and TRACTION actuator, perform the zero point calibration (see page BC-24).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication DTC is output (see page CA-34).

Result

Result	Proceed to
DTC is not output	A

Result	Proceed to
DTC is output	B

B → REPAIR CAN COMMUNICATION SYSTEM

A

2 PERFORM ACTIVE TEST BY INTELLIGENT TESTER (SKID CONTROL BUZZER)

(a) Select the ACTIVE TEST, generate a control command, and then check that the skid control buzzer operate.

Skid control ECU

Item (Display)	Test Details	Diagnostic Note
BUZZER	Turns skid control buzzer ON / OFF	Buzzer can be heard

OK:
The skid control buzzer can be heard.

OK → REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

NG

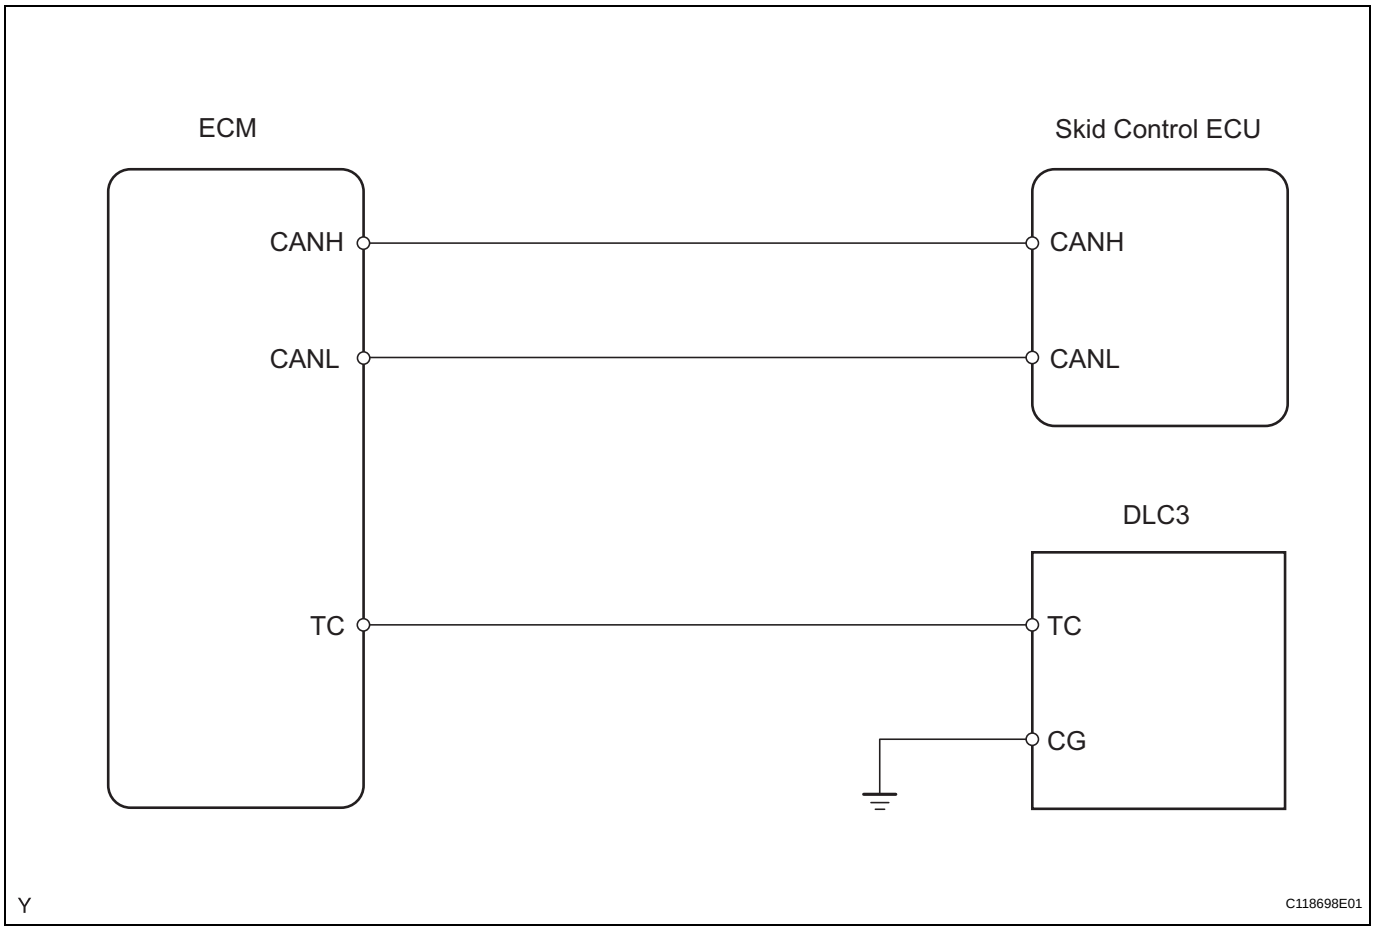
BC

3 INSPECT COMBINATION METER

(a) Inspect the combination meter (see page ME-15).

NG → REPLACE COMBINATION METER

OK

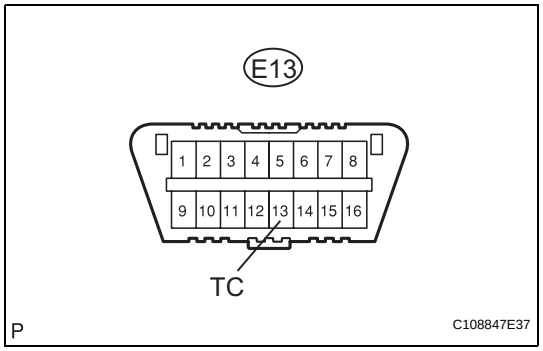


REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

TC and CG Terminal Circuit

DESCRIPTION

Connecting terminals TC and CG of the DLC3 causes the skid control ECU to display 2-digit DTCs by flashing the ABS warning light.



WIRING DIAGRAM

BC

INSPECTION PROCEDURE

1	CHECK DLC3 (TC VOLTAGE)

(a) Turn the ignition switch ON.
(b) Measure the voltage of the DLC3.

Standard voltage

Tester Connection	Specified Condition
E13-13 (TC) - Body ground	10 to 14 V

NG → **Go to step 3**

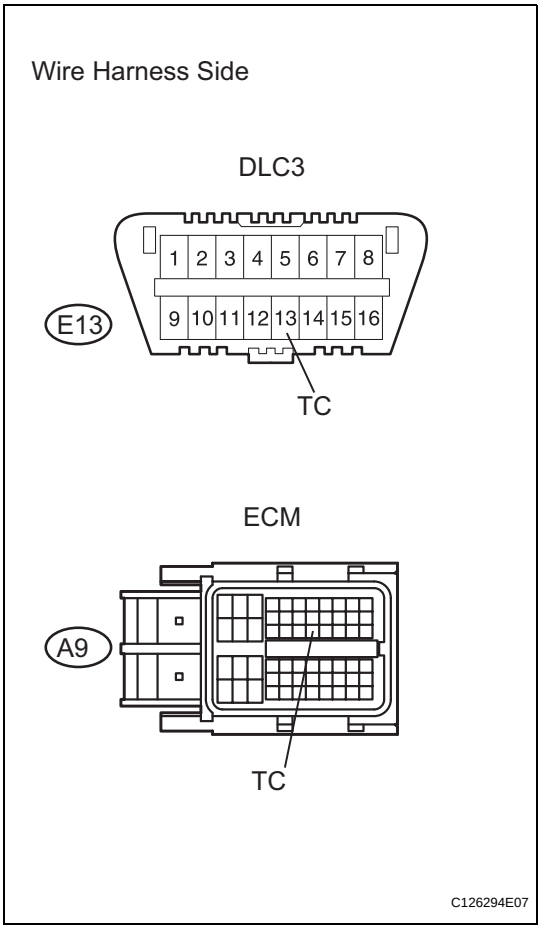
OK

2	CHECK CAN COMMUNICATION SYSTEM

(a) Check the DTC (see page CA-34).

Result

Result	Proceed to
DTC is not output	A
DTC is output	B



B → **REPAIR CIRCUIT INDICATED BY OUTPUT DTC**

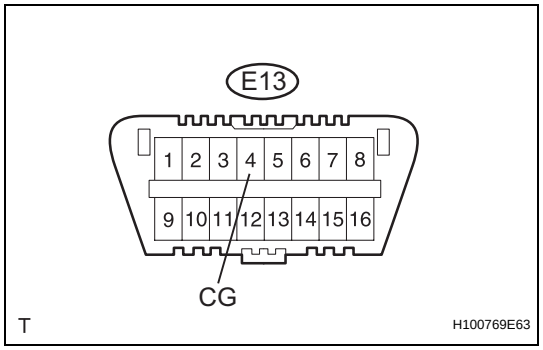
A →

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

3	CHECK WIRE HARNESS (DLC3 - ECM AND BODY GROUND)

BC

(a) Turn the ignition switch OFF.
(b) Disconnect the A12 ECM connector.
(c) Measure the resistance of the wire harness side connectors.



Standard resistance

Tester Connection	Specified Condition
E13-13 (TC) - A9-27 (TC)	Below 1 Ω
A9-27 (TC) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK →

4	CHECK WIRE HARNESS (DLC3 - BODY GROUND)

(a) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Specified Condition
E13-4 (CG) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

5	CHECK CAN COMMUNICATION SYSTEM

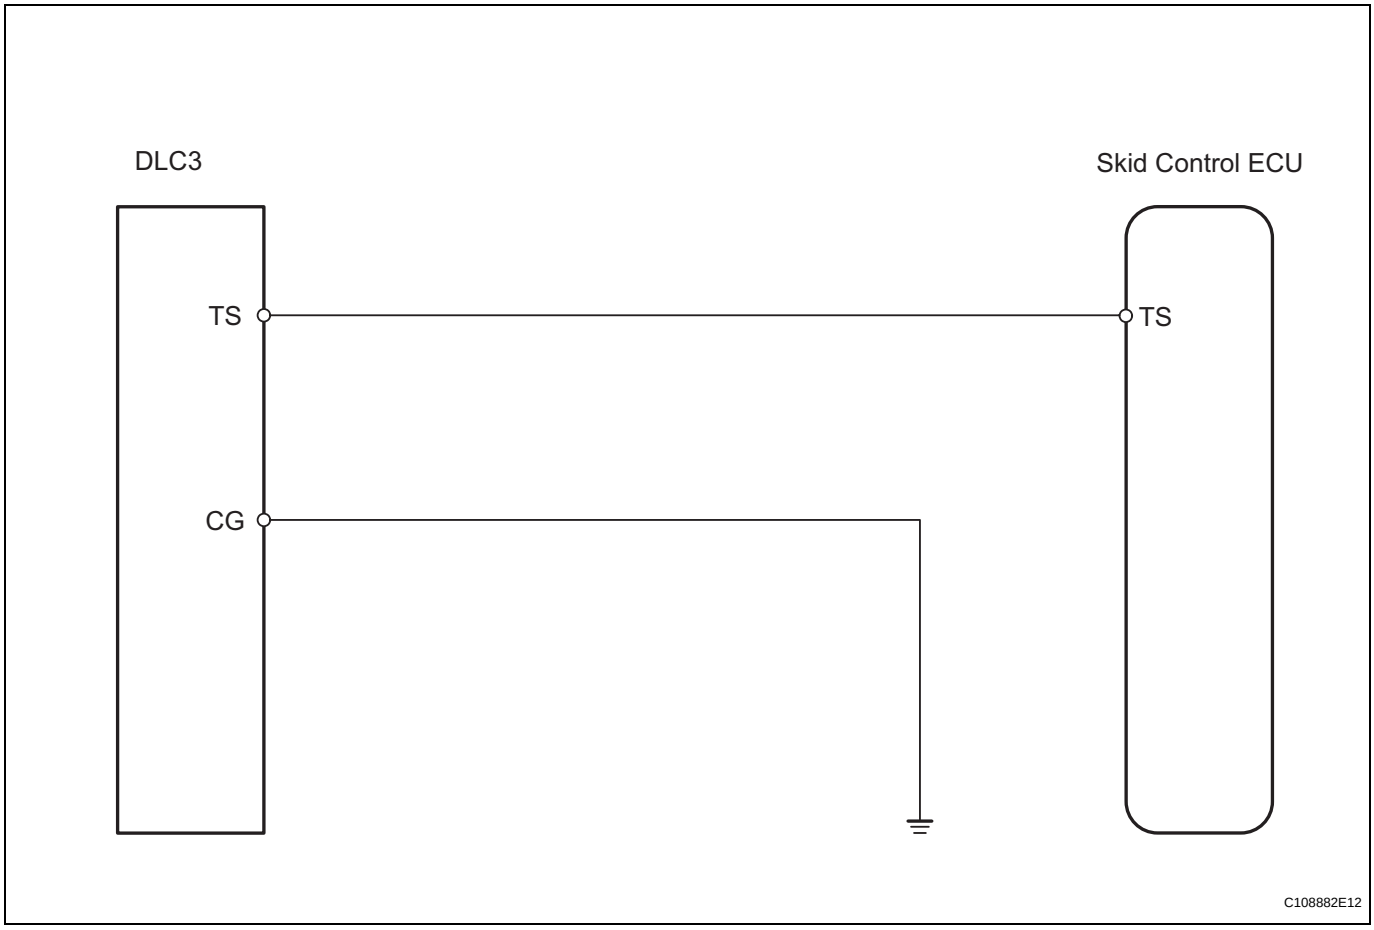
(a) Check if the CAN communication DTC is output (see page CA-34).
Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → **REPAIR CIRCUIT INDICATED BY OUTPUT DTC**

A

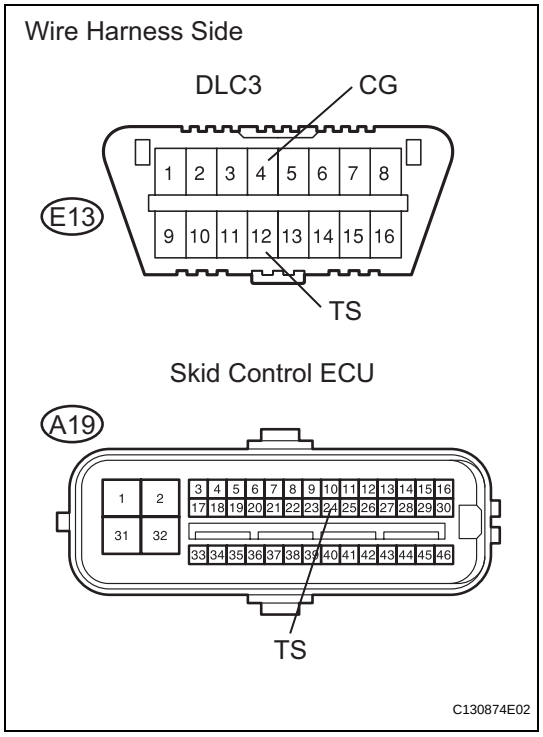
REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY



BC

TS and CG Terminal Circuit

DESCRIPTION



If the vehicle is stationary during sensor check mode, speed sensor malfunctions cannot be detected. The vehicle must be driven for speed sensor malfunctions to be detected.
HINT:
Change to sensor check mode by connecting terminals TC and CG of the DLC3, and turning the ignition switch from OFF to ON.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK WIRE HARNESS (DLC3 - SKID CONTROL ECU AND BODY GROUND)

(a) Disconnect the A27 ECU connector.
(b) Measure the resistance of the wire harness side connectors.

Standard resistance

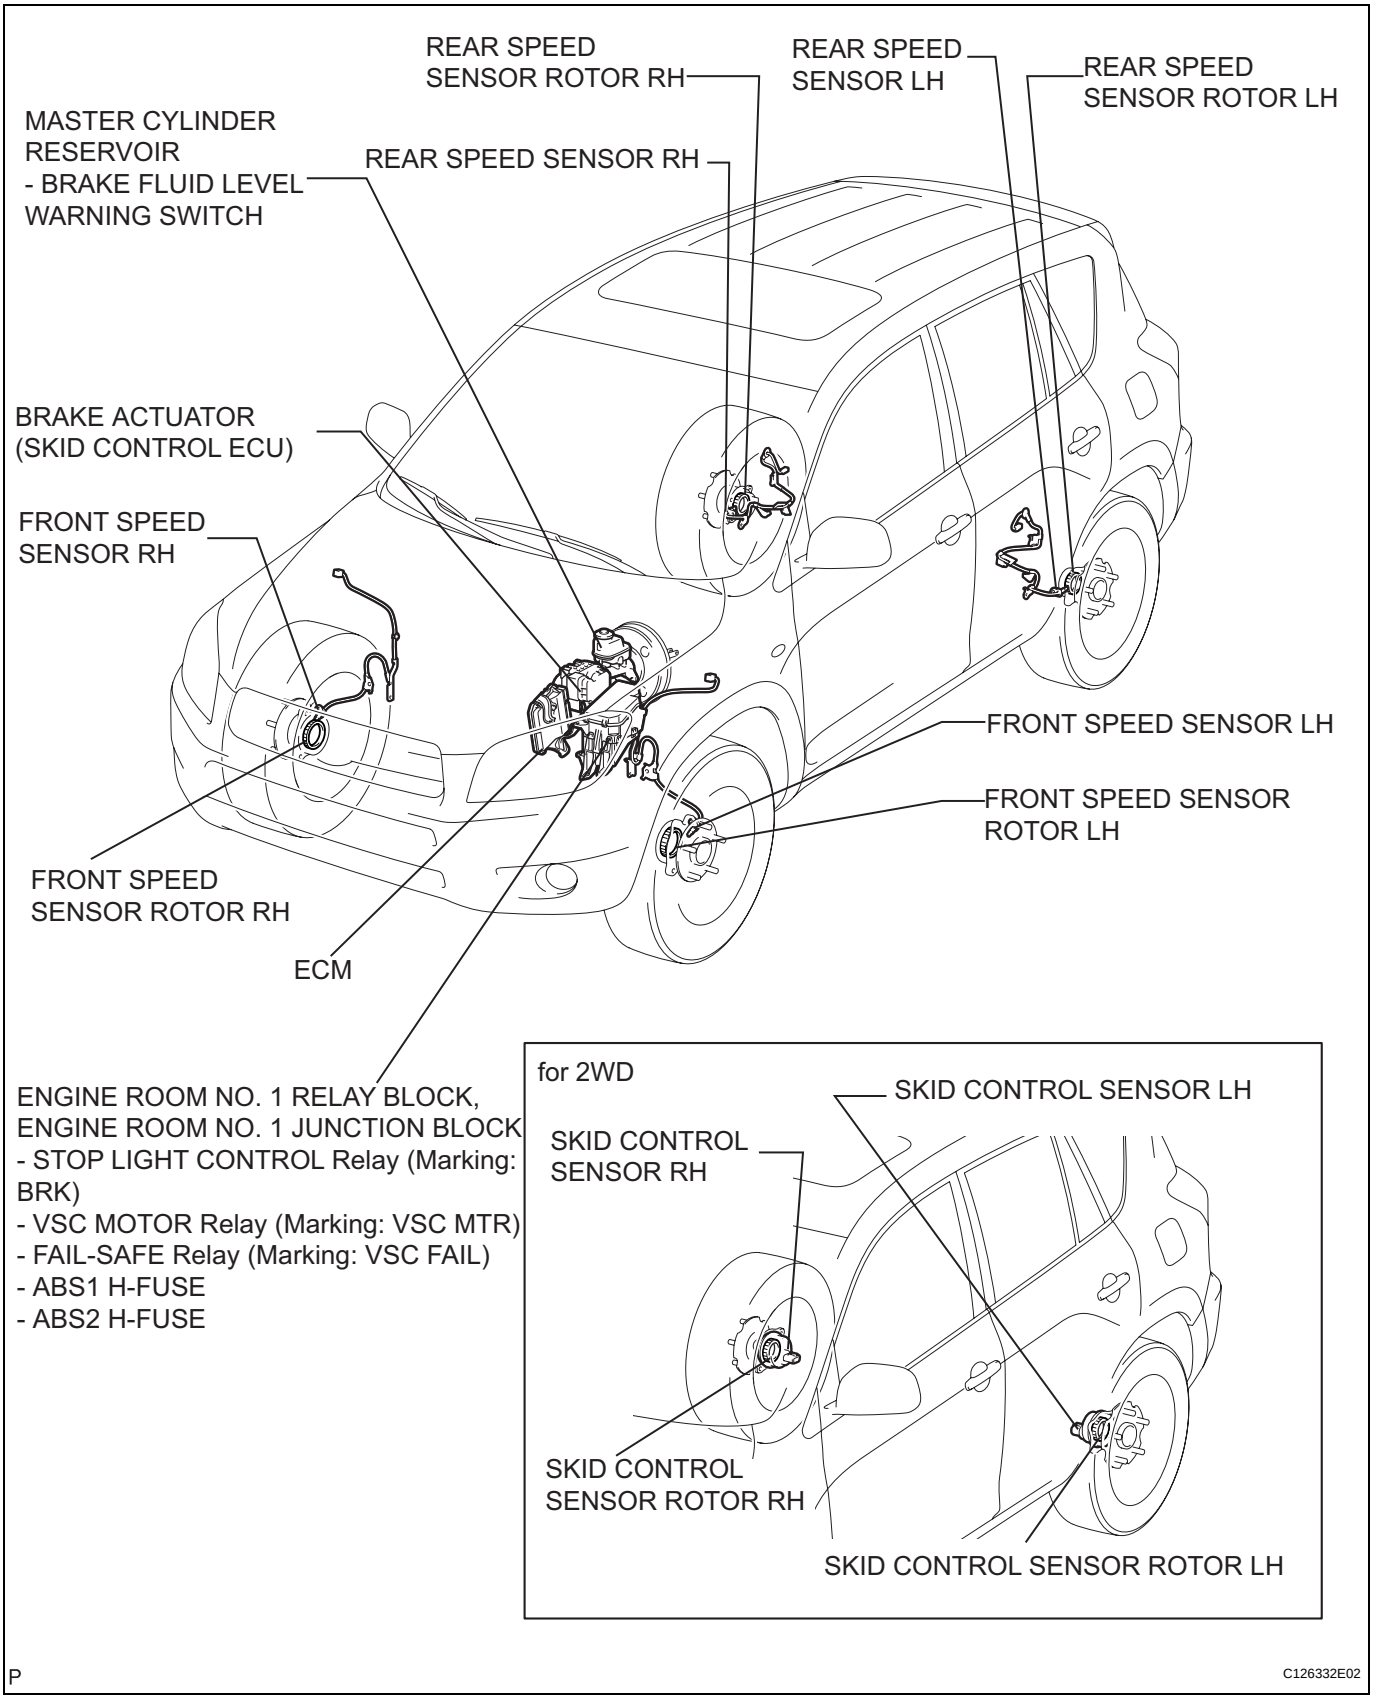
Tester Connection	Specified Condition
E13-4 (CG) - Body ground	Below 1 Ω
E13-12 (TS) - A19-15 (TS)	Below 1 Ω
A19-15 (TS) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE ABS AND TRACTION ACTUATOR ASSEMBLY

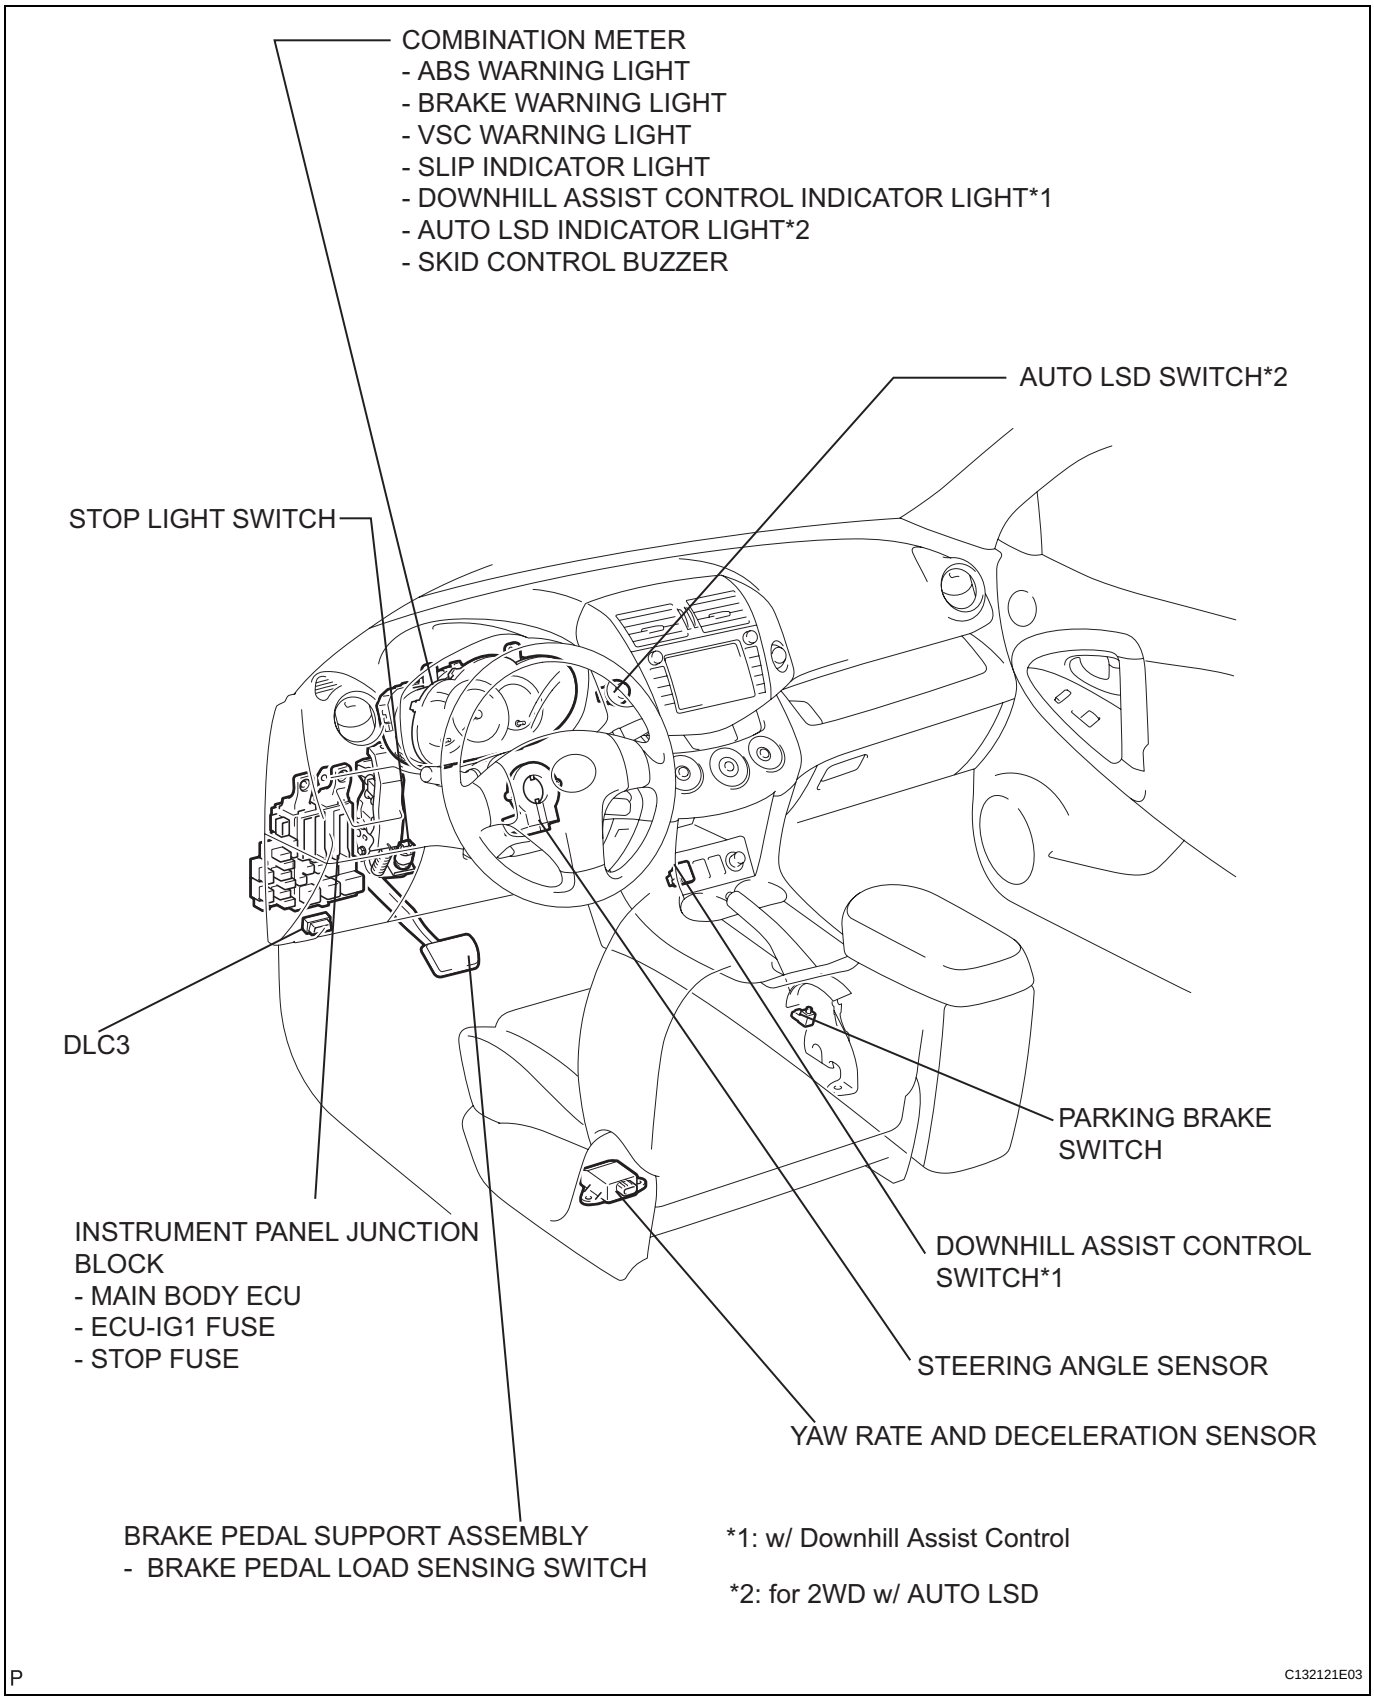
BC



VEHICLE STABILITY CONTROL SYSTEM

PRECAUTION

1. TROUBLESHOOTING PRECAUTION



- When there are malfunctions in the contact points of the terminals or installation problems with any parts, removal and installation of the suspected problem parts may return the system to its normal condition either entirely or temporarily.
- In order to determine the location of the malfunction, be sure to check the conditions at the time the malfunction occurred through data such as DTC and freeze frame data outputs. Record this information before disconnecting any connectors and removing or installing any parts.
- Since the vehicle stability control system may be influenced by malfunctions in other systems, be sure to check for DTCs in other systems.
- Be sure to remove and install the ABS and TRACTION actuator and each sensor with the ignition switch OFF, unless specified in the inspection procedures.
- When removing and installing the ABS and TRACTION actuator and each sensor, be sure to check that the normal display is output during a test mode inspection and a DTC output inspection after reinstalling all the parts.
- After replacing the ABS and TRACTION actuator and/or yaw rate sensor, be sure to perform yaw rate and deceleration sensor zero point calibration (see page BC-24).
- The CAN communication system is used for data communication between the skid control ECU, the steering sensor and the yaw rate sensor (the deceleration sensor is included). If there is trouble in the CAN communication line, the DTC of the communication line is output.
- If the DTC of the CAN communication line is output, repair the malfunction in the communication line and then troubleshoot the vehicle stability control system.
- Since the CAN communication line has its own length and route, it cannot be repaired temporarily with a bypass wire, etc.

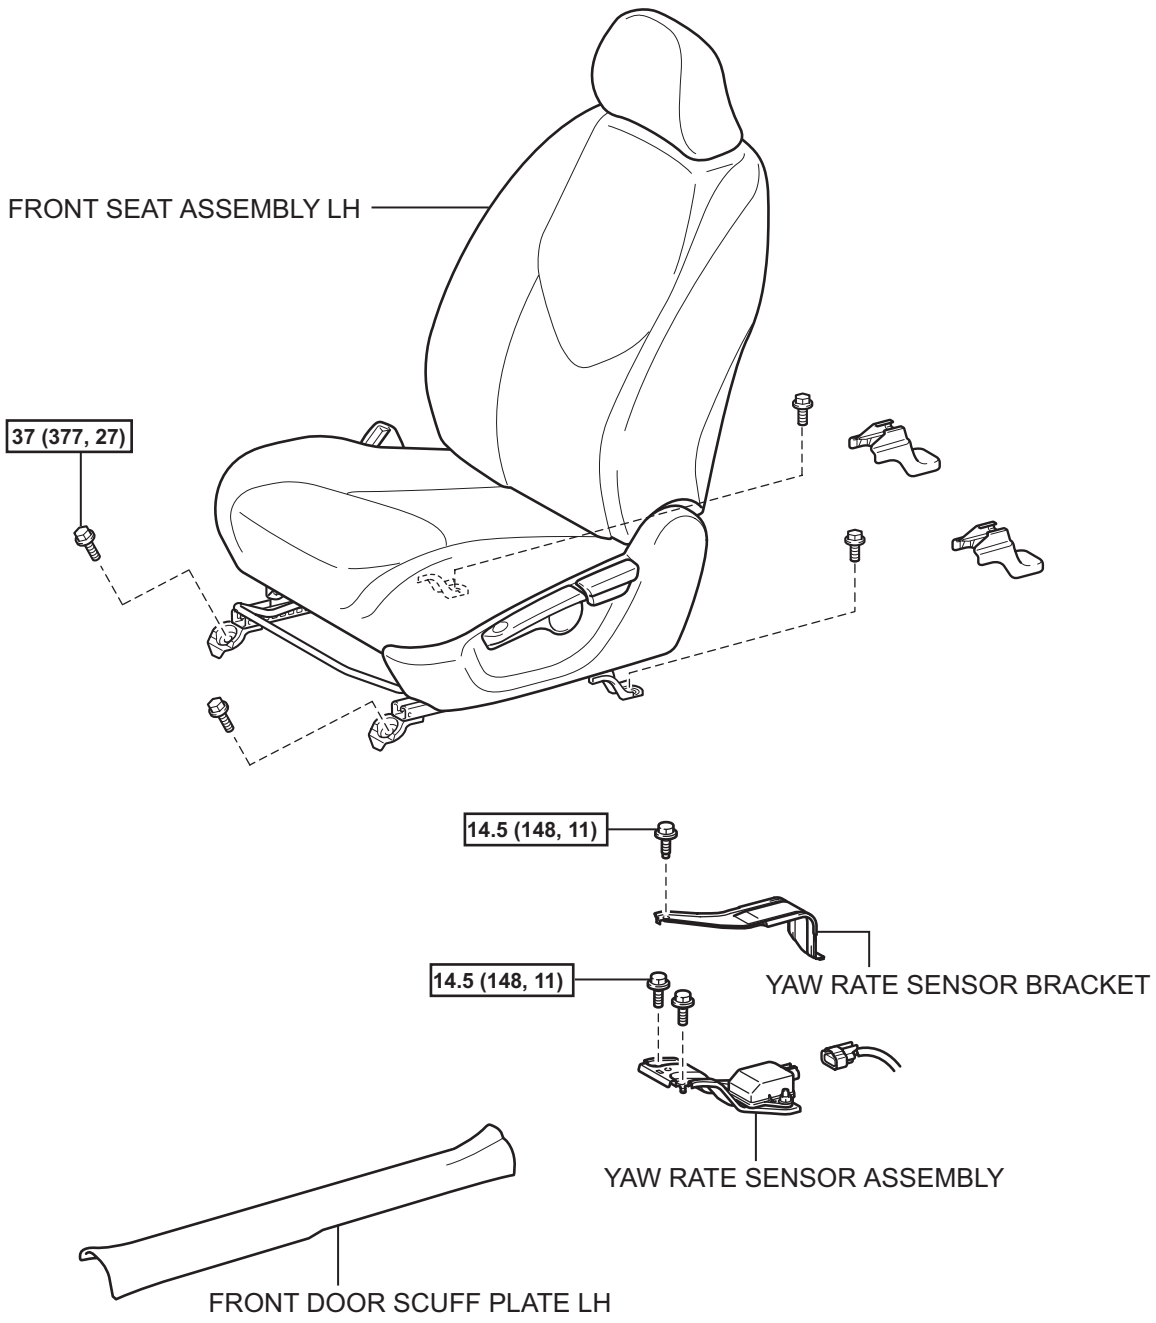
INSPECTION

1. **INSPECT YAW RATE SENSOR**
   (a) Inspect the yaw rate sensor. If any of the following occurs, replace the yaw rate sensor with a new one.
   - The surface of the sensor is cracked, dented, or chipped.
   - The connector or wire harness is scratched, cracked, or damaged.
   - The sensor has been dropped.

INSTALLATION



1. **INSTALL YAW RATE SENSOR ASSEMBLY**
   (a) Install the yaw rate sensor with the 2 bolts.
   Torque: 14.5 N*m (148 kgf*cm, 11 ft.*lbf)
   NOTICE:
   - **Do not damage the yaw rate sensor.**
   - **Make sure that the yaw rate sensor is installed securely.**
   (b) Connect the yaw rate sensor connector.
2. **INSTALL YAW RATE SENSOR BRACKET**
   (a) Install the bracket with the bolt.
   Torque: 14.5 N*m (148 kgf*cm, 11 ft.*lbf)
3. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-59)**
4. **INSTALL FRONT SEAT ASSEMBLY LH**
   (a) for Manual Seat:
   Install the front seat (see page SE-22).
   (b) for Power Seat:
   Install the front seat (see page SE-37).
5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
6. **PERFORM ZERO POINT CALIBRATION OF YAW RATE AND DECELERATION SENSOR**
   (a) Perform the yaw rate and deceleration sensor zero point calibration (see page BC-24).
7. **INSPECT YAW RATE SENSOR SIGNAL**
   (a) Inspect the yaw rate sensor signal (see page BC-28).

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE FRONT SEAT ASSEMBLY LH**
   (a) for Manual Seat:
   Remove the front seat LH (see page SE-11).
   (b) for Power Seat:
   Remove the front seat LH (see page SE-27).
3. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-26)**
4. **REMOVE YAW RATE SENSOR BRACKET**
   (a) Remove the bolt and yaw rate sensor bracket.
5. **REMOVE YAW RATE SENSOR ASSEMBLY**
   (a) Disconnect the yaw rate sensor connector.
   (b) Remove the 2 bolts and yaw rate sensor.
   NOTICE:
   Do not remove the sensor from the bracket.

SYSTEM DIAGRAM

CA

HINT:

- The ABS and traction actuator (skid control ECU) detects and stores steering sensor and yaw rate sensor DTCs and performs DTC communication by receiving information from the steering sensor and yaw rate sensor.
- The ECM uses the CAN communication system to perform DTC communication instead of the conventional communication line (SIL).

SYSTEM DESCRIPTION

1. BRIEF DESCRIPTION

(a) The CAN (Controller Area Network) is a serial data communication system for real time application. It is a vehicle multiplex communication system which has a high communication speed (500 kbps) and the ability to detect malfunctions.

(b) By pairing the CANH and CANL bus lines, the CAN performs communication based on differential voltages.

(c) Many ECUs (sensors) installed on the vehicle operate by sharing information and communicating with each other.

(d) The CAN has 2 resistors of 120 Ω which are necessary to communicate with the main wire.

2. DEFINITION OF TERMS

(a) Main wire

(1) The main wire is a wire harness between the 2 terminus circuits on the bus (communication line). This is the main bus in the CAN communication system.

(b) Branch wire

(1) The branch wire is a wire harness which diverges from the main wire to an ECU or sensor.

(c) Terminus circuit

(1) The terminus circuit is a circuit which converts the communication current of the CAN communication into the bus voltage. It consists of a resistor and condenser. 2 terminus circuits are necessary on a bus.

(d) CAN J/C

(1) The CAN J/C is a junction designed for CAN communication, which contains a terminus circuit.

3. ECU OR SENSOR WHICH COMMUNICATE VIA CAN COMMUNICATION SYSTEM

(a) ABS and traction actuator (Skid control ECU)
(b) Power steering ECU
(c) Steering Angle sensor
(d) Yaw rate sensor
(e) ECM
(f) Center airbag sensor
(g) Air conditioning amplifier
(h) Combination meter ECU
(i) Main body ECU
(j) 4WD control ECU*

HINT:
*: for 4WD

4. DIAGNOSTIC CODES FOR CAN COMMUNICATION SYSTEM

(a) DTCs for the CAN communication system are as follows: U0073, U0100, U0105, U0121, U0122, U0123, U0124, U0126, U0129, C1280, C1296, C1297, and B1499.

5. NOTES REGARDING TROUBLESHOOTING

(a) Trouble in the CAN bus (communication line) can be checked through the DLC3 (except when there is a wire break other than in the branch wire of the DLC3).

NOTICE:

Do not connect the tester directly to the DLC3 connector. Be sure to use a service wire.

(b) DTCs regarding the CAN communication system can be checked using the intelligent tester.

(c) The CAN communication system cannot detect trouble in the branch line of the DLC3 even though the DLC3 is also connected to the CAN communication system.

HOW TO PROCEED WITH TROUBLESHOOTING

NOTICE:

- **DTCs for the CAN communication system are as follows: U0073, U0100, U0105, U0121, U0122, U0123, U0124, U0126, U0129, C1280, C1296, C1297, and B1499.**
- **Refer to the troubleshooting procedures of each system if DTCs regarding the CAN communication system are not output.**
- **Turn the ignition switch off before measuring the resistances of the main wire and the branch wire.**
- **After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not in operation.**
- **Before measuring the resistance, leave the vehicle for at least 1 minute and do not operate the ignition switch, any switches or doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:

- *: Use the intelligent tester (with CAN VIM).
- Operating the ignition switch, any switches or any doors triggers related ECU and sensor communication with the CAN, which causes resistance variation.

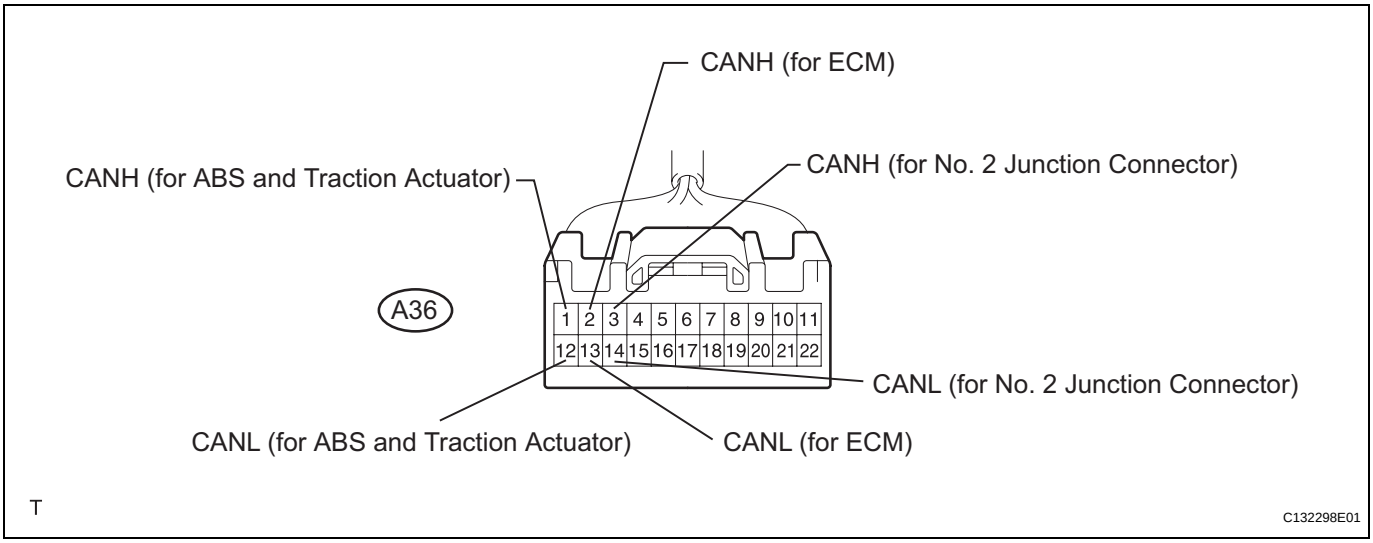
TERMINALS OF ECU

(2005/11-2006/01)

NOTICE:

- **Turn the ignition switch OFF before measuring the resistances of the main wire and the branch wire.**
- **After the ignition switch is turned OFF, check that the key reminder warning system and light reminder warning system are not in operation.**
- **Before measuring the resistance, leave the vehicle for at least 1 minute and do not operate the ignition switch, any switches or doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**



HINT:

Operating the ignition switch, any switches or any doors triggers related ECU and sensor communication with the CAN, which causes resistance variation.

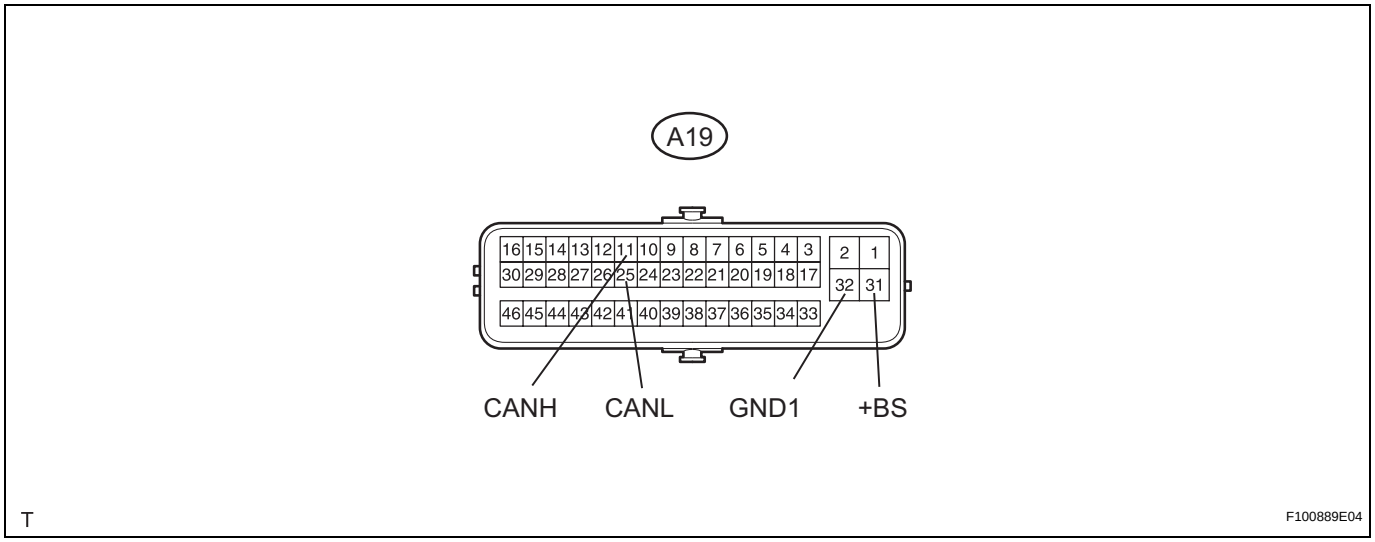
CANH (E69-7)	P	4WD control ECU*
CANL (E69-18)	W	4WD control ECU*
CANH (E69-5)	G	Combination meter ECU
CANL (E69-16)	W	Combination meter ECU

HINT:
*: for 4WD

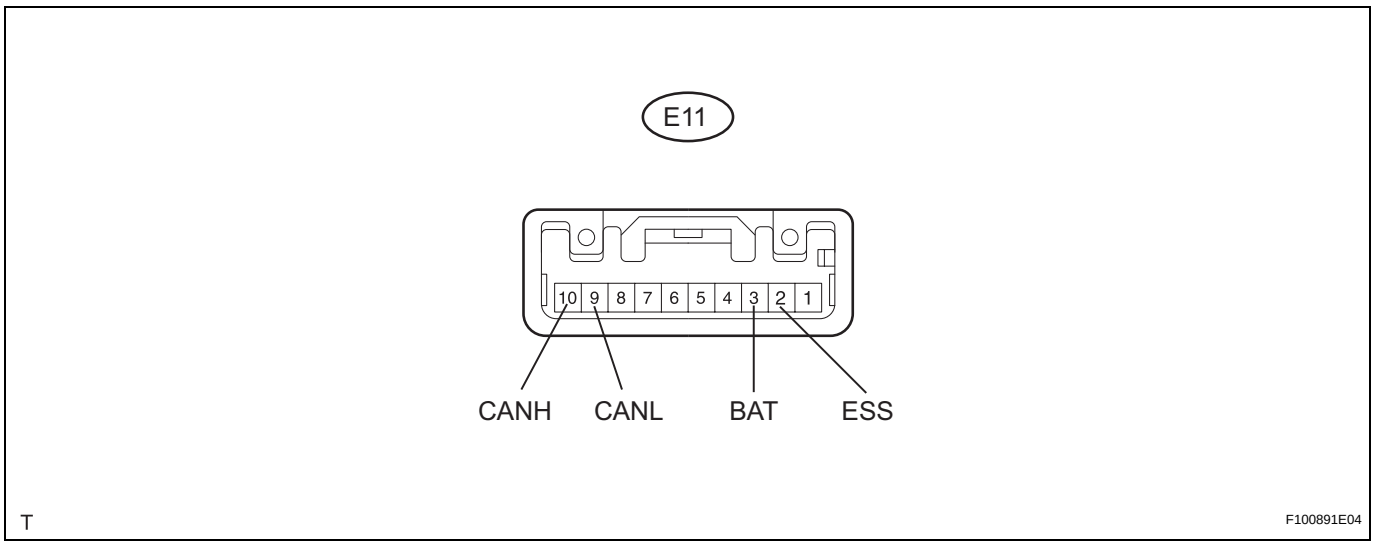


2. CHECK DLC3

(a) Measure the resistance of the connector.

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (E13-6) - CANL (E13-14)	B - W	Ignition switch OFF	54 to 69 Ω
CANH (E13-6) - CG (E13-4)	B - BR	Ignition switch OFF	200 Ω or more
CANL (E13-14) - CG (E13-4)	W - BR	Ignition switch OFF	200 Ω or more
CANH (E13-6) - BAT (E13-16)	B - L	Ignition switch OFF	1 MΩ or more
CANL (E13-14) - BAT (E13-16)	W - L	Ignition switch OFF	1 MΩ or more

3. CHECK ABS AND TRACTION ACTUATOR (SKID CONTROL ECU)

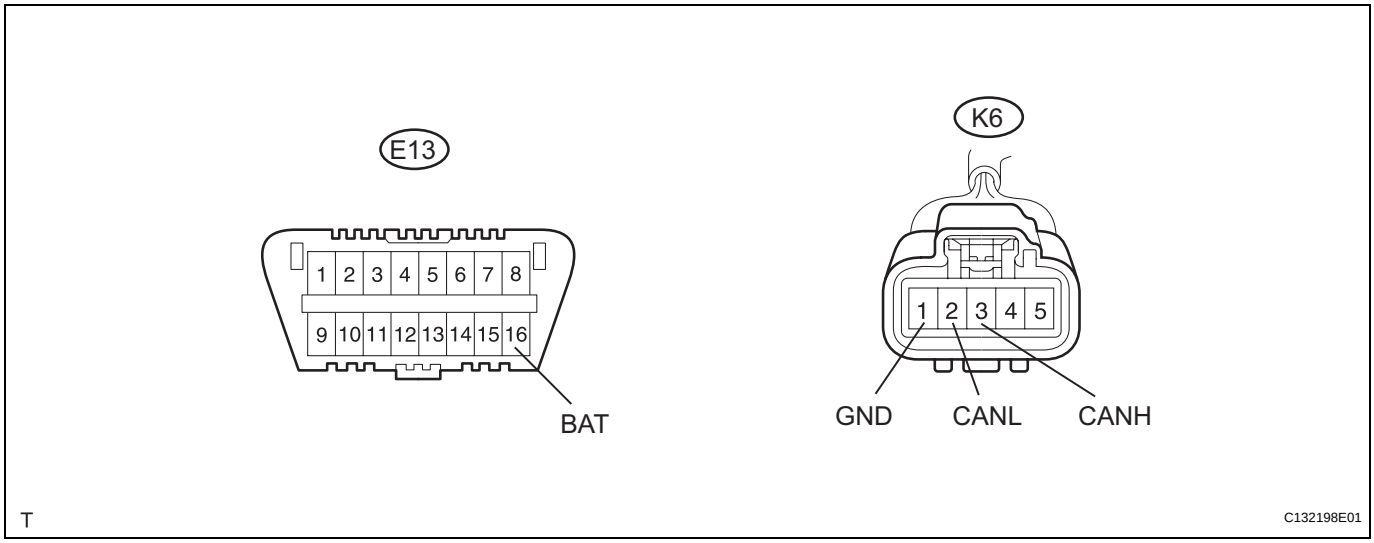


(a) Disconnect the A19 ECU connector.

(b) Measure the resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (A19-11) - CANL (A19-25)	R - W	Ignition switch OFF	54 to 69 Ω
CANH (A19-11) - GND1 (A19-32)	R - W-B	Ignition switch OFF	200 Ω or more
CANL (A19- 25) - GND1 (A19-32)	W - W-B	Ignition switch OFF	200 Ω or more
CANH (A19-11) - +BS (A19-31)	R - W	Ignition switch OFF	1 MΩ or more
CANL (A19-25) - +BS (A19-31)	W - W	Ignition switch OFF	1 MΩ or more

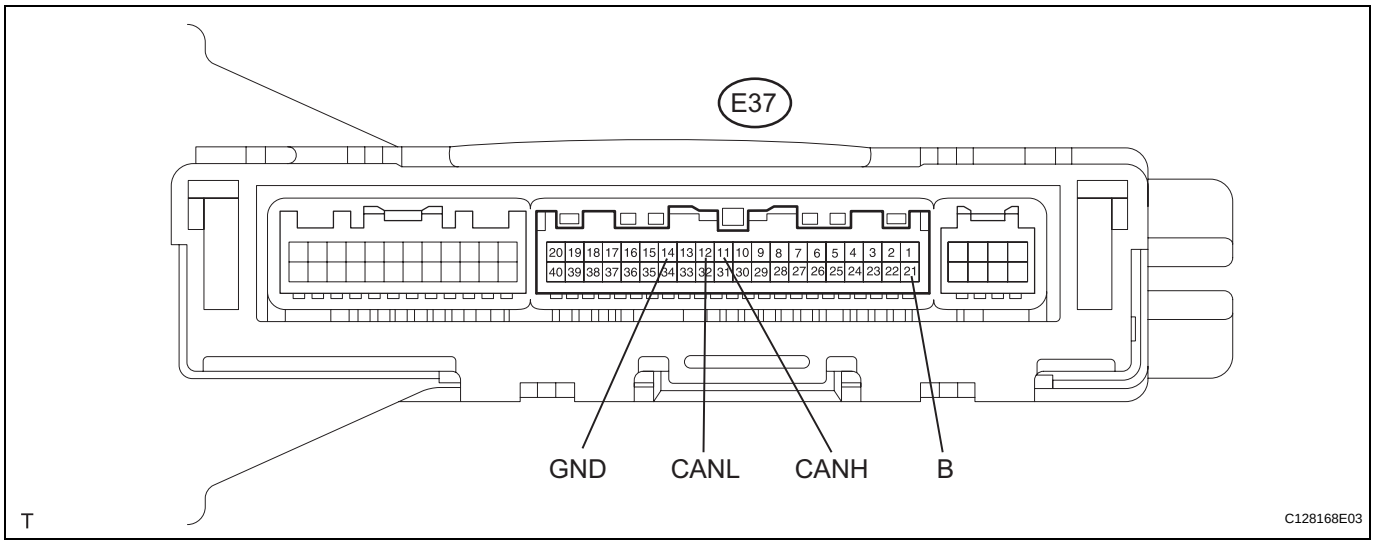
CA



4. CHECK STEERING ANGLE SENSOR

(a) Disconnect the E11 sensor connector.
(b) Measure the resistance of the wire harness side connector.

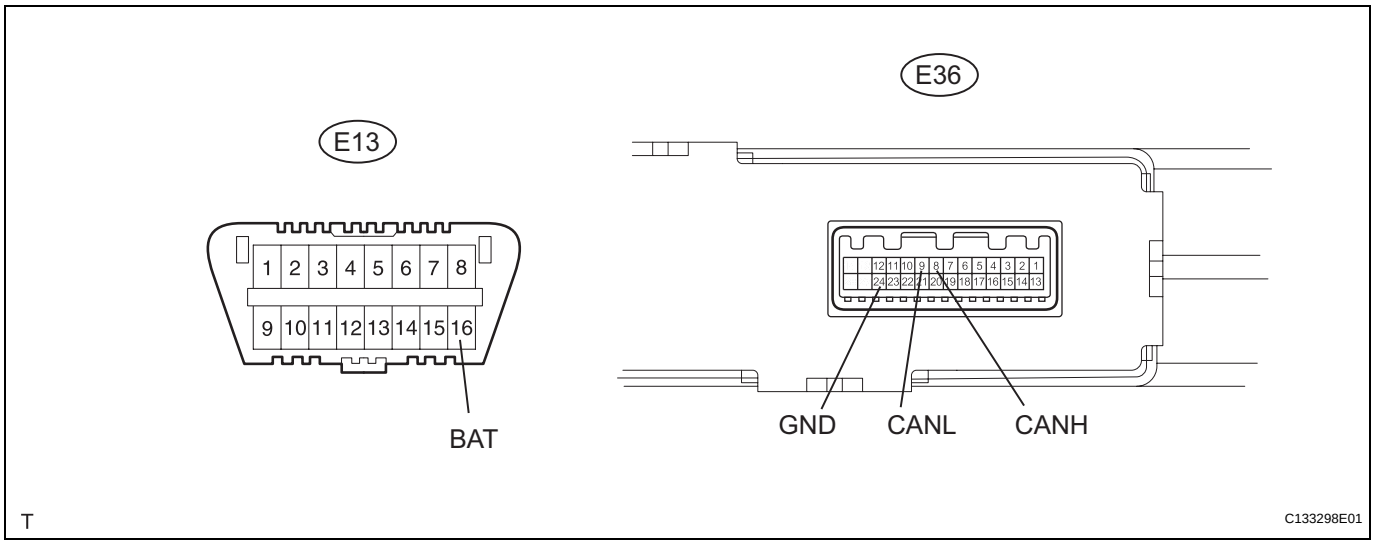
Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (E11-10) - CANL (E11-9)	BR - W	Ignition switch OFF	54 to 69 Ω
CANH (E11-10) - ESS (E11-2)	BR - W-B	Ignition switch OFF	200 Ω or more
CANL (E11-9) - ESS (E11-2)	W - W-B	Ignition switch OFF	200 Ω or more
CANH (E11-10) - BAT (E11-3)	BR - R	Ignition switch OFF	1 MΩ or more
CANL (E11-9) - BAT (E11-3)	W - R	Ignition switch OFF	1 MΩ or more



5. CHECK YAW RATE SENSOR

(a) Disconnect the K6 sensor connector.
(b) Measure the resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (K6-3) - CANL (K6-2)	L - W	Ignition switch OFF	54 to 69 Ω
CANH (K6-3) - GND (K6-1)	L - W-B	Ignition switch OFF	200 Ω or more
CANL (K6-2) - GND (K6-1)	W - W-B	Ignition switch OFF	200 Ω or more
CANH (K6-3) - BAT (E13-16)	L - L	Ignition switch OFF	1 MΩ or more
CANL (K6-2) - BAT (E13-16)	W - L	Ignition switch OFF	1 MΩ or more

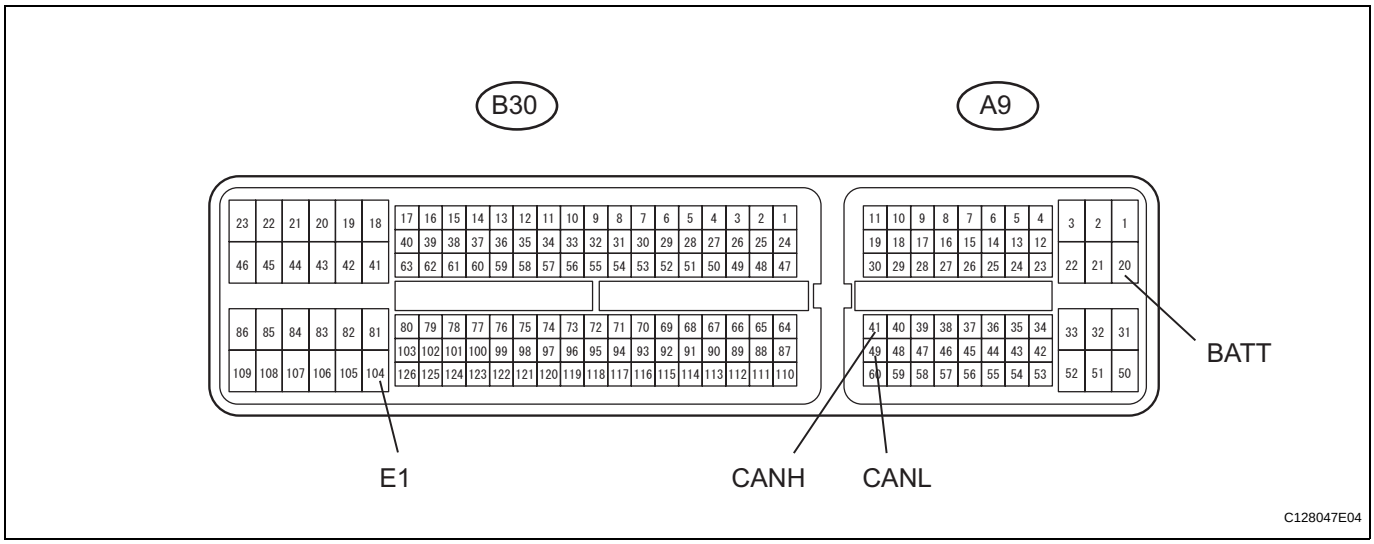


6. CHECK AIR CONDITIONING AMPLIFIER (for AUTOMATIC AIR CONDITIONING SYSTEM)

(a) Disconnect the E37 amplifier connector.
(b) Measure the resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (E37-11) - CANL (E37-12)	V - W	Ignition switch OFF	54 to 69 Ω
CANH (E37-11) - GND (E37-14)	V - W-B	Ignition switch OFF	200 Ω or more
CANL (E37-12) - GND (E37-14)	W - W-B	Ignition switch OFF	200 Ω or more
CANH (E37-11) - B (E37-21)	V - R	Ignition switch OFF	1 MΩ or more
CANL (E37-12) - B (E37-21)	W - R	Ignition switch OFF	1 MΩ or more

7. CHECK AIR CONDITIONING AMPLIFIER (for MANUAL AIR CONDITIONING SYSTEM)

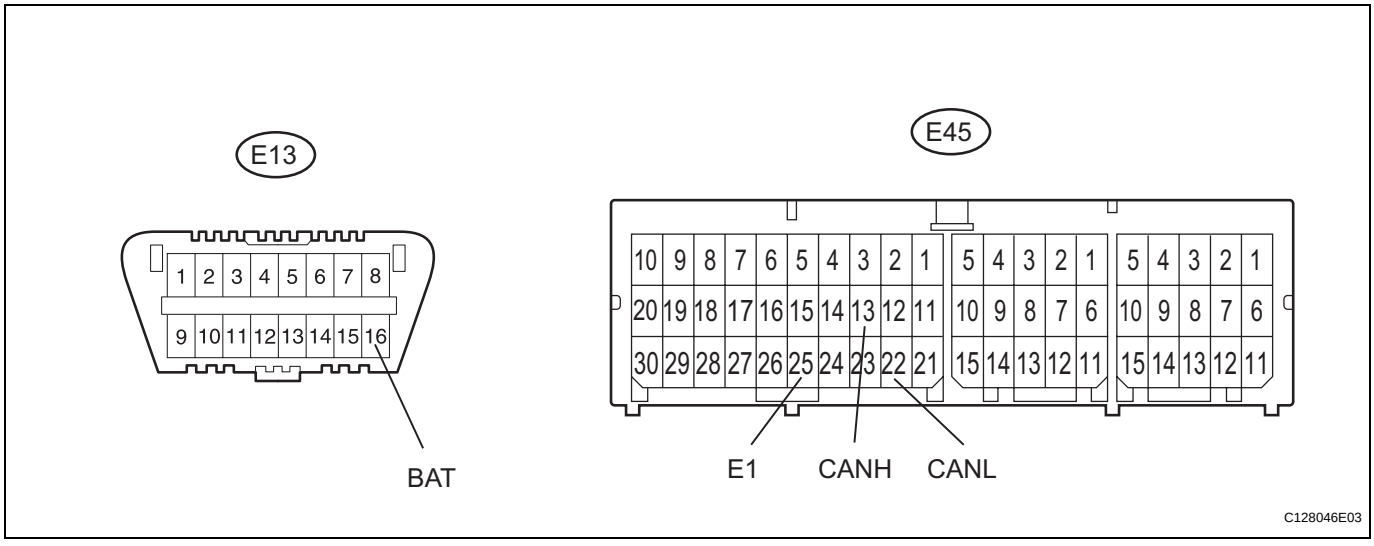


(a) Disconnect the E36 amplifier connector.
(b) Measure the resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (E36-8) - CANL (E36-9)	V - W	Ignition switch OFF	54 to 69 Ω
CANH (E36-8) - GND (E36-24)	V - W-B	Ignition switch OFF	200 Ω or more
CANL (E36-9) - GND (E36-24)	W - W-B	Ignition switch OFF	200 Ω or more

CA

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (E36-8) - BAT (E13-16)	V - L	Ignition switch OFF	1 MΩ or more
CANH (E36-9) - BAT (E13-16)	W - L	Ignition switch OFF	1 MΩ or more

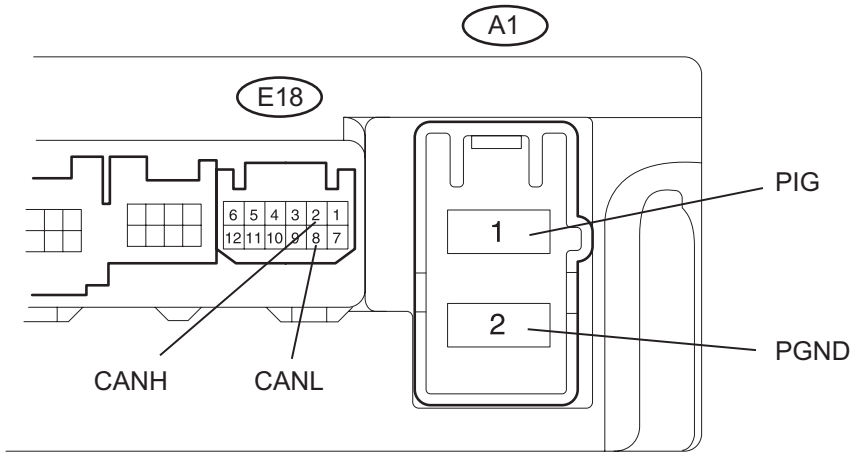


8. CHECK ECM

(a) Disconnect the A19 and B30 ECM connectors.
(b) Measure the resistance of the wire harness side connectors.

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (A9-41) - CANL (A9-49)	Y - W	Ignition switch OFF	108 to 132 Ω
CANH (A9-41) - E1 (B30-104)	Y - BR	Ignition switch OFF	200 Ω or more
CANL (A9-49) - E1 (B30-104)	W - BR	Ignition switch OFF	200 Ω or more
CANH (A9-41) - BATT (A9-20)	Y - W	Ignition switch OFF	1 MΩ or more
CANL (A9-49) - BATT (A9-20)	W - W	Ignition switch OFF	1 MΩ or more

9. CHECK CENTER AIRBAG SENSOR ASSEMBLY

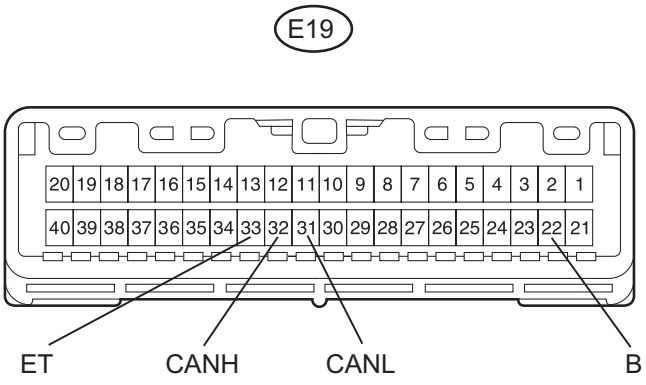


(a) Disconnect the E45 sensor connector.
(b) Measure the resistance of the wire harness side connectors.

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (E45-13) - CANL (E45-22)	B - W	Ignition switch OFF	54 to 69 Ω

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (E45-13 - E1 (E45-25)	B - W-B	Ignition switch OFF	200 Ω or more
CANL (E45-22) - E1 (E45-25)	W - W-B	Ignition switch OFF	200 Ω or more
CANH (E45-13) - BAT (E13-16)	B - L	Ignition switch OFF	1 MΩ or more
CANL (E45-22) - BAT (E13-16)	W - L	Ignition switch OFF	1 MΩ or more

10. CHECK POWER STEERING ECU



T C128167E02

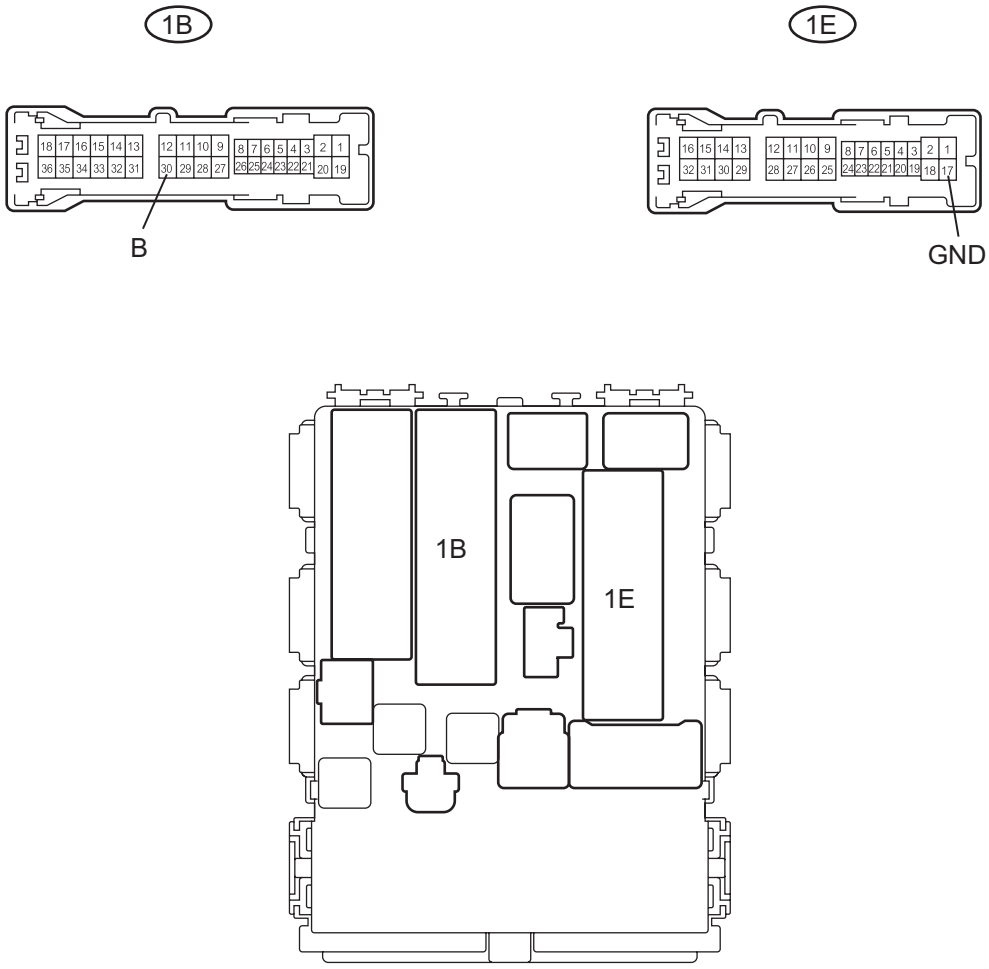
(a) Disconnect the A1 and E18 ECU connectors.
(b) Measure the resistance of the wire harness side connectors.

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (E18-2) - CANL (E18-8)	Y - W	Ignition switch OFF	54 to 69 Ω
CANH (E18-2) - PGND (A1-2)	Y - W-B	Ignition switch OFF	200 Ω or more
CANL (E18-8) - PGND (A1-2)	W - W-B	Ignition switch OFF	200 Ω or more
CANH (E18-2) - PIG (A1-1)	Y - W-B	Ignition switch OFF	1 MΩ or more
CANL (E18-8) - PIG (A1-1)	W - W-B	Ignition switch OFF	1 MΩ or more

11. CHECK COMBINATION METER ECU

T C128516E04

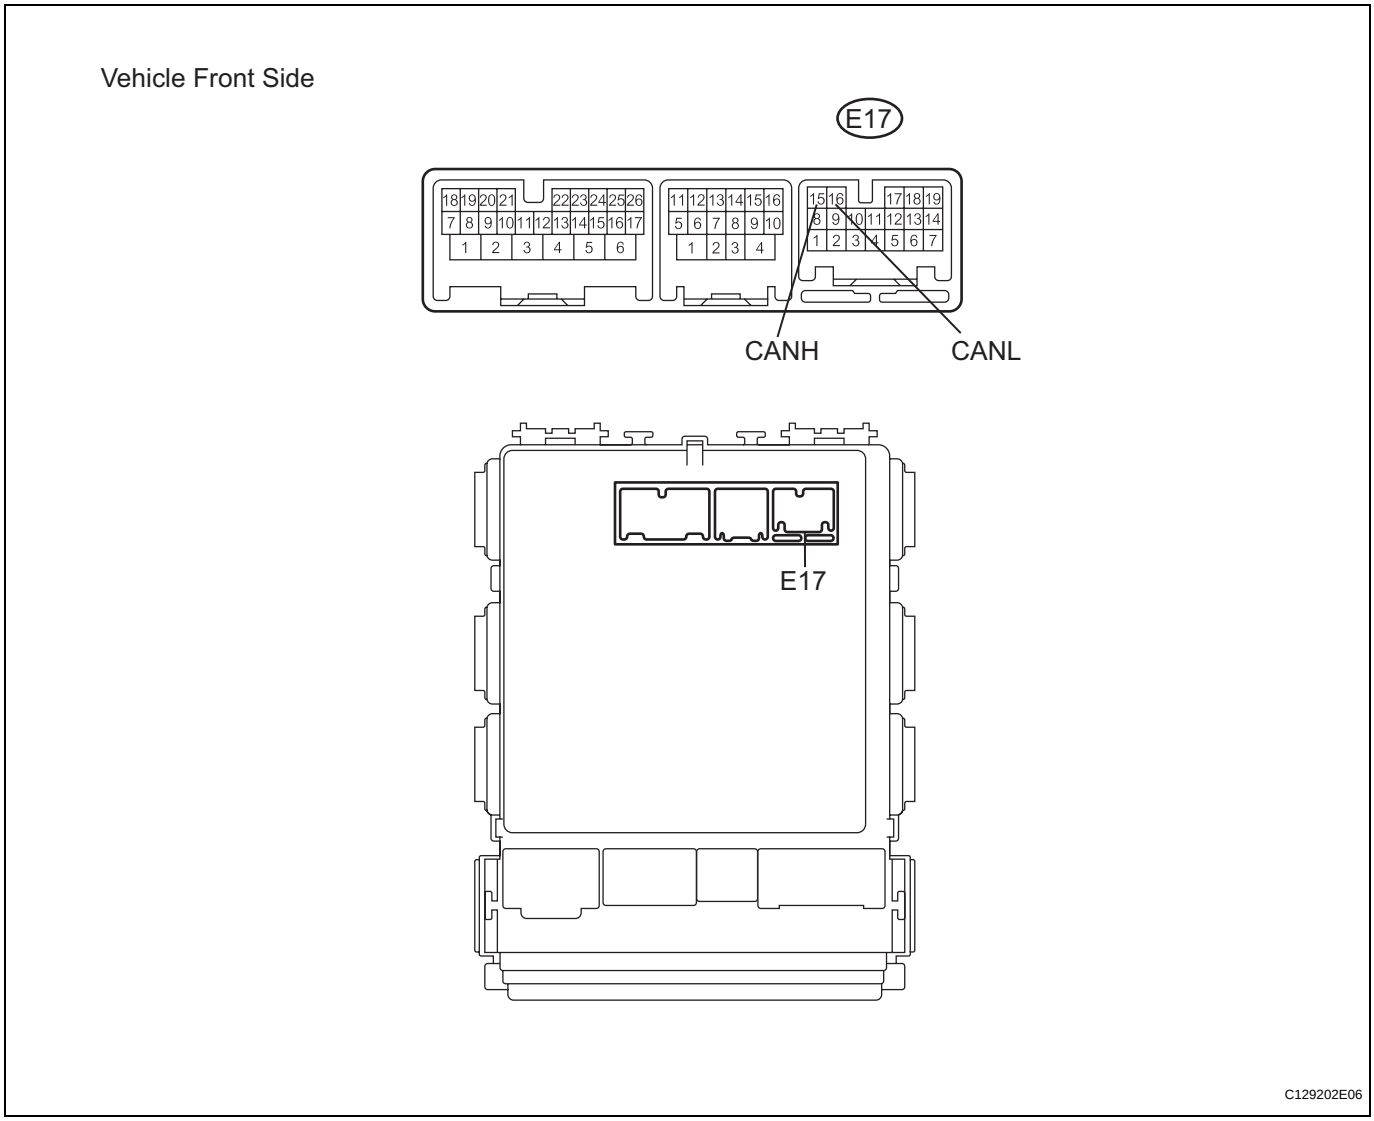
(a) Disconnect the E19 ECU connector.



CA

(b) Measure the resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (E19-32) - CANL (E19-31)	G - W	Ignition switch OFF	108 to 132 Ω
CANH (E19-32) - CANL (E19-31)	G - BR	Ignition switch OFF	200 Ω or more
CANL (E19-31) - ET (E19-33)	W - BR	Ignition switch OFF	200 Ω or more
CANH (E19-32) - B (E19-22)	G - R	Ignition switch OFF	1 MΩ or more
CANL (E19-31) - B (E19-22)	W - R	Ignition switch OFF	1 MΩ or more

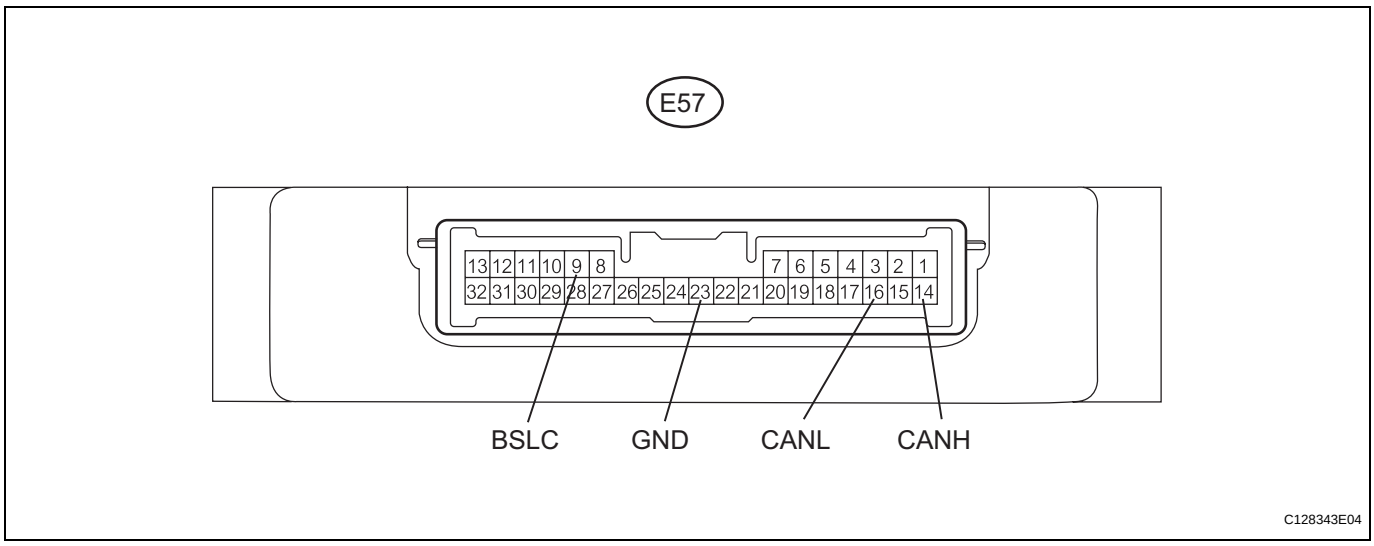


12. CHECK INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

Vehicle Rear Side

H

C129203E04



(a) Disconnect the 1B and 1E junction block connectors.
(b) Disconnect the E17 ECU connector.
(c) Measure the resistance of the wire harness side connectors.

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (E17-15) - CANL (E17-16)	R - W	Ignition switch OFF	54 to 69 Ω
CANH (E17-15) - GND1 (1E-17)	R - W-B	Ignition switch OFF	200 Ω or more
CANL (E17-16) - GND1 (1E-17)	W - W-B	Ignition switch OFF	200 Ω or more
CANH (E17-15) - BECU (1B-30)	R - R	Ignition switch OFF	1 MΩ or more
CANL (E17-16) - BECU (1B-30)	W - R	Ignition switch OFF	1 MΩ or more

CA

13. CHECK 4WD CONTROL ECU (for 4WD)

CA

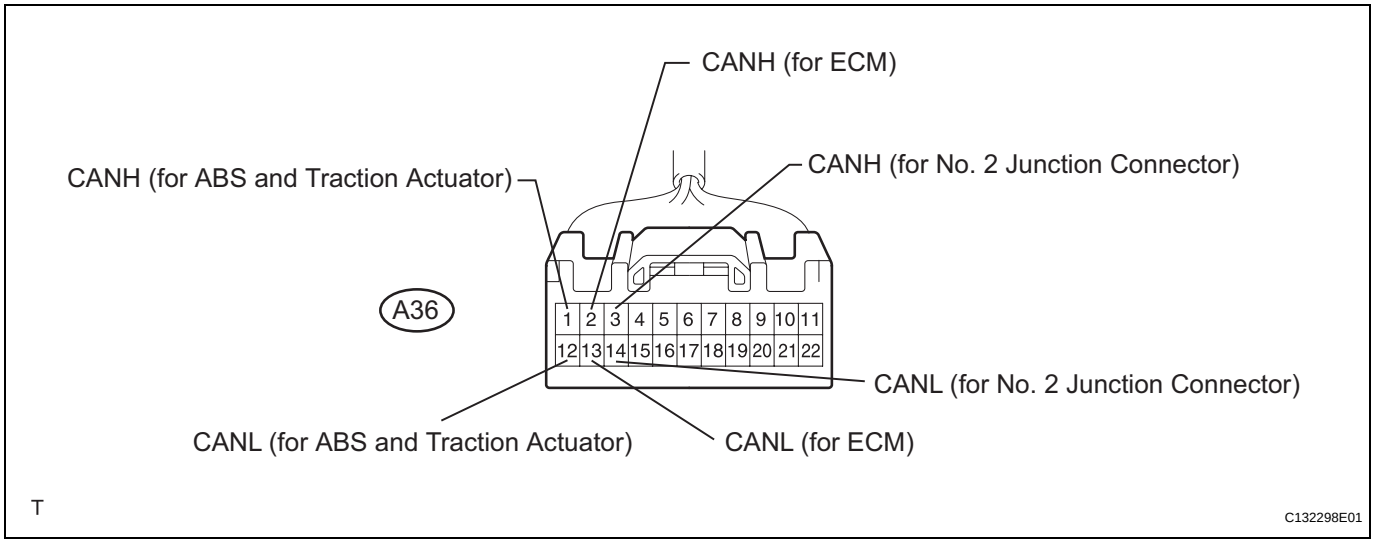
(a) Disconnect the E57 ECU connector.
(b) Measure the resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (E57-14) - CANL (E57-16)	P - W	Ignition switch OFF	54 to 69 Ω
CANH (E57-14) - GND (E57-23)	P - W-B	Ignition switch OFF	200 Ω or more
CANL (E57-16) - GND (E57-23)	W - W-B	Ignition switch OFF	200 Ω or more
CANH (E57-14) - BSLC (E57-9)	P - R	Ignition switch OFF	1 MΩ or more
CANL (E57-16) - BSLC (E57-9)	W -R	Ignition switch OFF	1 MΩ or more

TERMINALS OF ECU

(2006/01-)

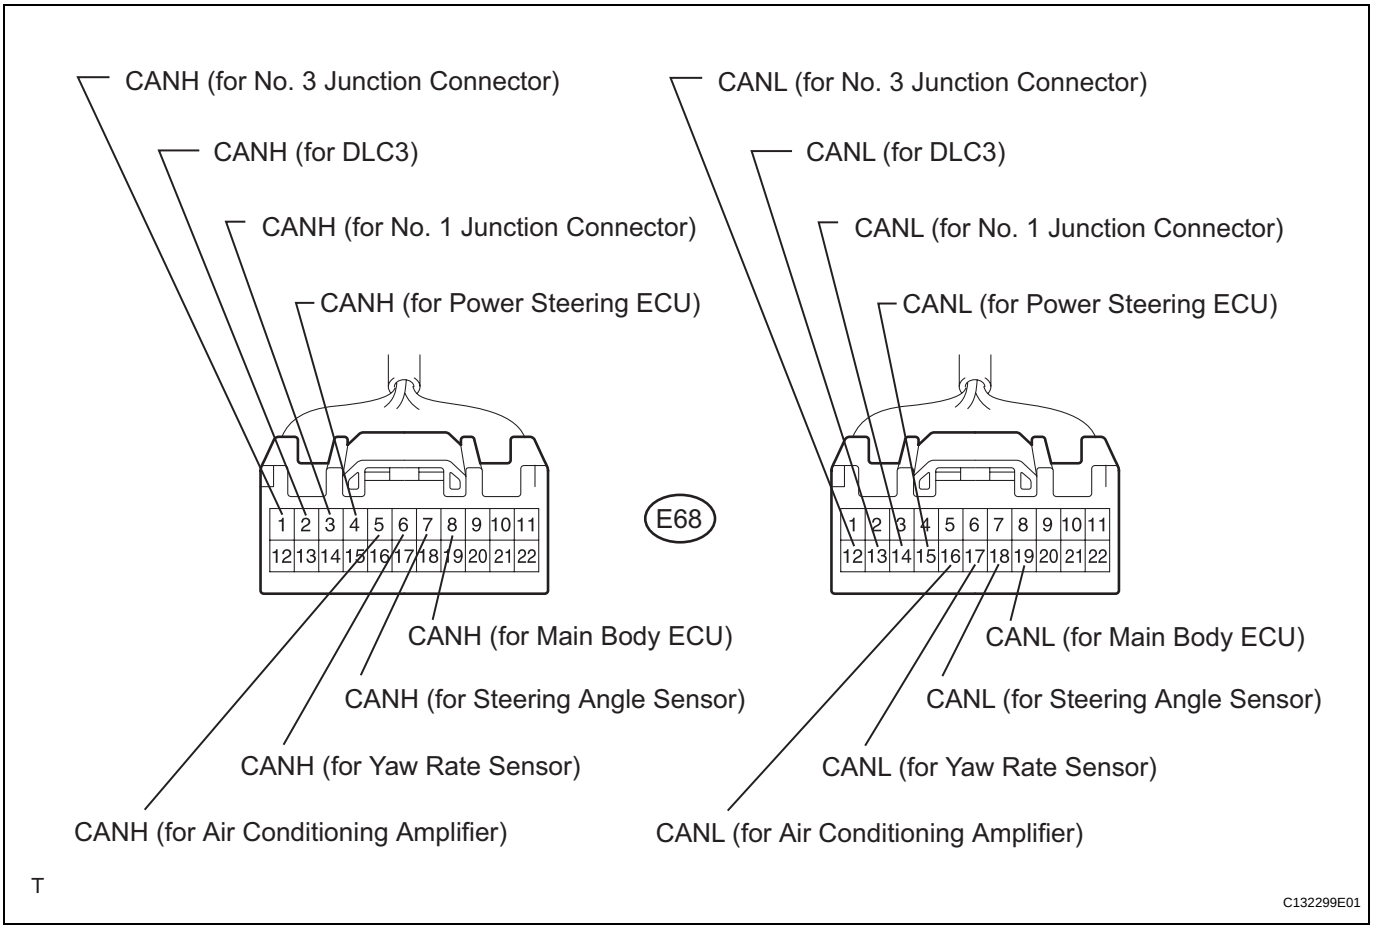
NOTICE:



- **Turn the ignition switch OFF before measuring the resistances of the main wire and branch wire.**
- **After the ignition switch is turned OFF, check that the key reminder warning system and light reminder warning system are not in operation.**
- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

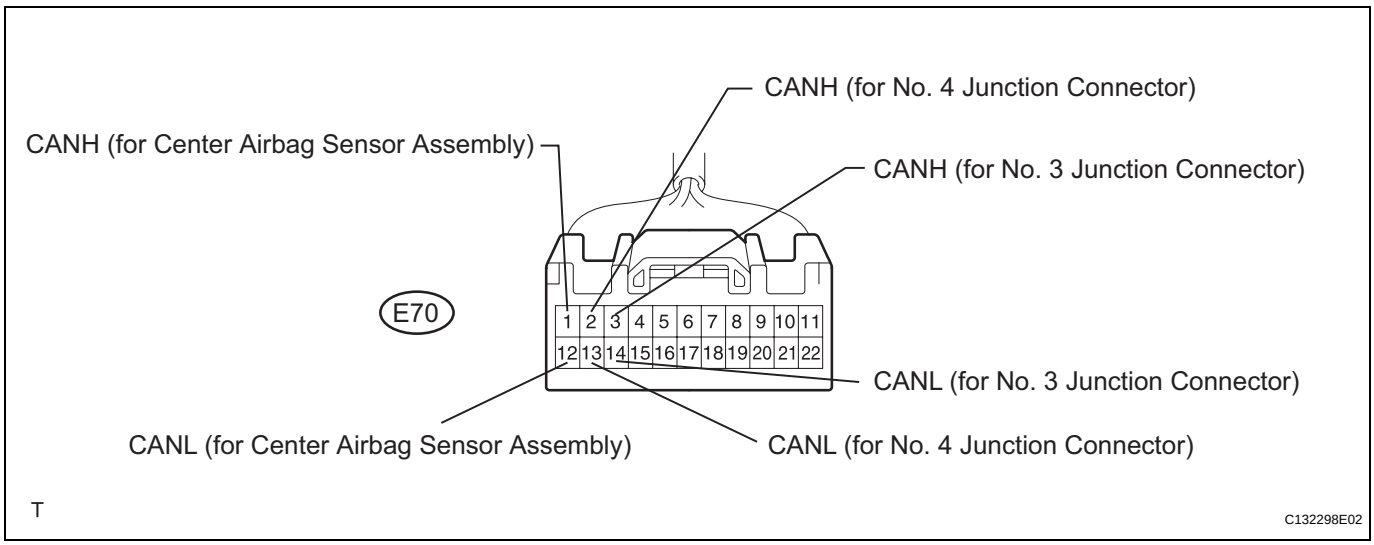
HINT:

Operating the ignition switch, any other switches or the doors triggers related ECU and sensor communication with the CAN, which causes resistance variation.



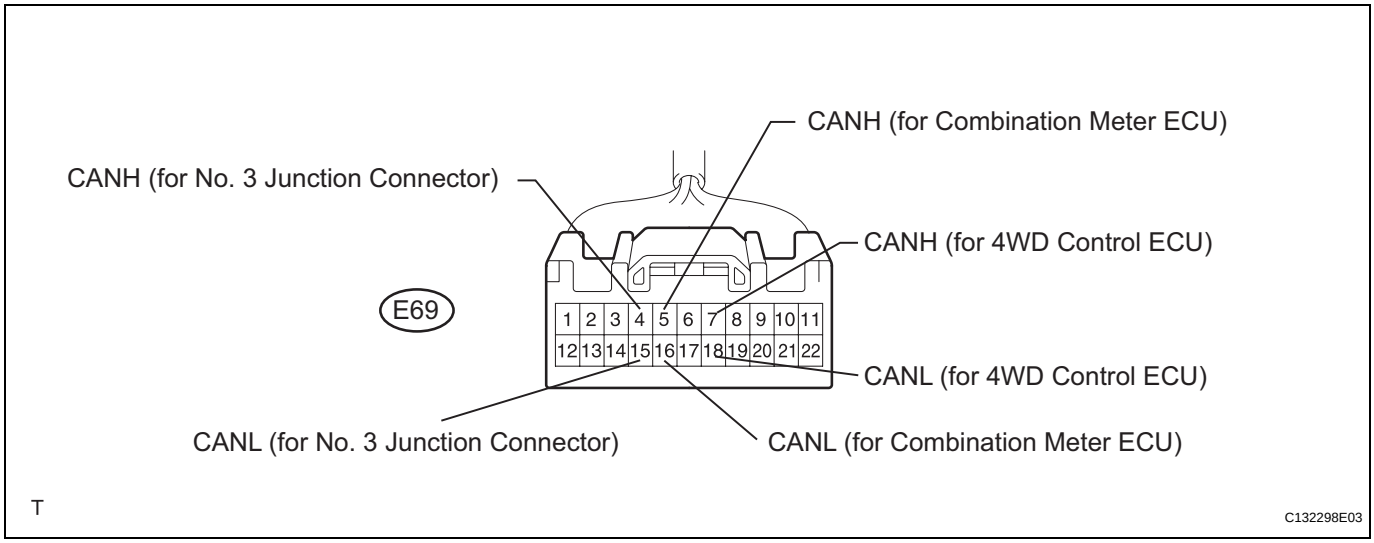
1. JUNCTION CONNECTOR

(a) No. 1 junction connector



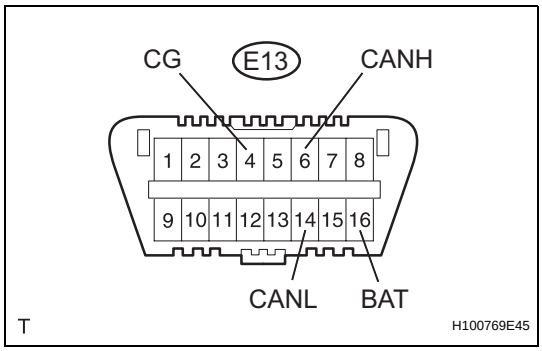
No. 1 Junction Connector	Wiring Color	Connect to
CANH (A36-1)	R	ABS and traction actuator (skid control ECU)
CANL (A36-12)	W	ABS and traction actuator (skid control ECU)
CANH (A36-2)	Y	ECM
CANL (A36-13)	W	ECM
CANH (A36-3)	L	No. 2 junction connector
CANL (A36-14)	W	No. 2 junction connector

(b) No. 2 junction connector



No. 2 Junction Connector	Wiring Color	Connect to
CANH (E68-3)	L	No. 1 junction connector
CANL (E68-14)	W	No. 1 junction connector
CANH (E68-6)	L	Yaw rate sensor
CANL (E68-17)	W	Yaw rate sensor
CANH (E68-4)	Y	Power steering ECU
CANL (E68-15)	W	Power steering ECU
CANH (E68-8)	R	Main body ECU
CANL (E68-19)	W	Main body ECU
CANH (E68-7)	BR	Steering angle sensor
CANL (E68-18)	W	Steering angle sensor
CANH (E68-2)	B	DLC3
CANL (E68-13)	W	DLC3
CANH (E68-5)	V	Air conditioning amplifier
CANL (E68-16)	W	Air conditioning amplifier
CANH (E68-1)	O	No. 3 junction connector
CANL (E68-12)	W	No. 3 junction connector

(c) No. 3 junction connector

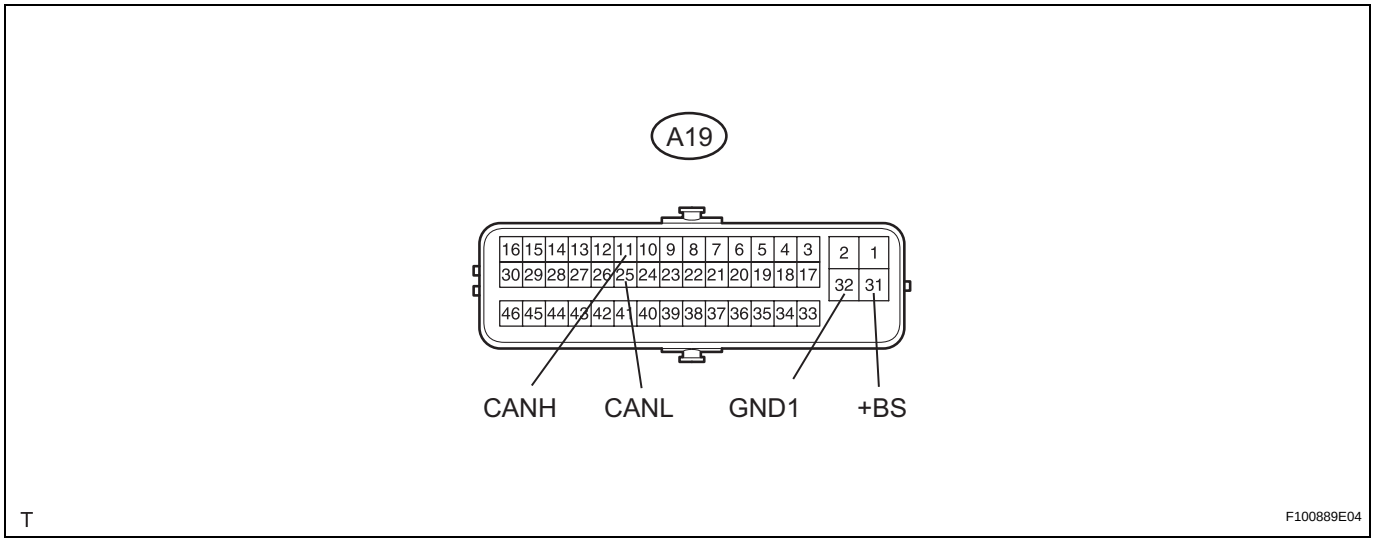


No. 3 Junction Connector	Wiring Color	Connect to
CANH (E70-3)	O	No. 2 junction connector
CANL (E70-14)	W	No. 2 junction connector
CANH (E70-1)	B	Center airbag sensor assembly
CANL (E70-12)	W	Center airbag sensor assembly
CANH (E70-2)	V	No. 4 junction connector
CANL (E70-13)	W	No. 4 junction connector

(d) No. 4 junction connector

No. 4 Junction Connector	Wiring Color	Connect to
CANH (E69-4)	V	No. 3 junction connector
CANL (E69-15)	W	No. 3 junction connector
CANH (E69-7)	P	4WD control ECU*
CANL (E69-18)	W	4WD control ECU*
CANH (E69-5)	G	Combination meter ECU
CANL (E69-16)	W	Combination meter ECU

HINT:
*: for 4WD



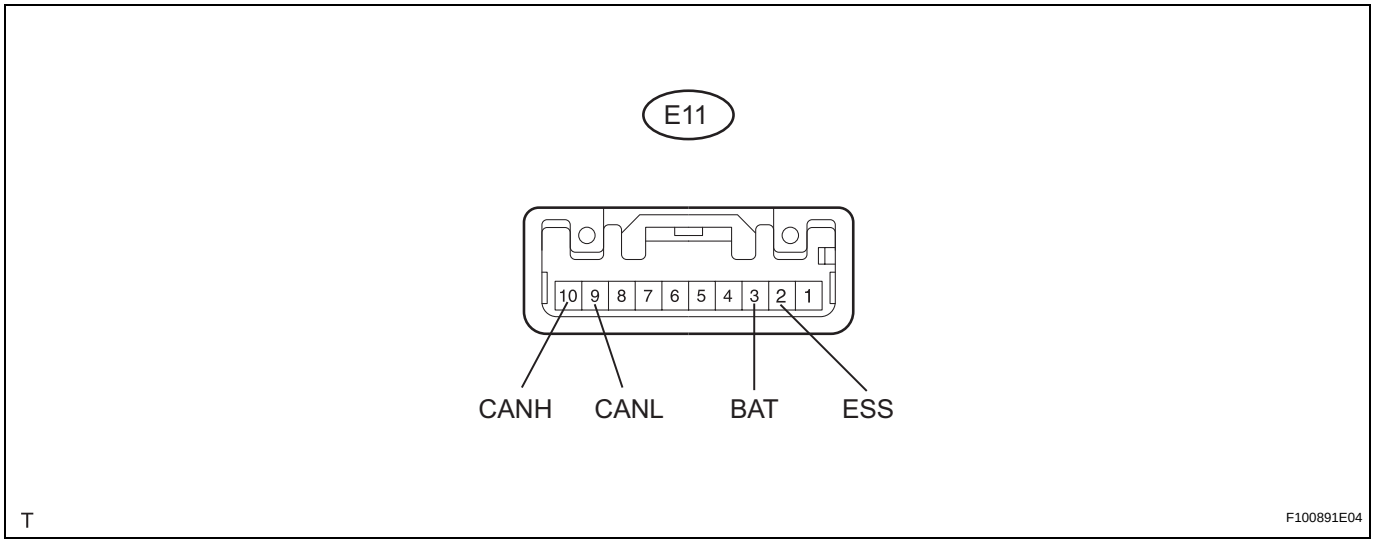
2. CHECK DLC3

(a) Measure the resistance of the connector.

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (E13-6) - CANL (E13-14)	B - W	Ignition switch OFF	54 to 69 Ω
CANH (E13-6) - CG (E13-4)	B - BR	Ignition switch OFF	200 Ω or more
CANL (E13-14) - CG (E13-4)	W - BR	Ignition switch OFF	200 Ω or more
CANH (E13-6) - BAT (E13-16)	B - L	Ignition switch OFF	1 MΩ or more
CANL (E13-14) - BAT (E13-16)	W - L	Ignition switch OFF	1 MΩ or more

CA

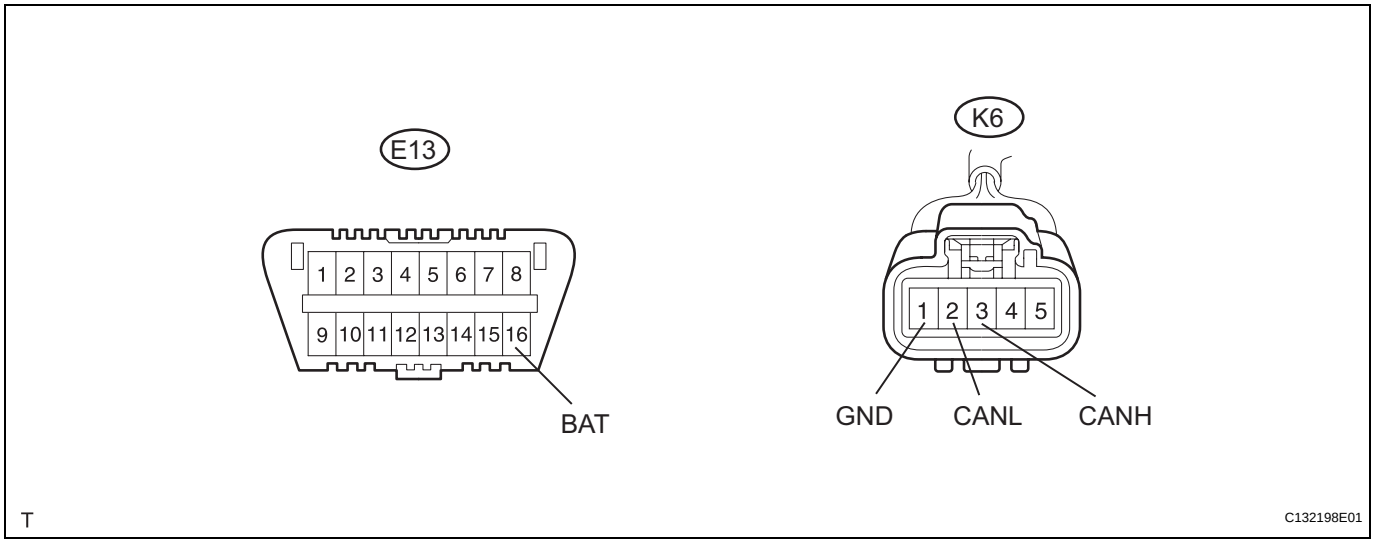
3. CHECK ABS AND TRACTION ACTUATOR (SKID CONTROL ECU)



(a) Disconnect the A19 ECU connector.

(b) Measure the resistance of the wire harness side connector.

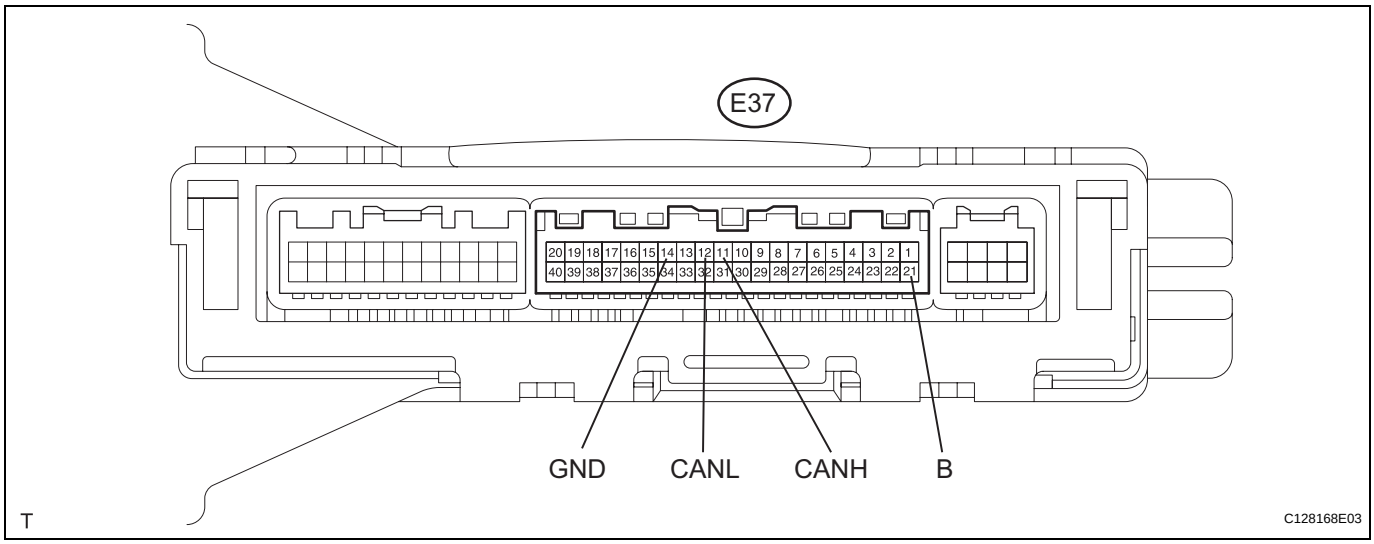
Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (A19-11) - CANL (A19-25)	R - W	Ignition switch OFF	54 to 69 Ω
CANH (A19-11) - GND1 (A19-32)	R - W-B	Ignition switch OFF	200 Ω or more
CANL (A19- 25) - GND1 (A19-32)	W - W-B	Ignition switch OFF	200 Ω or more
CANH (A19-11) - +BS (A19-31)	R - W	Ignition switch OFF	1 MΩ or more
CANL (A19-25) - +BS (A19-31)	W - W	Ignition switch OFF	1 MΩ or more



4. CHECK STEERING ANGLE SENSOR

(a) Disconnect the E11 sensor connector.
(b) Measure the resistance of the wire harness side connector.

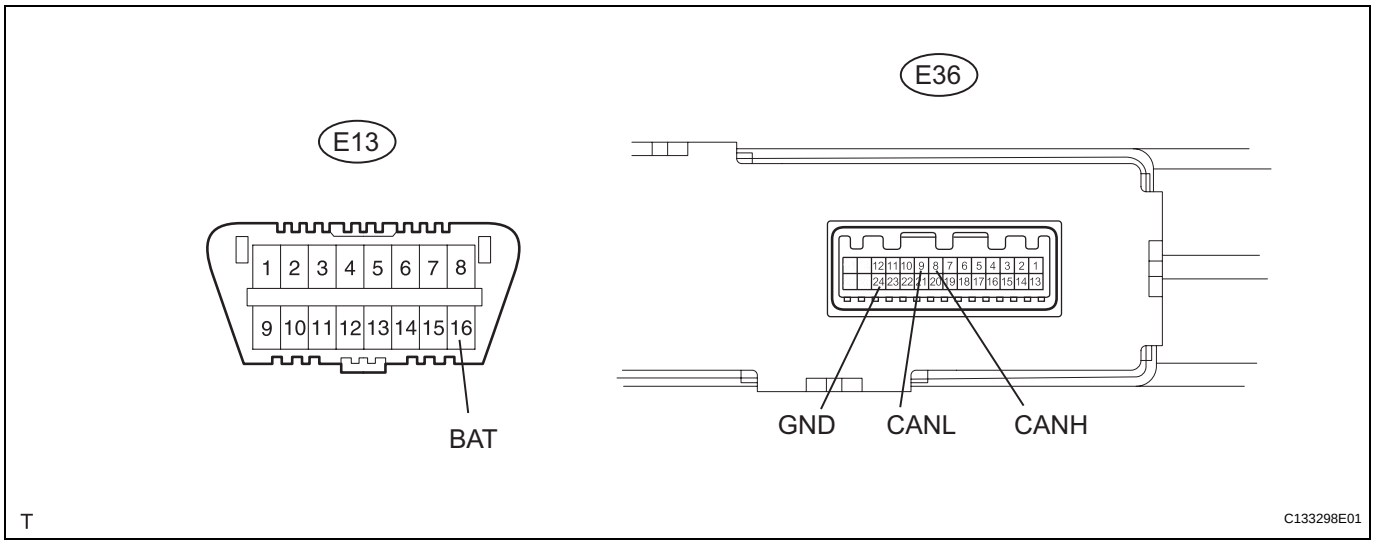
Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (E11-10) - CANL (E11-9)	BR - W	Ignition switch OFF	54 to 69 Ω
CANH (E11-10) - ESS (E11-2)	BR - W-B	Ignition switch OFF	200 Ω or more
CANL (E11-9) - ESS (E11-2)	W - W-B	Ignition switch OFF	200 Ω or more
CANH (E11-10) - BAT (E11-3)	BR - R	Ignition switch OFF	1 MΩ or more
CANL (E11-9) - BAT (E11-3)	W - R	Ignition switch OFF	1 MΩ or more



5. CHECK YAW RATE SENSOR

(a) Disconnect the K6 sensor connector.
(b) Measure the resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (K6-3) - CANL (K6-2)	L - W	Ignition switch OFF	54 to 69 Ω
CANH (K6-3) - GND (K6-1)	L - W-B	Ignition switch OFF	200 Ω or more
CANL (K6-2) - GND (K6-1)	W - W-B	Ignition switch OFF	200 Ω or more
CANH (K6-3) - BAT (E13-16)	L - L	Ignition switch OFF	1 MΩ or more
CANL (K6-2) - BAT (E13-16)	W - L	Ignition switch OFF	1 MΩ or more

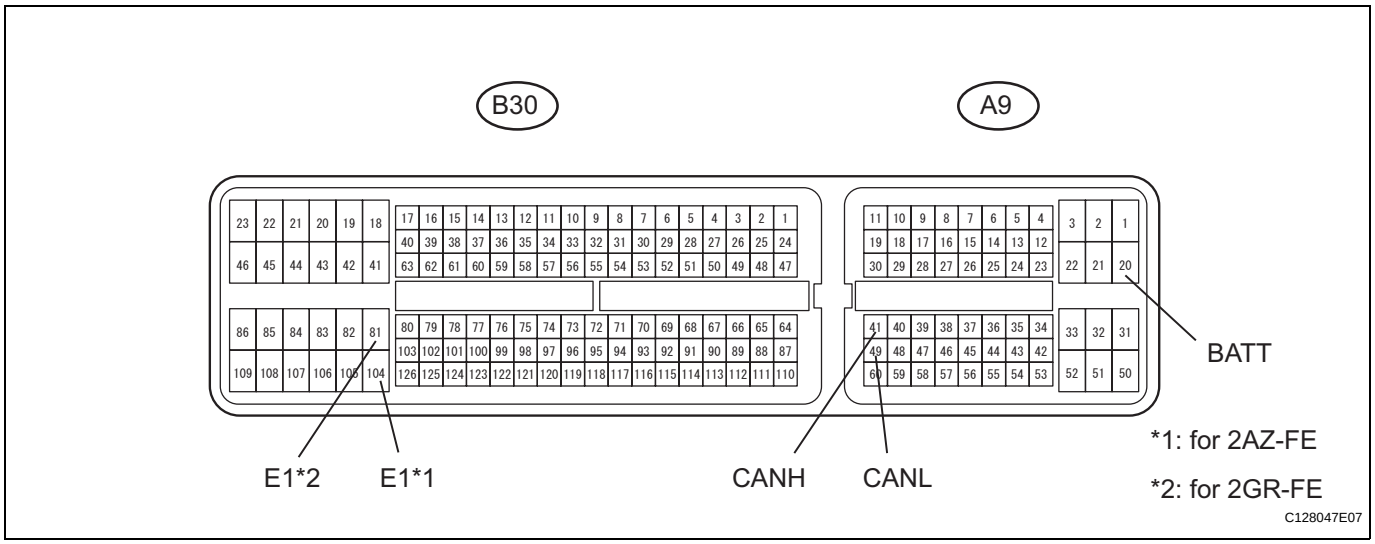


6. CHECK AIR CONDITIONING AMPLIFIER (for Automatic Air Conditioning System)

(a) Disconnect the E37 amplifier connector.
(b) Measure the resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (E37-11) - CANL (E37-12)	V - W	Ignition switch OFF	54 to 69 Ω
CANH (E37-11) - GND (E37-14)	V - W-B	Ignition switch OFF	200 Ω or more
CANL (E37-12) - GND (E37-14)	W - W-B	Ignition switch OFF	200 Ω or more
CANH (E37-11) - B (E37-21)	V - R	Ignition switch OFF	1 MΩ or more
CANL (E37-12) - B (E37-21)	W - R	Ignition switch OFF	1 MΩ or more

7. CHECK AIR CONDITIONING AMPLIFIER (for Manual Air Conditioning System)

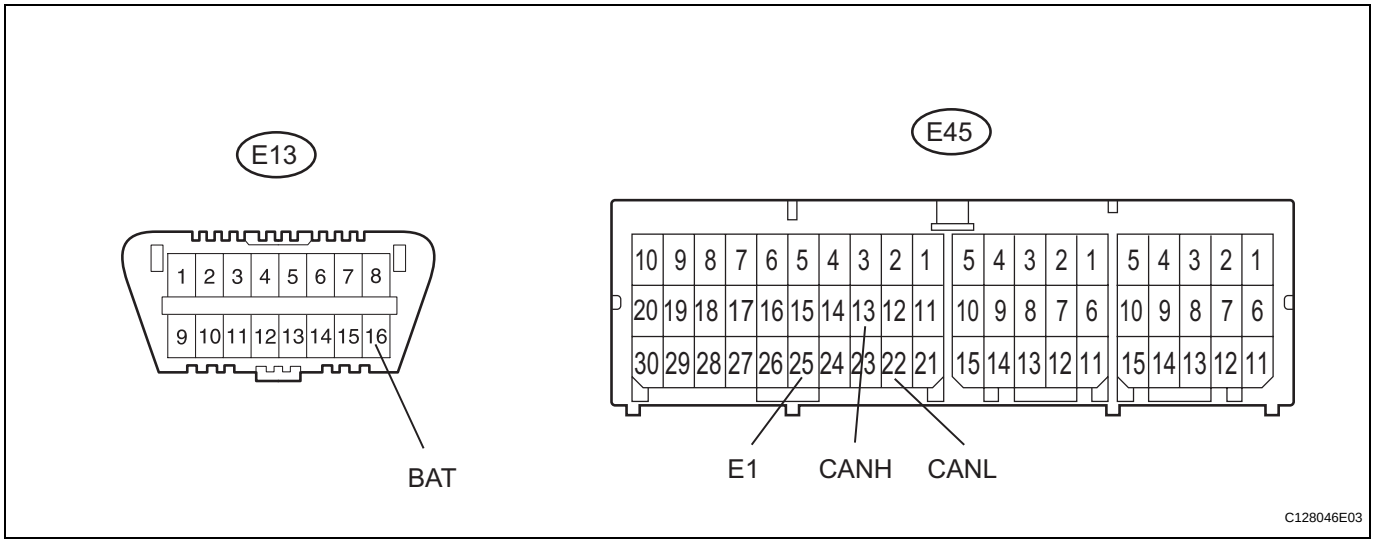


(a) Disconnect the E36 amplifier connector.
(b) Measure the resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (E36-8) - CANL (E36-9)	V - W	Ignition switch OFF	54 to 69 Ω
CANH (E36-8) - GND (E36-24)	V - W-B	Ignition switch OFF	200 Ω or more
CANL (E36-9) - GND (E36-24)	W - W-B	Ignition switch OFF	200 Ω or more

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (E36-8) - BAT (E13-16)	V - L	Ignition switch OFF	1 MΩ or more
CANH (E36-9) - BAT (E13-16)	W - L	Ignition switch OFF	1 MΩ or more

8. CHECK ECM

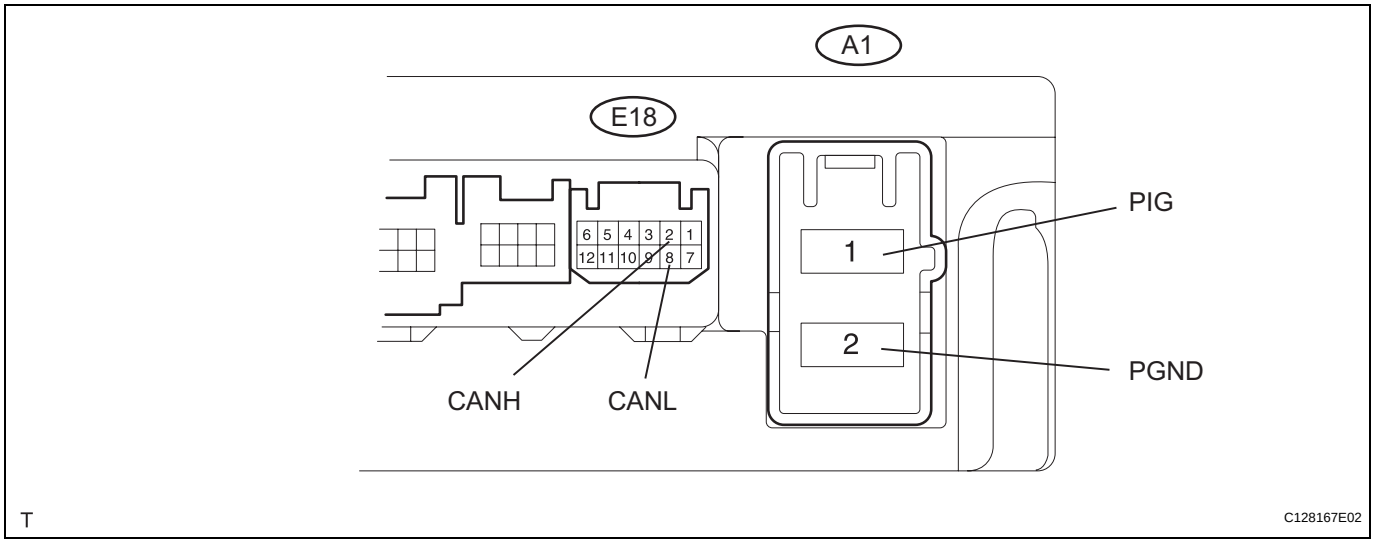


(a) Disconnect the A9 and B30 ECM connectors.
(b) Measure the resistance of the wire harness side connectors.

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (A9-41) - CANL (A9-49)	Y - W	Ignition switch OFF	108 to 132 Ω
CANH (A9-41) - E1 (B30-104)*1	Y - BR	Ignition switch OFF	200 Ω or more
CANL (A9-49) - E1 (B30-104)*1	W - BR	Ignition switch OFF	200 Ω or more
CANH (A9-41) - E1 (B30-81)*2	Y - BR	Ignition switch OFF	200 Ω or more
CANL (A9-49) - E1 (B30-81)*2	W - BR	Ignition switch OFF	200 Ω or more
CANH (A9-41) - BATT (A9-20)	Y - W	Ignition switch OFF	1 MΩ or more
CANL (A9-49) - BATT (A9-20)	W - W	Ignition switch OFF	1 MΩ or more

HINT:
*1: for 2AZ-FE
*2: for 2GR-FE

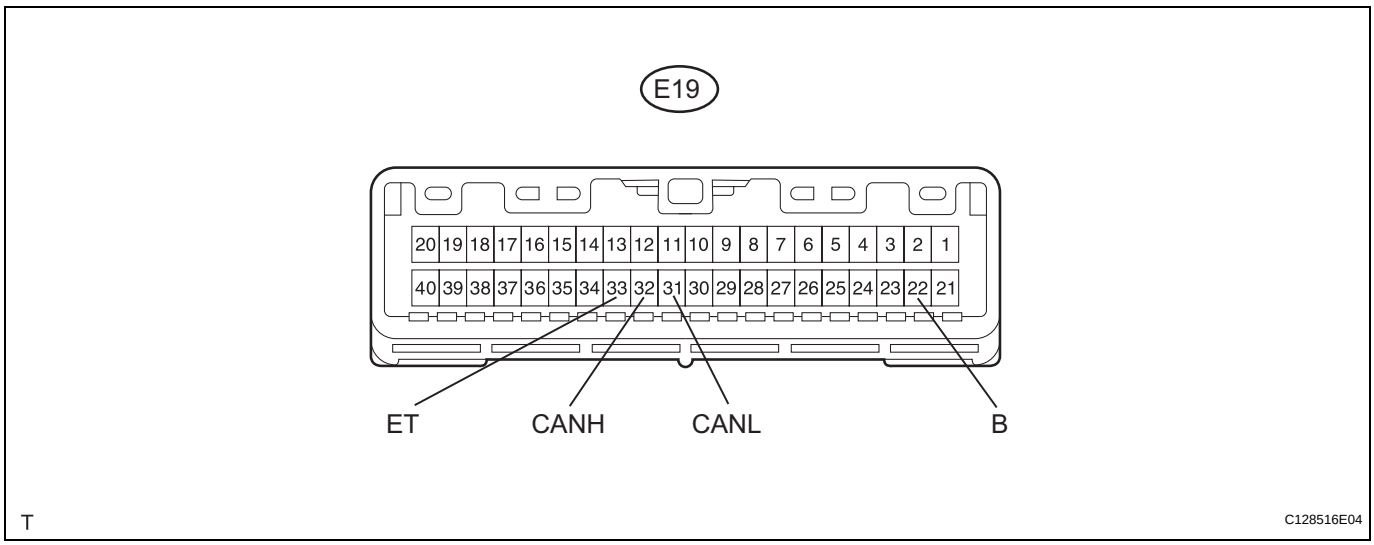
9. CHECK CENTER AIRBAG SENSOR ASSEMBLY



CA

(a) Disconnect the E45 sensor connector.
(b) Measure the resistance of the wire harness side connectors.

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (E45-13) - CANL (E45-22)	B - W	Ignition switch OFF	54 to 69 Ω
CANH (E45-13 - E1 (E45-25)	B - W-B	Ignition switch OFF	200 Ω or more
CANL (E45-22) - E1 (E45-25)	W - W-B	Ignition switch OFF	200 Ω or more
CANH (E45-13) - BAT (E13-16)	B - L	Ignition switch OFF	1 MΩ or more
CANL (E45-22) - BAT (E13-16)	W - L	Ignition switch OFF	1 MΩ or more

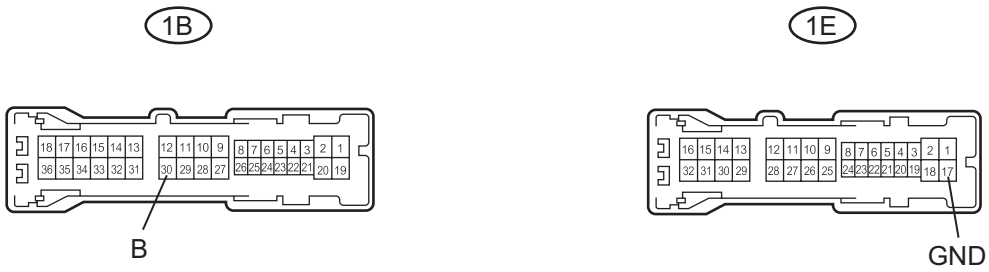


10. CHECK POWER STEERING ECU

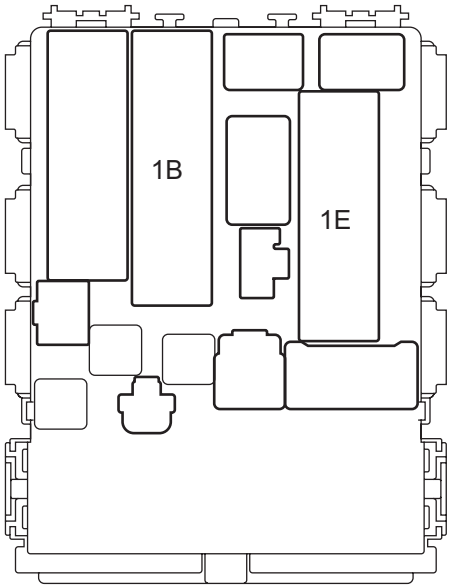
(a) Disconnect the A1 and E18 ECU connectors.
(b) Measure the resistance of the wire harness side connectors.

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (E18-2) - CANL (E18-8)	Y - W	Ignition switch OFF	54 to 69 Ω
CANH (E18-2) - PGND (A1-2)	Y - W-B	Ignition switch OFF	200 Ω or more
CANL (E18-8) - PGND (A1-2)	W - W-B	Ignition switch OFF	200 Ω or more
CANH (E18-2) - PIG (A1-1)	Y - W-B	Ignition switch OFF	1 MΩ or more
CANL (E18-8) - PIG (A1-1)	W - W-B	Ignition switch OFF	1 MΩ or more

11. CHECK COMBINATION METER ECU



(a) Disconnect the E19 ECU connector.
(b) Measure the resistance of the wire harness side connector.

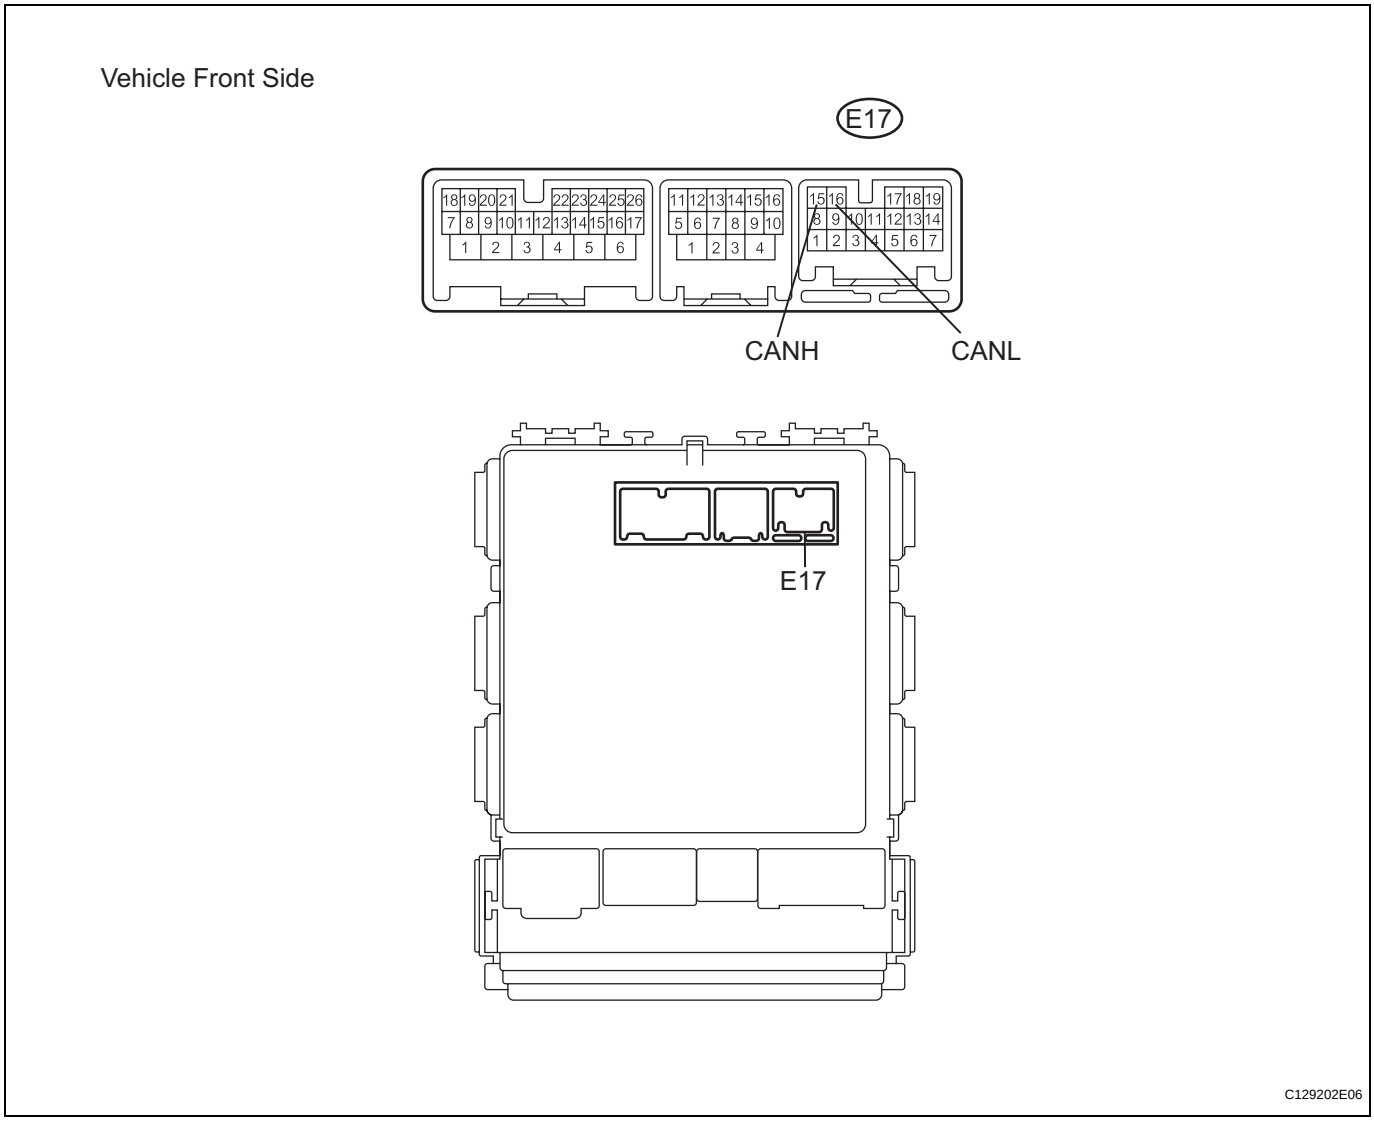


CA

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (E19-32) - CANL (E19-31)	G - W	Ignition switch OFF	108 to 132 Ω
CANH (E19-32) - CANL (E19-31)	G - BR	Ignition switch OFF	200 Ω or more
CANL (E19-31) - ET (E19-33)	W - BR	Ignition switch OFF	200 Ω or more
CANH (E19-32) - B (E19-22)	G - R	Ignition switch OFF	1 MΩ or more
CANL (E19-31) - B (E19-22)	W - R	Ignition switch OFF	1 MΩ or more

12. CHECK INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

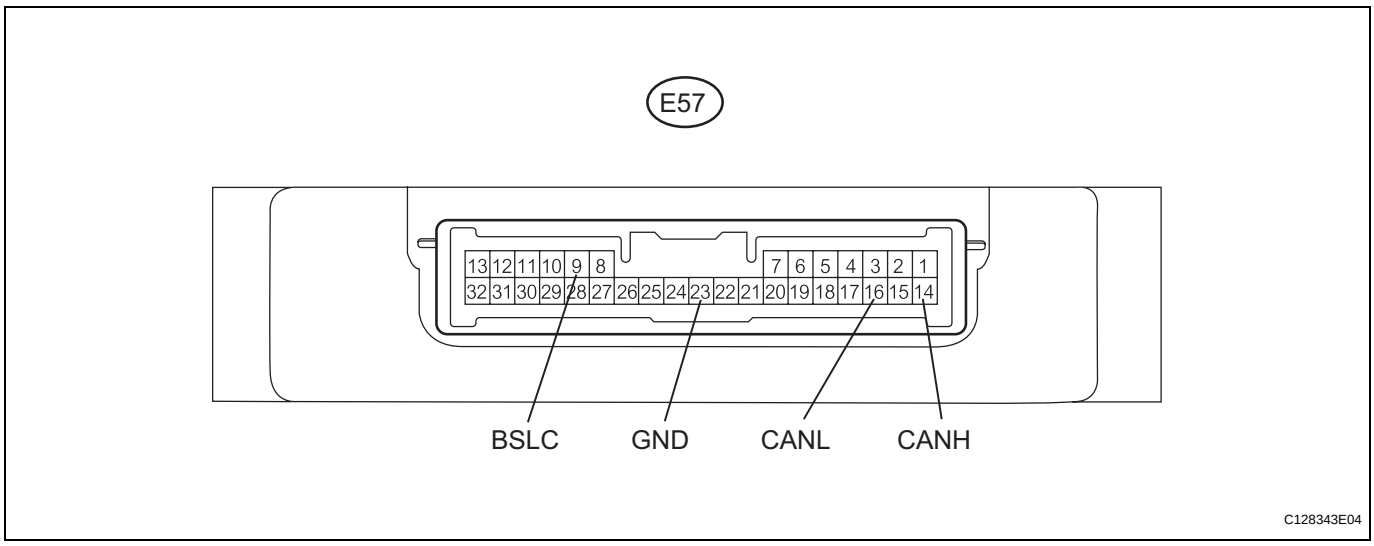
Vehicle Rear Side



CA

H

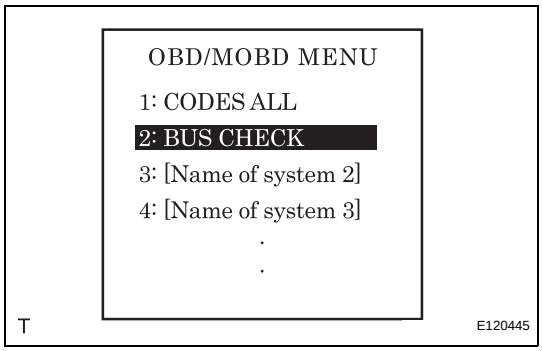
C129203E04



(a) Disconnect the 1B and 1E junction block connectors.
(b) Disconnect the E17 ECU connector.
(c) Measure the resistance of the wire harness side connectors.

Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (E17-15) - CANL (E17-16)	R - W	Ignition switch OFF	54 to 69 Ω
CANH (E17-15) - GND1 (1E-17)	R - W-B	Ignition switch OFF	200 Ω or more
CANL (E17-16) - GND1 (1E-17)	W - W-B	Ignition switch OFF	200 Ω or more
CANH (E17-15) - BECU (1B-30)	R - R	Ignition switch OFF	1 MΩ or more
CANL (E17-16) - BECU (1B-30)	W - R	Ignition switch OFF	1 MΩ or more

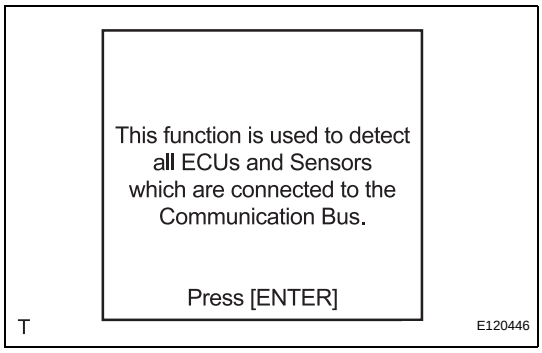
CA



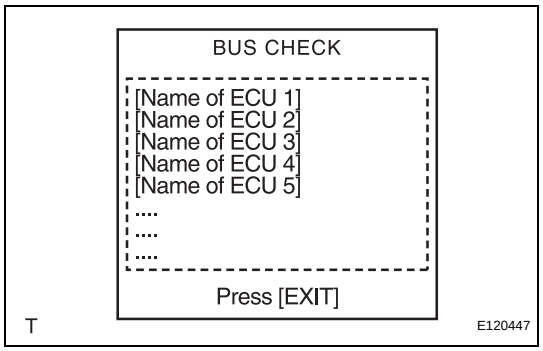
13. CHECK 4WD CONTROL ECU (for 4WD)

CA

(a) Disconnect the E57 ECU connector.
(b) Measure the resistance of the wire harness side connector.



Symbols (Terminal No.)	Wiring Color	Condition	Specified Condition
CANH (E57-14) - CANL (E57-16)	P - W	Ignition switch OFF	54 to 69 Ω
CANH (E57-14) - GND (E57-23)	P - W-B	Ignition switch OFF	200 Ω or more
CANL (E57-16) - GND (E57-23)	W - W-B	Ignition switch OFF	200 Ω or more
CANH (E57-14) - BSLC (E57-9)	P - R	Ignition switch OFF	1 MΩ or more
CANL (E57-16) - BSLC (E57-9)	W -R	Ignition switch OFF	1 MΩ or more



DIAGNOSIS SYSTEM

1. BUS CHECK

(a) Select "BUS CHECK" from the "OBD / MOBD MENU" screen.
HINT:
The ECUs and sensors that are properly connected to the CAN communication system can be displayed using the intelligent tester via CAN VIM.

(b) Press "ENTER" on the intelligent tester via CAN VIM.

(c) The screen displayed the ECUs and sensors that are properly connected to the CAN communication system.
HINT:
There is a communication stop in the system of any properly connected ECUs or sensors that are not displayed (see page CA-10).

2. CHECK INSTALLED SYSTEMS (ECUS AND SENSORS) THAT USE CAN COMMUNICATION

(a) System (ECUs and sensors) that use CAN communication vary depending on the vehicle's optional settings. Check which systems (ECUs and sensors) are installed on the vehicle.

ECU / Sensor name	Installed to
ABS and traction actuator (skid control ECU)	Vehicle with VSC
Steering sensor	Vehicle with VSC
Yaw rate sensor	Vehicle with VSC
Air conditioning amplifier	All vehicles (Automatic air conditioning system and manual air conditioning system)
ECM	All vehicles
Center airbag sensor assembly	All vehicles
Power steering ECU	All vehicles
Main body ECU	All vehicles
Combination meter ECU	All vehicles
4WD control ECU	Vehicle with 4WD

CA

3. DTC TABLE BY ECU

HINT:
- In the CAN communication system, CAN communication system DTCs output by the ECU can be displayed by using the intelligent tester.
- If CAN communication system DTCs are output, the trouble cannot be determined solely from the DTCs. Perform troubleshooting according to "HOW TO PROCEED WITH TROUBLESHOOTING" (see page CA-8).

(a) ABS AND TRACTION ACTUATOR (SKID CONTROL ECU)
HINT:
DTC communication uses the CAN communication system.

DTC No.	Detection Item
U0073/94	Control Module Communication Bus OFF
U0100/65	Lost Communication with ECM / PCM
U0123/62	Lost Communication with Yaw Rate Sensor Module
U0124/95	Lost Communication with Lateral Acceleration Sensor Module
U0126/63	Lost Communication with Steering Angle Sensor Module

(b) POWER STEERING ECU
HINT:
DTC communication uses the CAN communication system.

DTC No.	Detection Item
U0073/49	Control Module Communication Bus OFF
U0105/41	Lost Communication with ECM
U0121/42	Lost Communication with Anti-lock Brake System (ABS) Control Module

(c) ECM
HINT:
DTC communication uses the CAN communication system.

DTC No.	Detection Item
U0122	Lost Communication with Vehicle Dynamic Control Module
U0129	Lost Communication with Brake System Control Module

(d) AIR CONDITIONING AMPLIFIER
For vehicle with air conditioning (Automatic air conditioning system and Manual air conditioning system).
HINT:
DTC communication uses the CAN communication system.

DTC No.	Detection Item
B1499/99	Multiplex Communication Circuit

(e) COMBINATION METER ECU
HINT:
DTC communication uses the CAN communication system.

DTC No.	Detection Item
U0100	Lost Communication with ECM/PCM "A"
U0129	Lost Communication with Skid Control ECU

(f) 4WD CONTROL ECU
For vehicle with 4WD only.
HINT:
DTC communication uses the CAN communication system.

DTC No.	Detection Item
U0073/86	Control Module Communication Bus OFF
U0100/85	Lost Communication with ECM / PCM "A"
U0126/84	Lost Communication with Steering Angle Sensor Module
U0129/83	Lost Communication with Brake System Control Module

(g) MAIN BODY ECU
HINT:
The center airbag sensor is connected to the CAN communication system but CAN communication DTCs are not output.

(h) CENTER AIRBAG SENSOR
HINT:
The center airbag sensor is connected to the CAN communication system but CAN communication DTCs are not output.

4. DTC COMBINATION TABLE

DTC		**Detected Communication Stop Mode**				
Output from	Output DTC	ABS AND TRACTION ACTUATOR (SKID CONTROL ECU) COMMUNICATION STOP MODE	POWER STEERING ECU COMMUNICATION STOP MODE	STEERING ANGLE SENSOR COMMUNICATION STOP MODE	YAW RATE SENSOR COMMUNICATION STOP MODE	ECM COMMUNICATION STOP MODE

FAIL-SAFE CHART

1. FAIL-SAFE FUNCTION

(a) When communication fails in any of the main wires (communication lines) due to a short circuit or other causes, the fail-safe function, which is specified for each system, operates to prevent the system from malfunctioning.

(b) The table below shows the effects on each system when communication is impossible. For further details, refer to each system.

Function	ECM	ABS and Traction Actuator (Skid Control ECU)	Yaw Rate Sensor	Steering Angle Sensor	4WD Control ECU	Condition when communication impossible	DTC detection (Driver detectable)
Navi-CVT cooperative control (appropriate gear change control according to curve, incline, or driver's instructions)	●					Cooperative control cancellation	None (Brakes are not as effective when entering curves)
Normal cruise control (Maintains vehicle speed)	●	○				Normal cruise function stops	Detectable (Light comes on)
Neutral control	●	○				Neutral control function stops	None
Air conditioning control (Vehicle interior A/C control)	○					Air conditioning function stops	None (Air conditioning inoperative)
VSC control (Controls driving force while VSC in operation)	○	●	○	○		Control inoperative (gradually stops controlling during VSC control)	Detectable (Light comes on)
TRC control (Controls driving force and engine power when wheel slip detected during acceleration)	○	●				Control inoperative (gradually stops controlling during TRC control)	Detectable (Light comes on)
4WD control (Controls vehicle driving power distribution to front and rear wheels according to driving conditions)	○	○		○	●	4WD control function stops (same as 2WD)	Detectable (Light comes on)

CA

Function	ECM	ABS and Traction Actuator (Skid Control ECU)	Yaw Rate Sensor	Steering Angle Sensor	4WD Control ECU	Condition when communication impossible	DTC detection (Driver detectable)
Electric power steering control (Vehicle speed response type torque control)	○	○				EPS assist function canceled or reduced (steering wheel becomes harder to turn)	When VSC is abnormal (Light comes on)
							When engine is abnormal (Function canceled / Recognizable by decrease in steering power assist)
Meter display (Vehicle condition display, indicator light control)	○	○			○	Light does not come on, illuminates abnormally, or blinks abnormally	Detectable (Abnormal display)

CA

HINT:
- ●: Control master ECU
- ○: Related ECU or sensor

CA

ABS and Traction Actuator (Skid Control ECU) Communication Stop Mode

DESCRIPTION

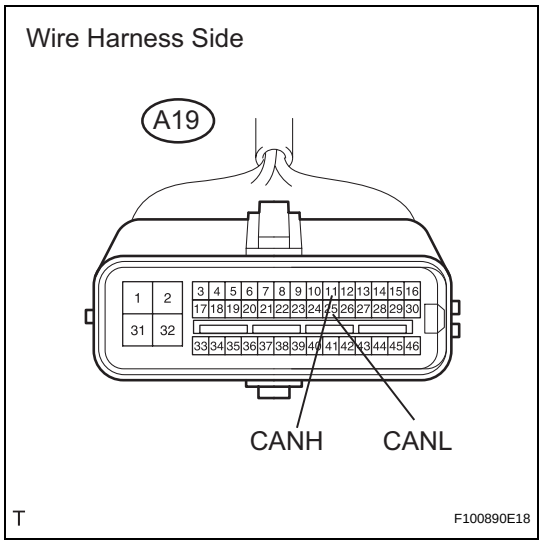
Detection Item	Symptom	Trouble Area
ABS AND TRACTION ACTUATOR (SKID CONTROL ECU) COMMUNICATION STOP MODE	• ABS / VSC / TRAC is not displayed on "BUS CHECK" screen of intelligent tester • Applies to "ABS AND TRACTION ACTUATOR (SKID CONTROL ECU) COMMUNICATION STOP MODE" in "DTC COMBINATION TABLE"	• Power source or inside skid control ECU • ABS and traction actuator (skid control ECU) branch wire and connector • ABS and traction actuator (skid control ECU)

WIRING DIAGRAM

T

C132192E01

INSPECTION PROCEDURE



NOTICE:

- **Turn the ignition switch OFF before measuring the resistances of the main wire and the branch wire.**
- **After the ignition switch is turned OFF, check that the key reminder warning system and light reminder warning system are not in operation.**
- **Before measuring the resistance, leave the vehicle for at least 1 minute and do not operate the ignition switch, any switches or doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

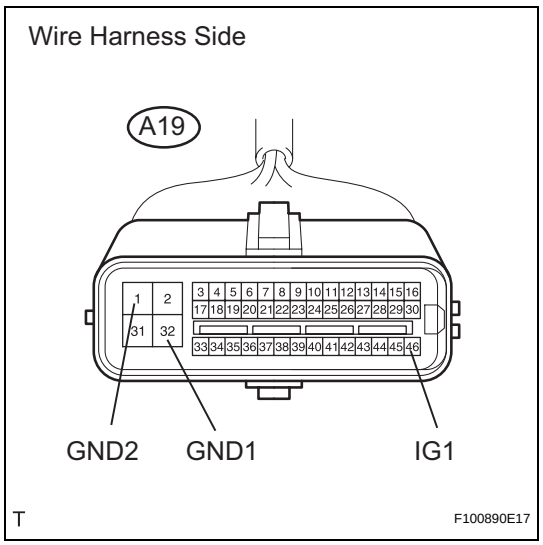
HINT:

Operating the ignition switch, any switches or any doors triggers related ECU and sensor communication with the CAN, which causes resistance variation.

1 CHECK CAN BUS LINE DISCONNECTION (ABS AND TRACTION ACTUATOR BRANCH WIRE)

(a) Disconnect the A19 ABS and traction actuator (skid control ECU) connector.

(b) Measure the resistance of the wire harness side connector.



Standard resistance

Tester Connection	Condition	Specified Condition
A19-11 (CANH) - A19-25 (CANL)	Ignition switch OFF	54 to 69 Ω

NG → **REPAIR OR REPLACE ABS AND TRACTION ACTUATOR BRANCH WIRE AND CONNECTOR (CANH, CANL)**

OK

2 CHECK WIRE HARNESS (ABS AND TRACTION ACTUATOR - BATTERY AND BODY GROUND)

(a) Disconnect the A19 ABS and traction actuator (skid control ECU) connector.

(b) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
A19-1 (GND2) - Body ground	Below 1 Ω
A19-32 (GND1) - Body ground	Below 1 Ω

(c) Measure the voltage of the wire harness side connector.

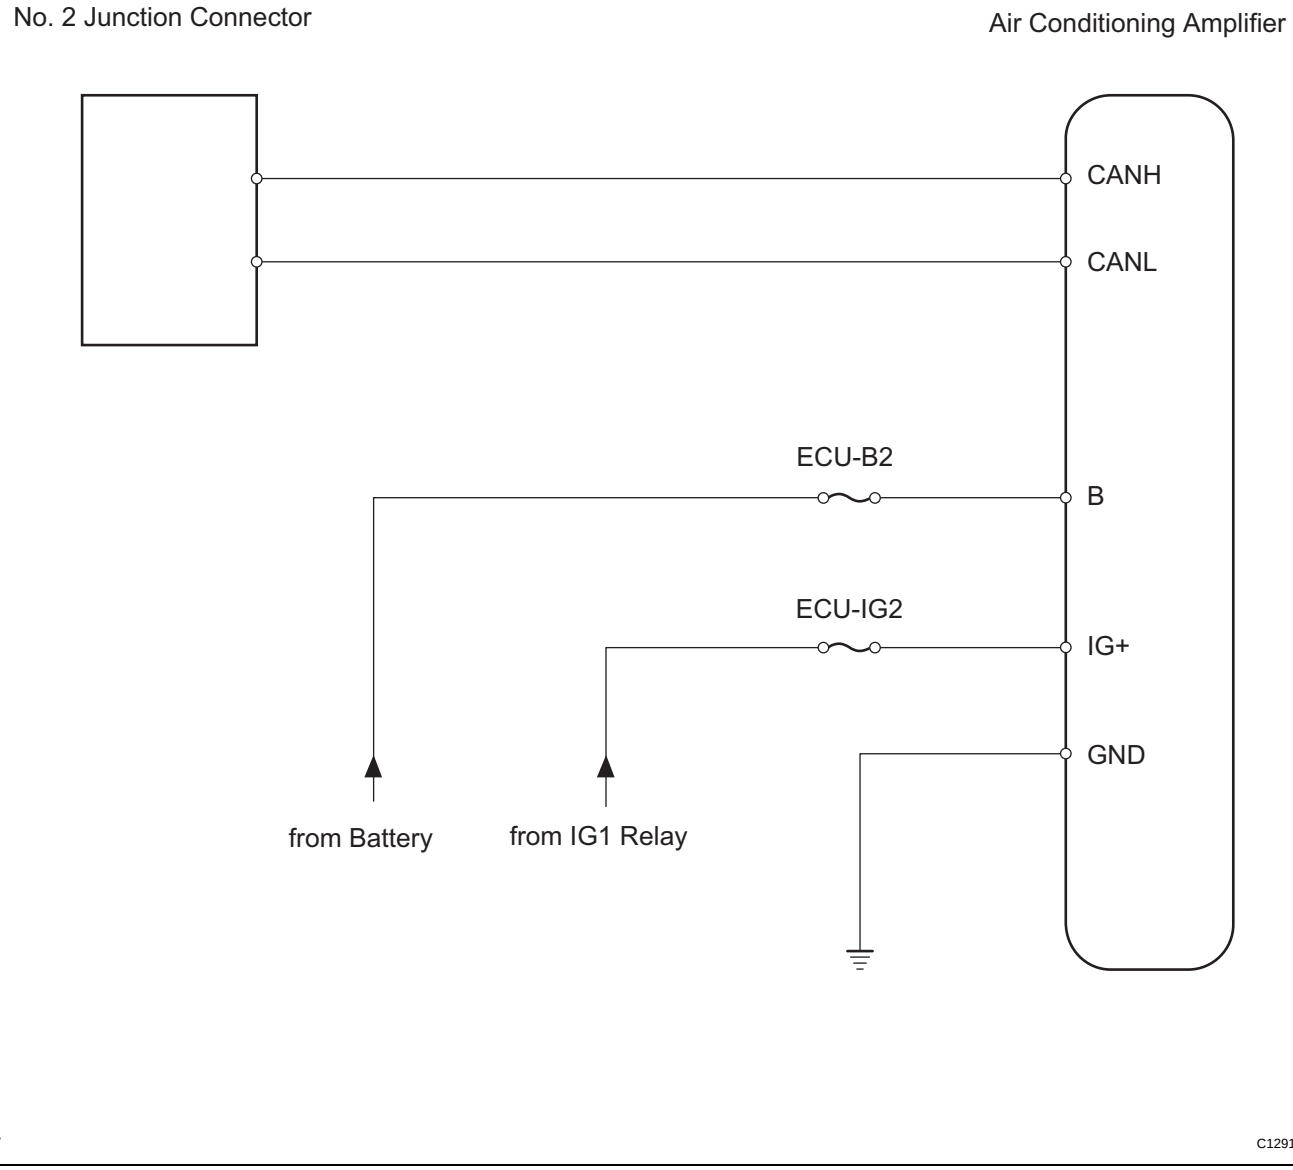
Standard voltage

Tester Connection	Condition	Specified Condition
A19-46 (IG1) - Body ground	Ignition switch ON	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE ABS AND TRACTION ACTUATOR (SKID CONTROL ECU)

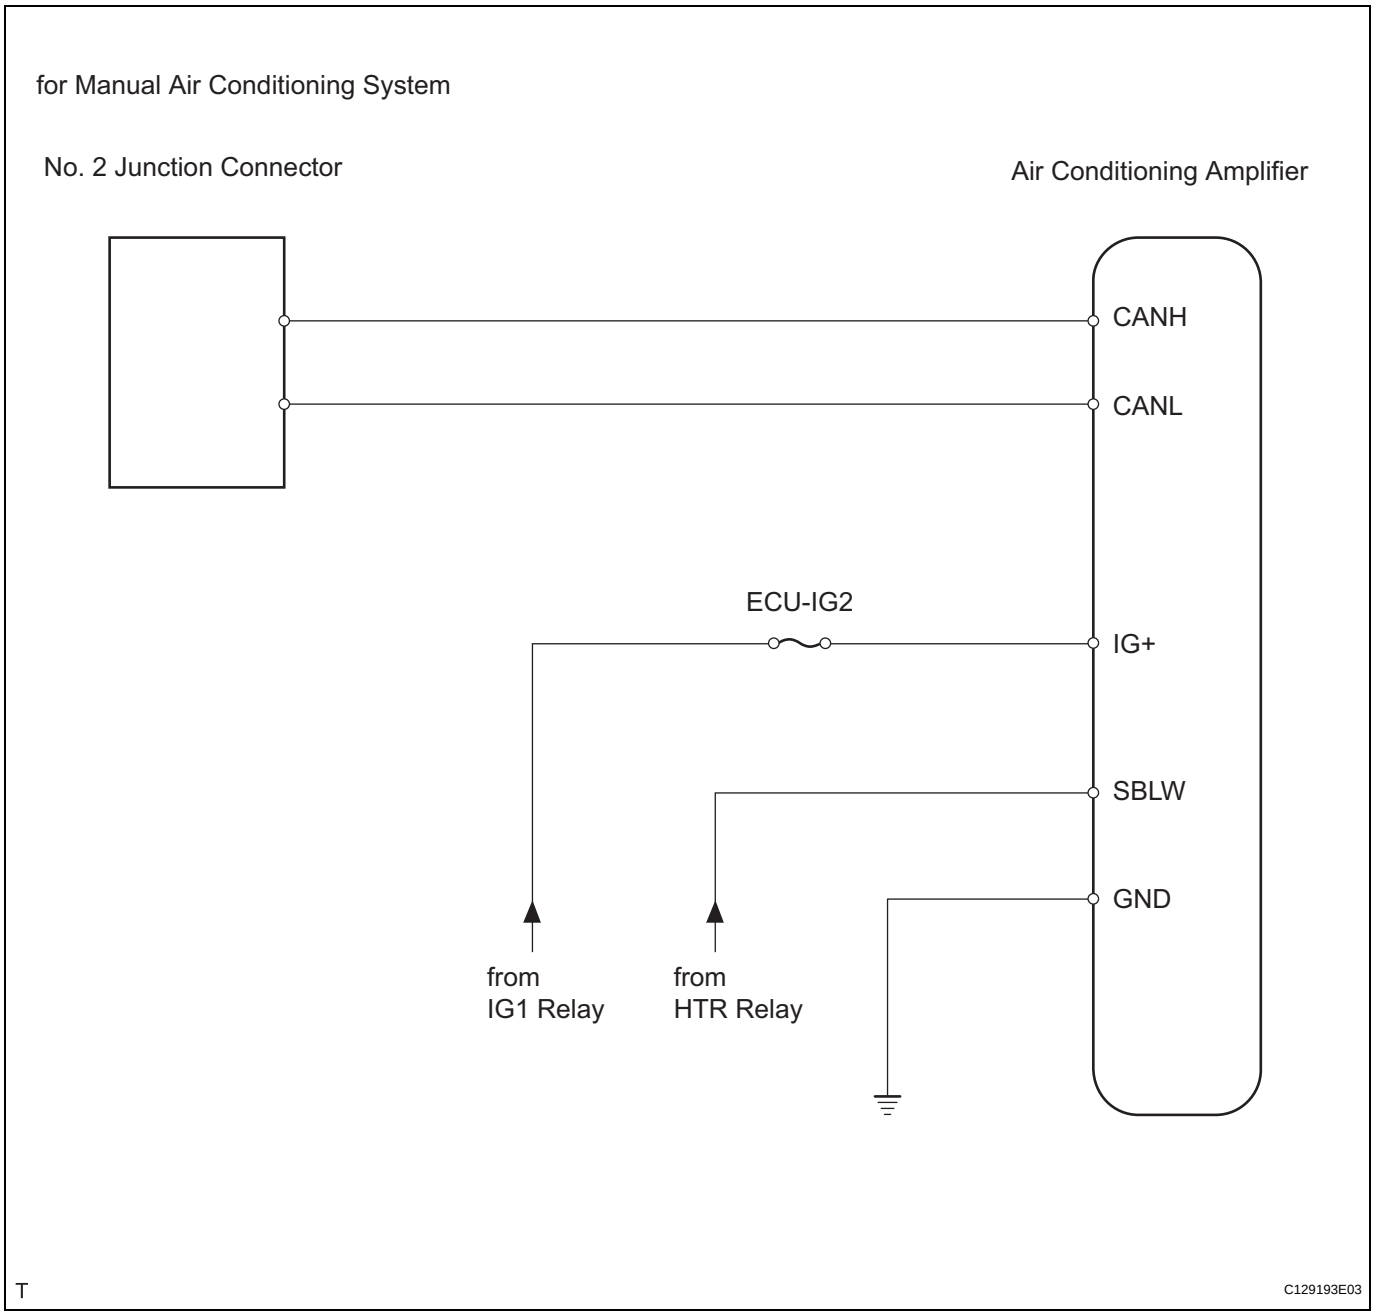


Air Conditioning Amplifier Communication Stop Mode

DESCRIPTION

Detection Item	Symptom	Trouble Area
AIR CONDITIONING AMPLIFIER COMMUNICATION STOP MODE	• A/C is not displayed on "BUS CHECK" screen of intelligent tester • Applies to "AIR CONDITIONING AMPLIFIER COMMUNICATION STOP MODE" in "DTC COMBINATION TABLE"	• Power source or inside air conditioning amplifier • Air conditioning amplifier branch wire and connector • Air conditioning amplifier

WIRING DIAGRAM



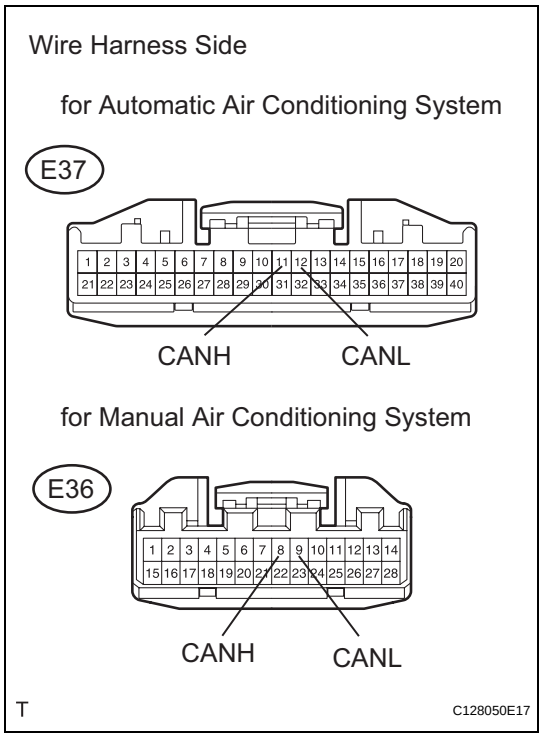
for Automatic Air Conditioning System

T

C129192E09

CA

INSPECTION PROCEDURE



NOTICE:

- **Turn the ignition switch OFF before measuring the resistances of the main wire and the branch wire.**
- **After the ignition switch is turned OFF, check that the key reminder warning system and light reminder warning system are not in operation.**
- **Before measuring the resistance, leave the vehicle for at least 1 minute and do not operate the ignition switch, any switches or doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:

Operating the ignition switch, any switches or any doors triggers related ECU and sensor communication with the CAN, which causes resistance variation.

1	**CHECK CAN BUS LINE FOR DISCONNECTION (AIR CONDITIONING AMPLIFIER BRANCH WIRE)**

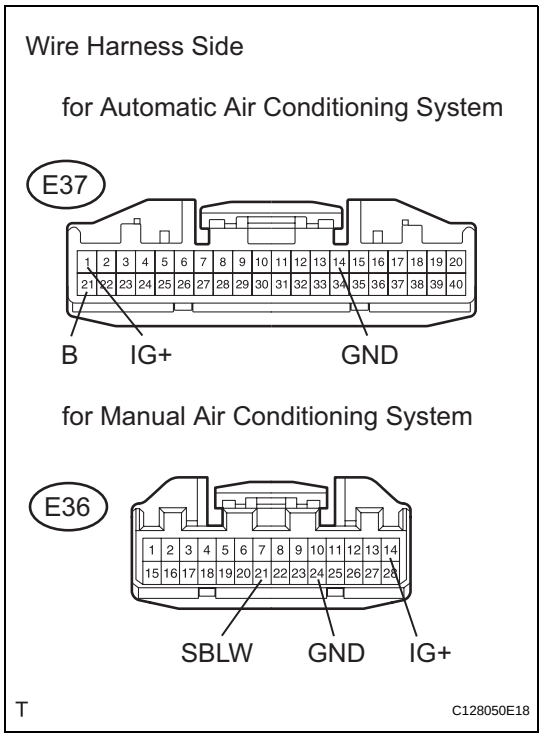
(a) Disconnect the E37*1 or E36*2 air conditioning amplifier connector.
HINT:
- *1: for Automatic air conditioning system.
- *2: for Manual air conditioning system.

(b) Measure the resistance of the wire harness side connector.
Standard resistance:
for Automatic Air Conditioning System

Tester Connection	Condition	Specified Condition
E37-11 (CANH) - E37-12 (CANL)	Ignition switch OFF	54 to 69 Ω

for Manual Air Conditioning System

Tester Connection	Condition	Specified Condition
E36-8 (CANH) - E36-9 (CANL)	Ignition switch OFF	54 to 69 Ω



NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO AIR CONDITIONING AMPLIFIER (CANH, CANL)**

OK

2	**CHECK WIRE HARNESS (AIR CONDITIONING AMPLIFIER - BATTERY AND BODY GROUND)**

(a) Disconnect the E37*1 or E36*2 air conditioning amplifier connector.
HINT:
- *1: for Automatic air conditioning system.

CA

- *2: for Manual air conditioning system.

(b) Measure the resistance of the wire harness side connectors.

Standard resistance:

for Automatic Air Conditioning System

Tester Connection	Specified Condition
E37-14 (GND) - Body ground	Below 1 Ω

for Manual Air Conditioning System

Tester Connection	Specified Condition
E36-24 (GND) - Body ground	Below 1 Ω

(c) Measure the voltage of the wire harness side connector.

Standard voltage:

for Automatic Air Conditioning System

Tester Connection	Condition	Specified Condition
E37-21 (B) - Body ground	Always	10 to 14 V
E37-1 (IG+) - Body ground	Ignition switch ON	10 to 14 V

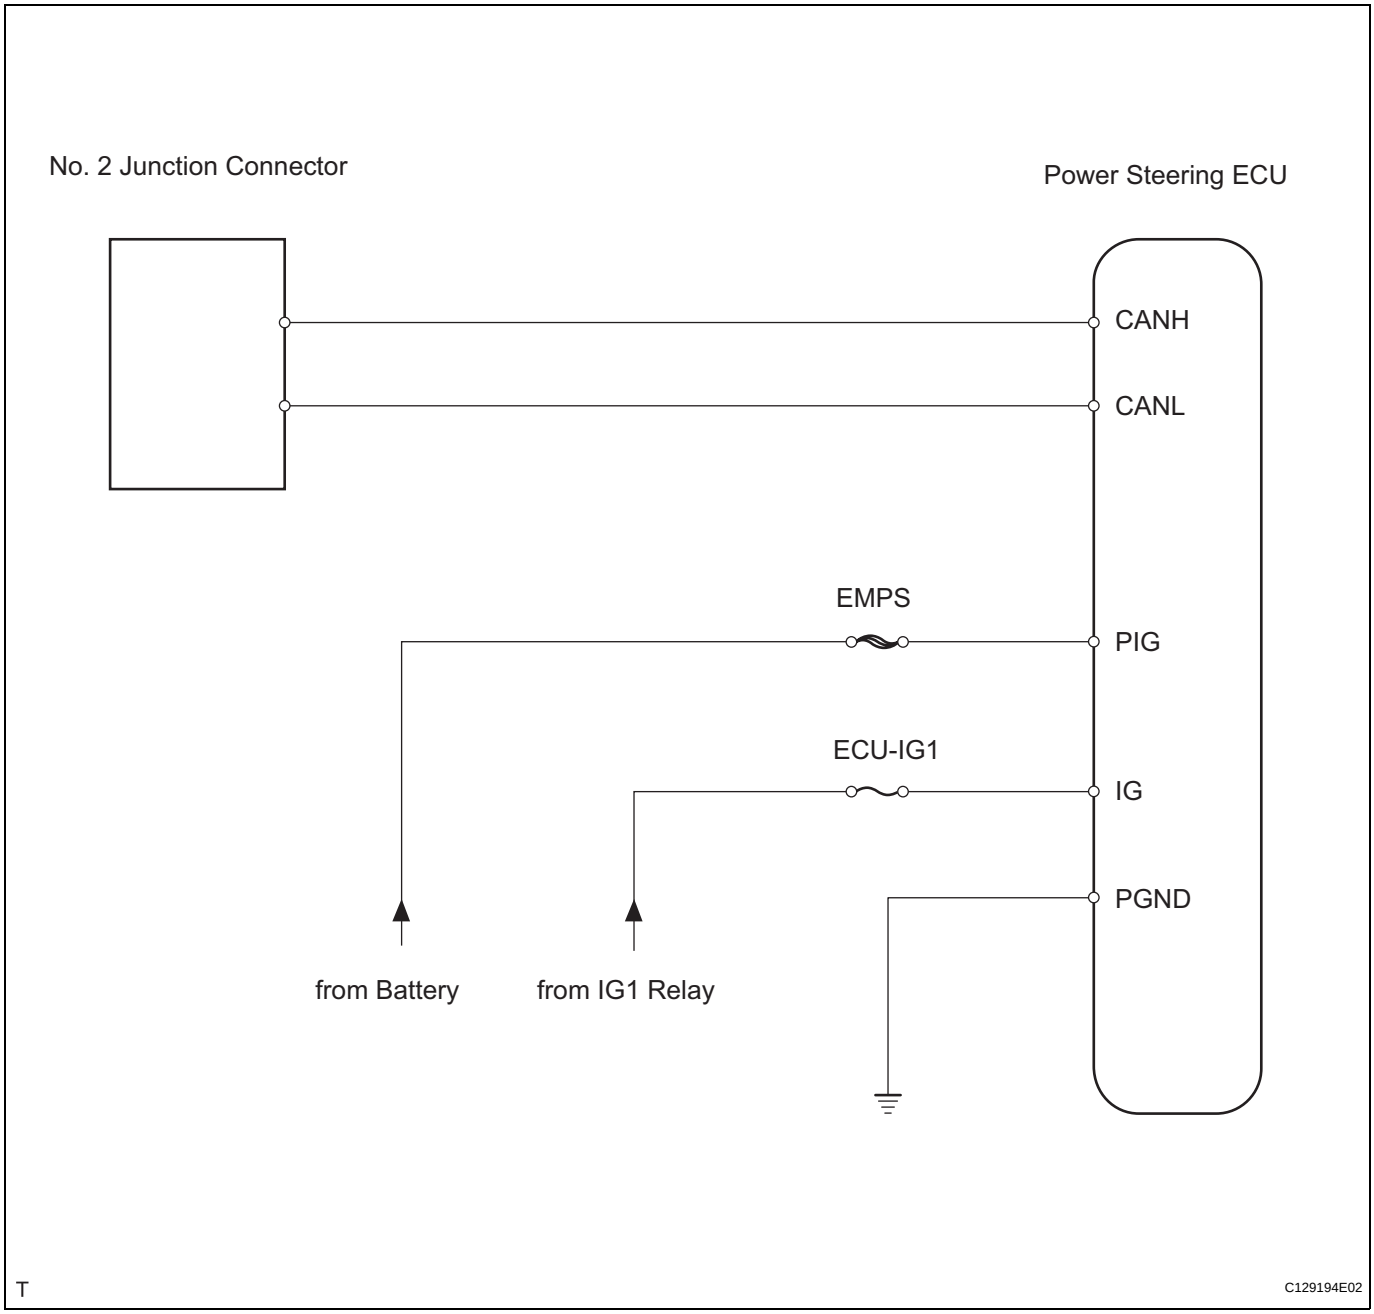
for Manual Air Conditioning System

Tester Connection	Condition	Specified Condition
E36-14 (IG+) - Body ground	Ignition switch ON	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE AIR CONDITIONING AMPLIFIER



CA

Power Steering ECU Communication Stop Mode

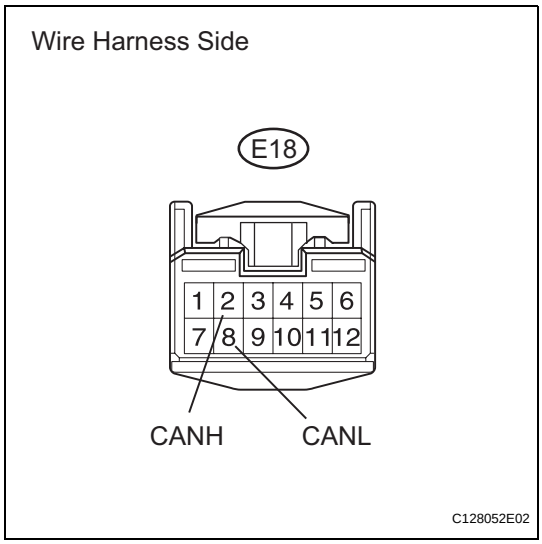
DESCRIPTION

Detection Item	Symptom	Trouble Area
POWER STEERING ECU COMMUNICATION STOP MODE	• EPS is not displayed on "BUS CHECK" screen of intelligent tester • Applies to "POWER STEERING ECU COMMUNICATION STOP MODE" in "DTC COMBINATION TABLE"	• Power source or inside power steering ECU • Power steering ECU branch wire and connector • Power steering ECU

WIRING DIAGRAM

CA

INSPECTION PROCEDURE



NOTICE:

- **Turn the ignition switch OFF before measuring the resistances of the main wire and the branch wire.**
- **After the ignition switch is turned OFF, check that the key reminder warning system and light reminder warning system are not in operation.**
- **Before measuring the resistance, leave the vehicle for at least 1 minute and do not operate the ignition switch, any switches or doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

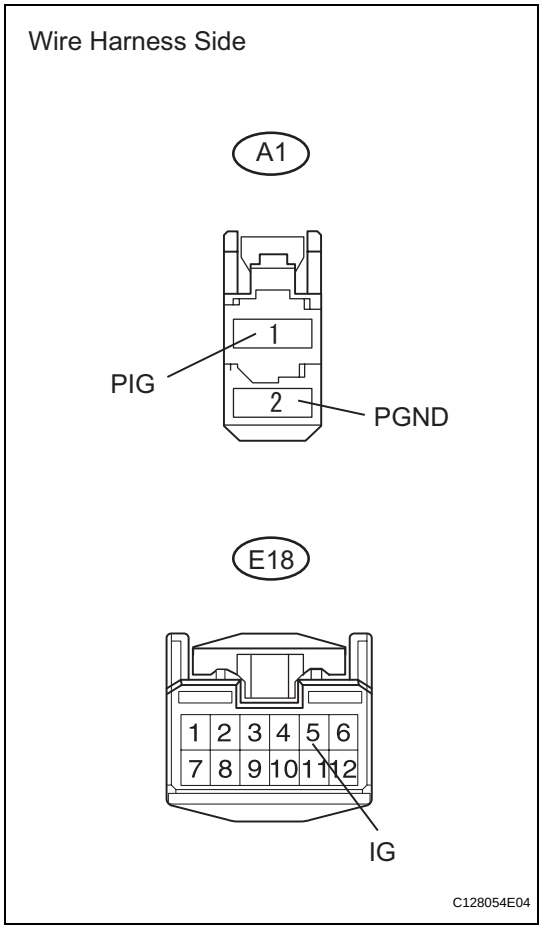
HINT:

Operating the ignition switch, any switches or any doors triggers related ECU and sensor communication with the CAN, which causes resistance variation.

1	CHECK CAN BUS LINE FOR DISCONNECTION (POWER STEERING ECU MAIN WIRE)

(a) Disconnect the E18 power steering ECU connector.

(b) Measure the resistance of the wire harness side connector.



Standard resistance

Tester Connection	Condition	Specified Condition
E18-2 (CANH) - E18-8 (CANL)	Ignition switch OFF	54 to 69 Ω

NG → **REPAIR OR REPLACE CAN MAIN WIRE CONNECTED TO POWER STEERING ECU (CANH, CANL)**

OK

2	CHECK WIRE HARNESS (POWER STEERING ECU - BATTERY AND BODY GROUND)

(a) Disconnect the A1 and E18 power steering ECU connectors.

(b) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
A1-2 (PGND) - Body ground	Below 1 Ω

(c) Measure the voltage of the wire harness side connectors.

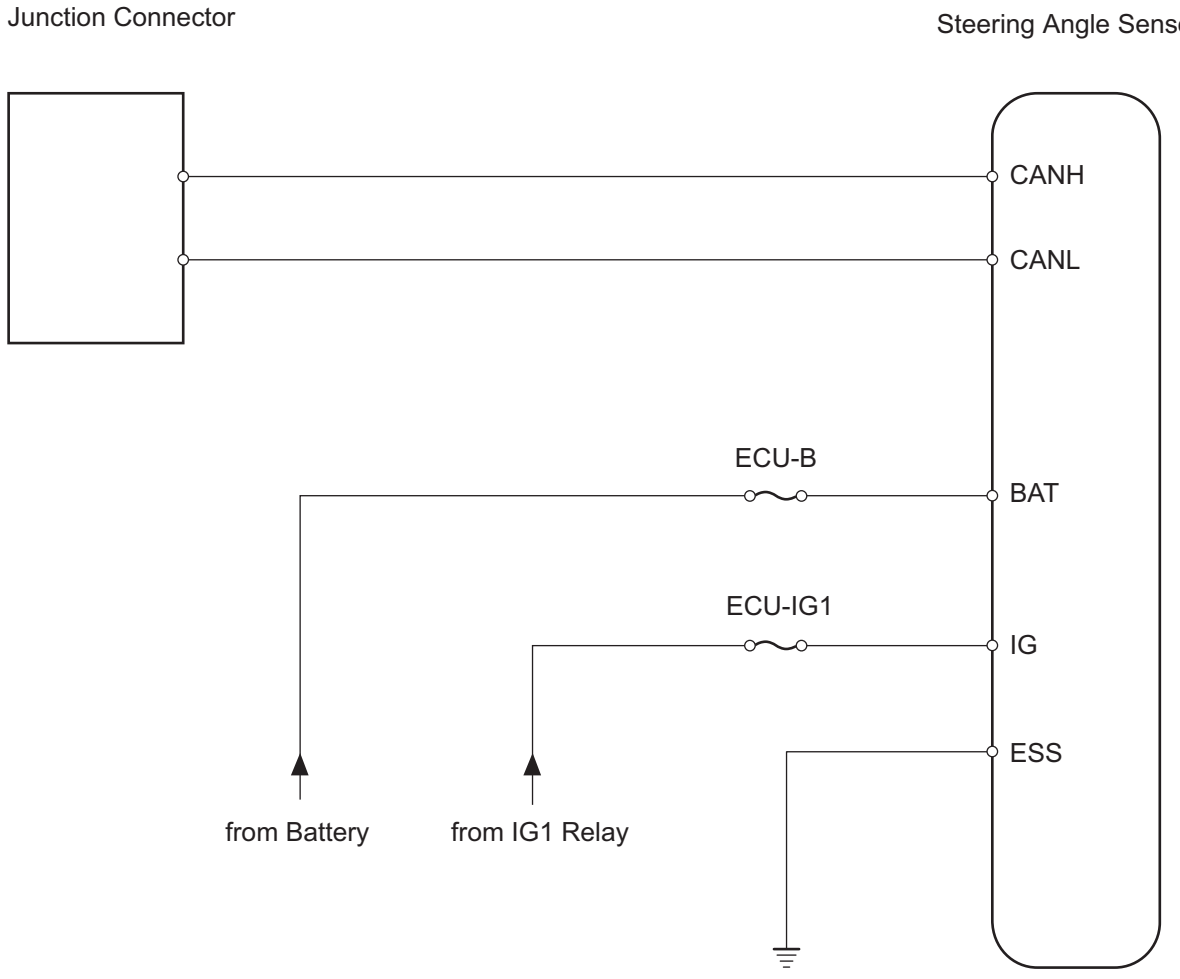
Standard voltage

Tester Connection	Condition	Specified Condition
A1-1 (PIG) - Body ground	Always	10 to 14 V
E18-5 (IG) - Body ground	Ignition switch ON	10 to 14 V

CA

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK



REPLACE POWER STEERING ECU

Steering Angle Sensor Communication Stop Mode

DESCRIPTION

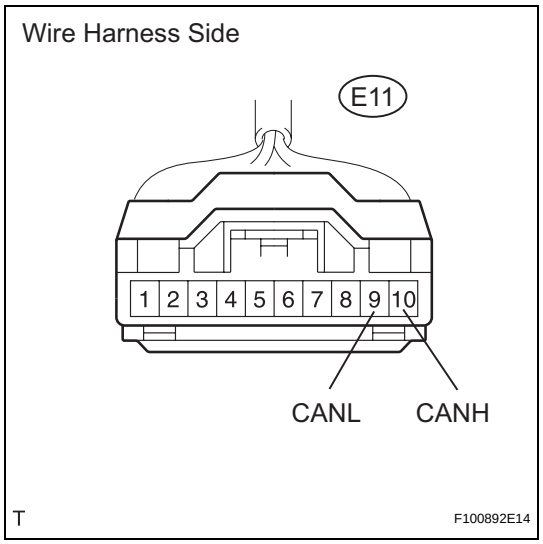
Detection Item	Symptom	Trouble Area
STEERING ANGLE SENSOR COMMUNICATION STOP MODE	• STEERING SENSOR is not displayed on "BUS CHECK" screen of intelligent tester • Applies to "STEERING ANGLE SENSOR COMMUNICATION STOP MODE" in "DTC COMBINATION TABLE"	• Power source or inside steering angle sensor • Steering angle sensor branch wire and connector • Steering angle sensor

WIRING DIAGRAM

T

C129192E06

INSPECTION PROCEDURE



NOTICE:

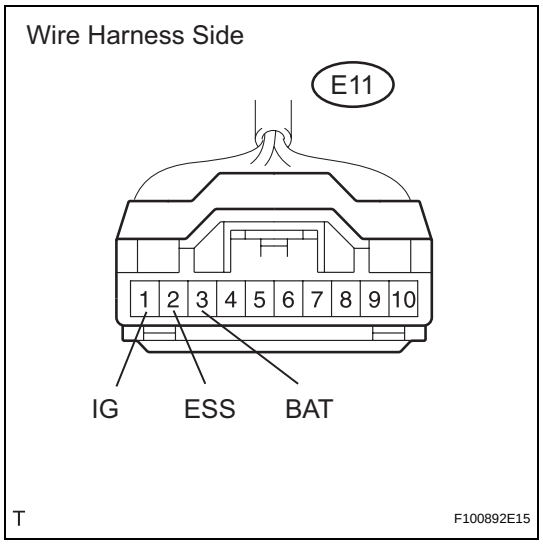
- **Turn the ignition switch OFF before measuring the resistances of the main wire and the branch wire.**
- **After the ignition switch is turned OFF, check that the key reminder warning system and light reminder warning system are not in operation.**
- **Before measuring the resistance, leave the vehicle for at least 1 minute and do not operate the ignition switch, any switches or doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:

Operating the ignition switch, any switches or any doors triggers related ECU and sensor communication with the CAN, which causes resistance variation.

1 CHECK CAN BUS LINE FOR DISCONNECTION (STEERING ANGLE SENSOR BRANCH WIRE)

(a) Disconnect the E11 steering angle sensor connector.
(b) Measure the resistance of the wire harness side connector.



Standard resistance

Tester Connection	Condition	Specified Condition
E11-10 (CANH) - E11-9 (CANL)	Ignition switch OFF	54 to 69 Ω

NG → **REPAIR OR REPLACE BRANCH WIRE CONNECTED TO STEERING ANGLE SENSOR (CANH, CANL)**

OK

2 CHECK WIRE HARNESS (STEERING ANGLE SENSOR - BATTERY AND BODY GROUND)

(a) Disconnect the E11 steering angle sensor connector.
(b) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
E11-2 (ESS) - Body ground	Below 1 Ω

(c) Measure the voltage of the wire harness side connector.

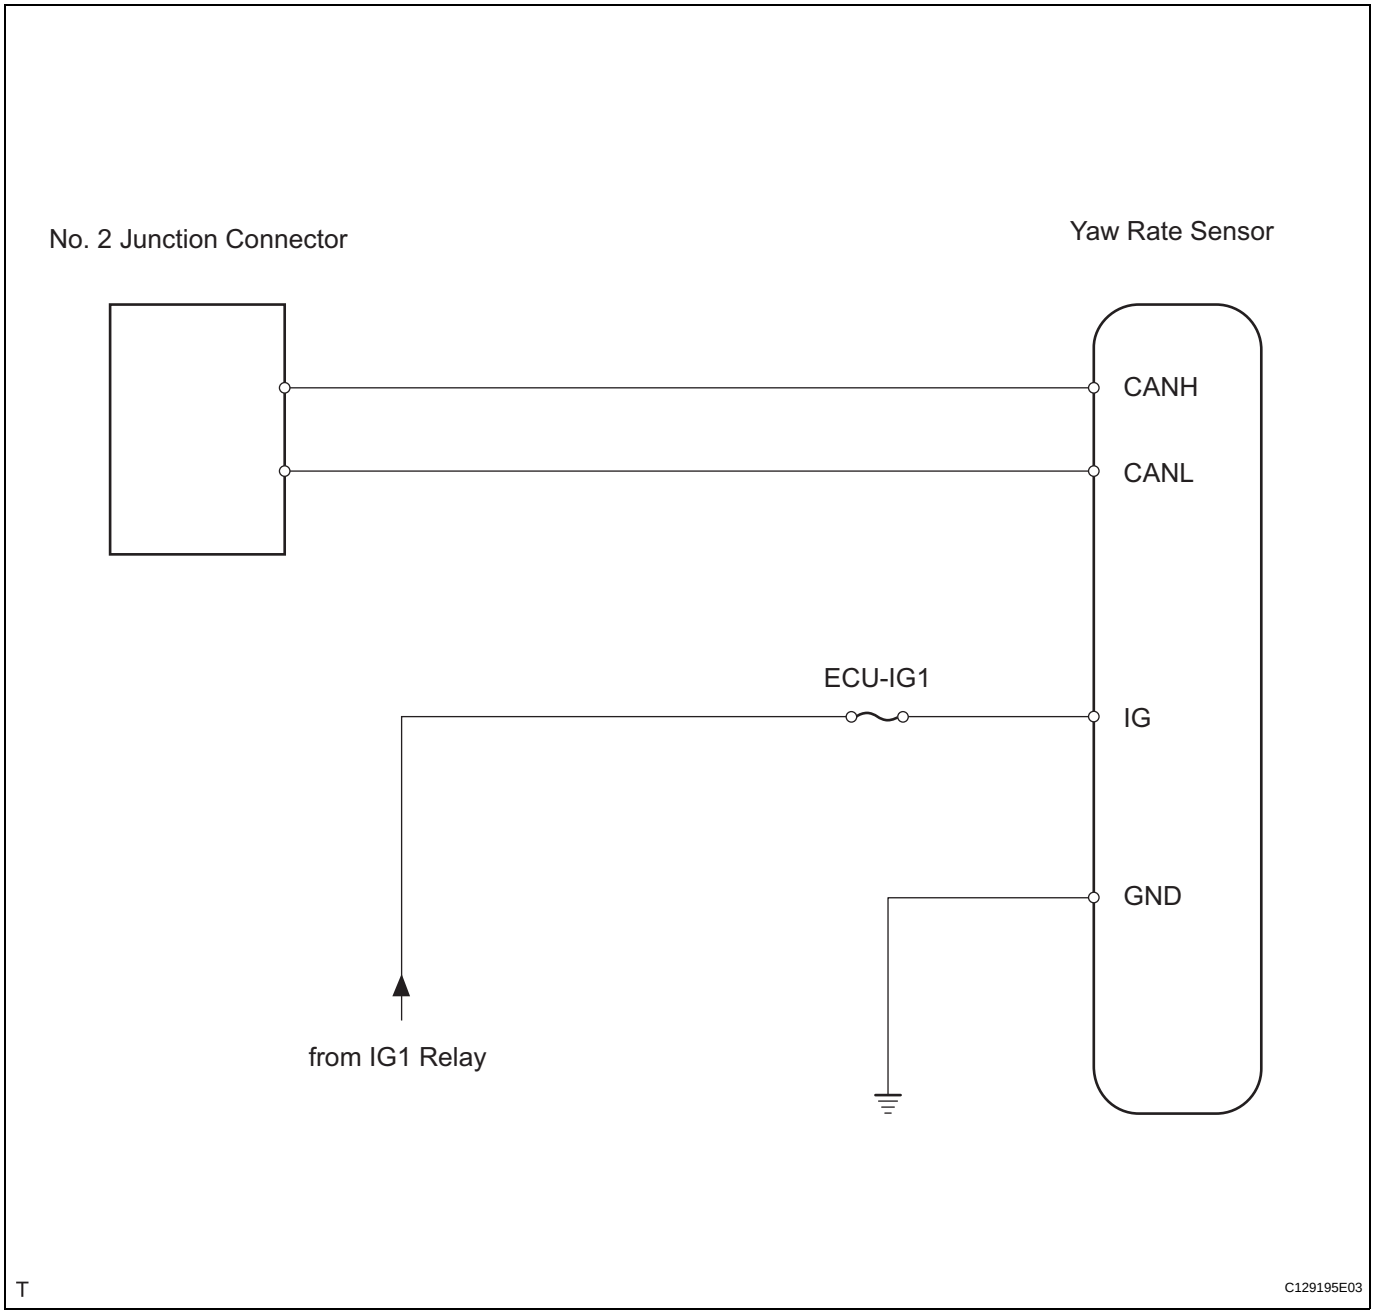
Standard voltage

Tester Connection	Condition	Specified Condition
E11-3 (BAT) - Body ground	Always	10 to 14 V
E11-1 (IG) - Body ground	Ignition switch ON	10 to 14 V

CA

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK



REPLACE STEERING ANGLE SENSOR

Yaw Rate Sensor Communication Stop Mode

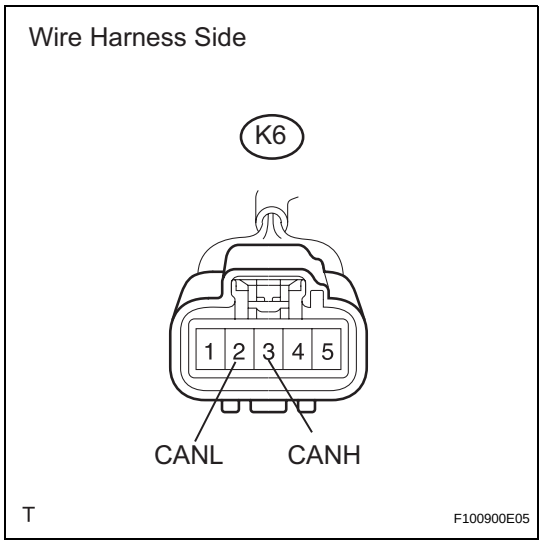
DESCRIPTION

Detection Item	Symptom	Trouble Area
YAW RATE SENSOR COMMUNICATION STOP MODE	• YAW / DECELERAT is not displayed on "BUS CHECK" screen of intelligent tester • Applies to "YAW RATE SENSOR COMMUNICATION STOP MODE" in "DTC COMBINATION TABLE"	• Power source or inside yaw rate sensor • Yaw rate sensor branch wire and connector • Yaw rate sensor

WIRING DIAGRAM

CA

INSPECTION PROCEDURE



NOTICE:

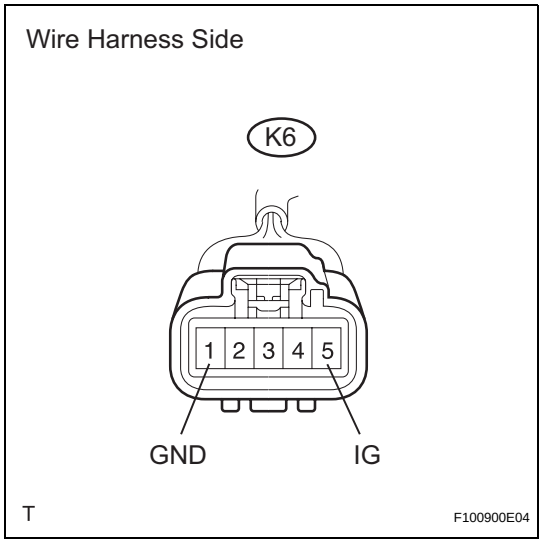
- **Turn the ignition switch OFF before measuring the resistances of the main wire and the branch wire.**
- **After the ignition switch is turned OFF, check that the key reminder warning system and light reminder warning system are not in operation.**
- **Before measuring the resistance, leave the vehicle for at least 1 minute and do not operate the ignition switch, any switches or doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:

Operating the ignition switch, any switches or any doors triggers related ECU and sensor communication with the CAN, which causes resistance variation.

1 CHECK CAN BUS LINE FOR DISCONNECTION (YAW RATE SENSOR BRANCH WIRE)

(a) Disconnect the K6 yaw rate sensor connector.
(b) Measure the resistance of the wire harness side connector.



Standard resistance

Tester Connection	Condition	Specified Condition
K6-3 (CANH) - K6-2 (CANL)	Ignition switch OFF	54 to 69 Ω

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO YAW RATE SENSOR (CANH, CANL)**

OK

2 CHECK WIRE HARNESS (YAW RATE SENSOR - BATTERY AND BODY GROUND)

(a) Disconnect the K6 yaw rate sensor connector.
(b) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
K6-1 (GND) - Body ground	Below 1 Ω

(c) Measure the voltage of the wire harness side connector.

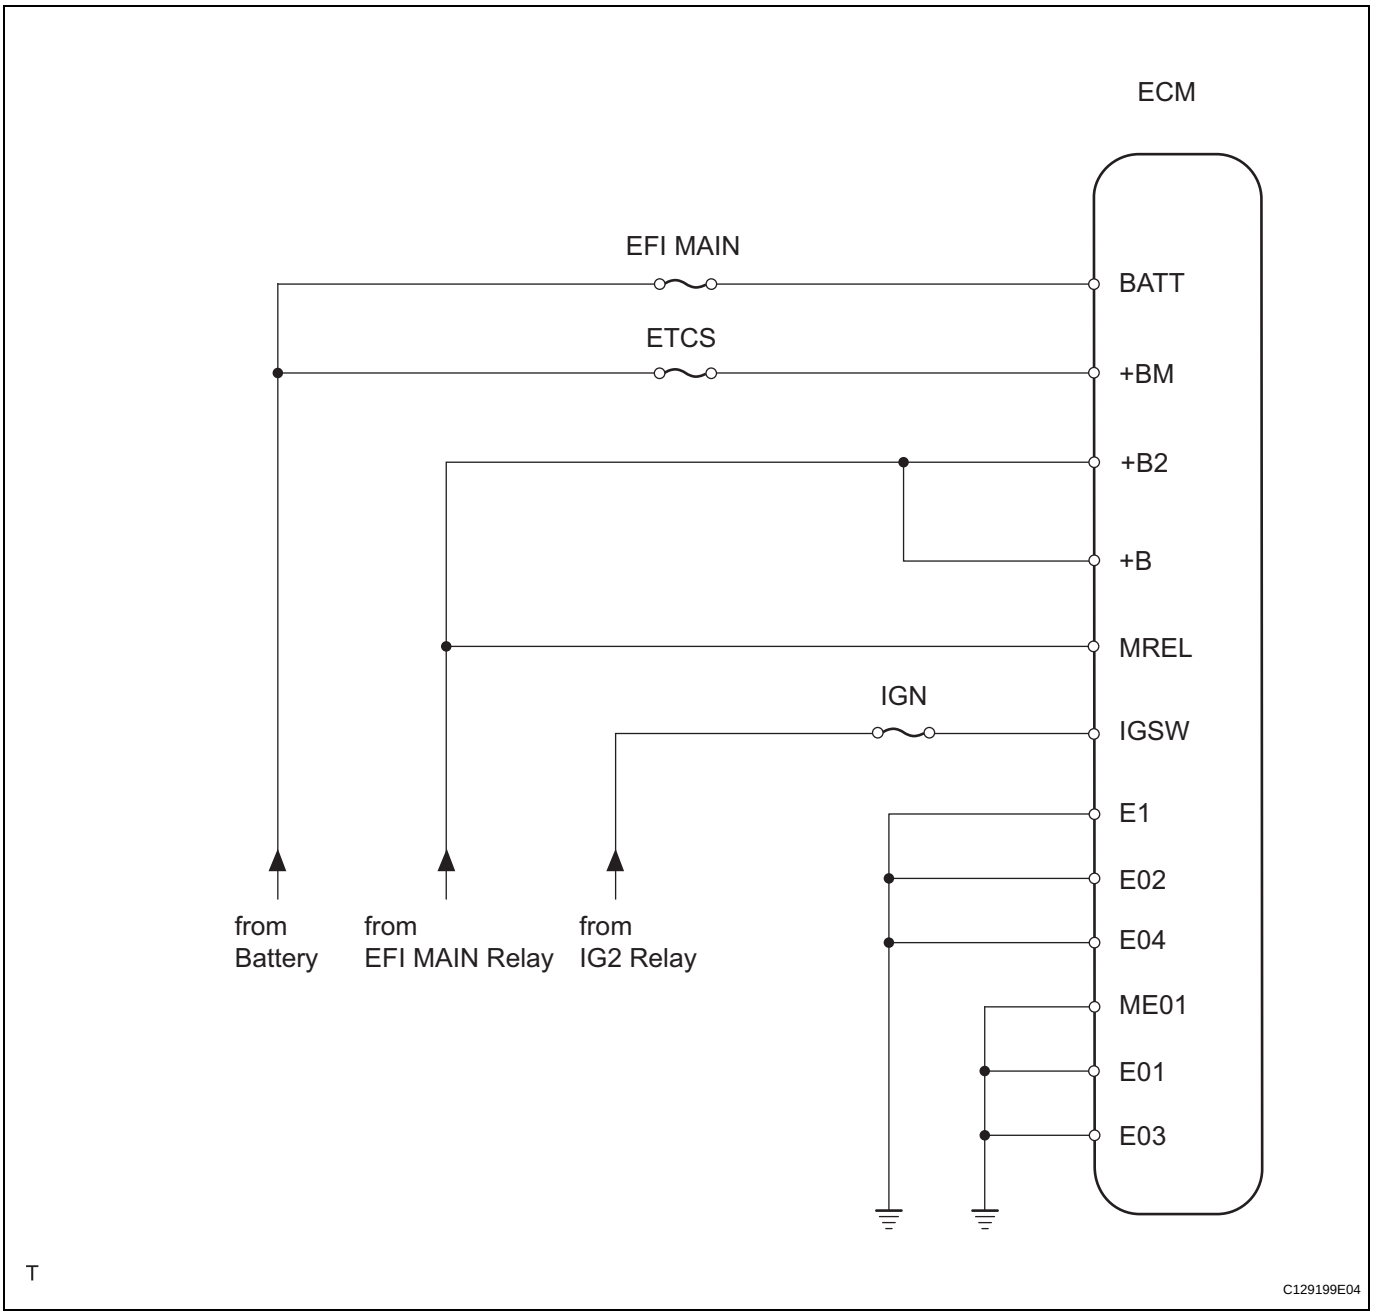
Standard voltage

Tester Connection	Condition	Specified Condition
K6-5 (IG) - Body ground	Ignition switch ON	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE YAW RATE SENSOR



ECM Communication Stop Mode

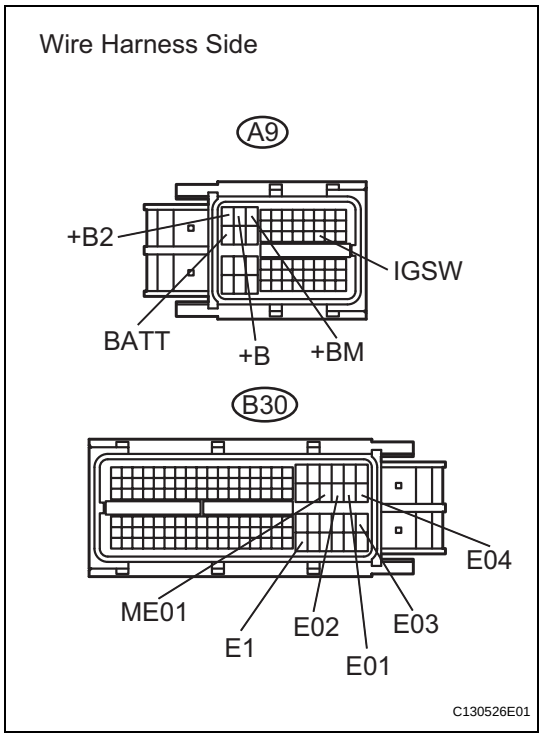
(2005/11-2006/01)

DESCRIPTION

Detection Item	Symptom	Trouble Area
ECM COMMUNICATION STOP MODE	• ENGINE is not displayed on "BUS CHECK" screen of intelligent tester • Applies to "ECM COMMUNICATION STOP MODE" in "DTC COMBINATION TABLE"	• Power source or inside ECM • ECM main wire and connector • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE



NOTICE:

- **Turn the ignition switch OFF before measuring the resistances of the main wire and the branch wire.**
- **After the ignition switch is turned OFF, check that the key reminder warning system and light reminder warning system are not in operation.**
- **Before measuring the resistance, leave the vehicle for at least 1 minute and do not operate the ignition switch, any switches or doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:

Operating the ignition switch, any switches or any doors triggers related ECU and sensor communication with the CAN, which causes resistance variation.

1 CHECK WIRE HARNESS (ECM - BATTERY AND BODY GROUND)

(a) Disconnect the A9 and B30 ECM connectors.

(b) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
B30-104 (E1) - Body ground	Below 1 Ω
B30-45 (E01) - Body ground	Below 1 Ω
B30-44 (E02) - Body ground	Below 1 Ω
B30-86 (E03) - Body ground	Below 1 Ω
B30-46 (E04) - Body ground	Below 1 Ω
B30-43 (ME01) - Body ground	Below 1 Ω

(c) Measure the voltage of the wire harness side connector.

Standard voltage

Tester Connection	Condition	Specified Condition
A9-1 (+B2) - Body ground	When battery's positive (+) voltage is applied to terminal MREL	10 to 14 V
A9-2 (+B) - Body ground	When battery's positive (+) voltage is applied to terminal MREL	10 to 14 V
A9-3 (+BM) - Body ground	Always	10 to 14 V
A9-20 (BATT) - Body ground	Always	10 to 14 V
A9-28 (IGSW) - Body ground	Ignition switch ON	10 to 14 V

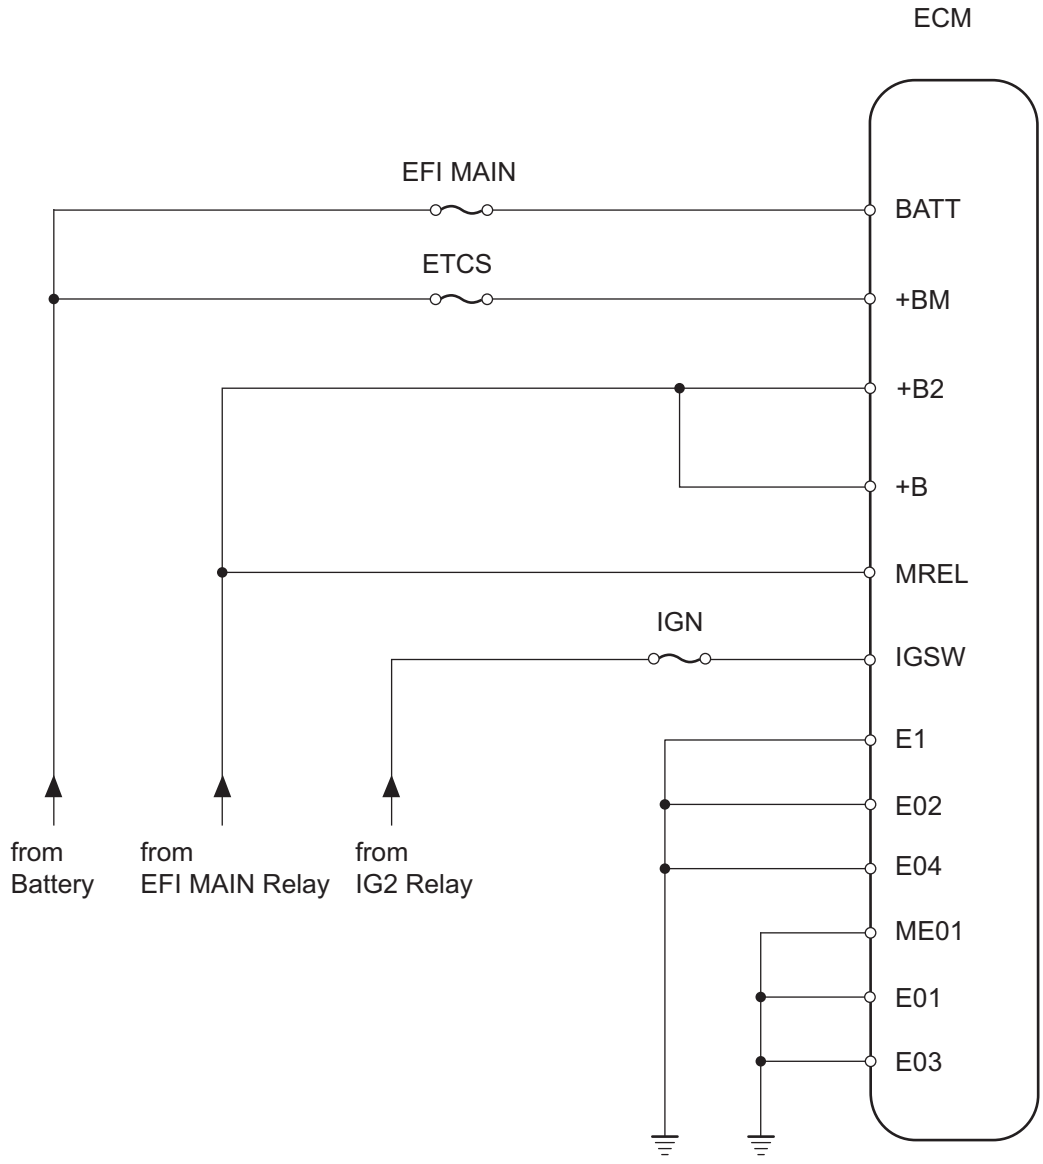
NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK ↓

REPLACE ECM

CA

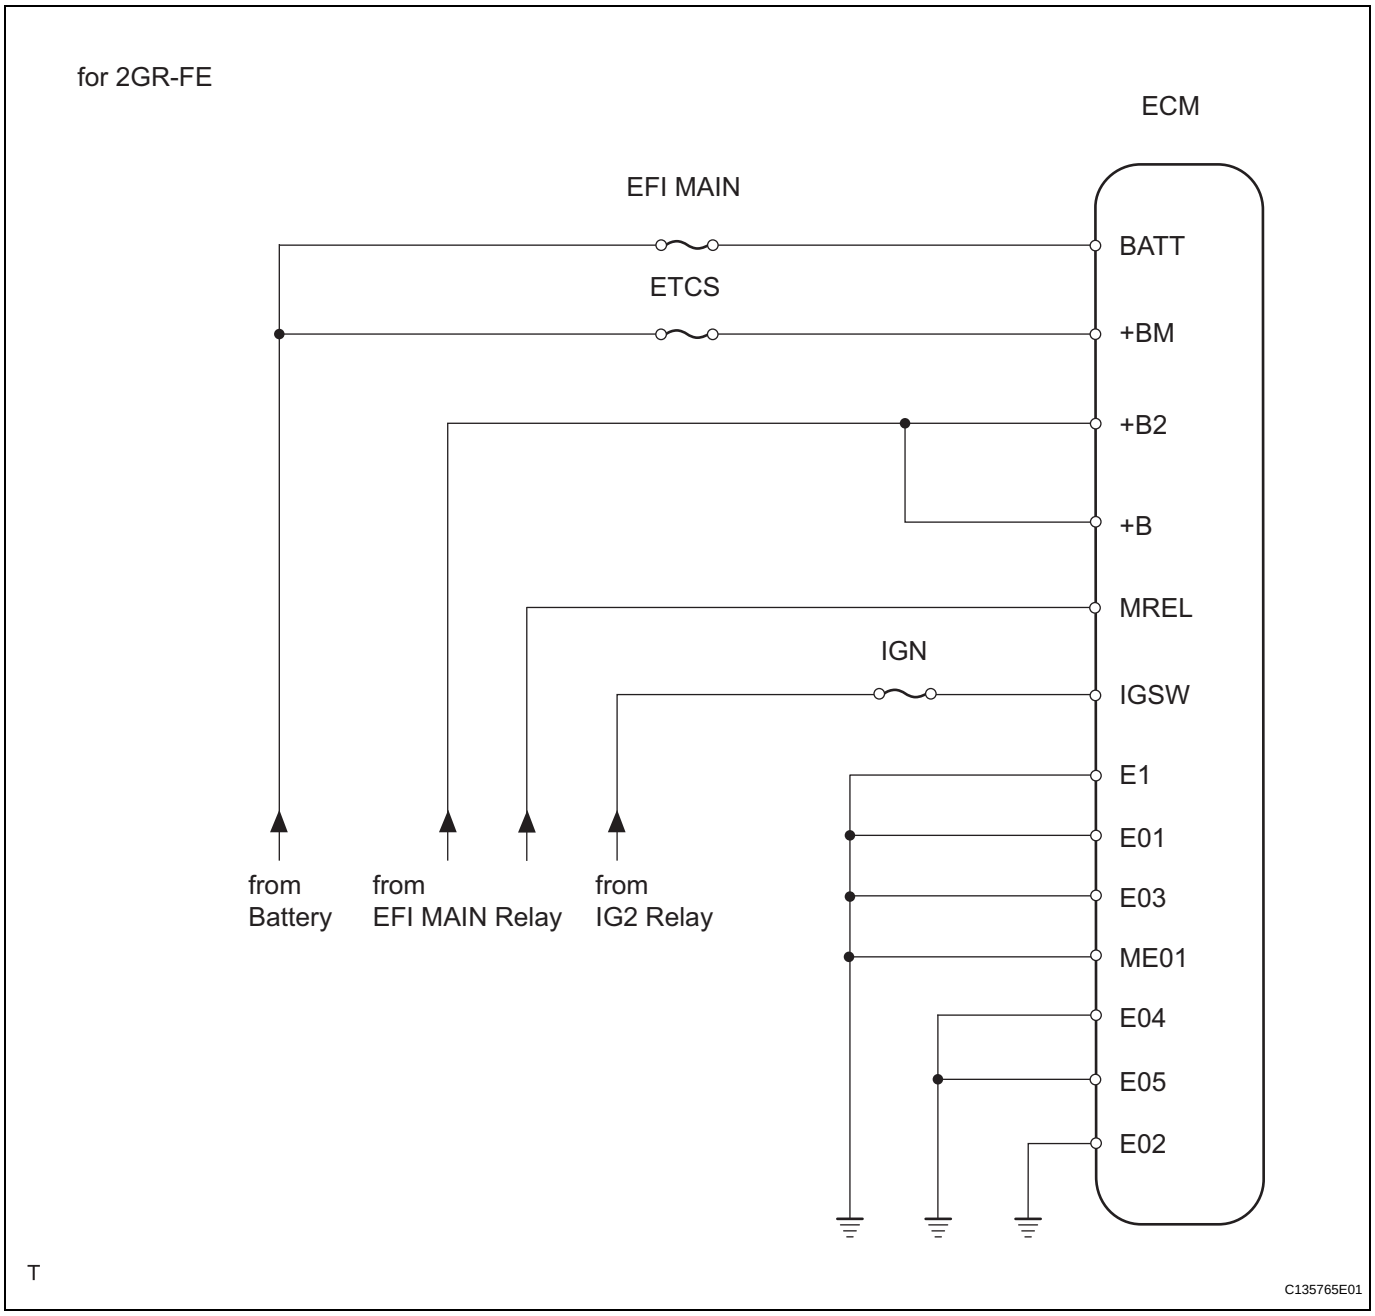
ECM Communication Stop Mode



(2006/01-)

DESCRIPTION

Detection Item	Symptom	Trouble Area
ECM COMMUNICATION STOP MODE	• ENGINE is not displayed on "BUS CHECK" screen of intelligent tester • Applies to "ECM COMMUNICATION STOP MODE" in "DTC COMBINATION TABLE"	• Power source or inside ECM • ECM main wire and connector • ECM



WIRING DIAGRAM

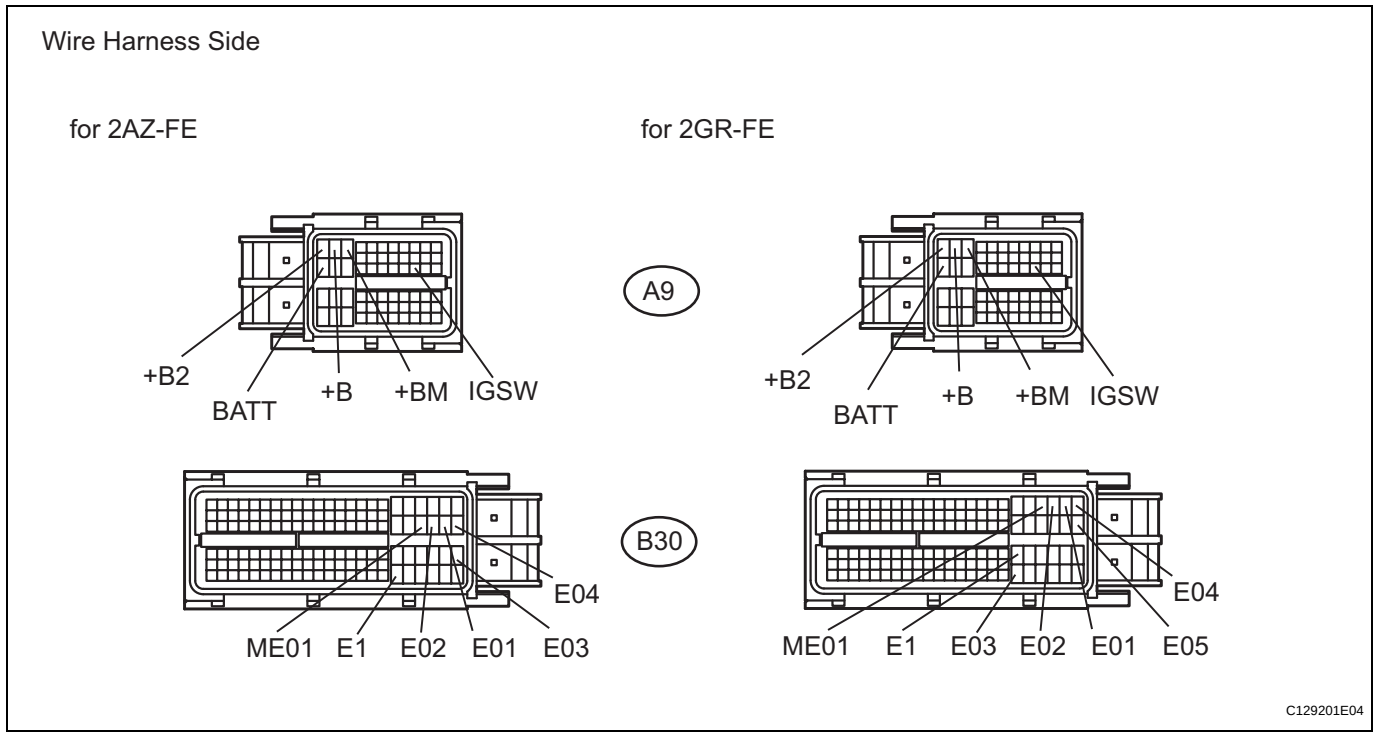
for 2AZ-FE

T

C129199E06

INSPECTION PROCEDURE

NOTICE:



- **Turn the ignition switch OFF before measuring the resistances of the main wire and branch wire.**
- **After the ignition switch is turned OFF, check that the key reminder warning system and light reminder warning system are not in operation.**
- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:

Operating the ignition switch, any switches or any doors triggers related ECU and sensor communication with the CAN, which causes resistance variation.

1	**CHECK WIRE HARNESS (ECM - BATTERY AND BODY GROUND)**

(a) Disconnect the A9 and B30 ECM connectors.

(b) Measure the resistance of the wire harness side connector.

Standard resistance:

for 2AZ-FE

Tester Connection	Specified Condition
B30-104 (E1) - Body ground	Below 1 Ω
B30-45 (E01) - Body ground	Below 1 Ω
B30-44 (E02) - Body ground	Below 1 Ω
B30-86 (E03) - Body ground	Below 1 Ω
B30-46 (E04) - Body ground	Below 1 Ω
B30-43 (ME01) - Body ground	Below 1 Ω

for 2GR-FE

Tester Connection	Specified Condition
B30-81 (E1) - Body ground	Below 1 Ω
B30-22 (E01) - Body ground	Below 1 Ω
B30-21 (E02) - Body ground	Below 1 Ω
B30-104 (E03) - Body ground	Below 1 Ω
B30-23 (E04) - Body ground	Below 1 Ω
B30-46 (E05) - Body ground	Below 1 Ω
B30-20 (ME01) - Body ground	Below 1 Ω

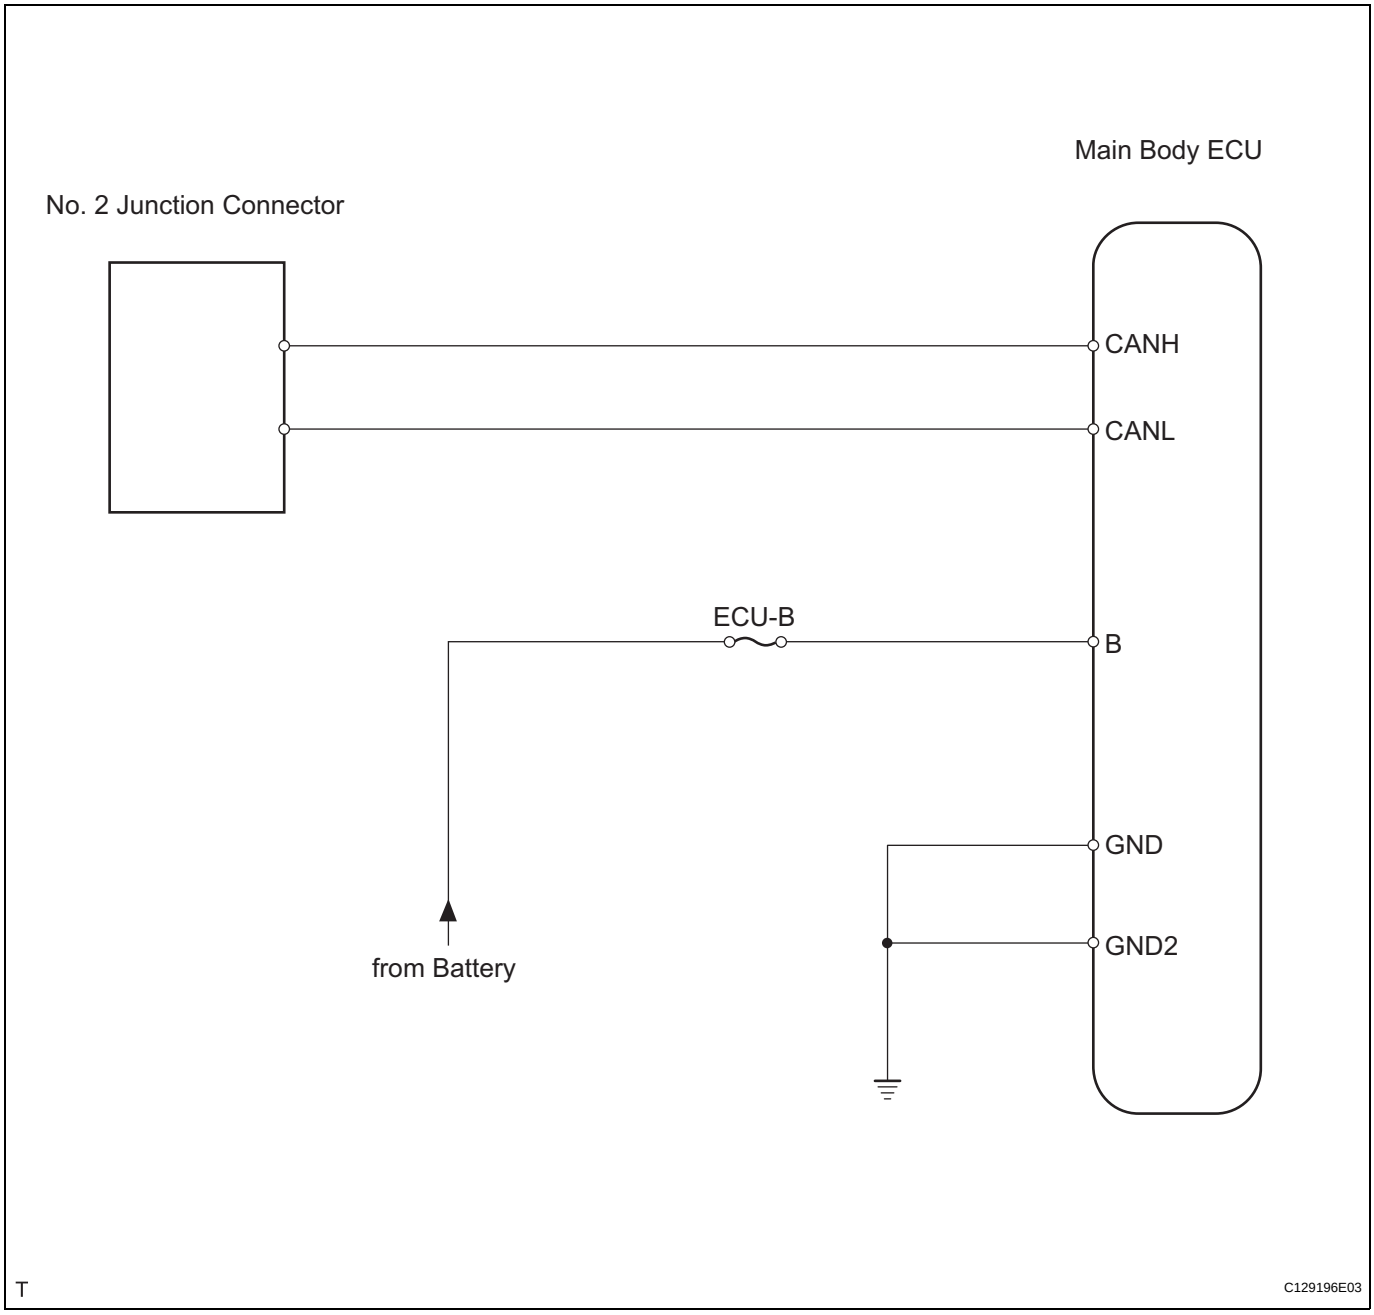
(c) Measure the voltage of the wire harness side connector.

Standard voltage

Tester Connection	Condition	Specified Condition
A9-1 (+B2) - Body ground	When battery's positive (+) voltage is applied to terminal MREL	10 to 14 V
A9-2 (+B) - Body ground	When battery's positive (+) voltage is applied to terminal MREL	10 to 14 V
A9-3 (+BM) - Body ground	Always	10 to 14 V
A9-20 (BATT) - Body ground	Always	10 to 14 V
A9-28 (IGSW) - Body ground	Ignition switch ON	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK



REPLACE ECM

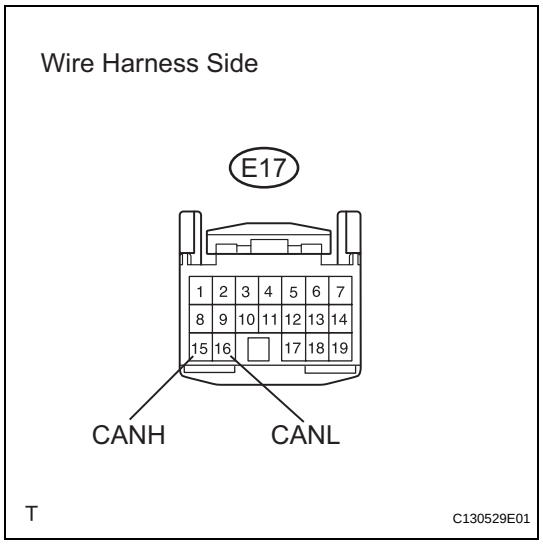
Main Body ECU Communication Stop Mode

DESCRIPTION

Detection Item	Symptom	Trouble Area
MAIN BODY ECU COMMUNICATION STOP MODE	• MAIN BODY is not displayed on "BUS CHECK" screen of intelligent tester • Applies to "MAIN BODY ECU COMMUNICATION STOP MODE" in "DTC COMBINATION TABLE"	• Power source or inside main body ECU • Main body ECU branch wire and connector • Instrument panel junction block (Main body ECU)

WIRING DIAGRAM

INSPECTION PROCEDURE



NOTICE:

- **Turn the ignition switch OFF before measuring the resistances of the main wire and the branch wire.**
- **After the ignition switch is turned OFF, check that the key reminder warning system and light reminder warning system are not in operation.**
- **Before measuring the resistance, leave the vehicle for at least 1 minute and do not operate the ignition switch, any switches or doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:

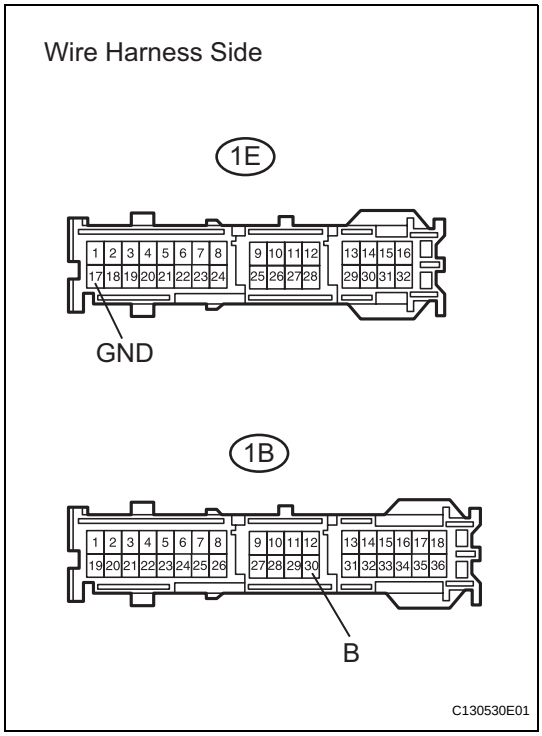
Operating the ignition switch, any switches or any doors triggers related ECU and sensor communication with the CAN, which causes resistance variation.

1	CHECK CAN BUS LINE FOR DISCONNECTION (MAIN BODY ECU BRANCH WIRE)

(a) Disconnect the E17 main body ECU connector.

(b) Measure the resistance of the wire harness side connector.

Standard resistance



Tester Connection	Condition	Specified Condition
E17-15 (CANH) - E17-16 (CANL)	Ignition switch OFF	54 to 69 Ω

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO MAIN BODY ECU (CANH, CANL)**

OK

CA

2	CHECK WIRE HARNESS (MAIN BODY ECU - BATTERY AND BODY GROUND)

(a) Disconnect the 1E and 1B junction block connectors.
(b) Measure the resistance of the wire harness side connector.
Standard resistance

Tester Connection	Specified Condition
1E-17 (GND) - Body ground	Below 1 Ω

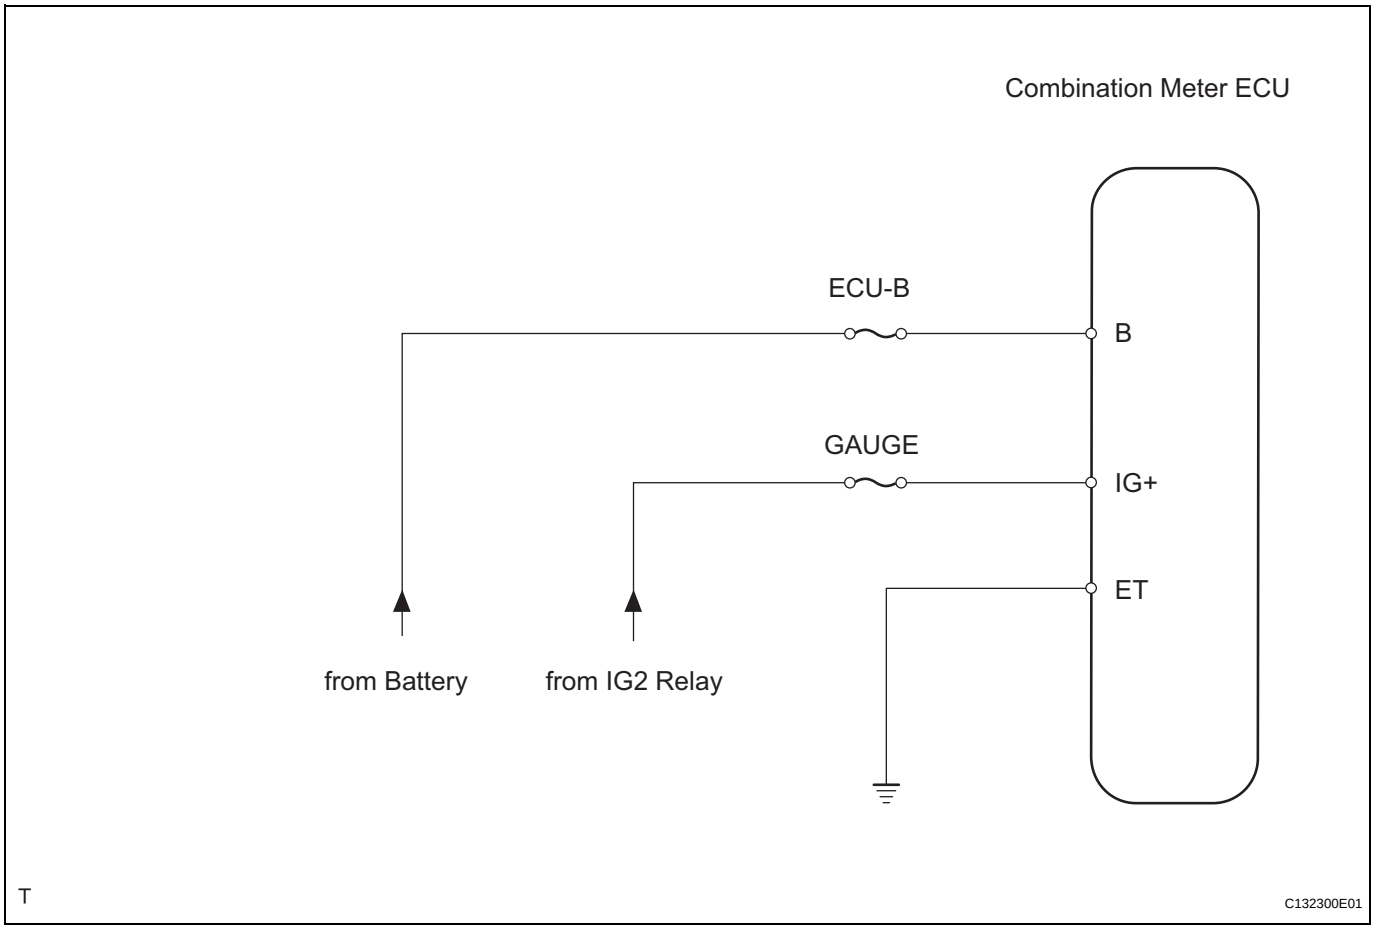
(c) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Specified Condition
1B-30 (B) - Body ground	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)



CA

Combination Meter ECU Communication Stop Mode

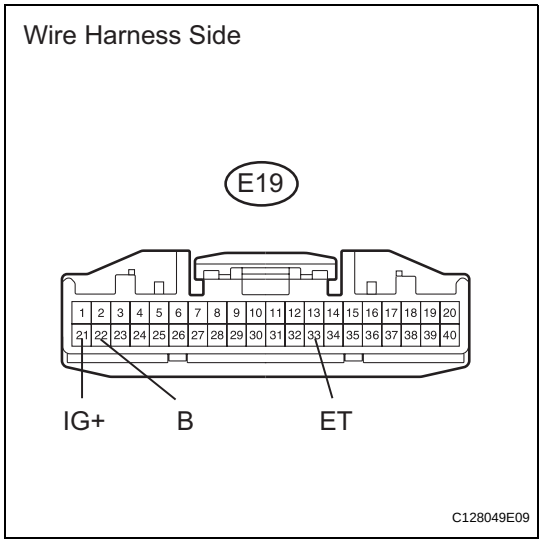
DESCRIPTION

Detection Item	Symptom	Trouble Area
COMBINATION METER ECU COMMUNICATION STOP MODE	• METER is not displayed on "BUS CHECK" screen of intelligent tester • Applies to "COMBINATION METER ECU COMMUNICATION STOP MODE" in "DTC COMBINATION TABLE"	• Power source or inside combination meter ECU • Combination meter ECU branch wire and connector • Combination meter ECU

WIRING DIAGRAM

CA

INSPECTION PROCEDURE



NOTICE:

- **Turn the ignition switch OFF before measuring the resistances of the main wire and the branch wire.**
- **After the ignition switch is turned OFF, check that the key reminder warning system and light reminder warning system are not in operation.**
- **Before measuring the resistance, leave the vehicle for at least 1 minute and do not operate the ignition switch, any switches or doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:

Operating the ignition switch, any switches or any doors triggers related ECU and sensor communication with the CAN, which causes resistance variation.

1	CHECK WIRE HARNESS (COMBINATION METER ECU - BATTERY AND BODY GROUND)

(a) Disconnect the E19 combination meter ECU connector.
(b) Measure the resistance of the wire harness side connector.
Standard resistance

Tester Connection	Specified Condition
E19-33 (ET) - Body ground	Below 1 Ω

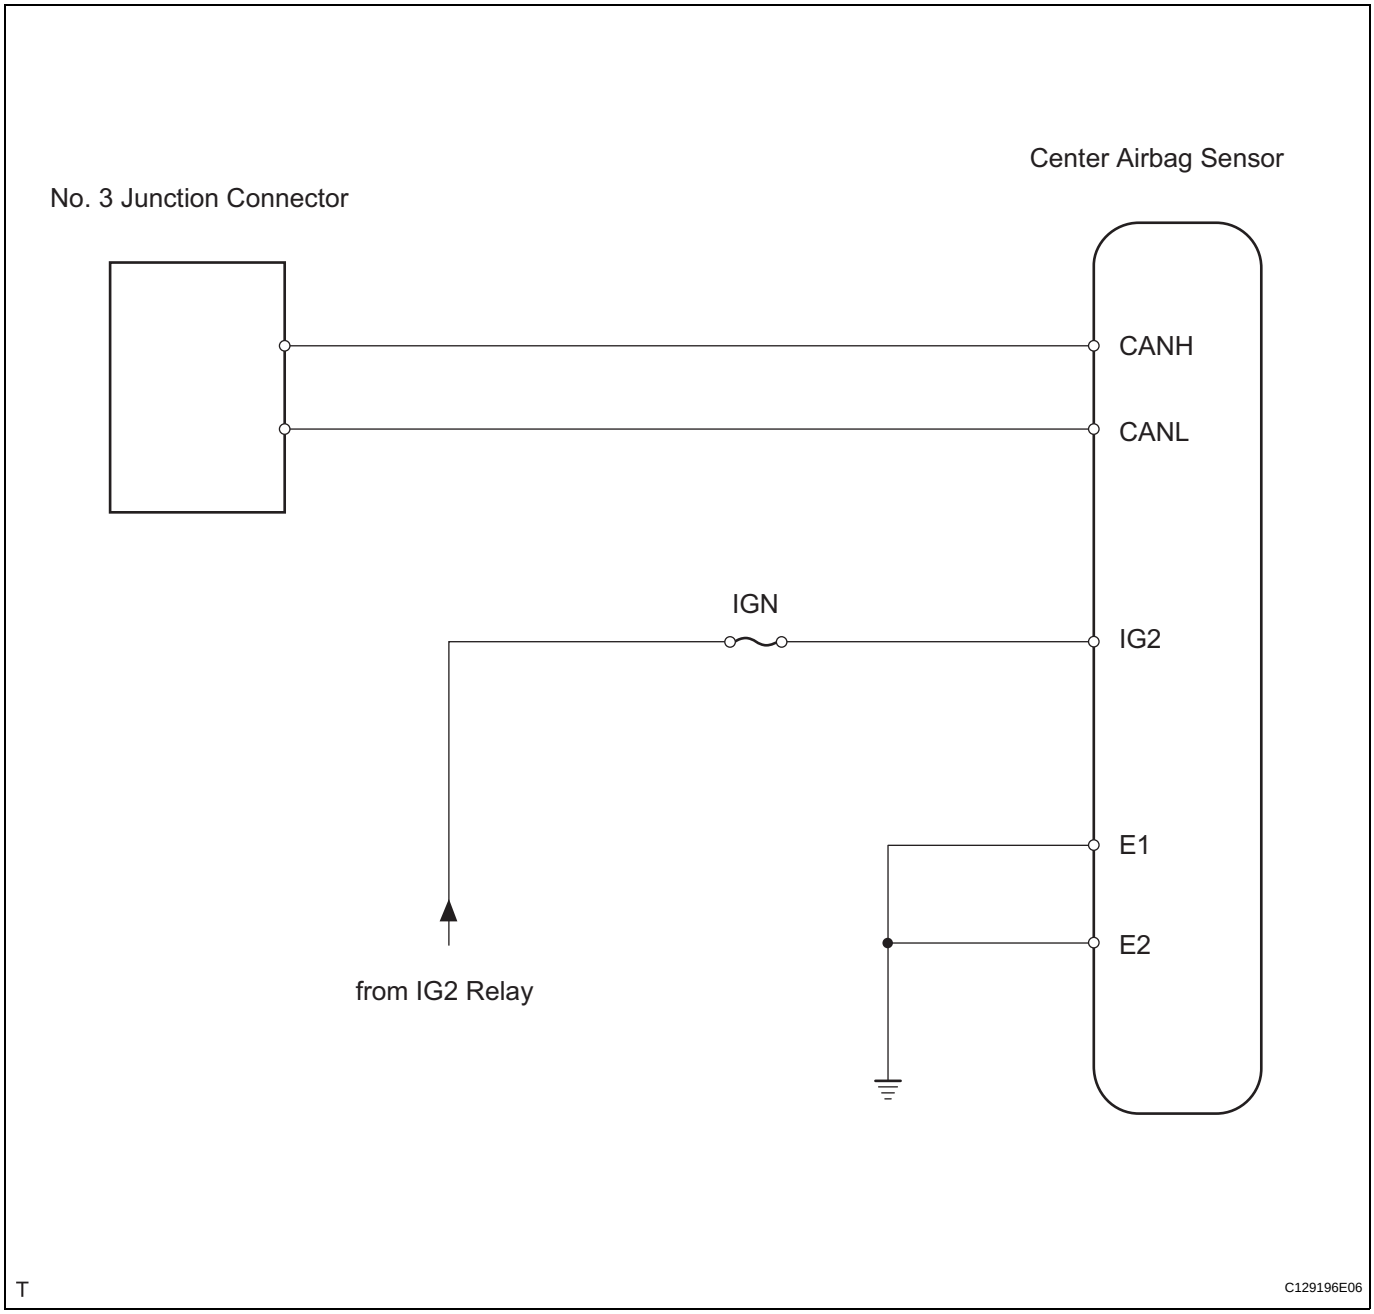
(c) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Condition	Specified Condition
E19-22 (B) - Body ground	Always	10 to 14 V
E19-21 (IG+) - Body ground	Ignition switch ON	10 to 14 V

CA

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK



REPLACE COMBINATION METER ECU

Center Airbag Sensor Communication Stop Mode

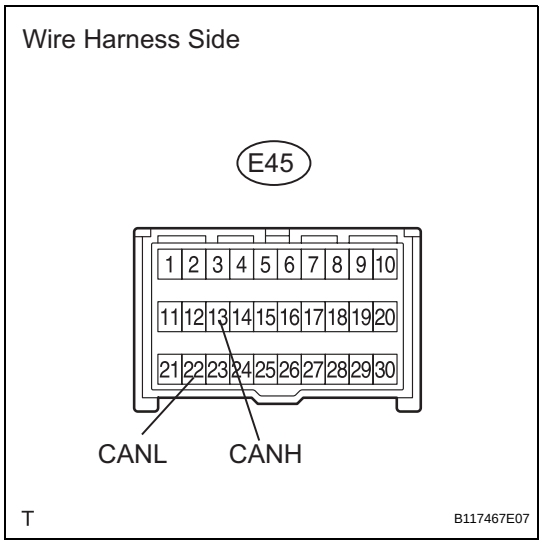
DESCRIPTION

Detection Item	Symptom	Trouble Area
CENTER AIRBAG SENSOR COMMUNICATION STOP MODE	• SRS AIRBAG is not displayed on "BUS CHECK" screen of intelligent tester. • Applies to "CENTER AIRBAG SENSOR COMMUNICATION STOP MODE" in "DTC COMBINATION TABLE"	• Power source or inside center airbag sensor assembly • Center airbag sensor assembly branch wire and connector • Center airbag sensor assembly

WIRING DIAGRAM

CA

INSPECTION PROCEDURE



NOTICE:

- **Turn the ignition switch OFF before measuring the resistances of the main wire and the branch wire.**
- **After the ignition switch is turned OFF, check that the key reminder warning system and light reminder warning system are not in operation.**
- **Before measuring the resistance, leave the vehicle for at least 1 minute and do not operate the ignition switch, any switches or doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

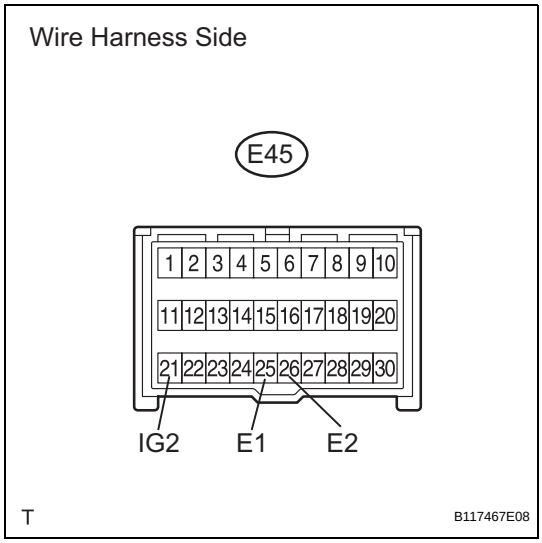
HINT:

Operating the ignition switch, any switches or any doors triggers related ECU and sensor communication with the CAN, which causes resistance variation.

1 CHECK CAN BUS LINE FOR DISCONNECTION (CENTER AIRBAG SENSOR ASSEMBLY BRANCH WIRE)

(a) Disconnect the E45 center airbag sensor connector.

(b) Measure the resistance of the wire harness side connector.



Standard resistance

Tester Connection	Condition	Specified Condition
E45-13 (CANH) - E45-22 (CANL)	Ignition switch OFF	54 to 69 Ω

NG → **REPAIR OR REPLACE CENTER AIRBAG SENSOR ASSEMBLY BRANCH WIRE AND CONNECTOR (CANH, CANL)**

OK

2 CHECK WIRE HARNESS (CENTER AIRBAG SENSOR ASSEMBLY - BATTERY AND BODY GROUND)

(a) Disconnect the E45 center airbag sensor connector.

(b) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
E45-25 (E1) - Body ground	Below 1 Ω
E45-26 (E2) - Body ground	Below 1 Ω

(c) Measure the voltage of the wire harness side connector.

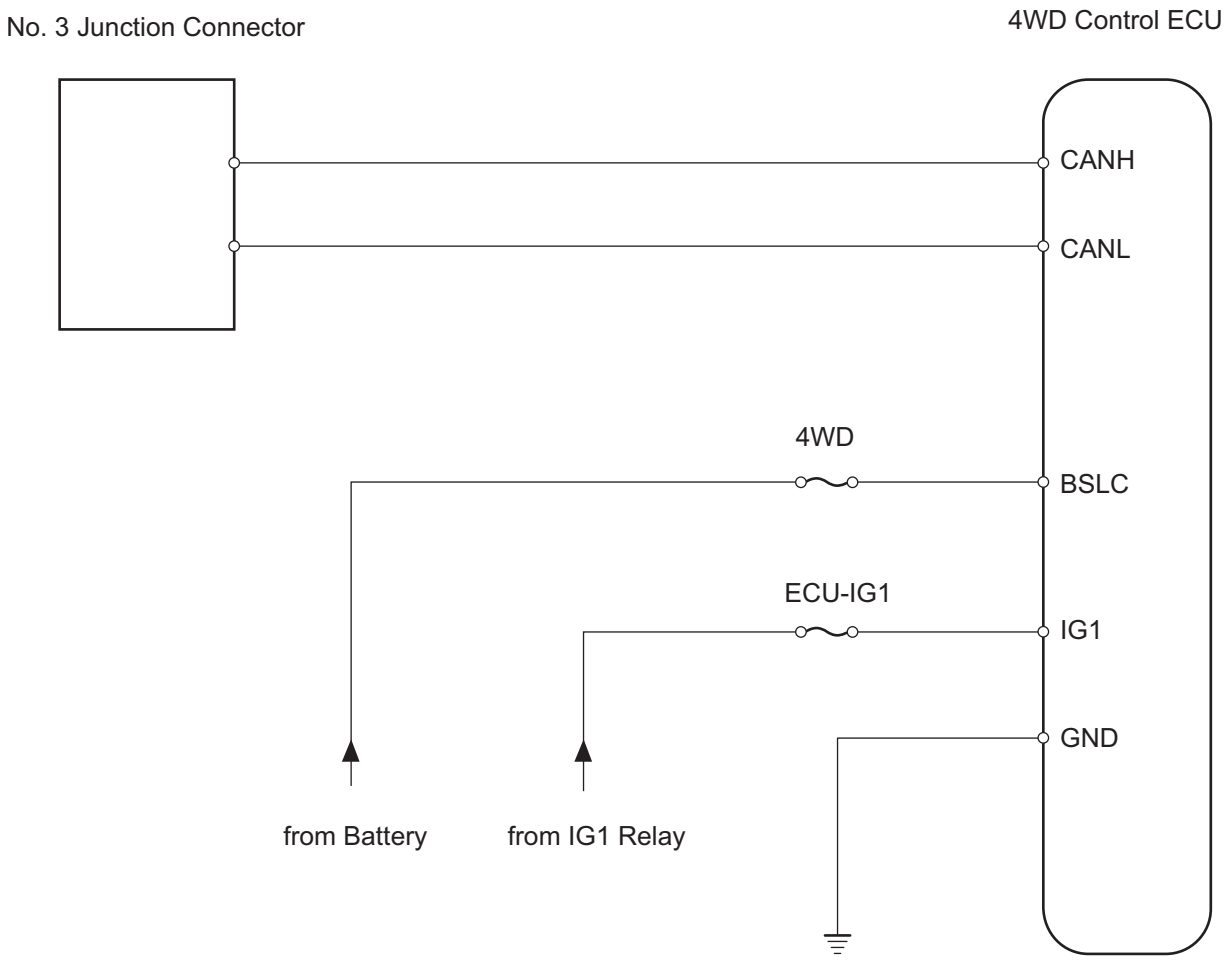
Standard voltage

Tester Connection	Condition	Specified Condition
E45-21 (IG2) - Body ground	Ignition switch ON	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY



4WD Control ECU Communication Stop Mode

DESCRIPTION

Detection Item	Symptom	Trouble Area
4WD CONTROL ECU COMMUNICATION STOP MODE	• 4WD is not displayed on "BUS CHECK" screen of intelligent tester • Applies to "4WD CONTROL ECU COMMUNICATION STOP MODE" in "DTC COMBINATION TABLE"	• Power source or inside 4WD control ECU • 4WD control ECU branch wire and connector • 4WD control ECU

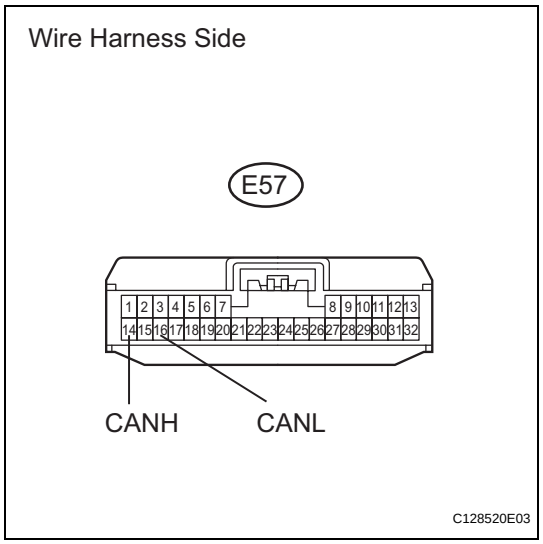
HINT:
For vehicle with 4WD only.

WIRING DIAGRAM

T

C129192E08

INSPECTION PROCEDURE



NOTICE:

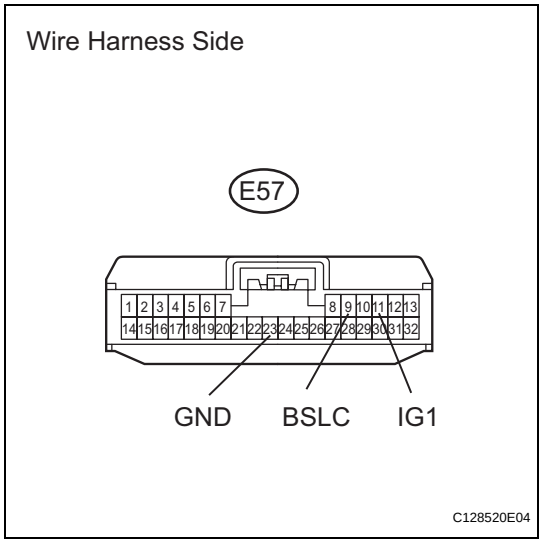
- **Turn the ignition switch OFF before measuring the resistances of the main wire and the branch wire.**
- **After the ignition switch is turned OFF, check that the key reminder warning system and light reminder warning system are not in operation.**
- **Before measuring the resistance, leave the vehicle for at least 1 minute and do not operate the ignition switch, any switches or doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:

Operating the ignition switch, any switches or any doors triggers related ECU and sensor communication with the CAN, which causes resistance variation.

1 CHECK CAN BUS LINE FOR DISCONNECTION (4WD CONTROL ECU BRANCH WIRE)

(a) Disconnect the E57 4WD control ECU connector.
(b) Measure the resistance of the wire harness side connector.



Standard resistance

Tester Connection	Condition	Specified Condition
E57-14 (CANH) - E57-16 (CANL)	Ignition switch OFF	54 to 69 Ω

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO 4WD CONTROL ECU (CANH, CANL)**

OK

2 CHECK WIRE HARNESS (4WD CONTROL ECU - BATTERY AND BODY GROUND)

(a) Disconnect the E57 4WD control ECU connector.
(b) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
E57-23 (GND) - Body ground	Below 1 Ω

(c) Measure the voltage of the wire harness side connector.

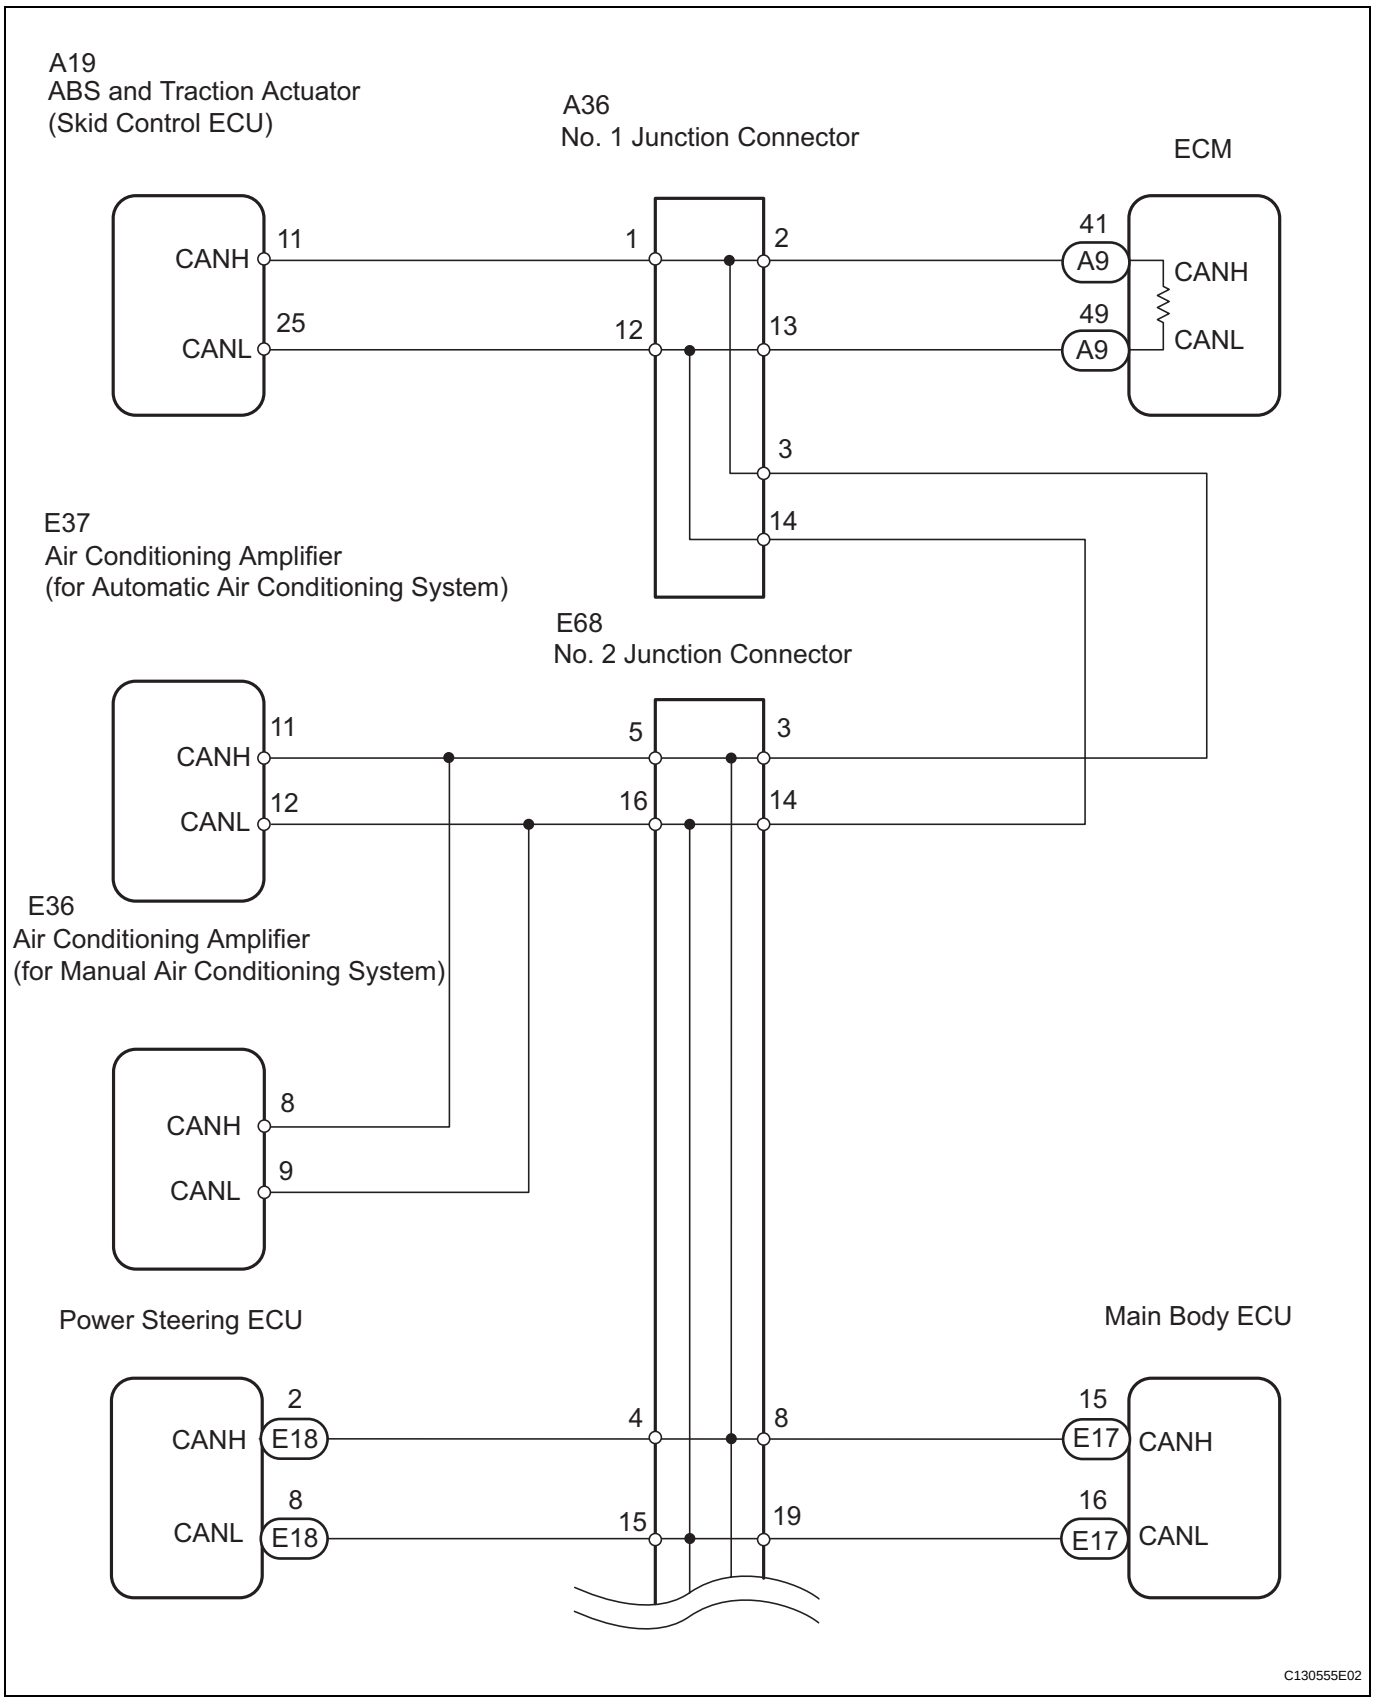
Standard voltage

Tester Connection	Condition	Specified Condition
E57-9 (BSLC) - Body ground	Always	10 to 14 V
E57-11 (IG1) - Body ground	Ignition switch ON	10 to 14 V

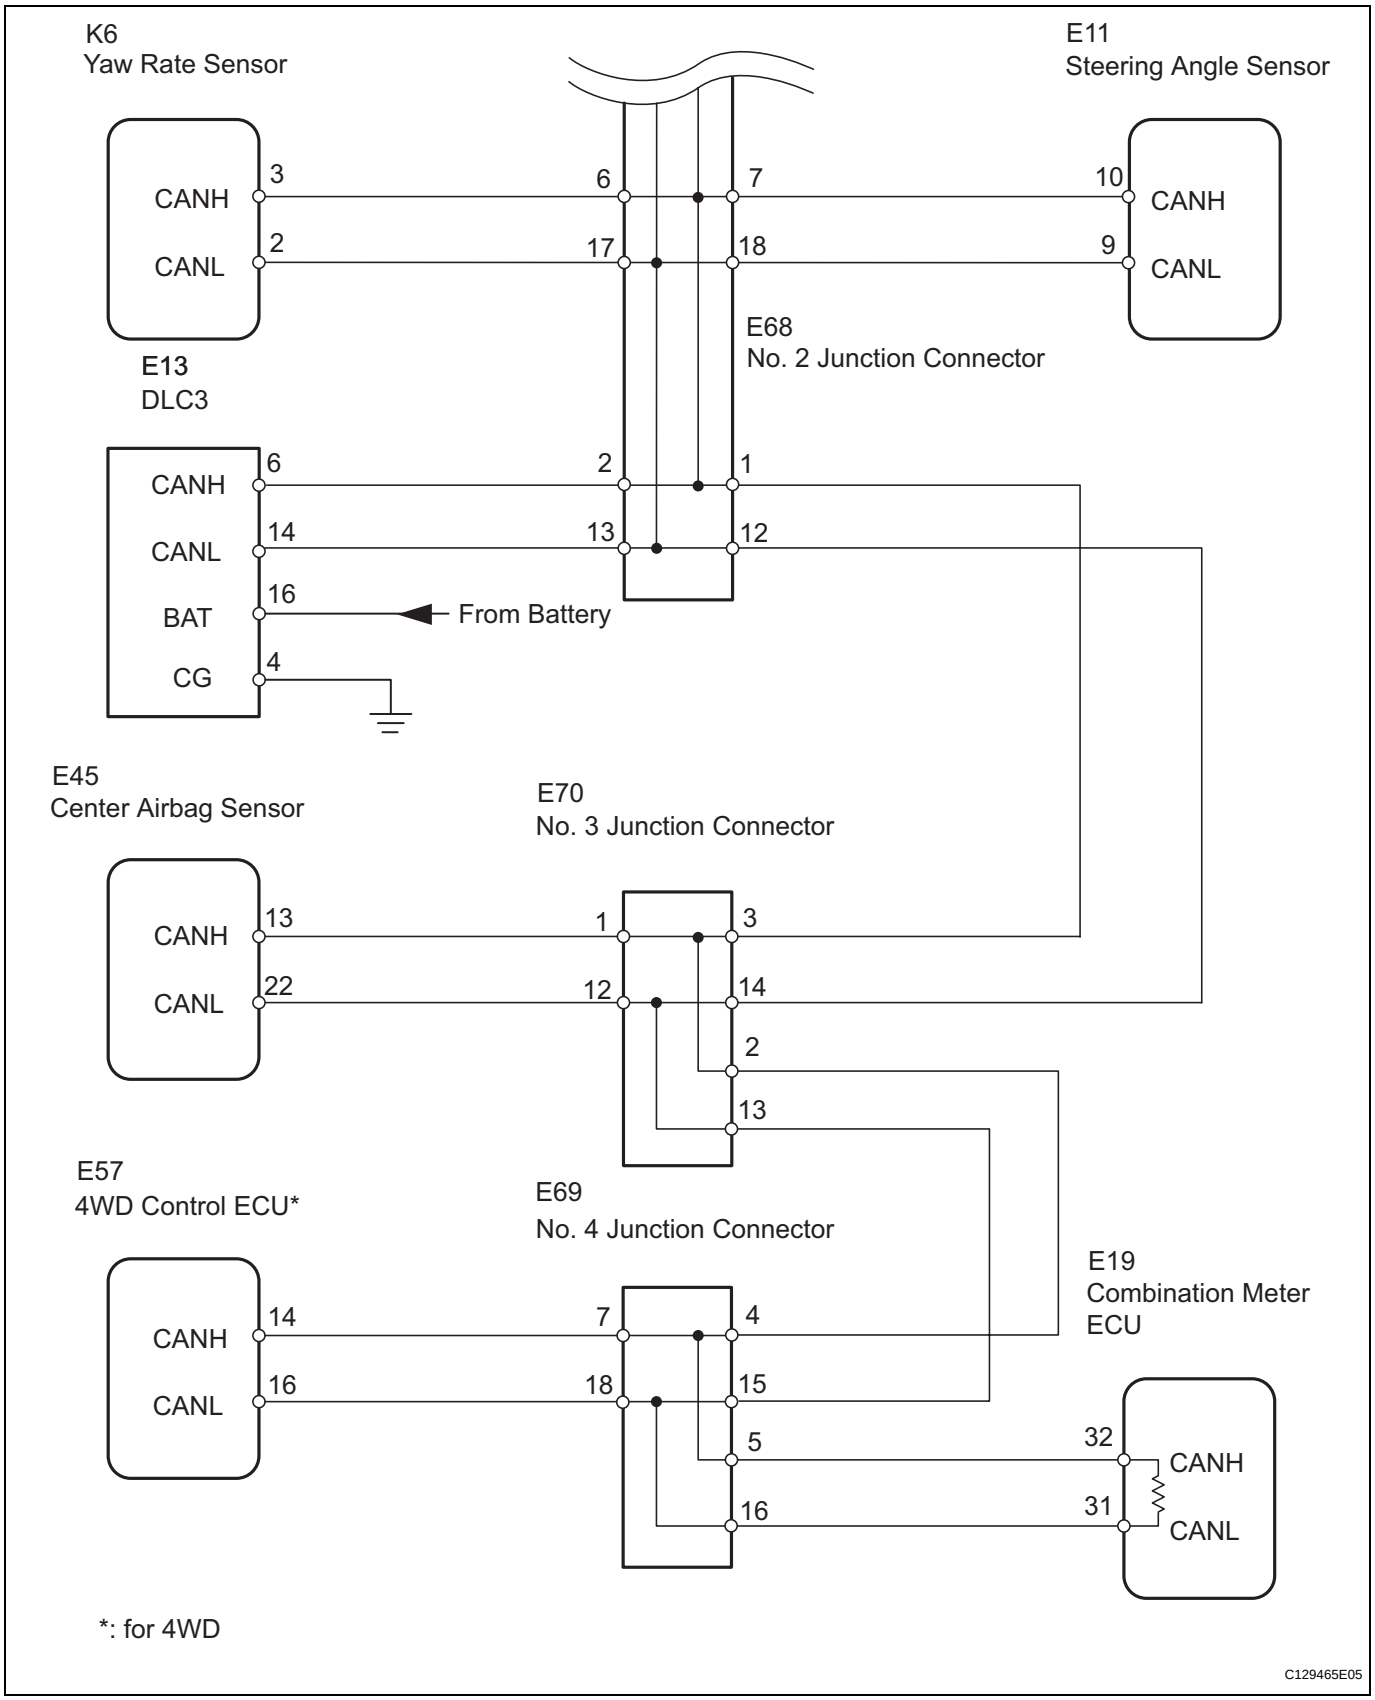
NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

CA

OK



REPLACE 4WD CONTROL ECU



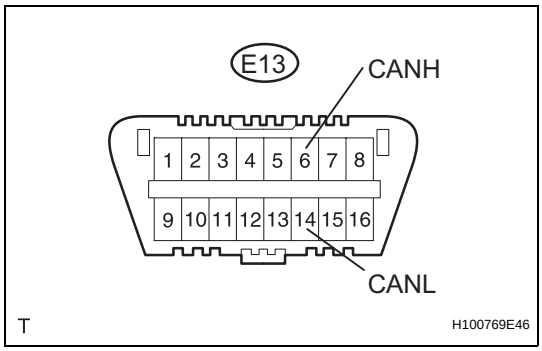
CAN Bus Line

DESCRIPTION

When any DTC for the CAN communication system is output, first measure the resistance between the terminals of the DLC3 to specify the trouble area, and check that there is not a short in the CAN main wire, between the main wire, to +B, or to GND.

WIRING DIAGRAM

INSPECTION PROCEDURE



NOTICE:

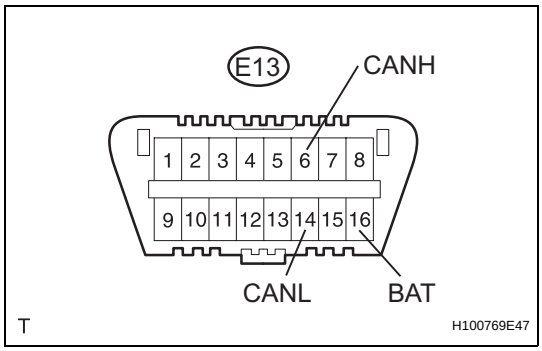
- **Turn the ignition switch OFF before measuring the resistances of the main wire and the branch wire.**

- **After the ignition switch is turned OFF, check that the key reminder warning system and light reminder warning system are not in operation.**
- **Before measuring the resistance, leave the vehicle for at least 1 minute and do not operate the ignition switch, any switches or doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:
Operating the ignition switch, any switches or any doors triggers related ECU and sensor communication with the CAN, which causes resistance variation.

1 CHECK CAN BUS WIRE (MAIN WIRE FOR OPEN, CAN BUS LINES FOR SHORT CIRCUIT)

(a) Measure the resistance of the DLC3.
Standard resistance



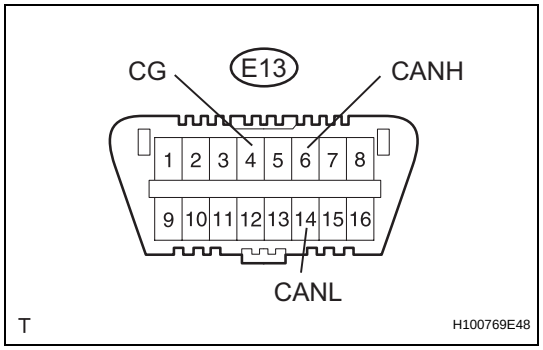
Tester Connection	Condition	Specified Condition	Proceed to
E13-6 (CANH) - E13-14 (CANL)	Ignition switch OFF	54 to 69 Ω	OK
E13-6 (CANH) - E13-14 (CANL)	Ignition switch OFF	69 Ω or more	NG-A
E13-6 (CANH) - E13-14 (CANL)	Ignition switch OFF	54 Ω or less	NG-B

NG-A → **CHECK CAN MAIN WIRE FOR OPEN**

NG-B → **CHECK CAN BUS LINES FOR SHORT CIRCUIT**

OK

2 CHECK CAN BUS LINE FOR SHORT TO +B



(a) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E13-14 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

NG → **CHECK CAN BUS LINE FOR SHORT TO +B**

OK

3	**CHECK CAN BUS LINE FOR SHORT TO GND**

(a) Measure the resistance of the DLC3.
Standard resistance

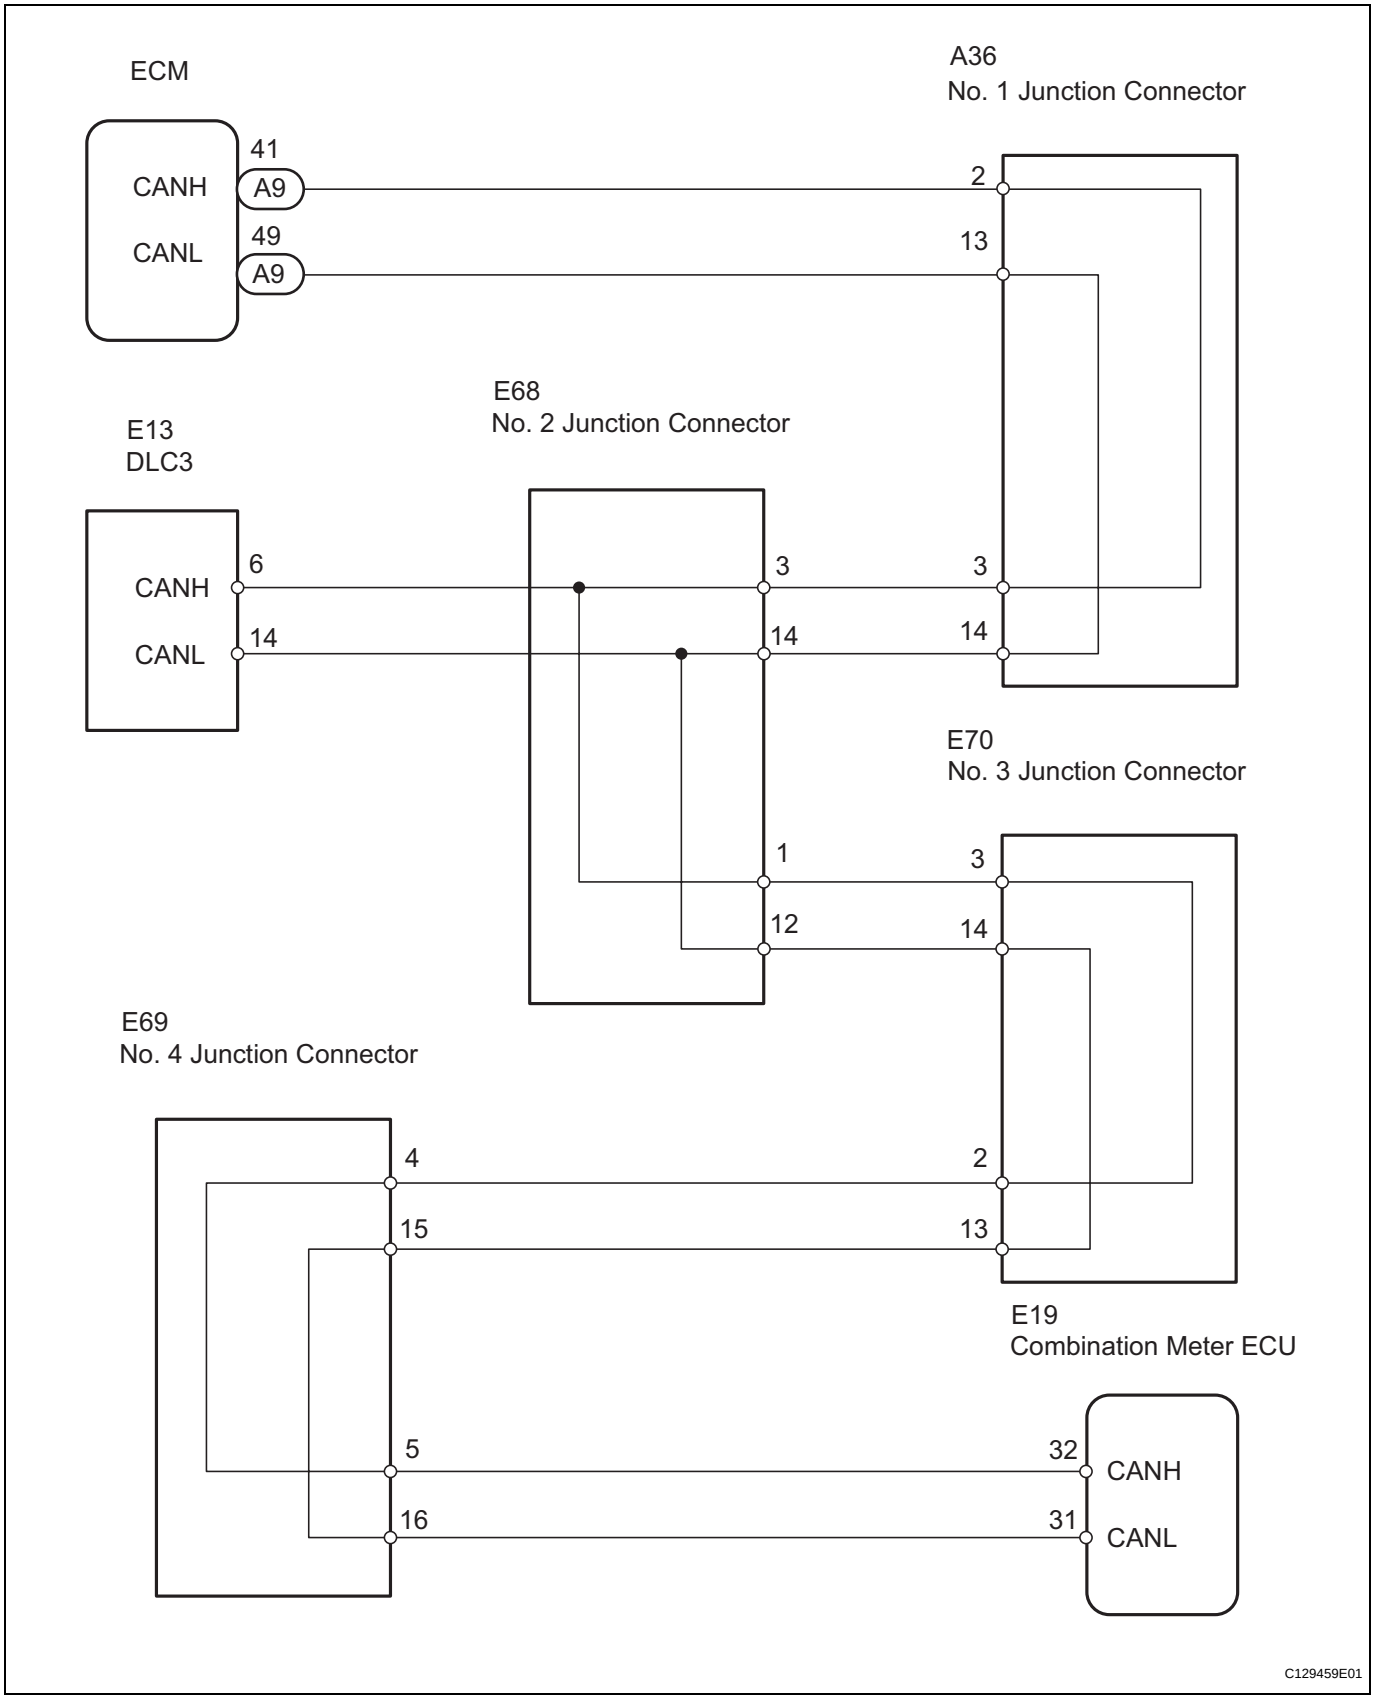
Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **CHECK CAN BUS LINE FOR SHORT TO GND**

OK

CHECK HOW TO PROCEED WITH TROUBLESHOOTING

CA



Open in CAN Main Wire

DESCRIPTION

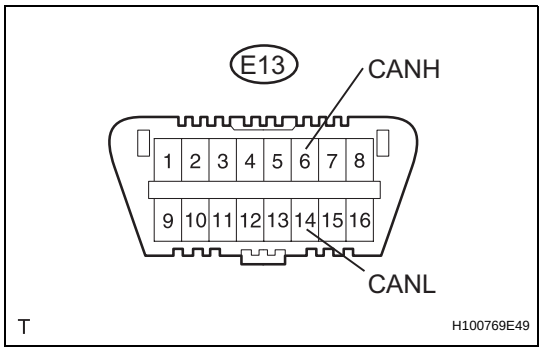
There may be an open circuit in the CAN main wire and / or the DLC3 branch wire when the resistance between terminals 6 (CANH) and 14 (CANL) of the DLC3 is 69 Ω or more.

Symptom	Trouble Area
Resistance between terminals 6 (CANH) and 14 (CANL) of DLC3 is 69 Ω or more.	• CAN main wire and connector • No. 1 junction connector • No. 2 junction connector • No. 3 junction connector • No. 4 junction connector • ECM • Combination meter ECU

WIRING DIAGRAM

CA

INSPECTION PROCEDURE



NOTICE:

- **Turn the ignition switch OFF before measuring the resistances of the main wire and the branch wire.**
- **After the ignition switch is turned OFF, check that the key reminder warning system and light reminder warning system are not in operation.**
- **Before measuring the resistance, leave the vehicle for at least 1 minute and do not operate the ignition switch, any switches or doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:

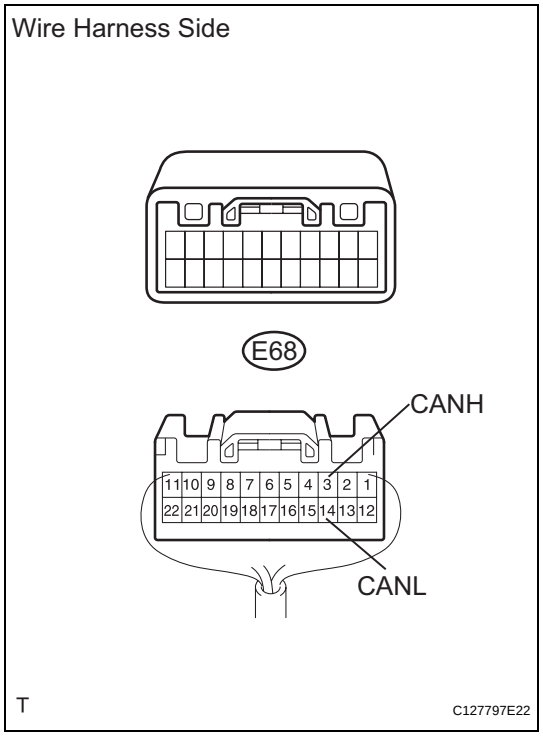
Operating the ignition switch, any switches or any doors triggers related ECU and sensor communication with the CAN, which causes resistance variation.

1	CHECK DLC3

(a) Measure the resistance of the DLC3.

Standard resistance

Tester Connection	Condition	Specified Condition	Proceed to
E13-6 (CANH) - E13-14 (CANL)	Ignition switch OFF	108 to 132 Ω	A
E13-6 (CANH) - E13-14 (CANL)	Ignition switch OFF	132 Ω or more	B



NOTICE:

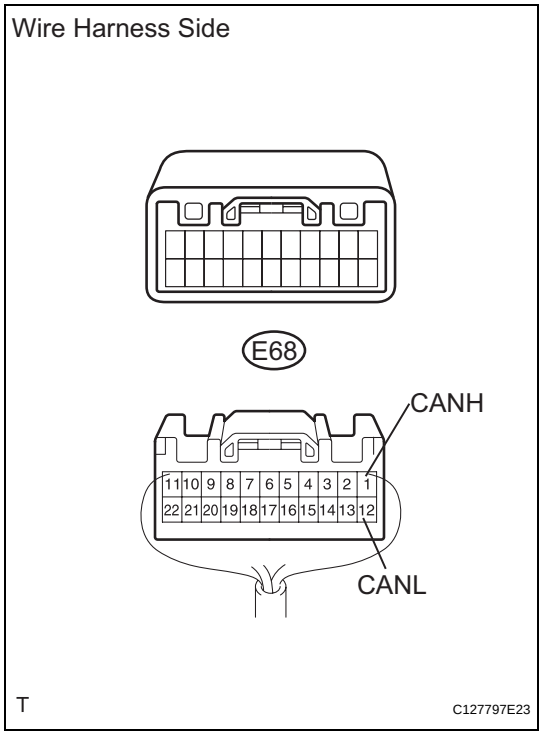
When the measured value is 132 Ω or more and a CAN communication system diagnostic trouble code is output, there may be a fault besides disconnection of the DLC3 branch wire. For that reason, troubleshooting should be performed again from "HOW TO PROCEED WITH TROUBLESHOOTING" (see page CA-8) after repairing the trouble area.

B → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO DLC3 (CANH, CANL)**

A

2 CHECK CAN MAIN WIRE FOR DISCONNECTION (NO. 2 JUNCTION CONNECTOR - ECM)

(a) Disconnect the E68 No. 2 junction connector.
(b) Measure the resistance of the wire harness side connector.



Standard resistance

Tester Connection	Condition	Specified Condition
E68-3 (CANH) - E68-14 (CANL)	Ignition switch OFF	108 to 132 Ω

NG → **Go to step 4**

OK

3 CHECK CAN MAIN WIRE FOR DISCONNECTION (NO. 2 JUNCTION CONNECTOR - COMBINATION METER ECU)

(a) Measure the resistance of the wire harness side connector.

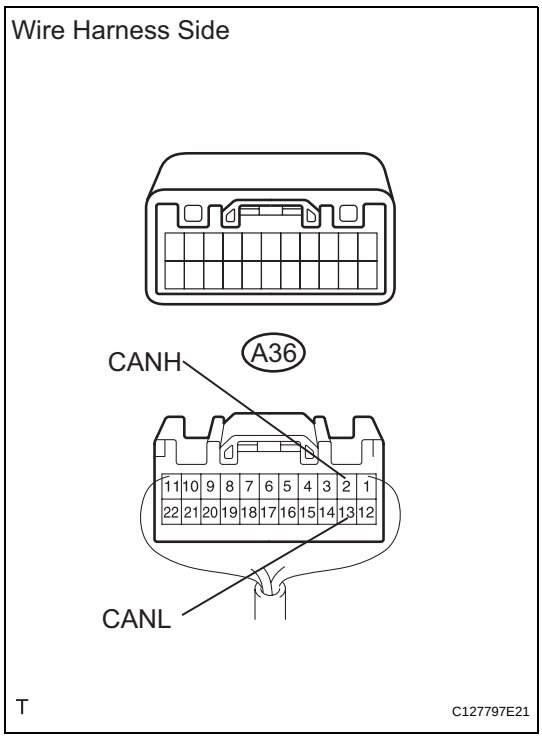
Standard resistance

Tester Connection	Condition	Specified Condition
E68-1 (CANH) - E68-12 (CANL)	Ignition switch OFF	108 to 132 Ω

NG → **Go to step 9**

CA

OK



REPLACE NO. 2 JUNCTION CONNECTOR

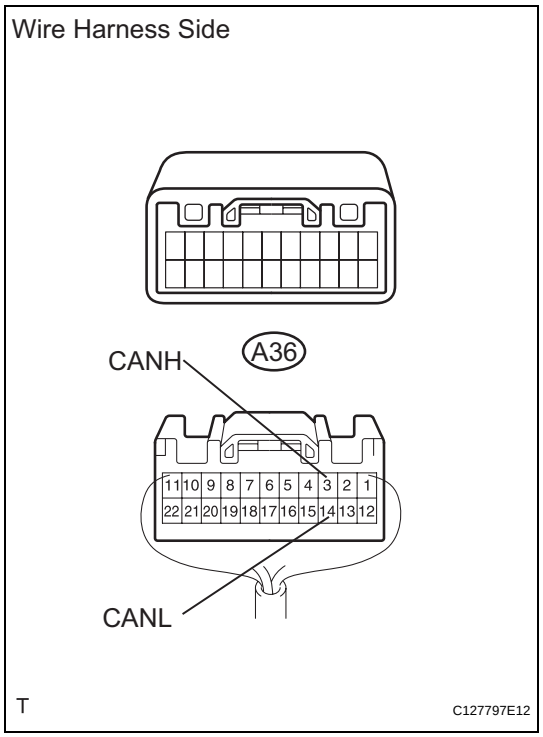
4	CONNECT CONNECTOR

(a) Reconnect the E68 No. 2 junction connector.

NEXT

5	CHECK CAN MAIN WIRE FOR DISCONNECTION (NO. 1 JUNCTION CONNECTOR - ECM)

(a) Disconnect the A36 No. 1 junction connector.
(b) Measure the resistance of the wire harness side connector.



Standard resistance

Tester Connection	Condition	Specified Condition
A36-2 (CANH) - A36-13 (CANL)	Ignition switch OFF	108 to 132 Ω

NG → **Go to step 7**

OK

6	CHECK CAN MAIN WIRE FOR DISCONNECTION (NO. 1 JUNCTION CONNECTOR - NO. 2 JUNCTION CONNECTOR)

(a) Measure the resistance of the wire harness side connector.

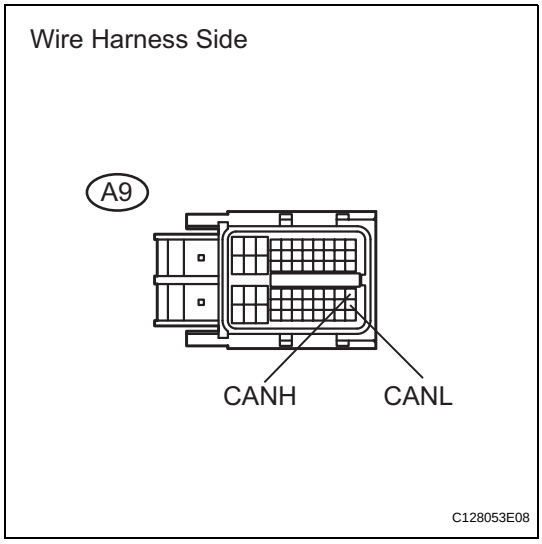
Standard resistance

Tester Connection	Condition	Specified Condition
A36-3 (CANH) - A36-14 (CANL)	Ignition switch OFF	108 to 132 Ω

NG → **REPAIR OR REPLACE CAN MAIN WIRE AND CONNECTOR (NO. 1 JUNCTION CONNECTOR - NO. 2 UNCTION CONNECTOR)**

OK

REPLACE NO. 1 JUNCTION CONNECTOR



7	CONNECT CONNECTOR

(a) Reconnect the A36 No. 1 junction connector.

NEXT

CA

8	CHECK CAN MAIN WIRE FOR DISCONNECTION (ECM - NO. 1 JUNCTION CONNECTOR)

(a) Disconnect the A9 ECM connector.
(b) Measure the resistance of the wire harness side connector.

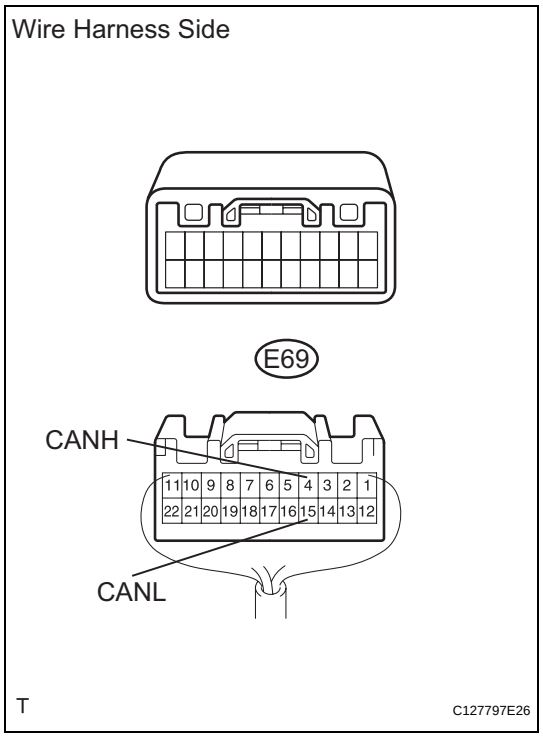
Standard resistance

Tester Connection	Condition	Specified Condition
A9-41 (CANH) - A9-49 (CANL)	Ignition switch OFF	108 to 132 Ω

NG → **REPAIR OR REPLACE CAN MAIN WIRE CONNECTED TO ECM (ECM - NO. 1 JUNCTION CONNECTOR)**

OK

REPLACE ECM



9	CONNECT CONNECTOR

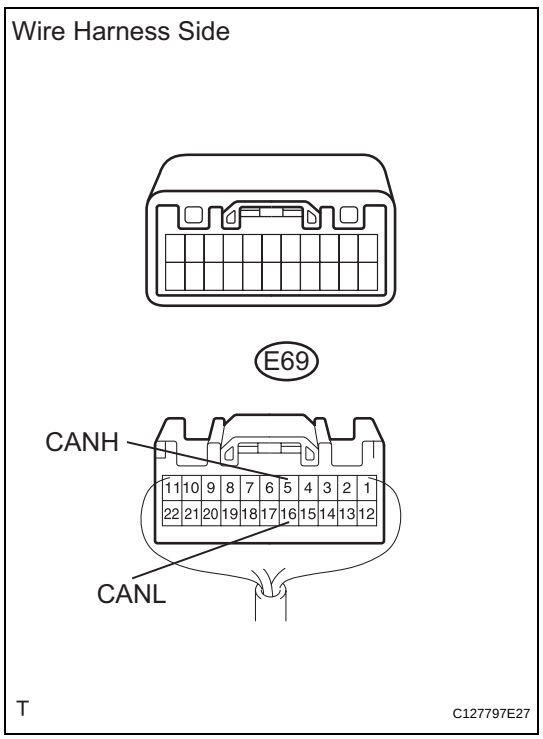
(a) Reconnect the E68 No. 2 junction connector.

NEXT

CA

10	CHECK CAN MAIN WIRE FOR DISCONNECTION (NO. 4 JUNCTION CONNECTOR - NO. 2 JUNCTION CONNECTOR)

(a) Disconnect the E69 No. 4 junction connector.
(b) Measure the resistance of the wire harness side connector.



Standard resistance

Tester Connection	Condition	Specified Condition
E69-4 (CANH) - E69-15 (CANL)	Ignition switch OFF	108 to 132 Ω

NG → **Go to step 14**

OK

11	CHECK CAN MAIN WIRE FOR DISCONNECTION (NO. 4 JUNCTION CONNECTOR - COMBINATION METER)

(a) Measure the resistance of the wire harness side connector.

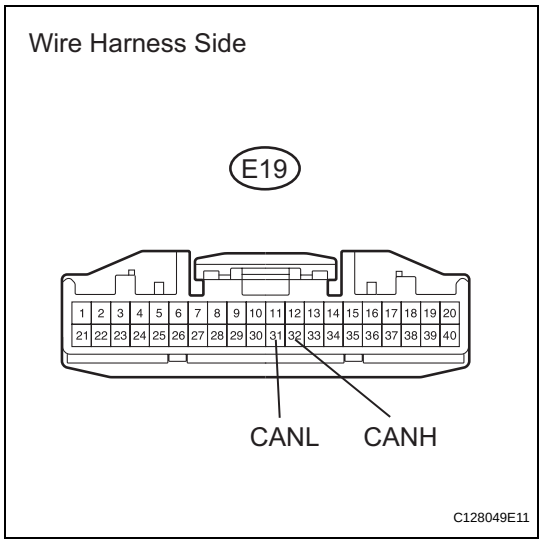
Standard resistance

Tester Connection	Condition	Specified Condition
E69-5 (CANH) - E69-16 (CANL)	Ignition switch OFF	108 to 132 Ω

NG → **Go to step 12**

CA

OK



REPLACE NO. 4 JUNCTION CONNECTOR

12	CONNECT CONNECTOR

(a) Reconnect the E69 No. 4 junction connector.

NEXT

13	CHECK CAN MAIN BUS LINE FOR DISCONNECTION (COMBINATION METER ECU - NO. 4 JUNCTION CONNECTOR)

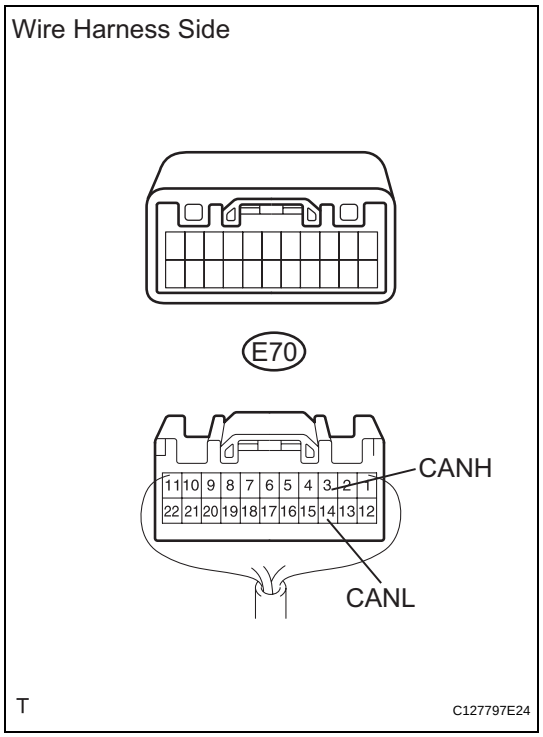
(a) Disconnect the E19 combination meter ECU connector.
(b) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Condition	Specified Condition
E19-32 (CANH) - E19-31 (CANL)	Ignition switch OFF	108 to 132 Ω

NG → **REPAIR OR REPLACE CAN MAIN WIRE CONNECTED TO COMBINATION METER ECU (COMBINATION METER ECU - NO. 4 JUNCTION CONNECTOR)**

OK



REPLACE COMBINATION METER ASSEMBLY (COMBINATION METER ECU)

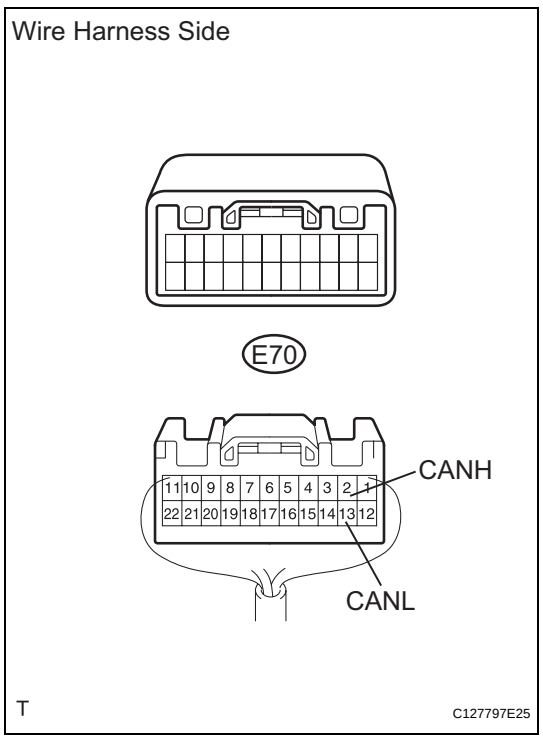
14	CONNECT CONNECTOR

(a) Reconnect the E69 No. 4 junction connector.

NEXT

15 **CHECK CAN MAIN WIRE FOR DISCONNECTION (NO. 2 JUNCTION CONNECTOR - NO. 3 JUNCTION CONNECTOR)**

(a) Disconnect the E70 No. 3 junction connector.
(b) Measure the resistance of the wire harness side connector.



Standard resistance

Tester Connection	Condition	Specified Condition
E70-3 (CANH) - E70-14 (CANL)	Ignition switch OFF	108 to 132 Ω

NG → **REPAIR OR REPLACE CAN MAIN WIRE AND CONNECTOR (NO. 3 JUNCTION CONNECTOR - NO. 2 JUNCTION CONNECTOR)**

OK

16 **CHECK CAN MAIN WIRE FOR DISCONNECTION (NO. 3 JUNCTION CONNECTOR - NO. 4 JUNCTION CONNECTOR)**

(a) Measure the resistance of the wire harness side connector.

Standard resistance

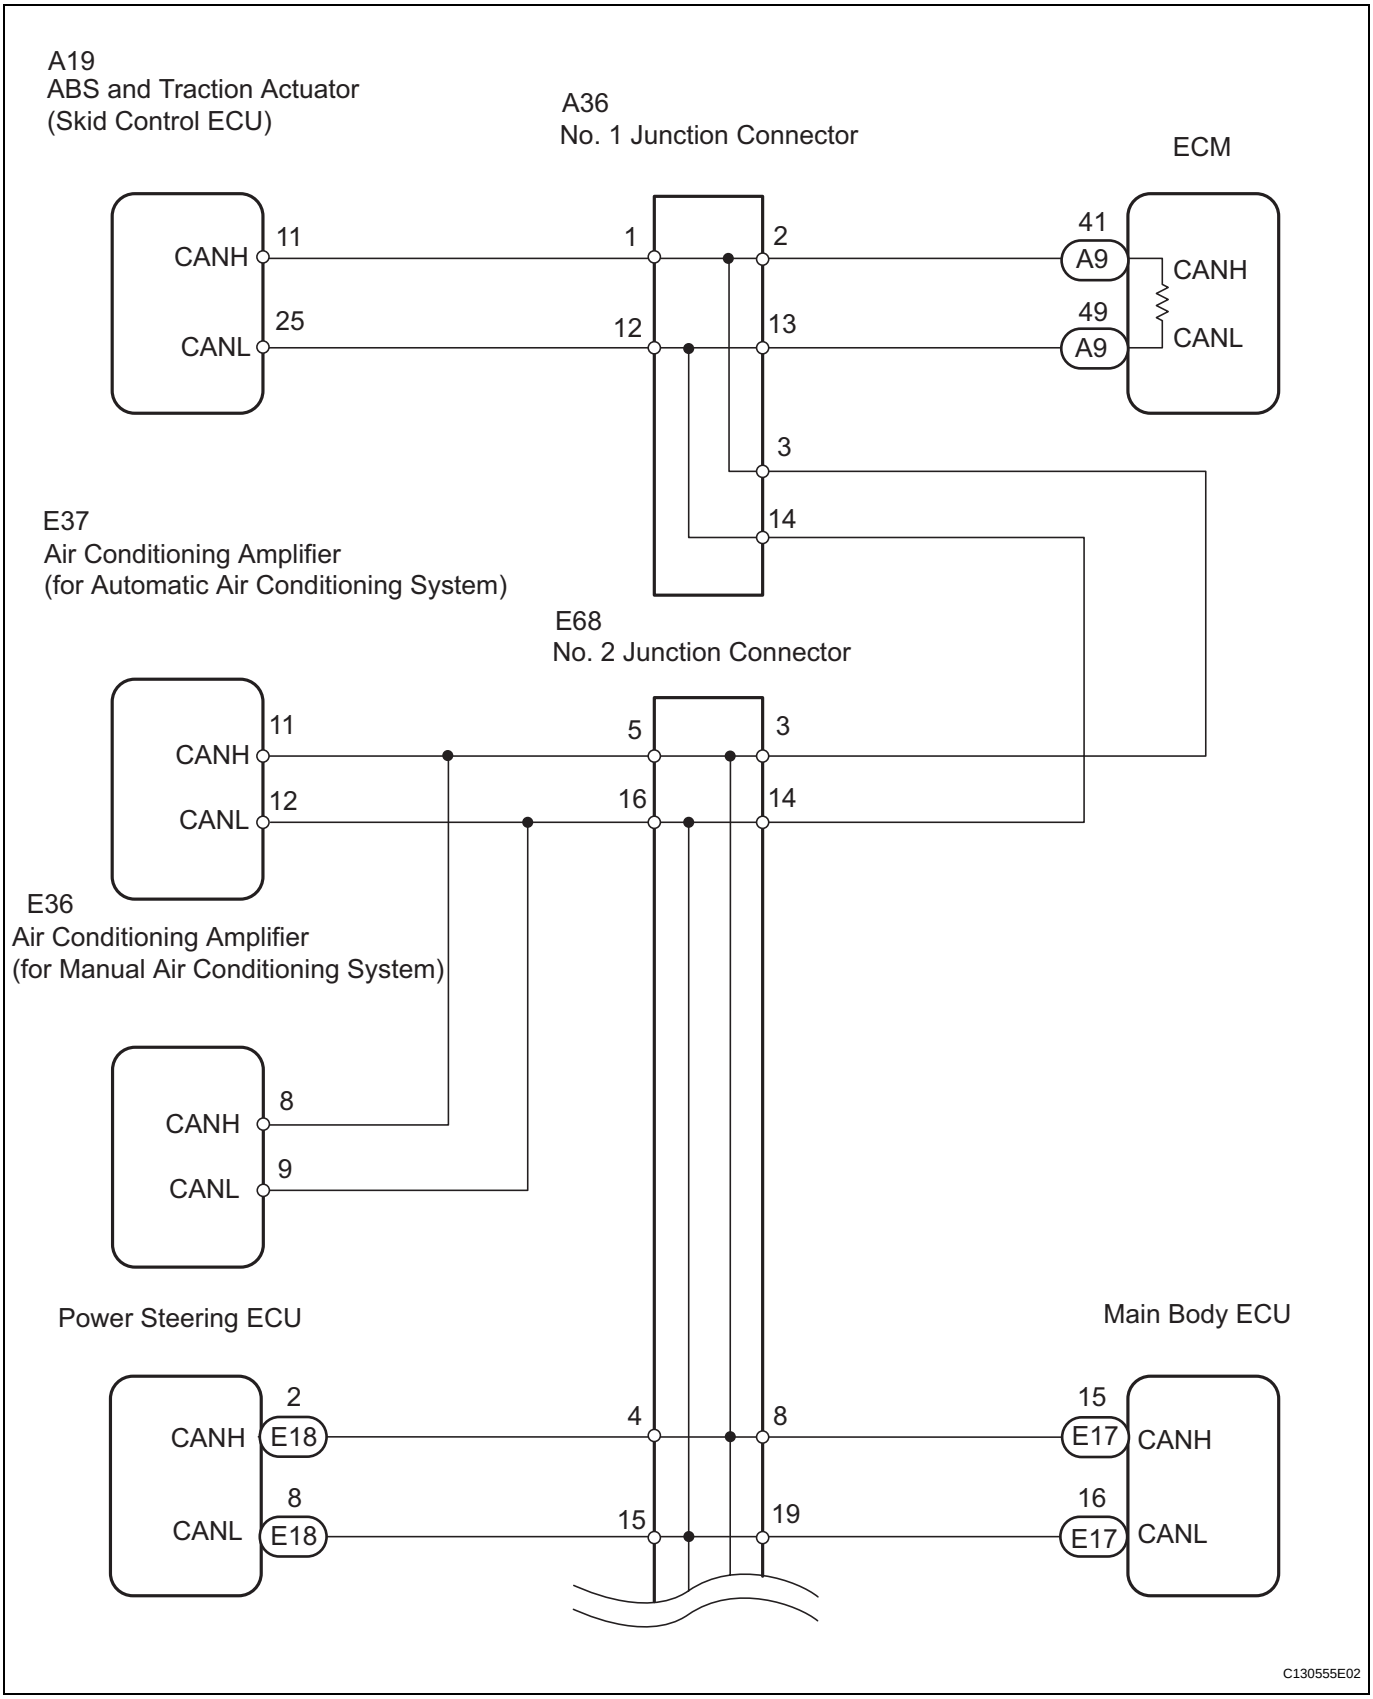
Tester Connection	Condition	Specified Condition
E70-2 (CANH) - E70-13 (CANL)	Ignition switch OFF	108 to 132 Ω

NG → **REPAIR OR REPLACE CAN MAIN WIRE AND CONNECTOR (NO. 3 JUNCTION CONNECTOR - NO. 4 JUNCTION CONNECTOR)**

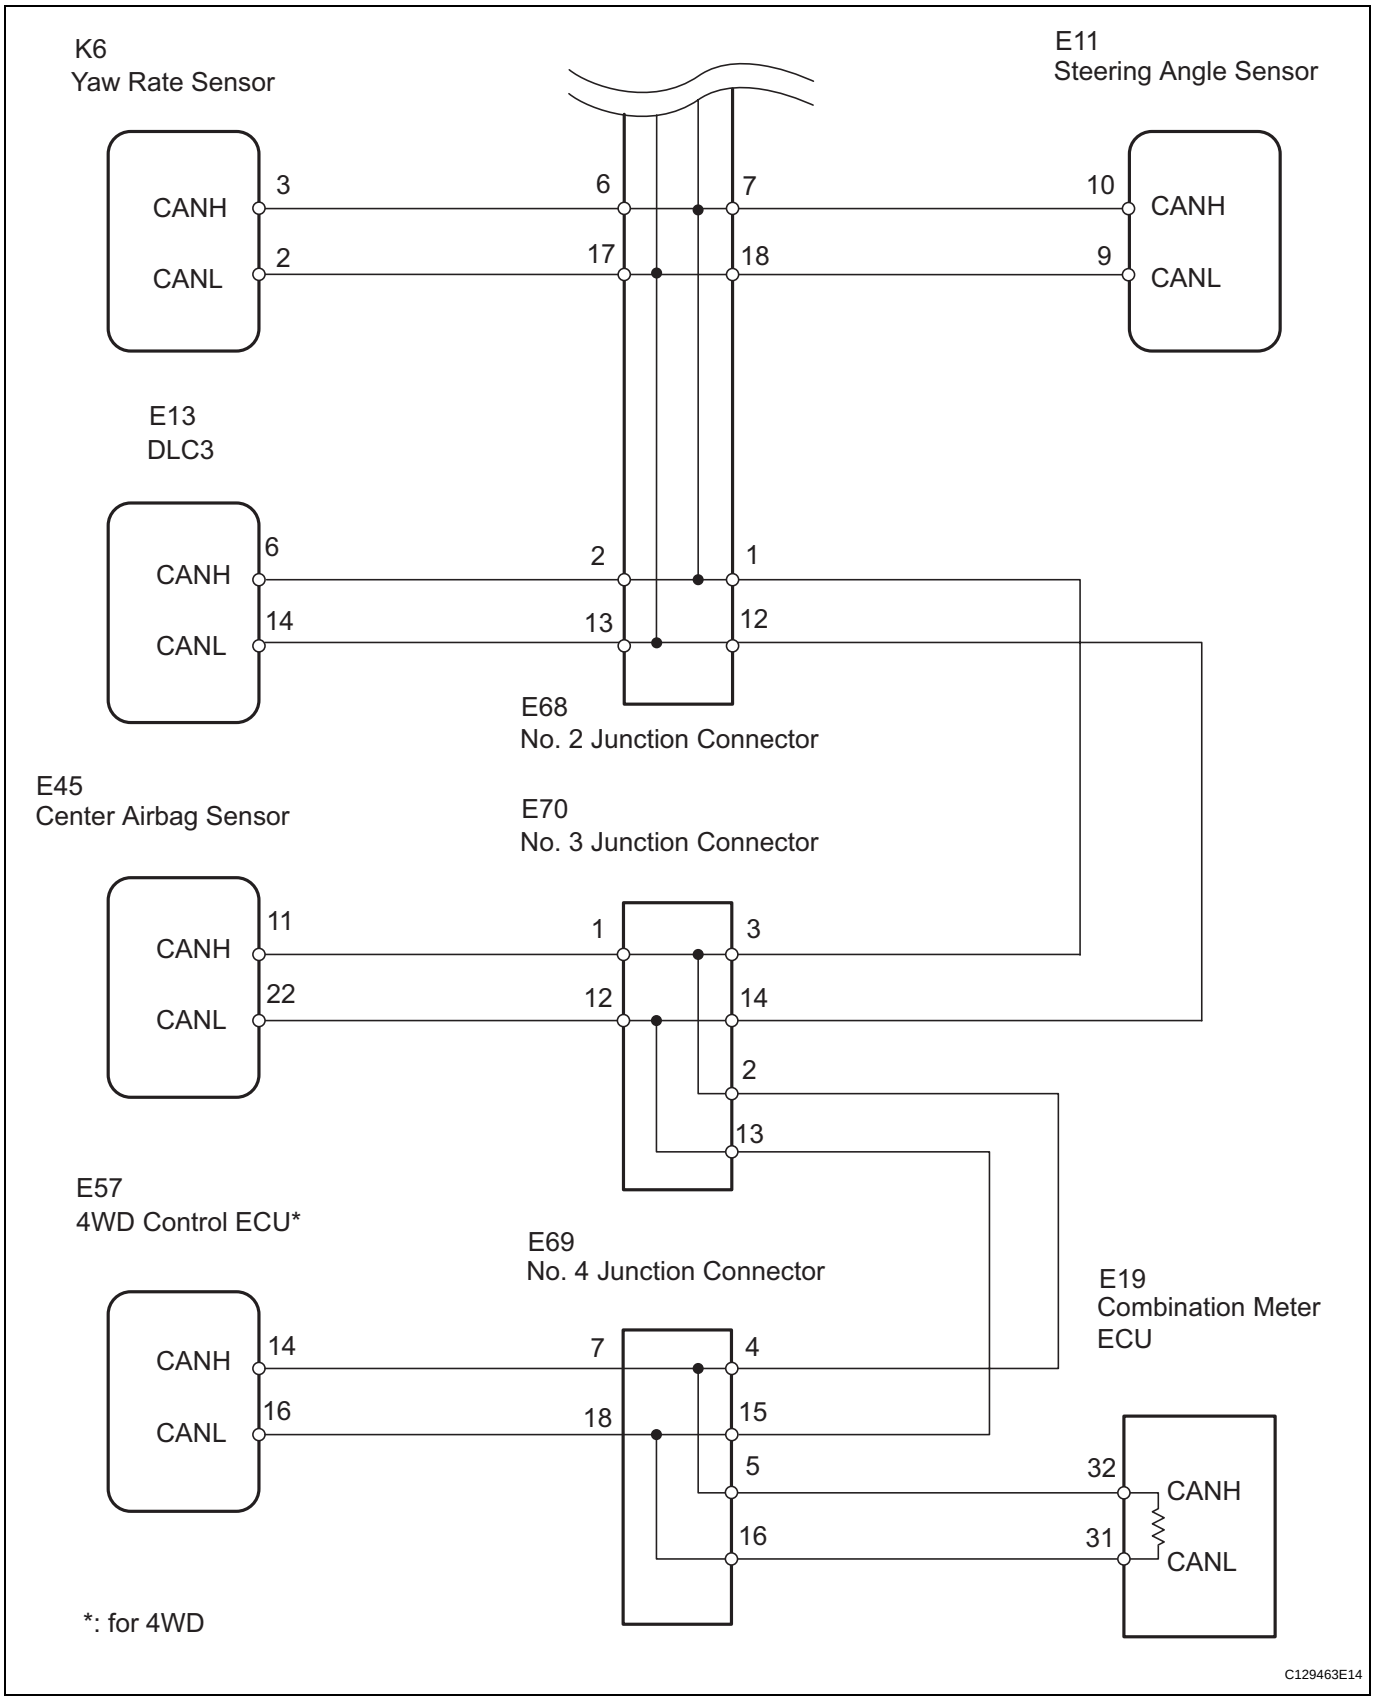
CA

OK

REPLACE NO. 3 JUNCTION CONNECTOR



Short in CAN Bus Lines



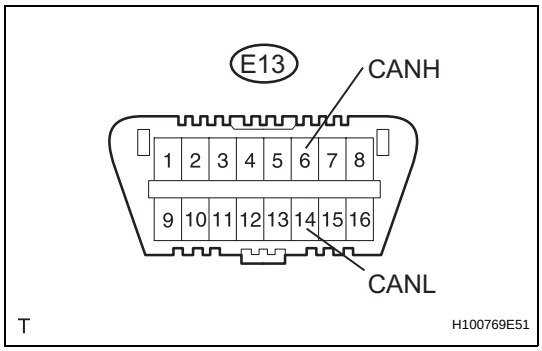
DESCRIPTION

There may be a short circuit between the CAN bus lines when the resistance between terminals 6 (CANH) and 14 (CANL) of the DLC3 is below 54 Ω.

Symptom	Trouble Area
Resistance between terminals 6 (CANH) and 14 (CANL) of DLC3 is below 54 Ω.	• Short between CAN bus lines • ABS and traction actuator (skid control ECU) • Power steering ECU • Steering angle sensor • Yaw rate sensor • ECM • Center airbag sensor • Air conditioning amplifier • Combination meter ECU • Instrument panel junction block (Main body ECU) • 4WD control ECU • No. 1 junction connector • No. 2 junction connector • No. 3 junction connector • No. 4 junction connector

WIRING DIAGRAM

INSPECTION PROCEDURE



NOTICE:

- **Turn the ignition switch OFF before measuring the resistances of the main wire and the branch wire.**

- **After the ignition switch is turned OFF, check that the key reminder warning system and light reminder warning system are not in operation.**
- **Before measuring the resistance, leave the vehicle for at least 1 minute and do not operate the ignition switch, any switches or doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

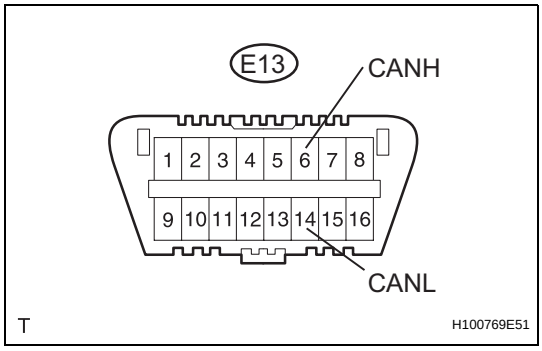
HINT:
Operating the ignition switch, any switches or any doors triggers related ECU and sensor communication with the CAN, which causes resistance variation.

1 CHECK CAN BUS LINES FOR SHORT CIRCUIT (DLC3 BRANCH WIRE)

(a) Disconnect the E68 No. 2 junction connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-14 (CANL)	Ignition switch OFF	1 MΩ or more

NG → **REPAIR OR REPLACE DLC3 BRANCH WIRE AND CONNECTOR (CANH, CANL)**



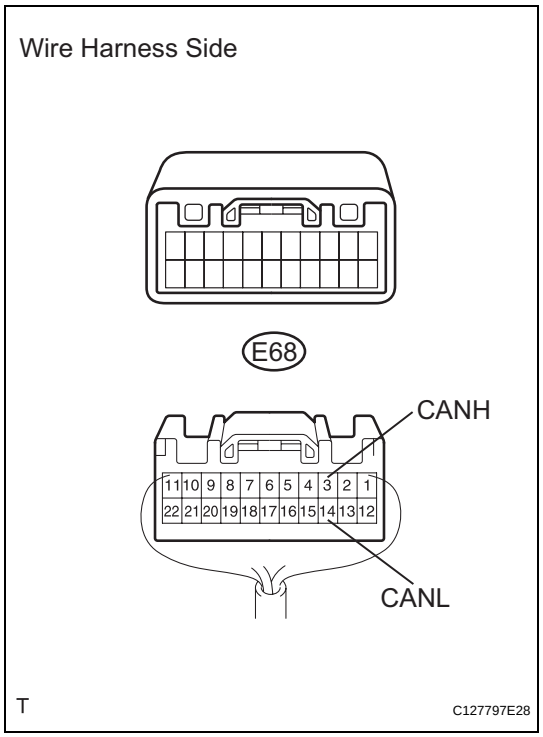
OK

2 CONNECT CONNECTOR

(a) Reconnect the E68 No. 2 junction connector.

NEXT

3 CHECK CAN BUS LINES FOR SHORT CIRCUIT (NO. 1 JUNCTION CONNECTOR SIDE)



(a) Disconnect the A36 No. 1 junction connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-14 (CANL)	Ignition switch OFF	108 to 132 Ω

OK → **Go to step 14**

NG

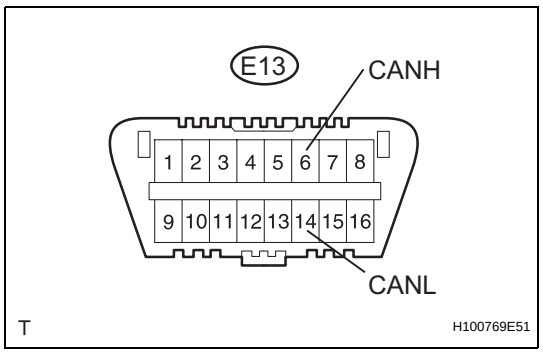
4	CHECK CAN BUS LINES FOR SHORT CIRCUIT (NO. 1 JUNCTION CONNECTOR - NO. 2 JUNCTION CONNECTOR)

(a) Disconnect the E68 No. 2 junction connector.
(b) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Condition	Specified Condition
E68-3 (CANH) - E68-14 (CANL)	Ignition switch OFF	1 MΩ or more

NG → **REPAIR OR REPLACE CAN MAIN WIRE AND CONNECTOR (NO. 1 JUNCTION CONNECTOR - NO. 2 JUNCTION CONNECTOR)**



OK

5	CONNECT CONNECTOR

(a) Reconnect the A36 No. 1 junction connector.
(b) Reconnect the E68 No. 2 junction connector.

NEXT

6	CHECK CAN BUS LINES FOR SHORT CIRCUIT (NO. 3 JUNCTION CONNECTOR, NO. 4 JUNCTION CONNECTOR SIDE)

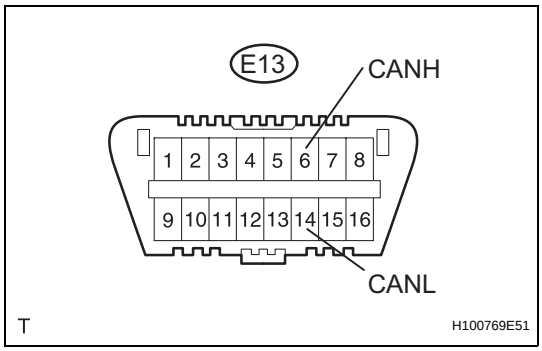
(a) Disconnect the E70 No. 3 junction connector.
(b) Measure the resistance of the DLC3.

Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-14 (CANL)	Ignition switch OFF	108 to 132 Ω

NG → **Go to step 20**

OK



CA

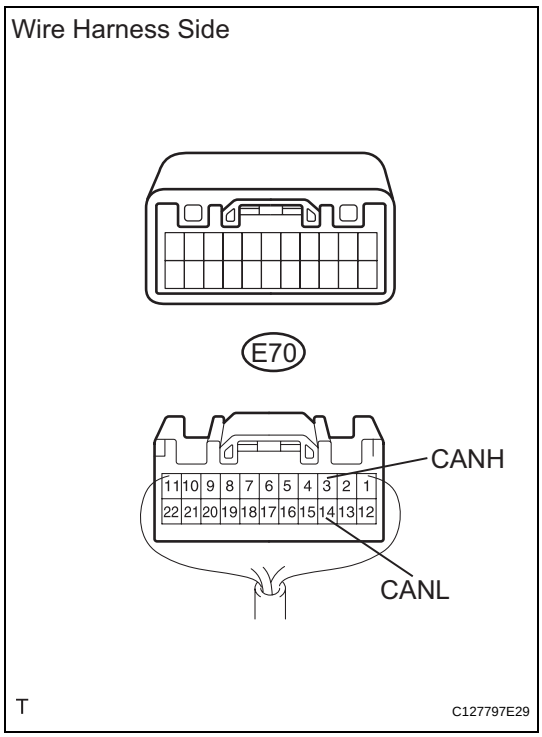
7	CONNECT CONNECTOR

(a) Reconnect the E70 No. 3 junction connector.

NEXT

8	CHECK CAN BUS LINES FOR SHORT CIRCUIT (NO. 4 JUNCTION CONNECTOR SIDE)

(a) Disconnect the E69 No. 4 junction connector.
(b) Measure the resistance of the DLC3.



Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-14 (CANL)	Ignition switch OFF	108 to 132 Ω

OK → Go to step 36

NG

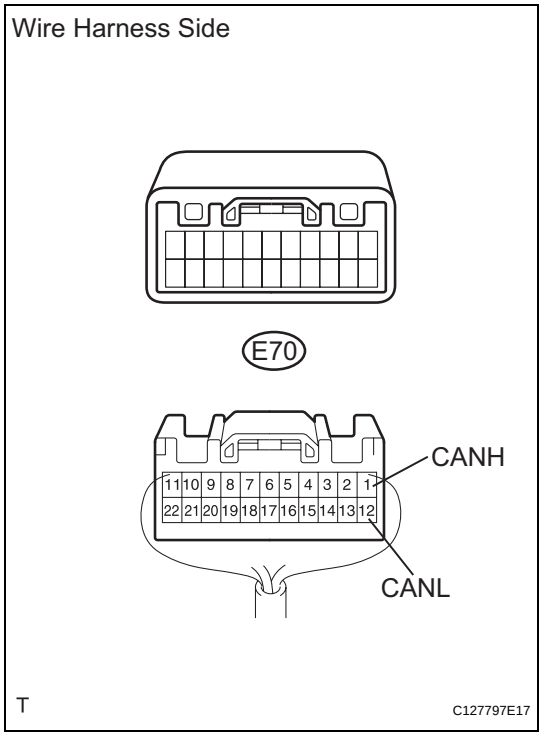
9	CHECK CAN BUS LINES FOR SHORT CIRCUIT (NO. 3 JUNCTION CONNECTOR - NO. 4 JUNCTION CONNECTOR)

(a) Disconnect the E70 No. 3 junction connector.
(b) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Condition	Specified Condition
E70-3 (CANH) - E70-14 (CANL)	Ignition switch OFF	1 MΩ or more

NG → REPAIR OR REPLACE CAN MAIN WIRE AND CONNECTOR (NO. 3 JUNCTION CONNECTOR - NO. 4 JUNCTION CONNECTOR)



OK

10	CONNECT CONNECTOR

(a) Reconnect the E69 No. 4 junction connector.

NEXT

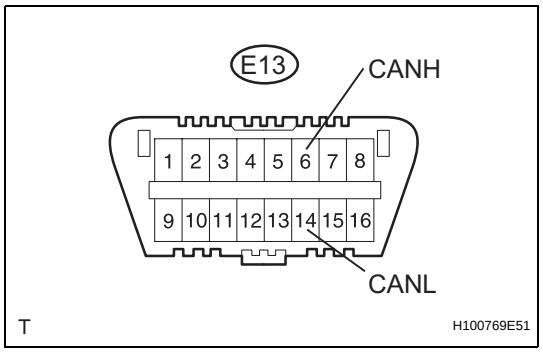
11	CHECK CAN BUS LINES FOR SHORT CIRCUIT (NO. 3 JUNCTION CONNECTOR - CENTER AIRBAG SENSOR ASSEMBLY)

(a) Measure the resistance of the wire harness side connector.

Result

Tester Connection	Condition	Specified Condition	Proceed to
E70-1 (CANH) - E70-12 (CANL)	Ignition switch OFF	Below 1 Ω	A
E70-1 (CANH) - E70-12 (CANL)	Ignition switch OFF	Other	B

B → **REPAIR OR REPLACE NO. 3 JUNCTION CONNECTOR**



A

12	CONNECT CONNECTOR

(a) Reconnect the E70 No. 3 junction connector.

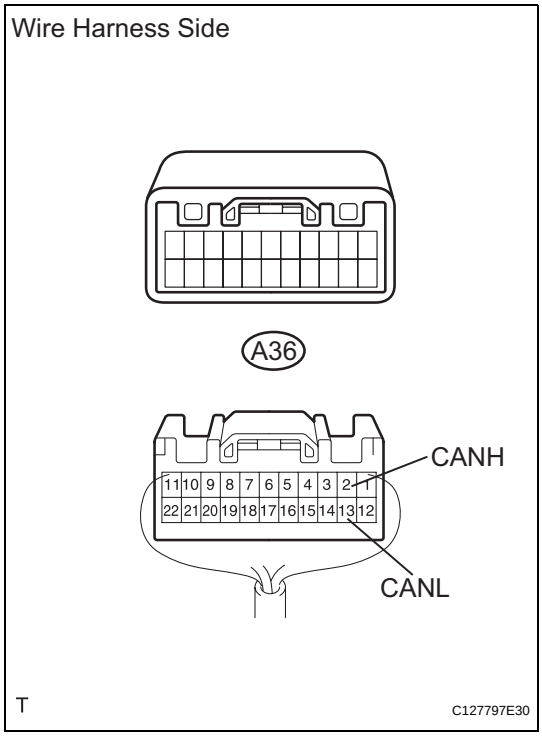
NEXT

13	CHECK CAN BUS LINES FOR SHORT CIRCUIT (CENTER AIRBAG SENSOR ASSEMBLY)

(a) Disconnect the E45 center airbag sensor connector.
(b) Measure the resistance of the DLC3.

Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-14 (CANL)	Ignition switch OFF	54 to 69 Ω



NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO CENTER AIRBAG SENSOR ASSEMBLY (CANH, CANL)**

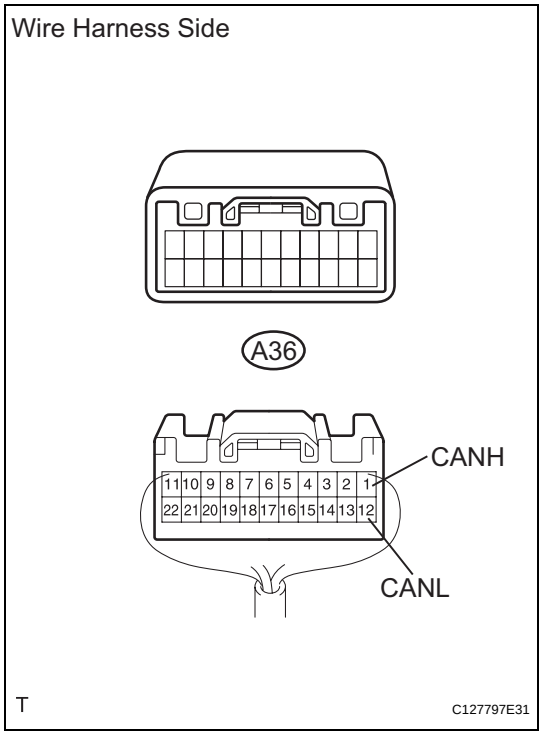
OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY

CA

14	CHECK CAN BUS LINES FOR SHORT CIRCUIT (NO. 1 JUNCTION CONNECTOR - ECM)

(a) Measure the resistance of the wire harness side connector.



Result

Tester Connection	Condition	Specified Condition	Proceed to
A36-2 (CANH) - A36-13 (CANL)	Ignition switch OFF	Below 1 Ω	A
A36-2 (CANH) - A36-13 (CANL)	Ignition switch OFF	Other	B

A → **Go to step 16**

B

15	CHECK CAN BUS LINES FOR SHORT CIRCUIT (NO. 1 JUNCTION CONNECTOR - ABS AND TRACTION ACTUATOR)

(a) Measure the resistance of the wire harness side connector.

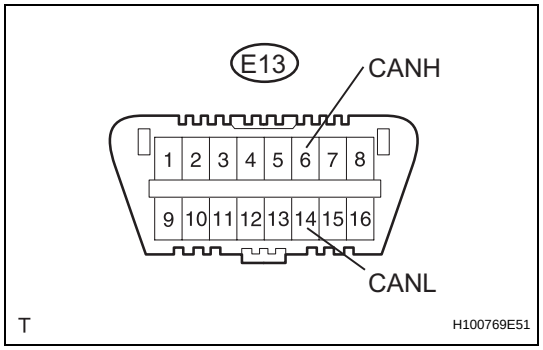
Result

Tester Connection	Condition	Specified Condition	Proceed to
A36-1 (CANH) - A36-12 (CANL)	Ignition switch OFF	Below 1 Ω	A
A36-1 (CANH) - A36-12 (CANL)	Ignition switch OFF	Other	B

A → **Go to step 18**

CA

B



REPAIR OR REPLACE NO. 1 JUNCTION CONNECTOR

16 CONNECT CONNECTOR

(a) Reconnect the A36 No. 1 junction connector.

NEXT

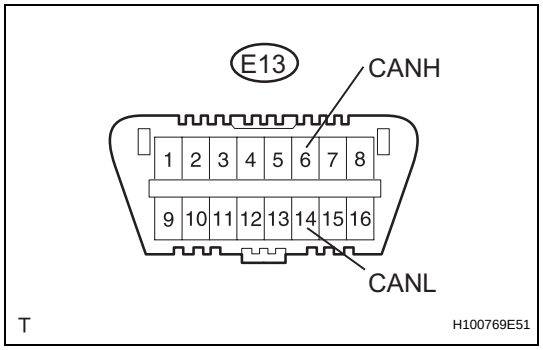
17 CHECK CAN BUS LINES FOR SHORT CIRCUIT (ECM)

(a) Disconnect the A9 ECM connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-14 (CANL)	Ignition switch OFF	108 to 132 Ω

NG → **REPAIR OR REPLACE CAN MAIN WIRE CONNECTED TO ECM (NO. 1 JUNCTION CONNECTOR - ECM)**

OK



REPLACE ECM

18 CONNECT CONNECTOR

(a) Reconnect the A36 No. 1 junction connector.

NEXT

19 CHECK CAN BUS LINES FOR SHORT CIRCUIT (ABS AND TRACTION ACTUATOR)

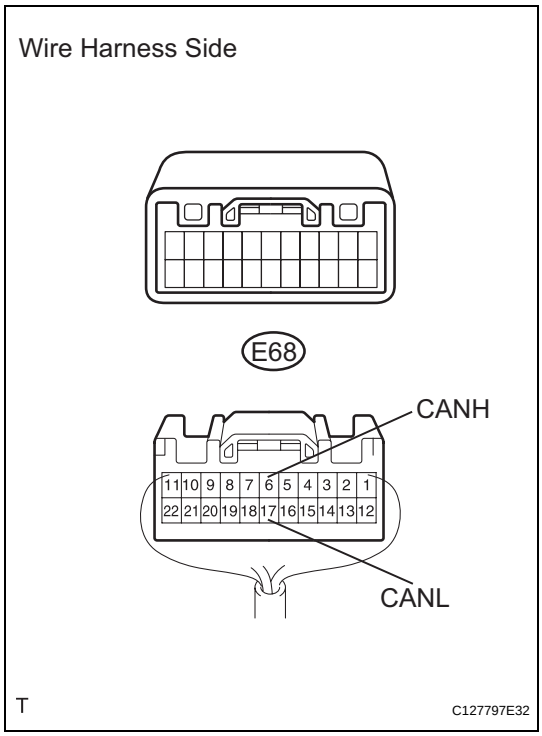
(a) Disconnect the A19 ABS and brake actuator (skid control ECU) connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-14 (CANL)	Ignition switch OFF	54 to 69 Ω

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO ABS AND TRACTION ACTUATOR (CANH, CANL)**

CA

OK



REPLACE ABS AND TRACTION ACTUATOR (SKID CONTROL ECU)

20	CONNECT CONNECTOR

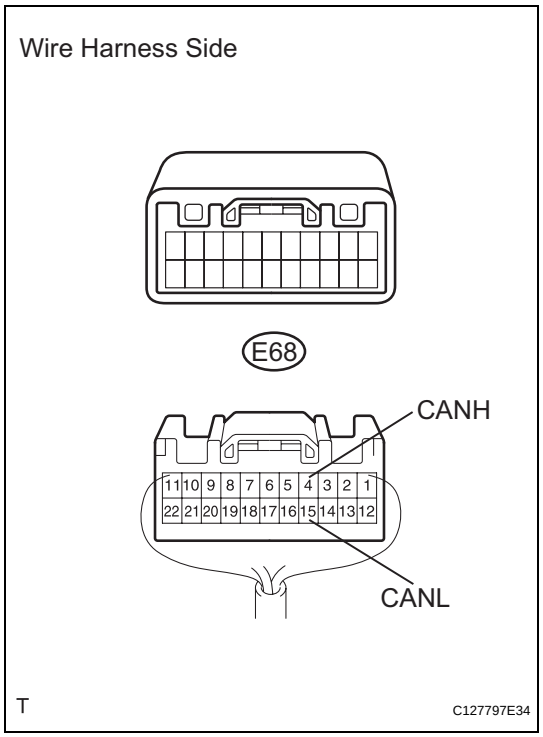
(a) Reconnect the E70 No. 3 junction connector.

NEXT

21	CHECK CAN BUS LINES FOR SHORT CIRCUIT (NO. 2 JUNCTION CONNECTOR - YAW RATE SENSOR)

(a) Disconnect the E68 No. 2 junction connector.
(b) Measure the resistance of the wire harness side connector.

Result



Tester Connection	Condition	Specified Condition	Proceed to
E68-6 (CANH) - E68-17 (CANL)	Ignition switch OFF	Below 1 Ω	A
E68-6 (CANH) - E68-17 (CANL)	Ignition switch OFF	Other	B

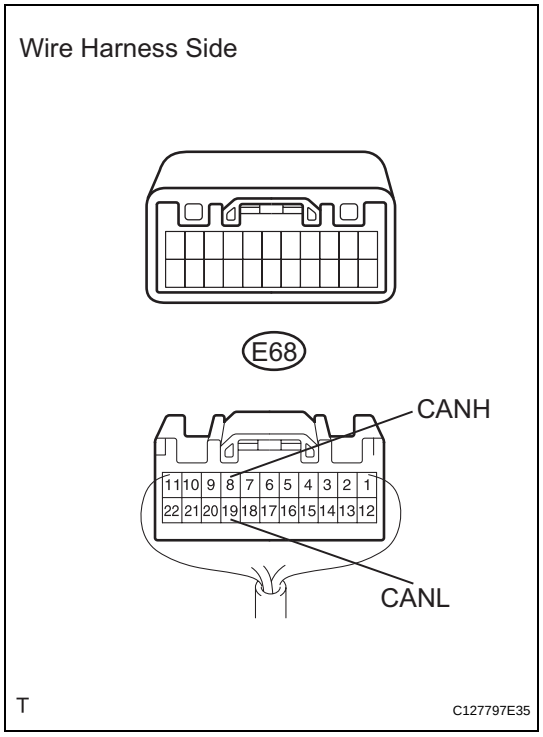
A → **Go to step 26**

B

CA

22 CHECK CAN BUS LINES FOR SHORT CIRCUIT (NO. 2 JUNCTION CONNECTOR - POWER STEERING ECU)

(a) Measure the resistance of the wire harness side connector.



Result

Tester Connection	Condition	Specified Condition	Proceed to
E68-4 (CANH) - E68-15 (CANL)	Ignition switch OFF	Below 1 Ω	A
E68-4 (CANH) - E68-15 (CANL)	Ignition switch OFF	Other	B

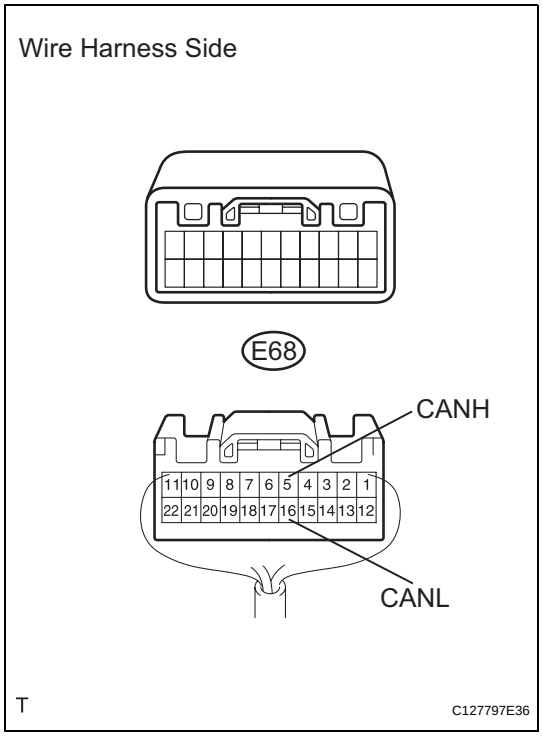
A → **Go to step 28**

B

23 CHECK CAN BUS LINES FOR SHORT CIRCUIT (NO. 2 JUNCTION CONNECTOR - MAIN BODY ECU)

(a) Measure the resistance of the wire harness side connector.

Result



Tester Connection	Condition	Specified Condition	Proceed to
E68-8 (CANH) - E68-19 (CANL)	Ignition switch OFF	Below 1 Ω	A
E68-8 (CANH) - E68-19 (CANL)	Ignition switch OFF	Other	B

A → **Go to step 30**

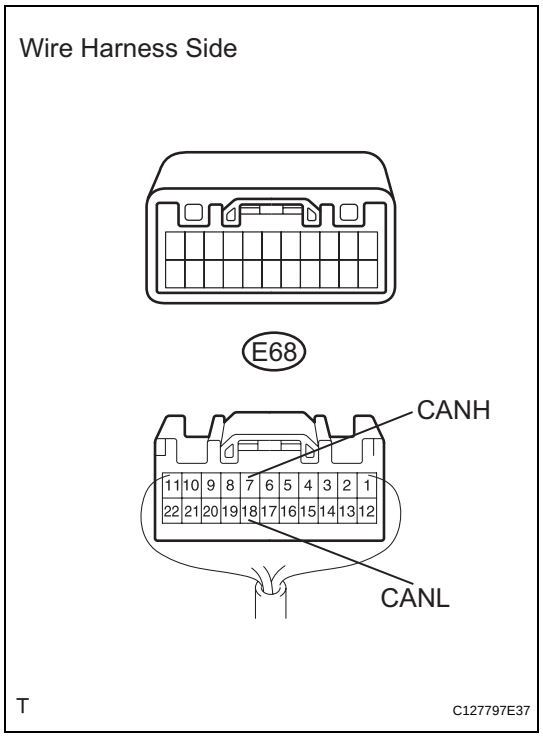
CA

B

24	CHECK CAN BUS LINES FOR SHORT CIRCUIT (NO. 2 JUNCTION CONNECTOR - AIR CONDITIONING AMPLIFIER)

(a) Measure the resistance of the wire harness side connector.

Result



Tester Connection	Condition	Specified Condition	Proceed to
E68-5 (CANH) - E68-16 (CANL)	Ignition switch OFF	Below 1 Ω	A
E68-5 (CANH) - E68-16 (CANL)	Ignition switch OFF	Other	B

A	Go to step 32

B

CA

25	CHECK CAN BUS LINES FOR SHORT CIRCUIT (NO. 2 JUNCTION CONNECTOR - STEERING ANGLE SENSOR)

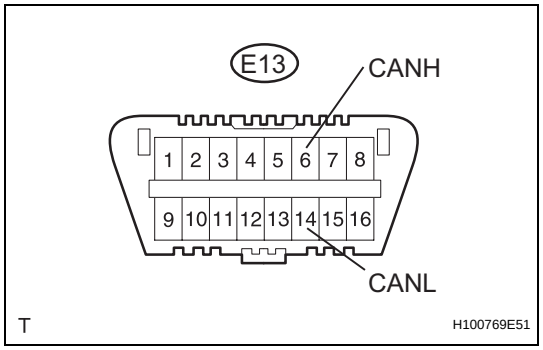
(a) Measure the resistance of the wire harness side connector.

Result

Tester Connection	Condition	Specified Condition	Proceed to
E68-7 (CANH) - E68-18 (CANL)	Ignition switch OFF	Below 1 Ω	A
E68-7 (CANH) - E68-18 (CANL)	Ignition switch OFF	Other	B

A → **Go to step 34**

B



REPAIR OR REPLACE NO. 2 JUNCTION CONNECTOR

26	CONNECT CONNECTOR

(a) Reconnect the E68 No. 2 junction connector.

NEXT

27	CHECK CAN BUS LINES FOR SHORT CIRCUIT (YAW RATE SENSOR)

(a) Disconnect the K6 yaw rate sensor connector.
(b) Measure the resistance of the DLC3.

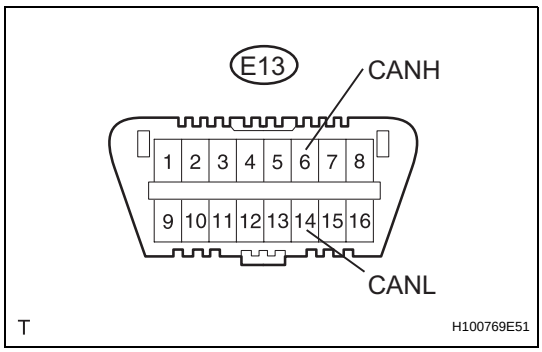
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-14 (CANL)	Ignition switch OFF	54 to 69 Ω

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO YAW RATE SENSOR (CANH, CANL)**

CA

OK



REPLACE YAW RATE SENSOR

28	CONNECT CONNECTOR

(a) Reconnect the E68 No. 2 junction connector.

NEXT

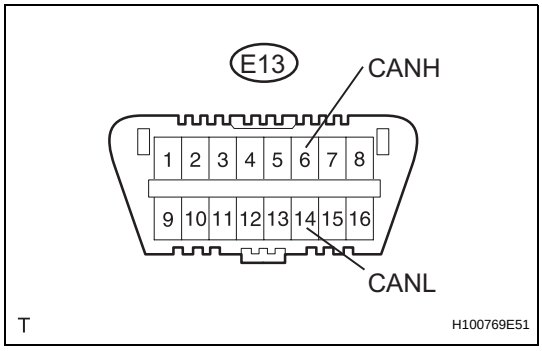
29	CHECK CAN BUS LINES FOR SHORT CIRCUIT (POWER STEERING ECU)

(a) Disconnect the E18 power steering ECU connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-14 (CANL)	Ignition switch OFF	54 to 69 Ω

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO POWER STEERING ECU (CANH, CANL)**

OK



REPLACE POWER STEERING ECU

30	CONNECT CONNECTOR

(a) Reconnect the E68 No. 2 junction connector.

NEXT

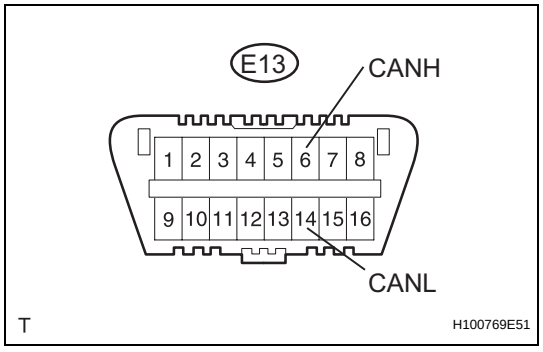
31	CHECK CAN BUS LINES FOR SHORT CIRCUIT (MAIN BODY ECU)

(a) Disconnect the E17 main body ECU connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-14 (CANL)	Ignition switch OFF	108 to 132 Ω

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO MAIN BODY ECU (CANH, CANL)**

OK



REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

32 **CONNECT CONNECTOR**

(a) Reconnect the E68 No. 2 junction connector.

NEXT

33 **CHECK CAN BUS LINES FOR SHORT CIRCUIT (AIR CONDITIONING AMPLIFIER)**

(a) Disconnect the E37*1 or E36*2 air conditioning amplifier connector.
HINT:
- *1: for Automatic air conditioning system.
- *2: for Manual air conditioning system.

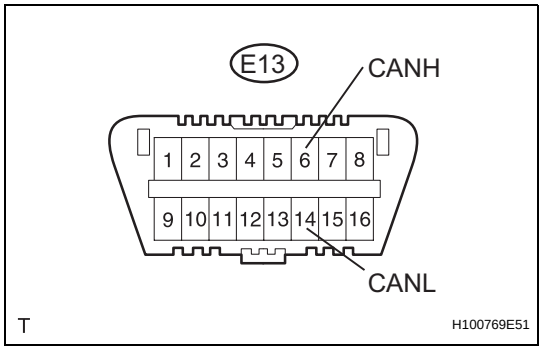
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-14 (CANL)	Ignition switch OFF	54 to 69 Ω

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO AIR CONDITIONING AMPLIFIER (CANH, CANL)**

OK

REPLACE AIR CONDITIONING AMPLIFIER



34 **CONNECT CONNECTOR**

(a) Reconnect the E68 No. 2 junction connector.

NEXT

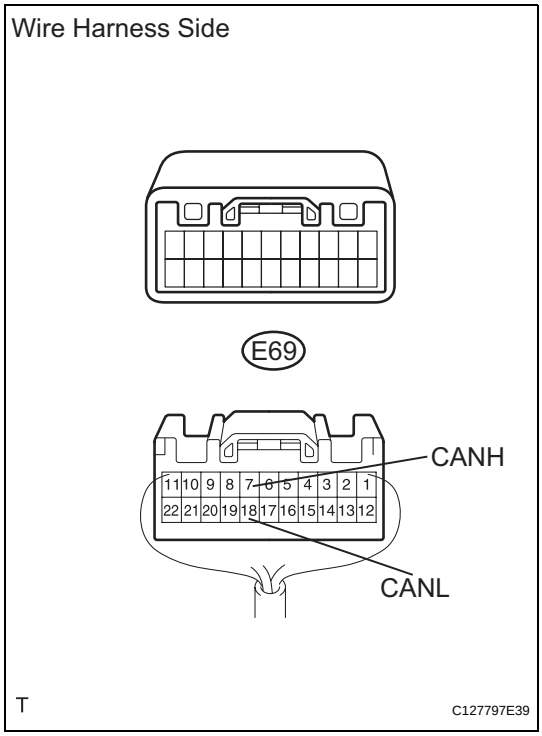
CA

35 CHECK CAN BUS LINES FOR SHORT CIRCUIT (STEERING ANGLE SENSOR)

(a) Disconnect the E11 steering sensor connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-14 (CANL)	Ignition switch OFF	54 to 69 Ω

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO STEERING ANGLE SENSOR (CANH, CANL)**



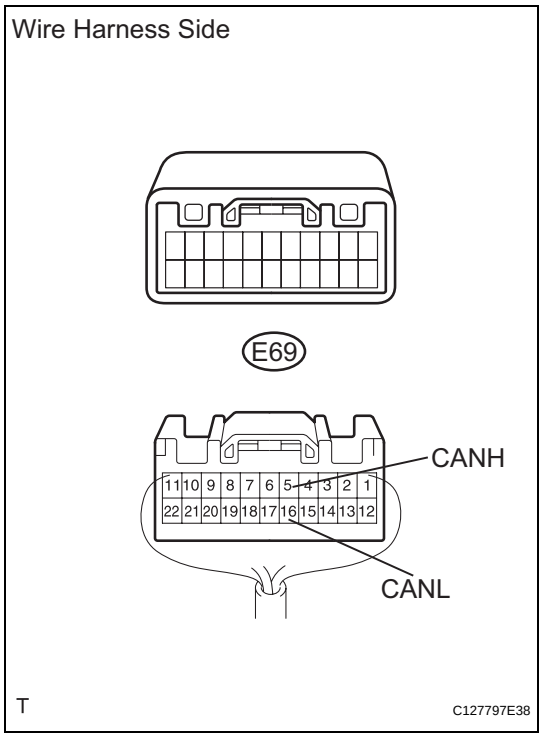
OK

CA

REPLACE STEERING ANGLE SENSOR

36 CHECK CAN BUS LINES FOR SHORT CIRCUIT (NO. 4 JUNCTION CONNECTOR - 4WD CONTROL ECU)

NOTICE:
For vehicles without 4WD, go to "CHECK CAN BUS LINES FOR SHORT CIRCUIT (NO. 4 JUNCTION CONNECTOR - COMBINATION METER ECU)".



(a) Measure the resistance of the wire harness side connector.
Result

Tester Connection	Condition	Specified Condition	Proceed to
E69-7 (CANH) - E69-18 (CANL)	Ignition switch OFF	Below 1 Ω	A
E69-7 (CANH) - E69-18 (CANL)	Ignition switch OFF	Other	B

A → **Go to step 38**

B

37	CHECK CAN BUS LINES FOR SHORT CIRCUIT (NO. 4 JUNCTION CONNECTOR - COMBINATION METER ECU)

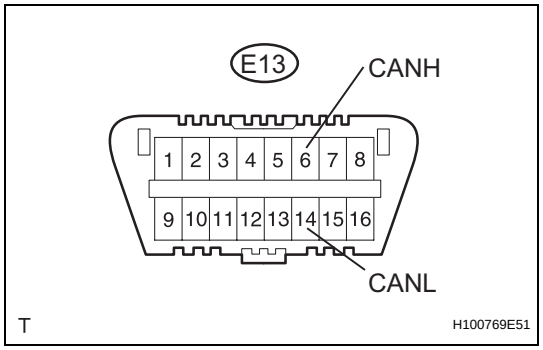
(a) Measure the resistance of the wire harness side connector.

Result

Tester Connection	Condition	Specified Condition	Proceed to
E69-5 (CANH) - E69-16 (CANL)	Ignition switch OFF	Below 1 Ω	A
E69-5 (CANH) - E69-16 (CANL)	Ignition switch OFF	Other	B

A → **Go to step 40**

B



REPAIR OR REPLACE NO. 4 JUNCTION CONNECTOR

38	CONNECT CONNECTOR

(a) Reconnect the E69 No. 4 junction connector.

NEXT

39	CHECK CAN BUS LINES FOR SHORT CIRCUIT (4WD CONTROL ECU)

(a) Disconnect the E57 4WD control ECU connector.
(b) Measure the resistance of the DLC3.

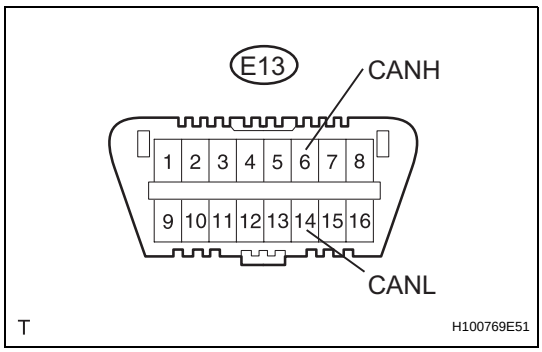
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-14 (CANL)	Ignition switch OFF	54 to 69 Ω

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO 4WD CONTROL ECU (CANH, CANL)**

CA

OK



REPLACE 4WD CONTROL ECU

40	CONNECT CONNECTOR

(a) Reconnect the E69 No. 4 junction connector.

NEXT

41	CHECK CAN BUS LINES FOR SHORT CIRCUIT (COMBINATION METER ECU)

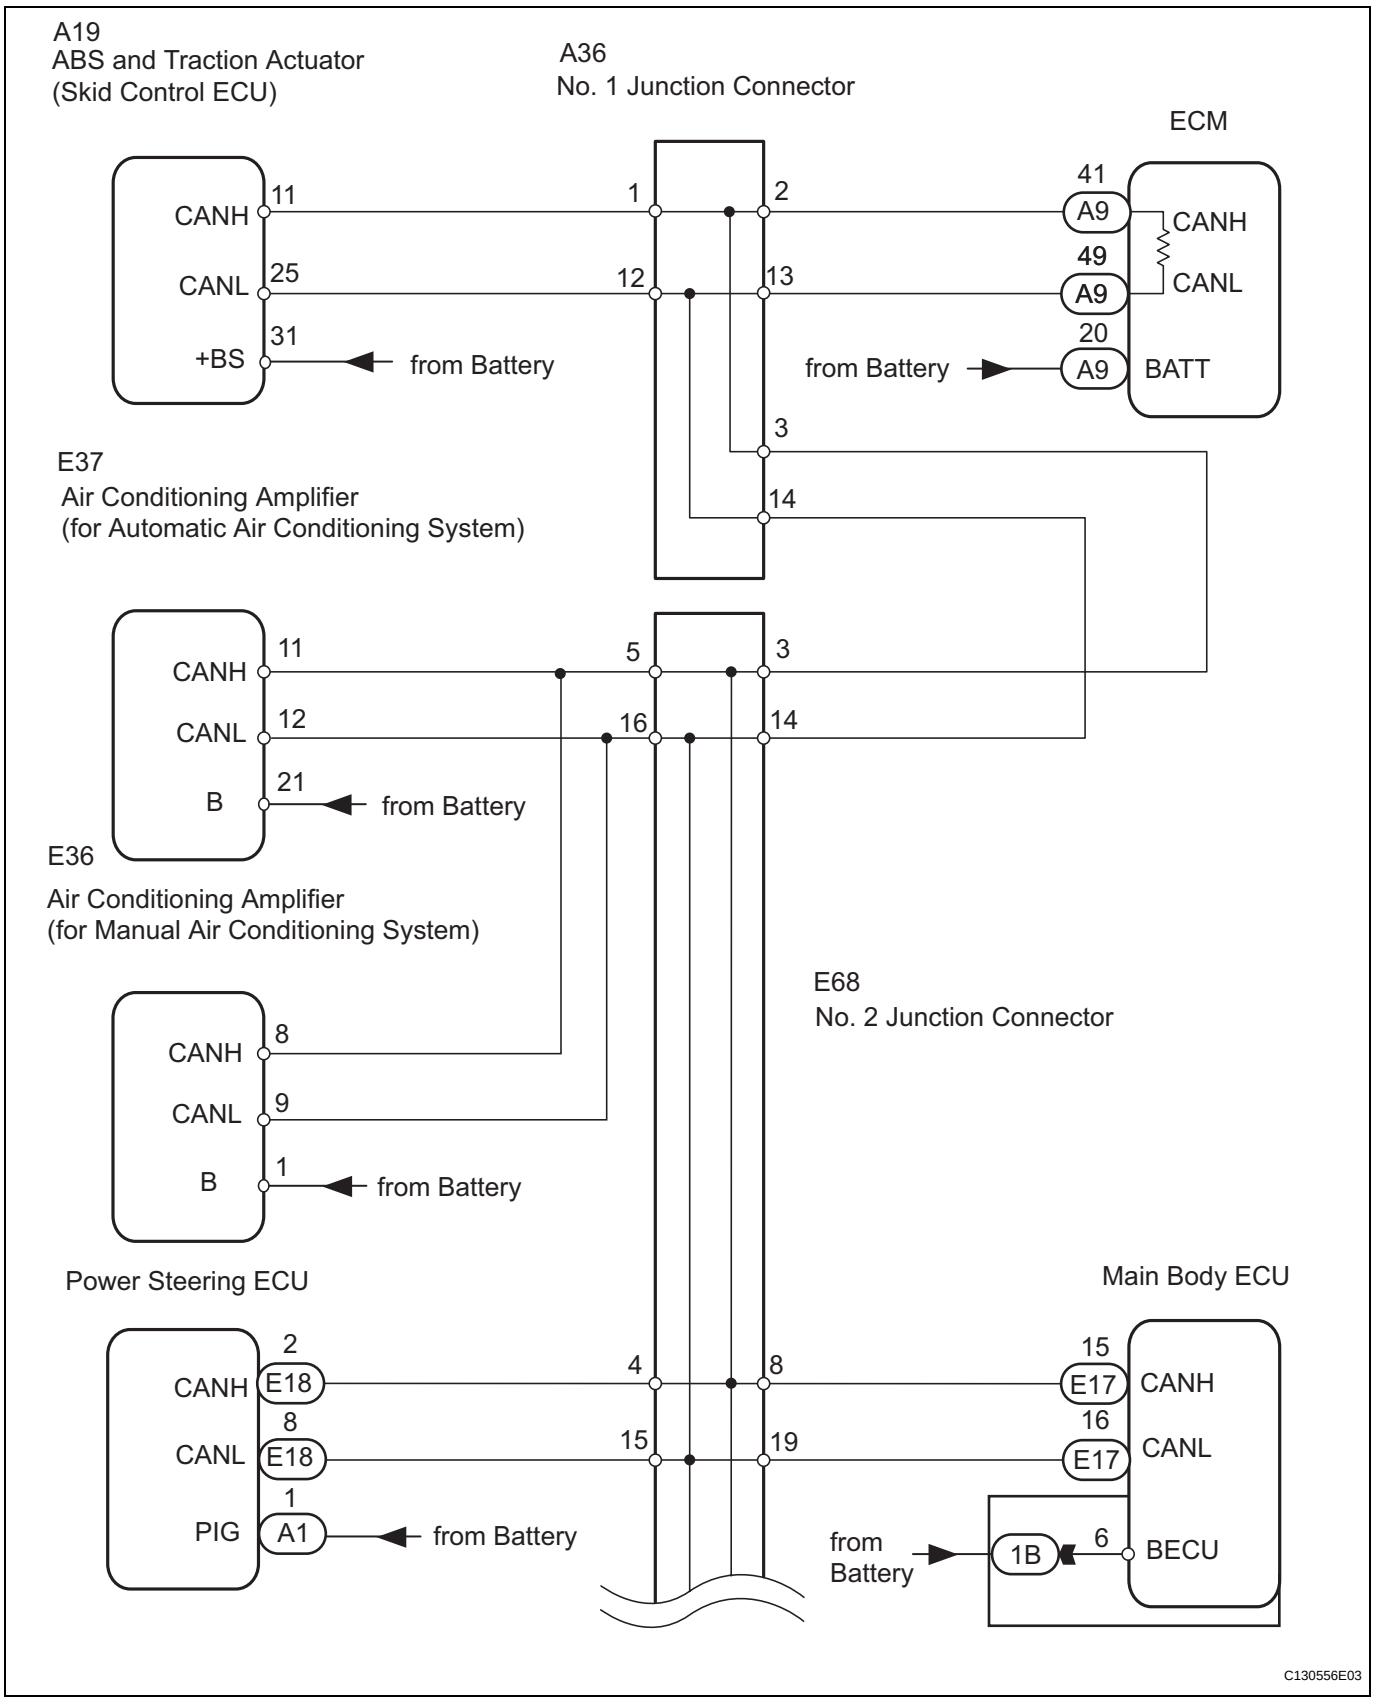
(a) Disconnect the E19 combination meter ECU connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-14 (CANL)	Ignition switch OFF	108 to 132 Ω

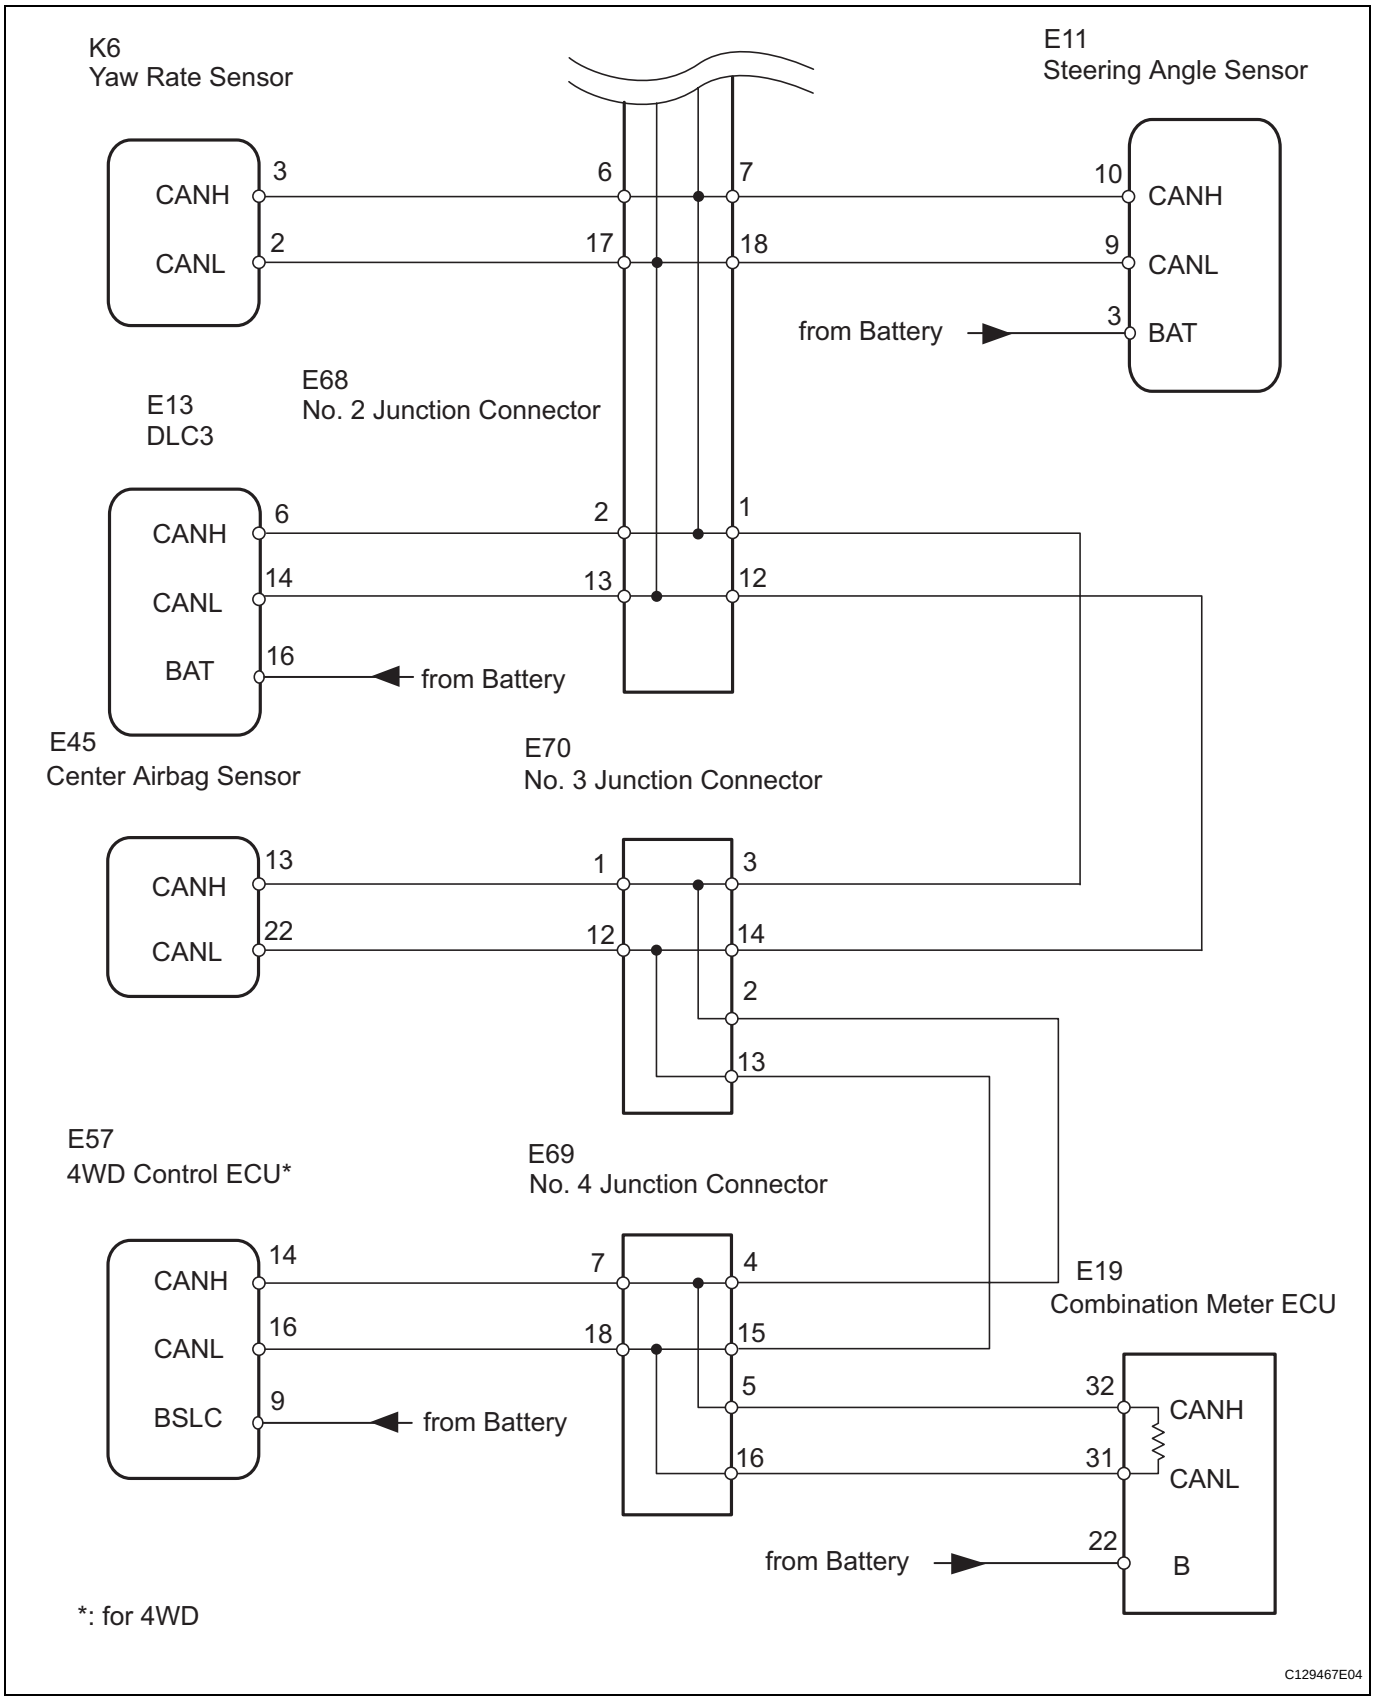
NG → **REPAIR OR REPLACE CAN MAIN WIRE CONNECTED TO COMBINATION METER ECU (CANH, CANL)**

OK

REPLACE COMBINATION METER ECU



Short to B+ in CAN Bus Line



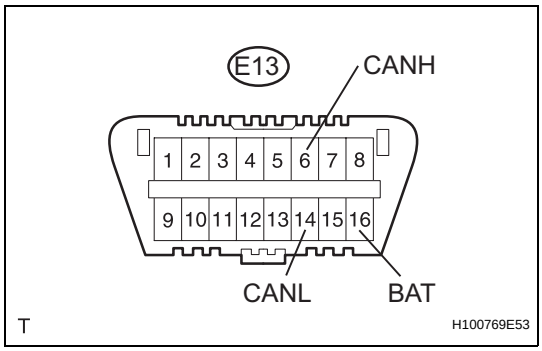
DESCRIPTION

There may be a short circuit between the CAN bus line and +B when there is resistance between terminals 6 (CANH) and 16 (BAT) or terminals 14 (CANL) and 16 (BAT) of the DLC3.

Symptom	Trouble Area
There is resistance between terminals 6 (CANH) and 16 (BAT) or terminals 14 (CANL) and 16 (BAT) of DLC3.	• Short to +B • ABS and traction actuator (skid control ECU) • Power steering ECU • Steering angle sensor • Yaw rate sensor • ECM • Center airbag sensor • Combination meter ECU • Air conditioning amplifier • Instrument panel junction block (Main body ECU) • 4WD control ECU

WIRING DIAGRAM

INSPECTION PROCEDURE



NOTICE:

- **Turn the ignition switch OFF before measuring the resistances of the main wire and the branch wire.**

- **After the ignition switch is turned OFF, check that the key reminder warning system and light reminder warning system are not in operation.**
- **Before measuring the resistance, leave the vehicle for at least 1 minute and do not operate the ignition switch, any switches or doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

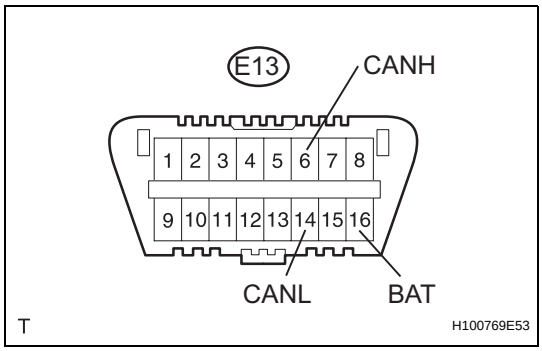
HINT:
Operating the ignition switch, any switches or any doors triggers related ECU and sensor communication with the CAN, which causes resistance variation.

1 CHECK CAN BUS LINE FOR SHORT TO +B (DLC3 BRANCH WIRE)

(a) Disconnect the E68 No. 2 junction connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E13-14 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO DLC3 (CANH, CANL)**



OK

2 CONNECT CONNECTOR

(a) Reconnect the E68 No. 2 junction connector.

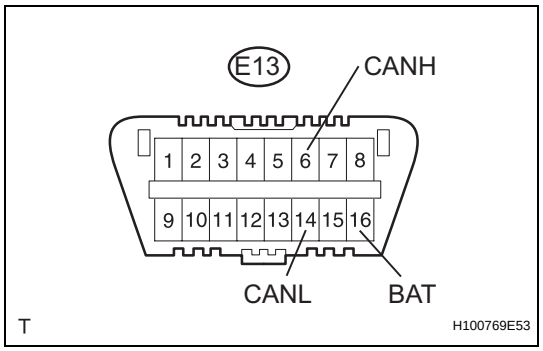
NEXT

3 CHECK CAN BUS LINE FOR SHORT TO +B (NO. 1 JUNCTION CONNECTOR SIDE)

(a) Disconnect the A36 No. 1 junction connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E13-14 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

OK → **Go to step 12**



NG

4 CONNECT CONNECTOR

(a) Reconnect the A36 No. 1 junction connector.

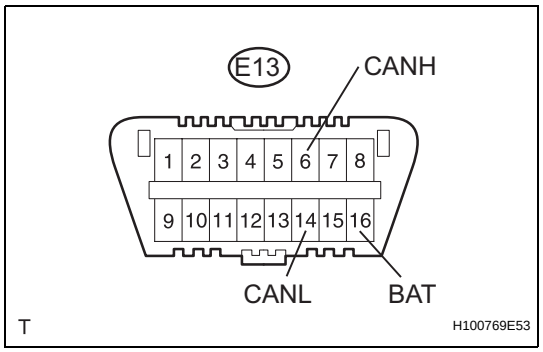
NEXT

5	**CHECK CAN BUS LINE FOR SHORT TO +B (NO. 3 JUNCTION CONNECTOR, NO. 4 JUNCTION CONNECTOR SIDE)**

(a) Disconnect the E70 No. 3 junction connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E13-14 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

NG → **Go to step 18**



OK

6	**CONNECT CONNECTOR**

(a) Reconnect the E70 No. 3 junction connector.

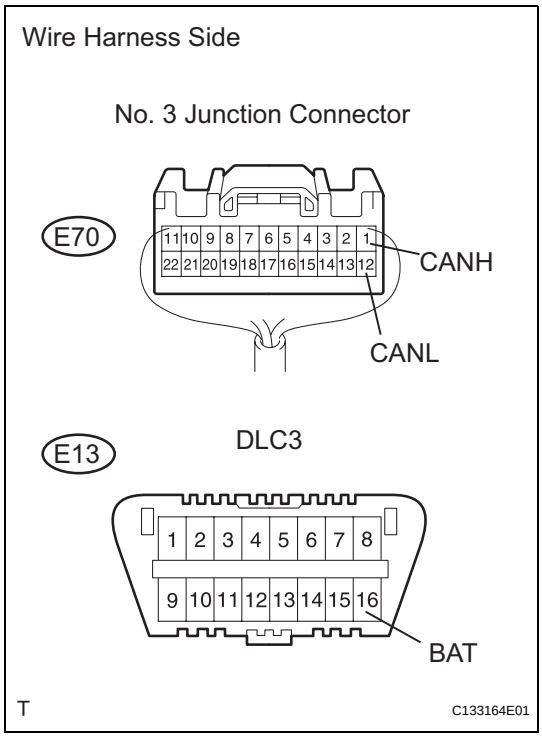
NEXT

7	**CHECK CAN BUS LINE FOR SHORT TO +B (NO. 4 JUNCTION CONNECTOR SIDE)**

(a) Disconnect the E69 No. 4 junction connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E13-14 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

OK → **Go to step 34**



NG

8	**CONNECT CONNECTOR**

(a) Reconnect the E69 No. 4 junction connector.

NEXT

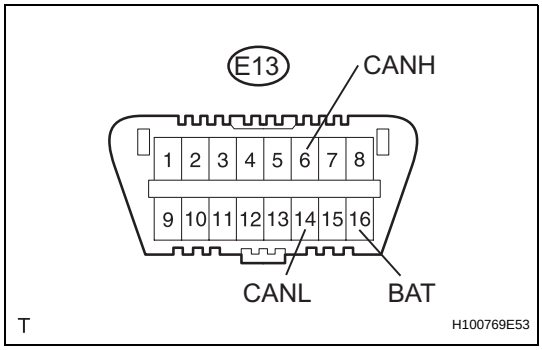
9	CHECK CAN BUS LINE FOR SHORT TO +B (NO. 3 JUNCTION CONNECTOR - CENTER AIRBAG SENSOR ASSEMBLY)

(a) Disconnect the E70 No. 3 junction connector.
(b) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Condition	Specified Condition
E70-1 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E70-12 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

OK → **REPAIR OR REPLACE CAN MAIN WIRE AND CONNECTOR (NO. 3 JUNCTION CONNECTOR - NO. 4 JUNCTION CONNECTOR)**



NG

10	CONNECT CONNECTOR

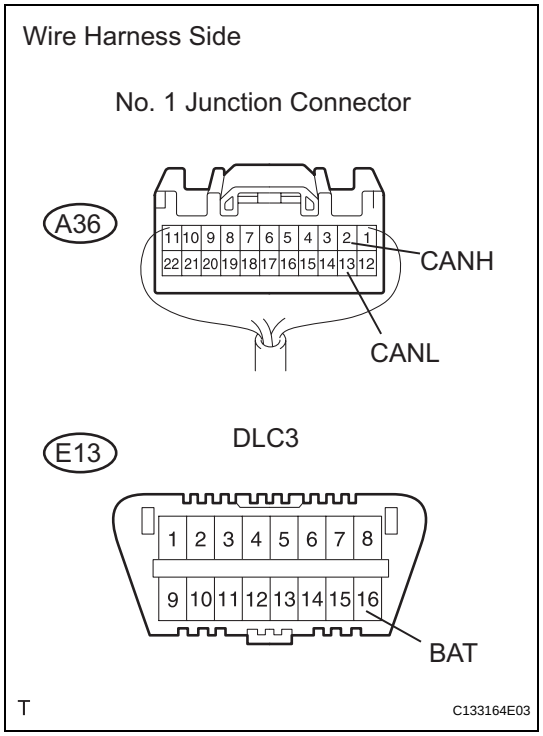
(a) Reconnect the E70 No. 3 junction connector.

NEXT

11	CHECK CAN BUS LINE FOR SHORT TO +B (CENTER AIRBAG SENSOR ASSEMBLY)

(a) Disconnect the E45 center airbag sensor connector.
(b) Measure the resistance of the DLC3.

Standard resistance



Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E13-14 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

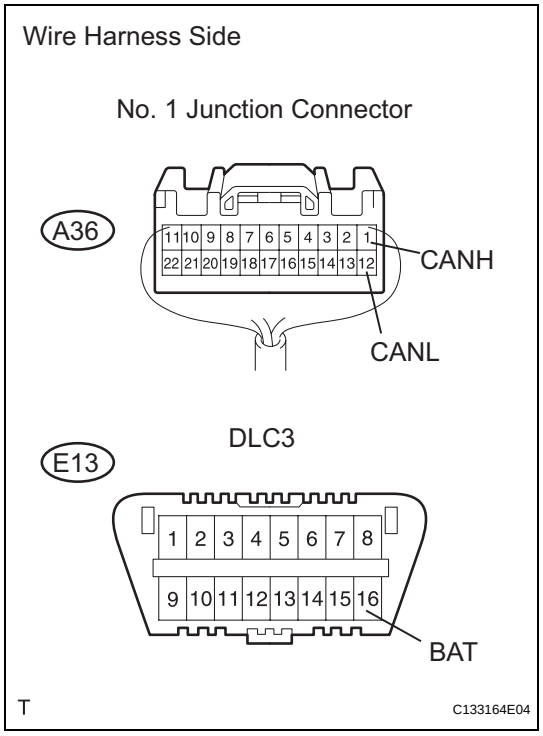
NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO CENTER AIRBAG SENSOR ASSEMBLY (CANH, CANL)**

OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY

12 CHECK CAN BUS LINE FOR SHORT TO +B (NO. 1 JUNCTION CONNECTOR - ECM)

(a) Disconnect the A36 No. 1 junction connector.
(b) Measure the resistance of the wire harness side connectors.



Standard resistance

Tester Connection	Condition	Specified Condition
A36-2 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
A36-13 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

NG → **Go to step 14**

OK

13 CHECK CAN BUS LINE FOR SHORT TO +B (NO. 1 JUNCTION CONNECTOR - ABS AND TRACTION ACTUATOR)

(a) Measure the resistance of the wire harness side connectors.

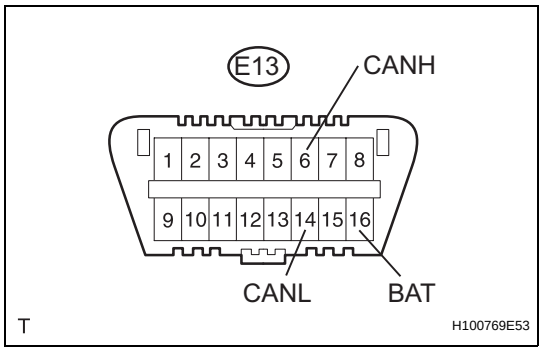
Standard resistance

Tester Connection	Condition	Specified Condition
A36-1 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
A36-12 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

NG → **Go to step 16**

CA

OK



REPAIR OR REPLACE CAN MAIN WIRE AND CONNECTOR (NO. 1 JUNCTION CONNECTOR - NO. 2 JUNCTION CONNECTOR)

14	CONNECT CONNECTOR

(a) Reconnect the A36 No. 1 junction connector.

NEXT

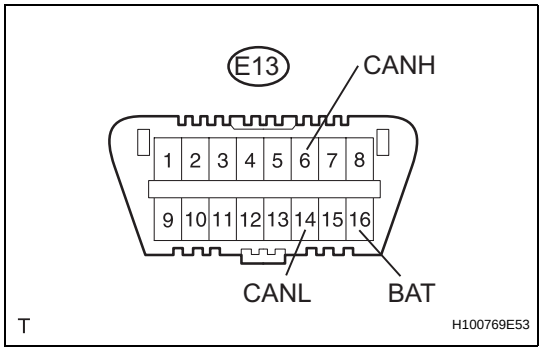
15	CHECK CAN BUS LINE FOR SHORT TO +B (ECM)

(a) Disconnect the A9 ECM connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E13-14 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

NG → **REPAIR OR REPLACE CAN MAIN WIRE CONNECTED TO ECM (NO. 1 JUNCTION CONNECTOR - ECM)**

OK



REPLACE ECM

16	CONNECT CONNECTOR

(a) Reconnect the A36 No. 1 junction connector.

NEXT

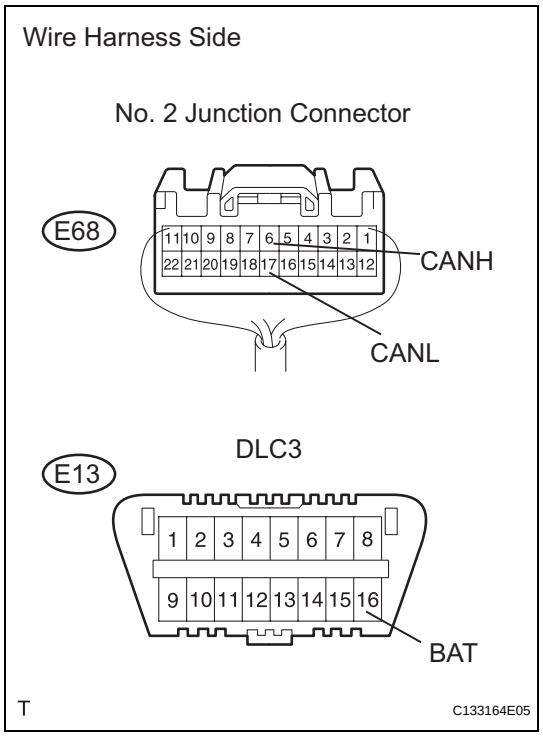
17	CHECK CAN BUS LINE FOR SHORT TO +B (ABS AND TRACTION ACTUATOR)

(a) Disconnect the A19 ABS and traction actuator (skid control ECU) connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E13-14 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO ABS AND TRACTION ACTUATOR (CANH, CANL)**

OK



REPLACE ABS AND TRACTION ACTUATOR (SKID CONTROL ECU)

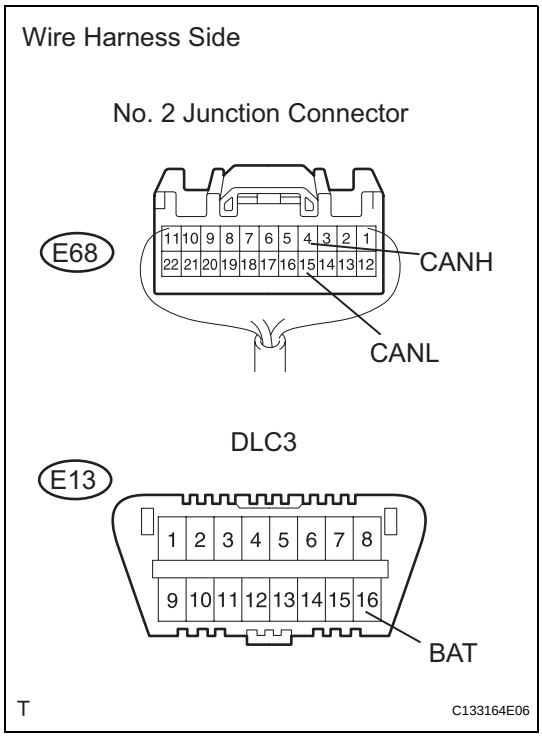
18	CONNECT CONNECTOR

(a) Reconnect the E70 No. 3 junction connector.

NEXT

19	CHECK CAN BUS LINE FOR SHORT TO +B (NO. 2 JUNCTION CONNECTOR - YAW RATE SENSOR)

(a) Disconnect the E68 No. 2 junction connector.
(b) Measure the resistance of the wire harness side connectors.



Standard resistance

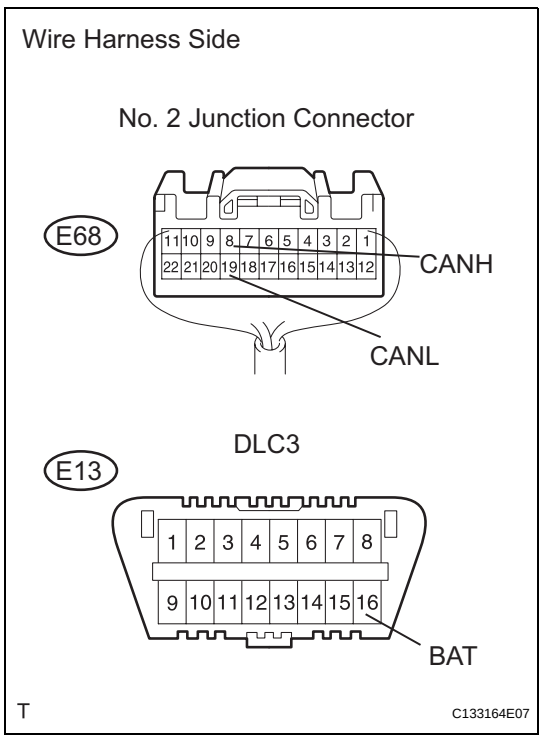
Tester Connection	Condition	Specified Condition
E68-6 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E68-17 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

NG → **Go to step 24**

OK

20	CHECK CAN BUS LINE FOR SHORT TO +B (NO. 2 JUNCTION CONNECTOR - POWER STEERING ECU)

(a) Measure the resistance of the wire harness side connectors.



Standard resistance

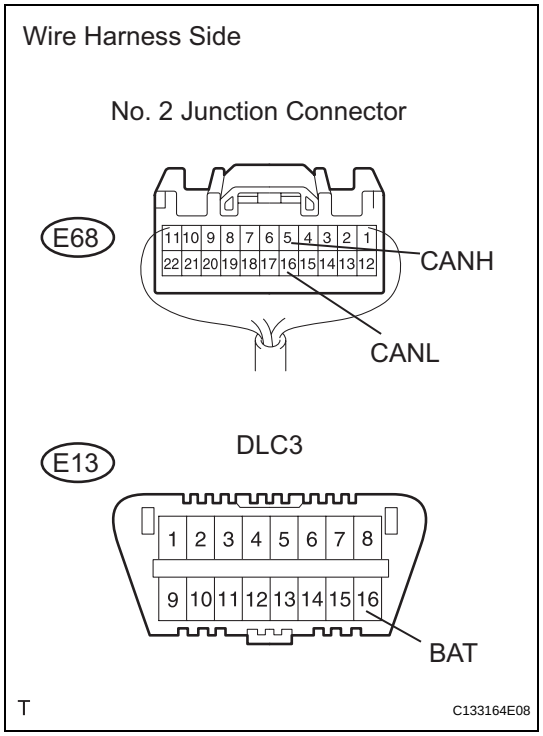
Tester Connection	Condition	Specified Condition
E68-4 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E68-15 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

NG → **Go to step 26**

OK

21	CHECK CAN BUS LINE FOR SHORT TO +B (NO. 2 JUNCTION CONNECTOR - MAIN BODY ECU)

(a) Measure the resistance of the wire harness side connectors.



Standard resistance

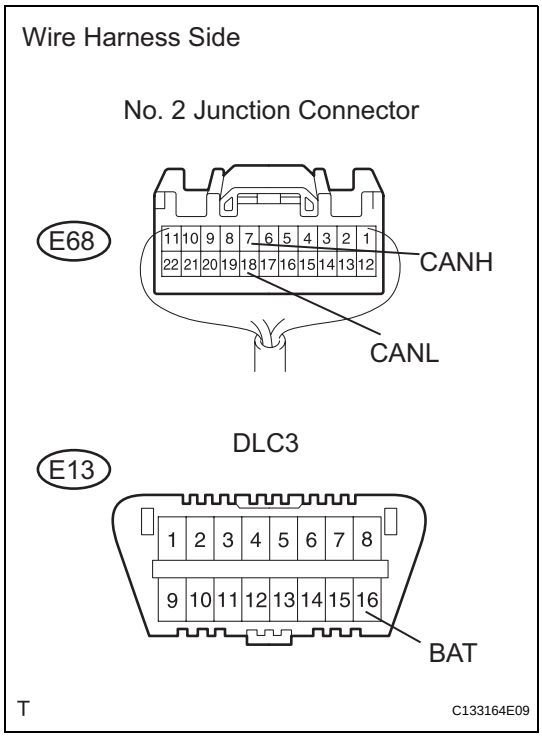
Tester Connection	Condition	Specified Condition
E68-8 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E68-19 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

NG → **Go to step 28**

OK

22	CHECK CAN BUS LINE FOR SHORT TO +B (NO. 2 JUNCTION CONNECTOR - AIR CONDITIONING AMPLIFIER)

(a) Measure the resistance of the wire harness side connectors.
Standard resistance



Tester Connection	Condition	Specified Condition
E68-5 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E68-16 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

NG → **Go to step 30**

CA

OK

23	CHECK CAN BUS LINE FOR SHORT TO +B (NO. 2 JUNCTION CONNECTOR - STEERING ANGLE SENSOR)

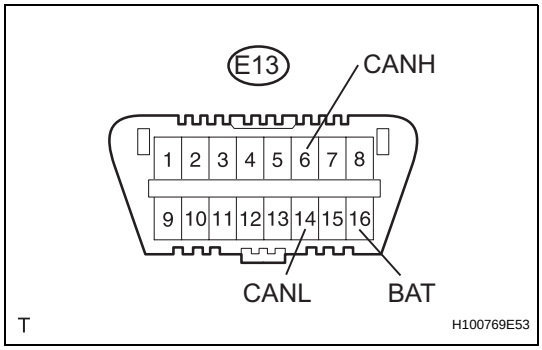
(a) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Condition	Specified Condition
E68-7 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E68-18 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

NG → **Go to step 32**

OK



REPAIR OR REPLACE CAN MAIN WIRE AND CONNECTOR (NO. 2 JUNCTION CONNECTOR - NO. 3 JUNCTION CONNECTOR)

24	CONNECT CONNECTOR

(a) Reconnect the E68 No. 2 junction connector.

NEXT

25	CHECK CAN BUS LINE FOR SHORT TO +B (YAW RATE SENSOR)

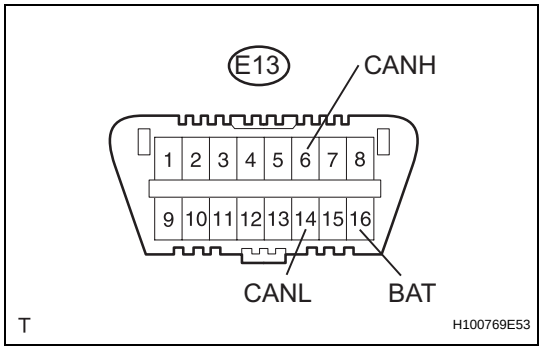
(a) Disconnect the K6 yaw rate sensor connector.
(b) Measure the resistance of the DLC3.

Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E13-14 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO YAW RATE SENSOR (CANH, CANL)**

OK



REPLACE YAW RATE SENSOR

26	CONNECT CONNECTOR

(a) Reconnect the E68 No. 2 junction connector.

NEXT

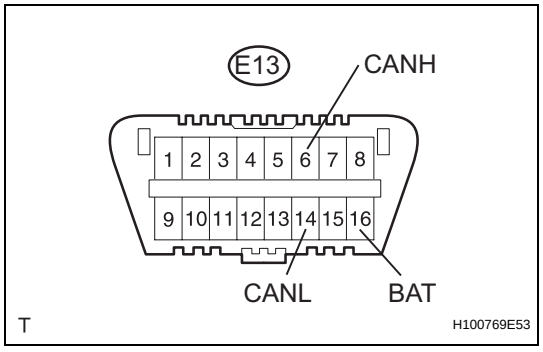
27	CHECK CAN BUS LINE FOR SHORT TO +B (POWER STEERING ECU)

(a) Disconnect the E18 power steering ECU connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E13-14 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO POWER STEERING ECU (CANH, CANL)**

OK



REPLACE POWER STEERING ECU

28	CONNECT CONNECTOR

(a) Reconnect the E68 No. 2 junction connector.

NEXT

29	CHECK CAN BUS LINE FOR SHORT TO +B (MAIN BODY ECU)

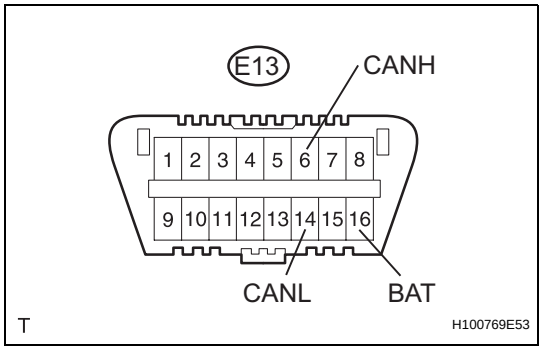
(a) Disconnect the E17 main body ECU connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E13-14 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

CA

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO MAIN BODY ECU (CANH, CANL)**

OK



REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

30	CONNECT CONNECTOR

(a) Reconnect the E68 No. 2 junction connector.

NEXT

31	CHECK CAN BUS LINE FOR SHORT TO +B (AIR CONDITIONING AMPLIFIER)

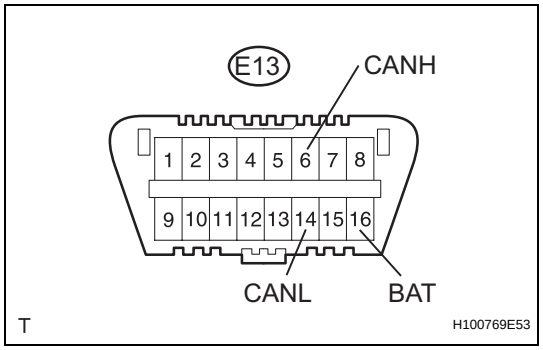
(a) Disconnect the E37*1 or E36*2 air conditioning amplifier connector.
HINT:
- *1: for Automatic air conditioning system.
- *2: for Manual air conditioning system.

(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E13-14 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO AIR CONDITIONING AMPLIFIER (CANH, CANL)**

OK



REPLACE AIR CONDITIONING AMPLIFIER

32	CONNECT CONNECTOR

(a) Reconnect the E68 No. 2 junction connector.

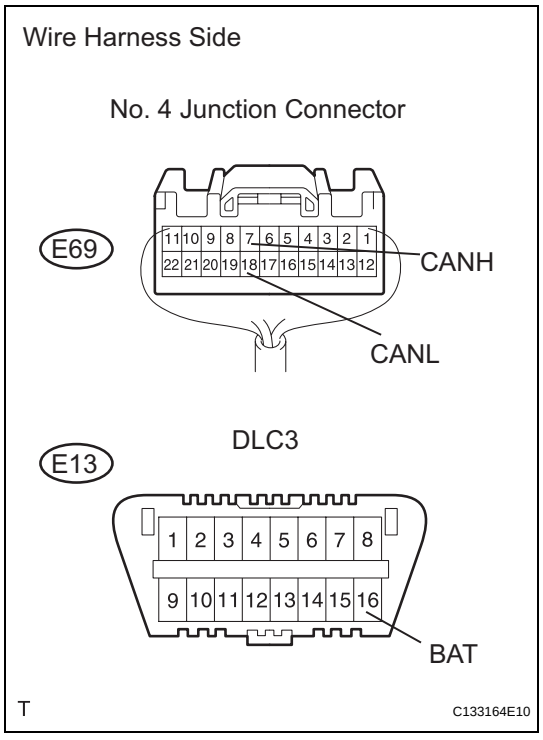
NEXT

33 CHECK CAN BUS LINE FOR SHORT TO +B (STEERING ANGLE SENSOR)

(a) Disconnect the E11 steering sensor connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E13-14 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

NG → **REPLACE CAN BRANCH WIRE CONNECTED TO STEERING ANGLE SENSOR (CANH, CANL)**



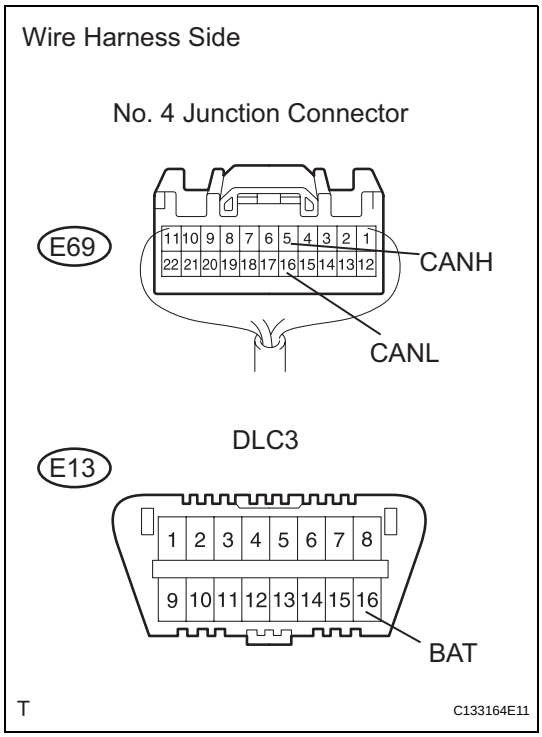
OK

CA

REPLACE STEERING ANGLE SENSOR

34 CHECK CAN BUS LINE FOR SHORT TO +B (NO. 4 JUNCTION CONNECTOR - 4WD CONTROL ECU)

NOTICE:
For vehicles without 4WD, go to "CHECK CAN BUS LINE FOR SHORT TO +B (NO. 4 JUNCTION CONNECTOR - COMBINATION METER ECU)".



(a) Measure the resistance of the wire harness side connectors.
Standard resistance

Tester Connection	Condition	Specified Condition
E69-7 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E69-18 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

NG → **Go to step 36**

OK

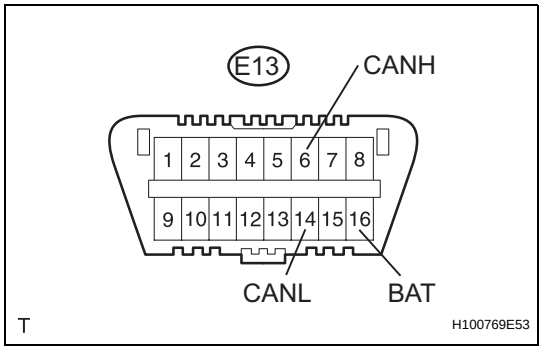
35	CHECK CAN BUS LINE FOR SHORT TO +B (NO. 4 JUNCTION CONNECTOR - COMBINATION METER ECU)

(a) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Condition	Specified Condition
E69-5 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E69-16 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

NG → **Go to step 38**



OK

36	CONNECT CONNECTOR

(a) Reconnect the E69 No. 4 junction connector.

NEXT

37	CHECK CAN BUS LINE FOR SHORT TO +B (4WD CONTROL ECU)

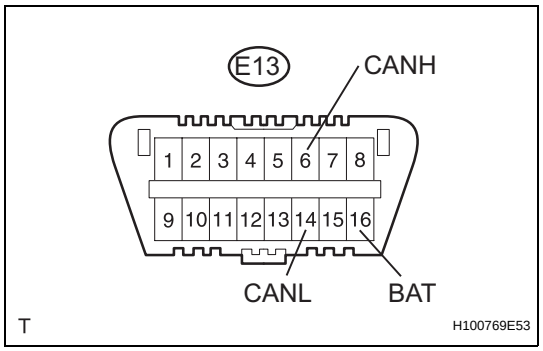
(a) Disconnect the E57 4WD control ECU connector.
(b) Measure the resistance of the DLC3.

Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E13-14 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO 4WD CONTROL ECU (CANH, CANL)**

OK



REPLACE 4WD CONTROL ECU

38	CONNECT CONNECTOR

(a) Reconnect the E69 No. 4 junction connector.

NEXT

39	CHECK CAN BUS LINE FOR SHORT TO +B (COMBINATION METER ECU)

(a) Disconnect the E19 combination meter ECU connector.
(b) Measure the resistance of the DLC3.

Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more
E13-14 (CANL) - E13-16 (BAT)	Ignition switch OFF	1 MΩ or more

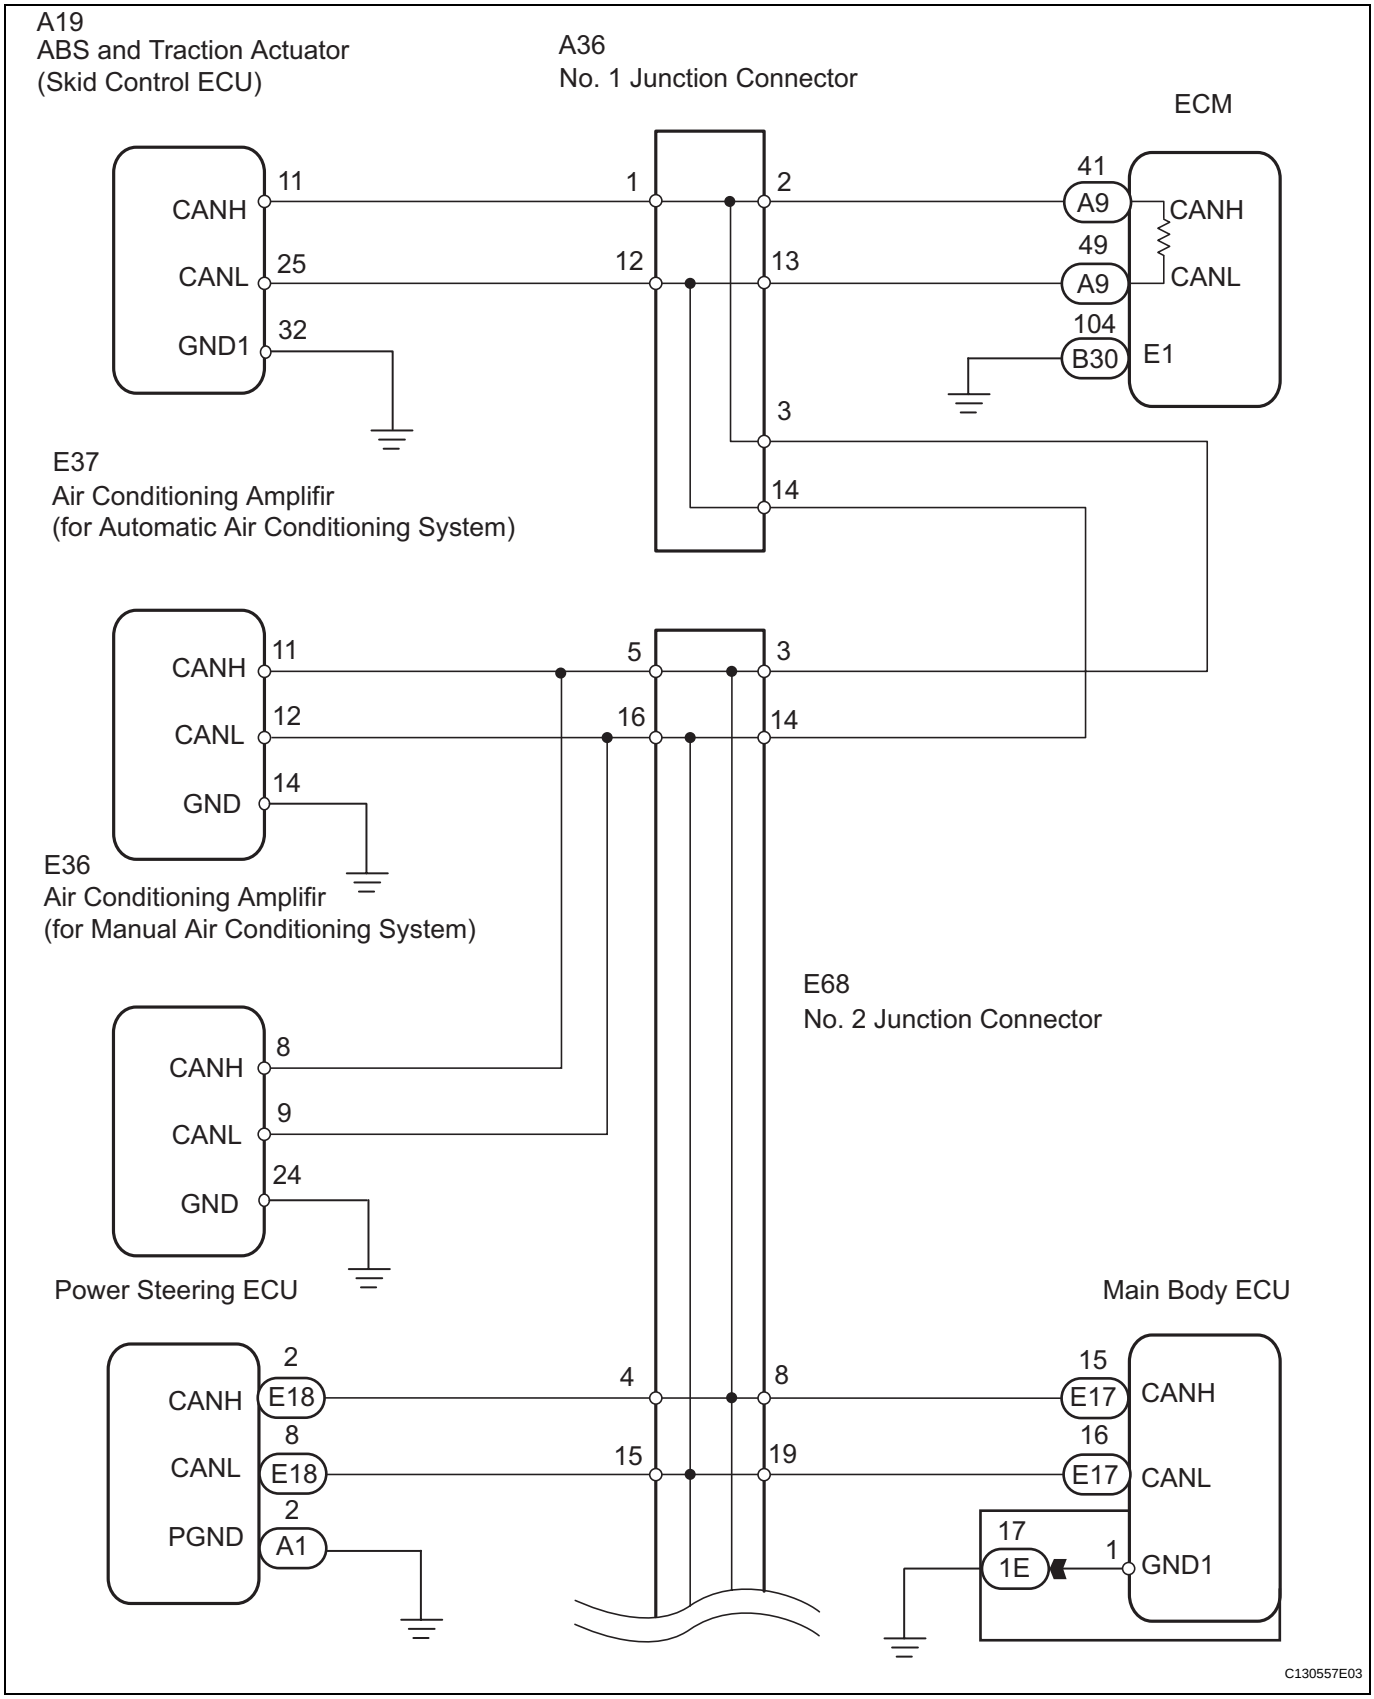
NG → **REPAIR OR REPLACE CAN MAIN WIRE CONNECTED TO COMBINATION METER ECU (CANH, CANL)**

OK

REPLACE COMBINATION METER ECU

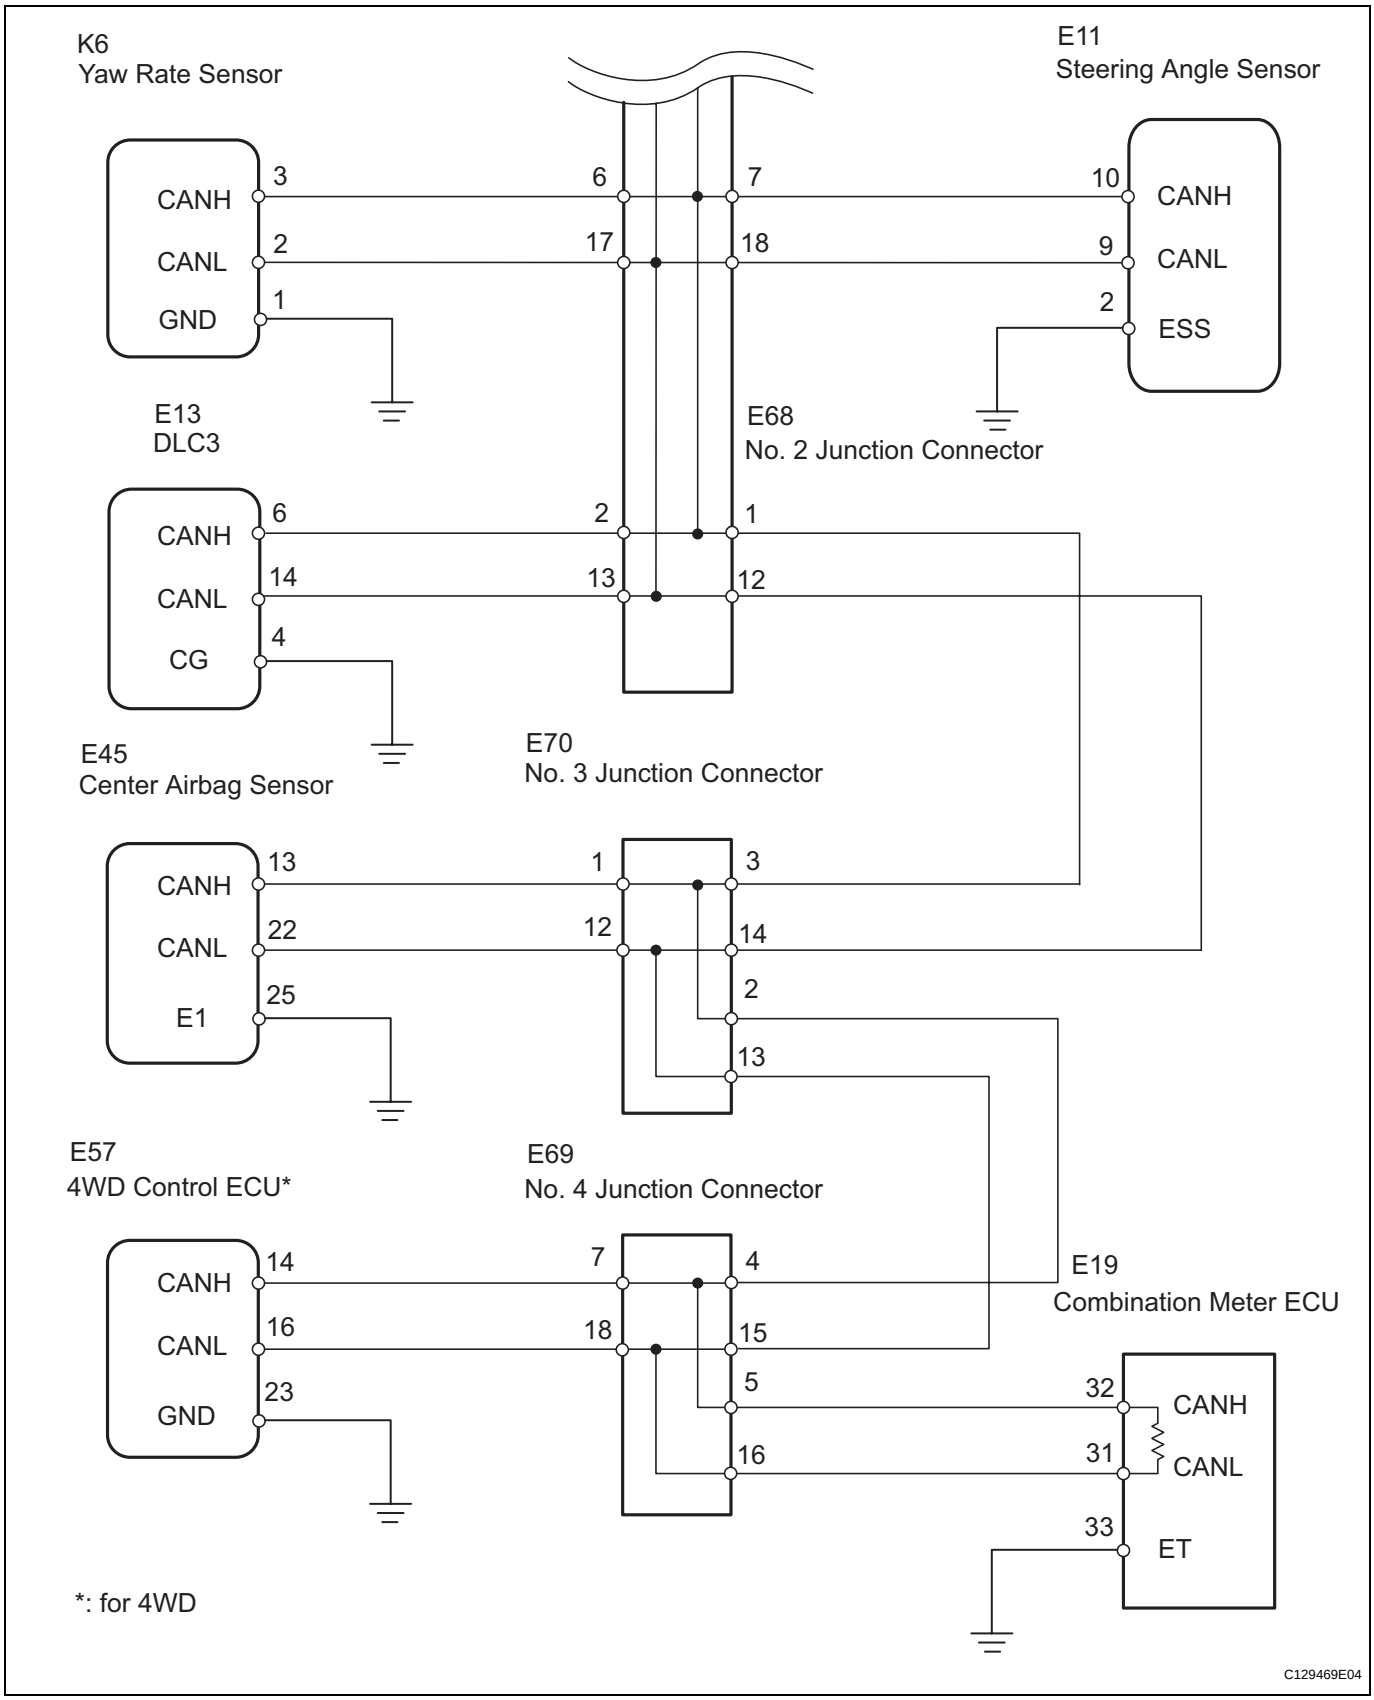
CA

Short to GND in CAN Bus Line



(2005/11-2006/01)

DESCRIPTION



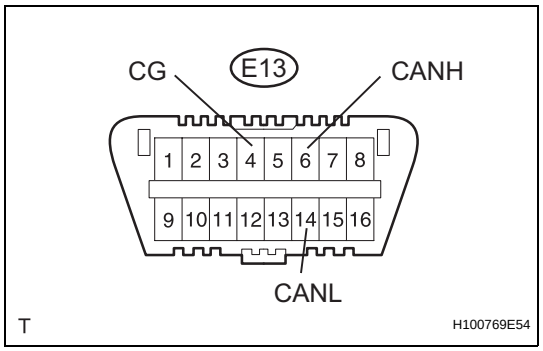
There may be a short circuit between the CAN bus line and GND when there is resistance between terminals 6 (CANH) and 4 (CG) or terminals 14 (CANL) and 4 (CG) of the DLC3.

Symptom	Trouble Area
There is resistance between terminals 6 (CANH) and 4 (CG) or terminals 14 (CANL) and 4 (CG) of DLC3.	• Short to GND • ABS and traction actuator (skid control ECU) • Power steering ECU • Steering angle sensor • Yaw rate sensor • ECM • Center airbag sensor • Air conditioning amplifier • Combination meter ECU • Instrument panel junction block (Main body ECU) • 4WD control ECU

WIRING DIAGRAM

CA

INSPECTION PROCEDURE



NOTICE:

- **Turn the ignition switch OFF before measuring the resistances of the main wire and the branch wire.**

- **After the ignition switch is turned OFF, check that the key reminder warning system and light reminder warning system are not in operation.**
- **Before measuring the resistance, leave the vehicle for at least 1 minute and do not operate the ignition switch, any switches or doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

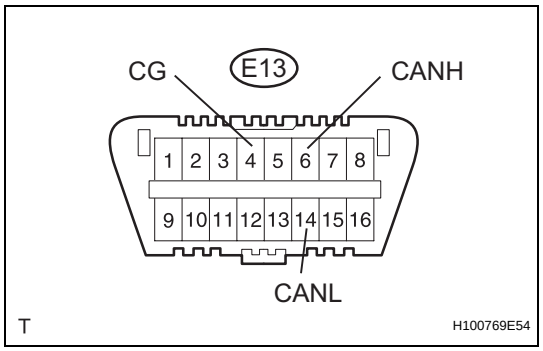
HINT:
Operating the ignition switch, any switches or any doors triggers related ECU and sensor communication with the CAN, which causes resistance variation.

1 CHECK CAN BUS LINE FOR SHORT TO GND (DLC3 BRANCH WIRE)

(a) Disconnect the E68 No. 2 junction connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO DLC3 (CANH, CANL)**



OK

2 CONNECT CONNECTOR

(a) Reconnect the E68 No. 2 junction connector.

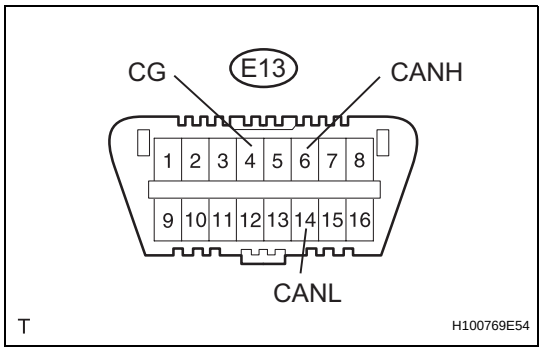
NEXT

3 CHECK CAN BUS LINE FOR SHORT TO GND (NO. 1 JUNCTION CONNECTOR)

(a) Disconnect the A36 No. 1 junction connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

OK → **Go to step 12**



NG

4 CONNECT CONNECTOR

(a) Reconnect the A36 No. 1 junction connector.

NEXT

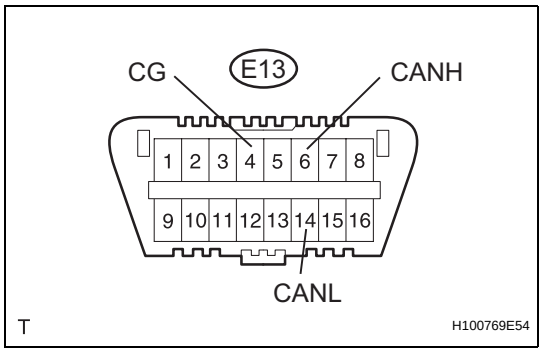
5	CHECK CAN BUS LINE FOR SHORT TO GND (NO. 3 JUNCTION CONNECTOR, NO. 4 JUNCTION CONNECTOR SIDE)

(a) Disconnect the E70 No. 3 junction connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **Go to step 18**

OK



CA

6	CONNECT CONNECTOR

(a) Reconnect the E70 No. 3 junction connector.

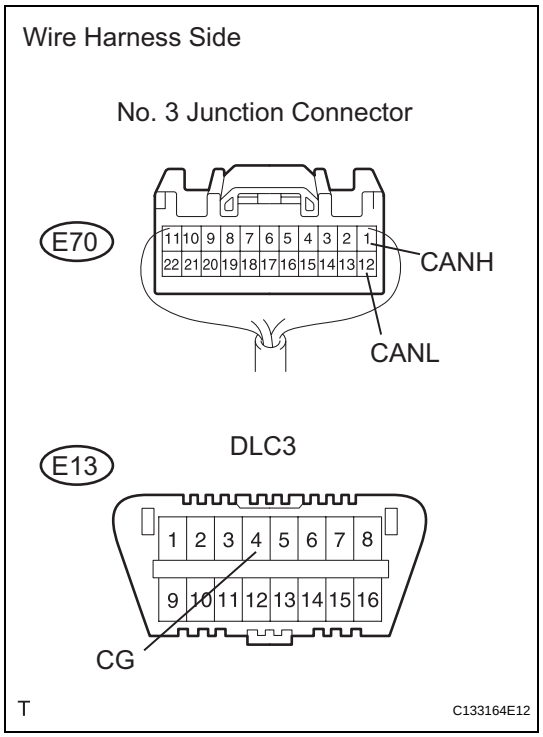
NEXT

7	CHECK CAN BUS LINE FOR SHORT TO GND (NO. 4 JUNCTION CONNECTOR SIDE)

(a) Disconnect the E69 No. 4 junction connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

OK → **Go to step 34**



NG

8	CONNECT CONNECTOR

(a) Reconnect the E69 No. 4 junction connector.

NEXT

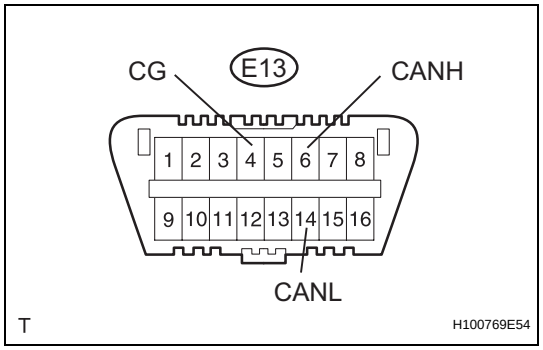
9	CHECK CAN BUS LINE FOR SHORT TO GND (NO. 3 JUNCTION CONNECTOR - CENTER AIRBAG SENSOR ASSEMBLY)

(a) Disconnect the E70 No. 3 junction connector.
(b) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Condition	Specified Condition
E70-1 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E70-12 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

OK → REPAIR OR REPLACE CAN MAIN WIRE AND CONNECTOR (NO. 3 JUNCTION CONNECTOR - NO. 4 JUNCTION CONNECTOR)



NG

10	CONNECT CONNECTOR

(a) Reconnect the E70 No. 3 junction connector.

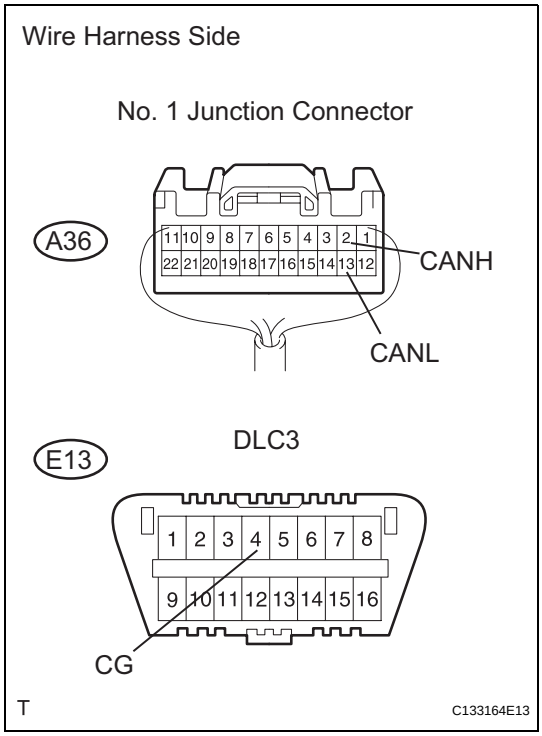
NEXT

11	CHECK CAN BUS LINE FOR SHORT TO GND (CENTER AIRBAG SENSOR ASSEMBLY)

(a) Disconnect the E45 center airbag sensor connector.
(b) Measure the resistance of the DLC3.

Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more



NG → REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO CENTER AIRBAG SENSOR ASSEMBLY (CANH, CANL)

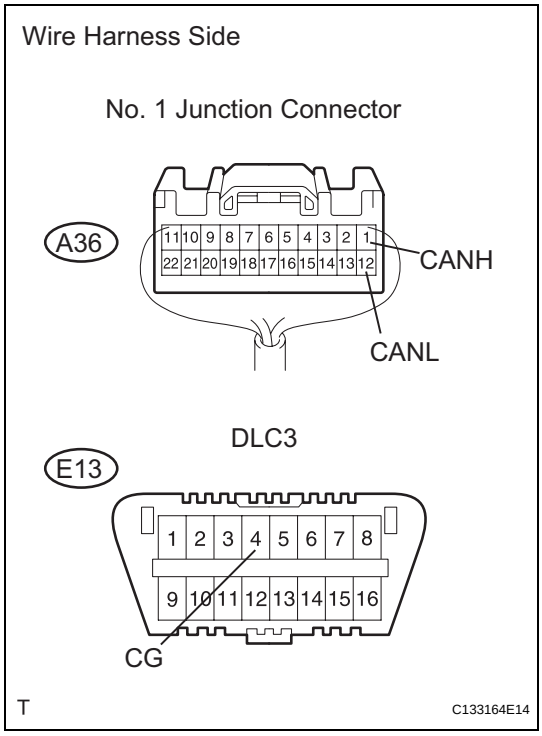
OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY

CA

12 CHECK CAN BUS LINE FOR SHORT TO GND (NO. 1 JUNCTION CONNECTOR - ECM)

(a) Disconnect the A36 No. 1 junction connector.
(b) Measure the resistance of the wire harness side connectors.



Standard resistance

Tester Connection	Condition	Specified Condition
A36-2 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
A36-13 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **Go to step 14**

OK

13 CHECK CAN BUS LINE FOR SHORT TO GND (NO. 1JUNCTION CONNECTOR - ABS AND TRACTION ACTUATOR)

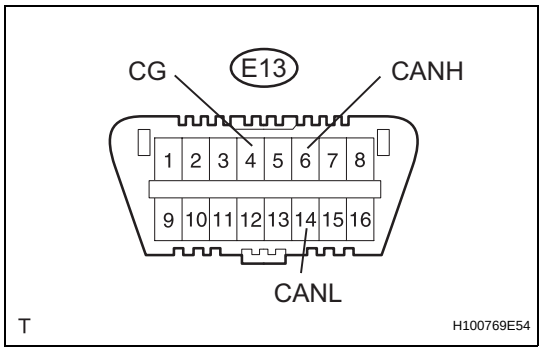
(a) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Condition	Specified Condition
A36-1 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
A36-12 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **Go to step 16**

OK



REPAIR OR REPLACE CAN MAIN WIRE AND CONNECTOR (NO. 1 JUNCTION CONNECTOR - NO. 2 JUNCTION CONNECTOR)

14	CONNECT CONNECTOR

(a) Reconnect the A36 No. 1 junction connector.

NEXT

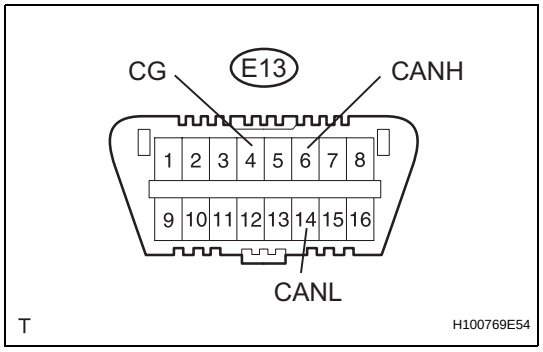
15	CHECK CAN BUS LINE FOR SHORT TO GND (ECM)

(a) Disconnect the A9 ECM connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **REPAIR OR REPLACE CAN MAIN WIRE CONNECTED TO ECM (NO. 1 JUNCTION CONNECTOR - ECM)**

OK



REPLACE ECM

16	CONNECT CONNECTOR

(a) Reconnect the A36 No. 1 junction connector.

NEXT

17	CHECK CAN BUS LINE FOR SHORT TO GND (ABS AND TRACTION ACTUATOR)

(a) Disconnect the A19 ABS and traction actuator (skid control ECU) connector.
(b) Measure the resistance of the DLC3.
Standard resistance

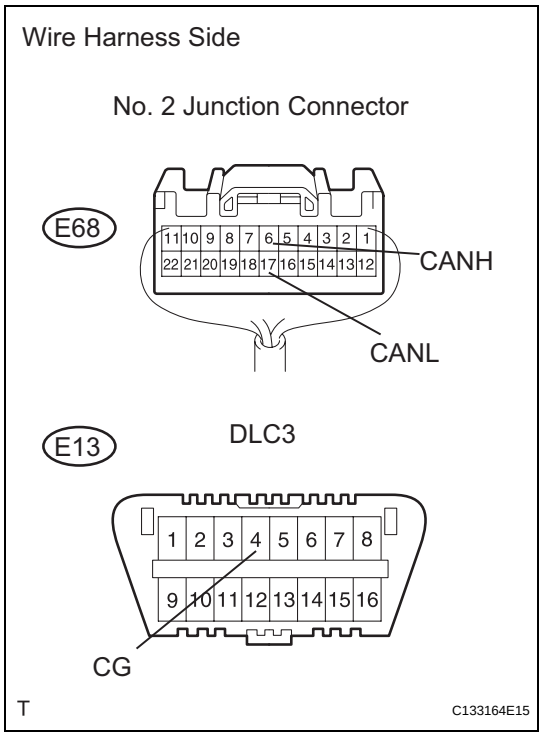
Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

CA

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO ABS AND TRACTION ACTUATOR (CANH, CANL)**

OK

REPLACE ABS AND TRACTION ACTUATOR (SKID CONTROL ECU)



18	CONNECT CONNECTOR

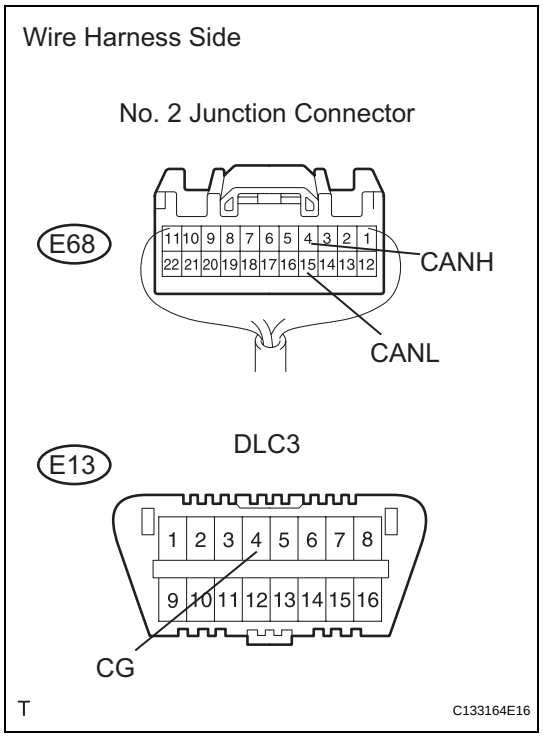
(a) Reconnect the E70 No. 3 junction connector.

NEXT

19	CHECK CAN BUS LINE FOR SHORT TO GND (NO. 2 JUNCTION CONNECTOR - YAW RATE SENSOR)

CA

(a) Disconnect the E68 No. 2 junction connector.
(b) Measure the resistance of the wire harness side connectors.



Standard resistance

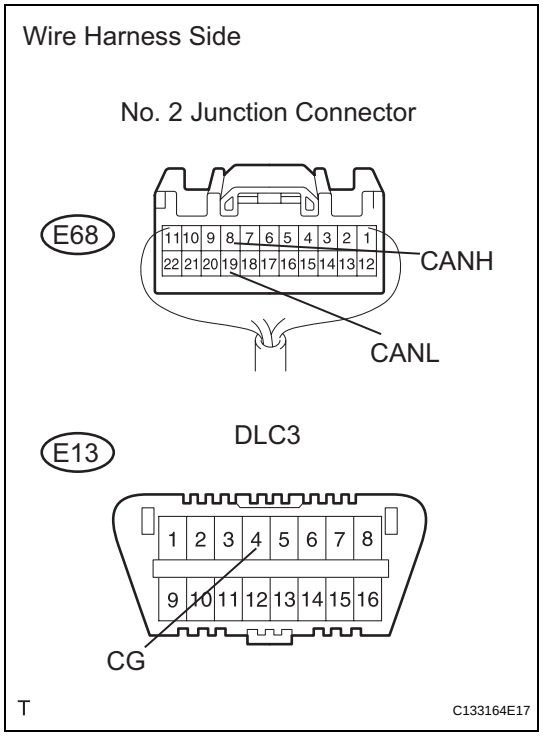
Tester Connection	Condition	Specified Condition
E68-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E68-17 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **Go to step 24**

OK

20 CHECK CAN BUS LINE FOR SHORT TO GND (NO. 2 JUNCTION CONNECTOR - POWER STEERING ECU)

(a) Measure the resistance of the wire harness side connectors.



Standard resistance

Tester Connection	Condition	Specified Condition
E68-4 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E68-15 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

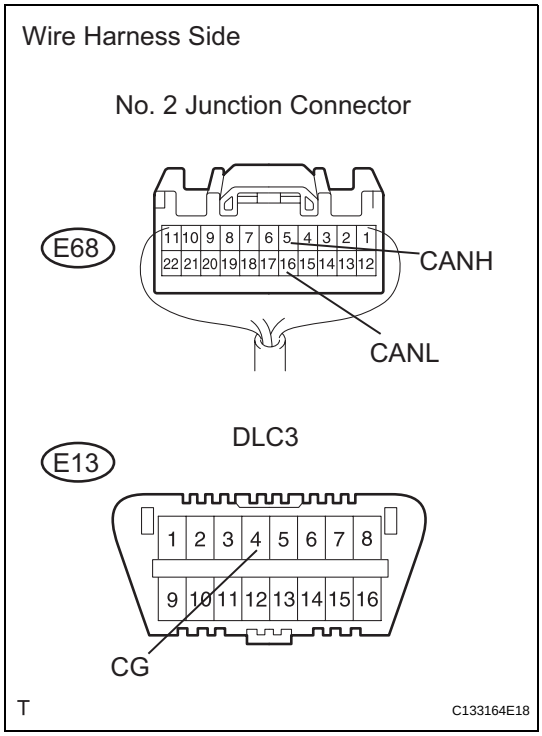
NG → **Go to step 26**

OK

21 CHECK CAN BUS LINE FOR SHORT TO GND (NO. 2 JUNCTION CONNECTOR - MAIN BODY ECU)

(a) Measure the resistance of the wire harness side connectors.

Standard resistance



Tester Connection	Condition	Specified Condition
E68-8 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E68-19 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **Go to step 28**

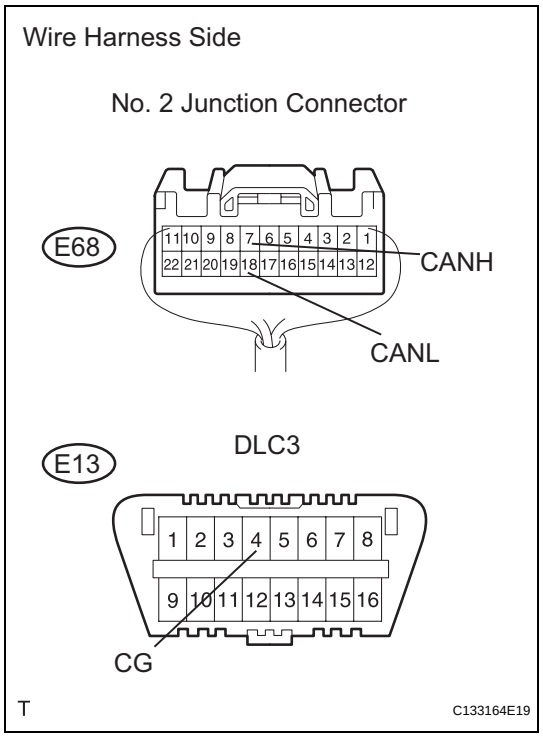
CA

OK

22	CHECK CAN BUS LINE FOR SHORT TO GND (NO. 2 JUNCTION CONNECTOR - AIR CONDITIONING AMPLIFIER)

(a) Measure the resistance of the wire harness side connectors.

Standard resistance



Tester Connection	Condition	Specified Condition
E68-5 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E68-16 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → Go to step 30

OK

CA

23	CHECK CAN BUS LINE FOR SHORT TO GND (NO. 2 JUNCTION CONNECTOR - STEERING ANGLE SENSOR)

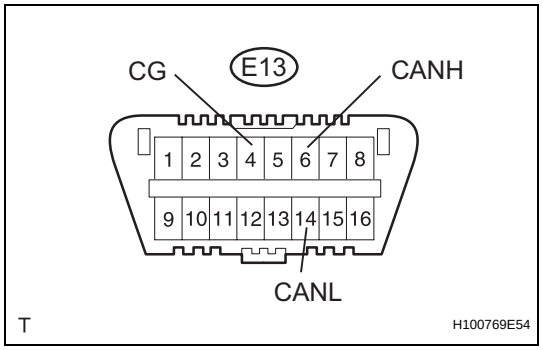
(a) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Condition	Specified Condition
E68-7 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E68-18 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **Go to step 32**

OK



REPAIR OR REPLACE CAN MAIN WIRE AND CONNECTOR (NO. 2 JUNCTION CONNECTOR - NO. 3 JUNCTION CONNECTOR)

24	CONNECT CONNECTOR

(a) Reconnect the E68 No. 2 junction connector.

NEXT

25	CHECK CAN BUS LINE FOR SHORT TO GND (YAW RATE SENSOR)

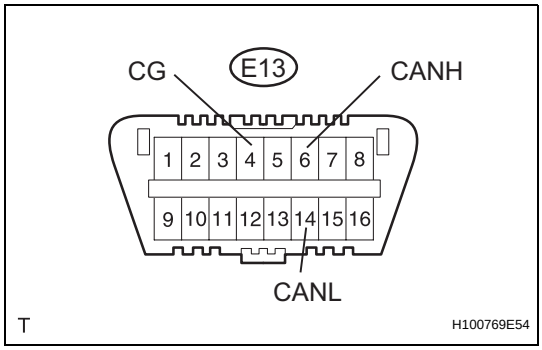
(a) Disconnect the K6 yaw rate sensor connector.
(b) Measure the resistance of the DLC3.

Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

OK → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO YAW RATE SENSOR (CANH, CANL)**

OK



REPLACE YAW RATE SENSOR

26 CONNECT CONNECTOR

(a) Reconnect the E68 No. 2 junction connector.

NEXT

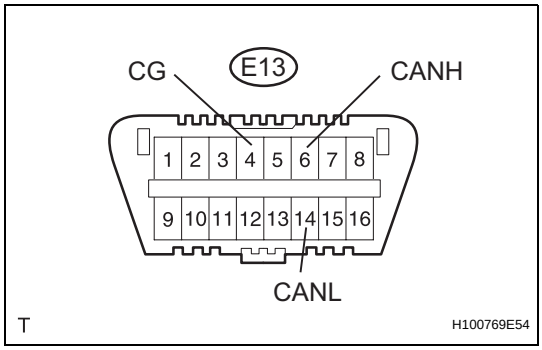
27 CHECK CAN BUS LINE FOR SHORT TO GND (POWER STEERING ECU)

(a) Disconnect the E18 power steering ECU connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

OK → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO POWER STEERING ECU (CANH, CANL)**

OK



REPLACE POWER STEERING ECU

28 CONNECT CONNECTOR

(a) Reconnect the E68 No. 2 junction connector.

NEXT

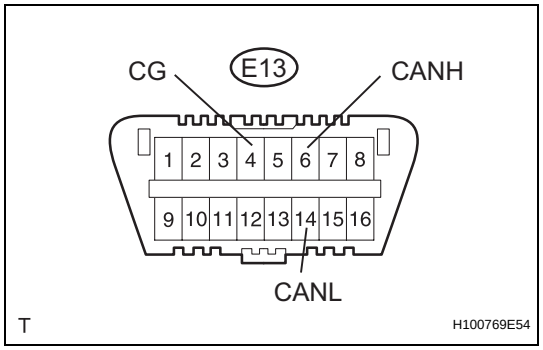
29 CHECK CAN BUS LINE FOR SHORT TO GND (MAIN BODY ECU)

(a) Disconnect the E17 main body ECU connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

OK → REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO MAIN BODY ECU (CANH, CANL)

OK



REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

30 CONNECT CONNECTOR

(a) Reconnect the E68 No. 2 junction connector.

NEXT

31 CHECK CAN BUS LINE FOR SHORT TO GND (AIR CONDITIONING AMPLIFIER)

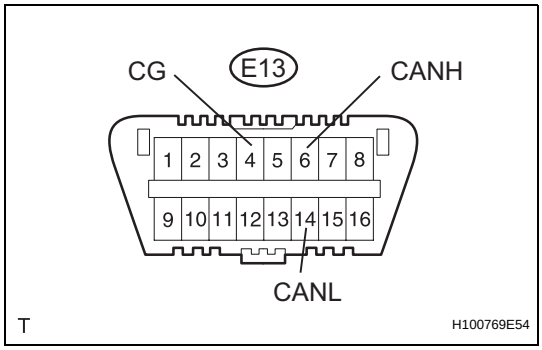
(a) Disconnect the E37*1 or E36*2 air conditioning amplifier connector.
HINT:
- *1: for Automatic air conditioning system.
- *2: for Manual air conditioning system.

(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

OK → REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO AIR CONDITIONING AMPLIFIER (CANH, CANL)

OK



REPLACE AIR CONDITIONING AMPLIFIER

32 CONNECT CONNECTOR

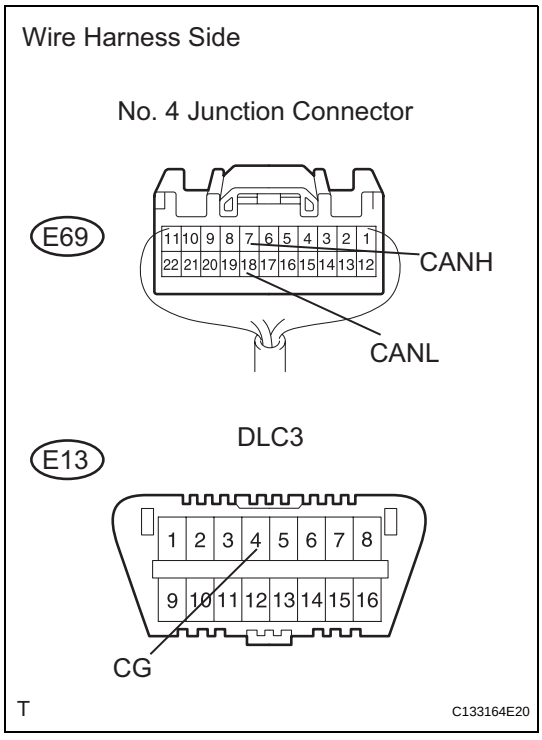
(a) Reconnect the 68 No. 2 junction connector.

NEXT

33	CHECK CAN BUS LINE FOR SHORT TO GND (STEERING ANGLE SENSOR)

(a) Disconnect the E11 steering sensor connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more



OK → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO STEERING ANGLE SENSOR (CANH, CANL)**

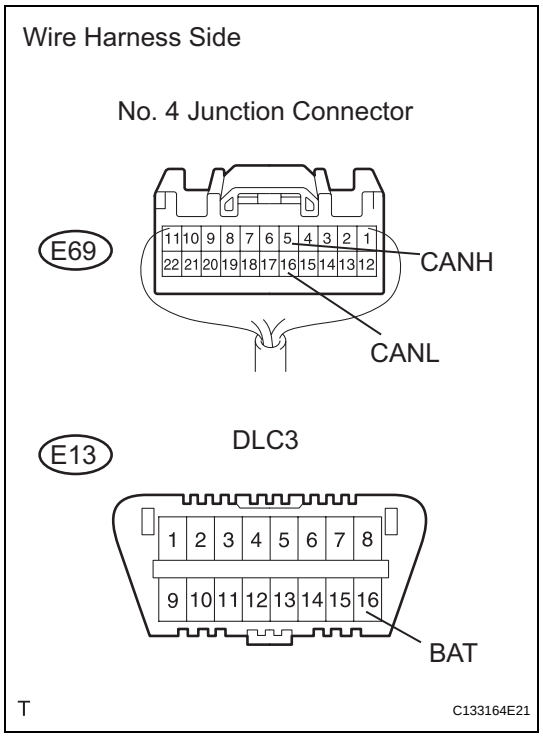
OK

CA

REPLACE STEERING ANGLE SENSOR

34	CHECK CAN BUS LINE FOR SHORT TO GND (NO. 4 JUNCTION CONNECTOR - 4WD CONTROL ECU)

NOTICE:
For vehicles without 4WD, go to "CHECK CAN BUS LINE FOR SHORT TO GND (NO. 4 JUNCTION CONNECTOR - COMBINATION METER ECU)".



(a) Measure the resistance of the wire harness side connectors.
Standard resistance

Tester Connection	Condition	Specified Condition
E69-7(CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E69-18 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **Go to step 36**

OK

35	CHECK CAN BUS LINE FOR SHORT TO GND (NO. 4 JUNCTION CONNECTOR - COMBINATION METER ECU)

(a) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Condition	Specified Condition
E69-5(CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E69-16 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

OK

36	CONNECT CONNECTOR

(a) Reconnect the E69 No. 4 junction connector.

NEXT

37	CHECK CAN BUS LINE FOR SHORT TO GND (4WD CONTROL ECU)

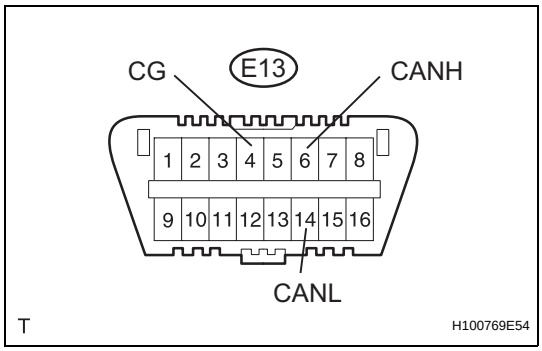
(a) Disconnect the E57 4WD control ECU connector.
(b) Measure the resistance of the DLC3.

Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO 4WD CONTROL ECU (CANH, CANL)**

OK



REPLACE 4WD CONTROL ECU

38	CONNECT CONNECTOR

(a) Reconnect the E69 No. 4 junction connector.

NEXT

39	CHECK CAN BUS LINE FOR SHORT TO GND (COMBINATION METER ECU)

(a) Disconnect the E19 combination meter ECU connector.
(b) Measure the resistance of the DLC3.

Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

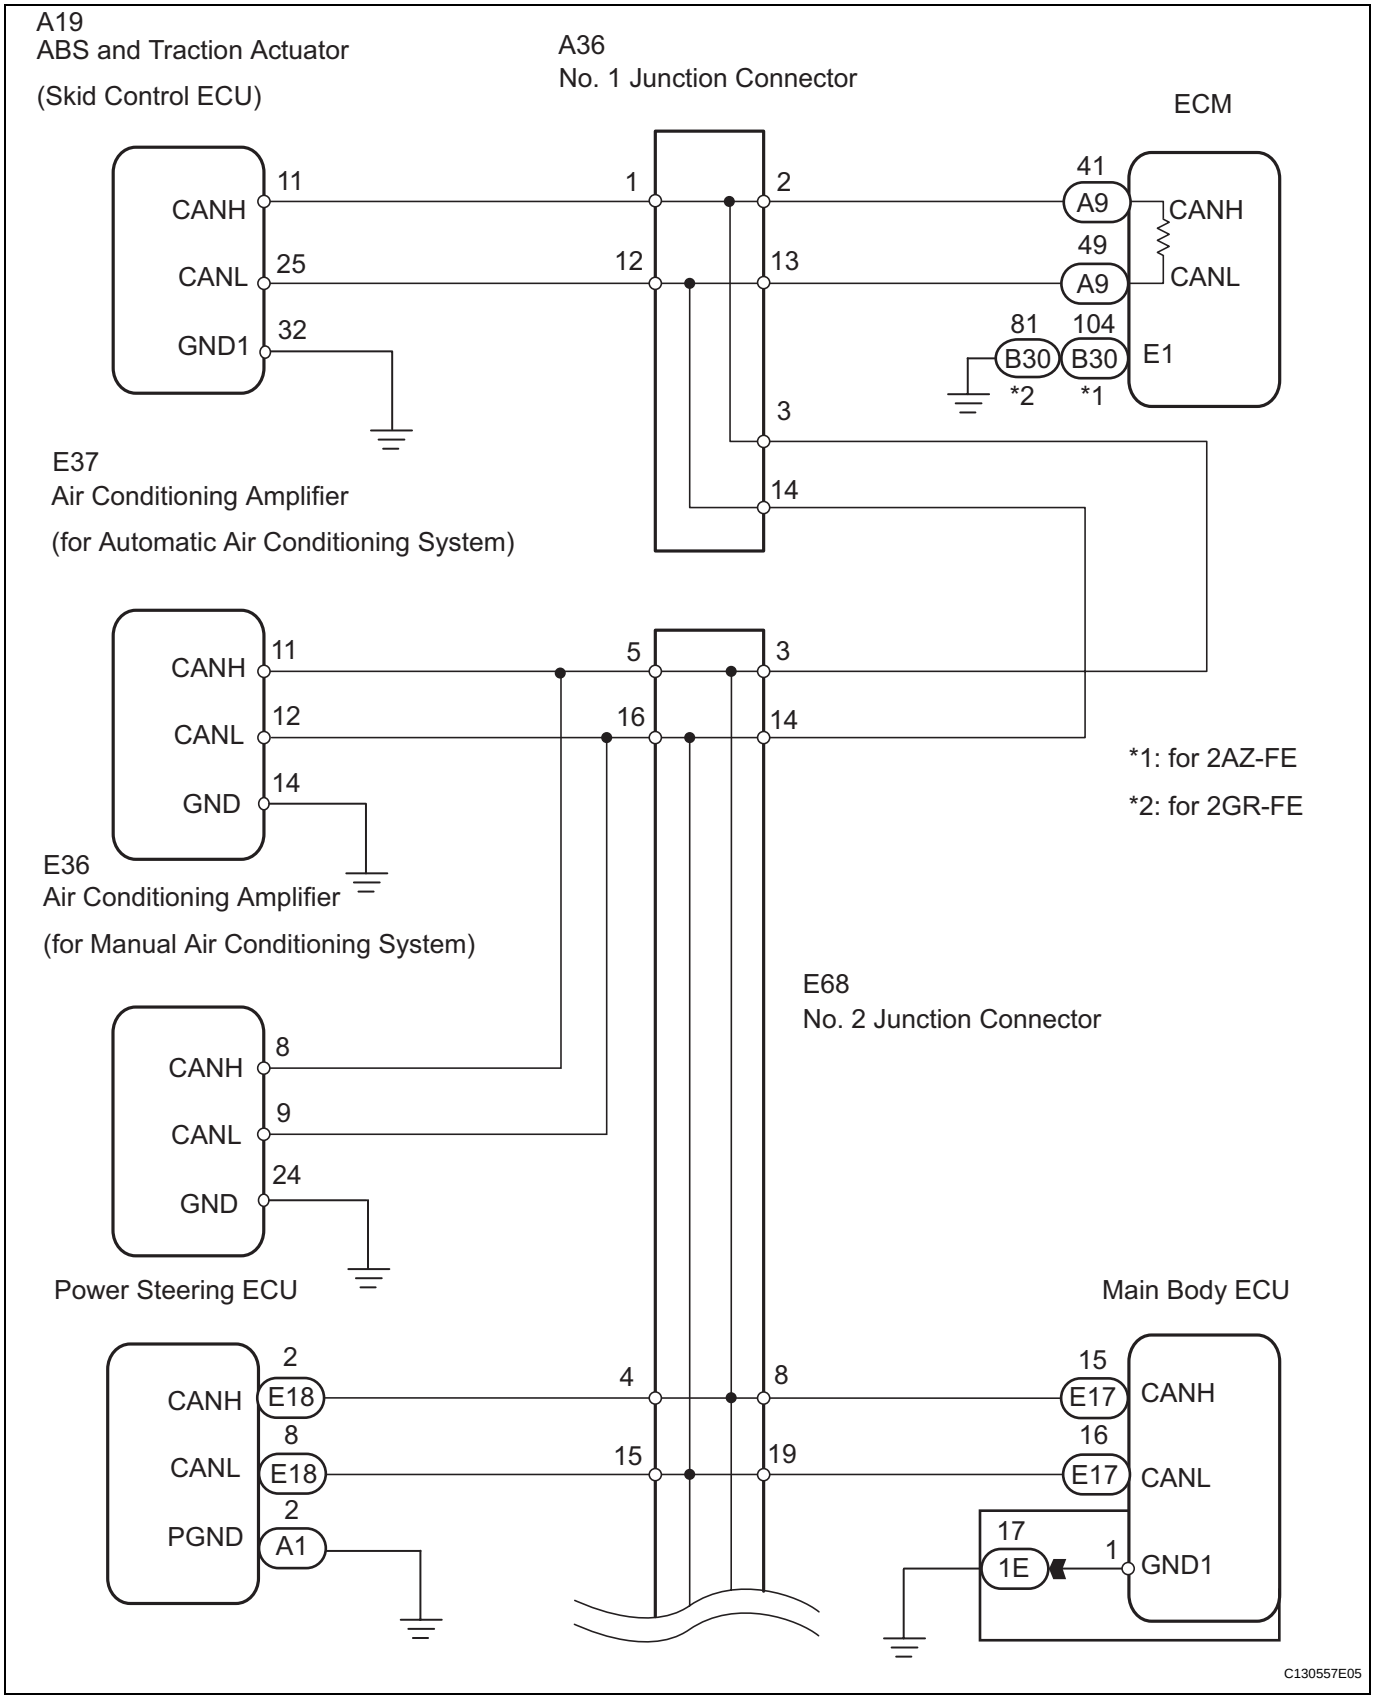
NG → **REPAIR OR REPLACE CAN MAIN WIRE CONNECTED TO COMBINATION METER ECU (CANH, CANL)**

OK

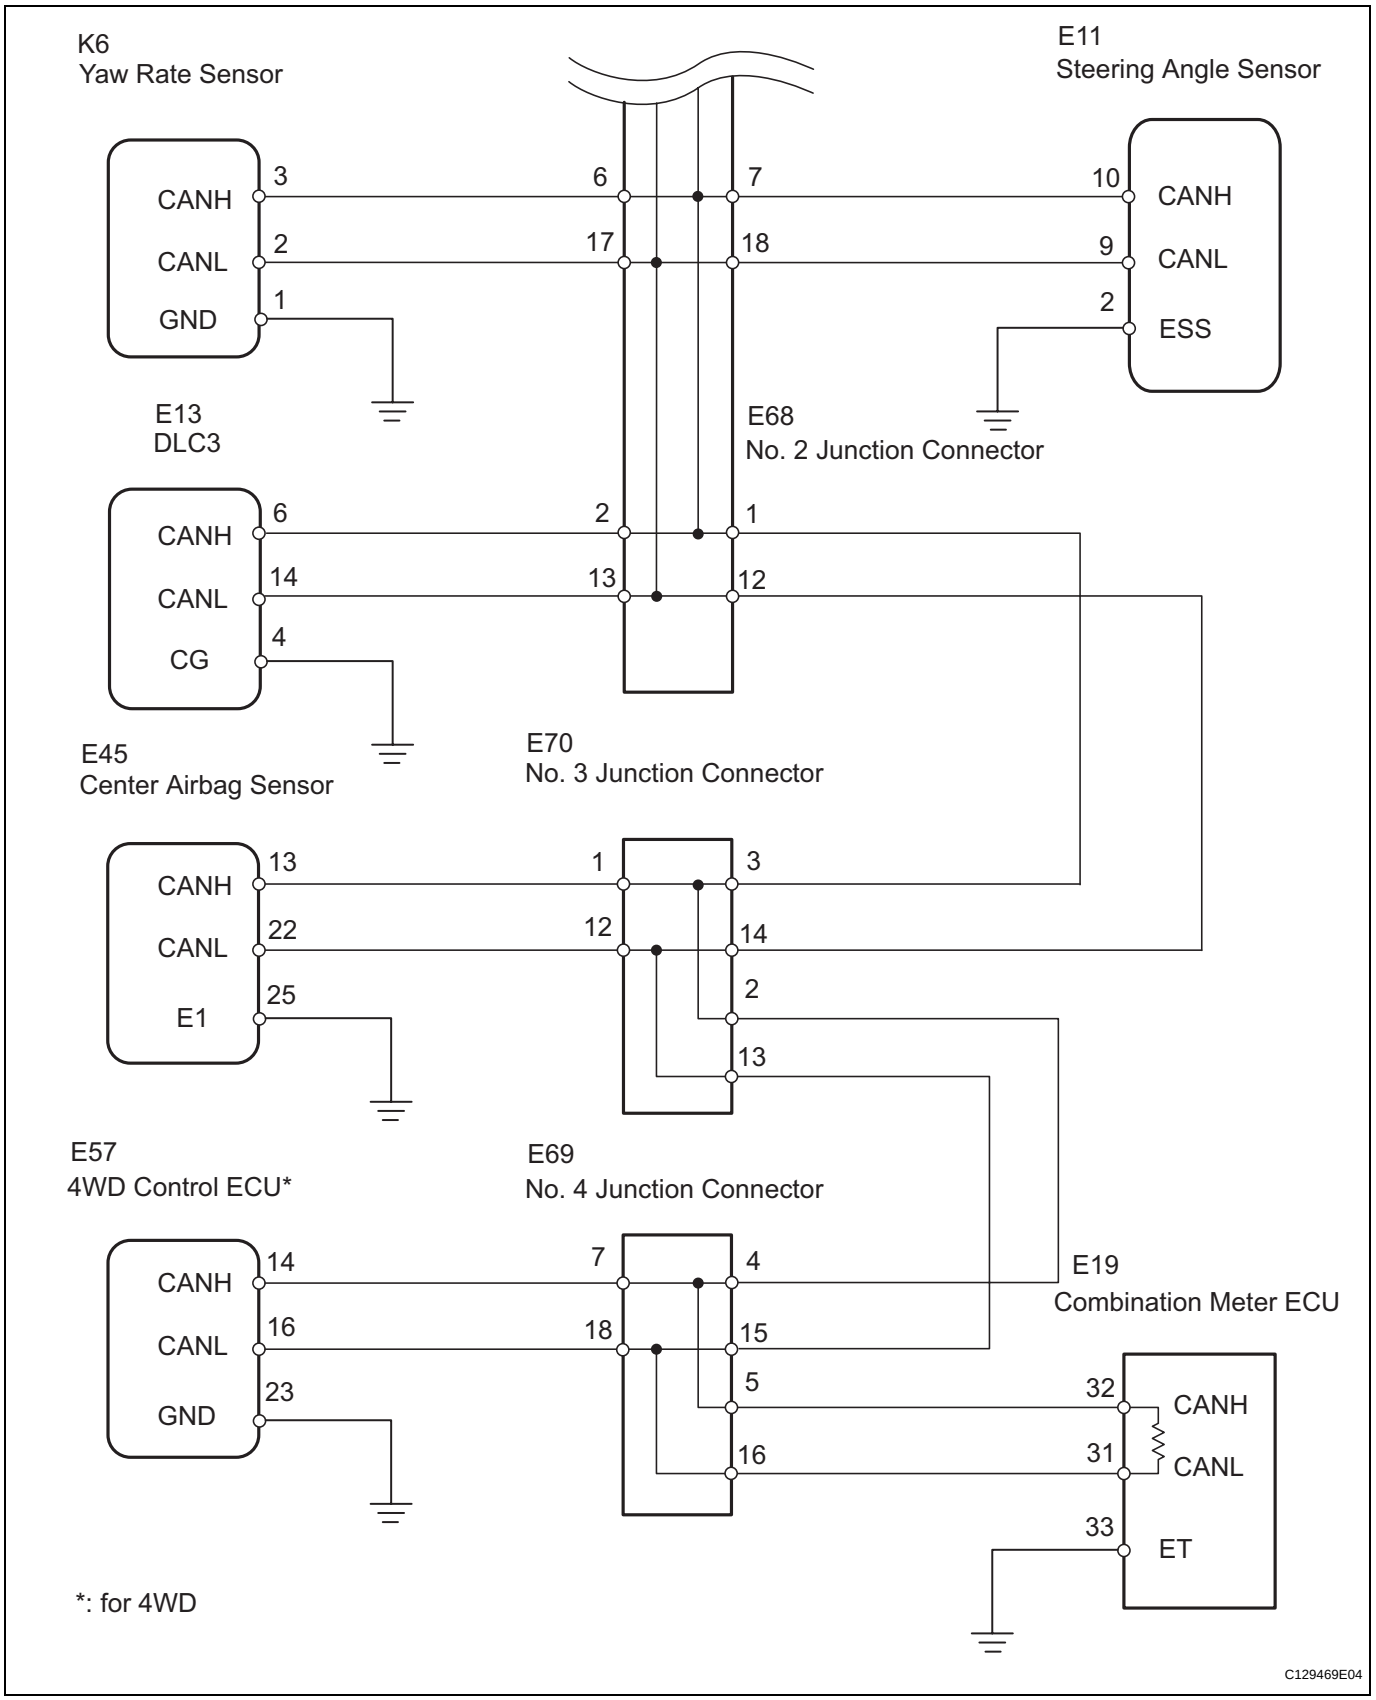
REPLACE COMBINATION METER ECU

CA

Short to GND in CAN Bus Line



(2006/01-)



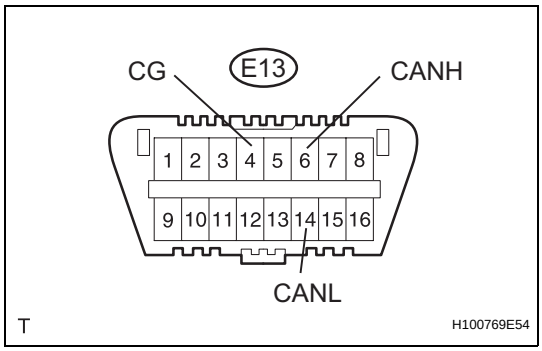
DESCRIPTION

There may be a short circuit between the CAN bus line and GND when there is resistance between terminals 6 (CANH) and 4 (CG) or terminals 14 (CANL) and 4 (CG) of the DLC3.

Symptom	Trouble Area
There is resistance between terminals 6 (CANH) and 4 (CG) or terminals 14 (CANL) and 4 (CG) of DLC3.	• Short to GND • ABS and traction actuator (skid control ECU) • Power steering ECU • Steering angle sensor • Yaw rate sensor • ECM • Center airbag sensor • Air conditioning amplifier • Combination meter ECU • Instrument panel junction block (main body ECU) • 4WD control ECU

WIRING DIAGRAM

INSPECTION PROCEDURE



NOTICE:

- **Turn the ignition switch OFF before measuring the resistances of the main wire and branch wire.**

- **After the ignition switch is turned OFF, check that the key reminder warning system and light reminder warning system are not in operation.**
- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

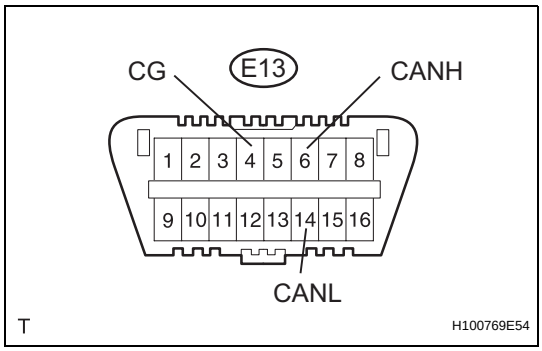
HINT:
Operating the ignition switch, any switches or any doors triggers related ECU and sensor communication with the CAN, which causes resistance variation.

1 CHECK CAN BUS LINE FOR SHORT TO GND (DLC3 BRANCH WIRE)

(a) Disconnect the E68 No. 2 junction connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO DLC3 (CANH, CANL)**



OK

2 CONNECT CONNECTOR

(a) Reconnect the E68 No. 2 junction connector.

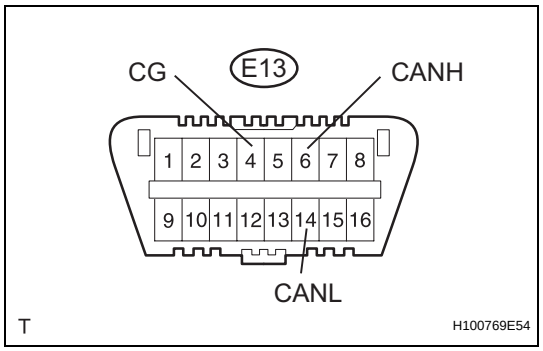
NEXT

3 CHECK CAN BUS LINE FOR SHORT TO GND (NO. 1 JUNCTION CONNECTOR)

(a) Disconnect the A36 No. 1 junction connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

OK → **Go to step 12**



NG

4 CONNECT CONNECTOR

(a) Reconnect the A36 No. 1 junction connector.

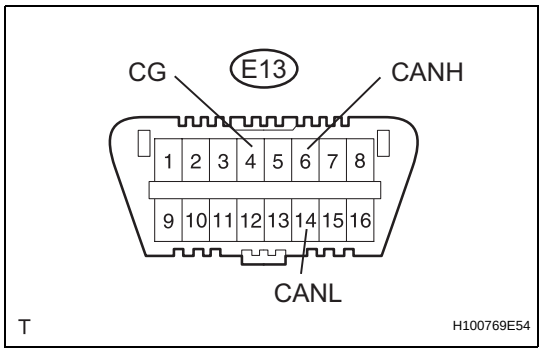
NEXT

5	CHECK CAN BUS LINE FOR SHORT TO GND (NO. 3 JUNCTION CONNECTOR, NO. 4 JUNCTION CONNECTOR SIDE)

(a) Disconnect the E70 No. 3 junction connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **Go to step 18**



OK

6	CONNECT CONNECTOR

(a) Reconnect the E70 No. 3 junction connector.

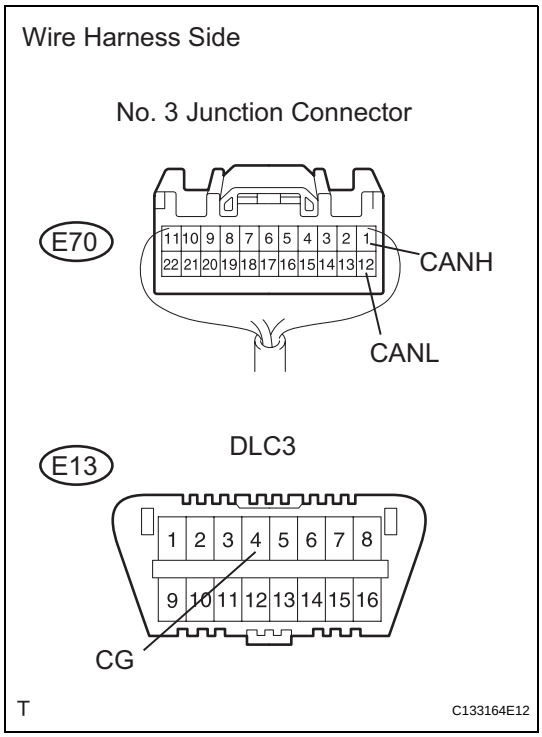
NEXT

7	CHECK CAN BUS LINE FOR SHORT TO GND (NO. 4 JUNCTION CONNECTOR SIDE)

(a) Disconnect the E69 No. 4 junction connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

OK → **Go to step 34**



NG

8	CONNECT CONNECTOR

(a) Reconnect the E69 No. 4 junction connector.

NEXT

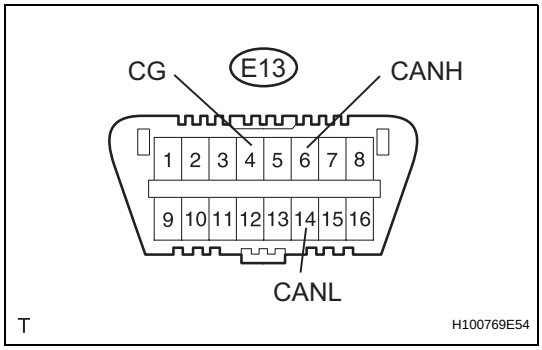
9	CHECK CAN BUS LINE FOR SHORT TO GND (NO. 3 JUNCTION CONNECTOR - CENTER AIRBAG SENSOR ASSEMBLY)

(a) Disconnect the E70 No. 3 junction connector.
(b) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Condition	Specified Condition
E70-1 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E70-12 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

OK → **REPAIR OR REPLACE CAN MAIN WIRE AND CONNECTOR (NO. 3 JUNCTION CONNECTOR - NO. 4 JUNCTION CONNECTOR)**



NG

10	CONNECT CONNECTOR

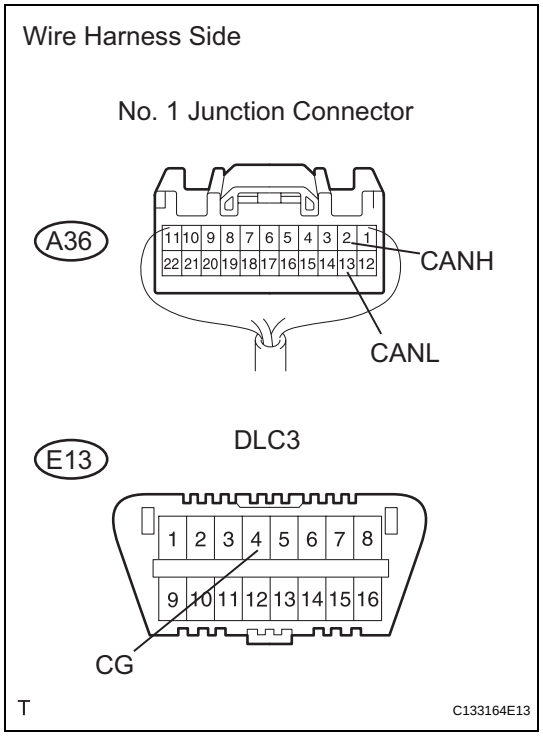
(a) Reconnect the E70 No. 3 junction connector.

NEXT

11	CHECK CAN BUS LINE FOR SHORT TO GND (CENTER AIRBAG SENSOR ASSEMBLY)

(a) Disconnect the E45 center airbag sensor connector.
(b) Measure the resistance of the DLC3.

Standard resistance



Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

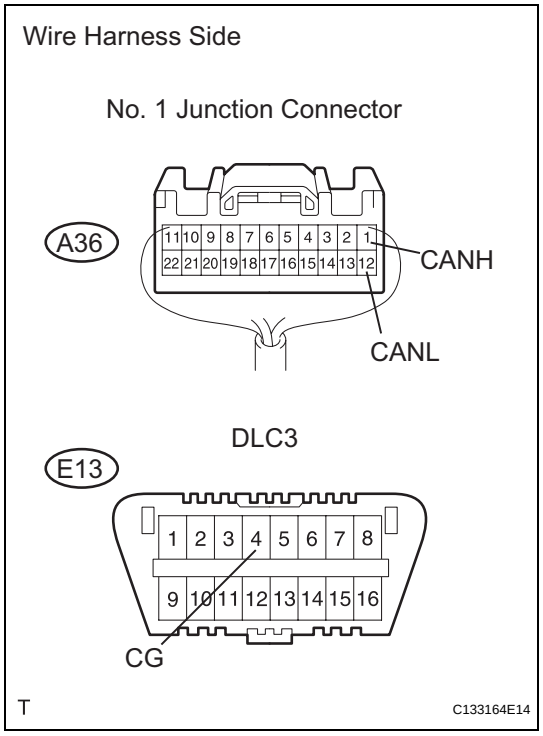
NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO CENTER AIRBAG SENSOR ASSEMBLY (CANH, CANL)**

OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY

12 CHECK CAN BUS LINE FOR SHORT TO GND (NO. 1 JUNCTION CONNECTOR - ECM)

(a) Disconnect the A36 No. 1 junction connector.
(b) Measure the resistance of the wire harness side connectors.



Standard resistance

Tester Connection	Condition	Specified Condition
A36-2 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
A36-13 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **Go to step 14**

OK

13 CHECK CAN BUS LINE FOR SHORT TO GND (NO. 1 JUNCTION CONNECTOR - ABS AND TRACTION ACTUATOR)

(a) Measure the resistance of the wire harness side connectors.

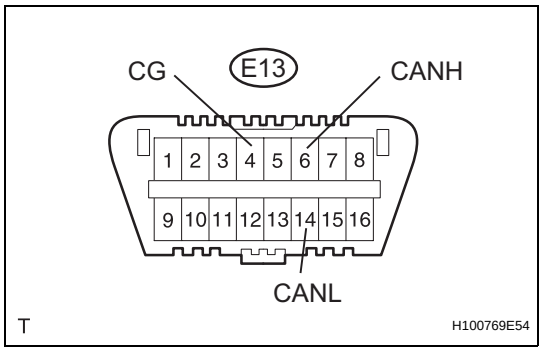
Standard resistance

Tester Connection	Condition	Specified Condition
A36-1 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
A36-12 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **Go to step 16**

CA

OK



REPAIR OR REPLACE CAN MAIN WIRE AND CONNECTOR (NO. 1 JUNCTION CONNECTOR - NO. 2 JUNCTION CONNECTOR)

14	CONNECT CONNECTOR

(a) Reconnect the A36 No. 1 junction connector.

NEXT

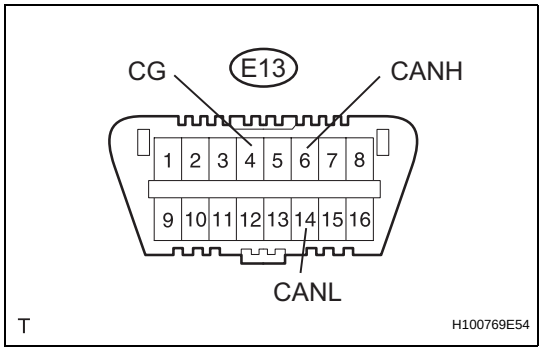
15	CHECK CAN BUS LINE FOR SHORT TO GND (ECM)

(a) Disconnect the A9 ECM connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **REPAIR OR REPLACE CAN MAIN WIRE CONNECTED TO ECM (NO. 1 JUNCTION CONNECTOR - ECM)**

OK



REPLACE ECM

16	CONNECT CONNECTOR

(a) Reconnect the A36 No. 1 junction connector.

NEXT

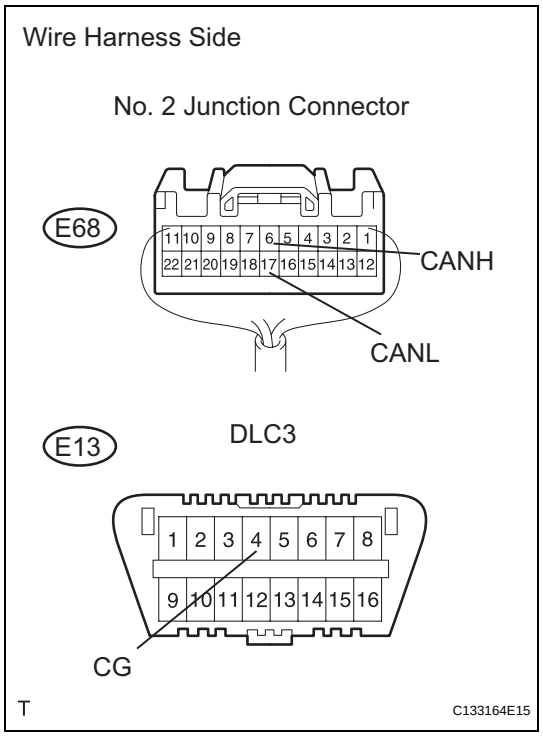
17	CHECK CAN BUS LINE FOR SHORT TO GND (ABS AND TRACTION ACTUATOR)

(a) Disconnect the A19 ABS and traction actuator (skid control ECU) connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO ABS AND TRACTION ACTUATOR (CANH, CANL)**

OK



REPLACE ABS AND TRACTION ACTUATOR (SKID CONTROL ECU)

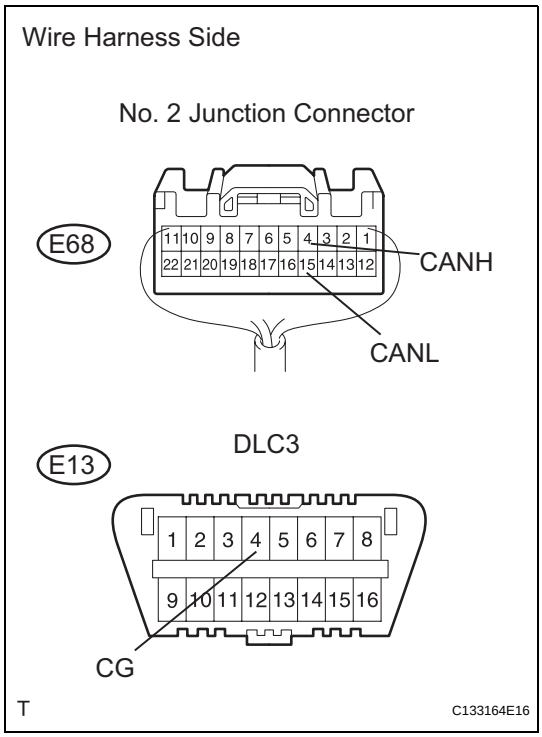
18	CONNECT CONNECTOR

(a) Reconnect the E70 No. 3 junction connector.

NEXT

19	CHECK CAN BUS LINE FOR SHORT TO GND (NO. 2 JUNCTION CONNECTOR - YAW RATE SENSOR)

(a) Disconnect the E68 No. 2 junction connector.
(b) Measure the resistance of the wire harness side connectors.



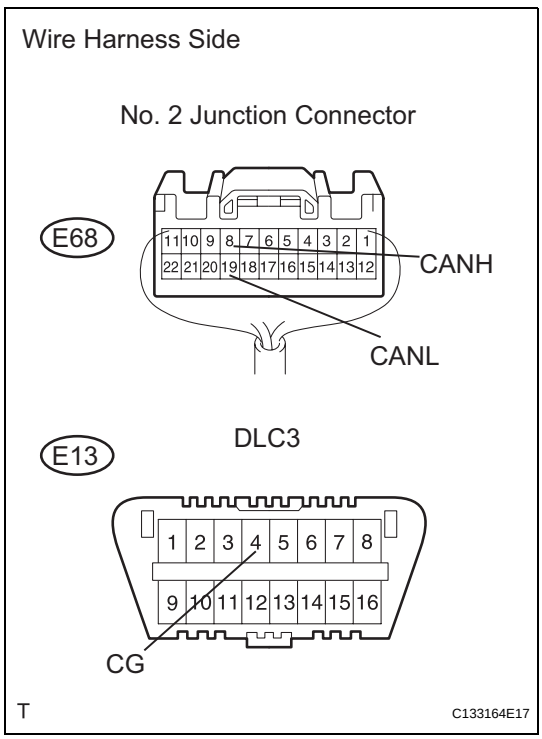
Standard resistance

Tester Connection	Condition	Specified Condition
E68-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E68-17 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **Go to step 24**

OK

20	CHECK CAN BUS LINE FOR SHORT TO GND (NO. 2 JUNCTION CONNECTOR - POWER STEERING ECU)



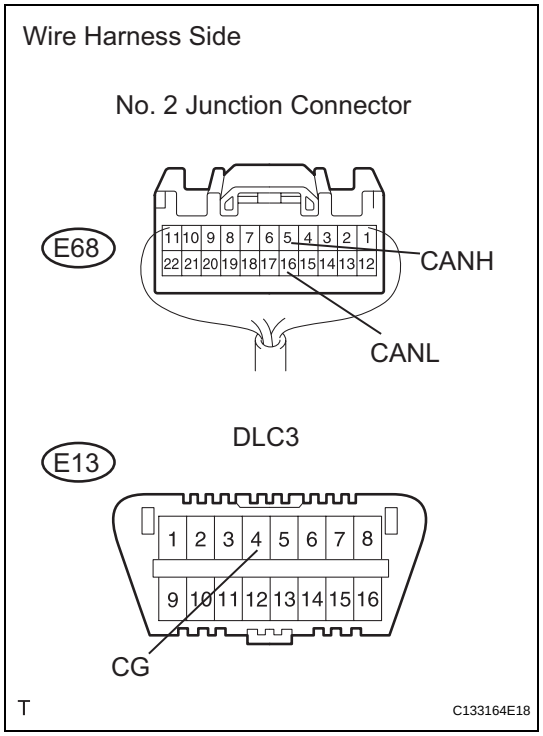
(a) Measure the resistance of the wire harness side connectors.
Standard resistance

Tester Connection	Condition	Specified Condition
E68-4 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E68-15 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **Go to step 26**

OK

21	CHECK CAN BUS LINE FOR SHORT TO GND (NO. 2 JUNCTION CONNECTOR - MAIN BODY ECU)



(a) Measure the resistance of the wire harness side connectors.
Standard resistance

Tester Connection	Condition	Specified Condition
E68-8 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E68-19 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

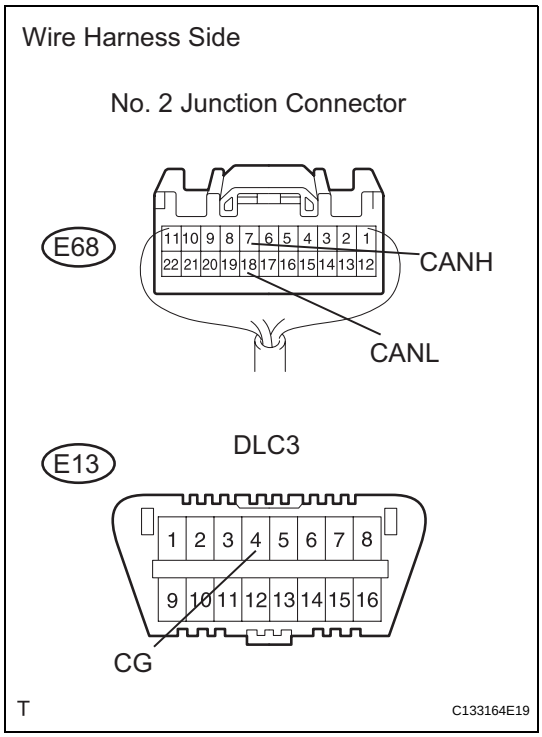
NG → **Go to step 28**

OK

22	CHECK CAN BUS LINE FOR SHORT TO GND (NO. 2 JUNCTION CONNECTOR - AIR CONDITIONING AMPLIFIER)

(a) Measure the resistance of the wire harness side connectors.

Standard resistance



Tester Connection	Condition	Specified Condition
E68-5 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E68-16 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → Go to step 30

OK

CA

23	CHECK CAN BUS LINE FOR SHORT TO GND (NO. 2 JUNCTION CONNECTOR - STEERING ANGLE SENSOR)

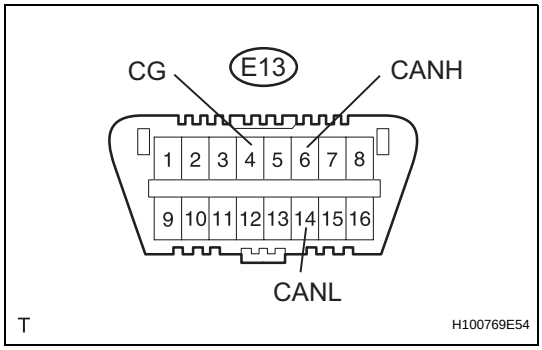
(a) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Condition	Specified Condition
E68-7 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E68-18 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **Go to step 32**

OK



REPAIR OR REPLACE CAN MAIN WIRE AND CONNECTOR (NO. 2 JUNCTION CONNECTOR - NO. 3 JUNCTION CONNECTOR)

24	CONNECT CONNECTOR

(a) Reconnect the E68 No. 2 junction connector.

NEXT

25	CHECK CAN BUS LINE FOR SHORT TO GND (YAW RATE SENSOR)

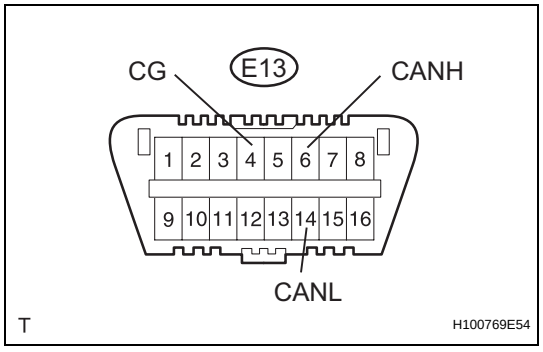
(a) Disconnect the K6 yaw rate sensor connector.
(b) Measure the resistance of the DLC3.

Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

OK → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO YAW RATE SENSOR (CANH, CANL)**

OK



REPLACE YAW RATE SENSOR

26 CONNECT CONNECTOR

(a) Reconnect the E68 No. 2 junction connector.

NEXT

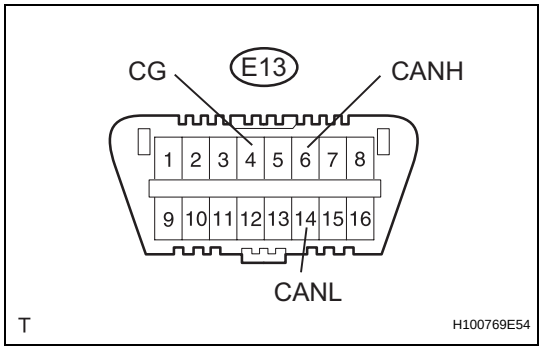
27 CHECK CAN BUS LINE FOR SHORT TO GND (POWER STEERING ECU)

(a) Disconnect the E18 power steering ECU connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

OK → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO POWER STEERING ECU (CANH, CANL)**

OK



REPLACE POWER STEERING ECU

28 CONNECT CONNECTOR

(a) Reconnect the E68 No. 2 junction connector.

NEXT

29 CHECK CAN BUS LINE FOR SHORT TO GND (MAIN BODY ECU)

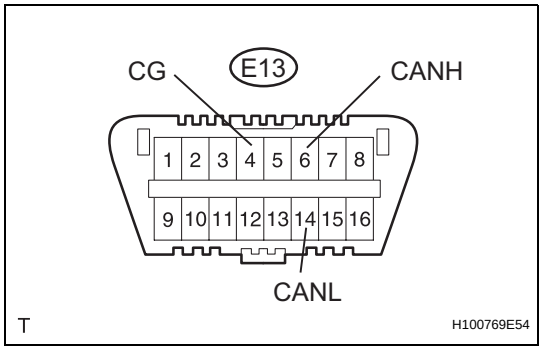
(a) Disconnect the E17 main body ECU connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

CA

OK → REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO MAIN BODY ECU (CANH, CANL)

OK



REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

30 CONNECT CONNECTOR

(a) Reconnect the E68 No. 2 junction connector.

NEXT

31 CHECK CAN BUS LINE FOR SHORT TO GND (AIR CONDITIONING AMPLIFIER)

(a) Disconnect the E37*1 or E36*2 air conditioning amplifier connector.
HINT:
*1: for Automatic air conditioning system
*2: for Manual air conditioning system

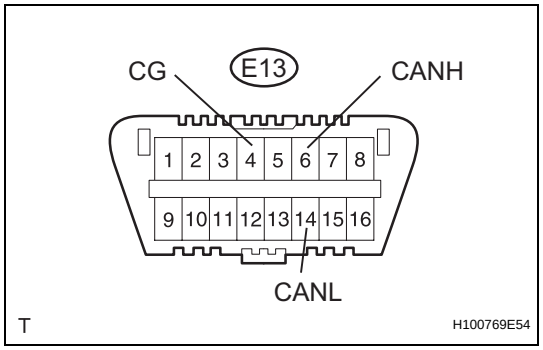
(b) Measure the resistance of the DLC3.

Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

OK → REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO AIR CONDITIONING AMPLIFIER (CANH, CANL)

OK



REPLACE AIR CONDITIONING AMPLIFIER

32 CONNECT CONNECTOR

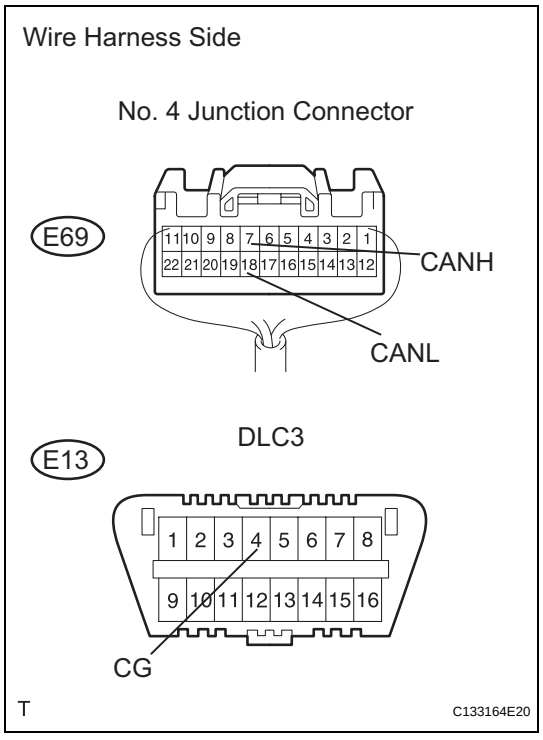
(a) Reconnect the E68 No. 2 junction connector.

NEXT

33 CHECK CAN BUS LINE FOR SHORT TO GND (STEERING ANGLE SENSOR)

(a) Disconnect the E11 steering sensor connector.
(b) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more



OK → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO STEERING ANGLE SENSOR (CANH, CANL)**

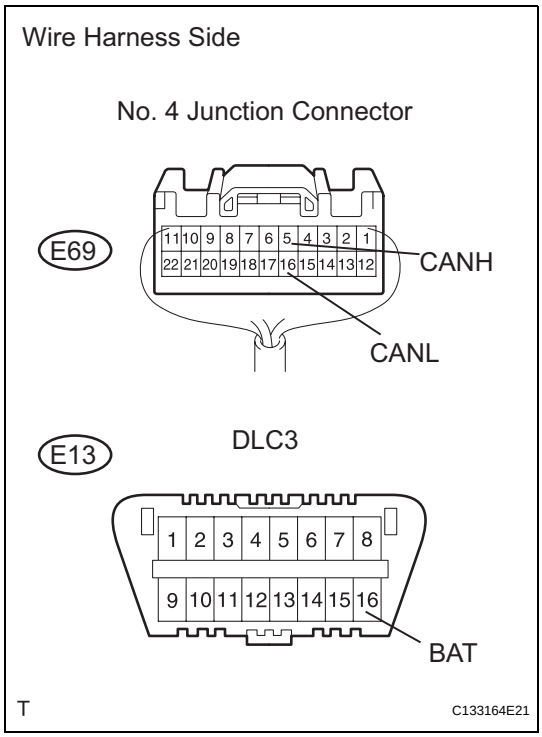
OK

REPLACE STEERING ANGLE SENSOR

34 CHECK CAN BUS LINE FOR SHORT TO GND (NO. 4 JUNCTION CONNECTOR - 4WD CONTROL ECU)

NOTICE:
For vehicles without 4WD, go to "CHECK CAN BUS LINE FOR SHORT TO GND (NO. 4 JUNCTION CONNECTOR - COMBINATION METER ECU)".

(a) Measure the resistance of the wire harness side connectors.
Standard resistance



Tester Connection	Condition	Specified Condition
E69-7(CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E69-18 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **Go to step 36**

OK

CA

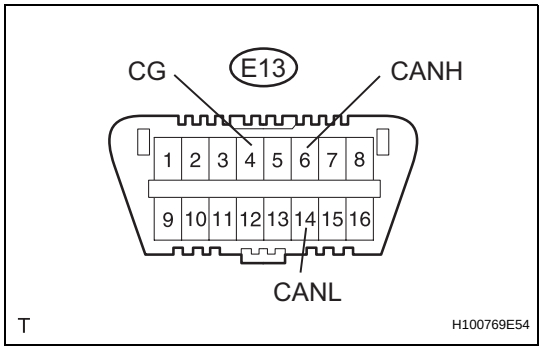
35	CHECK CAN BUS LINE FOR SHORT TO GND (NO. 4 JUNCTION CONNECTOR - COMBINATION METER ECU)

(a) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Condition	Specified Condition
E69-5(CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E69-16 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **Go to step 38**



OK

36	CONNECT CONNECTOR

(a) Reconnect the E69 No. 4 junction connector.

NEXT

37	CHECK CAN BUS LINE FOR SHORT TO GND (4WD CONTROL ECU)

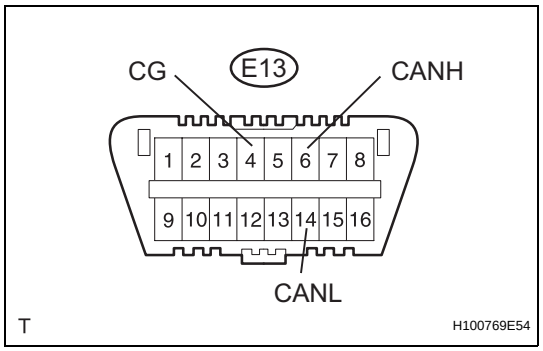
(a) Disconnect the E57 4WD control ECU connector.
(b) Measure the resistance of the DLC3.

Standard resistance

Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO 4WD CONTROL ECU (CANH, CANL)**

OK



REPLACE 4WD CONTROL ECU

38	CONNECT CONNECTOR

(a) Reconnect the E69 No. 4 junction connector.

NEXT

39	CHECK CAN BUS LINE FOR SHORT TO GND (COMBINATION METER ECU)

(a) Disconnect the E19 combination meter ECU connector.
(b) Measure the resistance of the DLC3.

Standard resistance

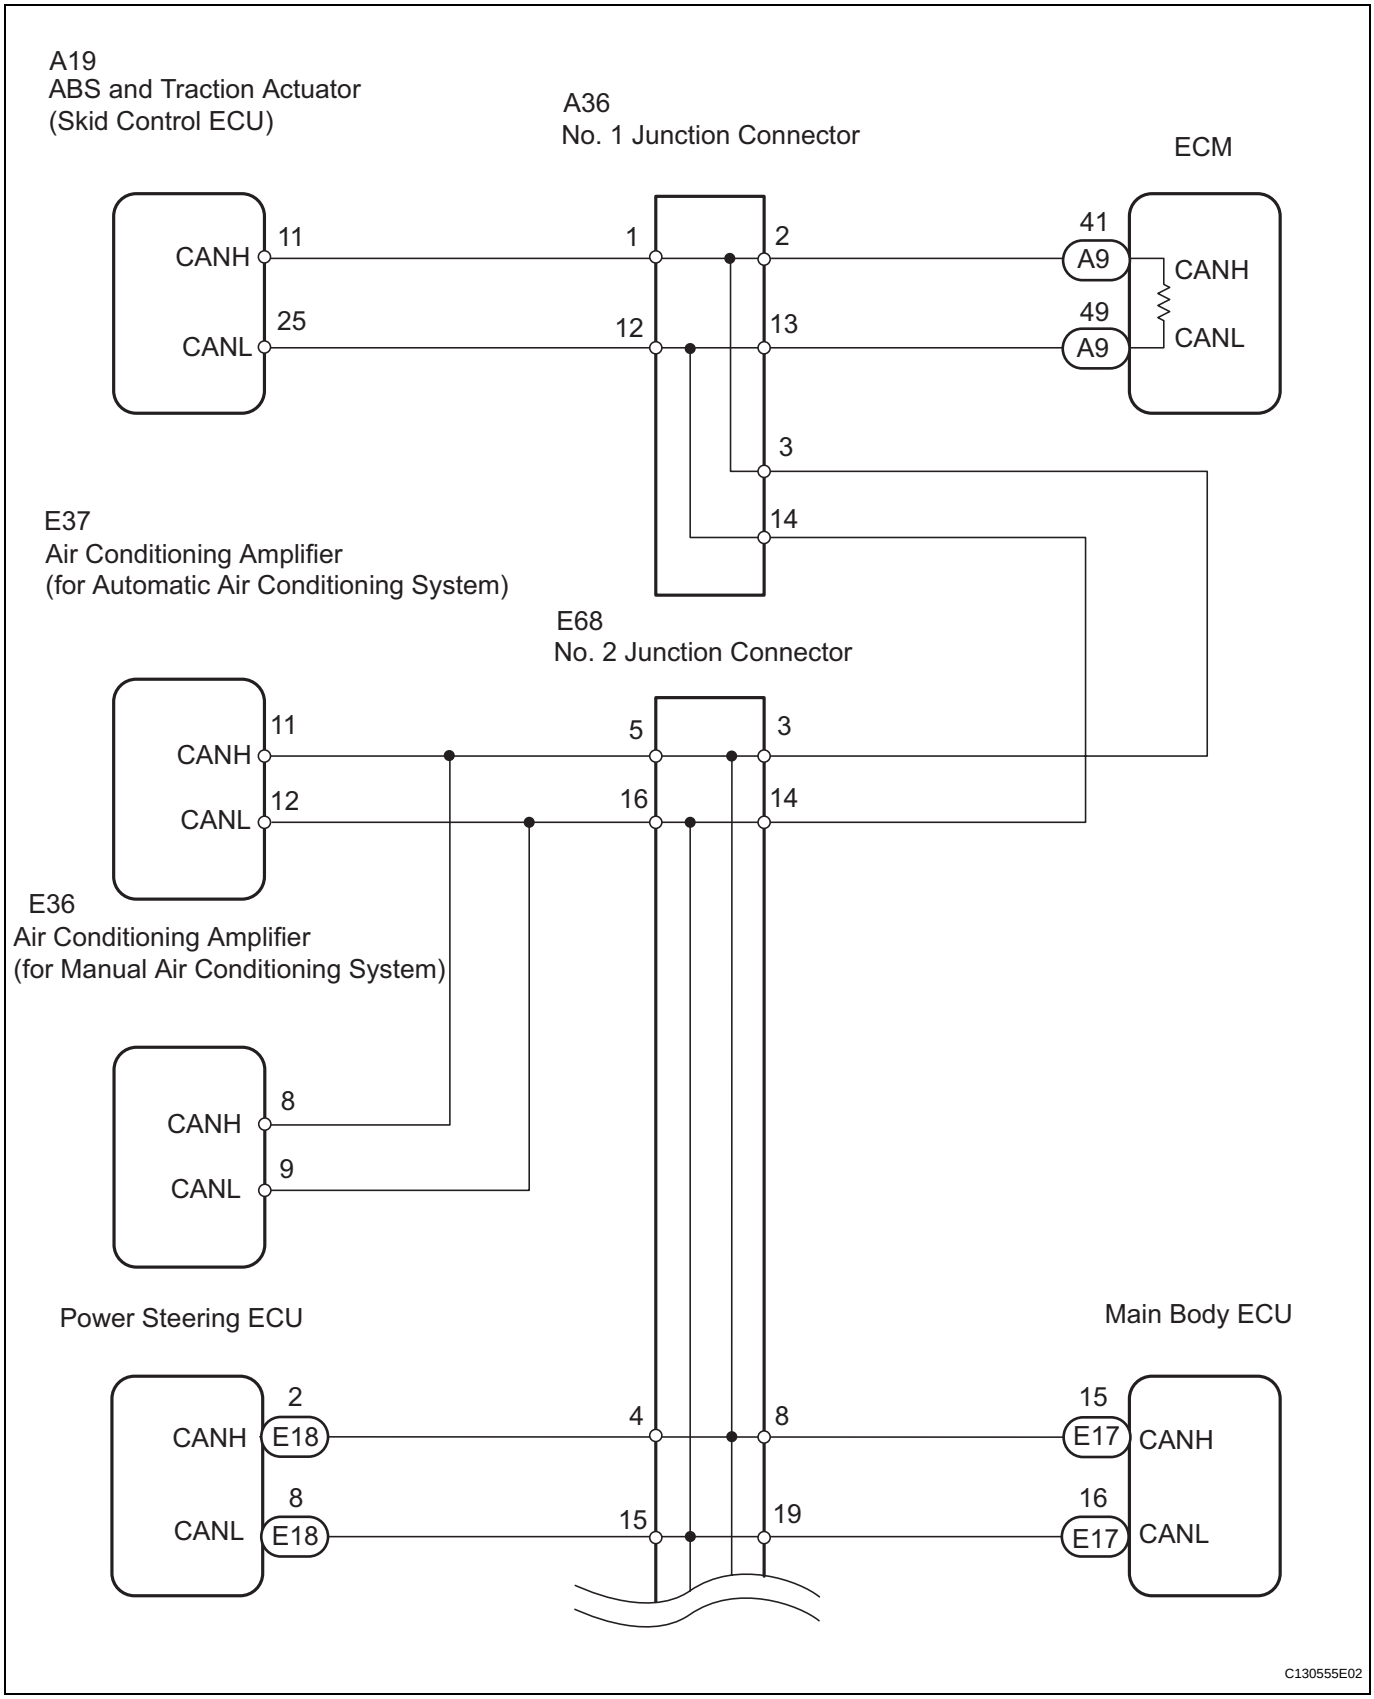
Tester Connection	Condition	Specified Condition
E13-6 (CANH) - E13-4 (CG)	Ignition switch OFF	200 Ω or more
E13-14 (CANL) - E13-4 (CG)	Ignition switch OFF	200 Ω or more

NG → **REPAIR OR REPLACE CAN MAIN WIRE CONNECTED TO COMBINATION METER ECU (CANH, CANL)**

OK

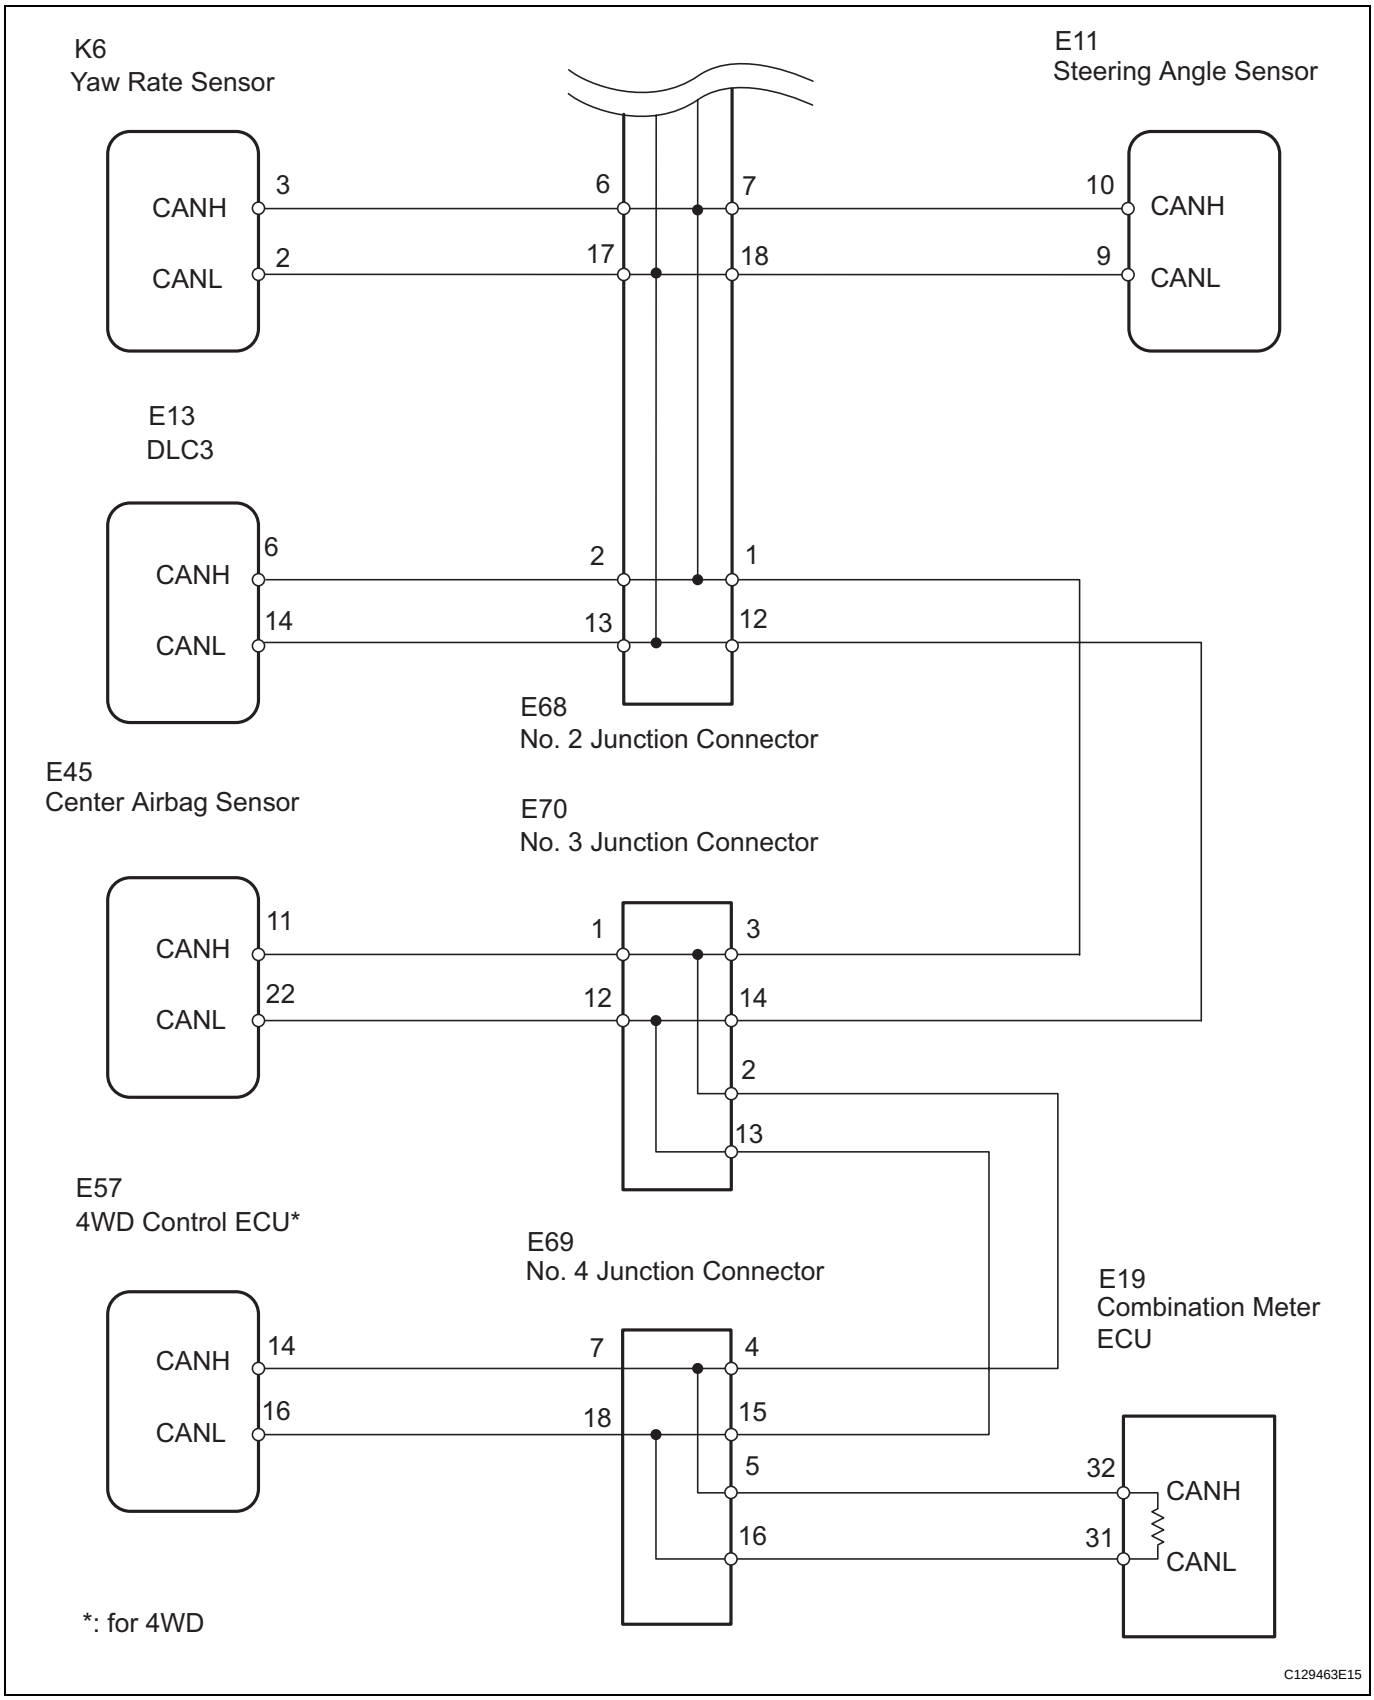
REPLACE COMBINATION METER ECU

CA



Open in One Side of CAN Branch Line

DESCRIPTION



If 2 or more ECUs and/or sensors do not appear on the intelligent tester's "BUS CHECK" screen via the CAN VIM, one side of the CAN branch wire may be open. (One side of the CANH [branch wire] /CANL [branch wire] of the ECU and/or sensor is open.)

Symptom	Trouble Area
2 or more ECUs and/or sensors do not appear on intelligent tester "BUS CHECK" screen via CAN VIM.	• One side of CAN branch wire is open • ABS and traction actuator (skid control ECU) • Power steering ECU • Steering angle sensor • Yaw rate sensor • Center airbag sensor • Air conditioning amplifier • Instrument panel junction block (Main body ECU) • 4WD control ECU • No. 1 junction connector • No. 2 junction connector • No. 3 junction connector • No. 4 junction connector

WIRING DIAGRAM

CA

INSPECTION PROCEDURE

NOTICE:

- **Turn the ignition switch OFF before measuring the resistances of the main wire and the branch wire.**

- **After the ignition switch is turned OFF, check that the key reminder warning system and light reminder warning system are not in operation.**
- **Before measuring the resistance, leave the vehicle for at least 1 minute and do not operate the ignition switch, any switches or doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

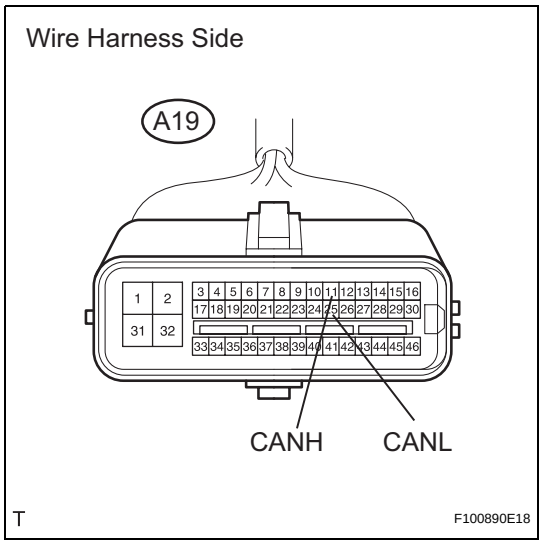
HINT:

- Perform the following inspection for the ECUs (sensors) which are not displayed on the intelligent tester. If a malfunction cannot be identified, perform the following inspections for the ECUs (sensors) connected to the CAN communication system.
- Do not remove the combination meter and ECM, as they are the end parts of the circuit. If removed, CAN communication will not be possible.
- The open circuit confirmation of the combination meter, ECM and main wire is performed in the CHECK CAN BUS LINE procedure of HOW TO PROCEED WITH TROUBLESHOOTING. This inspection only has procedures for checking for an open circuit on one side of the CAN branch wire.

1	CHECK FOR OPEN IN ONE SIDE OF BRANCH WIRE (ABS AND TRACTION ACTUATOR)

(a) Disconnect the A19 ABS and traction actuator (skid control ECU) connector.

(b) Select "BUS CHECK" on the intelligent tester display via the CAN VIM (see page CA-34).



Result

Result	Proceed to
ABS/VSC/TRAC not displayed on intelligent tester.	A
Several ECUs and sensors other than ABS/VSC/TRAC not displayed on intelligent tester.	B

B → **Go to step 3**

A

2	CHECK FOR OPEN IN ONE SIDE OF BRANCH WIRE (ABS AND TRACTION ACTUATOR BRANCH WIRE)

(a) Measure the resistance of the wire harness side connector.

Standard resistance:

54 to 69 Ω

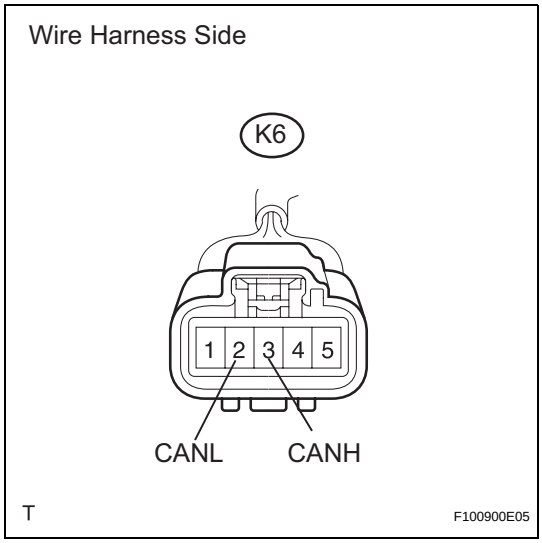
NG → **REPAIR OR REPLACE CAN BRANCH WIRE AND CONNECTOR (ABS AND TRACTION ACTUATOR)**

OK

REPLACE ABS AND TRACTION ACTUATOR (SKID CONTROL ECU)

3	CHECK FOR OPEN IN ONE SIDE OF BRANCH WIRE (YAW RATE SENSOR)

(a) Disconnect the K6 yaw rate sensor connector.
(b) Select "BUS CHECK" on the intelligent tester display via the CAN VIM (see page CA-34).



Result

Result	Proceed to
YAW / DECELERAT Sensor not displayed on intelligent tester.	A
Several ECUs and sensors other than YAW / DECELERAT Sensor not displayed on intelligent tester.	B

B → **Go to step 5**

A

4	CHECK FOR OPEN IN ONE SIDE OF BRANCH WIRE (YAW RATE SENSOR BRANCH WIRE)

(a) Measure the resistance of the wire harness side connector.

Standard resistance:
54 to 69 Ω

NG → **REPAIR OR REPLACE CAN BRANCH WIRE AND CONNECTOR (YAW RATE SENSOR)**

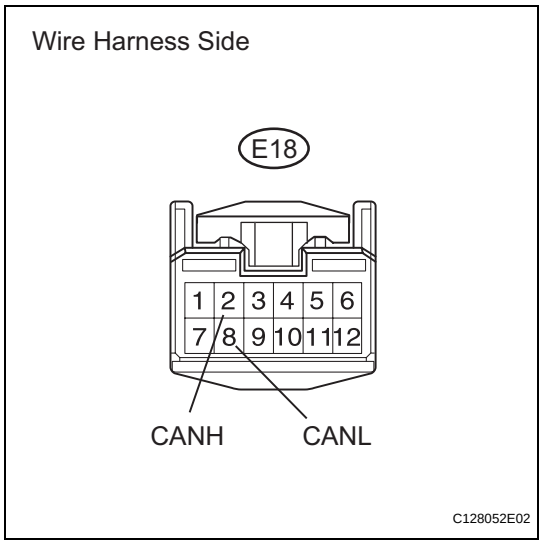
OK

REPLACE YAW RATE SENSOR

5	CHECK FOR OPEN IN ONE SIDE OF BRANCH WIRE (POWER STEERING ECU)

(a) Disconnect the E18 power steering ECU connector.

(b) Select "BUS CHECK" on the intelligent tester display via the CAN VIM (see page CA-34).



Result

Result	Proceed to
EPS not displayed on intelligent tester.	A
Several ECUs and sensors other than EPS not displayed on intelligent tester.	B

B → **Go to step 7**

A

6 CHECK FOR OPEN IN ONE SIDE OF BRANCH WIRE (POWER STEERING ECU BRANCH WIRE)

(a) Measure the resistance of the wire harness side connector.

Standard resistance:

54 to 69 Ω

NG → **REPAIR OR REPLACE CAN BRANCH WIRE AND CONNECTOR (POWER STEERING ECU)**

OK

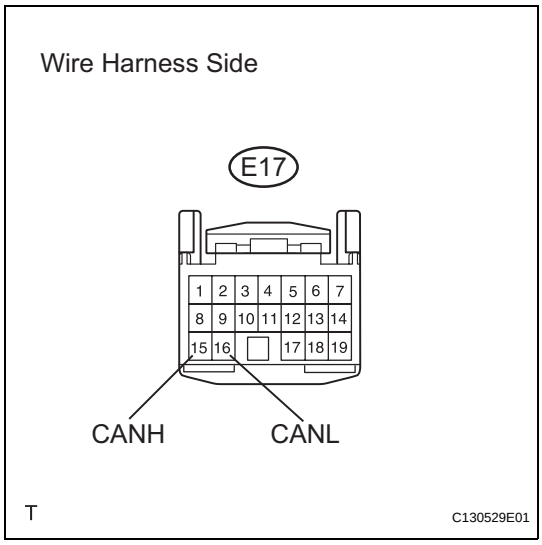
REPLACE POWER STEERING ECU

7 CHECK FOR OPEN IN ONE SIDE OF BRANCH WIRE (MAIN BODY ECU)

(a) Disconnect the E17 main body ECU connector.

(b) Select "BUS CHECK" on the intelligent tester display via the CAN VIM (see page CA-34).

Result



Result	Proceed to
MAIN BODY not displayed on intelligent tester.	A
Several ECUs and sensors other than MAIN BODY not displayed on intelligent tester.	B

B → **Go to step 9**

CA

A

8	CHECK FOR OPEN IN ONE SIDE OF BRANCH WIRE (MAIN BODY ECU BRANCH WIRE)

(a) Measure the resistance of the wire harness side connector.
Standard resistance:
54 to 69 Ω

NG → **REPAIR OR REPLACE CAN BRANCH WIRE AND CONNECTOR (MAIN BODY ECU)**

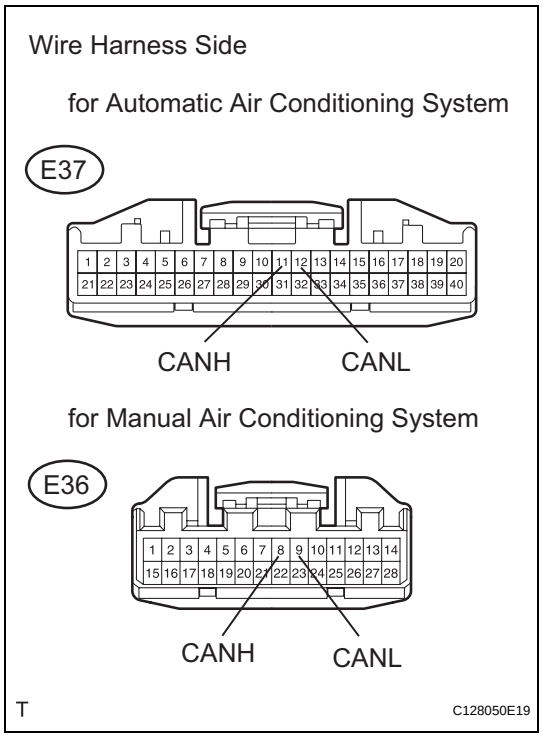
CA

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

9	CHECK FOR OPEN IN ONE SIDE OF BRANCH WIRE (AIR CONDITIONING AMPLIFIER)

(a) Disconnect the E37*1 or E36*2 air conditioning amplifier connector.
HINT:
- *1: for Automatic air conditioning system.
- *2: for Manual air conditioning system.



(b) Select "BUS CHECK" on the intelligent tester display via the CAN VIM (see page CA-34).
Result

Result	Proceed to
A/C not displayed on intelligent tester.	A
Several ECUs and sensors other than A/C not displayed on intelligent tester.	B

B → **Go to step 11**

A

10	CHECK FOR OPEN IN ONE SIDE OF BRANCH WIRE (AIR CONDITIONING AMPLIFIER BRANCH WIRE)

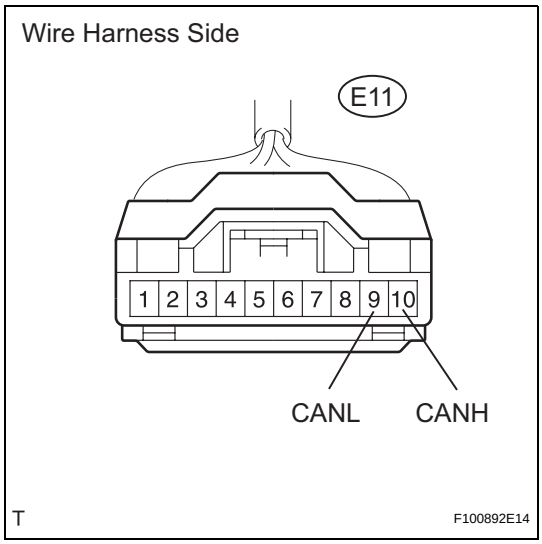
(a) Measure the resistance of the wire harness side connector.
Standard resistance:
54 to 69 Ω

NG → **REPAIR OR REPLACE CAN BRANCH WIRE AND CONNECTOR (AIR CONDITIONING AMPLIFIER)**

OK

REPLACE AIR CONDITIONING AMPLIFIER

11	CHECK FOR OPEN IN ONE SIDE OF BRANCH WIRE (STEERING ANGLE SENSOR)



(a) Disconnect the E11 steering angle sensor connector.
(b) Select "BUS CHECK" on the intelligent tester display via the CAN VIM (see page CA-34).
Result

Result	Proceed to
STEERING SENSOR not displayed on intelligent tester.	A
Several ECUs and sensors other than STEERING SENSOR not displayed on intelligent tester.	B

B → **Go to step 13**

A

12	CHECK FOR OPEN IN ONE SIDE OF BRANCH WIRE (STEERING ANGLE SENSOR BRANCH WIRE)

(a) Measure the resistance of the wire harness side connector.
Standard resistance:
54 to 69 Ω

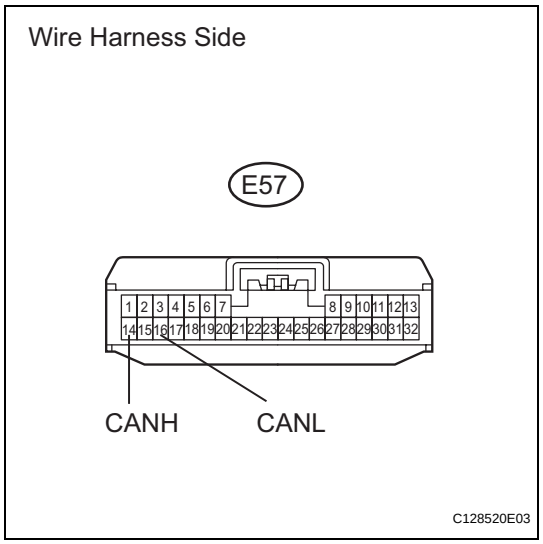
NG → **REPAIR OR REPLACE CAN BRANCH WIRE AND CONNECTOR (STEERING ANGLE SENSOR)**

OK

REPLACE STEERING ANGLE SENSOR

13	CHECK FOR OPEN IN ONE SIDE OF BRANCH WIRE (4WD CONTROL ECU)

NOTICE:
For vehicles without 4WD, go to "CHECK FOR OPEN IN ONE SIDE OF BRANCH WIRE (CENTER AIRBAG SENSOR ASSEMBLY BRANCH WIRE)".



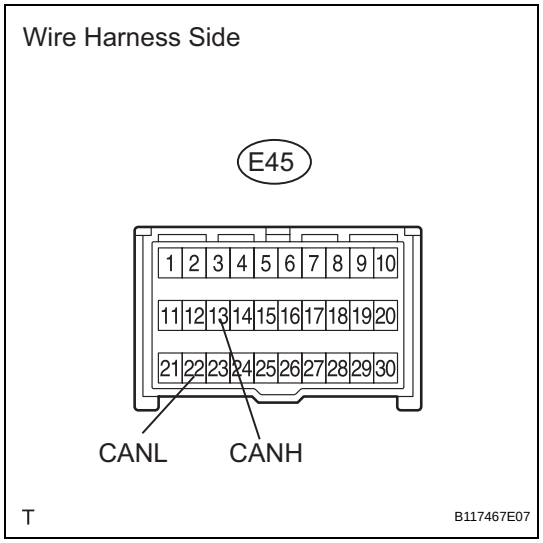
(a) Disconnect the E57 4WD control ECU connector.
(b) Select "BUS CHECK" on the intelligent tester display via the CAN VIM (see page CA-34).
Result

Result	Proceed to
4WD not displayed on intelligent tester.	A
Several ECUs and sensors other than 4WD not displayed on intelligent tester.	B

B → **Go to step 15**

A

14	CHECK FOR OPEN IN ONE SIDE OF BRANCH WIRE (4WD CONTROL ECU BRANCH WIRE)



(a) Measure the resistance of the wire harness side connector.
Standard resistance:
54 to 69 Ω

NG → **REPAIR OR REPLACE CAN BRANCH WIRE AND CONNECTOR (4WD CONTROL ECU)**

OK

REPLACE 4WD CONTROL ECU

15	CHECK FOR OPEN IN ONE SIDE OF BRANCH WIRE (CENTER AIRBAG SENSOR ASSEMBLY BRANCH WIRE)

(a) Disconnect the E45 center airbag sensor connector.
(b) Measure the resistance of the wire harness side connector.
Standard resistance:
54 to 69 Ω

NG → **REPAIR OR REPLACE CAN BRANCH WIRE AND CONNECTOR (CENTER AIRBAG SENSOR ASSEMBLY)**

OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY

CA

CAN COMMUNICATION SYSTEM

PRECAUTION

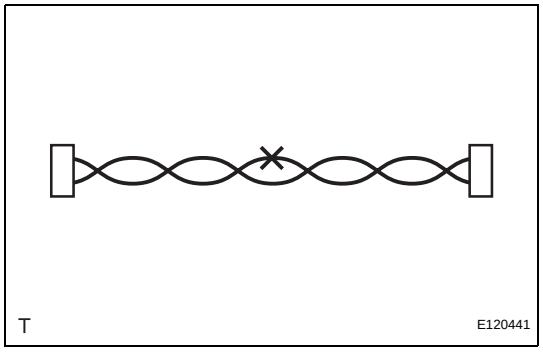
1. PRECAUTION

(a) Turn the ignition switch OFF before measuring the resistance of the main wire and the branch wire.

(b) After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not in operation.

(c) Before measuring the resistance, leave the vehicle for at least 1 minute and do not operate the ignition switch, any switches or doors. If doors need to be opened in order to check connectors, open the doors and leave them open.

HINT:



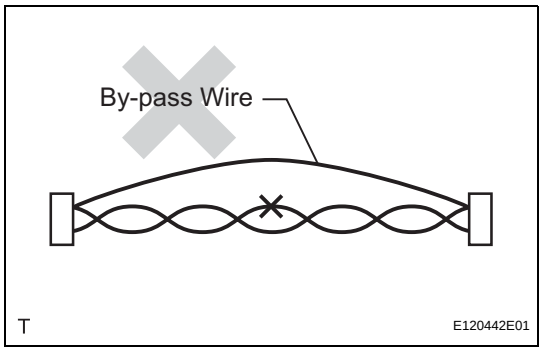
Operating the ignition switch, any switches or any doors triggers related ECU and sensor communication with the CAN, which causes resistance variation.

2. STEERING SYSTEM HANDLING PRECAUTIONS

(a) Care must be taken when replacing parts. Incorrect replacement could affect the performance of the steering system and result in hazards when driving.

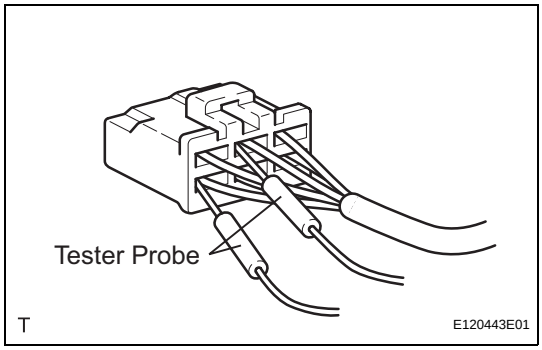
3. SRS AIRBAG SYSTEM HANDLING PRECAUTIONS

(a) This vehicle is equipped with an SRS (Supplemental Restraint System) such as the driver airbag and front passenger airbag. Failure to carry out service operations in the correct sequence could cause unexpected SRS deployment during servicing and may lead to a serious accident. Before servicing (including installation/removal, inspection and replacement of parts), be sure to read the precautionary notice for the Supplemental Restraint System (see page RS-1).



4. BUS LINE REPAIR

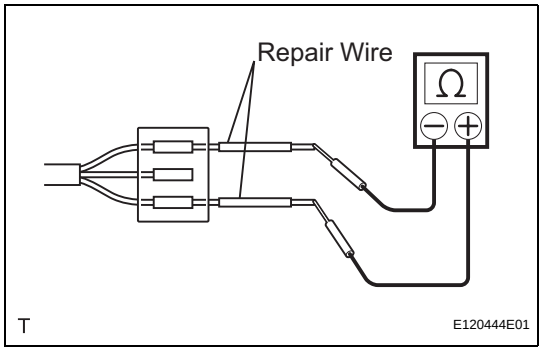
(a) After repairing the bus line with solder, wrap the repaired part with vinyl tape (see page IN-37).



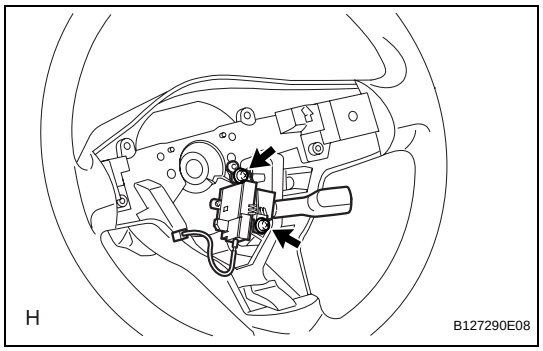
NOTICE:

- **The CANL bus line and CANH bus line must be installed together.**
- **When installing, twist them together.**
- **CAN bus lines are likely to be influenced by noise if the bus lines are not twist together.**
- **The difference in length between the CANL bus line and CANH bus line should be less than 100 mm (3.937 in.).**
- **Leave approximately 80 mm (3.150 in.) loose in the twisted wires around the connectors.**

CA



(b) Do not use bypass wiring between the connectors.
NOTICE:
The feature of the twisted wire harness will be lost if bypass wiring is used.

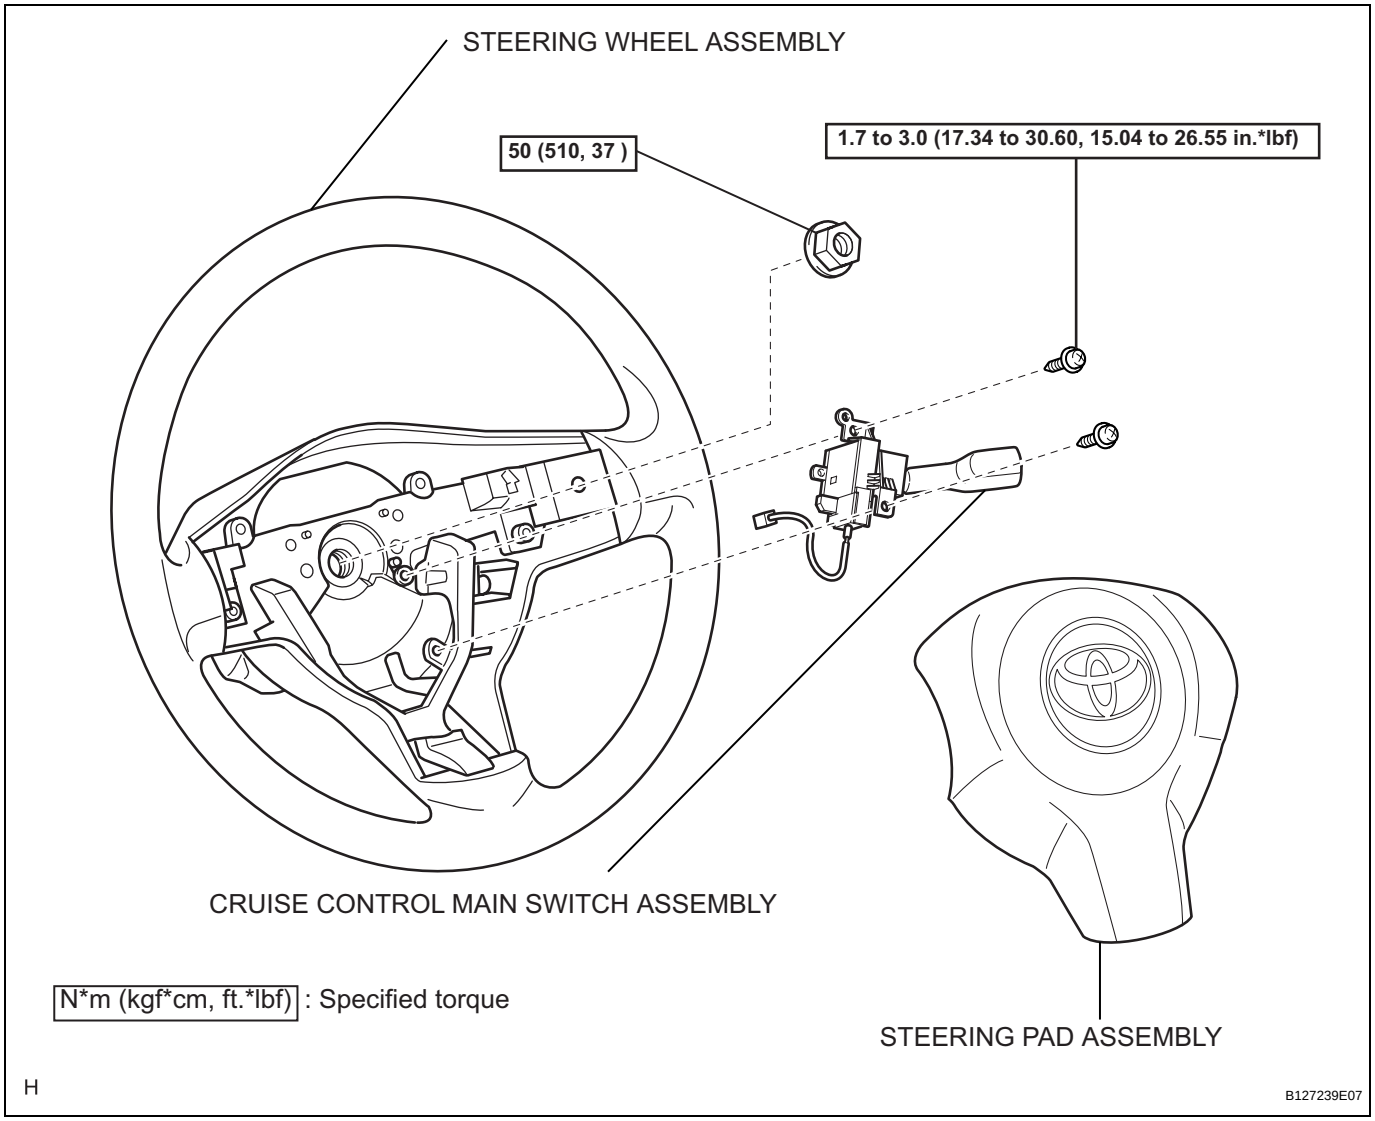


5. CONNECTOR HANDLING

(a) When inserting tester probes into a connector, insert them from the rear of the connector.

(b) Use a repair wire to check the connector if it is impossible to check resistance from the rear of the connector.

CA

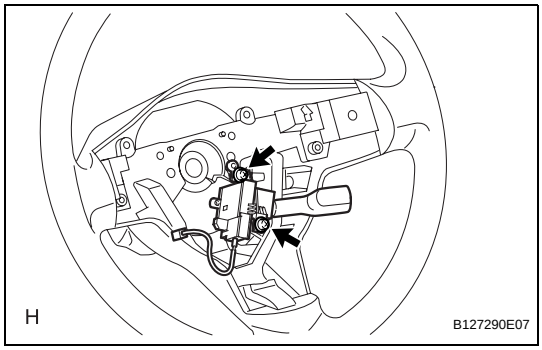


INSTALLATION

1. **INSTALL CRUISE CONTROL MAIN SWITCH**
   (a) Install the switch with the 2 screws.
   Torque: 1.7 to 3.0 N*m (17.34 to 30.60 kgf*cm, 15.04 to 26.55 in.*lbf)
   (b) Connect the connector.
2. **INSTALL STEERING PAD ASSEMBLY (See page RS-336)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
4. **CHECK SRS WARNING LIGHT**
   (a) Check the SRS warning light (see page RS-37).

CRUISE CONTROL MAIN SWITCH

COMPONENTS

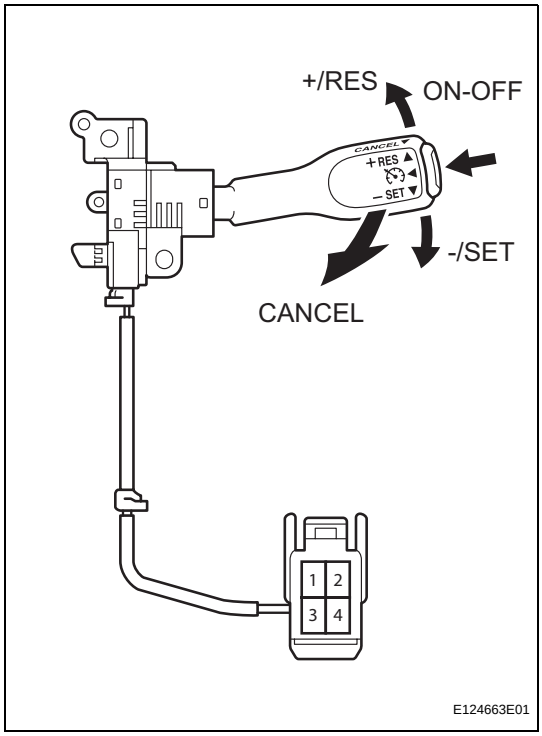


CC

REMOVAL

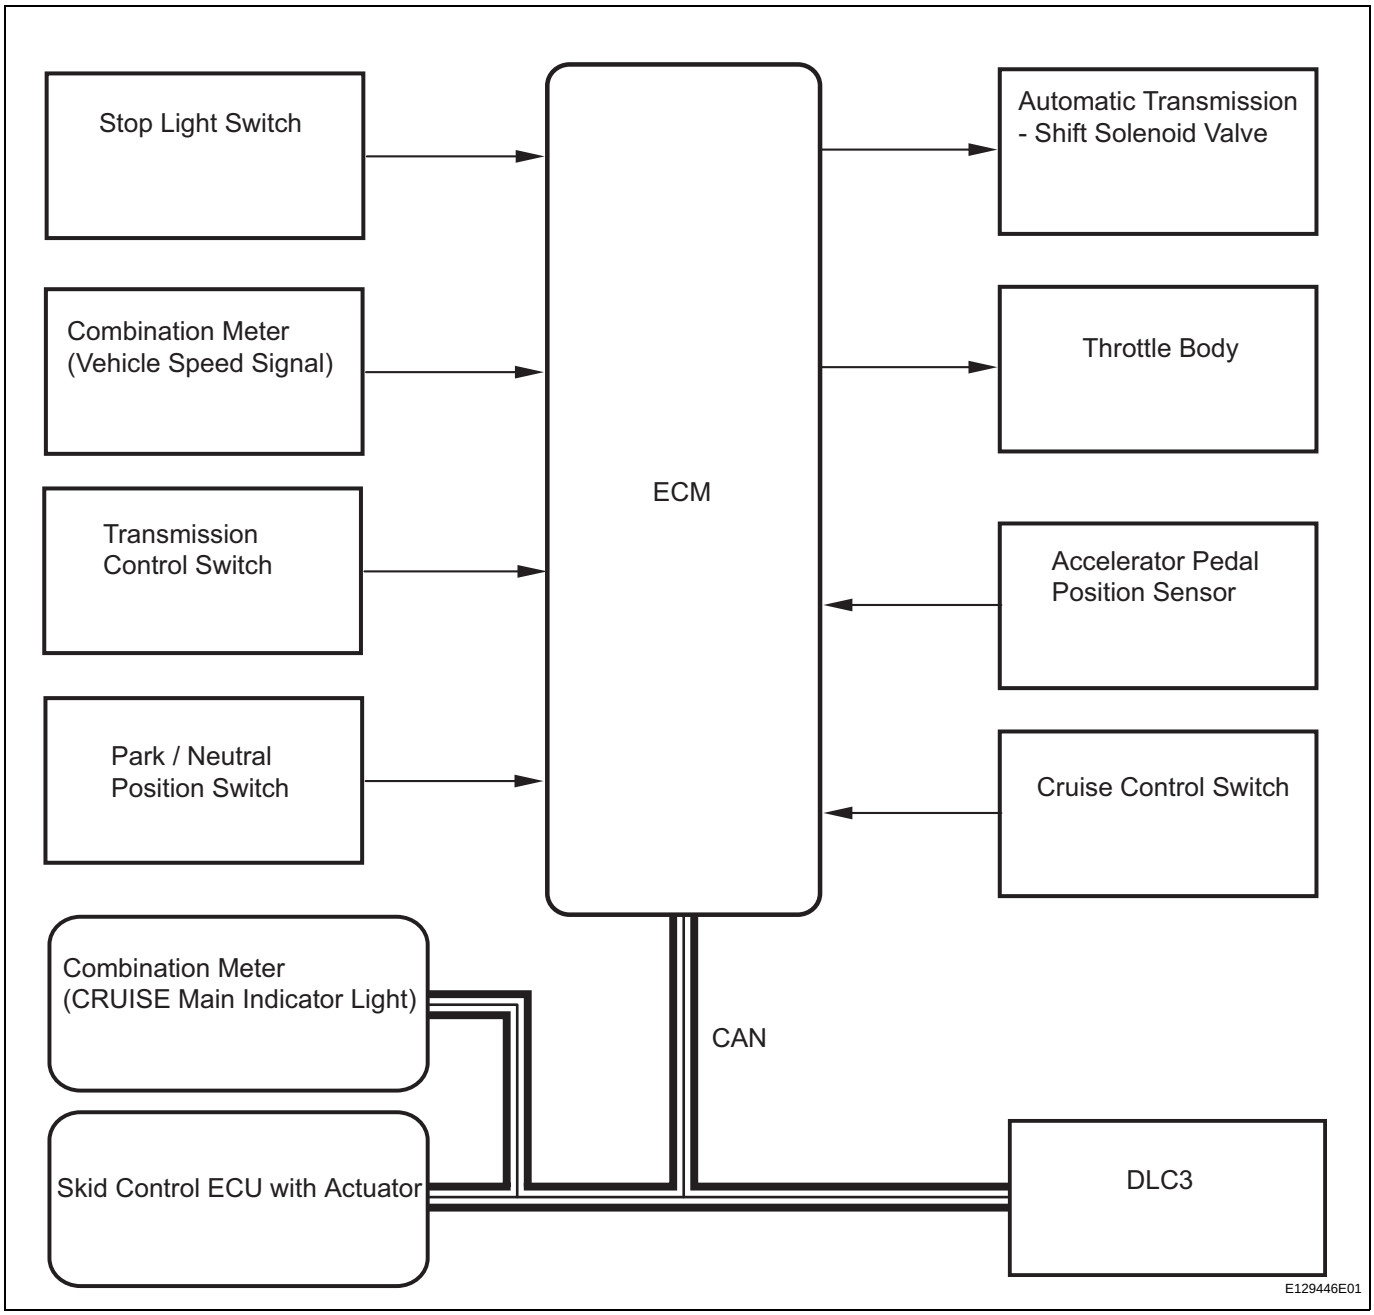
CAUTION:
Be sure to read the precautionary notices concerning the SRS airbag system before servicing it (see page RS-1).

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE STEERING PAD ASSEMBLY (See page RS-336)**
3. **REMOVE CRUISE CONTROL MAIN SWITCH**
   (a) Disconnect the connector.
   (b) Remove the 2 screws and switch.



INSPECTION

1. **INSPECT CRUISE CONTROL MAIN SWITCH**
   (a) Measure the resistance of the switch.
   Standard resistance



Tester Connection	Switch Condition	Specified Condition
3 - 4	+/RES	216 to 264 Ω
	-/SET	567 to 693 Ω
	CANCEL	1,386 to 1,694 Ω
	Cruise control switch ON	Below 1 Ω
	Cruise control switch OFF	10 kΩ or higher

If the result is not as specified, replace the switch assembly.

ECM	Combination meter	CRUISE main indicator light signal	CAN

CC

SYSTEM DESCRIPTION

1. CRUISE CONTROL SYSTEM

This system is controlled by the ECM, and is activated by the throttle position sensor and motor. The ECM controls the following functions: ON-OFF, SET / COAST, RESUME / ACCEL, CANCEL, vehicle speed operation, motor output control, and overdrive control.

- The ECM compares the driving vehicle speed from the combination meter with the stored vehicle speed set through the cruise control switch. The ECM controls the throttle valve motor of the throttle body to open the valve when the driving speed is less than the stored speed.
- The ECM receives signals such as ON-OFF, SET / COAST, RESUME / ACCEL, and CANCEL from the cruise control switch.
- The ECM illuminates the combination meter CRUISE main indicator light when it receives the cruise control switch ON signal.
- The ECM cancels the cruise control system when the brake pedal is depressed and the ECM receives the stop light switch signal.
- The ECM cancels the cruise control system when the shift lever is moved from D or 3 to a position other than D or 3, and the ECM receives the PNP switch signal.

2. LIMIT CONTROL

(a) Low speed limit

The lowest possible limit of the speed setting range is set at approximately 40 km/h (25 mph). The cruise control system cannot be set when the driving vehicle speed is below the low speed limit. Cruise control operation will be automatically canceled when the vehicle speed decreases below the low speed limit 40 km/h (25 mph) while the cruise control is in operation.

(b) High speed limit

The highest possible limit of the speed setting range is set at approximately 200 km/h (125 mph). The cruise control system cannot be set when the driving vehicle speed is over the high speed limit. Also, +/RES cannot be used to increase speed beyond the high speed limit.

3. OPERATION OF CRUISE CONTROL

The cruise control switch operates 7 functions: SET, COAST, TAP-DOWN, RESUME, ACCELERATION (ACCEL), TAP-UP, and CANCEL. The SET, TAP-DOWN and COAST functions, and the RESUME, TAP-UP and ACCEL functions are operated with the same switch. The cruise control switch is an automatic return type switch which turns on only when pressed in each arrow direction and turns off when released.

(a) SET CONTROL

Vehicle speed is stored and constant speed control is maintained when pushing the switch to -/SET while driving with the cruise control switch ON (the CRUISE main indicator light is illuminated), and the vehicle speed is within the set speed range (between the low and high speed limits).

(b) COAST CONTROL

The ECM changes the cruise control demanding throttle opening angle to 0° and decelerates the vehicle when -/SET on the cruise control switch is pressed and held while the cruise control system is operating. When the cruise control switch is released from -/SET, the vehicle speed is stored and constant speed control is maintained.

HINT:

- The throttle valve is not fully closed due to idle speed control, etc.
- w/ VSC:
  The brake is also used to decelerate the vehicle.

(c) TAP-DOWN CONTROL

When tapping down the cruise control switch to -/SET (for approximately 0.5 seconds) while the cruise control system is in operation, the stored vehicle speed decreases each time by approximately 1.6 km/h (1.0 mph). When the cruise control switch is released from -/SET and the difference between the driving and stored vehicle speed is less than 5 km/h (3 mph), the vehicle speed is stored and constant speed control is maintained.

(d) ACCEL CONTROL

The throttle valve motor of the throttle position sensor and motor is instructed by the ECM to open the throttle valve when +/RES on the cruise control switch is pressed and held while the cruise control system is operating. When the cruise control switch is released from +/RES, the vehicle speed is stored and constant speed is maintained.

(e) TAP-UP CONTROL
When tapping up the cruise control switch to +/RES (for approximately 0.5 seconds) while the cruise control system is in operation, the stored vehicle speed increases each time by approximately 1.6 km/h (1.0 mph). However, when the difference between the driving and the stored vehicle speed is more than 5 km/h (approximately 3.1 mph), the stored vehicle speed will not be changed.

(f) RESUME CONTROL
If the cruise control operation was canceled with the stop light switch or the CANCEL switch, and if driving speed is within the set speed range, setting the cruise control switch to +/RES restores the vehicle speed memorized at the time of cancellation, and constant speed is maintained.

(g) MANUAL CANCEL CONTROL
Performing any of the following cancels the cruise control system (the stored vehicle speed in the ECM is maintained).
- Depressing the brake pedal
- Moving the shift lever to any position except D or 3
- Pulling the cruise control switch to CANCEL
- Pushing the cruise control switch OFF (the stored vehicle speed in the ECM is not maintained)

4. AUTO CANCEL (FAIL-SAFE)
This system has an automatic cancellation function (fail-safe) (see page CC-17).

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the cruise control system.
- *: Use the intelligent tester.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3	CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

(a) Use the intelligent tester (with CAN VIM) to check if the CAN Communication System is functioning normally.
Result:

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B → **Go to CAN COMMUNICATION SYSTEM**

A

4	CHECK INDICATOR LIGHT

NEXT

5	CHECK DTC*

(a) Check for a DTC and note any codes that are output.
(b) Delete the DTC.
(c) Recheck for DTCs, and try to prompt the DTC by simulating the original activity that the DTC suggests.

Result

Result	Proceed to
DTC does not reoccur	A
DTC reoccurs	B

B → Go to step 8

A

6	PROBLEM SYMPTOMS TABLE

Result

Result	Proceed to
Fault is not listed in problem symptoms table	A
Fault is listed in problem symptoms table	B

B → Go to step 8

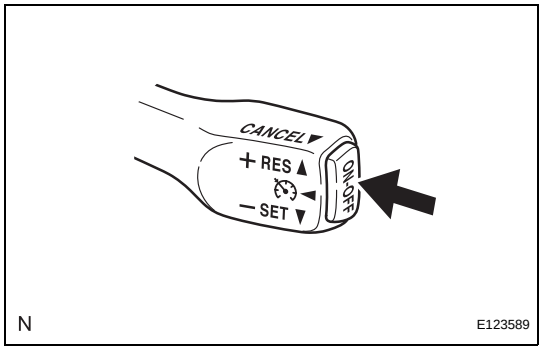
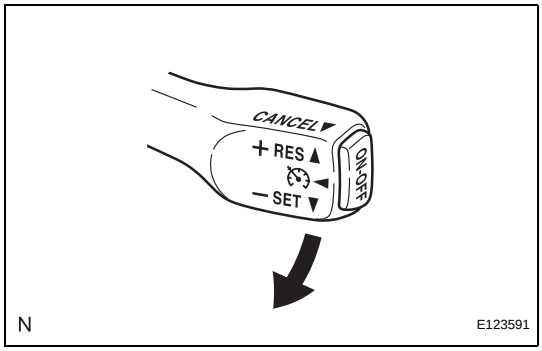
ROAD TEST

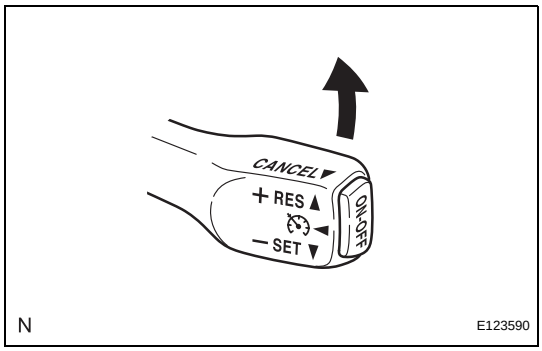


CC

1. INSPECT SET SWITCH

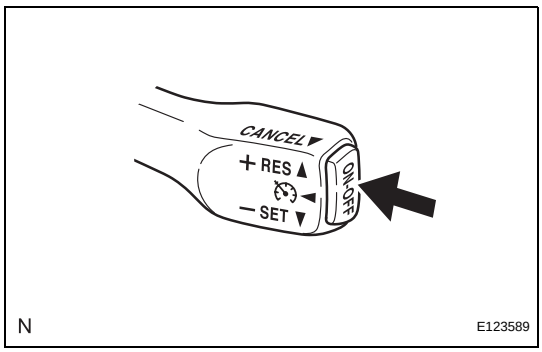


(a) Push the main switch ON.
(b) Drive at a desired speed (40 km/h (25 mph) or higher).

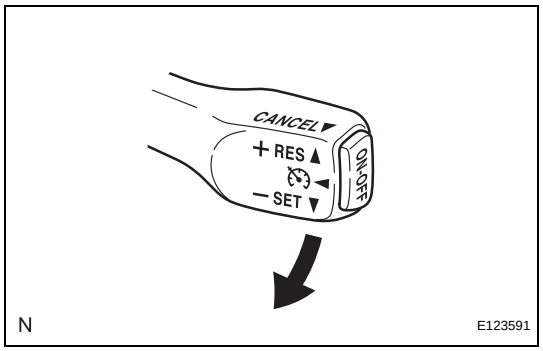


(c) Press the control switch to -/SET.
(d) After releasing the switch, check that the vehicle cruises at the desired speed.

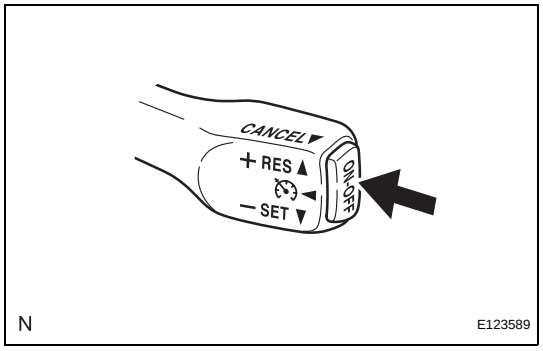
2. INSPECT "+" SWITCH
(a) Push the main switch button ON.
(b) Drive at a desired speed (40 km/h (25 mph) or higher).



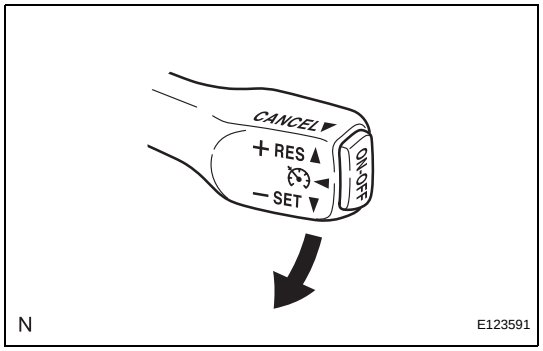
(c) Press the control switch to -/SET.
(d) Check that the vehicle speed increases while the control switch is pressed to +/RES, and that the vehicle cruises at the set speed when the switch is released.



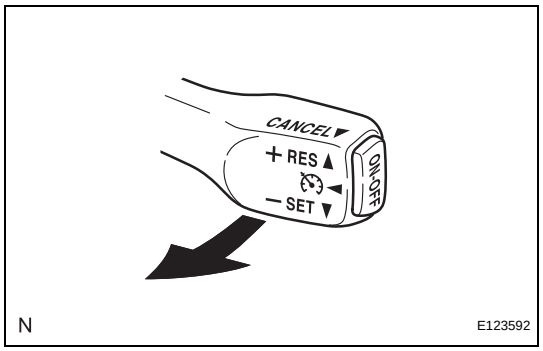
(e) Momentarily press the control switch to +/RES and then immediately release it. Check that the vehicle speed increases by about 1.6 km/h (1 mph) (Tap-up function).



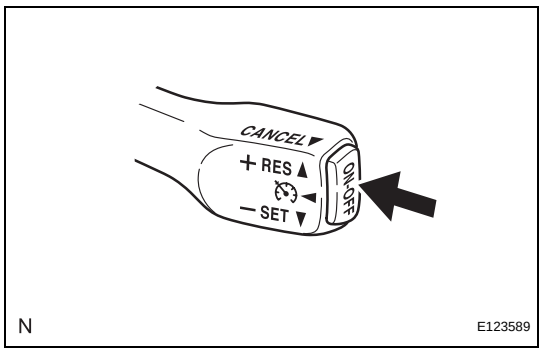
CC



3. INSPECT "-" SWITCH
(a) Push the main switch button ON.
(b) Drive at a desired speed (40 km/h (25 mph) or higher).

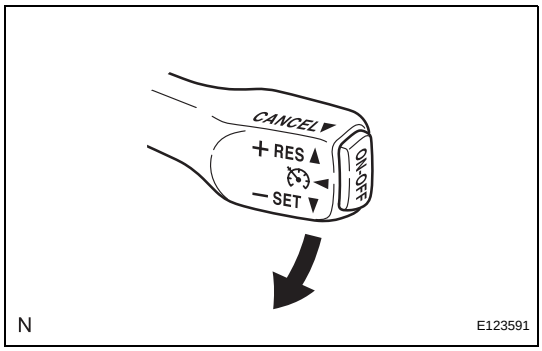


(c) Press the control switch to -/SET.
(d) Check that the vehicle speed decreases while the control switch is pressed to -/SET, and the vehicle cruises at the set speed when the switch is released.
(e) Momentarily press the control switch to -/SET, and then immediately release it. Check that the vehicle speed decreases by about 1.6 km/h (1 mph) (Tap-down function).

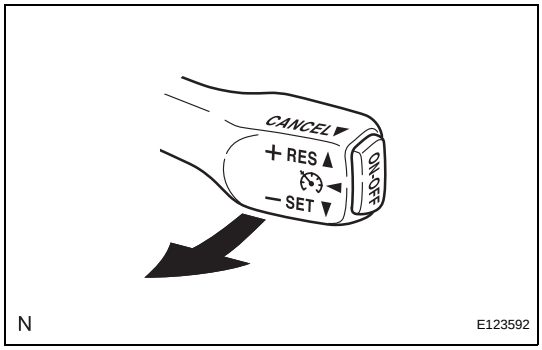


4. INSPECT CANCEL SWITCH
(a) Push the main switch button ON.
(b) Drive at a desired speed (40 km/h (25 mph) or higher).

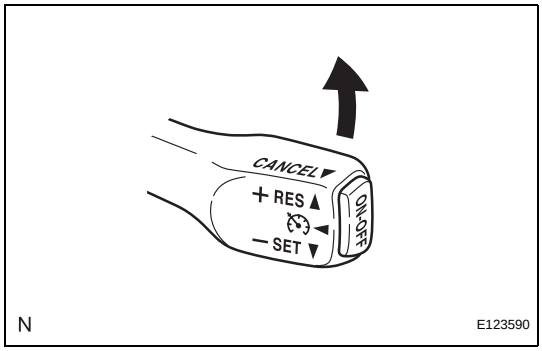
(c) Press the control switch to -/SET.



(d) When operating one of the following, check that the cruise control system is canceled.
- Depressing the brake pedal
- Pushing the cruise control main switch OFF
- Pulling the cruise control switch to CANCEL
- Moving the shift lever to any position except D or 3



5. INSPECT RES (RESUME) SWITCH
(a) Push the main switch button ON.
(b) Drive at a desired speed (40 km/h (25 mph) or higher).



CC

(c) Press the control switch to -/SET.

(d) When operating one of the following, check that the cruise control system is canceled.
- Depressing the brake pedal
- Pulling the cruise control switch to CANCEL
- Moving the shift lever to any position except D or 3

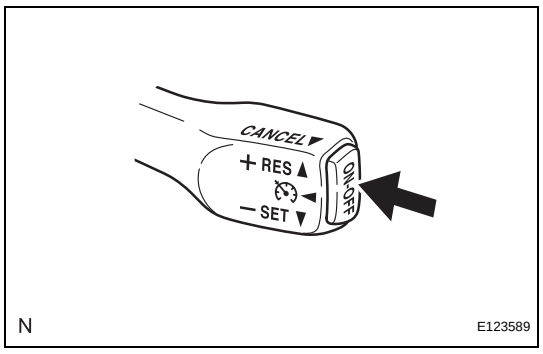
(e) After the control switch is pressed to +/RES at a driving speed of more than 40 km/h (25 mph), check that the vehicle restores the speed before the cancellation.

REGISTRATION

1. PERFORM VEHICLE STABILITY CONTROL SYSTEM RECOGNITION IN ECM

NOTICE:

If the vehicle has both cruise control and VSC, when replacing ECM, perform VSC recognition as follows:



(a) Turn the ignition switch ON.

(b) After waiting approximately 5 seconds, turn the cruise control main switch ON.

(c) Keep the cruise control main switch ON for approximately 5 seconds or more.

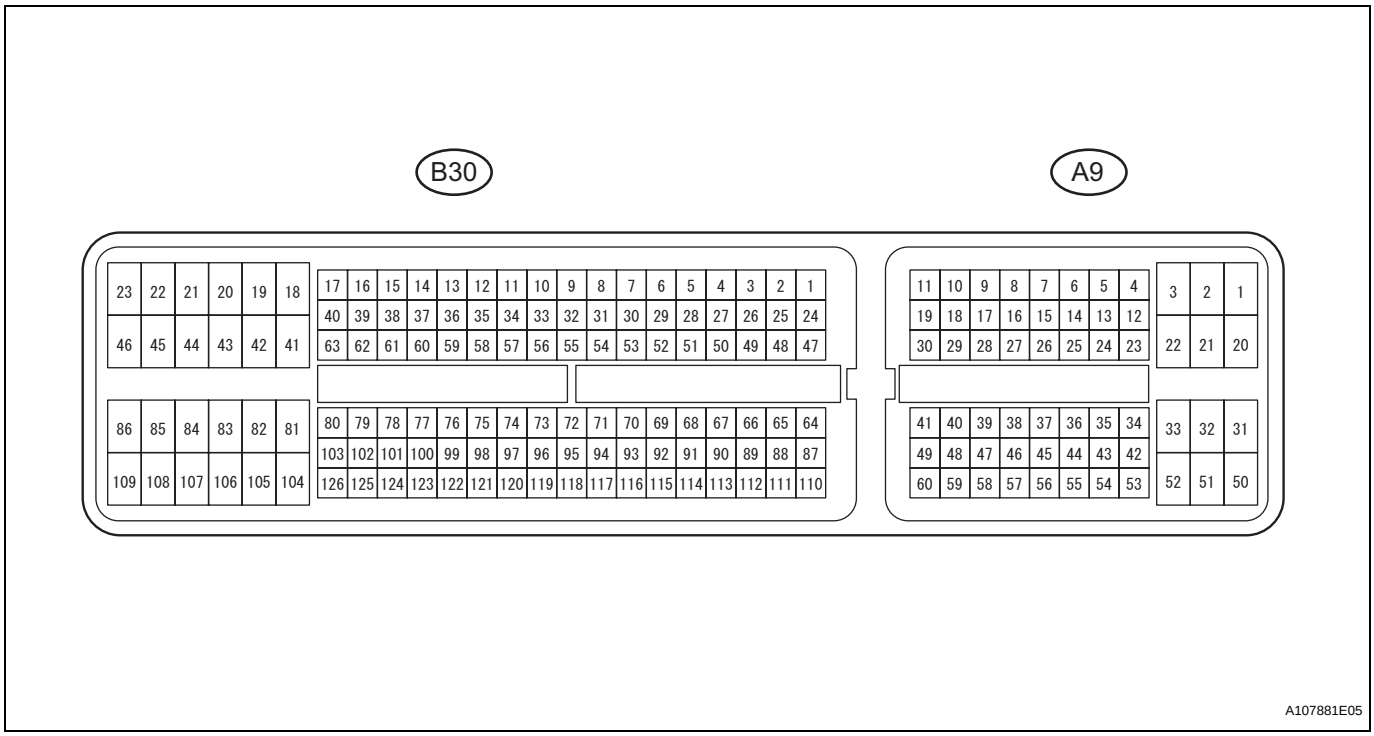
HINT:

The VSC recognition will not be reflected in the cruise control system until the ignition switch is turned OFF and ON.

CC

PROBLEM SYMPTOMS TABLE

HINT:



- Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Insect the fuses and relays related to this system before inspecting the suspected areas below.

Cruise control system

Symptom	Suspected Area	See page
SET not occurring or CANCEL occurring (DTC is normal)	1. Input signal circuit	CC-25
	2. Vehicle speed sensor circuit	CC-20
	3. Stop light switch circuit	CC-21
	4. Park / neutral position switch circuit	AX-39
	5. ECM	-
SET not occurring or CANCEL occurring (DTC is not output)	1. Cruise control switch circuit	CC-29
	2. ECM	-
Actual vehicle speed deviates above or below the set speed	1. Vehicle speed sensor circuit	CC-20
	2. ECM	-
Gear shifting occurs frequently between 3rd and O/D when driving on	1. Vehicle speed sensor circuit	CC-20
	2. ECM	-
Cruise control not canceled, even when brake pedal is depressed	1. Stop light switch circuit	CC-21
	2. ECM	-
Cruise control not canceled, even when transmission is shifted to N	1. Park / neutral position switch circuit	AX-108
	2. ECM	-
Control switch does not operate (-/SET, +/RES, CANCEL not possible)	1. Cruise control switch circuit	CC-29
	2. ECM	-
SET possible at 40 km/h (25 mph) or less, or CANCEL does not operate	1. Vehicle speed sensor circuit	CC-20
	2. ECM	-
Poor response in ACCEL and RESUME modes	1. ECM	-
O/D does not resume, even though road is not uphill	1. Vehicle speed sensor circuit	CC-20
	2. ECM	-
DTC memory is erased	1. ECM	-
DTC is not output, or is output when it should not be	1. Diagnosis circuit	CC-33
	2. ECM	-
Cruise main indicator light remains illuminated or fails to light up	1. Cruise control switch circuit	CC-29
	2. Combination meter	ME-52
	3. ECM	-

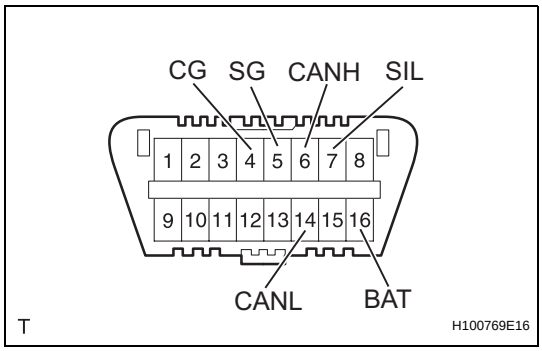
TERMINALS OF ECM

1. CHECK ECM

(a) Disconnect the A9 and B30 connectors.
(b) Measure the voltage and resistance of the wire harness side connectors.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
STP (A9-36) - E1 (B30-104)	L - BR	Stop light switch input signal	Depress brake pedal	10 to 14 V
			Release brake pedal	Below 1 V
CCS (A9-40) - E1 (B30-104)	L - BR	Cruise control main switch signal	CANCEL switch hold ON	1.386 to 1,694 Ω
			-/SET switch hold ON	567 to 693 Ω
			+/RES switch hold ON	216 to 264 Ω
			Main switch OFF	10 kΩ or higher
			Main switch ON	Below 1 Ω
ST1- (A9-35) - E1 (B30-104)	GR - BR	Stop light switch input signal	Release brake pedal	10 to 14 V
			Depress brake pedal	Below 1 V

If the result is not as specified, there may be a malfunction on the wire harness side.



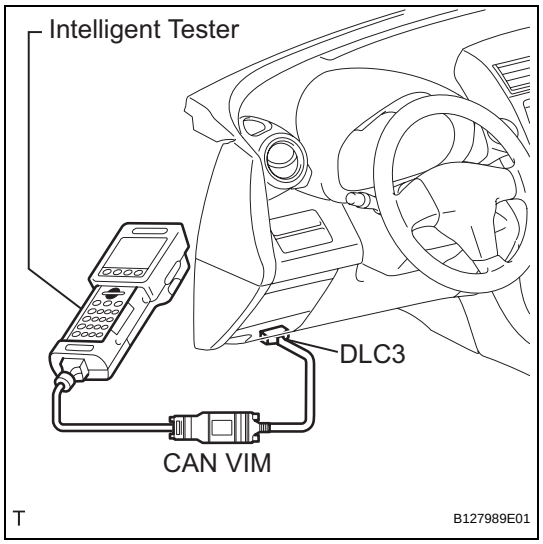
CC

DIAGNOSIS SYSTEM

1. DESCRIPTION

The ECM controls the function of cruise control on this vehicle. Data of the cruise control or DTC can be read from the DLC3 of the vehicle. When trouble occurs with cruise control, check that the CRUISE main indicator does not come on but DTC inspection is performed. Therefore, when there seems to be a problem with the cruise control, use the intelligent tester (with CAN VIM) or SST to check and troubleshoot it.

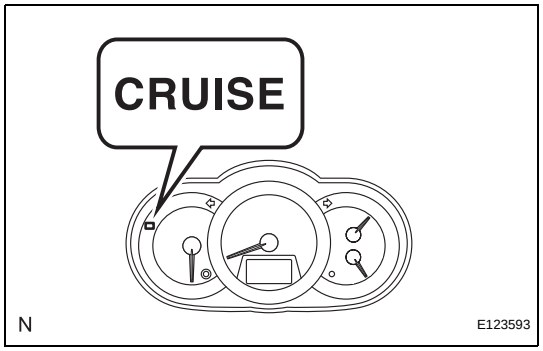
2. CHECK DLC3



(a) The ECM uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus '+' line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	HIGH-level CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - Body ground	HIGH-level CAN bus line	Ignition switch OFF*	1 MΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - Body ground	LOW-level CAN bus line	Ignition switch OFF*	1 MΩ or higher
CANL (6) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher

NOTICE:

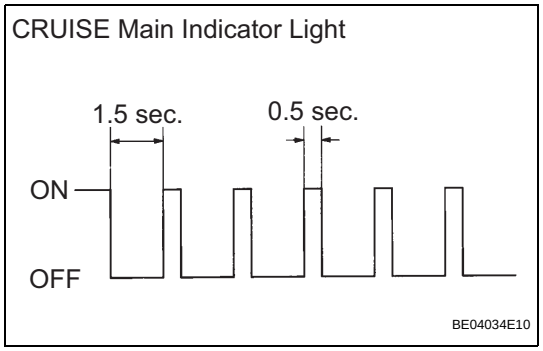


***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, other switches or doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:
Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

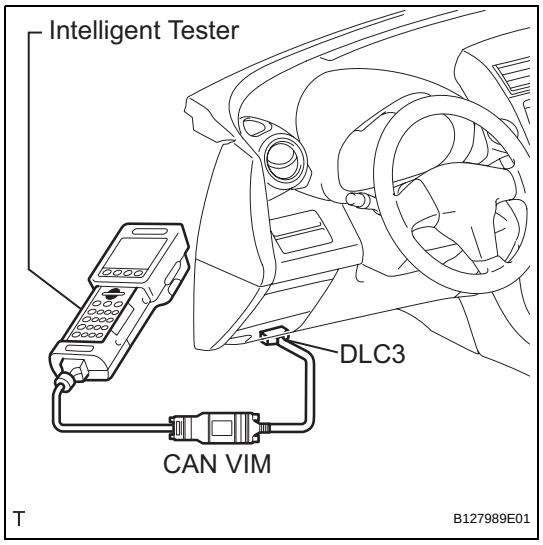
- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.



3. CHECK INDICATOR

(a) Turn the ignition switch ON.

(b) Check that the CRUISE main indicator light illuminates when the cruise control main switch is turned ON, and that the indicator light goes off when the main switch is turned OFF.



HINT:

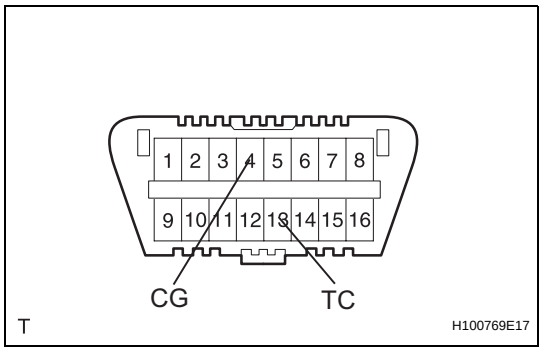
- If the indicator check result is not normal, proceed to troubleshooting for the combination meter section (see page ME-15).

- If a malfunction occurs in the speed sensor or stop light switch, etc. during cruise control driving, the ECM activates the AUTO CANCEL of the cruise control and the CRUISE main indicator light blinks to inform the driver of a malfunction. At the same time, the malfunction is stored in memory as a diagnostic trouble code.

DTC CHECK / CLEAR

1. CHECK DTC (USING INTELLIGENT TESTER)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

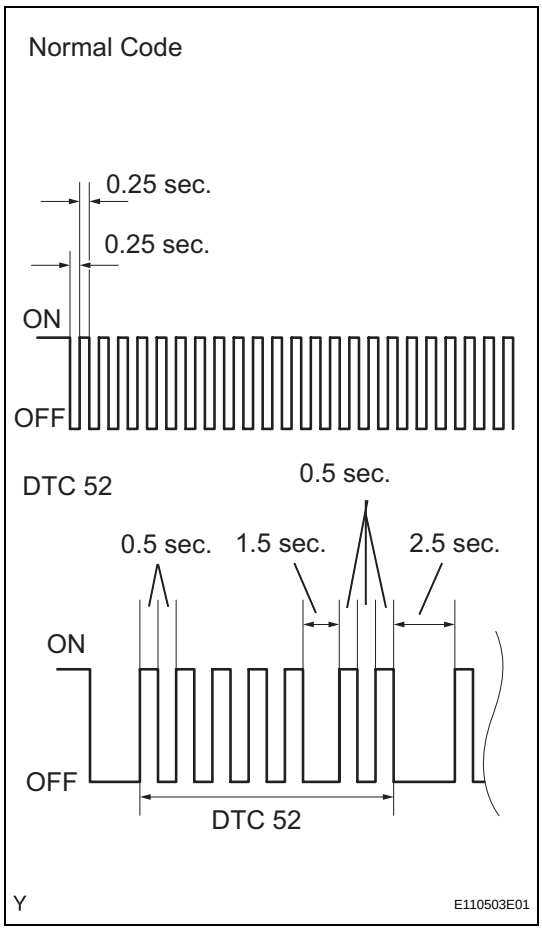


(b) Turn the ignition switch ON.

(c) Read the DTCs by following the directions on the tester screen.

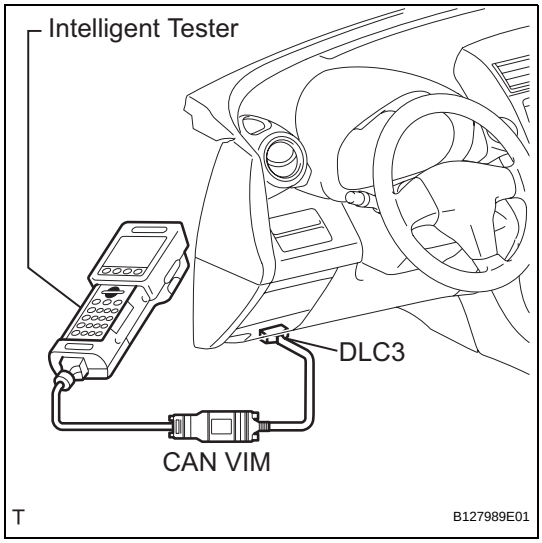
HINT:

Refer to the intelligent tester operator's manual for further details.



CC

2. CHECK DTC (USING SST CHECK WIRE)



(a) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.
SST 09843-18040

(b) Turn the ignition switch ON.

(c) Read the DTC on the CRUISE main indicator light.
HINT:
- If the DTC is not output, inspect the diagnosis circuit.
- As an example, the blinking patterns of a normal code and code 52 are shown in the illustration.

CC

3. CLEAR DTC (USING INTELLIGENT TESTER)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON.

(c) Read the DTCs by following the directions on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

4. CLEAR DTC (USING SST CHECK WIRE)

(a) Read and record DTCs from the CRUISE main indicator light. Turn the ignition switch OFF.

(b) If DTCs are indicated, repair the relevant circuits using the DTC Chart (see page CC-18).

(c) Clear the DTCs according to one of the following procedures.
- Disconnect the negative (-) battery cable for more than 1 minute.
- Remove the EFI NO. 1 and ETCS fuses from the engine room relay block (located inside the engine compartment) for more than 1 minute.

(d) Recheck for DTCs.

FAIL-SAFE CHART

HINT:
If the following conditions are detected while the cruise control is in operation, the system clears the stored vehicle speed in the ECM and cancels the cruise control operation.

Cruise control system

Vehicle Condition	Auto Cancel Condition	Fail-safe Deactivation Condition
CRUISE main indicator light blinks	• There is open or short in stop light switch circuit • There is problem with vehicle speed signal • There is problem with throttle position sensor and motor • VSC is damaged* • There is communication malfunction between VSC and ECM*	Turn cruise control main switch ON again
CRUISE main indicator light blinks	• There is problem with input circuit of stop light switch circuit • There is problem with cancel circuit	Turn ignition switch ON

HINT:
*: w/ VSC

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON.

(c) Read the DATA LIST according to the display on the tester.

ECM

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
VEHICLE SPD	Vehicle speed / min.: 0 km/h (0 mph) max.: 200 km/h (125 mph)	Actual vehicle speed	-

DTC	P0500/21	Vehicle Speed Sensor "A"

DTC	P0503/23	Vehicle Speed Sensor Circuit

DESCRIPTION

Refer to the SFI system (see page ES-224).

DTC No.	DTC Detection Condition	Trouble Area
P0500/21 P0503/23	No vehicle speed sensor signal to ECM under conditions (a) and (b) (2 trip detection logic): (a) Cruise control system is operating (b) Vehicle is being driven	• Combination meter • Vehicle speed sensor • Vehicle speed sensor circuit • ECM

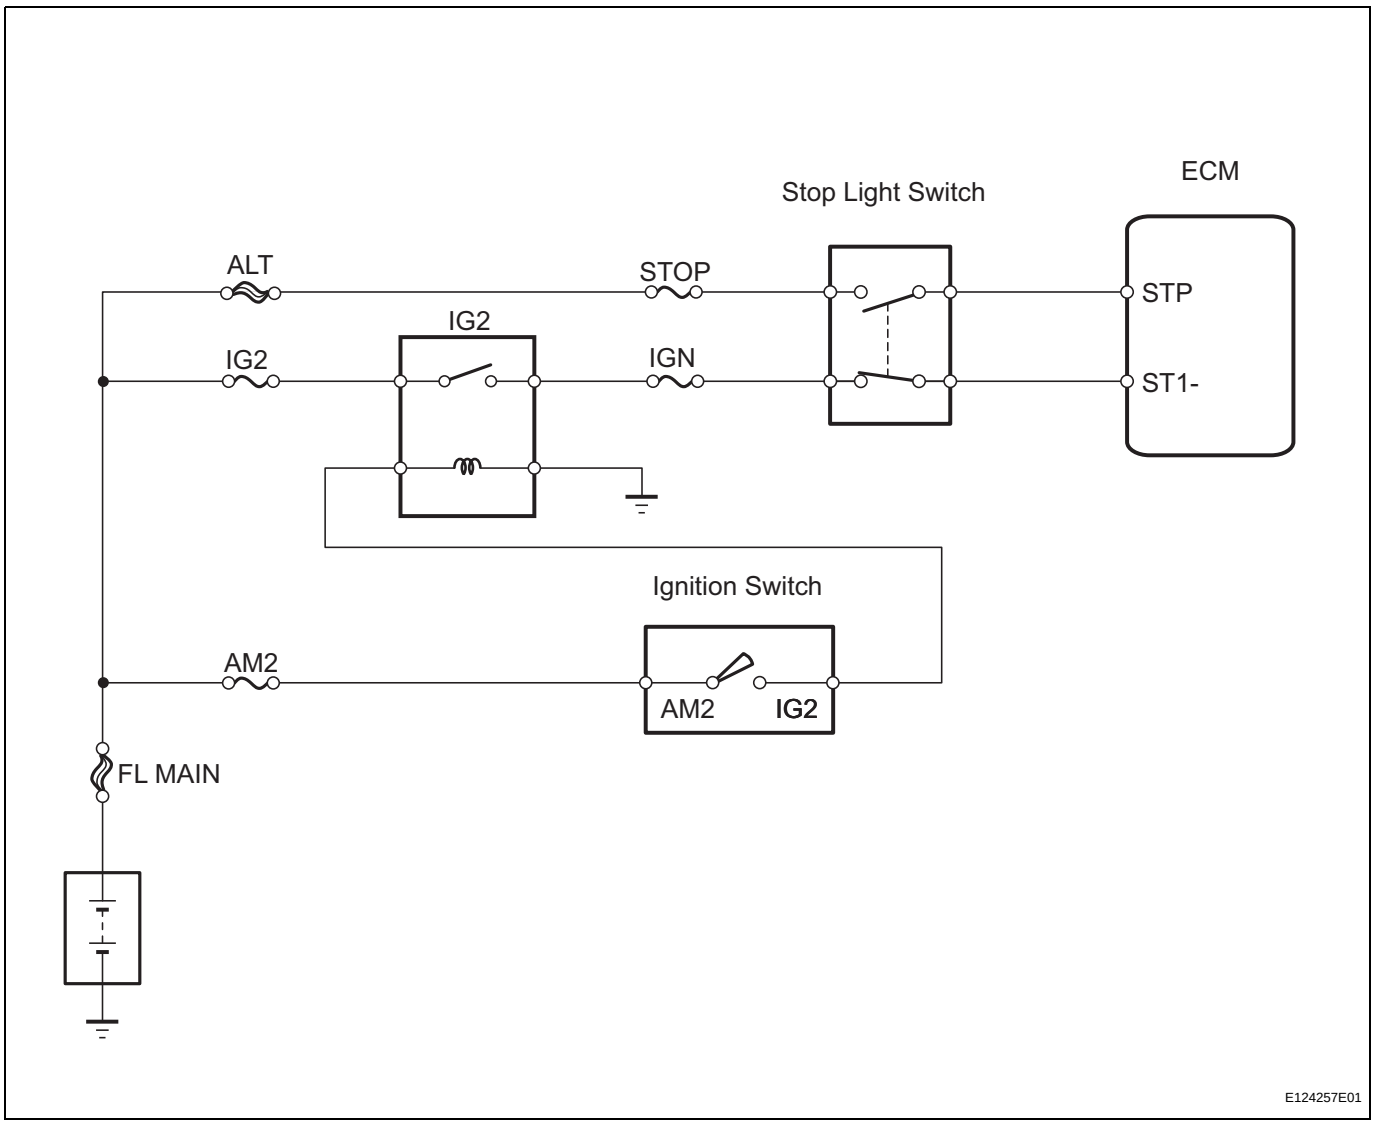
WIRING DIAGRAM

Refer to the SFI system (see page ES-224).

INSPECTION PROCEDURE

Refer to the SFI system (see page ES-224).

DTC	P0571/52	Stop Light Switch Circuit



DESCRIPTION

While driving with the cruise control, if the ECM detects that the brake pedal is depressed, the cruise control operation will be canceled. The stop light switch sends brake pedal status signals to the ECM. When the brake pedal is not depressed, terminal ST1- is equal to the positive (+) battery voltage and terminal STP is below 1 V. When the brake pedal is depressed, the ECM cancels cruise control operation. The ECM outputs this DTC when the voltage of terminals ST1- and STP are both below 1 V for 0.5 seconds or more at the same time. The fail-safe function operates to enable normal driving even if there is a malfunction in the stop light signal circuit.

DTC No.	DTC Detection Condition	Trouble Area
P0571/52	ECM detects malfunction of stop light switch circuit under both of following conditions: • Voltage of terminal STP is less than 1 V for 0.5 seconds or more • Voltage of terminal ST1- is less than 1 V for 0.5 seconds or more	• Stop light switch • BRK relay circuit* • Wire harness • ECM

HINT:
*: w/ Vehicle stability control system

WIRING DIAGRAM

INSPECTION PROCEDURE

1 **READ VALUE OF INTELLIGENT TESTER (STOP LIGHT SWITCH)**

(a) Check the DATA LIST for proper functioning of the stop light switch.

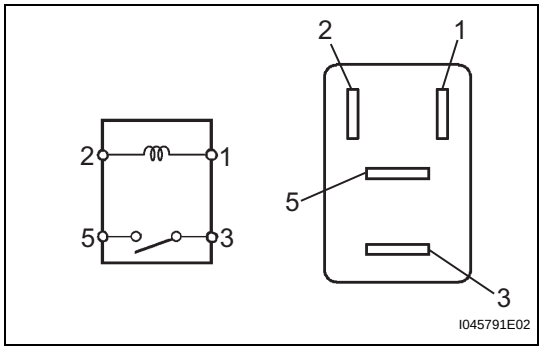
ECM

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
ST LIGHT SW M	Stop light switch signal (Main CPU) / ON or OFF	ON: Brake pedal is depressed OFF: Brake pedal is released	-

OK:
Display changes according to brake pedal operation described in above table.

NG → **REPLACE ECM**

OK



2 **INSPECT FUSE (STOP, IGN, IG2)**

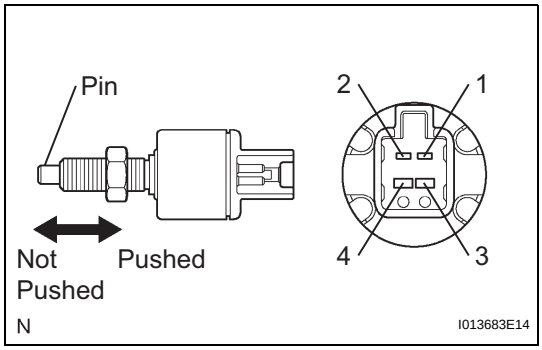
(a) Remove the STOP and IGN fuses from the instrument panel junction block.
(b) Remove the IG2 fuse from the engine room No. 1 relay block.
(c) Measure the resistance of the fuses.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

3 **INSPECT IG2 RELAY**

(a) Remove the IG2 relay from the instrument panel junction block.
(b) Measure the resistance of the relay.
Standard resistance



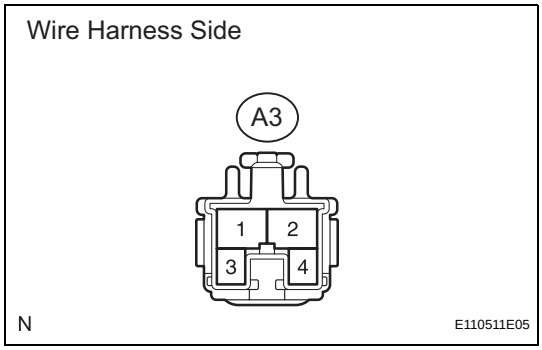
Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

NG → **REPLACE IG2 RELAY**

OK

CC

4 INSPECT STOP LIGHT SWITCH



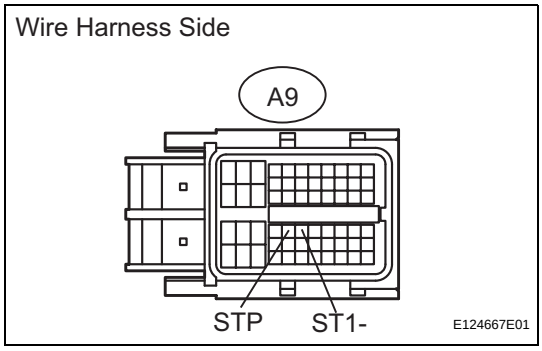
(a) Remove the stop light switch.
(b) Measure the resistance of the switch.
Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 - 2	Not pushed	Below 1 Ω
3 - 4	Pushed	
1 - 2	Pushed	10 kΩ or higher
3 - 4	Not pushed	

NG → REPLACE STOP LIGHT SWITCH

OK

5 CHECK WIRE HARNESS (SWITCH - BATTERY)



(a) Disconnect the A3 switch connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Switch Condition	Specified Condition
A3-3 - Body ground	Always	10 to 14 V
A3-2 - Body ground	Ignition switch ON	

NG → REPAIR OR REPLACE HARNESS AND CONNECTOR

OK

6 CHECK WIRE HARNESS (ECM - BATTERY)

(a) Disconnect the A9 ECM connector.
(b) Turn the ignition switch ON.
(c) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Switch Condition	Specified Condition
A9-35 (STP) - Body ground	Depressed	10 to 14 V
A9-36 (ST1-) - Body ground	Released	
A9-35 (STP) - Body ground	Released	Below 1 V
A9-36 (ST1-) - Body ground	Depressed	

NG → REPAIR OR REPLACE HARNESS AND CONNECTOR

CC

OK

REPLACE ECM

DTC	P0607/54	Input Signal Circuit Abnormal

DESCRIPTION

This DTC expresses the internal abnormalities of the ECM.

DTC No.	DTC Detection Condition	Trouble Area
P0607/54	When either of following conditions is met: • Cruise control input signal abnormal • Stop light switch input signal abnormal	ECM

INSPECTION PROCEDURE

1	CHECK FOR DTC

(a) Clear the DTC (see page CC-15).
(b) Check for DTC (see page CC-15).
OK:
DTC is not output.

NG → **REPLACE ECM**

OK

END

DTC	P1578/69	Brake System Malfunction

DESCRIPTION

This DTC is output when the VSC system has a problem. Check the VSC system when this DTC is output.

DTC No.	DTC Detection Condition	Trouble Area
P1578/69	ECM receives a brake system error signal for 0.2 seconds or more while cruise control is in operation	VSC system

INSPECTION PROCEDURE

HINT:
This circuit uses CAN communication. Therefore, if there are any malfunctions in the communication circuit, one or more DTCs in the CAN communication system are output.

1	CHECK BRAKE SYSTEM

Refer to HOW TO PROCEED WITH TROUBLESHOOTING (see page BC-20).

DTC	P1630/64	Communication Error from Skid Control ECU to ECM

DTC	U0122/82	Communication Stop from VSC to ECM

DESCRIPTION

The skid control ECU sends signals such as cruise control cancel demand signals and brake operation demand from ECM response signals to the ECM when the cruise control system is in operation.

DTC No.	DTC Detection Condition	Trouble Area
P1630/64	While cruise control is either preparing for operation or operating, if communication data from skid control ECU is logically inconsistent for a certain amount of time, ECM records this logical error code	• Communication circuit • Skid control ECU • ECM
U0122/82	While cruise control is either preparing for operation or operating, if communication data from skid control ECU is invalid for a certain amount of time, ECM records communication cut off code	• Communication circuit • Skid control ECU • ECM

INSPECTION PROCEDURE

HINT:
This circuit uses CAN communication. Therefore, if there are any malfunctions in the communication circuit, one or more DTCs in the CAN communication system are output.

1	CHECK CAN COMMUNICATION SYSTEM

Refer to HOW TO PROCEED WITH TROUBLESHOOTING (see page CA-8).

DTC	P1631/65	Communication Error from ECM to Skid Control ECU

DTC	U0100/78	Communication Stop from ECM to Distance Control ECU, VSC

DESCRIPTION

Therefore, if the skid control ECU detects a communication error from the ECM, it sends a malfunction signal back to the ECM.

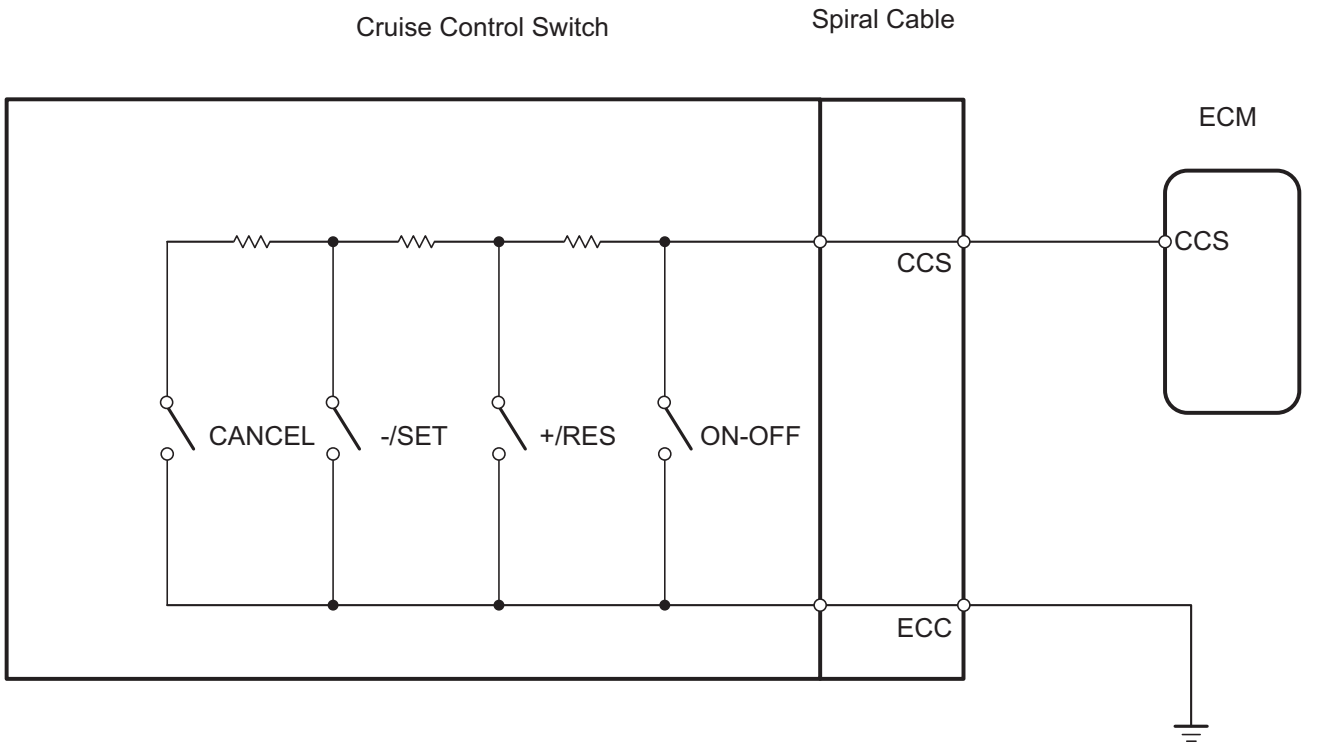
DTC No.	DTC Detection Condition	Trouble Area
P1631/65	While the cruise control is either preparing for operation or operating, if the ECM continuously receives a logical error signal from the skid control ECU for a certain amount of time, the ECM records this logical error code	• Communication circuit • ECM • Skid control ECU
U0100/78	While the cruise control is either preparing for operation or operating, if the ECM continuously receives a communication cut off signal from the skid control ECU for a certain amount of time, the ECM records this communication cut off code	• Communication circuit • ECM • Skid control ECU

INSPECTION PROCEDURE

HINT:

This circuit uses CAN communication. Therefore, if there are any malfunctions in the communication circuit, one or more DTCs in the CAN communication system are output.

1	CHECK CAN COMMUNICATION SYSTEM



Refer to HOW TO PROCEED WITH TROUBLESHOOTING (see page CA-8).

Cruise Control Switch Circuit

DESCRIPTION

This circuit sends signals to the ECM depending on the cruise control switch condition. The battery supplies positive (+) battery voltage to the cruise control switch. Then terminal CCS of the ECM receives the voltage according to the switch condition.

WIRING DIAGRAM

CC

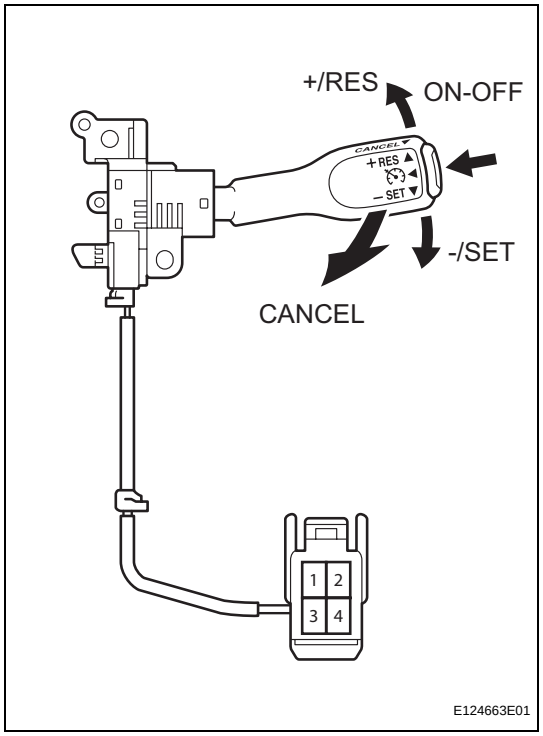
INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER (CRUISE CONTROL MAIN SWITCH)

(a) Check the DATA LIST for proper functioning of the cruise control switch.

ECM

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
MAIN SW (MAIN)	Main switch (Main CPU) / ON or OFF	ON: Main switch (Main CPU) is ON OFF: Main switch (Main CPU) is OFF	-
CANCEL SW	CANCEL switch / ON or OFF	ON: CANCEL switch is ON OFF: CANCEL switch is OFF	-
SET/COAST SW	- / SET switch / ON or OFF	ON: - / SET switch is ON OFF: - / SET switch is OFF	-



Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
RES/ACC SW	+ / RES switch / ON or OFF	ON: + / RES switch is ON OFF: + / RES switch is OFF	-

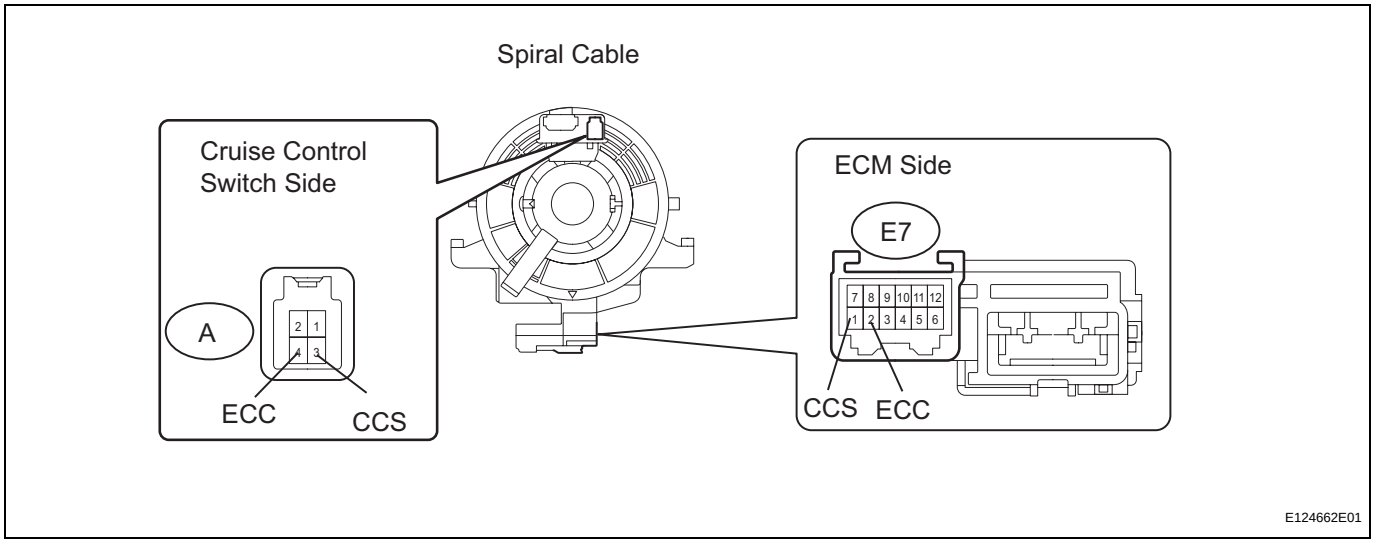
OK:
When cruise control switch operation is performed, the results will be same as above.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2 INSPECT CRUISE CONTROL SWITCH

(a) Disconnect the cruise control switch connector.
(b) Measure the resistance of the switch.
Standard resistance



Tester Connection	Switch Condition	Specified Condition
3 - 4	cruise control switch ON	10 kΩ or higher
	cruise control switch OFF	Below 1 Ω
	+/RES	216 to 264 Ω
	-/SET	567 to 693 Ω
	CANCEL	1,386 to 1,694 Ω

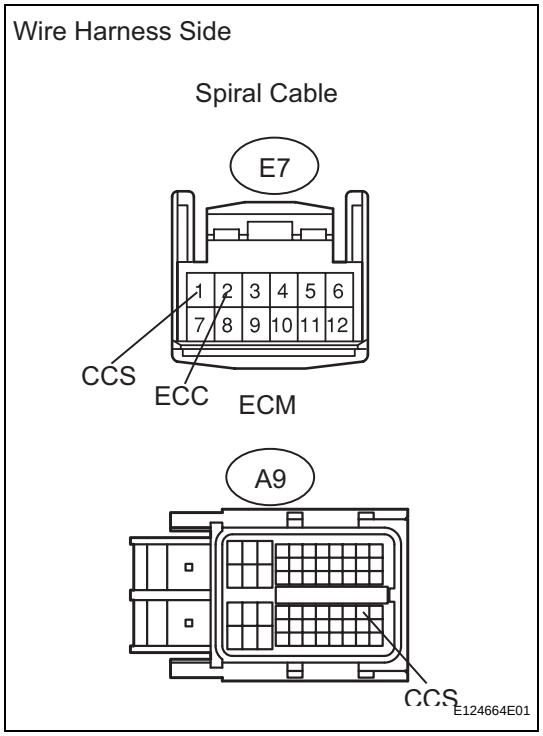
NG → **REPLACE CRUISE CONTROL MAIN SWITCH**

OK

CC

3	**INSPECT SPIRAL CABLE SUB-ASSEMBLY**

(a) Disconnect the cruise control switch connector.
(b) Disconnect the E7 cable connector.
(c) Measure the resistance of the spiral cable.
Standard resistance



Tester Connection	Specified Condition
A-3 (CCS) - E7-1 (CCS)	Below 1 Ω
A-2 (ECC) - E7-2 (ECC)	

NG → **REPLACE SPIRAL CABLE SUB-ASSEMBLY**

OK

CC

4	CHECK WIRE HARNESS (SPIRAL CABLE - ECM AND BODY GROUND)

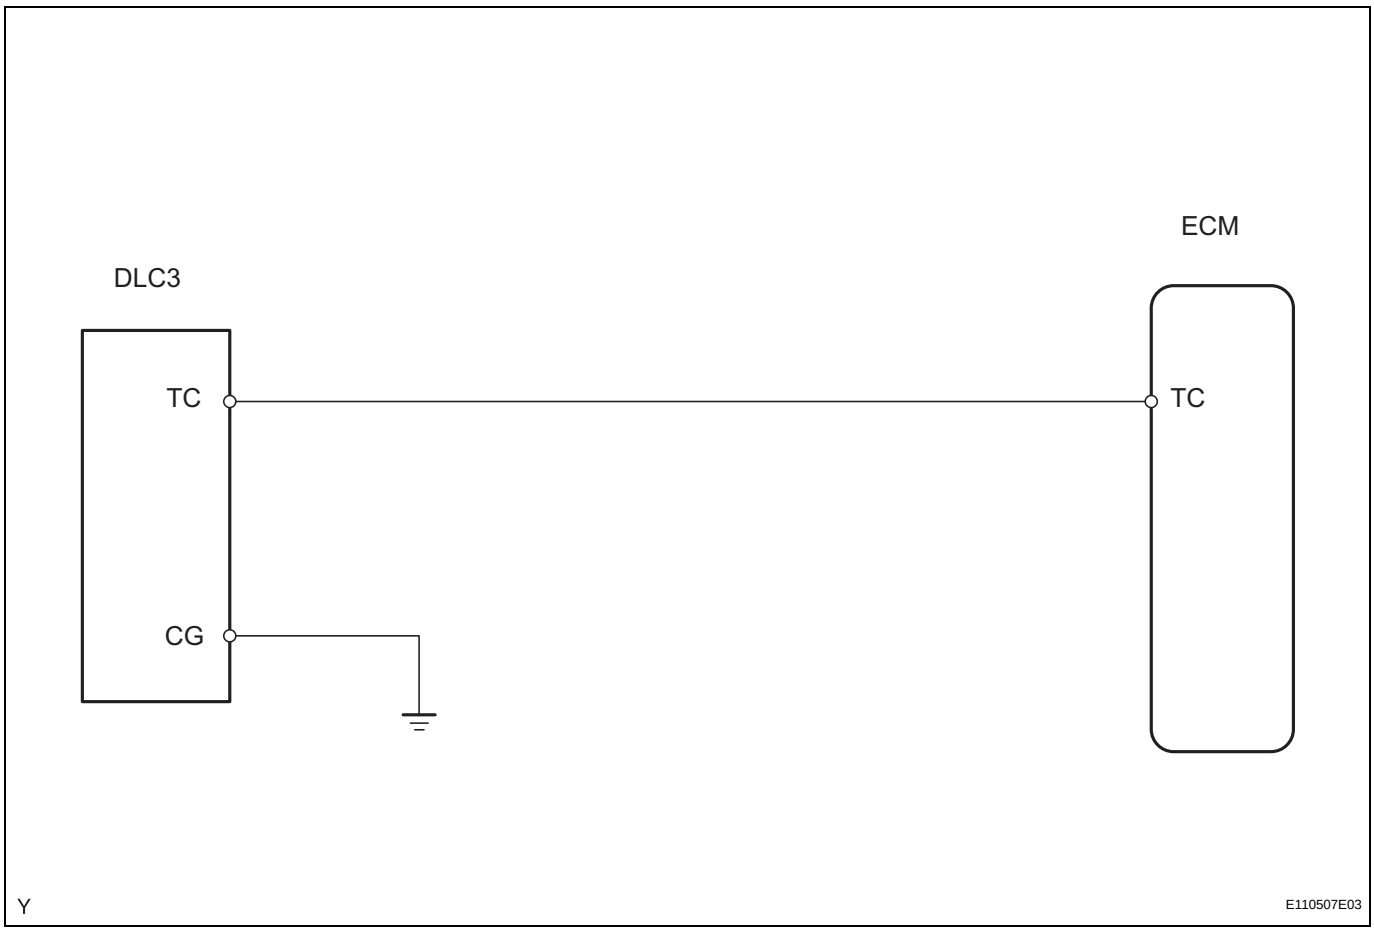
(a) Disconnect the E7 cable connector.
(b) Disconnect the A9 ECM connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
E7-1 (CCS) - A9-40 (CCS)	Below 1 Ω
E7-2 (ECC) - Body ground	

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

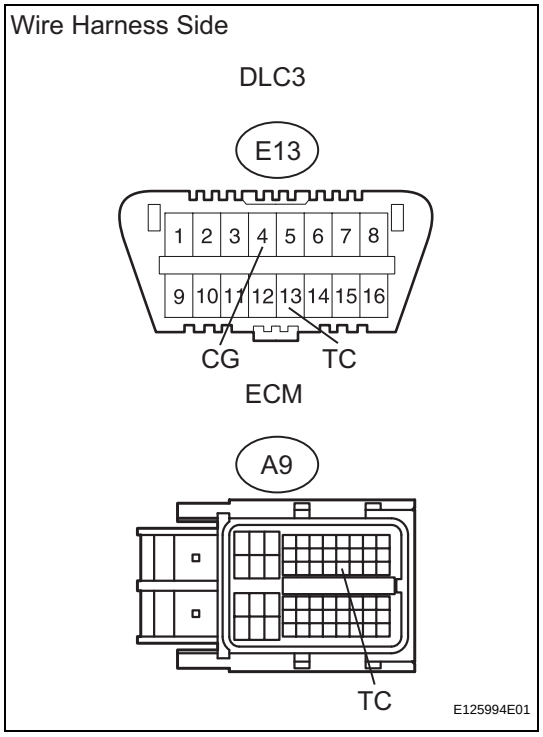
OK



PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

TC and CG Terminal Circuit

DESCRIPTION



Connecting terminals TC and CG of the DLC3 enables DTCs to be read through blinking patterns of the combination meter's CRUISE main indicator light.
HINT:
When a warning light of the combination meter blinks continuously, terminal TC of the DLC3 or an ECM may have a ground short.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK WIRE HARNESS (DLC3 - ECM AND BODY GROUND)

(a) Disconnect the E13 DLC3 connector.
(b) Disconnect the A9 ECM connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
E13-13 (TC) - A9-27 (TC)	Below 1 Ω
E13-4 (CG) - Body ground	

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE ECM

CC

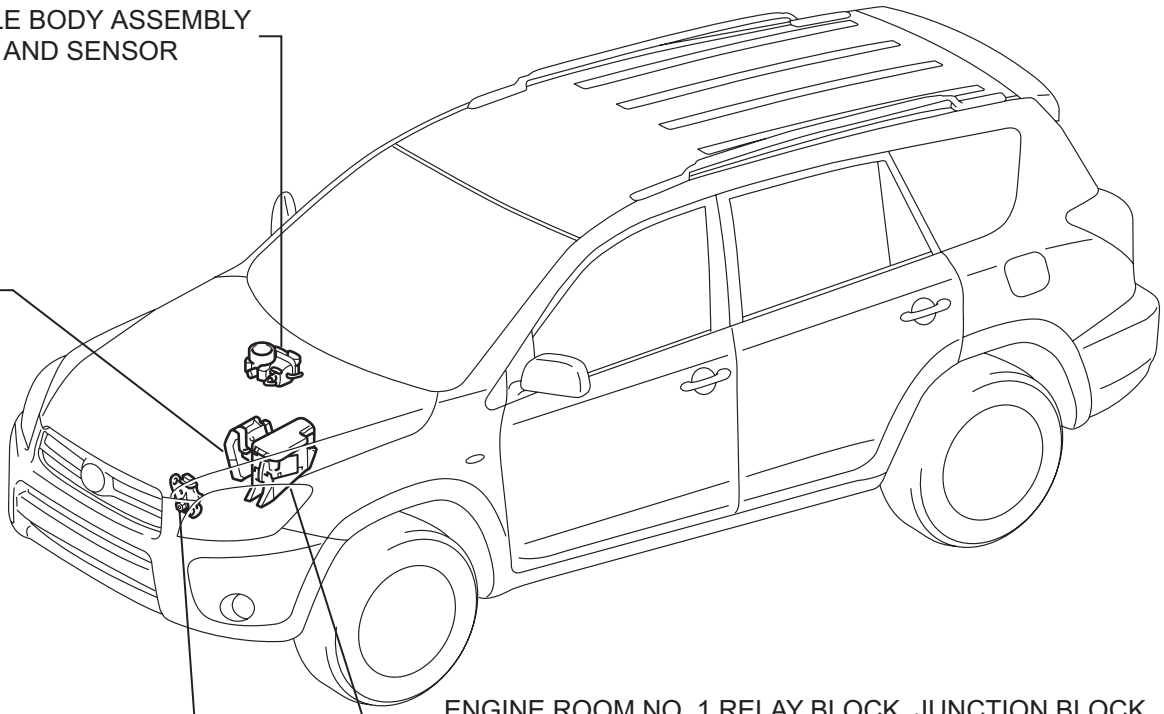
CRUISE CONTROL SYSTEM

PRECAUTION

1. HANDLING PRECAUTION FOR CRUISE CONTROL SYSTEM

(a) Turn the cruise control main switch OFF when not using the cruise control system.

(b) Be careful as the vehicle speed increases when driving downhill with the cruise control system on.



(c) The RESUME/ACCEL operation changes according to the cruise control system status. When the cruise control system is operating, ACCEL operates. When the cruise control system is not operating, RESUME operates.

(d) When the cruise control system is operating and the CRUISE main indicator light blinks, turn the cruise control main switch OFF to reset the cruise control system. After the reset, if the cruise control main switch cannot be turned ON, or the cruise control system is canceled immediately after turning the cruise control main switch ON, the system may have a malfunction.

(e) Do not use the cruise control system where the road conditions are as follows:

- Heavy traffic
- Steep downhill
- Roads with sharp turns
- Icy or snowy roads
- Slippery roads

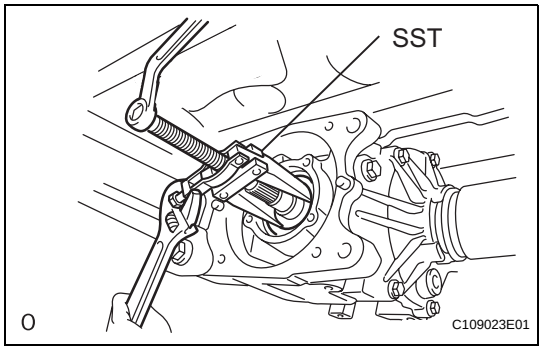
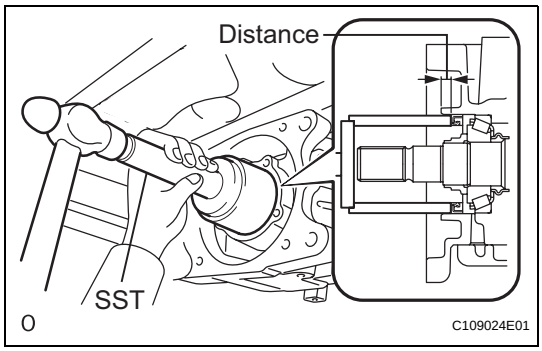
DIAPHRAGM OIL SEAL

COMPONENTS





DF

REMOVAL

1. **DRAIN DIFFERENTIAL OIL**
   (a) Using a 10 mm socket hexagon wrench, remove the rear differential drain plug and gasket, and drain the oil.
   (b) Install a new gasket to the rear differential drain plug.
   (c) Using a 10 mm socket hexagon wrench, install the rear differential drain plug and gasket.
2. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-3)**
3. **REMOVE ELECTROMAGNETIC COUPLING (See page DF-21)**
4. **REMOVE 4WD LINEAR SOLENOID (See page DF-22)**
5. **REMOVE YOKE (See page DF-22)**
6. **REMOVE TRANSMISSION COUPLING CONICAL SPRING WASHER (See page DF-22)**
7. **REMOVE TRANSMISSION COUPLING SHIM (See page DF-22)**
8. **REMOVE DIAPHRAGM OIL SEAL**
   (a) Using SST, remove the oil seal from the rear differential carrier.
   SST 09308-10010

INSTALLATION

1. **INSTALL DIAPHRAGM OIL SEAL**
   (a) Apply a light coat of MP grease No. 2 to the lip of a new diaphragm oil seal.
   (b) Using SST and a hammer, tap the diaphragm oil seal into the rear differential carrier according to the specification.
   SST 09710-30021 (09710-03121), 09950-60010 (09951-00570), 09950-70010 (09951-07100)
   Standard distance:
   7.0 +-0.5 mm (0.28 +-0.02 in.)
2. **INSTALL TRANSMISSION COUPLING SHIM (See page DF-41)**
3. **INSTALL TRANSMISSION COUPLING CONICAL SPRING WASHER (See page DF-41)**
4. **INSTALL YOKE (See page DF-41)**
5. **INSTALL 4WD LINEAR SOLENOID (See page DF-41)**

6. **INSTALL ELECTROMAGNETIC COUPLING (See page DF-42)**

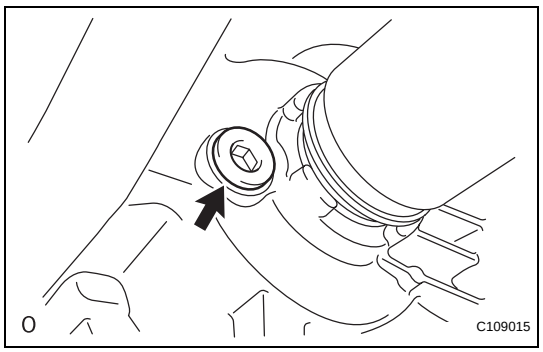
7. **TEMPORARILY INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-5)**

8. **FULLY TIGHTEN PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-6)**

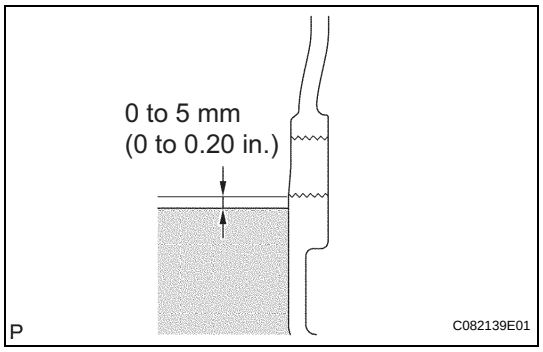
9. **INSPECT AND ADJUST JOINT ANGLE (See page PR-4)**

10. **ADD DIFFERENTIAL OIL**
    (a) Add differential oil (see page DF-3).

11. **CHECK FOR DIFFERENTIAL OIL LEAKAGE**
    If gas is leaking, tighten the areas necessary to stop the leak. Replace damaged parts as necessary.



DIFFERENTIAL OIL



ON-VEHICLE INSPECTION

1. CHECK DIFFERENTIAL OIL

(a) Stop the vehicle on a level surface.

(b) Using a 10 mm socket hexagon wrench, remove the rear differential filler plug and gasket.

(c) Check that the oil level is between 0 to 5 mm (0 to 0.20 in.) from the bottom lip of the differential filler plug hole.

NOTICE:

- **After changing the oil seal, drive the vehicle and then check the oil level again.**
- **Too much or too little oil will lead to differential problems.**

HINT:

If necessary, fill the differential carrier assembly with hypoid gear oil.

Recommended viscosity:
SAE 90

Standard oil grade:
Hypoid gear oil SX API GL-5

Standard differential oil capacity:
0.45 to 0.55 liters (0.48 to 0.58 US qts., 0.40 to 0.48 Imp. qts.)

(d) Using a 10 mm socket hexagon wrench, install a new gasket and the rear differential filler plug.

Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)

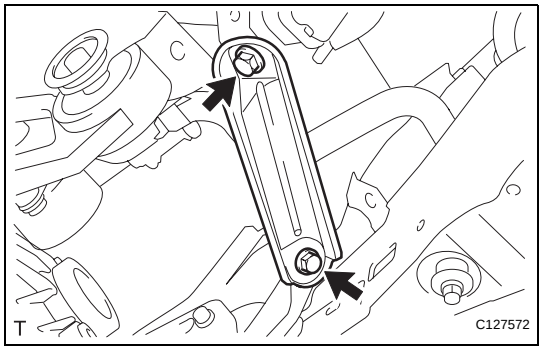
DIFFERENTIAL SYSTEM

PRECAUTION

1. **Before disassembling the differential assembly, thoroughly clean it by removing any sand, mud or foreign matter. This will help prevent contamination during disassembly and reassembly.**
2. **When removing the rear differential carrier cover or any other light alloy part, do not pry it off with a screwdriver or other tool that may cause damage. Instead, tap the part with a plastic-faced hammer.**
3. **Always arrange disassembled parts in the order they were removed and protect them from foreign matter.**
4. **Before installation of each part, thoroughly clean and dry it. Then apply hypoid gear oil SX to it. Do not use alkaline chemicals to clean aluminum parts, rubber parts or ring gear set bolts. Also, do not use white gasoline or other cleaning oils to clean Orings, oil seals or rubber parts.**
5. **Coat any sliding surface and rotating parts with hypoid gear oil SX.**
6. **Do not directly fix a part in a vise. Place aluminum plates between the part and vise.**
7. **Be careful not to damage the contact surfaces of the case. Such damage may cause oil leakage.**
8. **Before applying sealant, remove deposited oil sealant and clean the part to be sealed using white gasoline.**
9. **After sealing parts, do not allow oil to contact the seal for at least an hour.**
10. **Do not allow scratches on a part's contact surface with an oil seal, O-ring or gasket. Scratches may lead to oil leakage.**
11. **When press-fitting an oil seal, be careful not to damage the lip of the oil seal and its outside periphery.**
12. **When replacing a bearing, replace the inner and outer races as a set.**

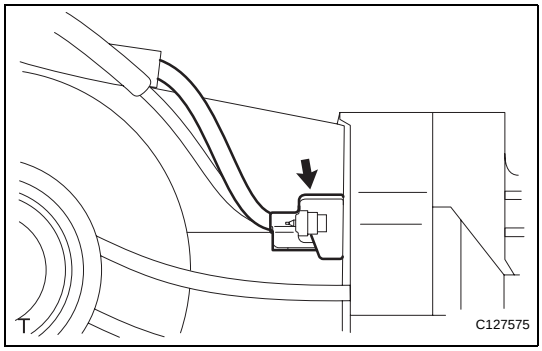
PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

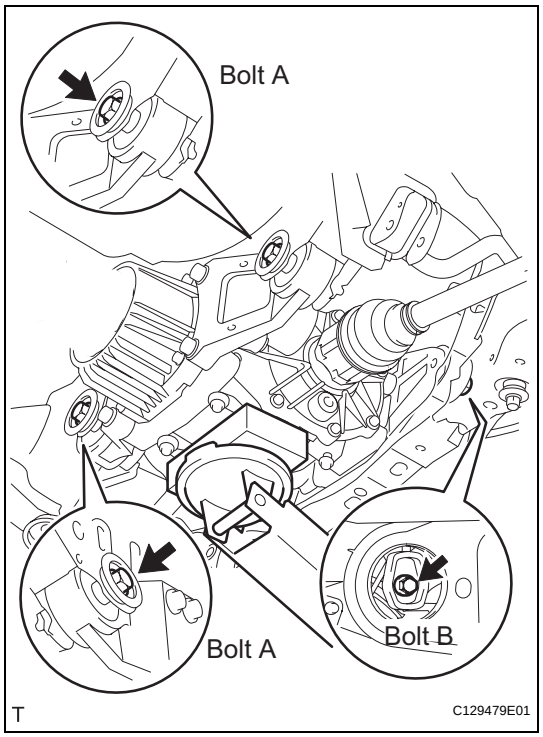


Differential system

Symptom	Suspected area	See page
Noise in rear differential	1. Oil (Level low or wrong grade)	DF-3
	2. Ring gear or drive pinion (Worn or chipped)	DF-20
	3. Backlash adjustment (Defective)	DF-20
	4. Preload adjustment (Defective)	DF-20
	5. Tooth contact between ring gear and drive pinion (Defective)	DF-34
	6. Bearing (Worn)	DF-20
Oil leak from rear differential	1. Oil (Level too high or wrong grade)	DF-3
	2. Side gear shaft oil seal (Worn or damaged)	DF-6
	3. Seal packing (Damaged)	DF-28

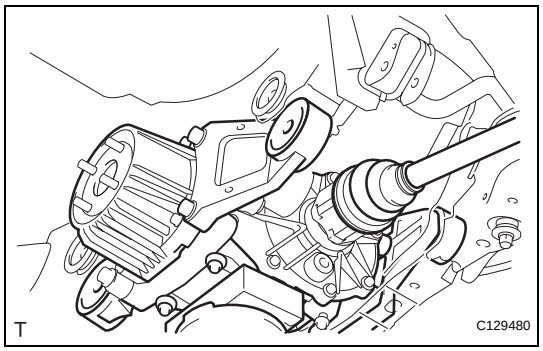


DF

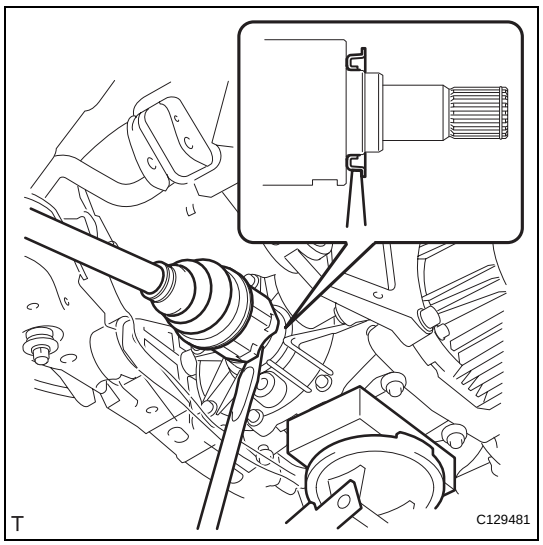


REMOVAL

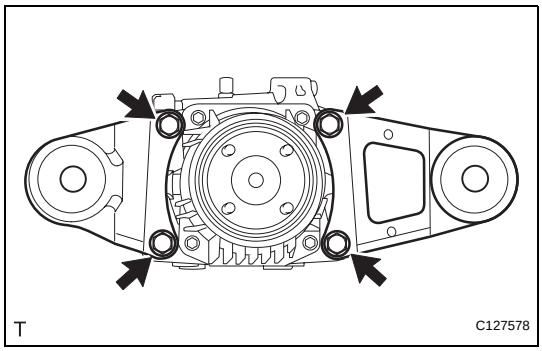
1. **DRAIN DIFFERENTIAL OIL**
2. **REMOVE REAR WHEEL**
3. **REMOVE TAILPIPE ASSEMBLY**
   (a) Remove the tailpipe (see page EX-2).
4. **REMOVE CENTER EXHAUST PIPE ASSEMBLY**
   (a) Remove the center pipe (see page EX-2).
5. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-3)**
6. **REMOVE REAR SUSPENSION MEMBER BRACE LH**
   (a) Remove the 2 bolts and brace from the suspension member.



7. **REMOVE REAR SUSPENSION MEMBER BRACE RH**
   HINT:
   Use the same procedures described for the LH side.
8. **REMOVE REAR DIFFERENTIAL CARRIER SUB-ASSEMBLY**
   (a) Disconnect the harness clamp.
   (b) Remove the breather tube.
   (c) Disconnect the connector.

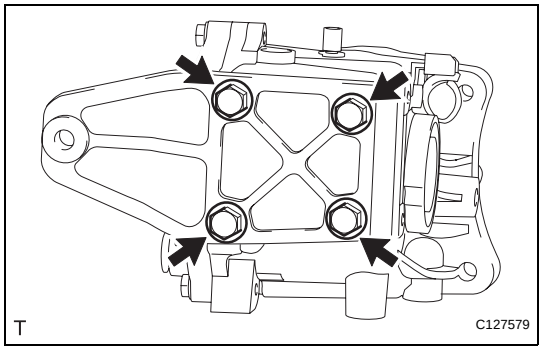


(d) Support the rear differential carrier with a transmission jack or equivalent.



(e) Fix the nuts in place and remove bolt A, bolt B and bolt C.
NOTICE:
Do not loosen the nuts. Loosen the bolts.

(f) Slowly lower the jack and then tilt the rear differential carrier.



(g) Set the tip of the tire lever to the position on the rear drive shaft inboard joint shown in the illustration. Then, using the ribbed part of the rear differential carrier as a fulcrum, disconnect the left and right rear drive shafts.
NOTICE:
Do not scratch the rear drive shaft dust cover.

9. REMOVE REAR DIFFERENTIAL NO. 1 AND NO. 2 SUPPORT

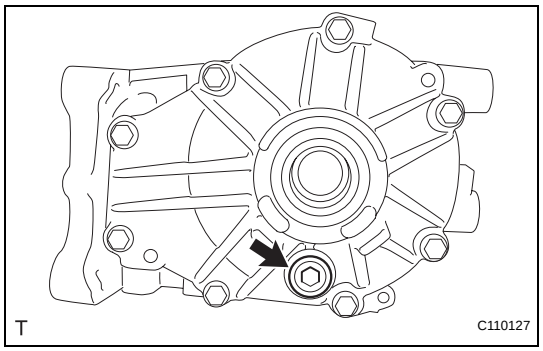
(a) Remove the 4 bolts and differential No. 1 and No. 2 supports from the differential carrier.

10. REMOVE REAR DIFFERENTIAL SUPPORT

(a) Remove the 4 bolts and differential support from the differential carrier.

DISASSEMBLY

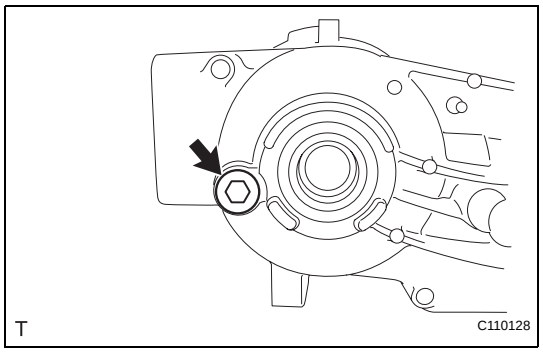
1. FIX DIFFERENTIAL CARRIER SUB-ASSEMBLY



(a) Fix the rear differential carrier in place with the overhaul attachment.

2. REMOVE STUD BOLT

(a) Remove the 4 stud bolts from the transmission coupling.

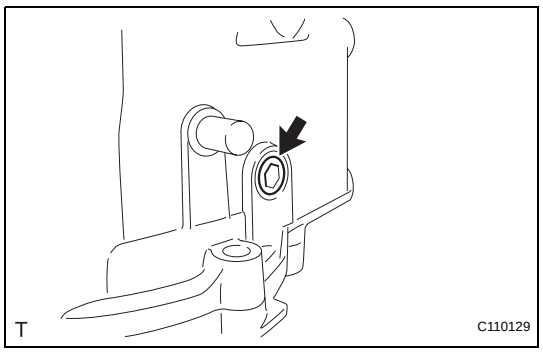


3. REMOVE DIFFERENTIAL DRAIN PLUG

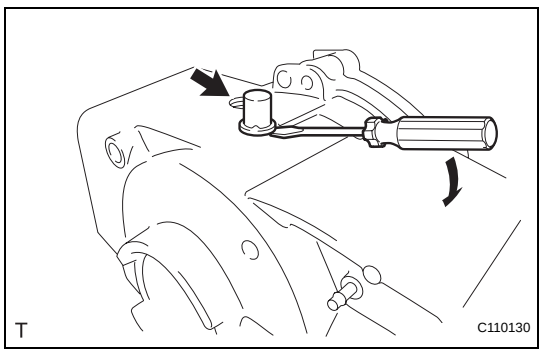
(a) Using a 10 mm socket hexagon wrench, remove the rear differential drain plug and gasket.

4. REMOVE DIFFERENTIAL FILLER PLUG

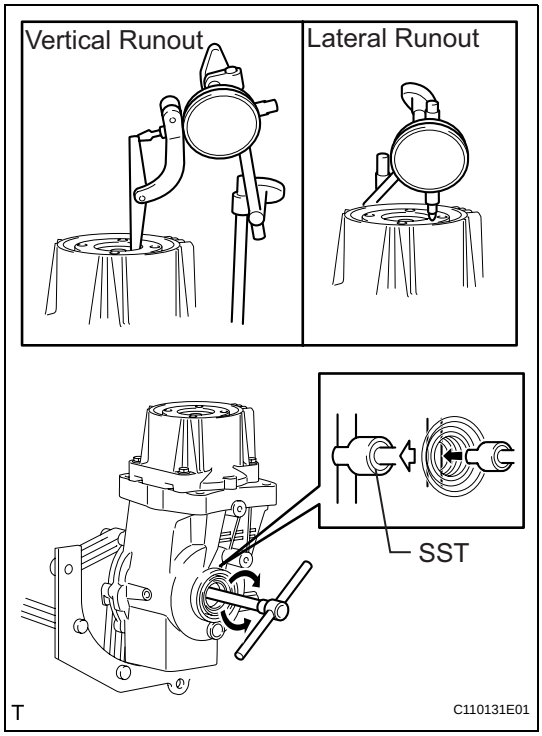
(a) Using a 10 mm socket hexagon wrench, remove the rear differential filler plug and gasket.



5. REMOVE DIFFERENTIAL CARRIER COVER PLUG



(a) Using an 8 mm socket hexagon wrench, remove rear differential carrier cover plug.



6. REMOVE DIFFERENTIAL CARRIER COVER BREATHER PLUG

(a) Using a chisel and hammer, slightly lift up the rear differential carrier cover breather plug.

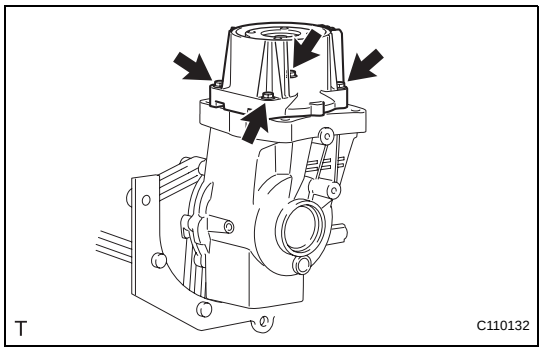
(b) Using a screwdriver, lightly pry up and remove the rear differential carrier cover breather plug.

7. INSPECT RUNOUT OF TRANSMISSION COUPLING ASSEMBLY

(a) Install a dial gauge so that it is perpendicular to the inner side of the transmission coupling.

(b) Using SST, rotate the transmission coupling assembly forward and backward and measure the vertical runout.

SST 09564-32011

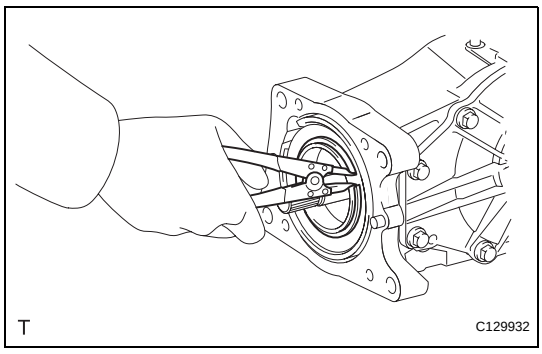


Maximum vertical runout :
0.06 mm (0.0024 in.)

(c) Install a dial gauge perpendicularly onto the transmission coupling assembly, as shown in the illustration.

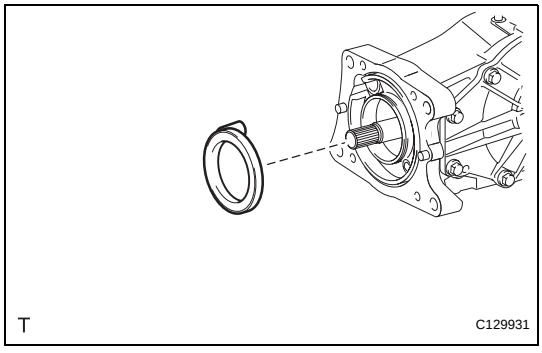
(d) Using SST, rotate the transmission coupling assembly forward and backward and measure the lateral runout.

SST 09564-32011



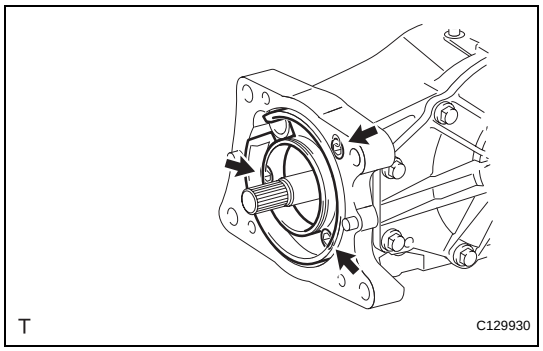
Maximum lateral runout:
0.07 mm (0.0028)

8. REMOVE ELECTROMAGNETIC COUPLING



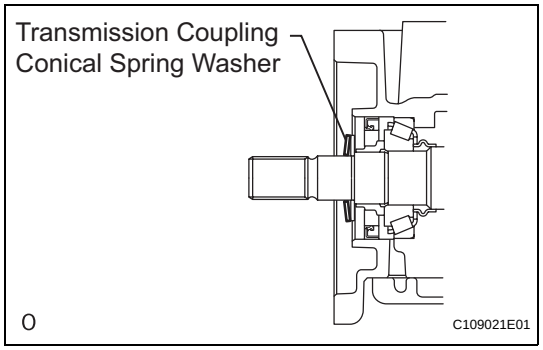
(a) Remove the 4 bolts and, using a plastic-faced hammer, lightly tap the rear differential carrier cover to remove it from the rear differential carrier.

NOTICE:
Set the brass bar on the ribbed part of the rear differential carrier cover.



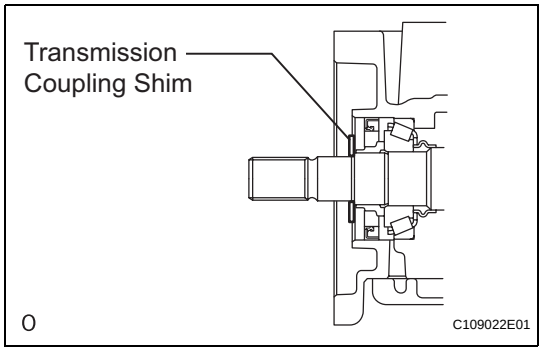
9. REMOVE 4WD LINEAR SOLENOID

(a) Using a snap ring expander, remove the snap ring.



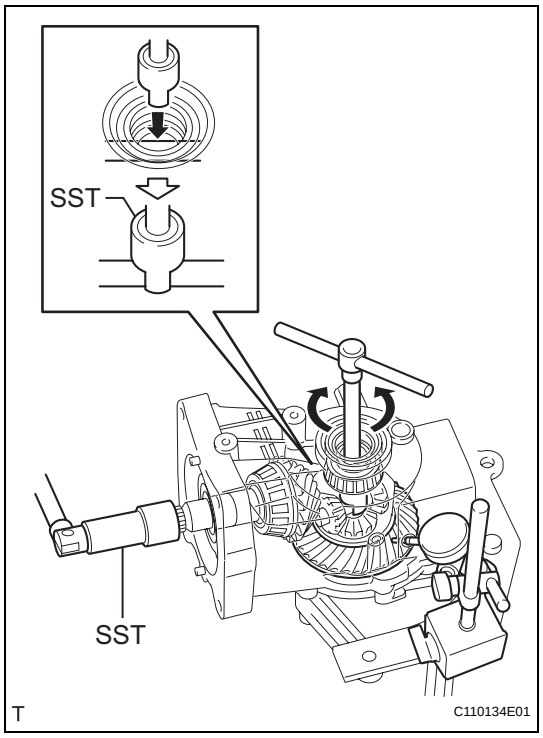
(b) Remove the solenoid from the yoke.

(c) Remove the O-ring from the solenoid.



10. REMOVE YOKE

(a) Using a 5 mm socket hexagon wrench, remove the 3 bolts and yoke from the differential carrier.

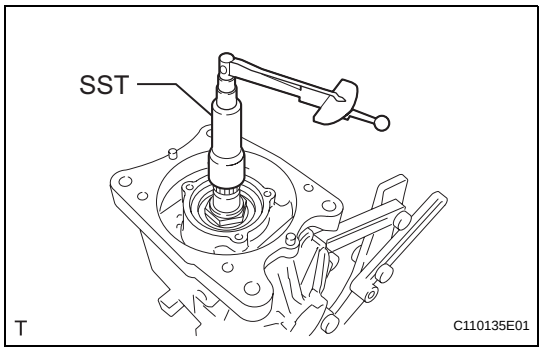


11. REMOVE TRANSMISSION COUPLING CONICAL SPRING WASHER

(a) Remove the spring washer from the differential carrier.

12. REMOVE TRANSMISSION COUPLING SHIM

(a) Remove the shim from the differential carrier.



13. INSPECT DIFFERENTIAL RING GEAR BACKLASH

(a) Insert a dial gauge through the rear differential carrier cover plug hole, and set it perpendicular to the ring gear tooth surface's tip.

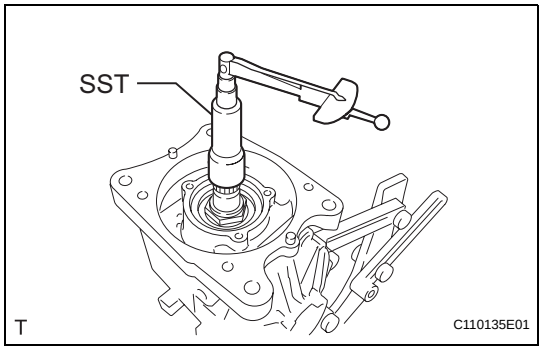
(b) Using SST, fix the drive pinion in place.
SST 09556-16011

(c) Using SST, rotate the rear differential case forward and backward, and measure the backlash.
SST 09564-32011
Standard backlash:
0.09 to 0.16 mm (0.0034 to 0.0063 in.)
NOTICE:
Measure at 3 or more areas around the circumference of the ring gear.

DF

14. INSPECT DIFFERENTIAL DRIVE PINION PRELOAD

(a) Using SST and a torque wrench, inspect the preload (starting torque) within the differential drive pinion and differential ring gear backlash area.



SST 09556-16011

Standard drive pinion preload:

0.24 to 0.37 N*m (2 to 4 kgf*cm, 2 to 3 in.*lbf)

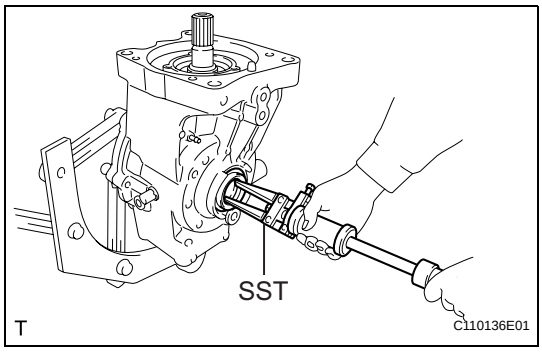
NOTICE:

For a more accurate measurement, rotate the case bearing forward and backward before measuring.

DF

15. INSPECT TOTAL PRELOAD

(a) Using SST and a torque wrench, inspect the preload (starting torque) with the teeth of the differential drive pinion and differential ring gear in contact.

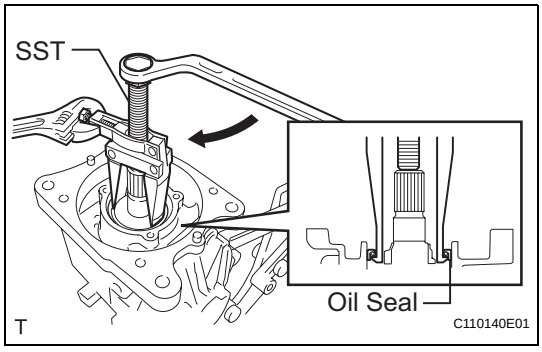


SST 09556-16011

Standard total preload:

Standard drive pinion preload plus 0.99 to 1.63 N*m (10 to 17 kgf*cm, 9 to 14 in.*lbf)

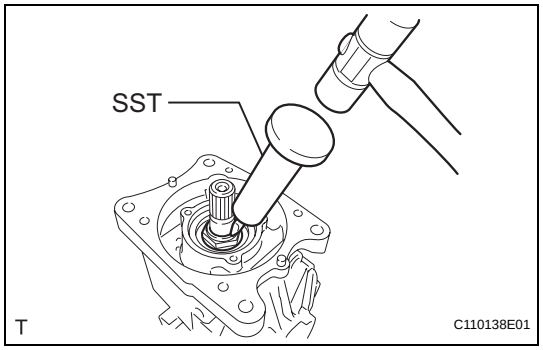
NOTICE:



For a more accurate measurement, rotate the case bearing forward and backward before measuring.

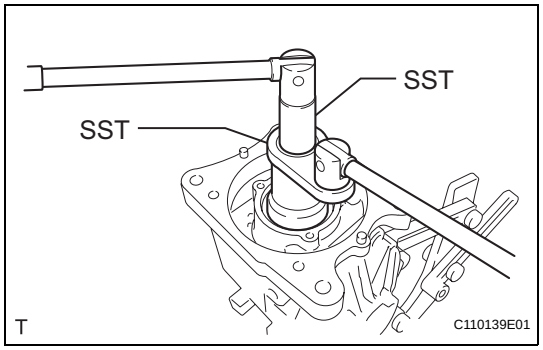
16. REMOVE DIFFERENTIAL SIDE GEAR SHAFT OIL SEAL

(a) Using SST, tap out the 2 rear differential side shaft gear oil seals from the rear differential carrier.



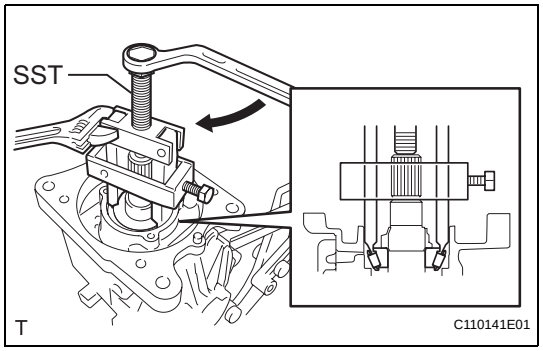
SST 09308-00010

17. REMOVE DIAPHRAGM OIL SEAL



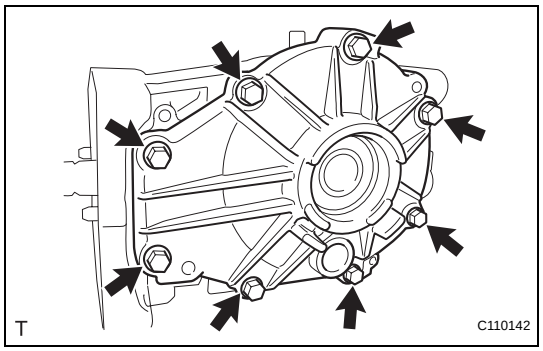
(a) Using SST, remove the diaphragm oil seal from the rear differential carrier.

SST 09308-10010



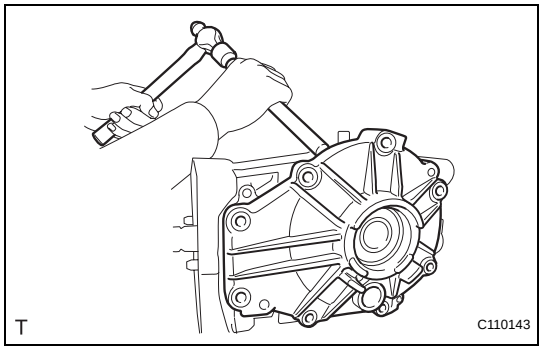
18. REMOVE DRIVE PINION NUT

(a) Using SST and a hammer, unstake the rear drive pinion nut.
SST 09930-00010
NOTICE:
- **Use SST with the tapered part against the shaft side.**
- **Do not modify the SST tip with a grinder or equivalent.**
- **Fully unstake the rear drive pinion nut**



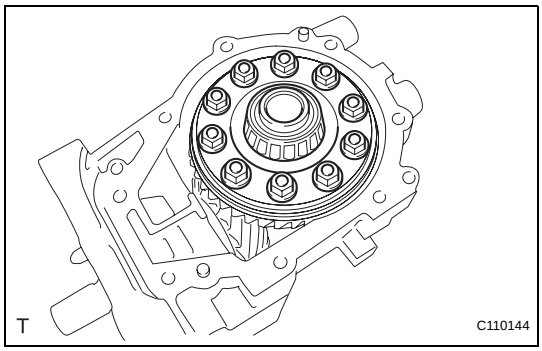
(b) Using SST, fix the differential drive pinion in place and remove the rear drive pinion nut from the differential drive pinion.
SST 09556-16011, 09564-16020

DF



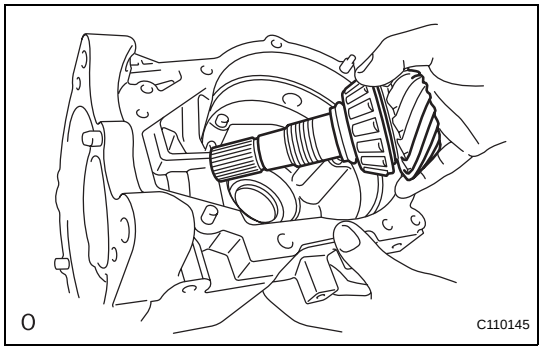
19. REMOVE REAR DRIVE PINION FRONT TAPERED ROLLER BEARING

(a) Using SST, remove the rear drive pinion tapered roller bearing front (inner race) from the rear differential carrier.
SST 09556-30010

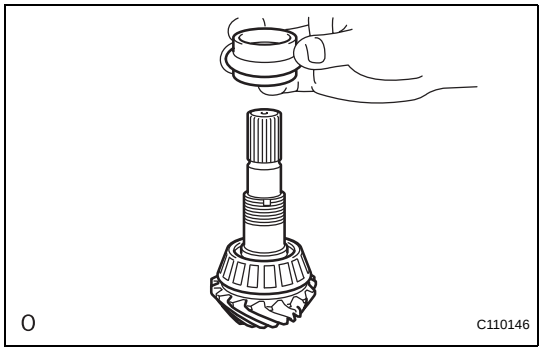


20. REMOVE DIFFERENTIAL SIDE BEARING RETAINER

(a) Remove the 8 bolts.

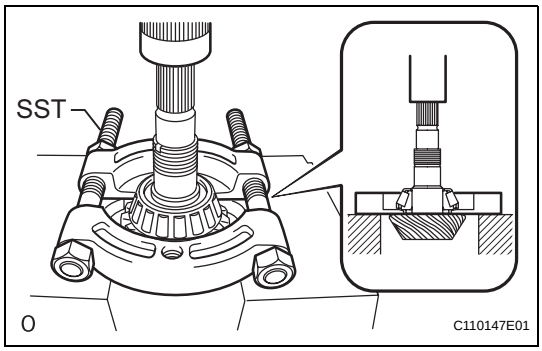


(b) Using a brass bar and hammer, lightly tap out the differential side bearing retainer.
NOTICE:
Set the brass bar on the ribbed part of the differential side bearing retainer.



21. REMOVE DIFFERENTIAL CASE SUB-ASSEMBLY

(a) Remove the rear differential case from the rear differential carrier.



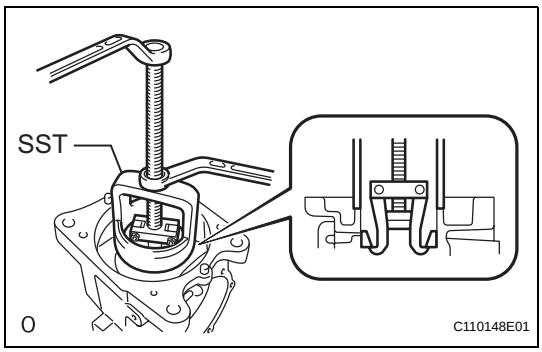
22. REMOVE DIFFERENTIAL DRIVE PINION

(a) Remove the differential drive pinion from the rear differential carrier.

23. REMOVE DIFFERENTIAL DRIVE PINION BEARING SPACER

(a) Remove the rear differential drive pinion bearing spacer from the differential drive pinion.

24. REMOVE REAR DRIVE PINION REAR TAPERED ROLLER BEARING

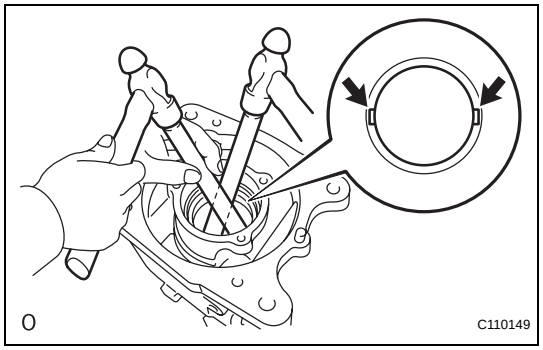


(a) Using SST and a press, press out the rear drive pinion tapered roller bearing rear (inner race) from the differential drive pinion.

SST 09950-00020

NOTICE:

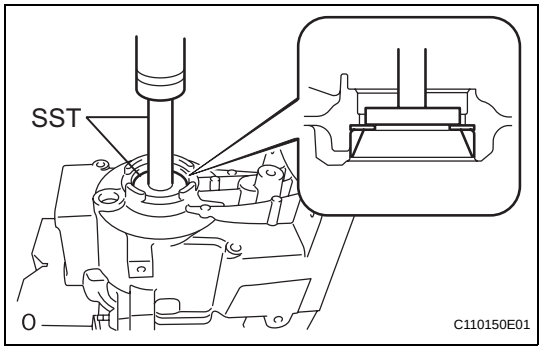
If the rear differential drive pinion or differential ring gear is damaged, replace them both.



(b) Remove the rear differential drive pinion washer.

25. REMOVE REAR DRIVE PINION FRONT TAPERED ROLLER BEARING

(a) Using SST, remove the rear drive pinion tapered roller bearing front (outer race) from the rear differential carrier.

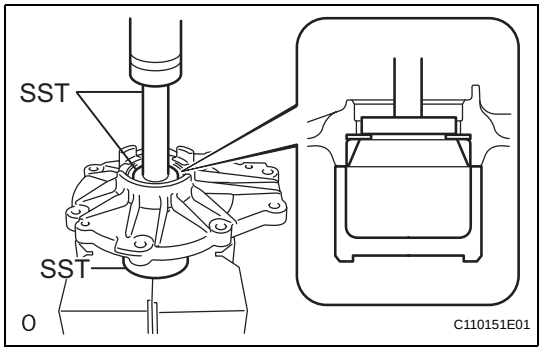


SST 09612-65014 (09612-01020, 09612-01050)

26. REMOVE REAR DRIVE PINION REAR TAPERED ROLLER BEARING

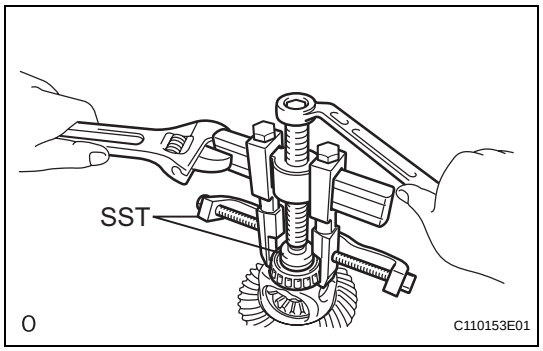
(a) Using a brass bar and hammer, lightly and uniformly tap out the rear drive pinion tapered roller bearing rear (outer race).

NOTICE:
Set the brass bar on the notch.



27. REMOVE DIFFERENTIAL CASE BEARING

SST 09950-60010 (09951-00460), 09950-70010 (09951-07100), 09649-17010 (09951-00510)

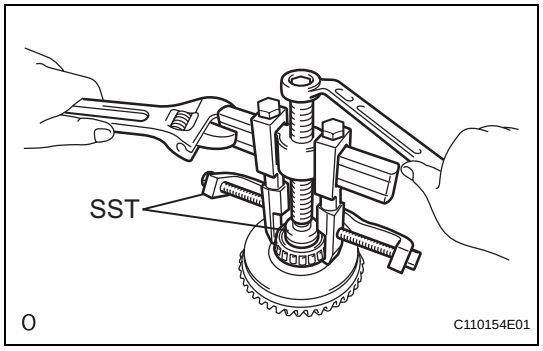


(a) Using SST and a press, press out the rear differential case bearing RH (outer race) and rear differential side gear shaft plate washer from the rear differential carrier.

SST 09950-60010, 09950-70010 (09951-07100)

(b) Using SST and a press, press out the rear differential case bearing LH (outer race) and rear differential side gear shaft plate washer from the differential side bearing retainer.

SST 09950-60010 (09951-00460), 09950-70010 (09951-07100), 09649-17010

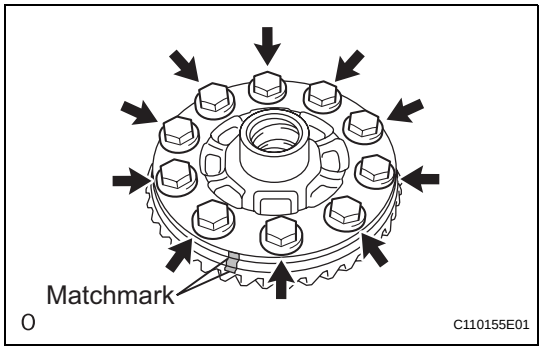


28. REMOVE DIFFERENTIAL CASE BEARING

(a) Using SST, remove the rear differential case bearing RH (inner race) from the rear differential case.

SST 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04061, 09957-04010, 09958-04011), 09950-60010 (09951-00320, 09955-04071)

NOTICE:
Before using SST center bolt (09953-04020), apply hypoid gear oil to its threads and tip.

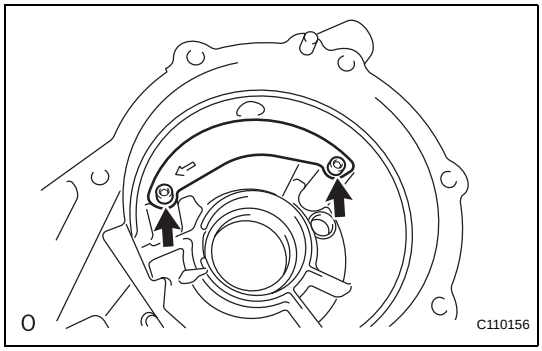


(b) Using SST, remove the rear differential case bearing LH (inner race) from the rear differential case.

SST 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04071, 09957-04010, 09958-04011), 09950-60010 (09951-00320)

NOTICE:
Before using SST center bolt (09953-04020), apply hypoid gear oil to its threads and tip.

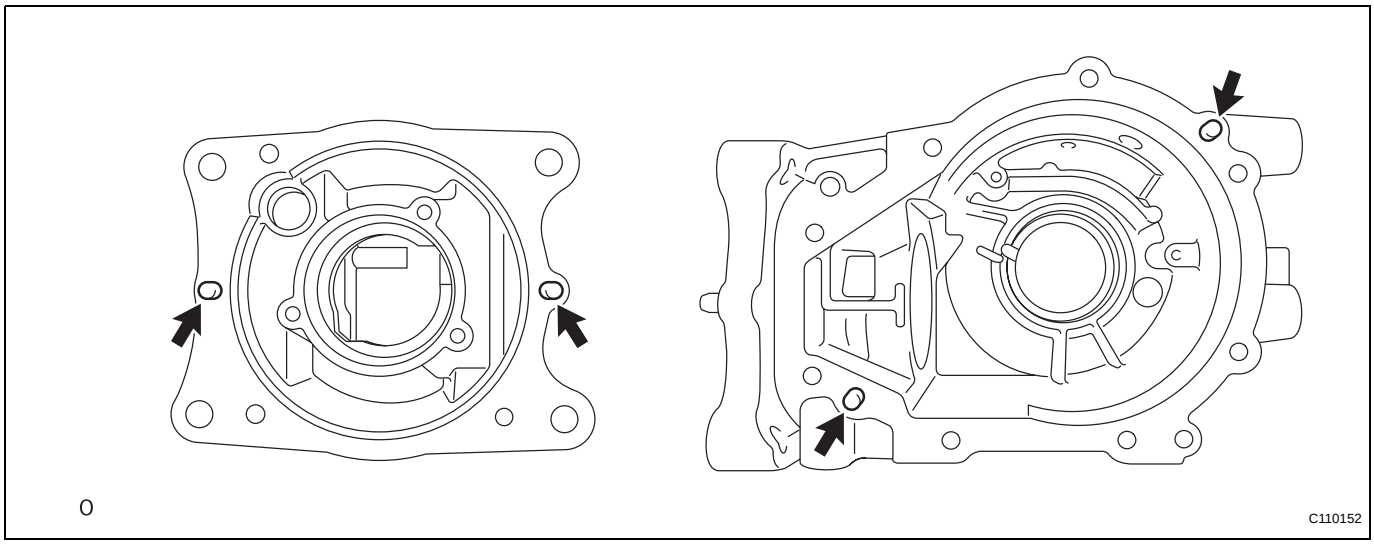
DF



HINT:
If the race is remains on the rear differential case, repeat the step above to remove the race.

29. REMOVE DIFFERENTIAL RING GEAR

(a) Place matchmarks on the rear differential case and differential ring gear.
(b) Remove the 10 bolts.
(c) Using a plastic-faced hammer, lightly tap the outer circumference of the differential ring gear to remove it from the rear differential case.



DF

30. REMOVE DIFFERENTIAL BREATHER PLUG OIL DEFLECTOR

(a) Using a 5 mm socket hexagon wrench, remove the 2 bolts and rear differential breather plug oil deflector.

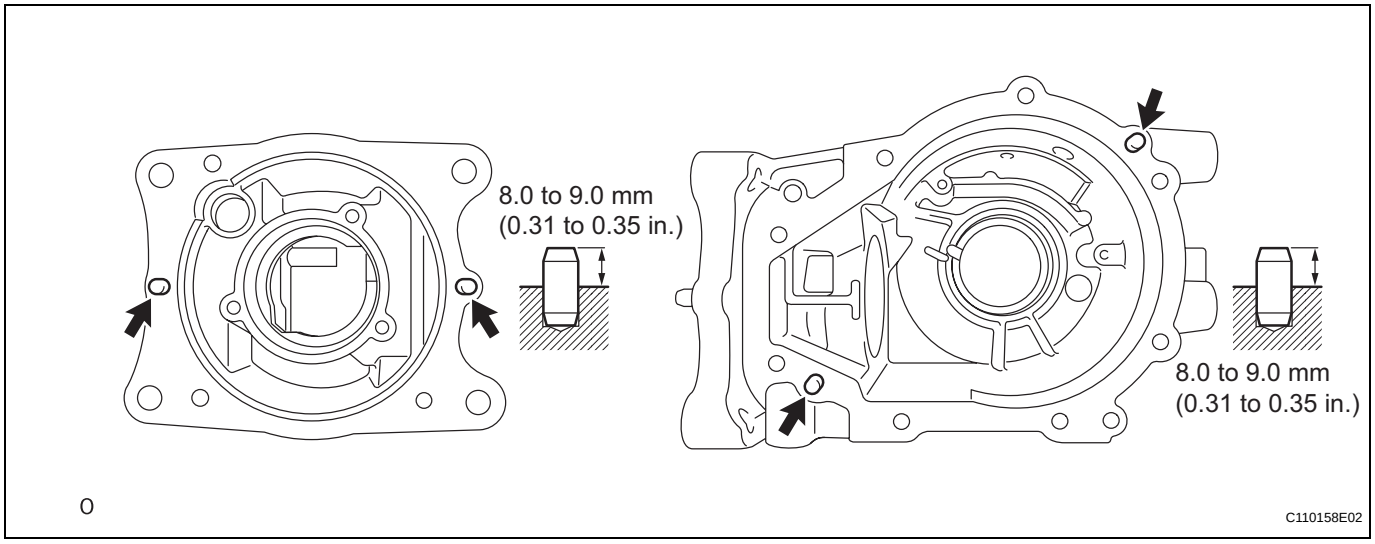
31. REMOVE STRAIGHT PIN

(a) Using pliers, remove the 4 straight pins from the rear differential carrier.

32. REMOVE ELBOW TUBE

33. REMOVE WIRING HARNESS CLAMP BRACKET

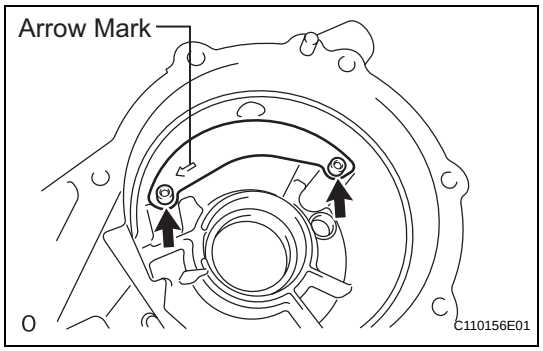
(a) Remove the bolt and bracket.



REASSEMBLY

1. INSTALL WIRING HARNESS CLAMP BRACKET

(a) Install the bracket with the bolt.

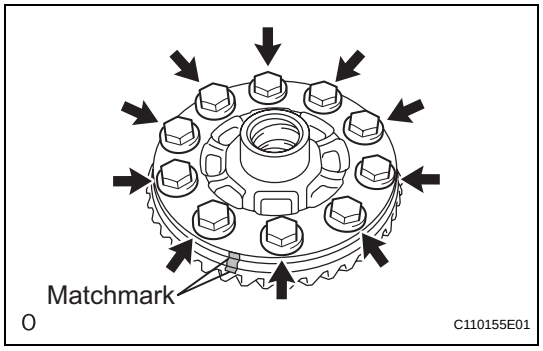


2. INSTALL ELBOW TUBE

3. INSTALL STRAIGHT PIN

(a) Using a plastic hammer, install the 4 straight pins to the rear differential carrier.

(b) Thoroughly clean oil and water from the surface of the rear differential case that will face the differential ring gear.



4. INSTALL DIFFERENTIAL BREATHER PLUG OIL DEFLECTOR

(a) Using a 5 mm socket hexagon wrench, install the rear differential breather plug oil deflector with the 2 bolts.

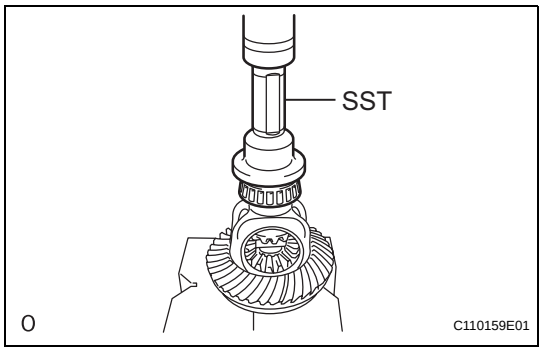
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

NOTICE:

Install it so that the arrow mark faces the front (transmission coupling side) of the vehicle.

5. INSTALL DIFFERENTIAL RING GEAR

(a) Align the matchmarks on the rear differential case and differential ring gear, and install the differential ring gear.



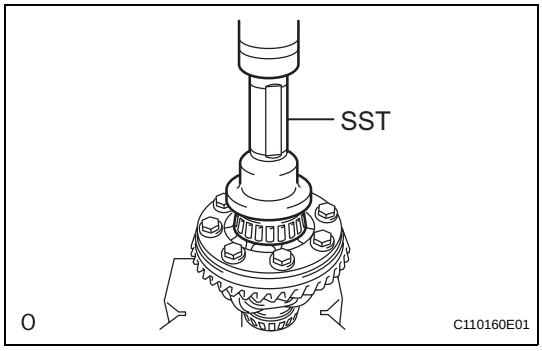
(b) Install 10 new differential case bolts.

Torque: 90 N*m (918 kgf*cm, 66 ft.*lbf)

NOTICE:

- **The new bolts are coated with heat resistant oil. Do not wash it off.**
- **Install the rear differential case bolts by tightening diametrically opposite bolts uniformly in several passes.**

DF



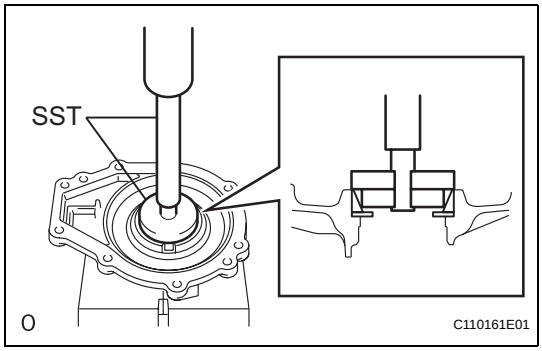
6. INSTALL DIFFERENTIAL CASE BEARING

(a) Using SST and a press, press-fit the rear differential case bearing RH (inner race) to the rear differential case.

SST 09223-50010

NOTICE:

If the rear differential case bearing inner race is damaged, replace it with a new one.

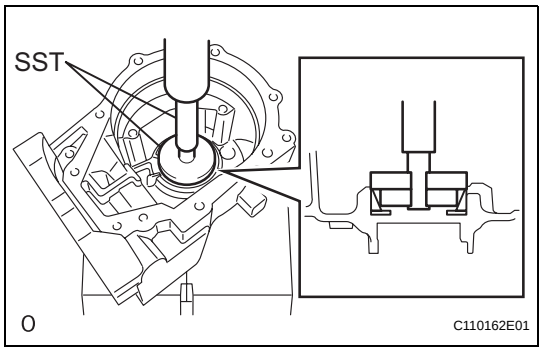


(b) Using SST and a press, press-fit the rear differential case bearing LH (inner race) to the rear differential case.

SST 09223-50010

NOTICE:

If the rear differential case bearing inner race is damaged, replace it with a new one.



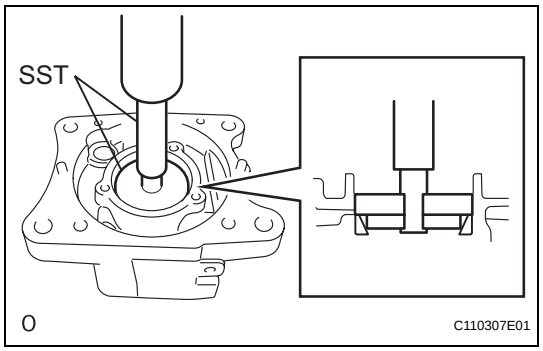
7. INSTALL DIFFERENTIAL CASE BEARING

(a) Using SST and a press, press-fit the rear differential side gear shaft washer and rear differential case bearing LH (outer race) to the differential side bearing retainer.

SST 09950-60010 (09951-00510, 09951-00620, 09952-06010), 09950-70010 (09951-07150)

NOTICE:

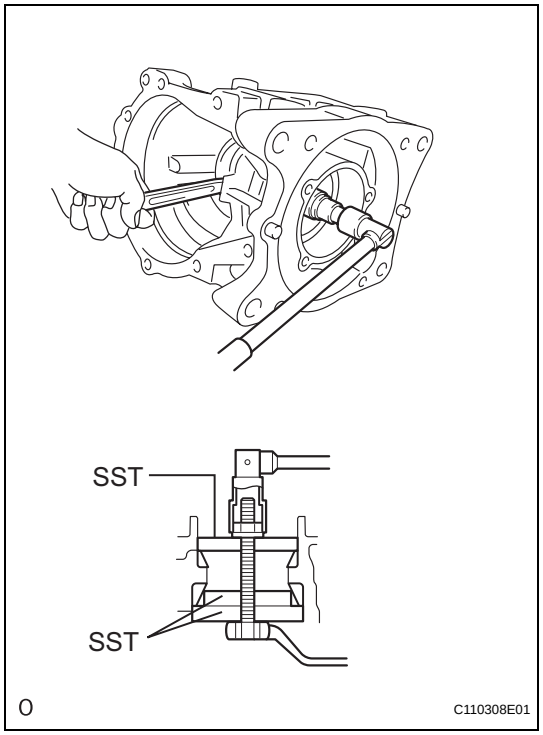
- **Install each rear differential side gear shaft washer to the place it was removed from.**
- **When replacing a bearing, replace the inner and outer races as a set.**
- **Install the rear differential side gear shaft oil seal after performing the teeth contact inspection and backlash adjustment.**



(b) Using SST and a press, press-fit the rear differential side gear shaft washer and rear differential case bearing RH (outer race) to the rear differential carrier.

SST 09950-60010 (09951-00510, 09951-00620, 09952-06010), 09950-70010 (09951-07150)

NOTICE:



- **Install each rear differential side gear shaft washer to the place it was removed from.**
- **When replacing a bearing, replace the inner and outer races as a set.**
- **Install the rear differential side gear shaft oil seal after performing the teeth contact inspection and backlash adjustment.**

8. INSTALL REAR DRIVE PINION FRONT TAPERED ROLLER BEARING

(a) Using SST and a press, press-fit the rear drive pinion tapered roller bearing front (outer race) to the rear differential carrier.

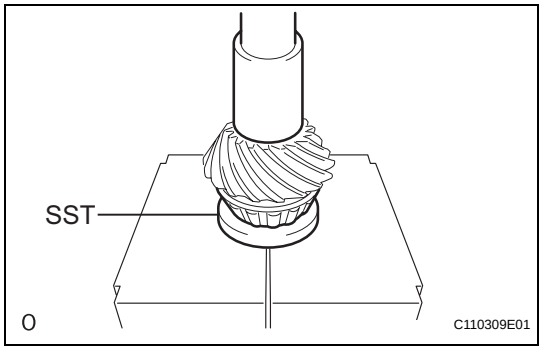
SST 09950-60010 (09951-00550), 09950-60020 (09951-00680), 09950-70010 (09951-07100)

9. INSTALL REAR DRIVE PINION REAR TAPERED ROLLER BEARING

(a) Using SST, bolts, nuts and washers, install the rear drive pinion tapered roller bearing rear (outer race) to the rear differential carrier.

SST 09950-60010 (09951-00600), 09950-60020 (09951-00680, 09951-00750)

HINT:



Use M12 x P1.25 bolts with shaft lengths of 186 mm (part No. 90101-12159) and M12 x P1.25 nuts (part No. 90179-12051) for the installation.

10. INSTALL REAR DRIVE PINION REAR TAPERED ROLLER BEARING

(a) Install the rear differential drive pinion washer to the differential drive pinion.

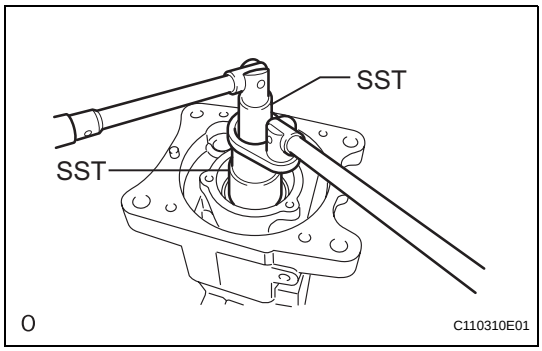
NOTICE:

Install each rear differential drive pinion washer to the place it was removed from.

(b) Using SST and a press, press-fit the tapered roller rear (inner race) to the differential drive pinion.

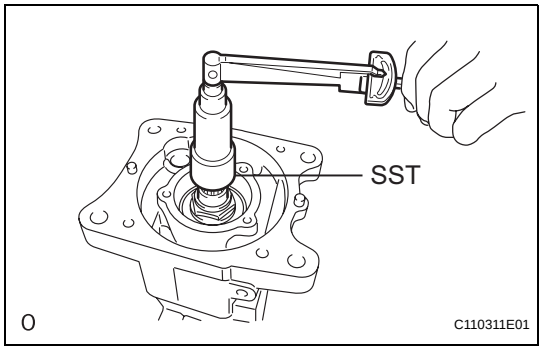
SST 09506-30012

11. ADJUST DIFFERENTIAL DRIVE PINION PRELOAD



(a) Install the differential drive pinion (with rear drive pinion tapered roller bearing rear inner race) to the rear differential carrier.

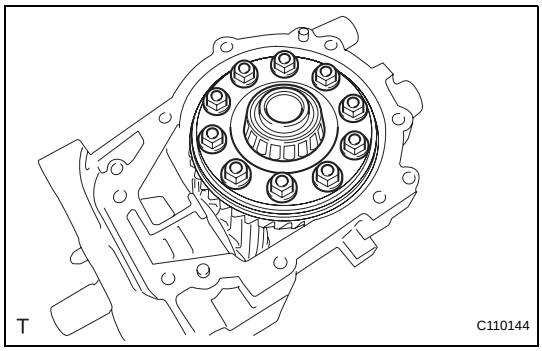
(b) Install the rear drive pinion tapered roller bearing front inner race and a new rear drive pinion nut to the differential drive pinion.



NOTICE:

- **New bearings are coated with anti-rust oil. If using new bearings, do not wash it off.**
- **If reusing a bearing, coat it with hypoid gear oil SX.**

DF

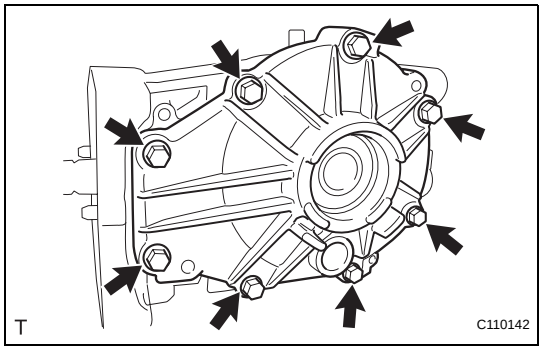


(c) Using SST, tighten a new rear drive pinion nut a little at a time until the specified preload is reached. Do not exceed the torque limit shown below.
SST 09556-16011, 09564-16020
Torque: 245 N*m (2,500 kgf*cm, 181 ft.*lbf) for use without SST
223 N*m (2,273 kgf*cm, 164 in.*lbf) for use with SST
HINT:
Use a torque wrench with a fulcrum length of 30 cm (11.81 in.)

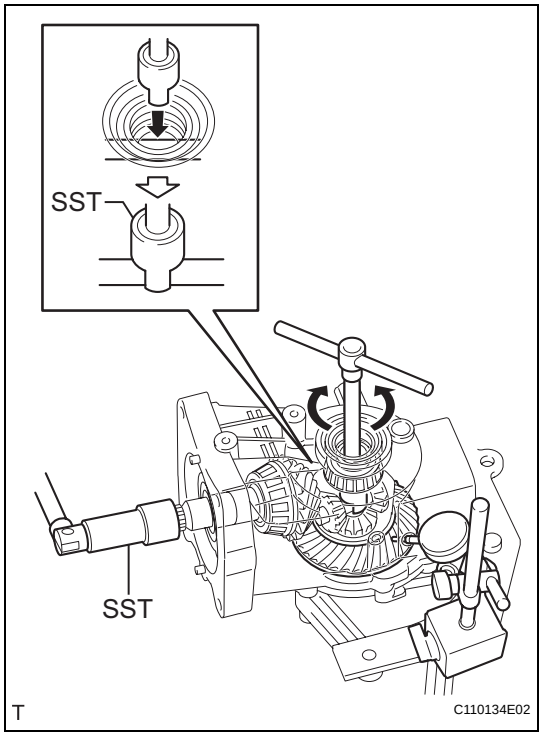
(d) Using SST and a torque wrench, measure the starting torque of the differential drive pinion.
SST 09556-16011
Standard drive pinion preload (start torque)

Bearing	Preload
New bearing	1.31 to 2.18 N*m (13 to 22 kgf*cm, 12 to 19 in.*lbf)
Reused bearing	0.24 to 0.37 N*m (2 to 4 kgf*cm, 2 to 3 in.*lbf)

NOTICE:
- **For a more accurate measurement, rotate the bearing forward and backward before inspecting.**
- **Record the preload measurement for use with the total preload inspection.**



12. INSTALL DIFFERENTIAL CASE



(a) Install the rear differential case to the rear differential carrier.

13. INSTALL DIFFERENTIAL SIDE BEARING RETAINER

(a) Using a scraper and wire brush, clean the seal packing from the rear differential carrier and differential side bearing retainer.
NOTICE:
Do not scratch the installation area.

(b) Install the differential side bearing retainer to the rear differential carrier with the 8 bolts.
Torque: 34 N*m (350 kgf*cm, 25 ft.*lbf)

14. ADJUST DIFFERENTIAL RING GEAR BACKLASH

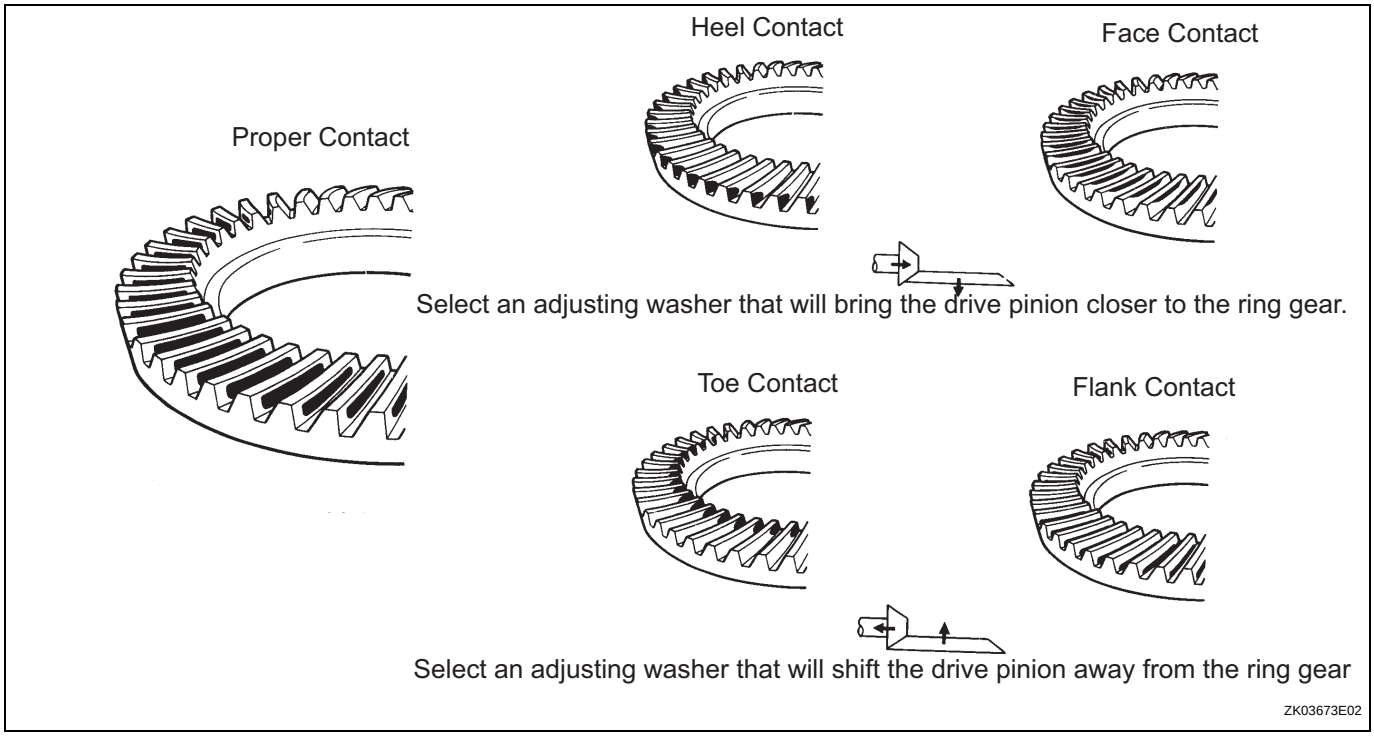
(a) Insert a dial gauge through the rear differential carrier cover plug hole, and set it perpendicular to the ring gear tooth surface's tip.

(b) Using SST, fix the drive pinion in place.
SST 09556-16011

(c) Using SST, rotate the rear differential case forward and backward, and measure the backlash.
SST 09564-16020
NOTICE:
Measure at 3 or more areas around the circumference of the ring gear.

(d) If the result is not within the specified range, select washers that are thicker or thinner as necessary, where the thickness for the left and right side is the same. Then perform the rear differential case bearing outer race installation.
HINT:
- If the backlash is small, select a thick washer for the RH side and a thin washer for the LH side.
- If the backlash is large, select a thin washer for the RH side and a thick washer for the LH side.

DF



Rear differential side gear shaft washer

Part No.	Thickness mm (in.)	Identifying Mark	Part No.	Thickness mm (in.)	Identifying Mark
90564-37022	1.59 to 1.61 (0.0625 to 0.0633)	A0	90564-37040	2.13 to 2.15 (0.0839 to 0.0846)	B8
90564-37023	1.62 to 1.64 (0.0637 to 0.0649)	A1	90564-37041	2.16 to 2.18 (0.0850 to 0.0858)	B9
90564-37024	1.65 to 1.67 (0.0650 to 0.0657)	A2	90564-37042	2.19 to 2.21 (0.0862 to 0.0870)	C0

15. INSPECT TOOTH CONTACT BETWEEN RING GEAR AND DRIVE PINION

(a) Remove the 8 bolts and differential side bearing retainer from the rear differential carrier.
(b) Remove the rear differential carrier case.
(c) Uniformly apply a light coat of prussian blue on both sides of the differential ring gear teeth.
(d) Install the rear differential case.
(e) Temporarily install the differential side bearing retainer to the differential carrier with the 8 bolts.
(f) Rotate the differential side pinion several times.
(g) Remove the 8 bolts and rear differential side bearing retainer from the differential carrier.
(h) Check the tooth contact pattern of the differential drive pinion and differential ring gear.

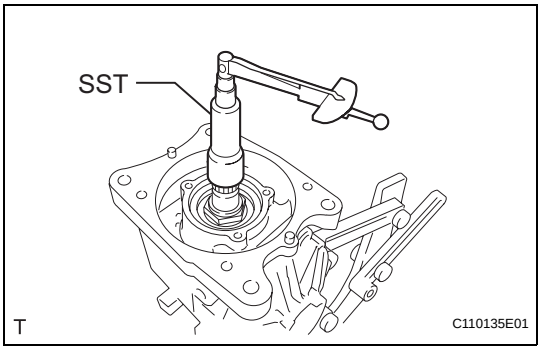
NOTICE:
Check the tooth contact pattern at 2 or more positions around circumference of the differential ring gear.

(i) Perform the following procedures for face or flank contact.
(1) Select washers that are thicker or thinner as necessary, where the thickness for the left and right side is the same. Then install the rear differential case bearing outer race.(*1)

(2) Repeat the differential ring gear and differential drive pinion tooth contact pattern inspection.
HINT:
If the tooth contact pattern is not correct, repeat*1.

(3) Repeat the differential ring gear and differential drive pinion backlash inspection.
HINT:
If the differential ring gear and differential drive pinion backlash is not as specified, replace the differential ring gear and differential drive pinion with new ones.

(j) Perform the following procedures for heel or toe contact.



(1) Select a drive pinion washer again and perform the rear drive pinion tapered roller bearing rear installation.

Rear differential drive pinion washer

Part No.	Thickness (mm)	Identifying Mark	Part No.	Thickness (mm)	Identifying Mark

DF

16. INSPECT TOTAL PRELOAD

(a) Using SST and a torque wrench, measure the starting torque with the teeth of the differential drive pinion and differential ring gear in contact.

SST 09556-16011

Standard total preload:

Standard drive pinion preload plus

Bearing	Preload
New bearing	1.18 to 1.63 N*m (12 to 17 kgf*cm, 10 to 14 in.*lbf)
Reused bearing	0.99 to 1.63 N*m (10 to 17 kgf*cm, 9 to 14 in.*lbf)

NOTICE:

For a more accurate measurement, rotate the case bearing forward and backward before measuring.

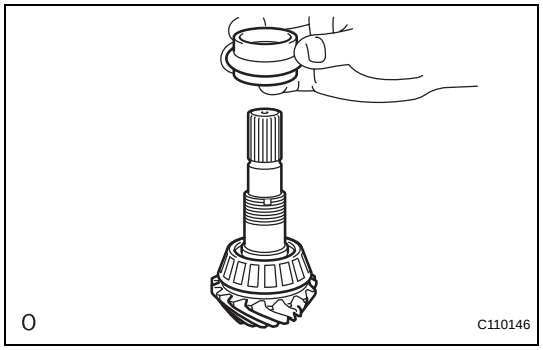
(b) If the results are not within the specification, perform the procedures below.

(1) Select a side gear shaft washer for the RH side again, and then perform the rear differential case bearing outer race installation (RH side only).

(2) Repeat the total preload inspection.

(3) Repeat the ring gear backlash inspection.

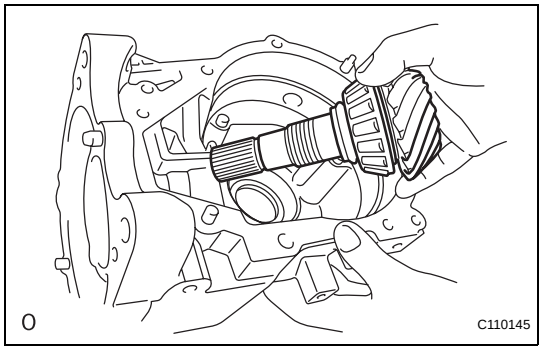
(4) Repeat the differential ring gear and drive pinion tooth contact pattern inspection.



17. REMOVE DIFFERENTIAL SIDE BEARING RETAINER

(a) Remove the 8 bolts and differential side bearing retainer from the rear differential carrier.

18. REMOVE DIFFERENTIAL CASE

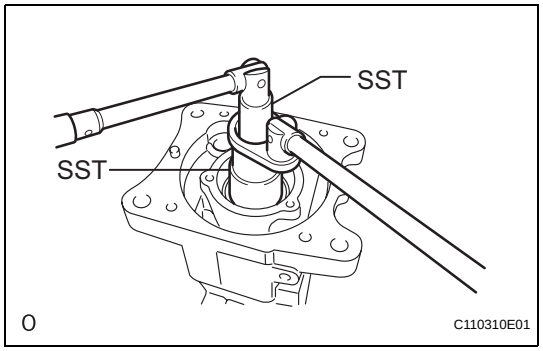


(a) Remove the rear differential case from the rear differential carrier.

19. REMOVE DIFFERENTIAL DRIVE PINION

20. INSTALL DIFFERENTIAL DRIVE PINION BEARING SPACER

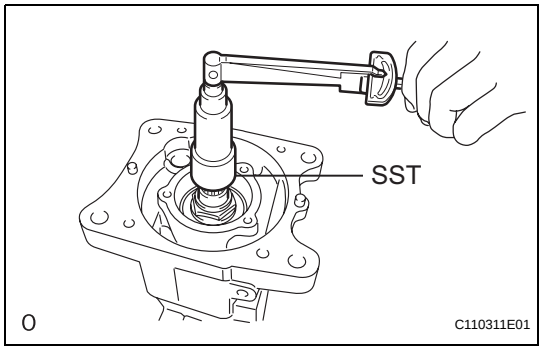
(a) Install a new rear differential drive pinion bearing spacer to the differential drive pinion.



21. INSTALL DIFFERENTIAL DRIVE PINION

(a) Install the differential drive pinion to the rear differential carrier.

22. INSTALL REAR DRIVE PINION NUT



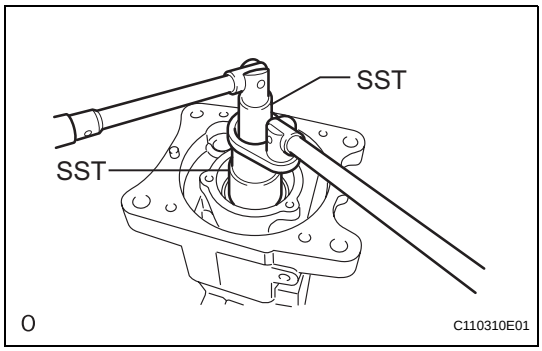
(a) Apply hypoid gear oil LSD to the threads of the rear drive pinion nut.

(b) Install a new rear drive pinion nut to the differential drive pinion. Using SST, tighten the nut while confirming the preload.

SST 09556-16011, 09564-16020
SST 09564-16020
Torque: 245 N*m (2,500 kgf*cm, 181 ft.*lbf) for use without SST
223 N*m (2,273 kgf*cm, 164 ft.*lbf) for use with SST

HINT:
Use a torque wrench with a fulcrum length of 30 cm (11.81 in.).

23. ADJUST DIFFERENTIAL DRIVE PINION PRELOAD



(a) Using SST and a torque wrench, inspect the starting torque.

SST 09556-16011
Standard drive pinion preload

Bearing	Preload
New bearing	1.31 to 2.18 N*m (13 to 22 kgf*cm, 12 to 19 in.*lbf)
Reused bearing	0.24 to 0.37 N*m (2 to 4 kgf*cm, 2 to 3 in.*lbf)

NOTICE:

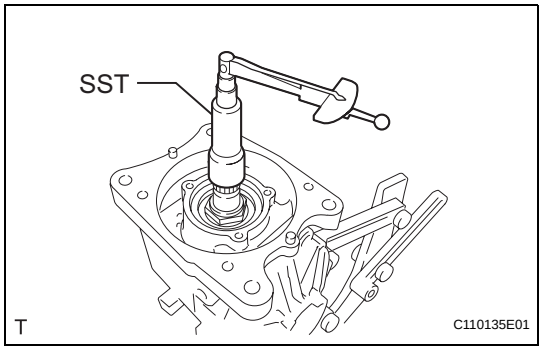
- **For a more accurate measurement, rotate the bearing forward and backward before adjusting.**
- **Adjust it so that it matches the drive pinion temporary adjustment starting torque.**

(b) If the preload is insufficient, use SST to tighten the drive pinion nut 5 to 10° at a time. Measure the starting torque and repeat the adjustment as necessary until the preload matches the specified torque.
SST 09564-16020

(c) If the tightening torque of the rear drive pinion nut exceeds 245 N*m { 2500 kgf*cm } but the preload is still insufficient, loosen the rear drive pinion nut. Then check if the rear drive pinion nut and differential drive pinion screw threads are damaged.

(d) If there is no defect, replace the rear drive differential drive pinion bearing spacer, apply hypoid gear oil LSD to its threads and repeat the procedure above.

DF



24. INSTALL DIFFERENTIAL CASE

25. INSTALL DIFFERENTIAL SIDE BEARING RETAINER

(a) Install the differential side bearing retainer to the rear differential carrier with the 8 bolts.
Torque: 34 N*m (350 kgf*cm, 25 ft.*lbf)

26. INSPECT DIFFERENTIAL RING GEAR BACKLASH

27. INSPECT TOTAL PRELOAD

(a) Using SST and a torque wrench, measure the starting torque with the teeth of the differential drive pinion and differential ring gear in contact.
SST 09556-16011
Standard total preload:
Standard drive pinion preload plus

Bearing	Preload
New bearing	1.18 to 1.90 N*m (12 to 19 kgf*cm, 10 to 17 in.*lbf)
Reused bearing	0.99 to 1.63 N*m (10 to 17 kgf*cm, 9 to 14 in.*lbf)

NOTICE:
For a more accurate measurement, rotate the case bearing forward and backward before measuring.

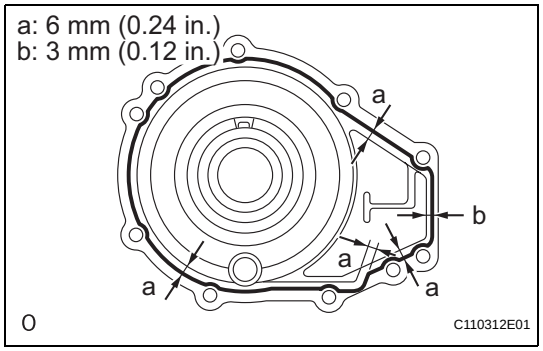
(b) If the results are not within the specified range, select a rear differential side gear shaft washer for the RH side again, and then perform the rear differential case bearing outer race installation (RH side only).
NOTICE:
If using a different rear differential side gear shaft washer, adjust the ring gear backlash. Then adjust the total preload.

28. REMOVE DIFFERENTIAL SIDE BEARING RETAINER

(a) Remove the 8 bolts and side bearing retainer from the rear differential carrier.

29. INSTALL DIFFERENTIAL SIDE BEARING RETAINER

(a) Using white gasoline, remove grease and oil from the alignment surfaces of the rear differential carrier and differential side bearing retainer.



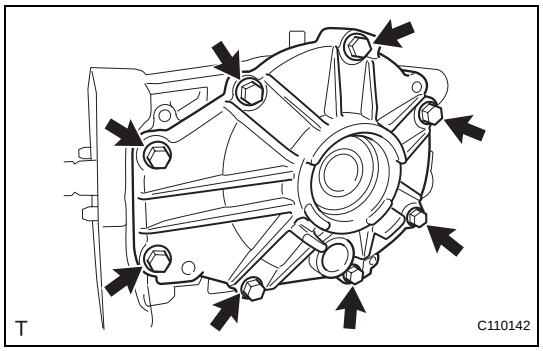
(b) Apply seal packing to the areas indicated in the illustration of the differential side bearing retainer.

Seal Packing:

Toyota Genuine Seal Packing 1281, Three Bond 1281 or equivalent

NOTICE:

- **Apply seal packing in a continuous line 2 to 3 mm (0.08 to 0.12 in.) in diameter.**
- **Perform the installation with 3 minutes of applying seal packing.**

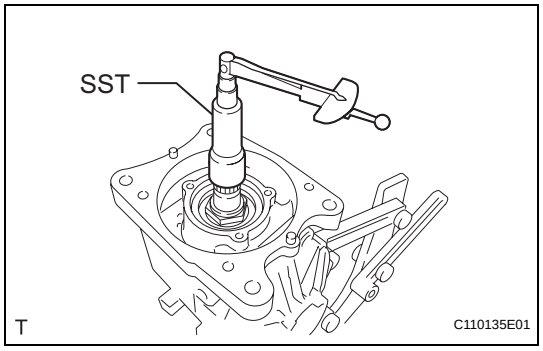


(c) Install the differential side bearing retainer to the rear differential carrier with the 8 bolts.

Torque: 34 N*m (350 kgf*cm, 25 ft.*lbf)

NOTICE:

After installing the cover, do not add oil or drive the vehicle, and leave it alone for 1 hour or more. Also, avoid sudden acceleration and deceleration for 12 hours or more.



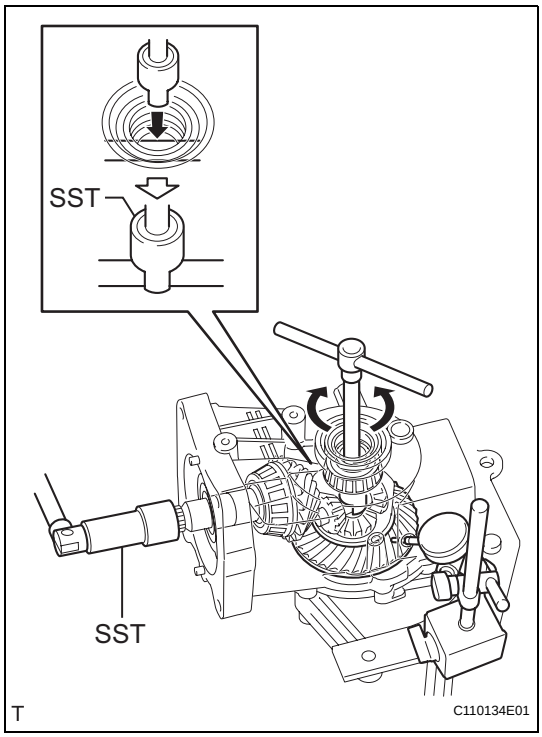
30. INSPECT TOTAL PRELOAD

(a) Using SST and a torque wrench, inspect the starting torque with the teeth of the differential drive pinion and differential ring gear in contact.

SST 09556-16011

Standard total preload:

Standard drive pinion preload plus



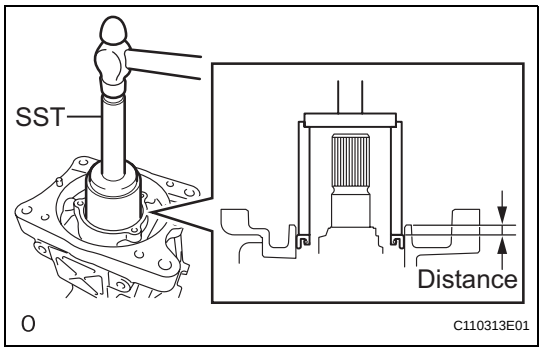
Bearing	Preload
New bearing	1.18 to 1.90 N*m (12 to 19 kgf*cm, 10 to 17 in.*lbf)
Reused bearing	0.99 to 1.63 N*m (10 to 17 kgf*cm, 9 to 14 in.*lbf)

NOTICE:

For a more accurate measurement, rotate the case bearing forward and backward before inspecting.

DF

31. INSPECT DIFFERENTIAL RING GEAR BACKLASH



(a) Insert a dial gauge through the rear differential carrier cover plug hole, and set it perpendicular to the ring gear tooth surface's tip.

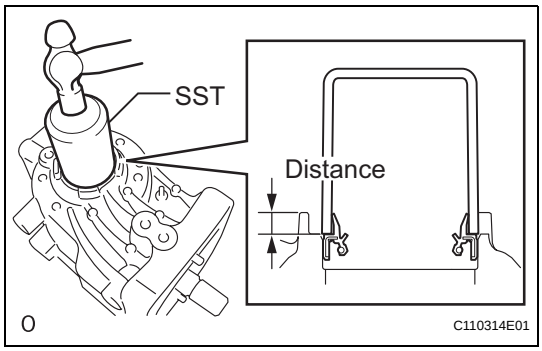
(b) Using SST, fix the drive pinion in place.
SST 09556-16011

(c) Using SST, rotate the rear differential case forward and backward, and inspect the backlash.
SST 09564-16020
Standard backlash:
0.09 to 0.16 mm (0.0004 to 0.006 in.)
NOTICE:
Inspect at 3 or more areas around the circumference of the ring gear.

32. INSTALL REAR DRIVE PINION NUT

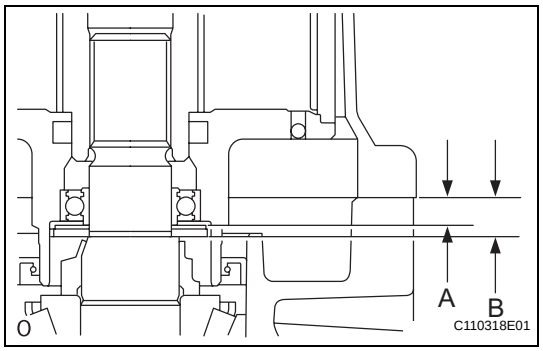
(a) Using a chisel and hammer, stake the rear drive pinion nut.

33. INSTALL DIAPHRAGM OIL SEAL



(a) Apply a light coat of MP grease No. 2 to the lip of a new diaphragm oil seal.

(b) Using SST and a hammer, tap the diaphragm oil seal into the rear differential carrier according to the specification.
SST 09710-30021 (09710-03121), 09950-60010 (09951-00570), 09950-70010 (09951-07100)
Standard distance:
7.0 +-0.5 mm (0.28 +-0.02 in.)

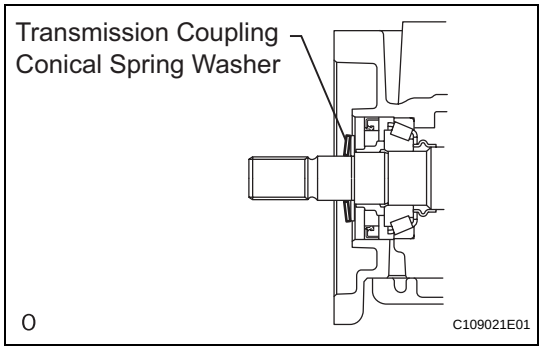


34. INSTALL DIFFERENTIAL SIDE GEAR SHAFT OIL SEAL

(a) Apply a light coat of MP grease No. 2 to the lip of a new rear differential side gear shaft oil seal.

(b) Using SST and a hammer, tap the 2 rear differential side gear shaft oil seals into the rear differential carrier and differential side bearing retainer according to the specification.
SST 09223-00010
Standard distance:
7.2 +-0.5 mm (0.28 +-0.02 in.)

DF



35. INSTALL TRANSMISSION COUPLING SHIM

(a) Measure each of the dimensions.
HINT:
- Dimension A: Bearing axis distance
- Dimension B: Drive pinion axis distance

(b) Select a transmission coupling shim based on the difference between dimensions A and B, and install the shim.

Transmission coupling shim

Difference of dimension A and B mm (in.)	Part No.	Thickness mm (in.)	Identifying Mark
3.96 to 4.01 (0.148 to 0.154)	90564-25024	1.98 to 2.02 (0.078 to 0.080)	1
4.26 to 4.31 (0.161 to 0.168)	90564-25025	2.28 to 2.32 (0.090 to 0.091)	2
4.56 to 4.61 (0.174 to 0.181)	90564-25026	2.58 to 2.62 (0.102 to 0.103)	3
3.81 to 3.86 (0.141 to 0.148)	90564-25027	1.83 to 1.87 (0.072 to 0.074)	4
4.11 to 4.16 (0.154 to 0.161)	90564-25028	2.13 to 2.17 (0.084 to 0.085)	5
4.41 to 4.16 (0.168 to 0.174)	90564-25029	2.43 to 2.47 (0.096 to 0.097)	6
3.71 to 3.76 (0.146 to 0.148)	90564-25031	1.73 to 1.77 (0.068 to 0.700)	8
3.76 to 3.81 (0.148 to 0.150)	90564-25032	1.78 to 1.82 (0.070 to 0.072)	9
3.86 to 3.91 (0.151 to 0.154)	90564-25033	1.88 to 1.92 (0.074 to 0.076)	10
3.91 to 3.96 (0.154 to 0.156)	90564-25034	1.93 to 1.97 (0.076 to 0.078)	11
4.01 to 4.06 (0.158 to 0.160)	90564-25035	2.03 to 2.07 (0.080 to 0.081)	12
4.06 to 4.11 (0.160 to 0.162)	90564-25036	2.08 to 2.12 (0.082 to 0.083)	13
4.16 to 4.21 (0.164 to 0.166)	90564-25037	2.18 to 2.22 (0.086 to 0.087)	14
4.21 to 4.26 (0.166 to 0.168)	90564-25038	2.23 to 2.27 (0.088 to 0.089)	15
4.31 to 4.36 (0.170 to 0.172)	90564-25039	2.33 to 2.37 (0.092 to 0.093)	16
4.36 to 4.41 (0.172 to 0.174)	90564-25040	2.38 to 2.42 (0.094 to 0.095)	17
4.46 to 4.51 (0.176 to 0.178)	90564-25041	2.48 to 2.52 (0.098 to 0.099)	18
4.51 to 4.56 (0.178 to 0.180)	90564-25042	2.53 to 2.57 (0.100 to 0.101)	19
4.61 to 4.66 (0.181 to 0.183)	90564-25043	2.63 to 2.67 (0.104 to 0.105)	20
4.66 to 4.71 (0.183 to 0.185)	90564-25044	2.68 to 2.72 (0.106 to 0.107)	21

36. REMOVE TRANSMISSION COUPLING CONICAL SPRING WASHER

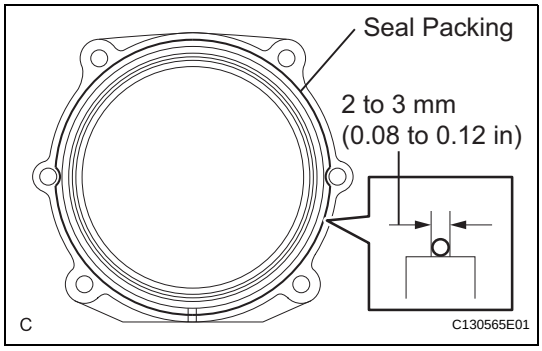
(a) Install the transmission coupling conical spring washer to the rear differential carrier.
NOTICE:
Install the transmission coupling conical spring washer so that the green marking (protruding part) is facing the front of the vehicle (coupling side).

37. INSTALL YOKE

(a) Using a 5 mm socket hexagon wrench, install the yoke with the 3 bolt.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

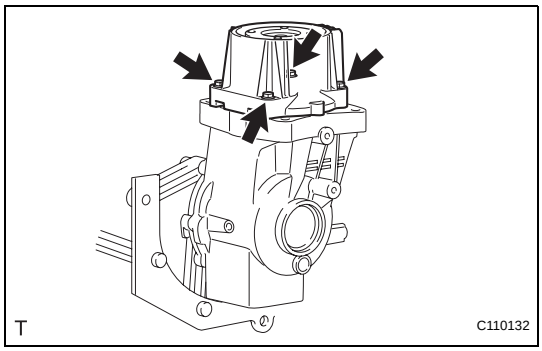
38. INSTALL 4WD LINEAR SOLENOID

(a) Install a new O-ring to the solenoid.
NOTICE:
Do not damage or twist the O-ring.



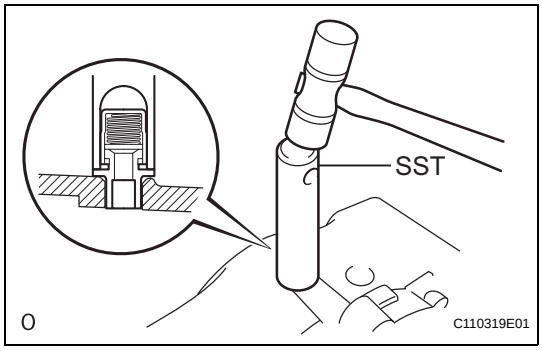
(b) Install the solenoid to the yoke.

DF



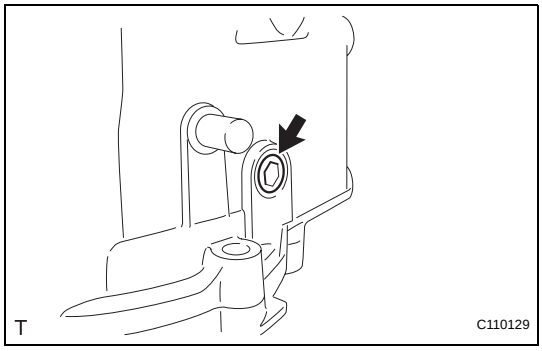
(c) Install the snap ring.

39. INSTALL ELECTROMAGNETIC COUPLING



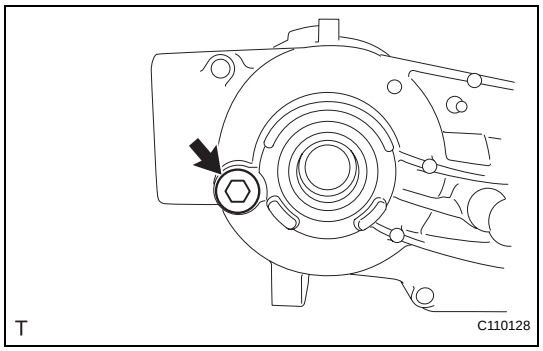
(a) Using white gasoline, remove grease and oil from the alignment surfaces of the rear differential carrier and transmission coupling.

(b) Apply seal packing 1281 to the areas indicated in the illustration of the transmission coupling.
Seal Packing:
Toyota Genuine Seal Packing 1281, Three Bond 1281 or equivalent
NOTICE:
- **Apply seal packing 1281 in a continuous line 2 to 3 mm (0.08 to 0.12 in.) in diameter.**
- **Perform the installation with 3 minutes of applying seal packing 1281.**



(c) Install the rear differential carrier cover to the rear differential carrier assembly with the 4 bolts.
Torque: 19.6 N*m (200 kgf*cm, 14 ft.*lbf)

40. INSTALL DIFFERENTIAL CARRIER COVER BREATHER PLUG

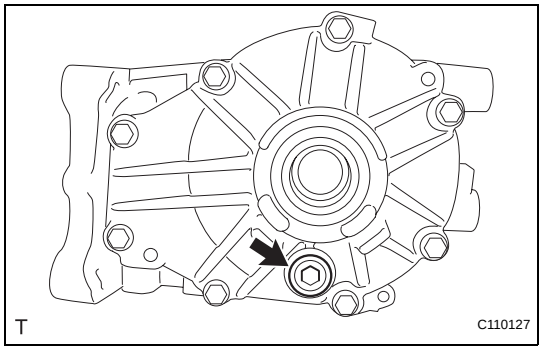


(a) Using a plastic-faced hammer, tap in the breather plug.
SST 09612-07010 (09612-10061)

41. INSTALL DIFFERENTIAL CARRIER COVER PLUG

(a) Using an 8 mm socket hexagon wrench, install a new rear differential carrier cover plug.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

DF

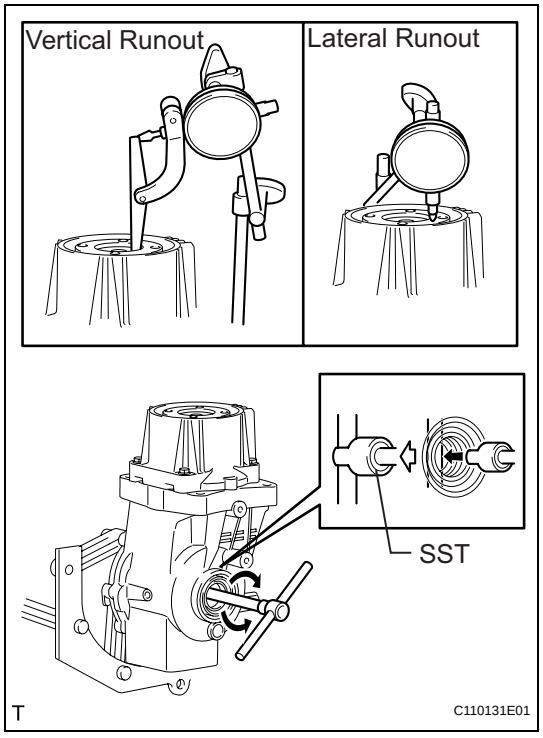


42. INSTALL DIFFERENTIAL FILLER PLUG

(a) Install a new gasket to the rear differential filler plug.

(b) Using a 10 mm socket hexagon wrench, install the rear differential filler plug.

Torque: 39 N*m (400 kgf*cm, 29 ft.*lbf)



43. INSTALL DIFFERENTIAL DRAIN PLUG

(a) Install a new gasket to the rear differential drain plug.

(b) Using a 10 mm socket hexagon wrench, install the rear differential drain plug.

Torque: 39 N*m (400 kgf*cm, 29 ft.*lbf)

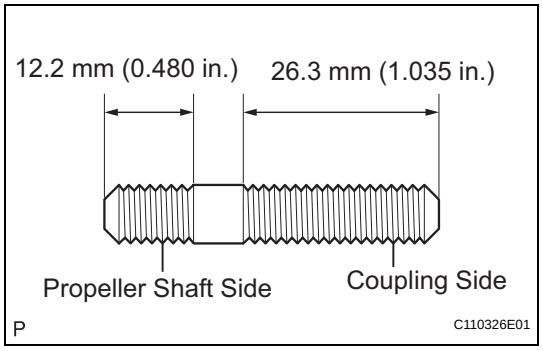
DF

44. INSPECT RUNOUT OF TRANSMISSION COUPLING ASSEMBLY

(a) Install a dial gauge so that it is perpendicular to the inner side of the transmission coupling.

(b) Using SST, rotate the transmission coupling forward and backward and measure the vertical runout.

SST 09564-16020

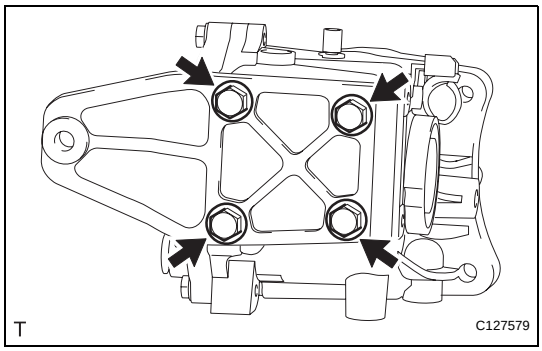


Maximum vertical runout:
0.06 mm (0.0024 in.)

(c) Install a dial gauge perpendicularly onto the transmission coupling, as shown in the illustration.

(d) Using SST, rotate the transmission coupling forward and backward and measure the lateral runout.

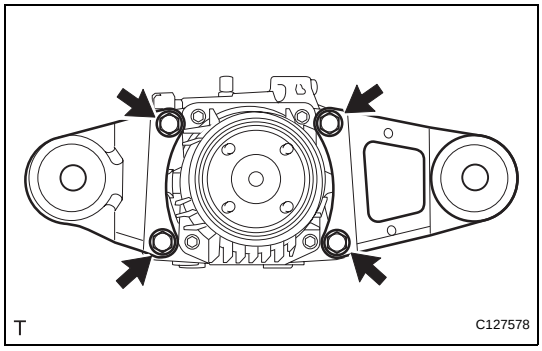
SST 09564-16020



Maximum lateral runout:
0.07 mm (0.0028 in.)

45. INSTALL STUD BOLT

(a) Install the differential support assembly rear with the 4 bolts.

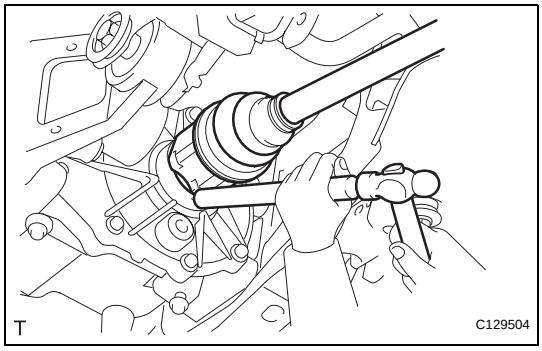


Torque: 8 N*m (82 kgf*cm, 71 in.*lbf)

INSTALLATION

1. INSTALL REAR DIFFERENTIAL SUPPORT

(a) Install the differential support to the differential carrier with the 4 bolts.
Torque: 98 N*m (999 kgf*cm, 72 ft.*lbf)

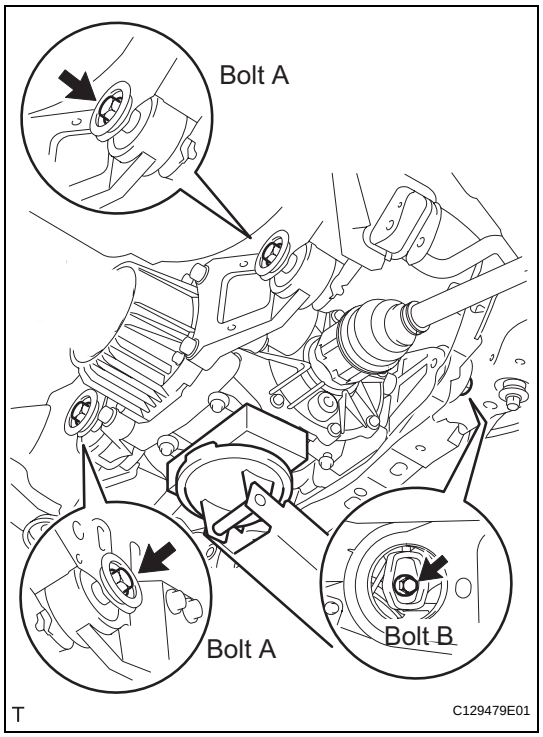


2. INSTALL REAR DIFFERENTIAL NO. 1 AND NO. 2 SUPPORT

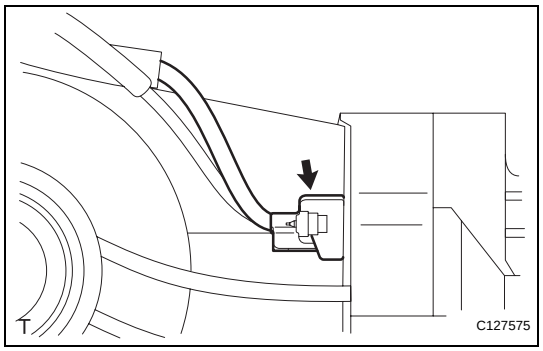
(a) Install the differential No. 1 and No. 2 supports with the 4 bolts to the differential carrier.
Torque: 55 N*m (561 kgf*cm, 41 ft.*lbf)

3. INSTALL REAR DIFFERENTIAL CARRIER SUB-ASSEMBLY

(a) Support the rear differential carrier with a transmission jack or equivalent



(b) Apply hypoid gear oil to the splines of the left and right rear drive shaft inboard joints.



(c) Align the splines of the rear drive shaft inboard joints and, using a brass bar and hammer, tap in the left and right rear drive shafts.
NOTICE:
- **Face the cutout section of the snap ring downward.**
- **Do not damage the oil seal during the insertion.**
- **Do not strike the tip of the outboard joint with the hammer.**

HINT:
Determine whether or not the rear drive shaft is completely tapped in by checking for changes in sound or the reaction force of the brass bar.

DF

(d) Slowly raise the transmission jack, fix the nuts in place and install the 3 bolts.
Torque: 86 N*m (877 kgf*cm, 63 ft.*lbf) for bolt A
140 N*m (1,428 kgf*cm, 103 ft.*lbf) for bolt B
NOTICE:
Tighten the bolts, not the nuts.

(e) Connect the connector.
(f) Install the breather tube.
(g) Connect the harness clamp.

4. **INSTALL REAR SUSPENSION MEMBER BRACE LH**
(a) Install the member brace to the suspension member with the 2 bolts.
Torque: 60 N*m (612 kgf*cm, 44 ft.*lbf)

5. **INSTALL REAR SUSPENSION MEMBER BRACE RH**
HINT:
Use the same procedures described for the LH side.

6. **TEMPORARILY INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-5)**

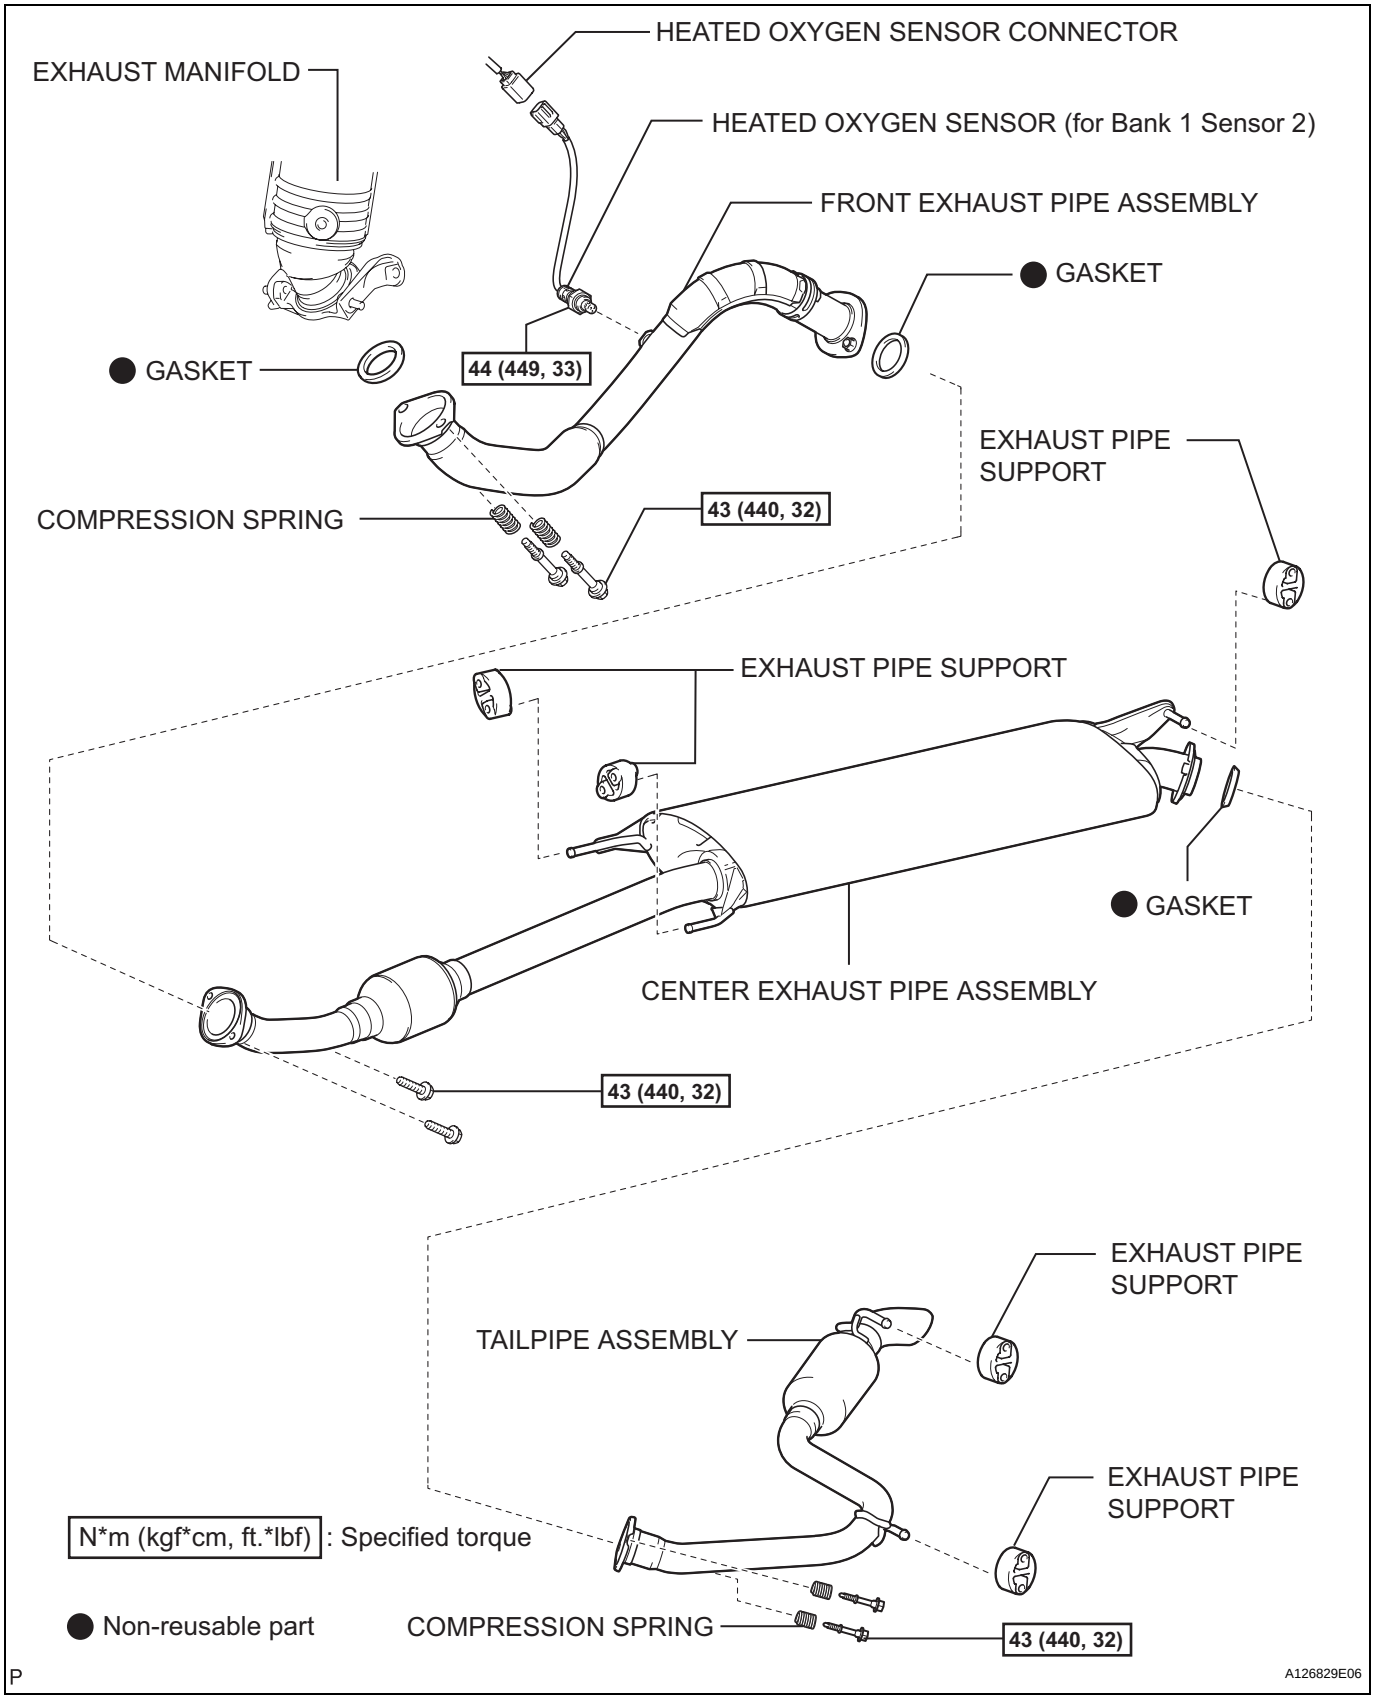
7. **TIGHTEN PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-6)**

8. **INSPECT JOINT ANGLE (See page PR-4)**

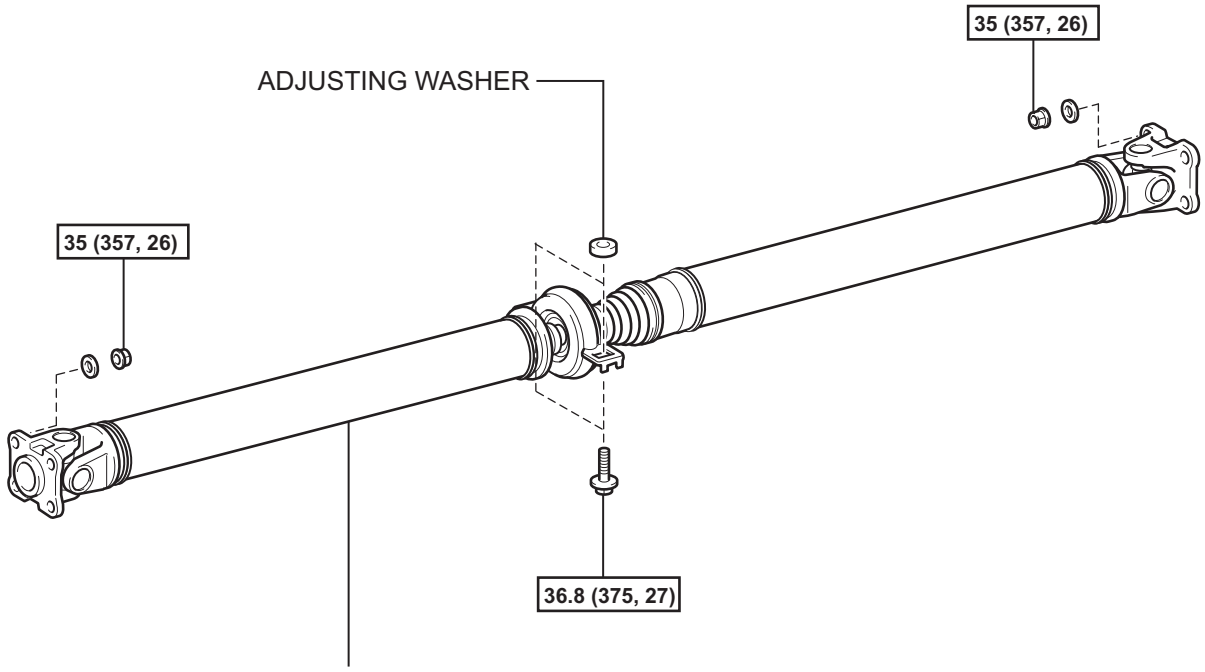
9. **INSTALL CENTER EXHAUST PIPE ASSEMBLY (See page EX-5)**

10. **INSTALL TAILPIPE ASSEMBLY (See page EX-6)**

11. **INSTALL REAR WHEEL**
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)



12. **ADD DIFFERENTIAL OIL**
(a) Add differential oil (see page DF-3).



13. **CHECK FOR DIFFERENTIAL OIL LEAKAGE**

14. **CHECK FOR EXHAUST GAS LEAKAGE**
If gas is leaking, tighten the areas necessary to stop the leak. Replace damaged parts as necessary.

REMOVAL

1. **DRAIN DIFFERENTIAL OIL (See page DF-10)**
2. **REMOVE TAILPIPE ASSEMBLY**
   (a) Remove the tailpipe (see page EX-2).
3. **REMOVE CENTER EXHAUST ASSEMBLY**
   (a) Remove the center pipe (see page EX-2).
4. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-3)**
5. **REMOVE REAR DIFFERENTIAL CARRIER SUB-ASSEMBLY (See page DF-18)**
6. **REMOVE REAR DIFFERENTIAL SIDE GEAR SHAFT OIL SEAL**
   (a) Using a SST, tap out the 2 oil seals.
   SST 09308-00010

INSTALLATION

1. **INSTALL REAR DIFFERENTIAL SIDE GEAR SHAFT OIL SEAL**
   (a) Apply a light coat of MP grease to the lip of a new rear differential side gear shaft oil seal.
   (b) Using SST and a hammer, tap the 2 rear differential side gear shaft oil seals into the rear differential carrier and differential side bearing retainer according to the specification.
   SST 09223-00010
   Standard oil seal tapping amount (A value):
   7.2 +-0.5 mm (0.28 +-0.02 in.)
2. **INSTALL REAR DIFFERENTIAL CARRIER ASSEMBLY (See page DF-44)**

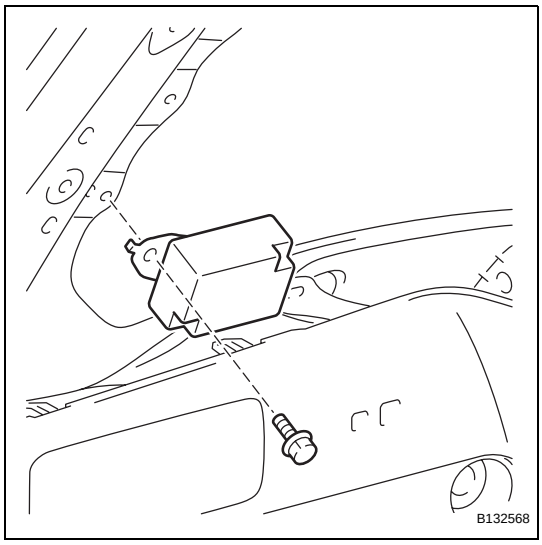
BACK DOOR LOCK



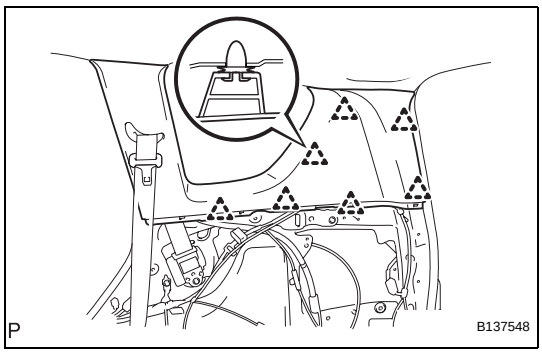
INSPECTION

1. INSPECT BACK DOOR WITH MOTOR LOCK ASSEMBLY

(a) Apply the battery voltage to the door lock motor and check the operation of the door lock motor.
OK

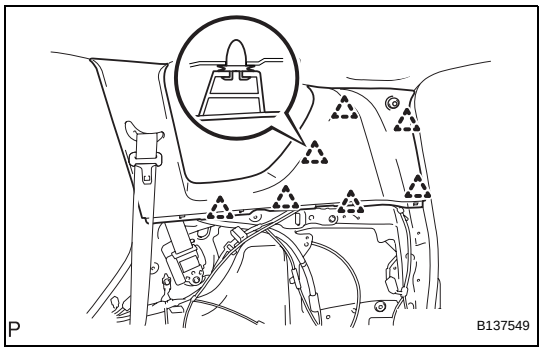
Measurement Condition	Specified Condition
Battery positive (+) → 4 (ACT+) **Battery negative (-) → 1 (ACT-)**	**Lock**
Battery positive (+) → 1 (ACT-) **Battery negative (-) → 4 (ACT+)**	**Unlock**

If the result is not as specified, replace the door lock assembly.



INSTALLATION

1. INSTALL DOOR CONTROL RECEIVER

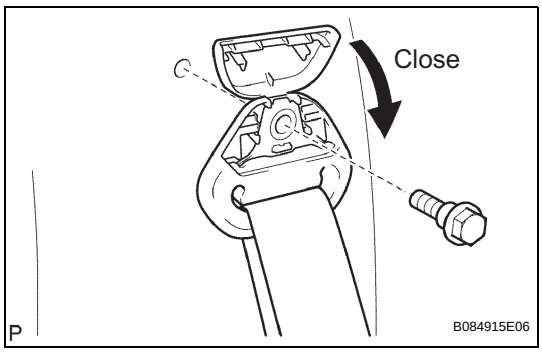


(a) Install the receiver with the bolt.

(b) Connect the receiver connector.

2. INSTALL INNER ROOF SIDE GARNISH ASSEMBLY RH (w/o Rear No. 2 Seat)

(a) Attach the 7 clips to install the garnish.

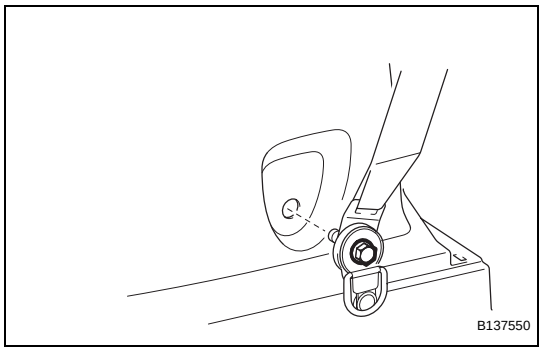


3. INSTALL INNER ROOF SIDE GARNISH ASSEMBLY RH (w/ Rear No. 2 Seat)

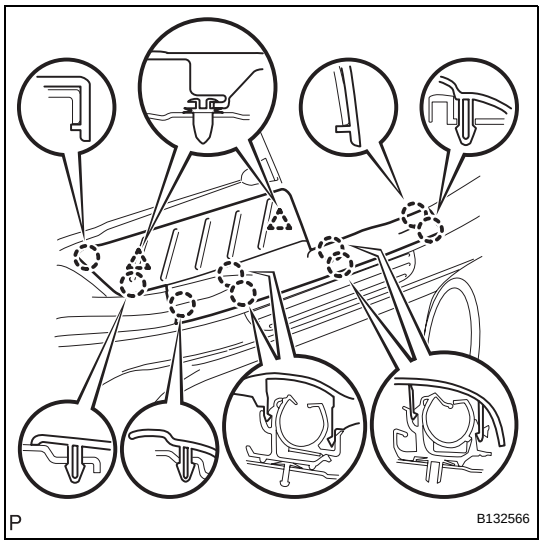
(a) Attach the 7 slips to install the garnish.

(b) Connect the rear No. 2 seat belt's shoulder anchor.

(1) Connect the shoulder anchor with the bolt.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)



(2) Attach the claws to close the seat belt anchor cover.

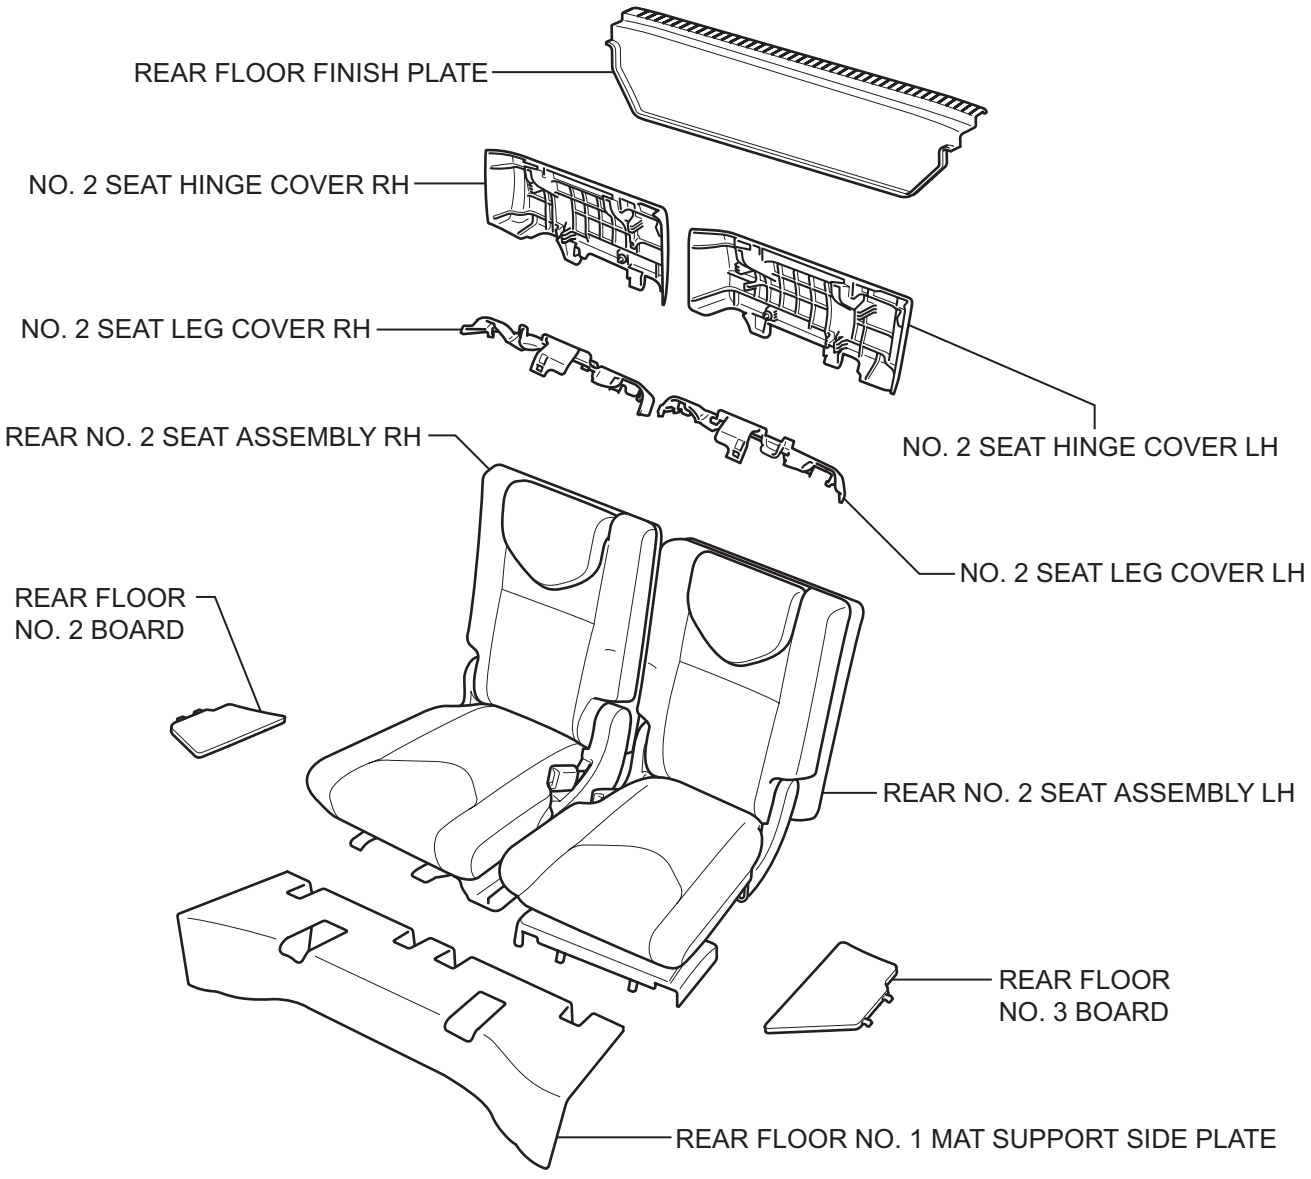


4. INSTALL DECK TRIM SIDE PANEL ASSEMBLY RH (w/o Rear No. Seat) (See page IR-53)

5. INSTALL DECK TRIM SIDE PANEL ASSEMBLY RH (w/ Rear No. 2 Seat) (See page IR-54)

DL

6. **INSTALL TETHER ANCHOR BRACKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)**
   (a) Install the tether anchor bracket with the bolt.
7. **INSTALL RECLINING REMOTE CONTROL LEVER BEZEL RH (w/o Rear No. 2 Seat) (See page SE-105)**
8. **INSTALL REAR DECK TRIM COVER RH (w/ Rear No. 2 Seat)**
   (a) Attach the 4 claws to install the trim cover.
   (b) Install the belt.
9. **INSTALL REAR FLOOR FINISH PLATE (See page IR-55)**
10. **INSTALL REAR FLOOR NO. 1 MAT SUPPORT SIDE PLATE (See page IR-55)**
11. **INSTALL REAR FLOOR NO. 3 BOARD**
12. **INSTALL REAR FLOOR NO. 2 BOARD**
13. **INSTALL REAR NO. 2 SEAT ASSEMBLY LH (w/ Rear No. 2 Seat) (See page SE-121)**
14. **INSTALL REAR NO. 2 SEAT ASSEMBLY RH (w/ Rear No. 2 Seat)**
    HINT:
    Use the same procedures described for the LH side.
15. **INSTALL NO. 2 SEAT LEG COVER LH (w/ Rear No. 2 Seat) (See page SE-123)**
16. **INSTALL NO. 2 SEAT LEG COVER RH (w/ Rear No. 2 Seat)**
    HINT:
    Use the same procedures described for the LH side.
17. **INSTALL NO. 2 SEAT HINGE COVER LH (w/ Rear No. 2 Seat) (See page SE-123)**
18. **INSTALL NO. 2 SEAT HINGE COVER RH (w/ Rear No. 2 Seat)**
    HINT:
    Use the same procedures described for the LH side.
19. **INSTALL DECK BOARD ASSEMBLY (w/o Rear No. 2 Seat)**
20. **INSTALL REAR FLOOR NO. 1 BOARD (w/o Rear No. 2 Seat)**
21. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH**



22. INSTALL REAR DOOR SCUFF PLATE RH

(a) Attach the 9 claws and 2 clips to install the scuff plate.

REMOVAL

1. **REMOVE REAR DOOR SCUFF PLATE RH**
   (a) Using a screwdriver, detach the 9 claws.
   HINT:
   Tape the screwdriver tip before use.
   (b) Using a clip remover, detach the 2 clips and remove the garnish.
2. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH**
3. **REMOVE REAR FLOOR NO. 1 BOARD (w/o Rear No. 2 Seat)**
4. **REMOVE DECK BOARD ASSEMBLY (w/o Rear No. 2 Seat)**
5. **REMOVE NO. 2 SEAT HINGE COVER LH (w/ Rear No. 2 Seat) (See page SE-109)**
6. **REMOVE NO. 2 SEAT HINGE COVER RH (w/ Rear No. 2 Seat)**
   HINT:
   Use the same procedures described for the LH side.

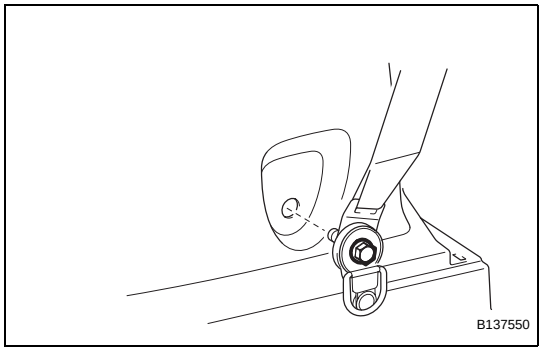
7. **REMOVE NO. 2 SEAT LEG COVER LH (w/ Rear No. 2 Seat) (See page SE-109)**

8. **REMOVE NO. 2 SEAT LEG COVER RH (w/ Rear No. 2 Seat)**
   HINT:
   Use the same procedures described for the LH side.

9. **REMOVE REAR NO. 2 SEAT ASSEMBLY LH (w/ Rear No. 2 Seat) (See page SE-110)**

10. **REMOVE REAR NO. 2 SEAT ASSEMBLY RH (w/ Rear No. 2 Seat)**

11. **REMOVE REAR FLOOR NO. 3 BOARD**

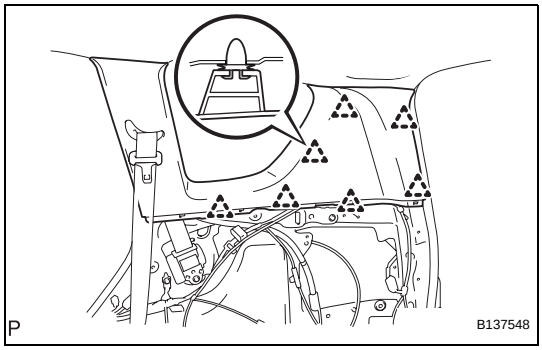


12. **REMOVE REAR FLOOR NO. 2 BOARD**

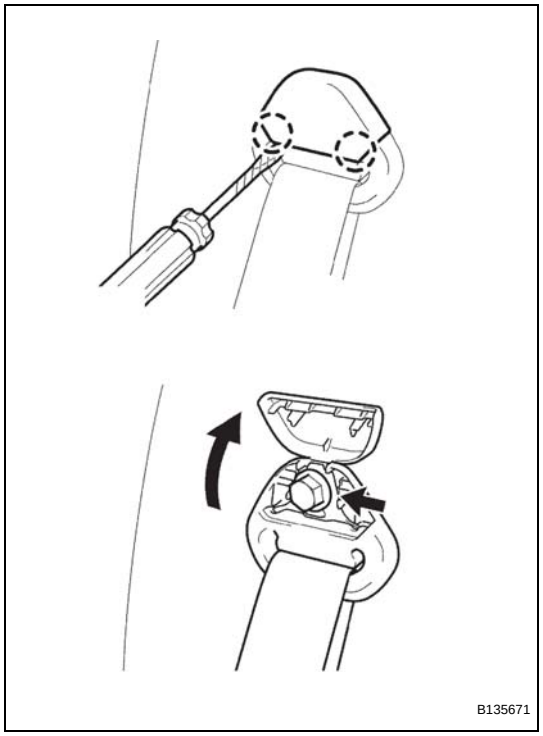
13. **REMOVE REAR FLOOR NO. 1 MAT SUPPORT SIDE PLATE (See page IR-31)**

14. **REMOVE REAR FLOOR FINISH PLATE (See page IR-31)**

15. **REMOVE REAR DECK TRIM COVER RH (w/ Rear No. 2 Seat)**
   (a) Remove the bolt.
   (b) Using a screwdriver, detach the 4 claws and remove the trim cover.
   HINT:
   Tape the screwdriver tip before use.



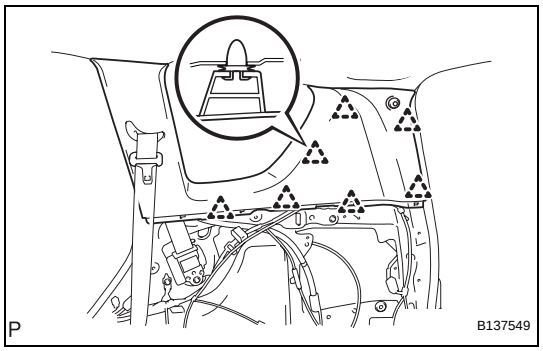
16. **REMOVE RECLINING REMOTE CONTROL LEVER BEZEL RH (w/o Rear No. 2 Seat) (See page SE-80)**



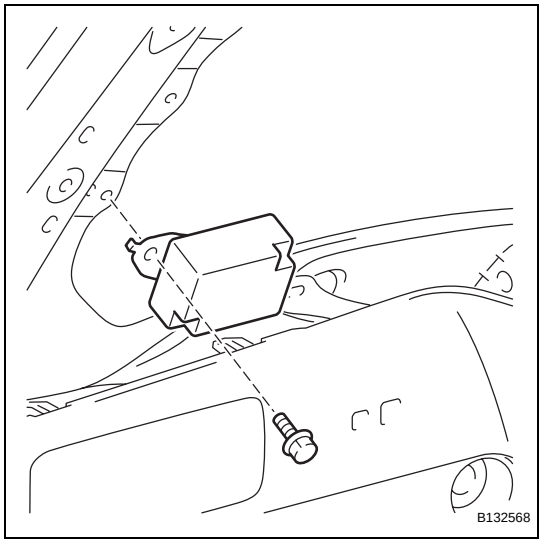
17. **REMOVE TETHER ANCHOR BRACKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)**
   (a) Remove the bolt and tether anchor bracket.

18. **REMOVE DECK TRIM SIDE PANEL ASSEMBLY RH (w/o Rear No. 2 Seat) (See page IR-33)**

19. **REMOVE DECK TRIM SIDE PANEL ASSEMBLY RH (w/ Rear No. 2 Seat) (See page IR-34)**

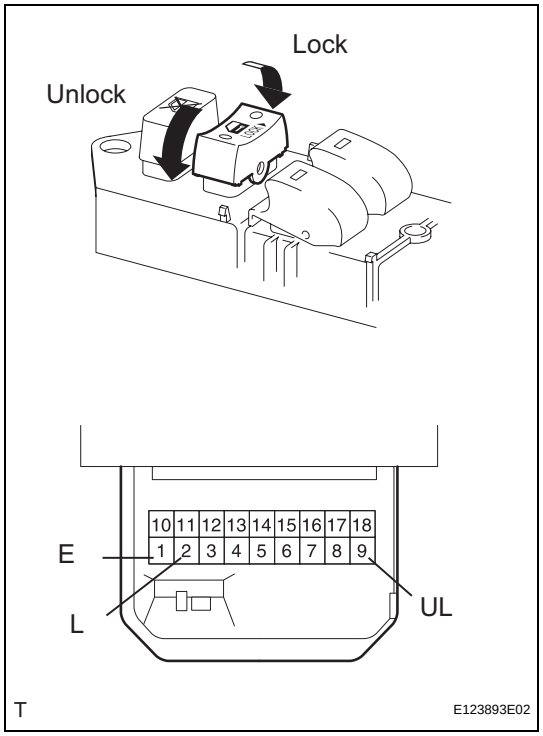


20. **REMOVE INNER ROOF SIDE GARNISH ASSEMBLY RH (w/o Rear No. 2 Seat)**
   (a) Using a clip remover, detach the 7 clips and remove the garnish.



21. REMOVE INNER ROOF SIDE GARNISH ASSEMBLY RH (w/ Rear No. 2 Seat)

(a) Disconnect the rear No. 2 seat outer belt's shoulder anchor.
  (1) Using a screwdriver, detach the 2 claws and open the seat belt anchor cover.
  HINT:
  Tape the screwdriver tip before use.
  (2) Remove the bolt and disconnect the shoulder anchor.



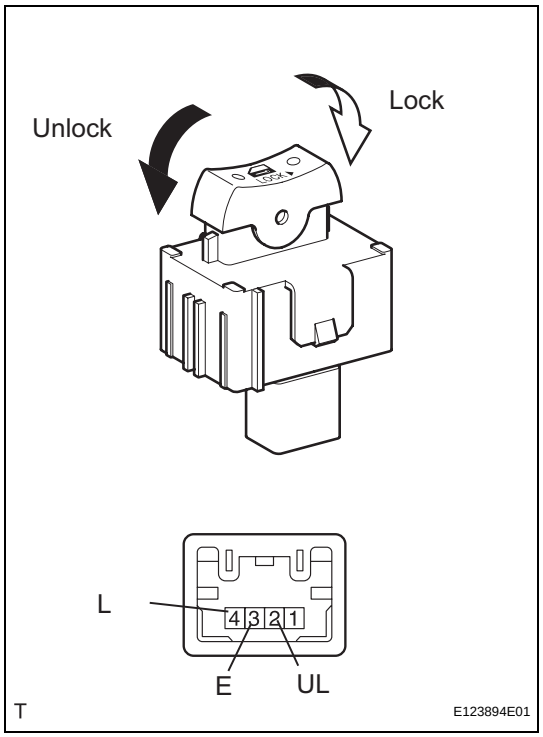
(b) Using a clip remover, detach the 7 clips and remove the garnish.

22. REMOVE DOOR CONTROL RECEIVER

(a) Disconnect the receiver connector.
(b) Remove the bolt and receiver.

DOOR CONTROL SWITCH

INSPECTION



1. INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (DOOR CONTROL SWITCH)

(a) Measure the resistance of the door control switch.

Standard resistance

Tester Connection	Switch Condition	Specified Condition
2 (L) - 1 (E)	Lock	Below 80 Ω
2 (L) - 1 (E)	OFF	10 kΩ or higher
9 (UL) - 1 (E)	Unlock	Below 80 Ω
9 (UL) - 1 (E)	OFF	10 kΩ or higher

If the result is not as specified, replace the power window regulator master switch assembly.

2. INSPECT DOOR CONTROL SWITCH ASSEMBLY

(a) Measure the resistance of the door control switch.

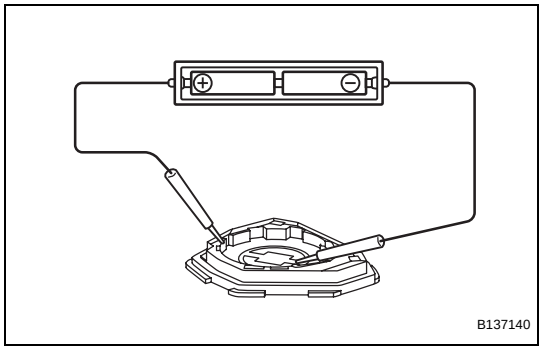
Standard resistance

Tester Connection	Switch Condition	Specified Condition
4 (L) - 3 (E)	Lock	Below 200 Ω
4 (L) - 3 (E)	OFF	10 kΩ or higher
2 (UL) - 3 (E)	Unlock	Below 200 Ω
2 (UL) - 3 (E)	OFF	10 kΩ or higher

If the result is not as specified, replace the door control switch assembly.

INSPECTION

1. INSPECT DOOR CONTROL TRANSMITTER MODULE



(a) Inspect operation of the transmitter.

(1) Remove the battery (lithium battery: CR2016) from the transmitter.

(2) Install a new or non-depleted battery (lithium battery: CR2016).

HINT:

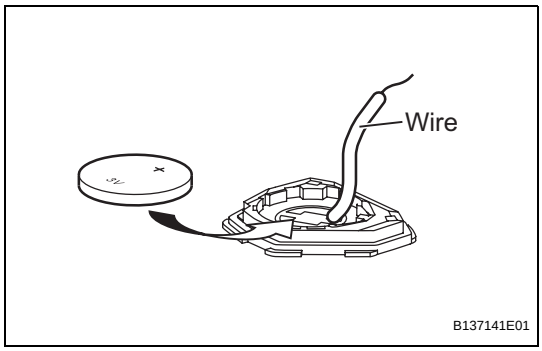
When a new or non-depleted battery is not available, first connect 2 new 1.5 V batteries in series. Then connect leads to the batteries and use the leads to apply 3 V to the transmitter, as shown in the illustration.

(3) From outside the vehicle, approximately 1 m (3.28 ft.) from the driver side outside door handle, test the transmitter by pointing its key plate at the vehicle and pressing a transmitter switch.

OK:

Door lock can be operated via the transmitter. LED illuminates more than once.

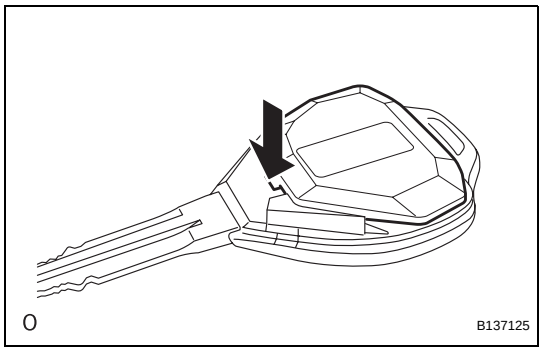
HINT:



- The operating range differs depending on the user, the way the transmitter is held and the location.
- The transmitter's faint electric waves may be affected if the area has strong electric waves or noise. The transmitter's operating range may be shortened or the transmitter may not function.

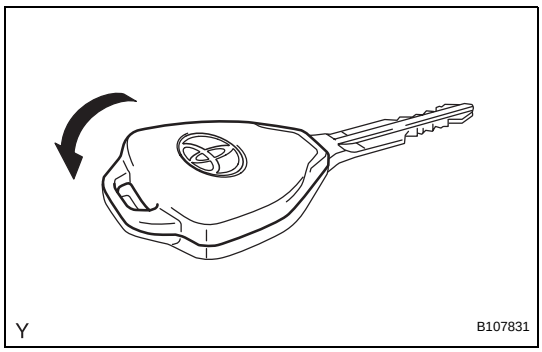
(b) Inspect the battery capacity.

HINT:



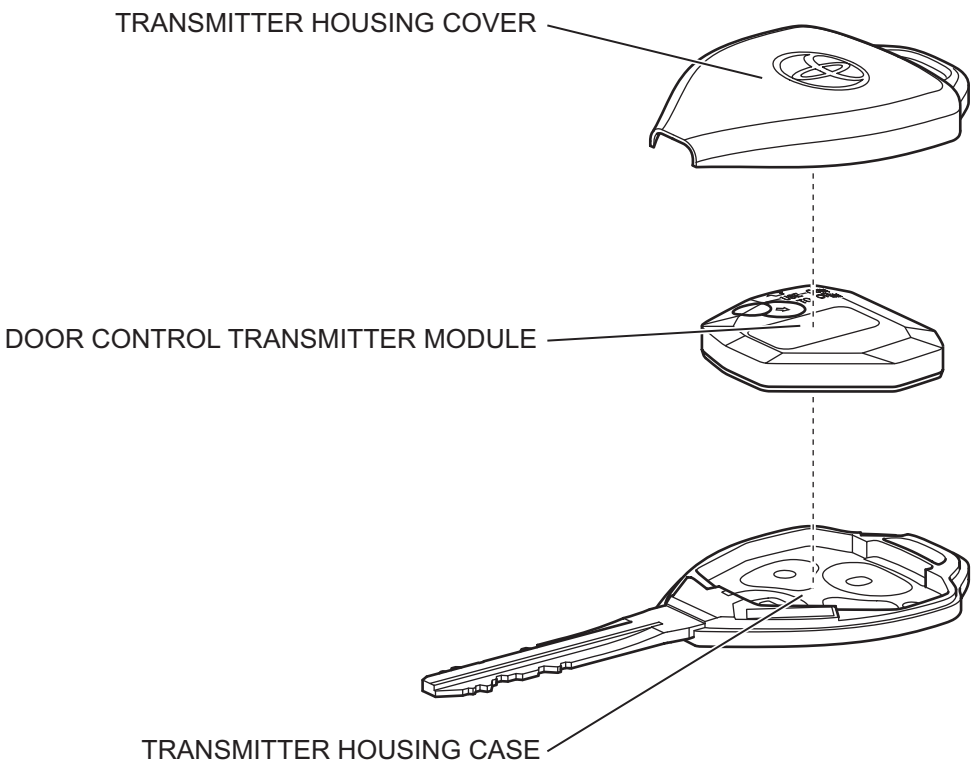
- When checking the amount of energy left in the battery, the battery must be checked while it is installed in the transmitter (a resistance of 1.2 kΩ is applied to the battery). When the battery energy is checked by itself (uninstalled), the voltage reading will be more than 2.5 V until the energy is depleted.
- If the transmitter is malfunctioning, the voltage reading of the energy left in the battery will be inaccurate.

(1) Remove the battery from the transmitter.



(2) Connect a wire to the negative (-) terminal of the transmitter and install the battery.
(3) Connect the tester's positive (+) lead to the battery and the negative (-) lead to the wire.
(4) Press one of the transmission switches on the transmitter for approximately 1 second.
(5) Press the transmission switch on the transmitter again to check the voltage.
Standard voltage:
2.2 V or higher
HINT:
- When the temperature of the battery is low, the inspection result will not be accurate. When the inspection result is less than 2.2 V, conduct the test again after leaving the battery in a place with a temperature of 18°C (64°F) for more than 30 minutes.
- Read the voltage immediately after the switch is pressed. When 0.8 seconds have passed after the switch is pressed, the automatic power off function starts and resistance applied to the battery will cease. The voltage of the battery will be 2.5 V or more.
- Press the switch at least 3 times before reading the voltage. If the battery temperature has just returned to 18°C (64°F), the voltage may be unusually high for the first or second voltage reading.

INSTALLATION



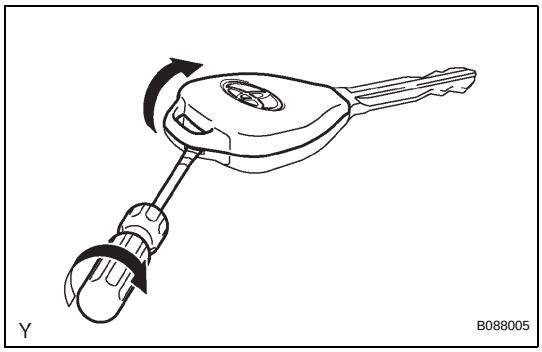
1. INSTALL DOOR CONTROL TRANSMITTER MODULE
NOTICE:
Take extra care when handling these precision electronic components.

2. INSTALL TRANSMITTER HOUSING COVER
(a) Install the transmitter housing cover to the transmitter housing case.
(b) Check that the transmitter's LED illuminates 3 times when the switch is pressed 3 times.
OK:
Transmitter's LED illuminates 3 times when switch is pressed 3 times.

DOOR CONTROL TRANSMITTER MODULE

COMPONENTS

H



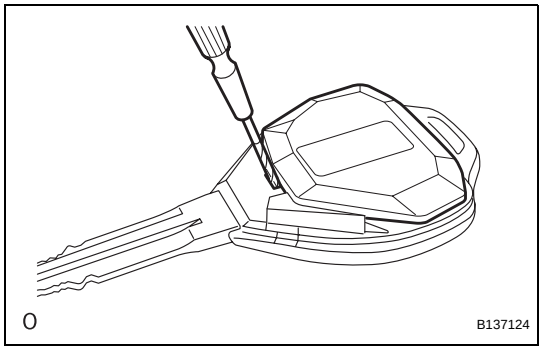
B137122E01

REMOVAL

1. REMOVE TRANSMITTER HOUSING COVER

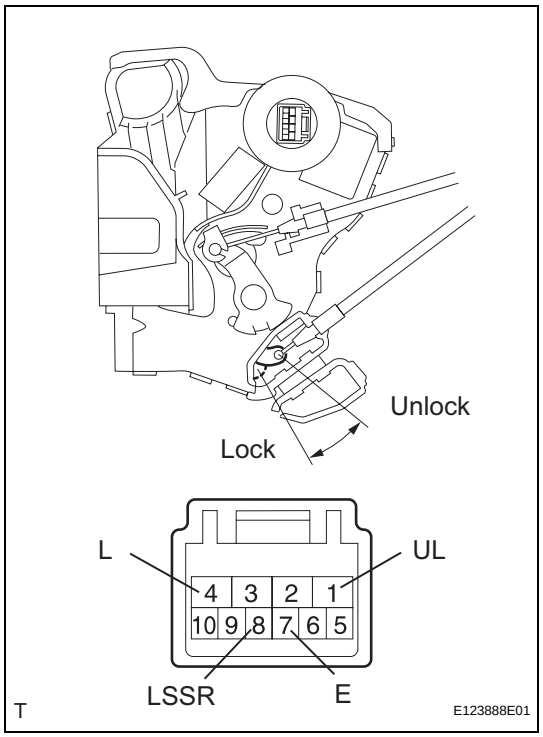
NOTICE:

Take extra care when handling these precision electronic components.



(a) Twist the screwdriver in the direction of the arrow mark in the illustration, and open the transmitter housing cover.

NOTICE:



Do not forcibly pry the cover.

HINT:

Tape the screwdriver tip before use.

2. REMOVE DOOR CONTROL TRANSMITTER MODULE

FRONT DOOR LOCK

INSPECTION

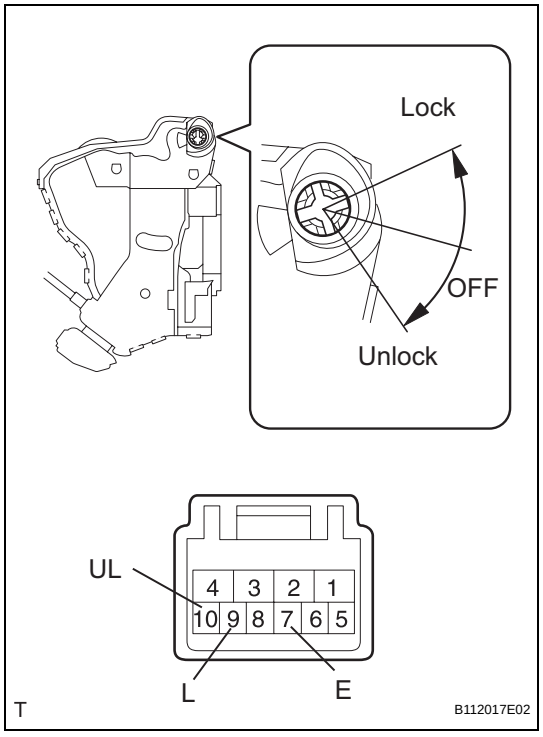
1. INSPECT FRONT DOOR WITH MOTOR LOCK ASSEMBLY LH

(a) Apply the battery voltage to the motor terminals and check the operation of the door lock motor.
OK

Measurement Condition	Specified Condition
Battery positive (+) → 4 (L) Battery negative (-) → 1 (UL)	Lock
Battery positive (+) → 1 (UL) Battery negative (-) → 4 (L)	Unlock

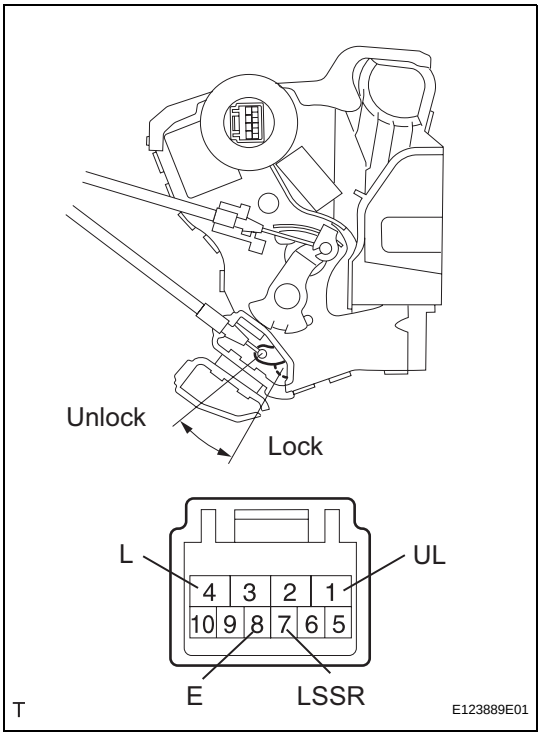
If the result is not as specified, replace the door lock assembly.

(b) Measure the resistance of the door lock position switch.
Standard resistance



Tester Connection	Switch Condition	Specified Condition
8 (LSSR) - 7 (E)	Lock	10 kΩ or higher
8 (LSSR) - 7 (E)	Unlock	Below 1 Ω

If the result is not as specified, replace the door lock assembly.



(c) Measure the resistance of the door key lock and unlock switch operation.
Standard resistance

Tester Connection	Switch Condition	Specified Condition
9 (L) - 7 (E)	Lock	Below 1 Ω
9 (L) - 7 (E)	OFF	10 kΩ or higher
10 (UL) - 7 (E)	Unlock	Below 1 Ω
10 (UL) - 7 (E)	OFF	10 kΩ or higher

If the result is not as specified, replace the door lock assembly.

DL

2. INSPECT FRONT DOOR WITH MOTOR LOCK ASSEMBLY RH

(a) Apply the battery voltage to the door lock motor and check that the operation of the door lock motor.
OK

Measurement Condition	Specified Condition
Battery positive (+) → 4 (L) Battery negative (-) → 1 (UL)	Lock
Battery positive (+) → 1 (UL) Battery negative (-) → 4 (L)	Unlock

If the result is not as specified, replace the door lock assembly.

(b) Measure the resistance of the door lock position switch.
Standard resistance

Tester Connection	Switch Condition	Specified Condition
7 (LSSR) - 8 (E)	Lock	10 kΩ or higher
7 (LSSR) - 8 (E)	Unlock	Below 1 Ω

If the result is not as specified, replace the door lock assembly.

SYSTEM DESCRIPTION

1. KEY REMINDER WARNING SYSTEM DESCRIPTION

(a) When the driver side door is opened with the key in the ignition key cylinder and ignition switch in the ACC or OFF position, this system causes the key reminder warning buzzer to sound in order to warn the driver that the ignition key has not been removed.

2. FUNCTION OF COMPONENT

Component	Function
Front Door Courtesy Light Switch Assembly LH	Detects front door status (open or closed) and outputs signal to instrument panel junction block (main body ECU)
Unlock Warning Switch Assembly	Detects if key is inserted into ignition key cylinder or not and outputs signal to instrument panel junction block (main body ECU)
Combination Meter Assembly	Receives buzzer request signal from main body ECU after main body ECU receives ignition switch signal and front door courtesy light switch signal, and actuates inner circuit to sound built-in buzzer intermittently

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
- Use these procedures to troubleshoot the key reminder warning system.
- *: Use the intelligent tester.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

HINT:
If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

OPERATION CHECK

1. CHECK KEY REMINDER WARNING SYSTEM

(a) Check that the key reminder warning buzzer sounds.

(1) With the driver side door closed, insert the key into the ignition key cylinder and then turn the ignition switch to LOCK or ACC.

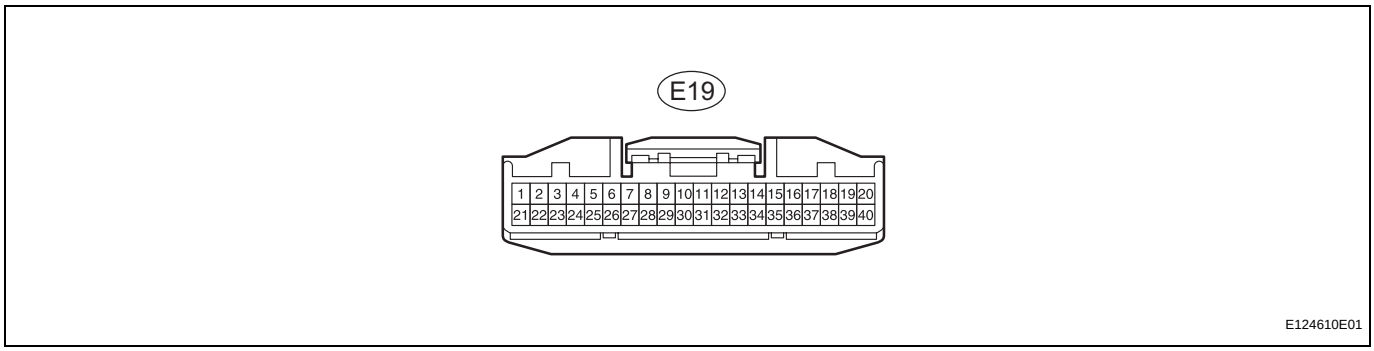
(2) Check that the buzzer sounds intermittently when the driver side door is open.

(b) Check that the key reminder warning buzzer stops.

(1) Check that the buzzer stops sounding if any of the following operations is performed while the buzzer is sounding:

- Close the driver side door (front door courtesy light switch is off).
- Turn the ignition switch ON.
- Remove the key from the ignition key cylinder.

PROBLEM SYMPTOMS TABLE

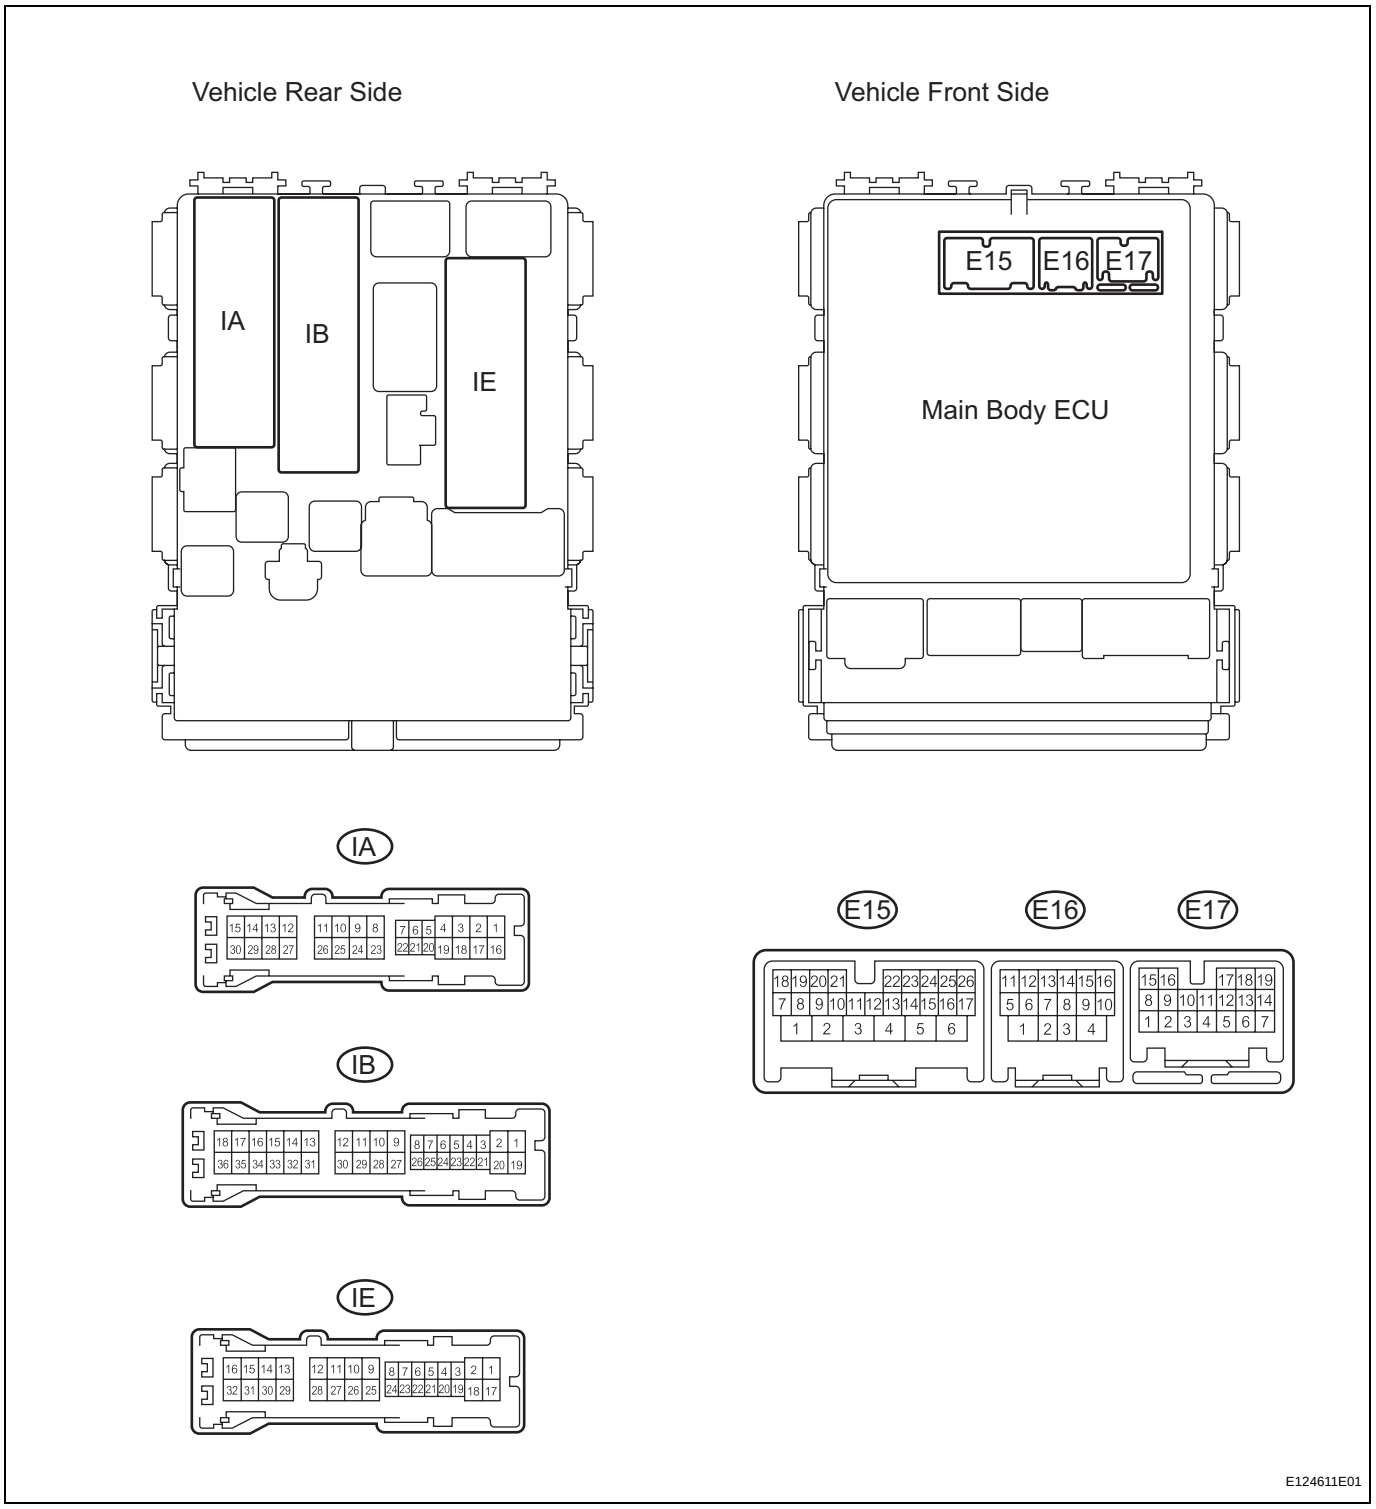


HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Key reminder warning system:

Symptom	Suspected Area	See page
Key reminder buzzer does not sound	1. Unlock warning switch	DL-84
	2. Front door courtesy switch (Driver side)	DL-84
	3. Combination meter (Key reminder warning buzzer)	DL-84
	4. Instrument panel junction block (Main body ECU)	DL-84
	5. Wire harness	DL-84

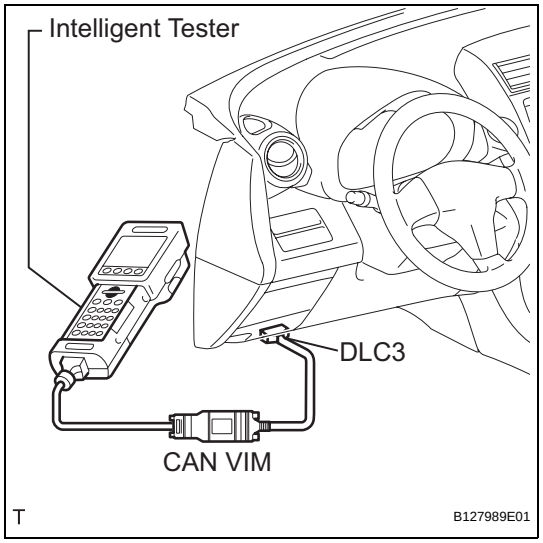
TERMINALS OF ECU



1. CHECK COMBINATION METER ASSEMBLY

(a) Measure the voltage and resistance of the connector.

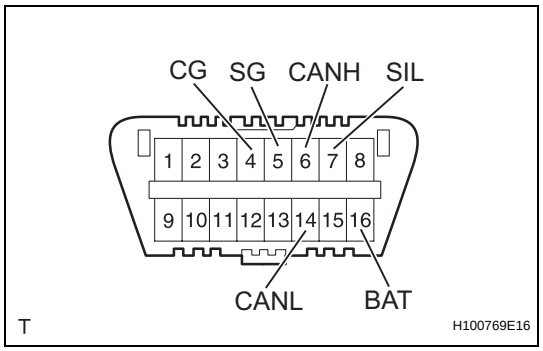
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
IG+ (E19-21) - Body ground	B - Body ground	Ignition switch signal	Ignition switch OFF	Below 1 V
			Ignition switch ON	10 to 14 V
B (E19-22) - Body ground	R - Body ground	Battery	Always	10 to 14 V
CANH (E19-32) - Body ground	G - Body ground	CAN communication line	Ignition switch ON	Pulse generation
CANL (E19-31) - Body ground	W - Body ground	CAN communication line	Ignition switch ON	Pulse generation
ET (E19-33) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω



2. CHECK INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

(a) Measure the voltage and resistance of the connectors.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
KSW (IE-26) - Body ground	L - Body ground	Key unlock warning switch input	Key inserted	Below 1 V
			Key removed from ignition key cylinder	10 to 14 V
GND (IE-17) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω



Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (IB-30) - Body ground	R - Body ground	Battery	Always	10 to 14 V
DTCY (IA-21) - Body ground	W - Body ground	Driver door courtesy switch input	Driver door closed	10 to 14 V
			Driver door open	Below 1 V
CANL (E17-16) - Body ground	W - Body ground	CAN communication line	Ignition switch ON	Pulse generation
CANH (E17-15) - Body ground	R - Body ground	CAN communication line	Ignition switch ON	Pulse generation

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Key reminder warning system data can be read through the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester (with CAN VIM) to check for malfunctions and perform repairs.

2. CHECK DLC3

The vehicle's ECM uses ISO 15765-4 communication protocol. The terminal arrangement of the DLC3 complies with ISO 15031-03 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	HIGH-level CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - Battery positive	HIGH-level CAN bus line	Ignition switch OFF*	1 MΩ or higher
CANL (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 MΩ or higher
CANH (14) - Battery positive	LOW-level CAN bus line	Ignition switch OFF*	1 MΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 MΩ or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, other switches or doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:
Connect the cable of the intelligent tester (with CAN VIM) to the DCL3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

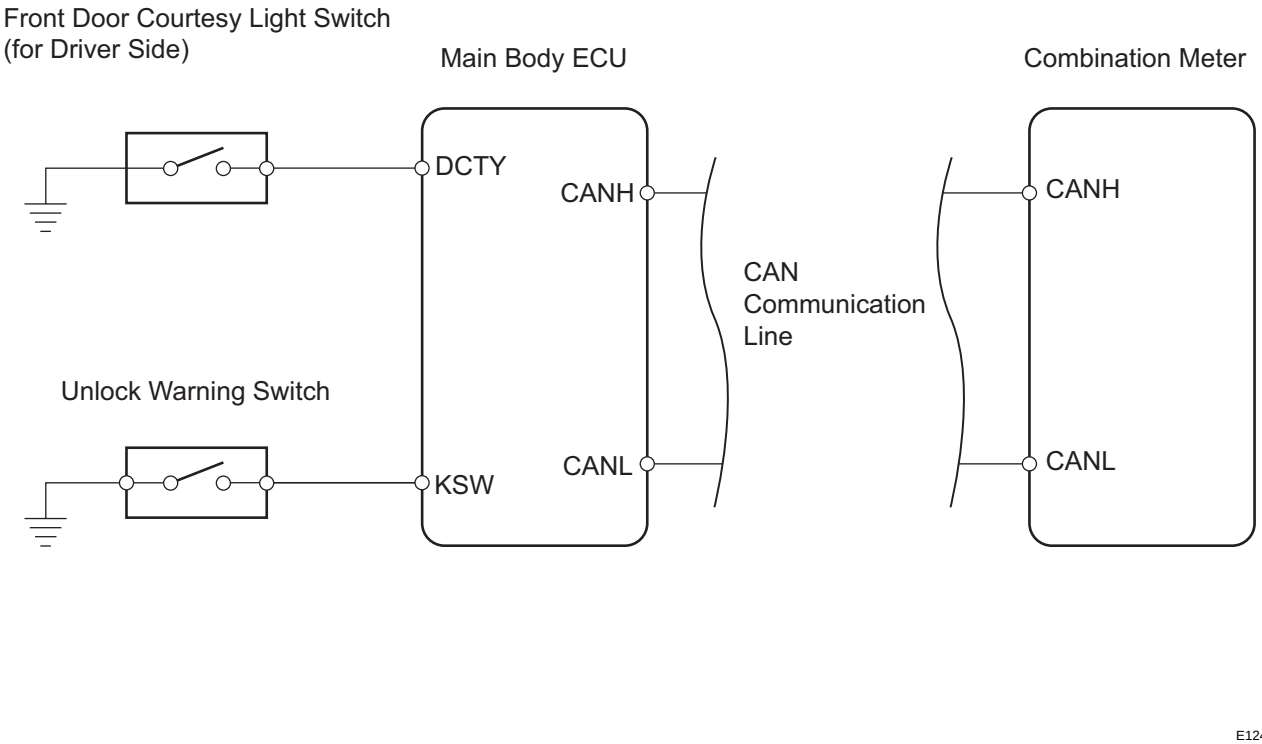
Using the intelligent tester's DATA LIST allows switch, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON.

(c) Read the DATA LIST.

Main body ECU



Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
KEY UNLOCK WARNING SW	Unlock warning switch signal / ON or OFF	ON: Key is in ignition key cylinder OFF: No key is in ignition key cylinder	-
D DOOR COURTESY SW	Driver side door courtesy switch signal / ON or OFF	ON: Driver side door is open OFF: Driver side door is closed	-

Key Reminder Buzzer does not Sound

DESCRIPTION

The key reminder warning buzzer sounds when the driver side door is opened while the ignition switch is in the LOCK or ACC positions. The key reminder warning buzzer is activated when the main body ECU sends a key switch signal and driver side courtesy switch signal to the combination meter.
HINT:
Since the key reminder warning system has functions that use CAN communication, first confirm that there is no malfunction in the communication system by inspecting the CAN communication functions in accordance with the "HOW TO PROCEED WITH TROUBLESHOOTING" procedures. Then, conduct the following inspection procedure.

WIRING DIAGRAM

DL

INSPECTION PROCEDURE

1	READ VALUE USING INTELLIGENT TESTER (FRONT DOOR COURTESY LIGHT SWITCH)

(a) Check the DATA LIST to ensure proper operation of the front door courtesy light switch.

Main body ECU

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
D DOOR COURTESY SW	Driver side door courtesy switch signal / ON or OFF	ON: Driver side door is open OFF: Driver side door is closed	-

OK:
"ON" (driver door is open) appears on the screen.

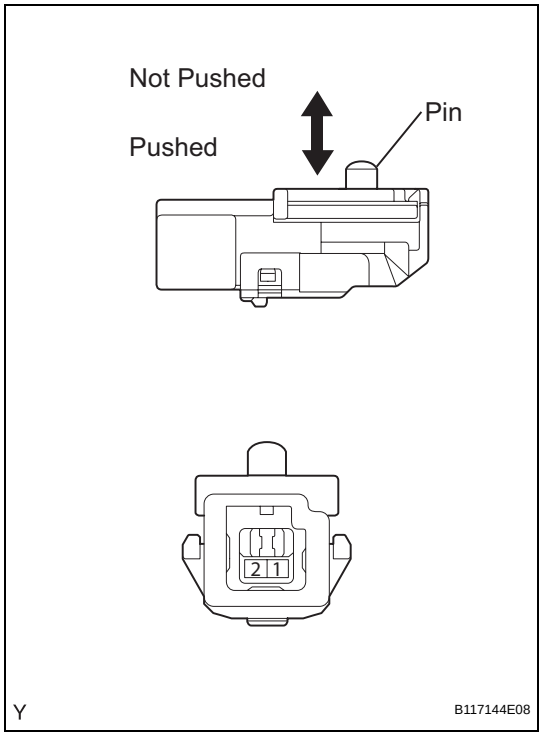
NG → **Go to step 5**

OK

2 READ VALUE USING INTELLIGENT TESTER (UNLOCK WARNING SWITCH)

(a) Check the DATA LIST to ensure proper operation of the door unlock warning switch.

Main body ECU



Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
KEY UNLOCK WARNING SW	Unlock warning switch signal / ON or OFF	ON: Key is in ignition key cylinder OFF: No key is in ignition key cylinder	-

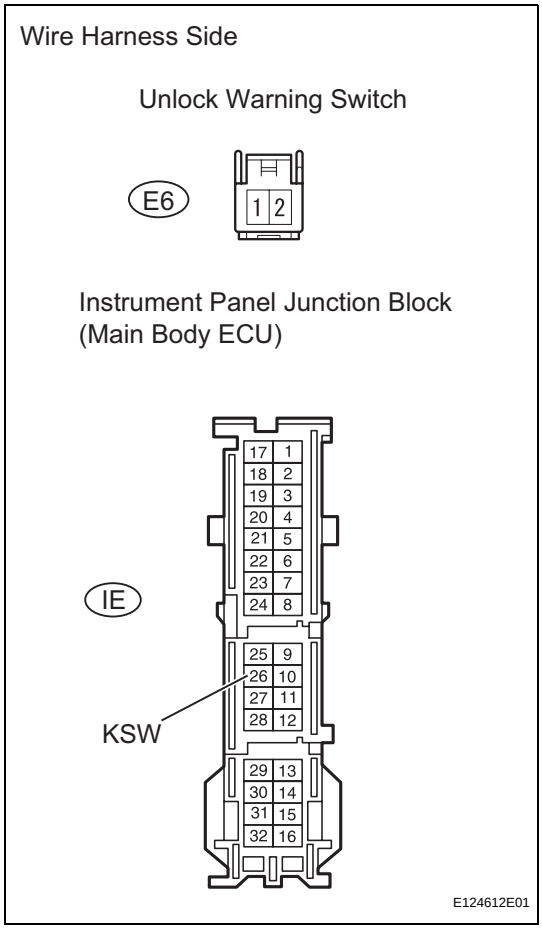
OK:
"ON" (key is in ignition key cylinder) appears on the screen.

OK → **REPLACE COMBINATION METER ASSEMBLY**

NG

3 INSPECT UNLOCK WARNING SWITCH ASSEMBLY

(a) Remove the unlock warning switch.
(b) Measure the resistance of the switch.
Standard resistance



Tester Connection	Condition	Specified Condition
1 - 2	Not pushed	10 kΩ or higher
1 - 2	Pushed	Below 1 Ω

NG → **REPLACE UNLOCK WARNING SWITCH ASSEMBLY**

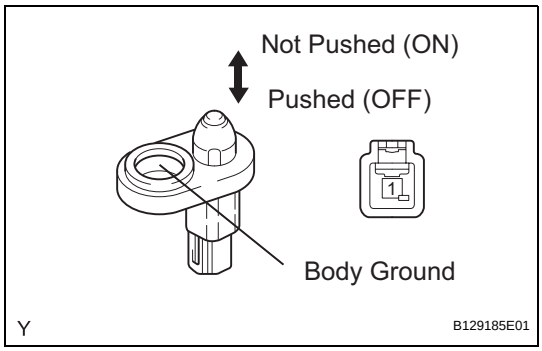
OK

DL

4 CHECK WIRE HARNESS (UNLOCK WARNING SWITCH - MAIN BODY ECU)

(a) Disconnect the E6 switch connector.
(b) Disconnect the IE junction block connector.
(c) Measure the resistance between the wire harness side connectors.

Standard resistance



Tester Connection	Specified Condition
E6-1 - IE-26 (KSW)	Below 1 Ω
E6-2 - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

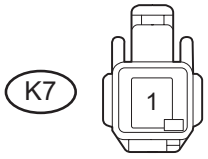
5 INSPECT FRONT DOOR COURTESY LIGHT SWITCH (for Driver Side)

(a) Remove the courtesy light switch.
(b) Measure the resistance of the switch.

Standard resistance

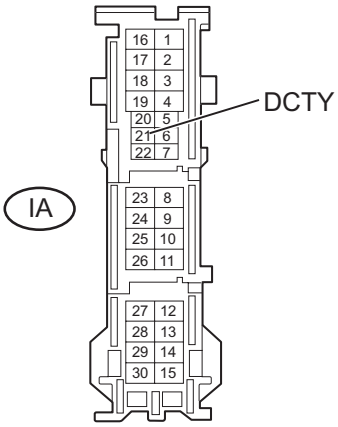
Tester Connection	Condition	Specified Condition
1 - Body ground	Not pushed (ON)	Below 1 Ω
1 - Body ground	Pushed (OFF)	10 kΩ or higher

NG → **REPLACE FRONT DOOR COURTESY LIGHT SWITCH (for Driver Side)**



OK

DL



6	**CHECK WIRE HARNESS AND CONNECTORS (FRONT DOOR COURTESY LIGHT SWITCH - MAIN BODY ECU)**

Wire Harness Side

Front Door Courtesy Light Switch
(for Driver Side)

Instrument Panel Junction Block
(Main Body ECU)

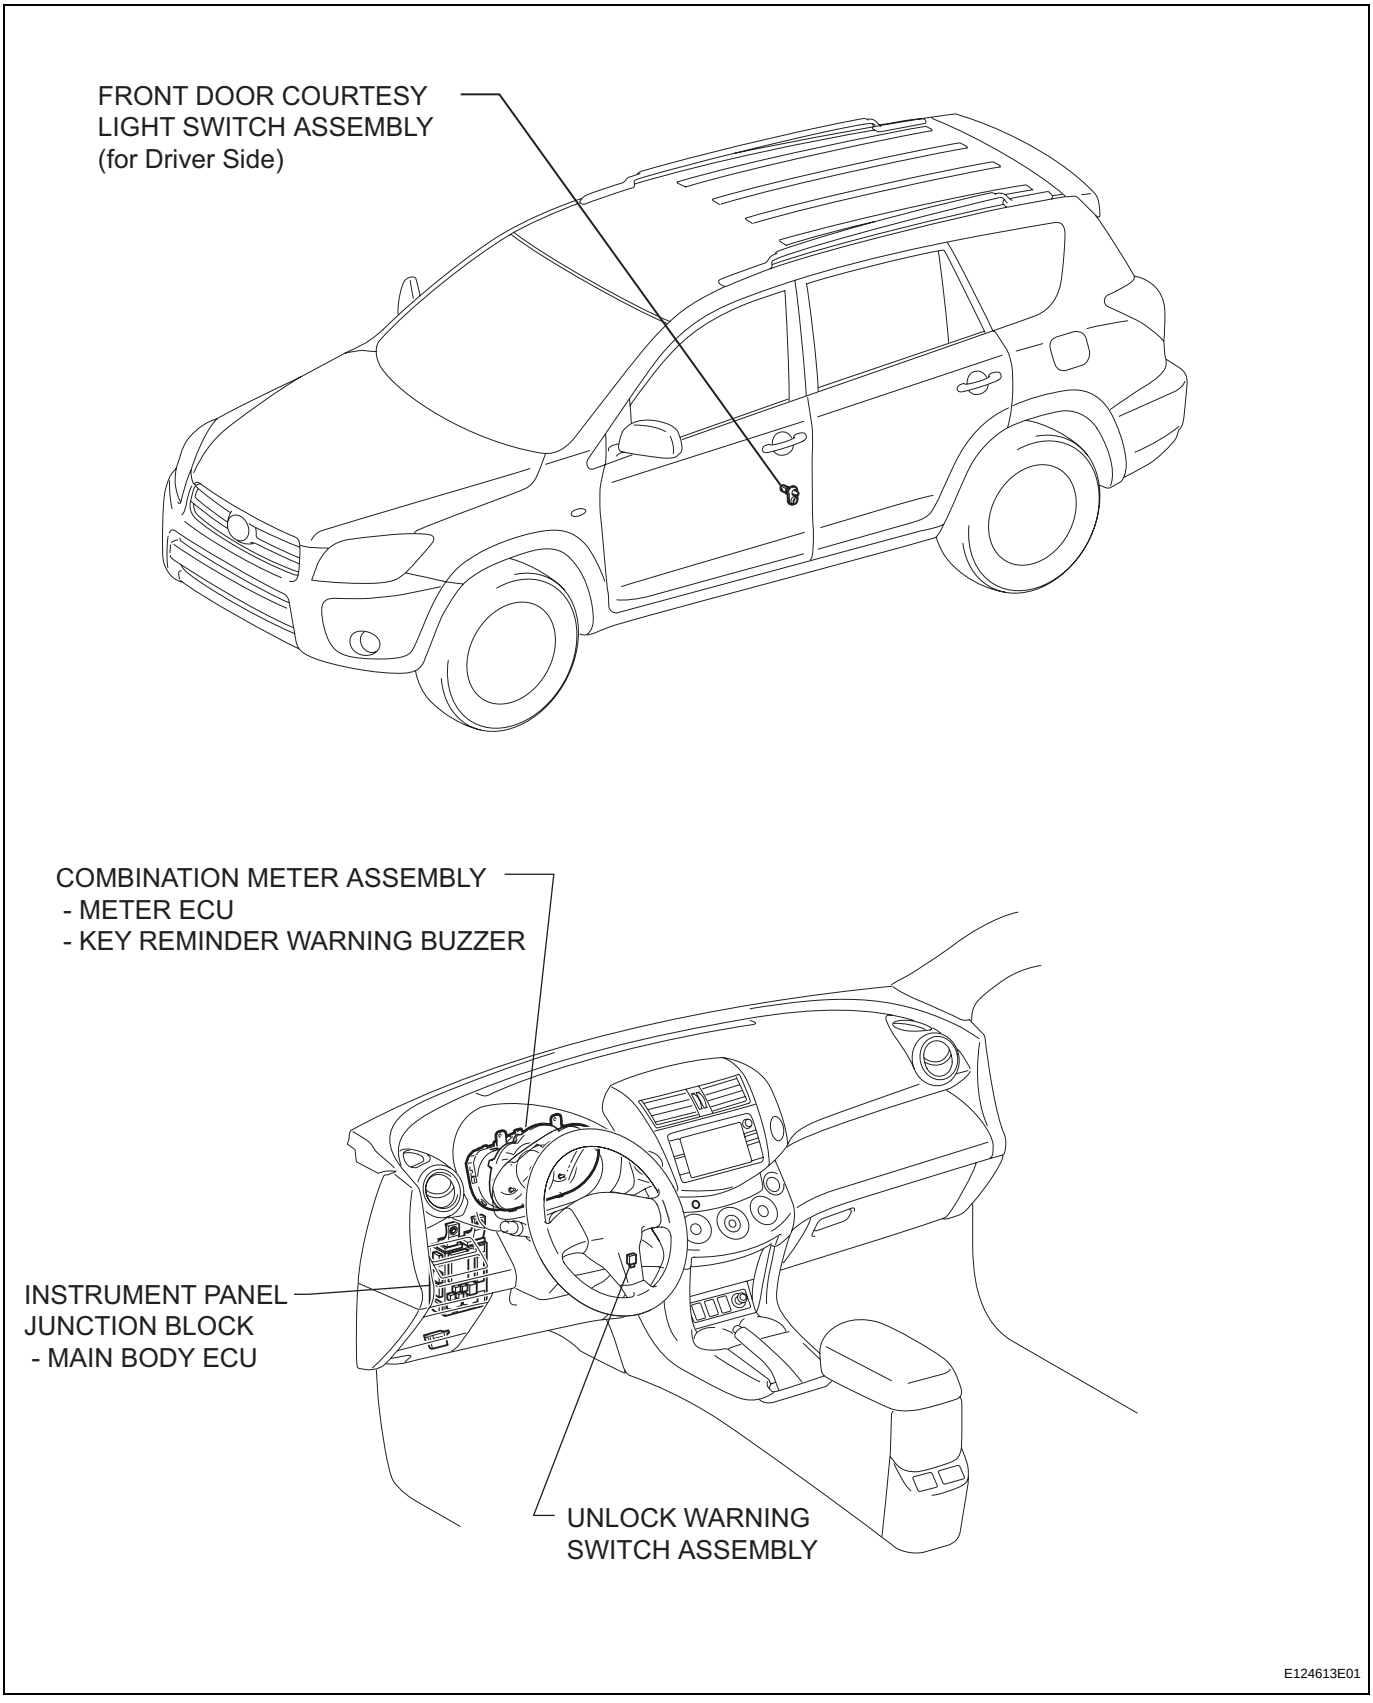
Y

B112021E13

(a) Disconnect the K7 connector.
(b) Disconnect the IA junction block connector.
(c) Measure the resistance between the wire harness side connectors.

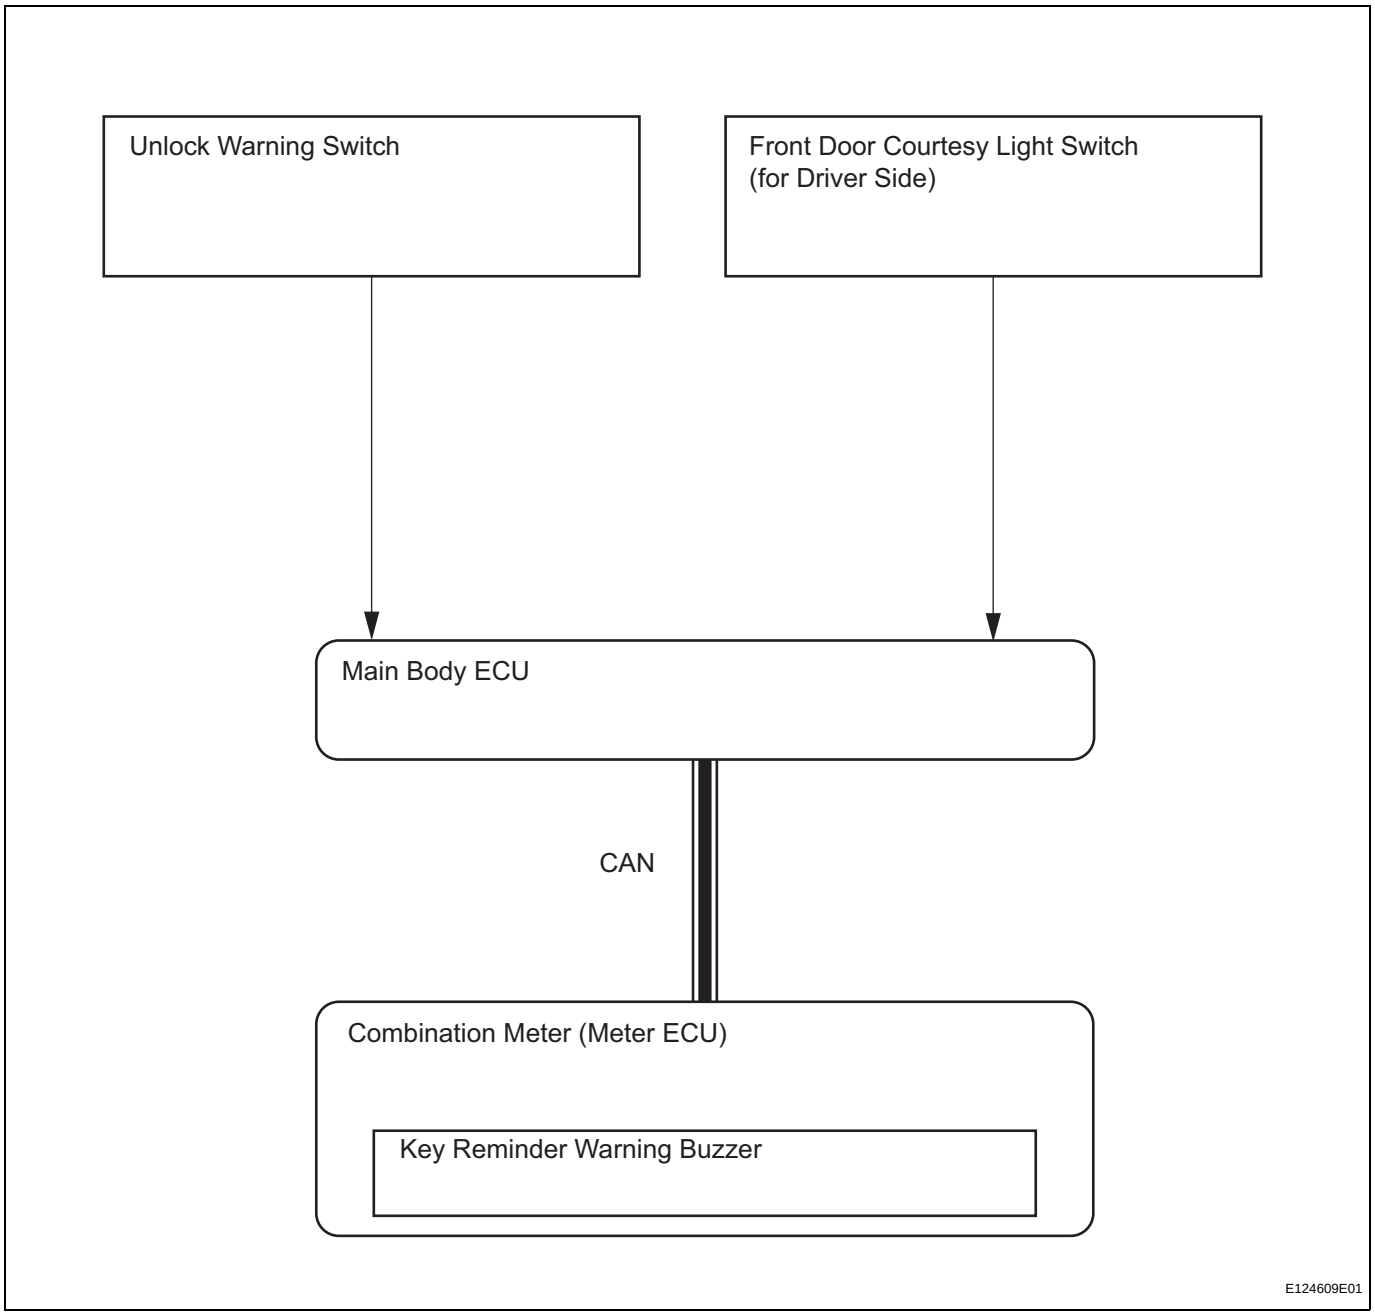
Standard resistance

Tester Connection	Specified Condition
K7-1 - IA-21 (DCTY)	Below 1 Ω



NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK



REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

SYSTEM DESCRIPTION

1. POWER DOOR LOCK SYSTEM DESCRIPTION

(a) The power door lock system locks / unlocks all doors with a one-touch operation.

- The door control switch of the power window regulator master switch or door control switch on passenger side sends lock / unlock request signals to the main body ECU. Then, the main body ECU sends these requests to the lock motors in each door to lock / unlock all the doors simultaneously.
- Operating the driver side door lock using a key sends lock / unlock request signals to the main body ECU.

2. COMPONENTS

Components	Function
Door control switch on power window regulator master switch	Locks / unlocks all doors
Door control switch	Locks / unlocks all doors
Door courtesy switch	• Placed on each door. • Detects door status (open or closed) and outputs data to main body ECU. • Turns on when door is open and off when door is closed.
Driver door lock	• Built-in motor locks / unlocks door. • Built-in door control switch (key-linked) detects door key operation's door status (locked or unlocked) and outputs data to main body ECU. • Built-in position switch detects door status (locked or unlocked) and outputs data to main body ECU. This switch turns off when door is locked and on when door is unlocked.
• Front passenger door lock • Rear door lock LH • Rear door lock RH • Back door lock	Built-in motor locks / unlocks door.

3. FUNCTIONS

This system is controlled by the main body ECU. The main body ECU outputs signals to each door lock motor. The door lock control system in the vehicle has the following functions:

Functions	Outlines
Key-linked lock and unlock function	Linked with key cylinder. Locks / unlocks all doors when lock / unlock operation is possible.
Key lock-in prevention function	When key is inserted in ignition key cylinder and door lock operation is performed, all doors are unlocked.
Manual unlock prohibition function	Performing door lock operation with transmitter or key disables unlock operation by door control switch.
2-step unlock function	Unlocks only driver door by turning key cylinder once and unlocks other doors by turning it twice.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the procedure to troubleshoot the power door lock control system.
- *: Use the Intelligent tester.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

OPERATION CHECK

1. CHECK ELECTRICAL DOOR LOCK OPERATION

(a) Check the basic function.

(1) Check that all doors lock when the door control switch (for manual operation) is turned to LOCK and all doors unlock when turned to UNLOCK.

(2) Check that all doors lock when the driver side door lock key cylinder is turned to LOCK using the key.

(3) Check that only the driver side door unlocks when the driver side door lock key cylinder is turned to UNLOCK and all doors unlock when turned to UNLOCK once again within 3 seconds using the key (2-step unlocking function).

(b) Check the key lock-in prevention.

NOTICE:

In order to prevent the key from being actually locked-in, the inspection should be made with the driver side door window open.

(1) Have the key inserted into the ignition key cylinder.

(2) With the driver side door open, check that all doors unlock immediately after the door lock knob for the driver side door is turned to LOCK.

(3) With the driver side door open, check that all doors unlock immediately after the door control switch (for manual operation) is turned to LOCK.

(4) With the driver side door open, turn the driver side door lock knob to LOCK and hold it for 2 seconds or more, and then close the driver side door. Then check that all doors unlock.

CUSTOMIZE PARAMETERS

1. CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER (REFERENCE)

HINT:

The following item can be customized.

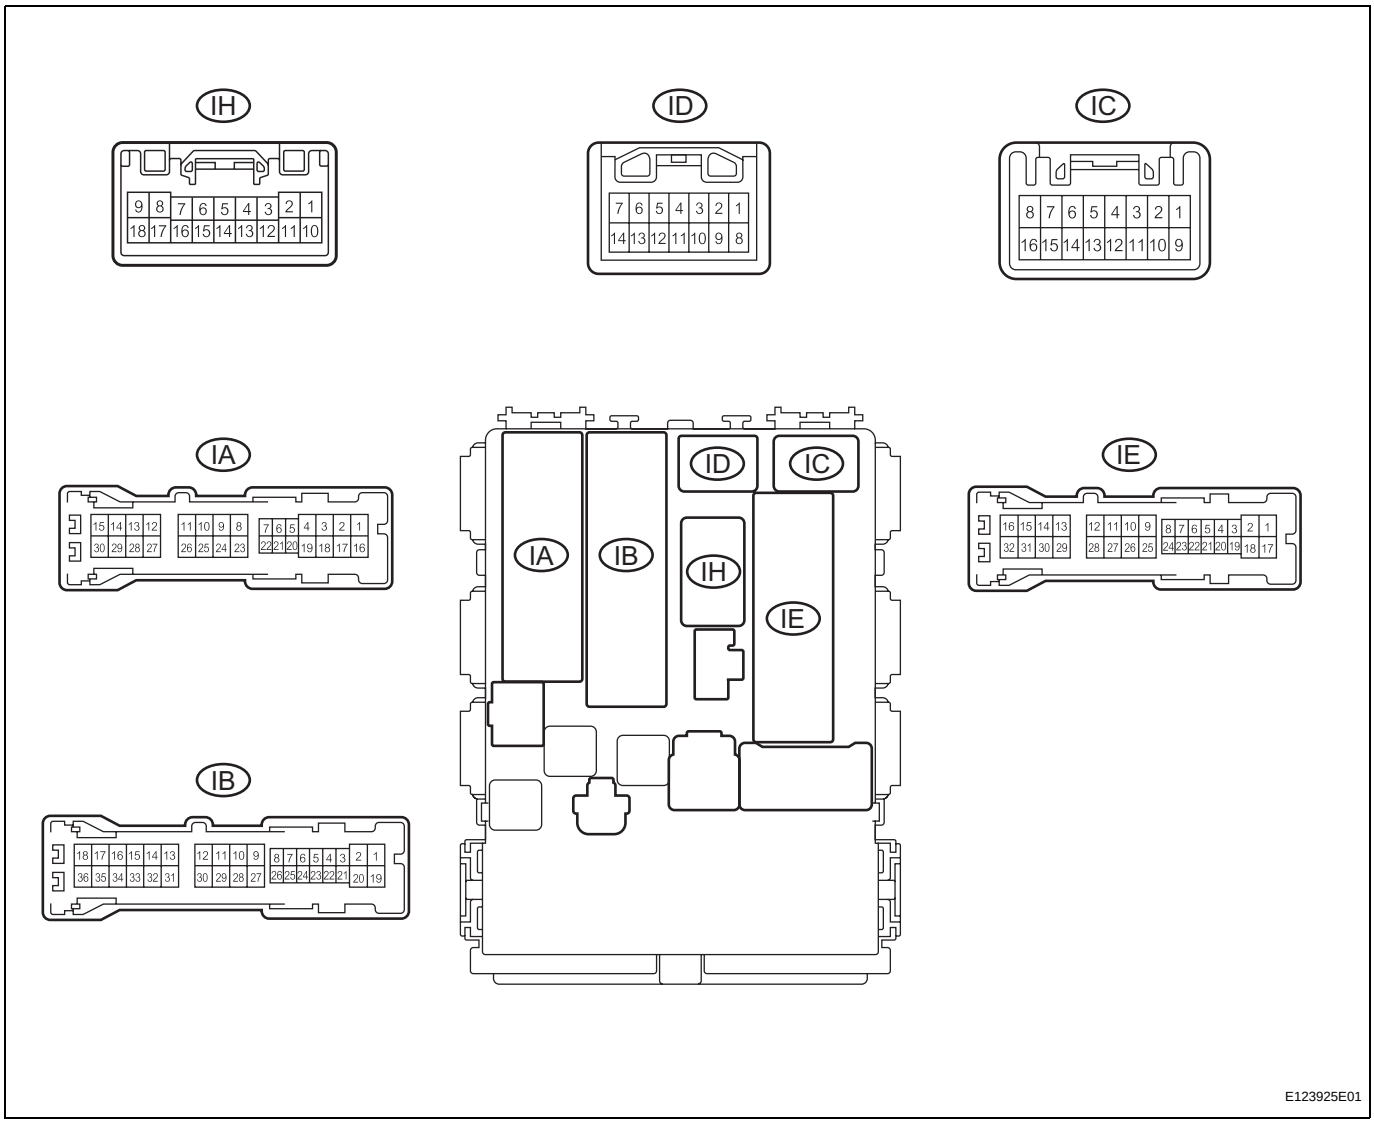
NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

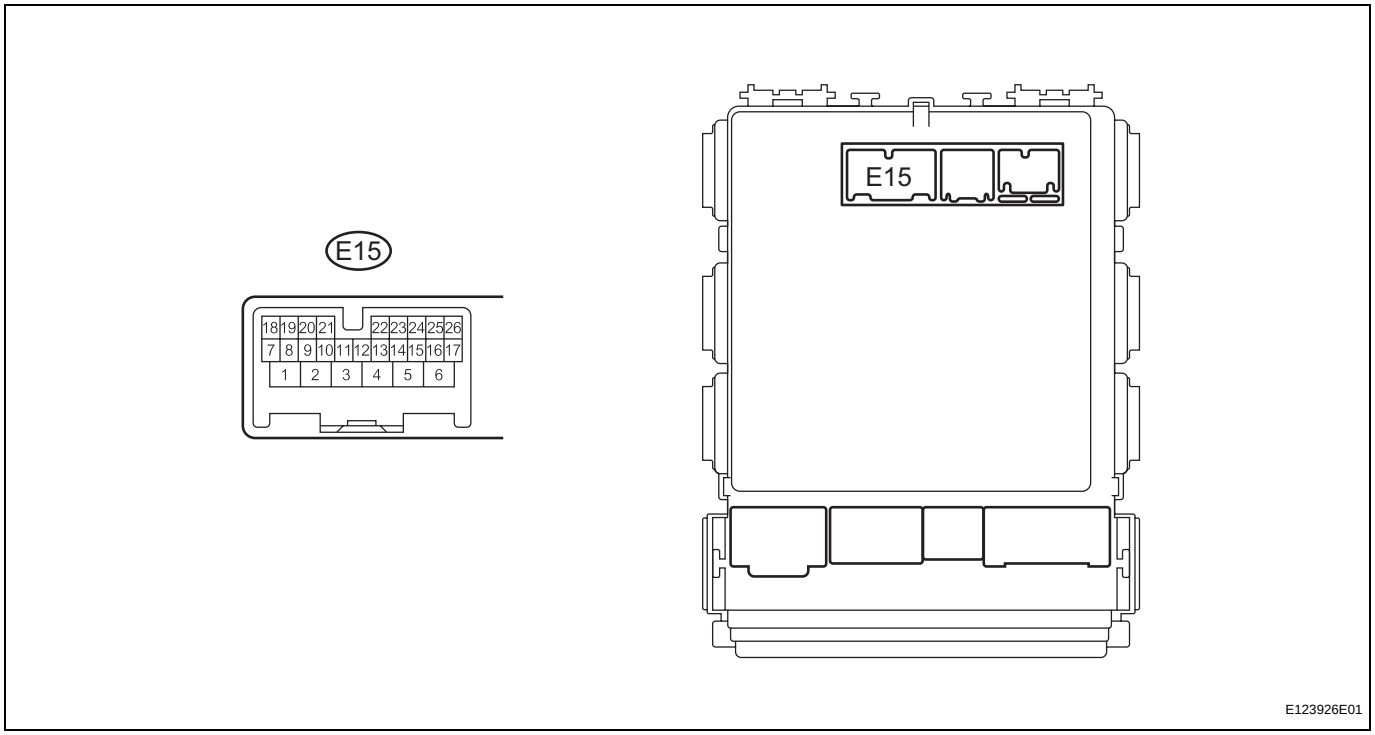
Power door lock control system:

Display (Item)	Default	Function	Setting
UNLK/KEY TWICE	ON	Unlocks only driver side door when driver side door key cylinder turned to unlock once, and unlocks all doors when turned to unlock twice. For OFF setting, turning it once unlocks all doors.	ON/OFF

PROBLEM SYMPTOMS TABLE



HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.



Power door lock control system

Symptom	Suspected area	See page
All Doors cannot be Locked / Unlocked Simultaneously	1. Front door lock LH	DL-14
	2. Door control switch on power window regulator master switch	
	3. Door control switch	
	4. Wire harness	
	5. Main body ECU	
Only Driver Door LOCK / UNLOCK Functions do not Operate	1. Front door lock LH	DL-22
	2. Wire harness	
	3. Main body ECU	
Only Passenger Door LOCK / UNLOCK Functions do not Operate	1. Front door lock RH	DL-25
	2. Wire harness	
	3. Main body ECU	
Only Rear Door LH LOCK / UNLOCK Functions do not Operate	1. Rear door lock LH	DL-28
	2. Wire harness	
	3. Main body ECU	
Only Rear Door RH LOCK / UNLOCK Functions do not Operate	1. Rear door lock RH	DL-30
	2. Wire harness	
	3. Main body ECU	
Only Back Door LOCK / UNLOCK Functions do not Operate	1. Back door lock	DL-32
	2. Wire harness	
	3. Main body ECU	
Key Lock-in Prevention Function does not Work Properly	1. Front door courtesy light switch LH	DL-34
	2. Unlock warning switch	
	3. Wire harness	
	4. Main body ECU	

TERMINALS OF ECU

1. CHECK INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

(a) Disconnect the IB and IE junction block connectors.
(b) Measure the voltage and resistance of the wire harness side connectors.

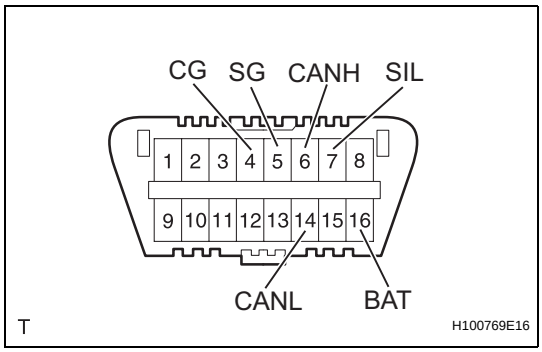
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
BECU (IB-30) - GND1 (IE-17)	R - W-B	Battery (power supply)	Always	10 to 14 V
GND1 (IE-17) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

(c) Reconnect the IB and IE junction block connector.
(d) Measure the voltage of the wire harness side connectors.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
ACT+ (IA-3) - Body ground	R - Body ground	Door lock motor drive lock output	Driver side door control switch or passenger side door control switch or driver side door key cylinder OFF	Below 1 V
ACT+ (IA-3) - Body ground	R - Body ground	Door lock motor drive lock output	Driver side door control switch or passenger side door control switch or driver side door key cylinder ON (LOCK)	10 to 14 V → Below 1 V
ACT+ (IH-8) - Body ground	R - Body ground	Door lock motor drive lock output	Driver side door control switch or passenger side door control switch or driver side door key cylinder OFF	Below 1 V
ACT+ (IH-8) - Body ground	R - Body ground	Door lock motor drive lock output	Driver side door control switch or passenger side door control switch or driver side door key cylinder ON (LOCK)	10 to 14 V → Below 1 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
ACT+ (IH-17) - Body ground	R - Body ground	Door lock motor drive lock output	Driver side door control switch or passenger side door control switch or driver side door key cylinder OFF	Below 1 V
ACT+ (IH-17) - Body ground	R - Body ground	Door lock motor drive lock output	Driver side door control switch or passenger side door control switch or driver side door key cylinder ON (LOCK)	10 to 14 V → Below 1 V
ACT- (IA-4) - Body ground	BR- Body ground	Door lock motor drive unlock output	Driver side door control switch or passenger side door control switch or driver side door key cylinder OFF	Below 1 V
ACT- (IA-4) - Body ground	BR - Body ground	Door lock motor drive unlock output	Driver side door control switch or passenger side door control switch or driver side door key cylinder ON (UNLOCK)	10 to 14 V → Below 1 V
ACT- (IH-18) - Body ground	B - Body ground	Door lock motor drive unlock output	Driver side door control switch or passenger side door control switch or driver side door key cylinder OFF	Below 1 V
ACT- (IH-18) - Body ground	B - Body ground	Door lock motor drive unlock output	Driver side door control switch or passenger side door control switch or driver side door key cylinder ON (UNLOCK)	10 to 14 V → Below 1 V
KSW (IE-26) - Body ground	L- Body ground	Key unlock warning switch input	Key is inserted in ignition key cylinder	Below 1 V
KSW (IE-26) - Body ground	L- Body ground	Key unlock warning switch input	No key is in ignition key cylinder	10 to 14 V
UL1 (IH-5) - Body ground	B - Body ground	Driver side manual unlock switch input	Driver side door control switch OFF	Below 1 V
UL1 (IH-5) - Body ground	B - Body ground	Driver side manual unlock switch input	Driver side door control switch ON (UNLOCK)	10 to 14 V → Below 1 V
UL1 (IH-14) - Body ground	O - Body ground	Passenger side manual unlock switch input	Passenger side door control switch OFF	Below 1 V
UL1 (IH-14) - Body ground	O - Body ground	Passenger side manual unlock switch input	Passenger side door control switch ON (UNLOCK)	10 to 14 V → Below 1 V
L1 (IH-4) - Body ground	P - Body ground	Driver side manual lock switch input	Driver side door control switch OFF	Below 1 V
L1 (IH-4) - Body ground	P - Body ground	Driver side manual lock switch input	Driver side door control switch ON (LOCK)	10 to 14 V → Below 1 V
L1 (IH-13) - Body ground	V - Body ground	Passenger side manual lock switch input	Passenger side door control switch OFF	Below 1 V
L1 (IH-13) - Body ground	V - Body ground	Passenger side manual lock switch input	Passenger side door control switch ON (LOCK)	10 to 14 V → Below 1 V
L2 (IH-7) - Body ground	SB - Body ground	Driver side Key-linked operated lock switch input	Driver side door key cylinder OFF	Below 1 V
L2 (IH-7) - Body ground	SB - Body ground	Driver side Key-linked operated lock switch input	Driver side door key cylinder ON (LOCK)	10 to 14 V → Below 1 V
PCTY (IC-14) - Body ground	BR - Body ground	Passenger door courtesy switch input	Passenger side door closed	10 to 14 V
PCTY (IC-14) - Body ground	BR - Body ground	Passenger door courtesy switch input	Passenger side door open	Below 1 V
RRCY (ID-7) - Body ground	LC - Body ground	Rear door courtesy switch LH input	Rear RH door closed	10 to 14 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
RRCY (ID-7) - Body ground	LC - Body ground	Rear door courtesy switch LH input	Rear RH door open	Below 1 V
BCTY (IA-7) - Body ground	LG - Body ground	Back door courtesy switch input	Back door closed	10 to 14 V
BCTY (IA-7) - Body ground	LG - Body ground	Back door courtesy switch input	Back door open	Below 1 V
DCTY (IA-21) - Body ground	W - Body ground	Driver side door courtesy switch input	Driver side door open	10 to 14 V
DCTY (IA-21) - Body ground	W - Body ground	Driver side door courtesy switch input	Driver side door closed	Below 1 V
DCTY (IC-6) - Body ground	BR - Body ground	Driver side door courtesy switch input	Driver side door open	10 to 14 V
DCTY (IC-6) - Body ground	BR - Body ground	Driver side door courtesy switch input	Driver side door closed	Below 1 V
ACTD (E15-5) - Body ground	B - Body ground	Driver side door unlock motor drive	Driver side door control switch or door control switch or driver side door key cylinder OFF	Below 1 V
ACTD (E15-5) - Body ground	B - Body ground	Driver side door unlock motor drive	Driver side door control switch or door control switch or driver side door key cylinder ON (UNLOCK)	10 to 14 V → Below 1 V
LSWP (E15-10) - Body ground	Y - Body ground	Passenger side door lock position switch input	Passenger side door UNLOCK	10 to 14 V
LSWP (E15-10) - Body ground	Y - Body ground	Passenger side door lock position switch input	Passenger side door LOCK	Below 1 V
UL3 (E15-9) - Body ground	LG - Body ground	Driver side door key-linked operated door unlock switch input	Driver side door key cylinder OFF	Below 1 V
UL3 (E15-9) - Body ground	LG - Body ground	Driver side door key-linked operated door unlock switch input	Driver side door key cylinder ON (LOCK)	10 to 14 V → Below 1 V



DIAGNOSIS SYSTEM

1. DESCRIPTION

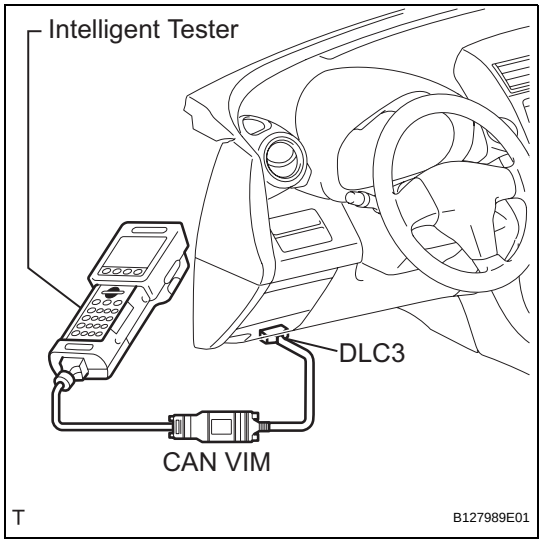
Power door lock control system data can be read in the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with ISO 15031-3 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus '+' line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	HIGH-level CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	1 kΩ or more
CANL (14) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	1 kΩ or more
CANH (6) - BAT (16)	LOW-level CAN bus line	Ignition switch OFF*	1 MΩ or more
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch OFF*	1 MΩ or more

NOTICE:



***: Before measuring the resistance, leave the vehicle for at least 1 minute and do not operate the ignition switch, any switches or doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON.

(c) Read the DATA LIST on the tester's screen.

Main body ECU

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
D DOR CTY SW	Driver side door courtesy light switch signal / ON or OFF	ON: Driver side door is open OFF: Driver side door is closed	-
D LOCK POS SW	Driver side door lock position switch signal / ON or OFF	ON: Driver side door is unlocked OFF: Driver side door is locked	-
D/L SW-LOCK	Door manual lock switch signal ON or OFF	ON: Door control switch on power window regulator master switch is pushed to lock position OFF: Door control switch on power window regulator master switch is not pushed	-
D/L SW UNLOCK	Door manual unlock switch signal / ON or OFF	ON: Door control switch on power window regulator master switch is pushed to unlock position OFF: Door control switch on power window regulator master switch is not pushed	-
DOR KEY SW-LOCK	Door key linked lock switch signal / ON or OFF	ON: Driver side door key cylinder is turned to lock position OFF: Driver side door key cylinder is not turned	-
D DOR KEY SW-UL	Door key linked lock switch signal / ON or OFF	ON: Driver side door key cylinder is turned to unlock position OFF: Driver side door key cylinder is not turned	-
P DOR CTY SW	Passenger side door courtesy light signal / ON or OFF	ON: Passenger side door is open OFF: Passenger side door is closed	-
P LOCK POS SW	Passenger side door lock position switch signal / ON or OFF	ON: Passenger side door is unlocked OFF: Passenger side door is locked	-
RR DOR CTY SW	Rear door RH courtesy light switch signal / ON or OFF	ON: Rear door RH is open OFF: Rear door RH is closed	-
RL DOR CTY SW	Rear door LH courtesy light switch signal / ON or OFF	ON: Rear door LH is open OFF: Rear door LH is closed	-
BK DOR CTY SW	Back door courtesy light switch signal / ON or OFF	ON: Back door is open OFF: Back door is closed	-
KEY UNLK WRN SW	Unlock warning switch signal / ON or OFF	ON: Key is in ignition key cylinder OFF: No key is in ignition key cylinder	-

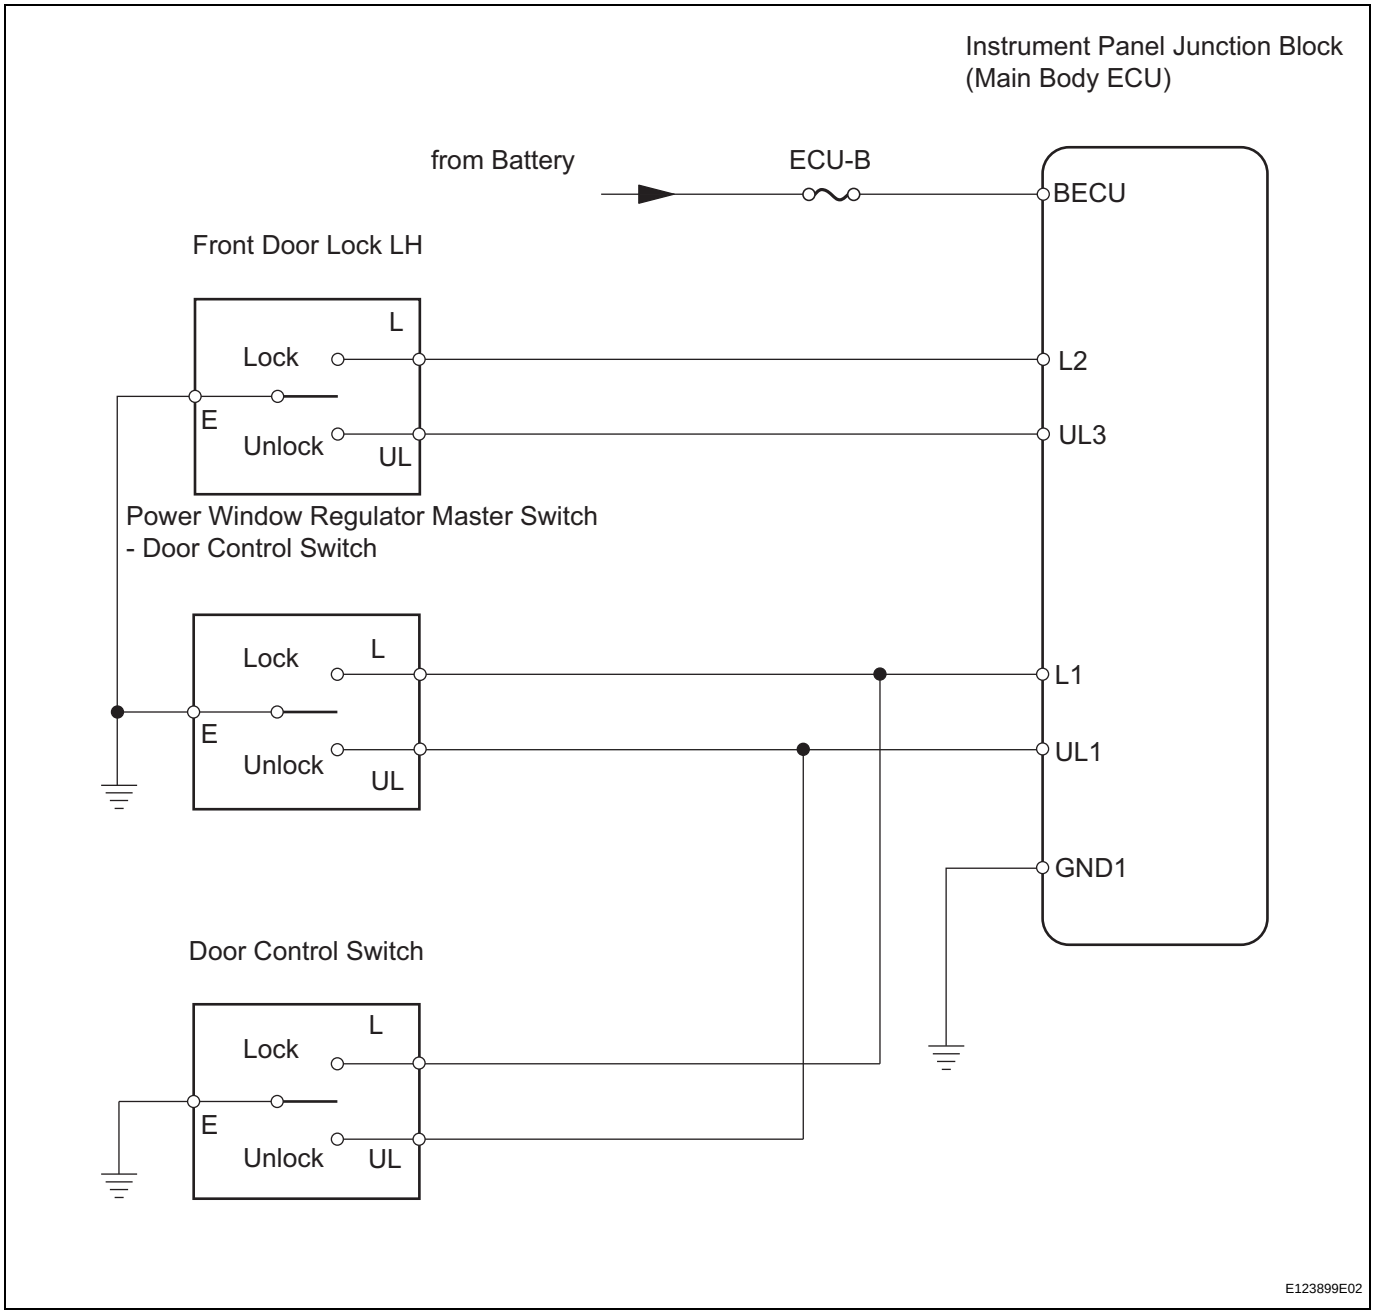
2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON.
(c) Perform the ACTIVE TEST according to the display on the tester.

Main body ECU



Item	Test Details	Diagnostic Note
DOOR LOCK	Operate door lock motor LOCK/UNLOCK	-
D DOOR UNLOCK	Operate driver side door unlock ON / OFF	-

All Doors cannot be Locked / Unlocked Simultaneously

DESCRIPTION

The main body ECU receives switch signals from the door control switch on the power window regulator master switch, door control switch and driver side door key cylinder, and activates the door lock motor on each door accordingly.

WIRING DIAGRAM

DL

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (DOOR LOCK)

(a) Select the ACTIVE TEST, use the intelligent tester to generate a control command, and then check that the doors lock / unlock.

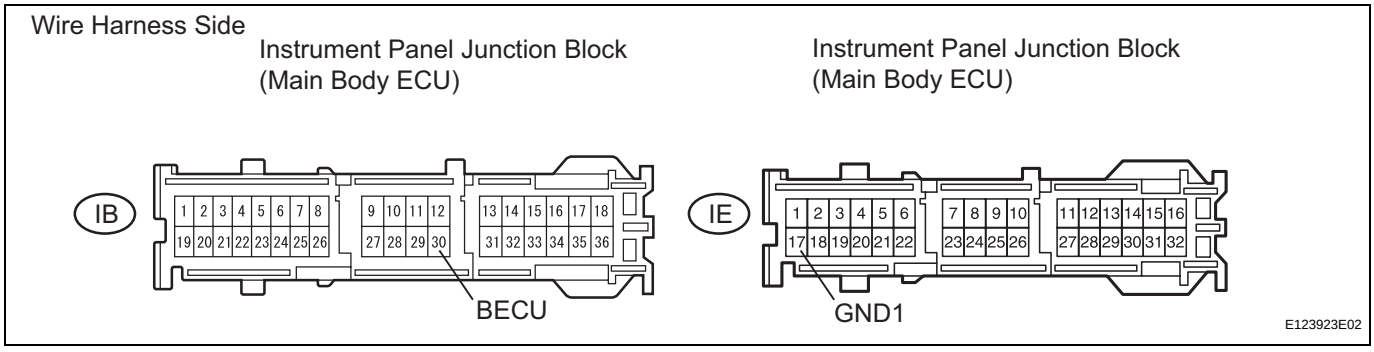
Main body ECU

Item	Test Details	Diagnostic Note
DOOR LOCK	Operate door lock motor LOCK / UNLOCK	-

OK:
Doors can lock / unlock.

OK → **Go to step 4**

NG



2	INSPECT FUSE (ECU-B)

(a) Remove the ECU-B fuse from the engine room No. 2 relay block.
(b) Measure the resistance.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

3	CHECK WIRE HARNESS (ECU - BATTERY AND BODY GROUND)

(a) Disconnect the IH and IE junction block connectors.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Specified Condition
IB-30 (BECU) - Body ground	10 to 14 V

(c) Measure the resistance of the wire harness side connector.

DL

Standard resistance

Tester Connection	Specified Condition
IE-17 (GND1) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

4 INSPECT ALL DOORS LOCK / UNLOCK OPERATION

(a) All doors can be locked/unlocked at once using the following:
- Door control switch on the master switch (switch operation)
- Door control switch on the front passenger side (switch operation).
- Door key cylinder linked with door lock on the driver side (key operation)

(b) Proceed to the next step according to the symptom if all the doors cannot be locked / unlocked at once.

Symptom	Proceed to
All doors cannot be locked / unlocked at once using door control switch on master switch or door key cylinder on driver side	A
All doors cannot be locked / unlocked at once using door control switch on front passenger side	B

B → **Go to step 12**

A

5 INSPECT DRIVER SIDE DOOR LOCK / UNLOCK OPERATION

(a) Proceed to the next step according to the symptom listed in the table below.

Symptom	Proceed to
All doors cannot be locked / unlocked at once using door control switch on power window regulator master switch	A
All doors cannot be locked / unlocked at once using door key cylinder on driver side	B
All doors cannot be locked / unlocked at once using both door control switch on master switch and door key cylinder on driver side	C

B → **Go to step 9**

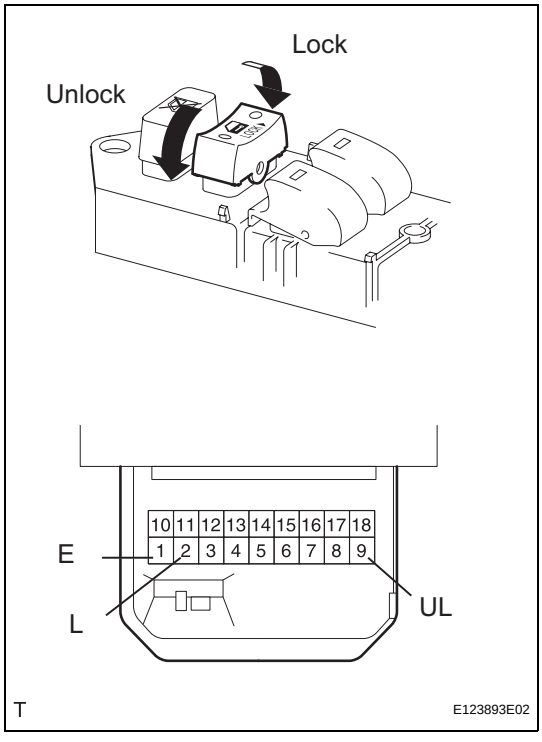
C → **REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)**

A

6	READ VALUE OF INTELLIGENT TESTER (DOOR CONTROL SWITCH ON MASTER SWITCH)

(a) Use the DATA LIST to check if the door control switch is functioning properly.

Main body ECU



Item	Measurement / Display (Range)	Normal Condition	Diagnostic Note
D/L SW-LOCK	Door manual lock switch signal / ON or OFF	ON: Door control switch on power window regulator master switch is pushed to lock position OFF: Door control switch on power window regulator master switch is not pushed	-
D/L SW-UNLOCK	Door manual unlock switch signal / ON or OFF	ON: Door control switch on power window regulator master switch is pushed to unlock position OFF: Door control switch on power window regulator master switch is not pushed	-

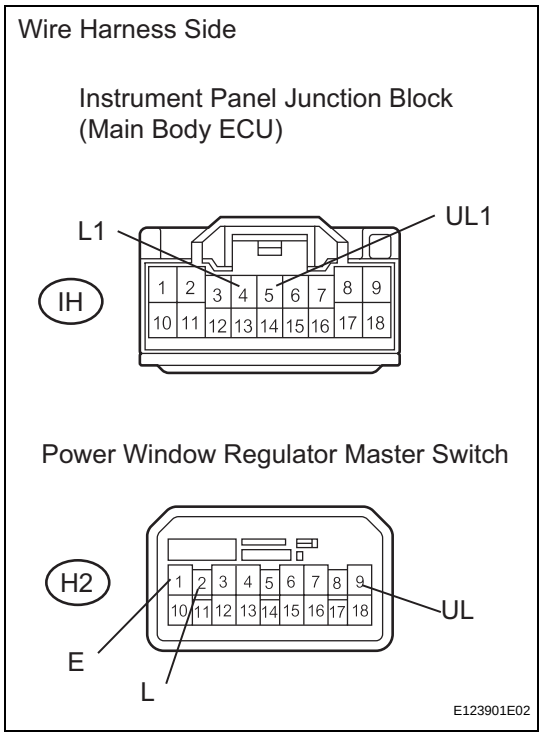
OK:
When the switch is operating, the intelligent tester should display as shown in the table.

OK → **REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)**

NG

7	INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (DOOR CONTROL SWITCH)

(a) Remove the master switch.
(b) Measure the resistance of the door control switch.
Standard resistance



Tester Connection	Switch Condition	Specified Condition
2 (L) - 1 (E)	Lock	Below 80 Ω
2 (L) - 1 (E)	OFF	10 kΩ or higher
9 (UL) -1 (E)	Unlock	Below 80 Ω
9 (UL) - 1 (E)	OFF	10 kΩ or higher

NG → **REPLACE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**

DL

OK

8 CHECK WIRE HARNESS (MASTER SWITCH - ECU AND BODY GROUND)

(a) Disconnect the H2 master switch connector.
(b) Disconnect the IH junction block connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
H2-2 (L) - IH-4 (L1)	Below 1 Ω
H2-2 (L) - Body ground	10 kΩ or higher
IH-4 (L1) - Body ground	10 kΩ or higher
H2-9 (UL) -IH-5 (UL1)	Below 1 Ω
H2-9 (UL) - Body ground	10 kΩ or higher
IH-5 (UL1) - Body ground	10 kΩ or higher
H2-1 (E) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

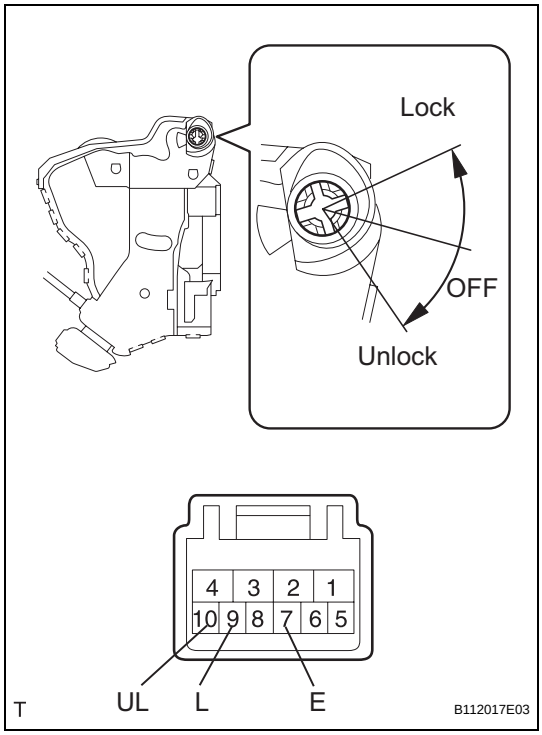
9 READ VALUE OF INTELLIGENT TESTER (DOOR KEY SWITCH)

(a) Use the DATA LIST to check if the door key is functioning properly.

Main body ECU

Item	Measurement / Display (Range)	Normal Condition	Diagnostic Note
DOR KEY SW-LOCK	Door key linked lock switch signal / ON or OFF	ON: Driver side door key cylinder is turned to lock position OFF: Driver side door key cylinder is not turned	-
D DOR KEY SW-UL	Door key linked lock switch signal / ON or OFF	ON: Driver side door key cylinder is turned to unlock position OFF: Driver side door key cylinder is not turned	-

OK:



When the door key is operating, the intelligent tester should display as shown in the table.

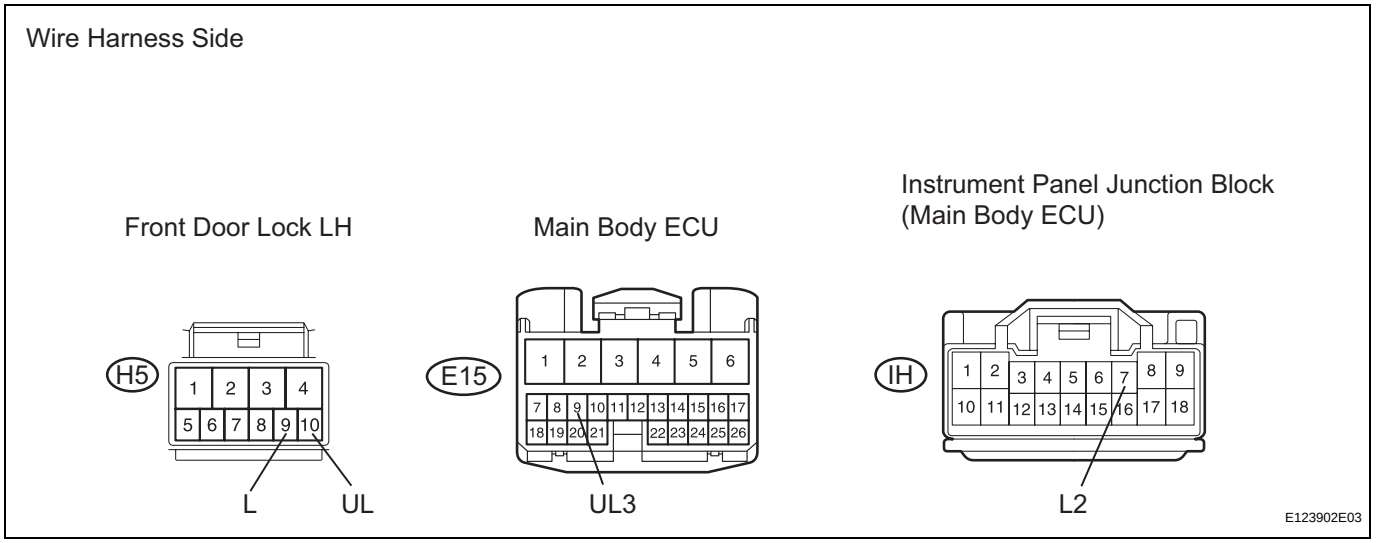
OK → **REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)**

DL

NG

10 INSPECT FRONT DOOR WITH MOTOR LOCK ASSEMBLY LH

(a) Remove the front door lock.
(b) Measure the resistance of the door lock and unlock switch.



Standard resistance

Tester Condition	Switch Condition	Specified Condition
9 (L) -7 (E)	Lock	Below 1 Ω
9 (L) -7 (E)	OFF	10 kΩ or higher
10 (UL) - 7 (E)	Unlock	Below 1 Ω
10 (UL) - 7 (E)	OFF	10 kΩ or higher

NG → **REPLACE FRONT DOOR WITH MOTOR LOCK ASSEMBLY LH**

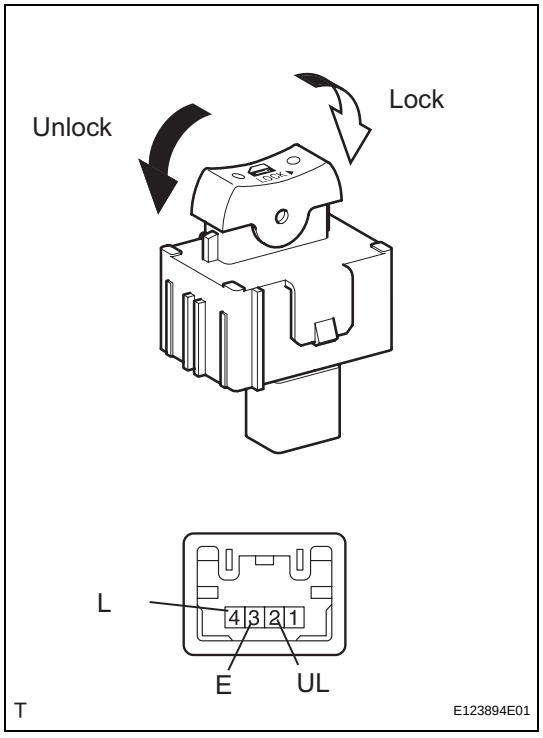
OK

11 CHECK WIRE HARNESS (MOTOR - ECU AND BODY GROUND)

(a) Disconnect the H5 door lock motor connector.
(b) Disconnect the E15 ECU connector.
(c) Disconnect the IH junction block connector.
(d) Measure the resistance of the wire harness side connectors.

DL

Standard resistance



Tester Connection	Specified Condition
H5-9 (L) - IH-7 (L2)	Below 1 Ω
H5-9 (L) - Body ground	10 kΩ or higher
IH-7 (L2) - Body ground	10 kΩ or higher
H5-10 (UL) - E15-9 (UL3)	Below 1 Ω
H5-10 (UL) - Body ground	10 kΩ or higher
E15-9 (UL3) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

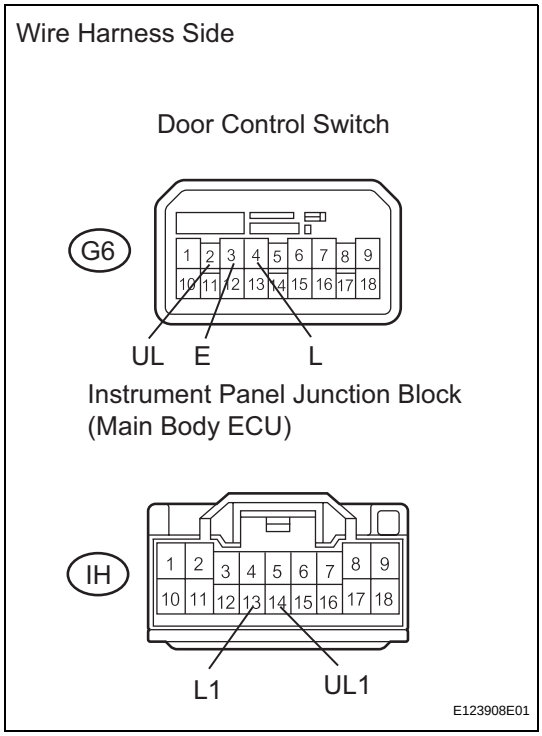
OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

12 INSPECT DOOR CONTROL SWITCH ASSEMBLY

(a) Remove the control switch.
(b) Measure the resistance of the door control switch.

Standard resistance



Tester Connection	Switch Condition	Specified Condition
4 (L) - 3 (E)	Lock	Below 200 Ω
4 (L) - 3 (E)	OFF	10 kΩ or higher
2 (UL) - 3 (E)	Unlock	Below 200 Ω
2 (UL) - 3 (E)	OFF	10 kΩ or higher

NG → **REPLACE DOOR CONTROL SWITCH ASSEMBLY**

OK

DL

13	CHECK WIRE HARNESS (SWITCH - ECU AND BODY GROUND)

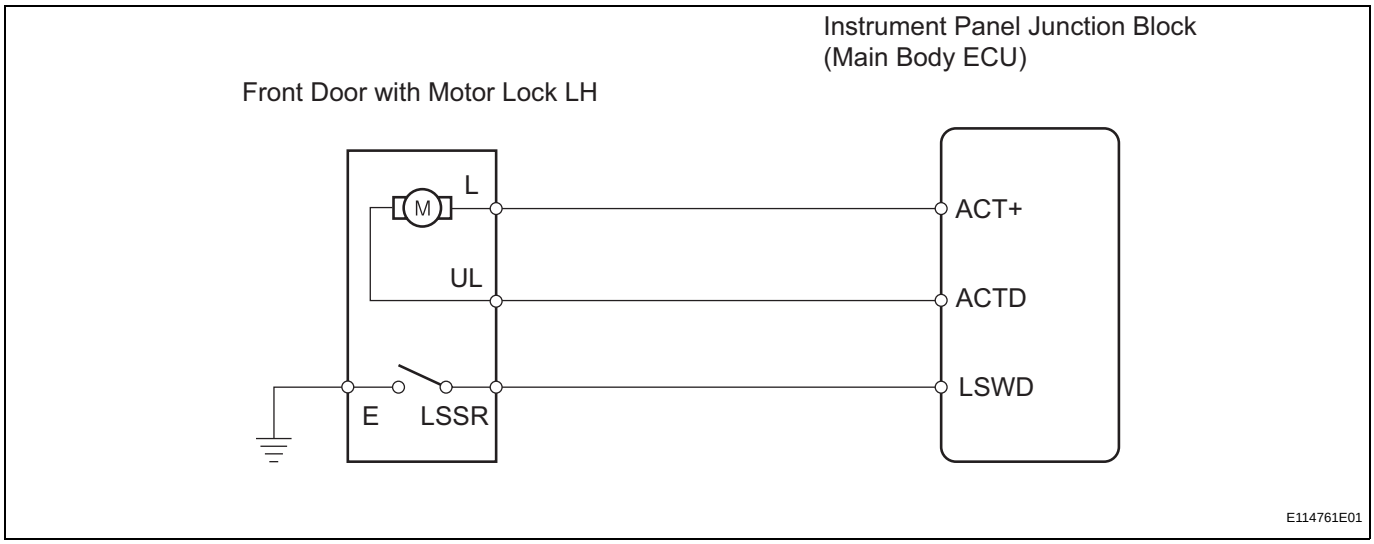
(a) Disconnect the G6 switch connector.
(b) Disconnect the IH junction block connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
G6-4 (L) - IH-13 (L1)	Below 1 Ω
G6-4 (L) - Body ground	10 kΩ or higher
IH-13 (L1) - Body ground	10 kΩ or higher
G6-2 (UL) -IH-14 (UL1)	Below 1 Ω
G6-2 (UL) - Body ground	10 kΩ or higher
IH-14 (UL1) - Body ground	10 kΩ or higher
G6-3 (E) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK



REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

Only Driver Door LOCK / UNLOCK Functions do not Operate

DESCRIPTION

The main body ECU receives lock / unlock switch signals and activates the door lock motor accordingly.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (DOOR LOCK)

(a) Select the ACTIVE TEST, use the intelligent tester to generate a control command, and then check that the doors lock / unlock.

Main body ECU

Item	Test Details	Diagnostic Note
D DOOR UNLOCK	Operate driver side door unlock ON / OFF	-

OK:

Doors can lock / unlock.

OK → **REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)**

NG

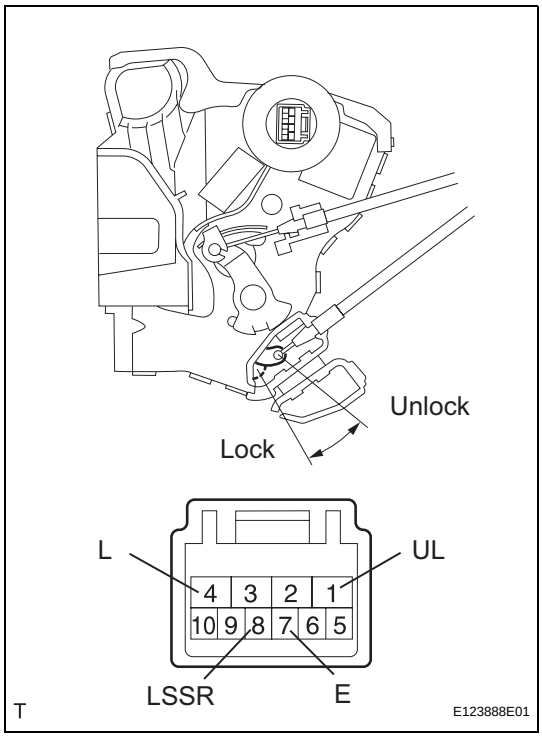
2	READ VALUE OF INTELLIGENT TESTER (LOCK POSITION SWITCH)

(a) Use the DATA LIST to check if the door lock is functioning properly.

Main body ECU

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
D LOCK POS SW	Driver side door lock position switch signal ON / OFF	ON: Driver side door is unlocked OFF: Driver side door is locked	-

DL



OK:

When the door lock is operating, the intelligent tester should display as shown in the table.

OK → **REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)**

NG

3 INSPECT FRONT DOOR WITH MOTOR LOCK ASSEMBLY LH

(a) Apply the battery voltage to the motor terminals and check the operation of the door lock motor.

OK

Measurement Condition	Specified Condition
Battery positive (+) → 4 (L) Battery negative (-) → 1 (UL)	Lock
Battery positive (+) → 1 (UL) Battery negative (-) → 4 (L)	Unlock

(b) Measure the resistance of the door lock position switch.

Standard resistance

Tester Connection	Switch Condition	Specified Condition
8 (LSSR) - 7 (E)	Lock	10 kΩ or higher
8 (LSSR) - 7 (E)	Unlock	Below 1 Ω

NG → **REPLACE FRONT DOOR WITH MOTOR LOCK ASSEMBLY LH**

Battery positive (+) → 1 (UL) Battery negative (-) → 4 (L)	**Unlock**

NG → **REPLACE REAR DOOR WITH MOTOR LOCK ASSEMBLY LH**

OK

DL

2	CHECK WIRE HARNESS (DOOR LOCK - ECU)

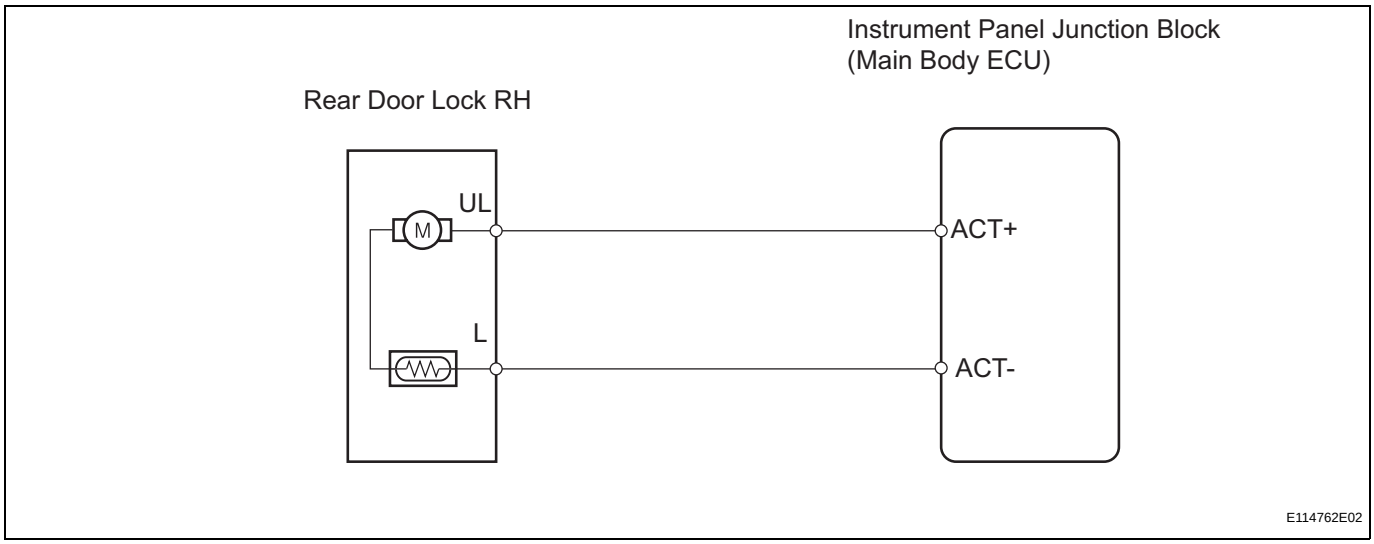
(a) Disconnect the J4 door lock connector.
(b) Disconnect the IA junction block connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
J4-1 (UL) - IA-4 (ACT-)	Below 1 Ω
J4-4 (L) - IA-3 (ACT+)	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

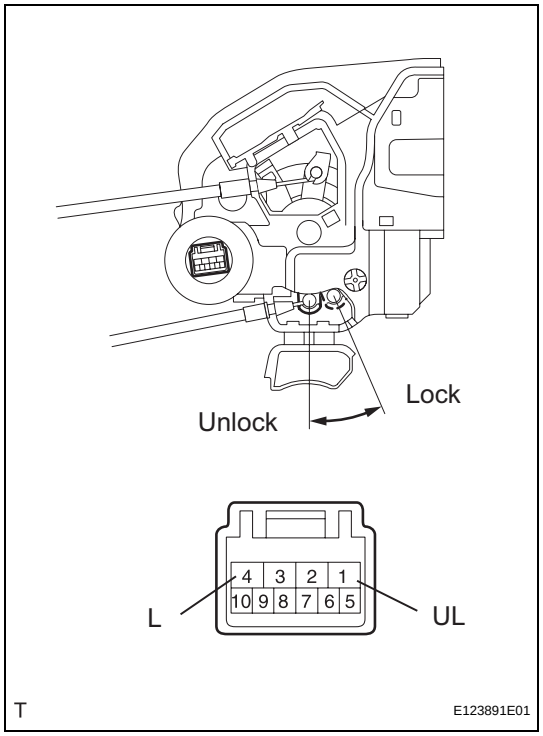
OK



REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

Only Rear Door RH LOCK / UNLOCK Functions do not Operate

DESCRIPTION



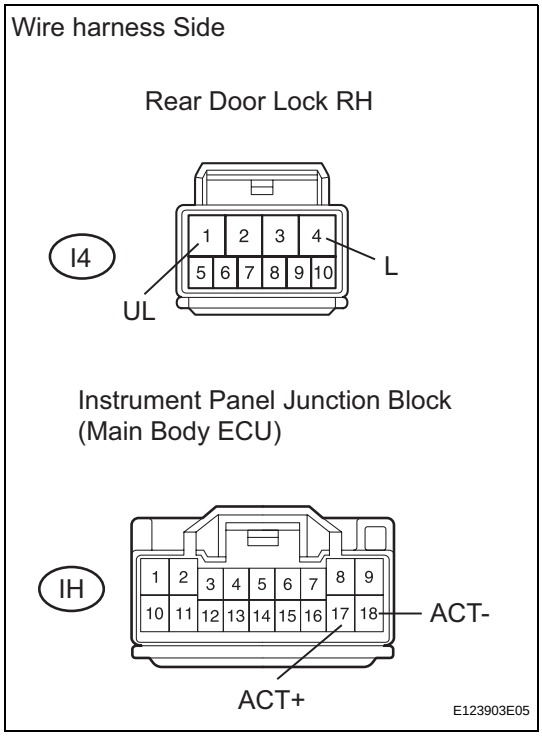
The main body ECU receives lock / unlock switch signals and activates the door lock motor accordingly.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	INSPECT REAR DOOR WITH MOTOR LOCK ASSEMBLY RH

(a) Apply the battery voltage to the door lock motor and check the operation of the door lock motor.
OK



Measurement Condition	Specified Condition
Battery positive (+) → 4 (L) Battery negative (-) → 1 (UL)	Lock
Battery positive (+) → 1 (UL) Battery negative (-) → 4 (L)	Unlock

NG → **REPLACE REAR DOOR WITH MOTOR LOCK ASSEMBLY RH**

OK

DL

2	CHECK WIRE HARNESS (DOOR LOCK - ECU)

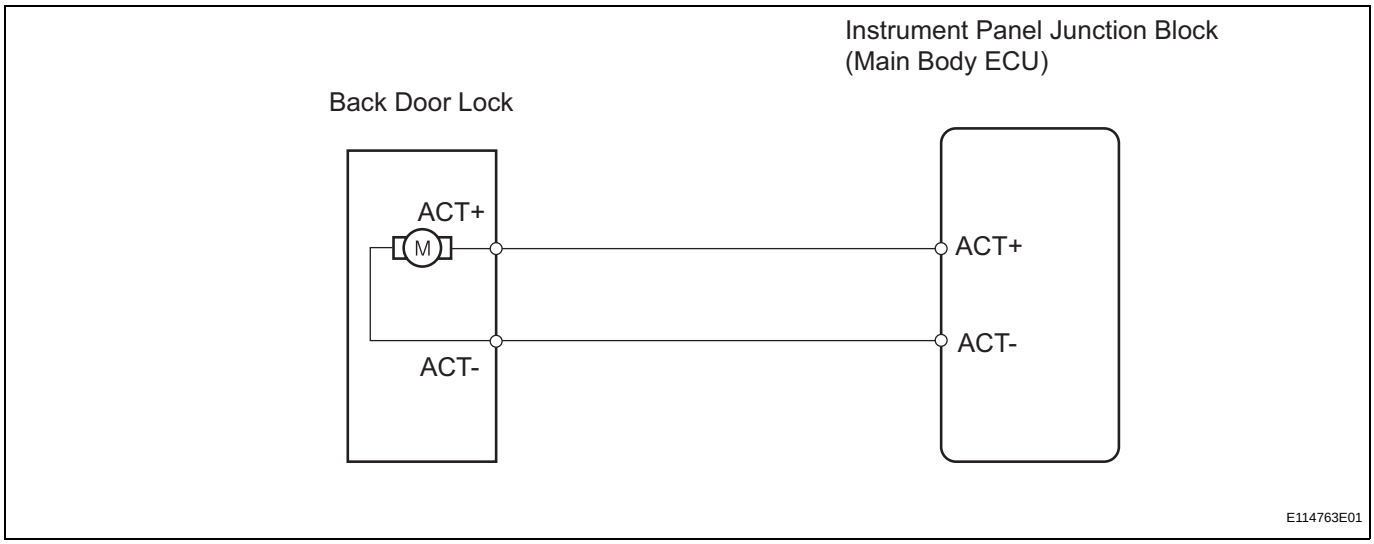
(a) Disconnect the I4 door lock connector.
(b) Disconnect the IH junction block connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
I4-1 (UL) - IH-18 (ACT-)	Below 1 Ω
I4-4 (L) - IH-17 (ACT+)	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR (MAIN BODY ECU)**

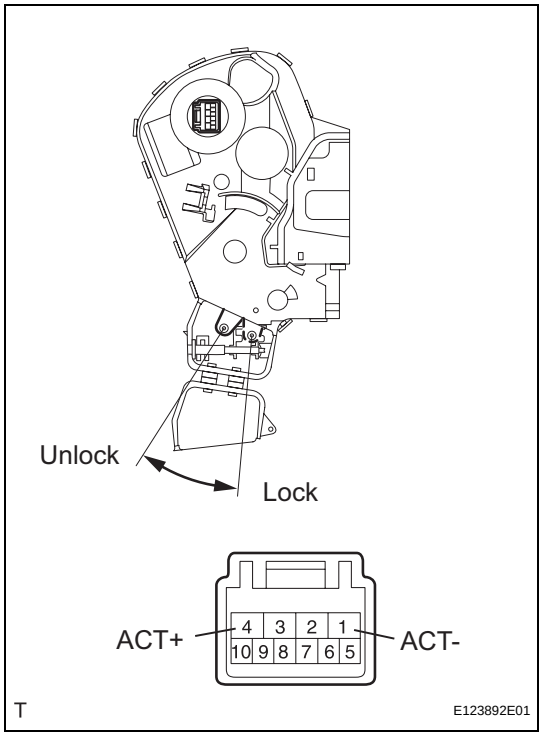
OK



REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

Only Back Door LOCK / UNLOCK Functions do not Operate

DESCRIPTION



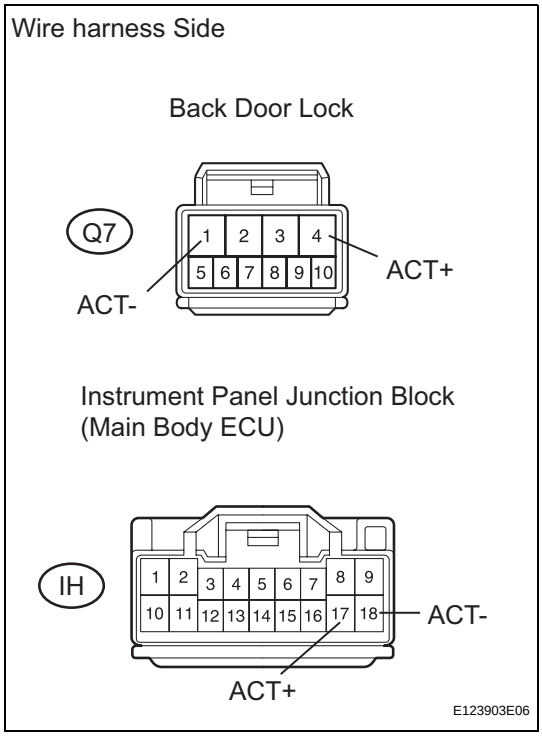
The main body ECU receives lock / unlock switch signals and activates the door lock motor accordingly.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	INSPECT BACK DOOR WITH MOTOR LOCK ASSEMBLY

(a) Apply the battery voltage to the door lock motor and check the operation of the door lock motor.
OK



Measurement Condition	Specified Condition
Battery positive (+) → 4 (ACT+) Battery negative (-) → 1 (ACT-)	Lock
Battery positive (+) → 1 (ACT-) Battery negative (-) → 4 (ACT+)	Unlock

NG → **REPLACE BACK DOOR WITH MOTOR LOCK ASSEMBLY**

OK

DL

2	CHECK WIRE HARNESS (DOOR LOCK - ECU)

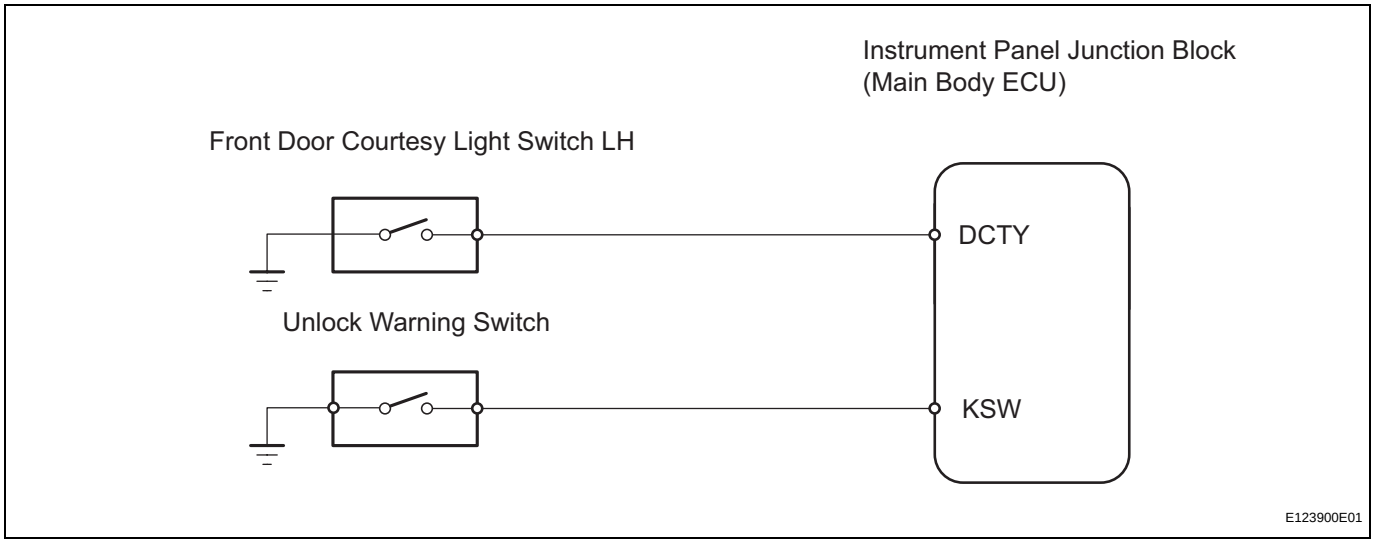
(a) Disconnect the Q7 door lock connector.
(b) Disconnect the IH junction block connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
Q7-1 (ACT-) - IH-18 (ACT-)	Below 1 Ω
Q7-4 (ACT+) - IH-17 (ACT+)	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK



REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

Key Lock-in Prevention Function does not Work Properly

DESCRIPTION

When the key is in the ignition key cylinder or the door courtesy light ON signal is output to the main body ECU, performing the door lock operation with the lock switch does not lock the door.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER (UNLOCK WARNING SWITCH)

(a) Use the DATA LIST to check if the unlock warning switch is functioning properly.

Main body ECU

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
KEY UNLK WRN SW	Unlock warning switch signal / ON or OFF	ON: Key is in ignition key cylinder OFF: No key is in ignition key cylinder	-

OK:

When the switch is operating, the intelligent tester should display as shown in the table.

NG → **Go to step 5**

OK

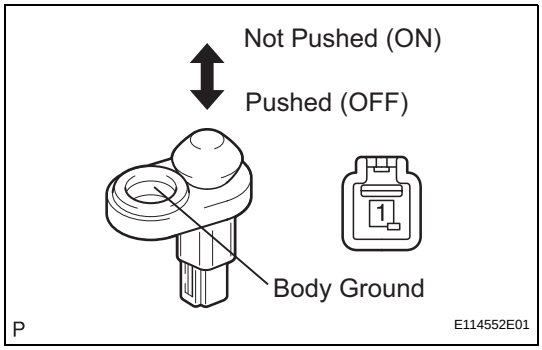
DL

2	READ VALUE OF INTELLIGENT TESTER (DRIVER SIDE DOOR COURTESY LIGHT SWITCH)

(a) Use the DATA LIST to check if the door courtesy light switch is functioning properly.

Main body ECU

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
D DOR CTY SW	Driver side door courtesy light switch signal / ON or OFF	ON: Driver side door is open OFF: Driver side door is closed	-



OK:

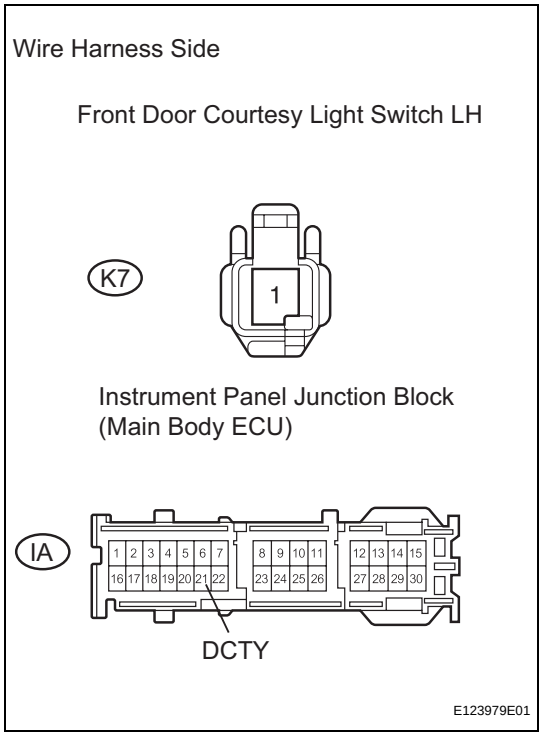
When the switch is operating, the intelligent tester should display as shown in the table.

OK → **REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)**

NG

3	INSPECT FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY LH

(a) Remove the front door courtesy light switch.
(b) Measure the resistance of the switch.



Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 - Body ground	Not pushed (ON)	Below 1 Ω
1 - Body ground	Pushed (OFF)	10 kΩ or higher

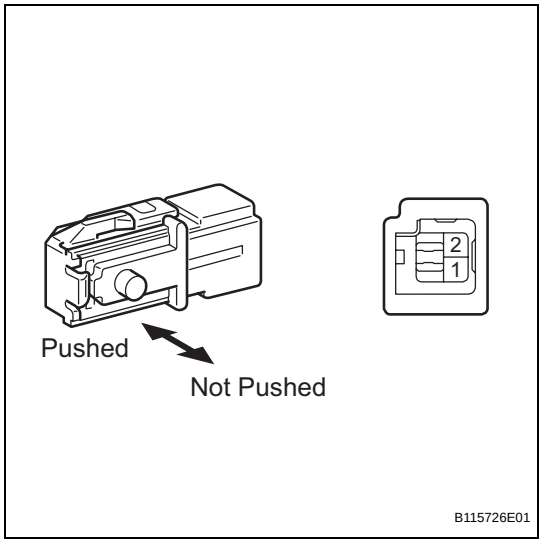
NG → **REPLACE FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY LH**

OK

4 CHECK WIRE HARNESS (ECU - SWITCH)

(a) Disconnect the K7 switch connector.
(b) Disconnect the IA junction block connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance



Tester Connection	Specified Condition
K7-1 - IA-21 (DCTY)	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

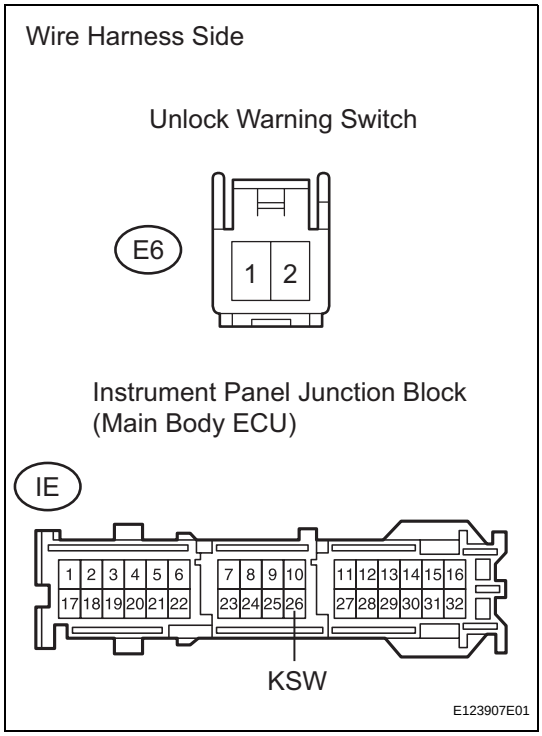
OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

5 INSPECT UNLOCK WARNING SWITCH ASSEMBLY

(a) Remove the unlock warning switch.
(b) Measure the resistance of the switch.

Standard resistance



Tester Connection	Switch Condition	Specified Condition
1- 2	Not pushed	10 kΩ or higher
1- 2	Pushed	Below 1 Ω

NG → **REPLACE UNLOCK WARNING SWITCH ASSEMBLY**

OK

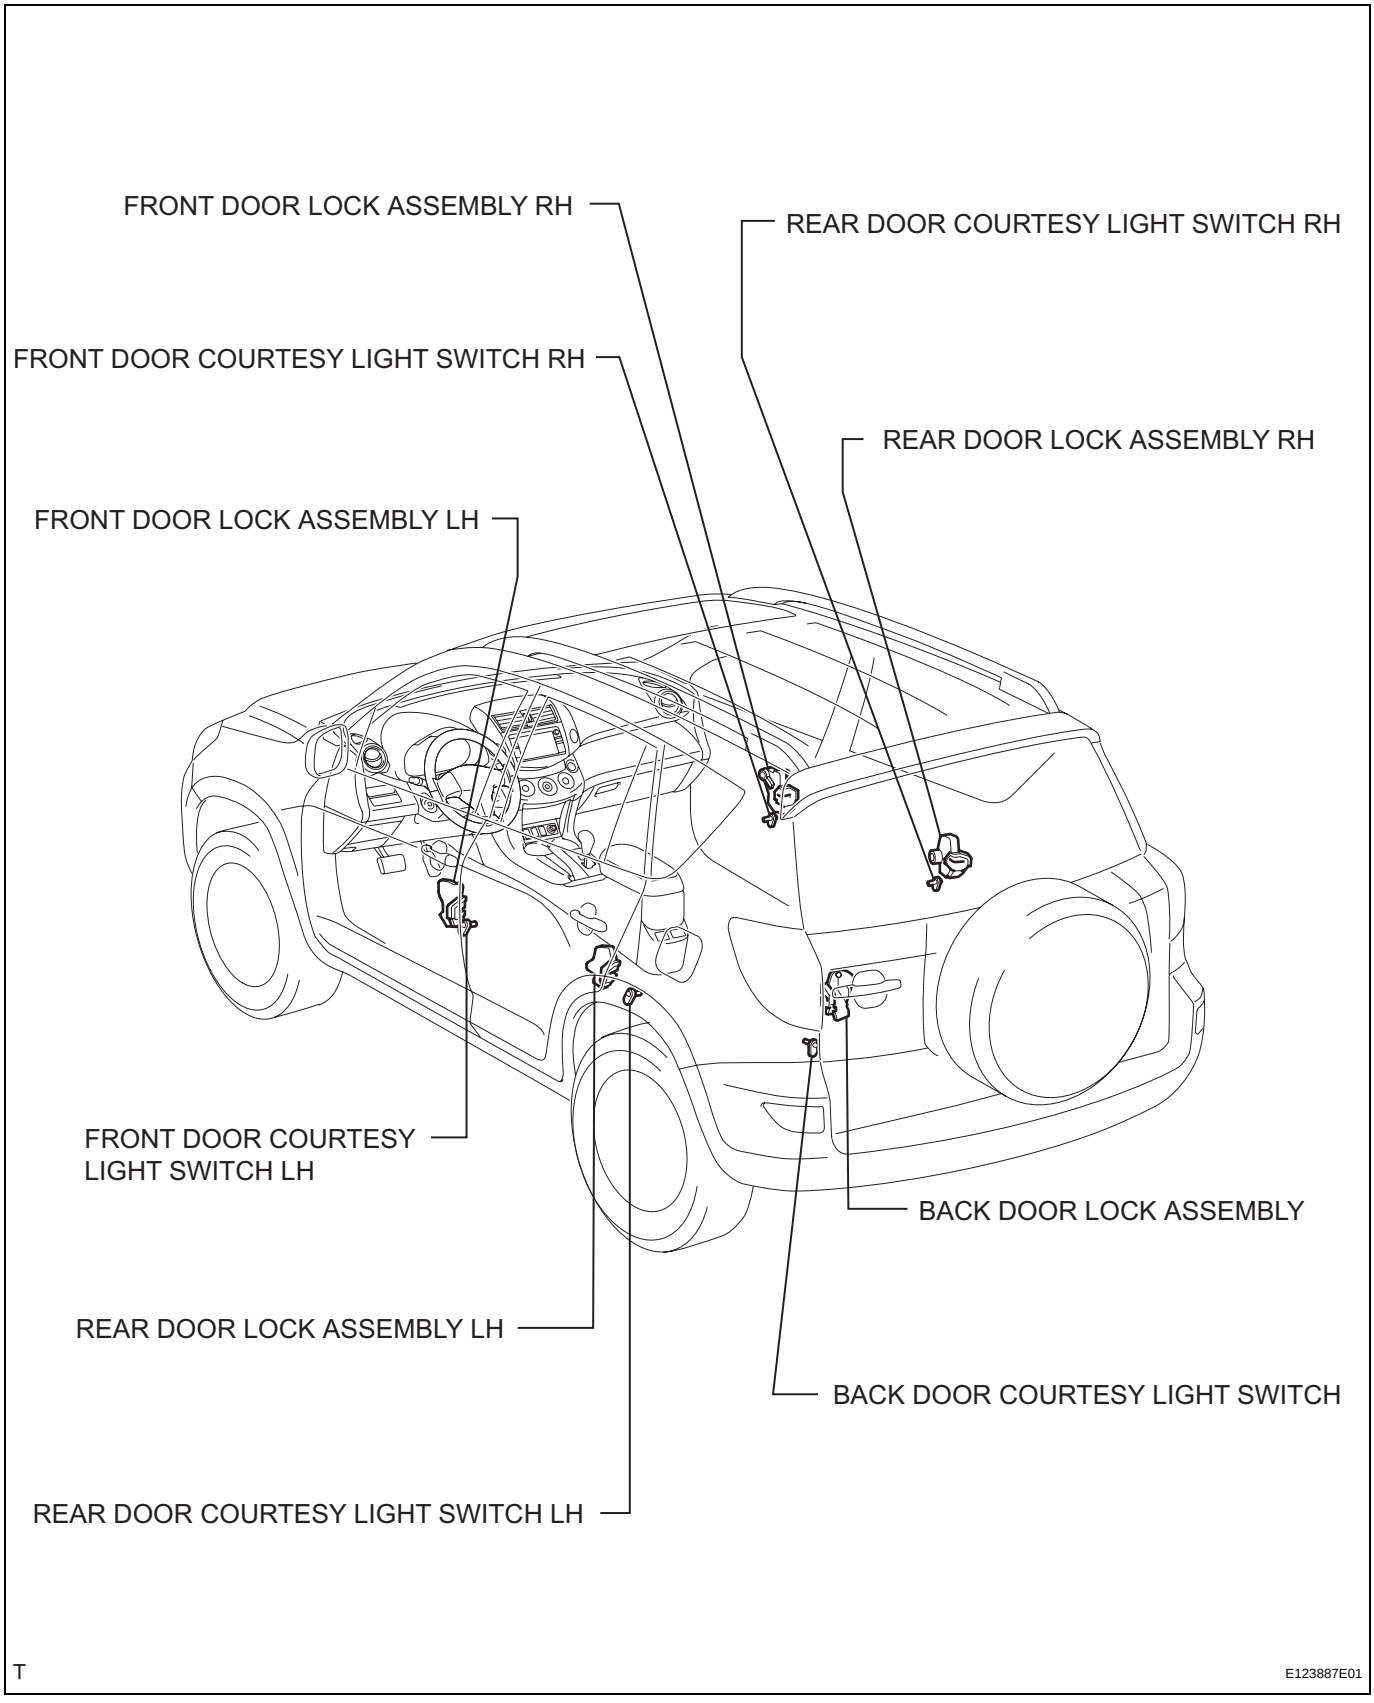
DL

6	CHECK WIRE HARNESS (SWITCH - ECU)

(a) Disconnect the E6 switch connector.
(b) Disconnect the IE junction block connector.
(c) Measure the resistance of the wire harness side connectors.

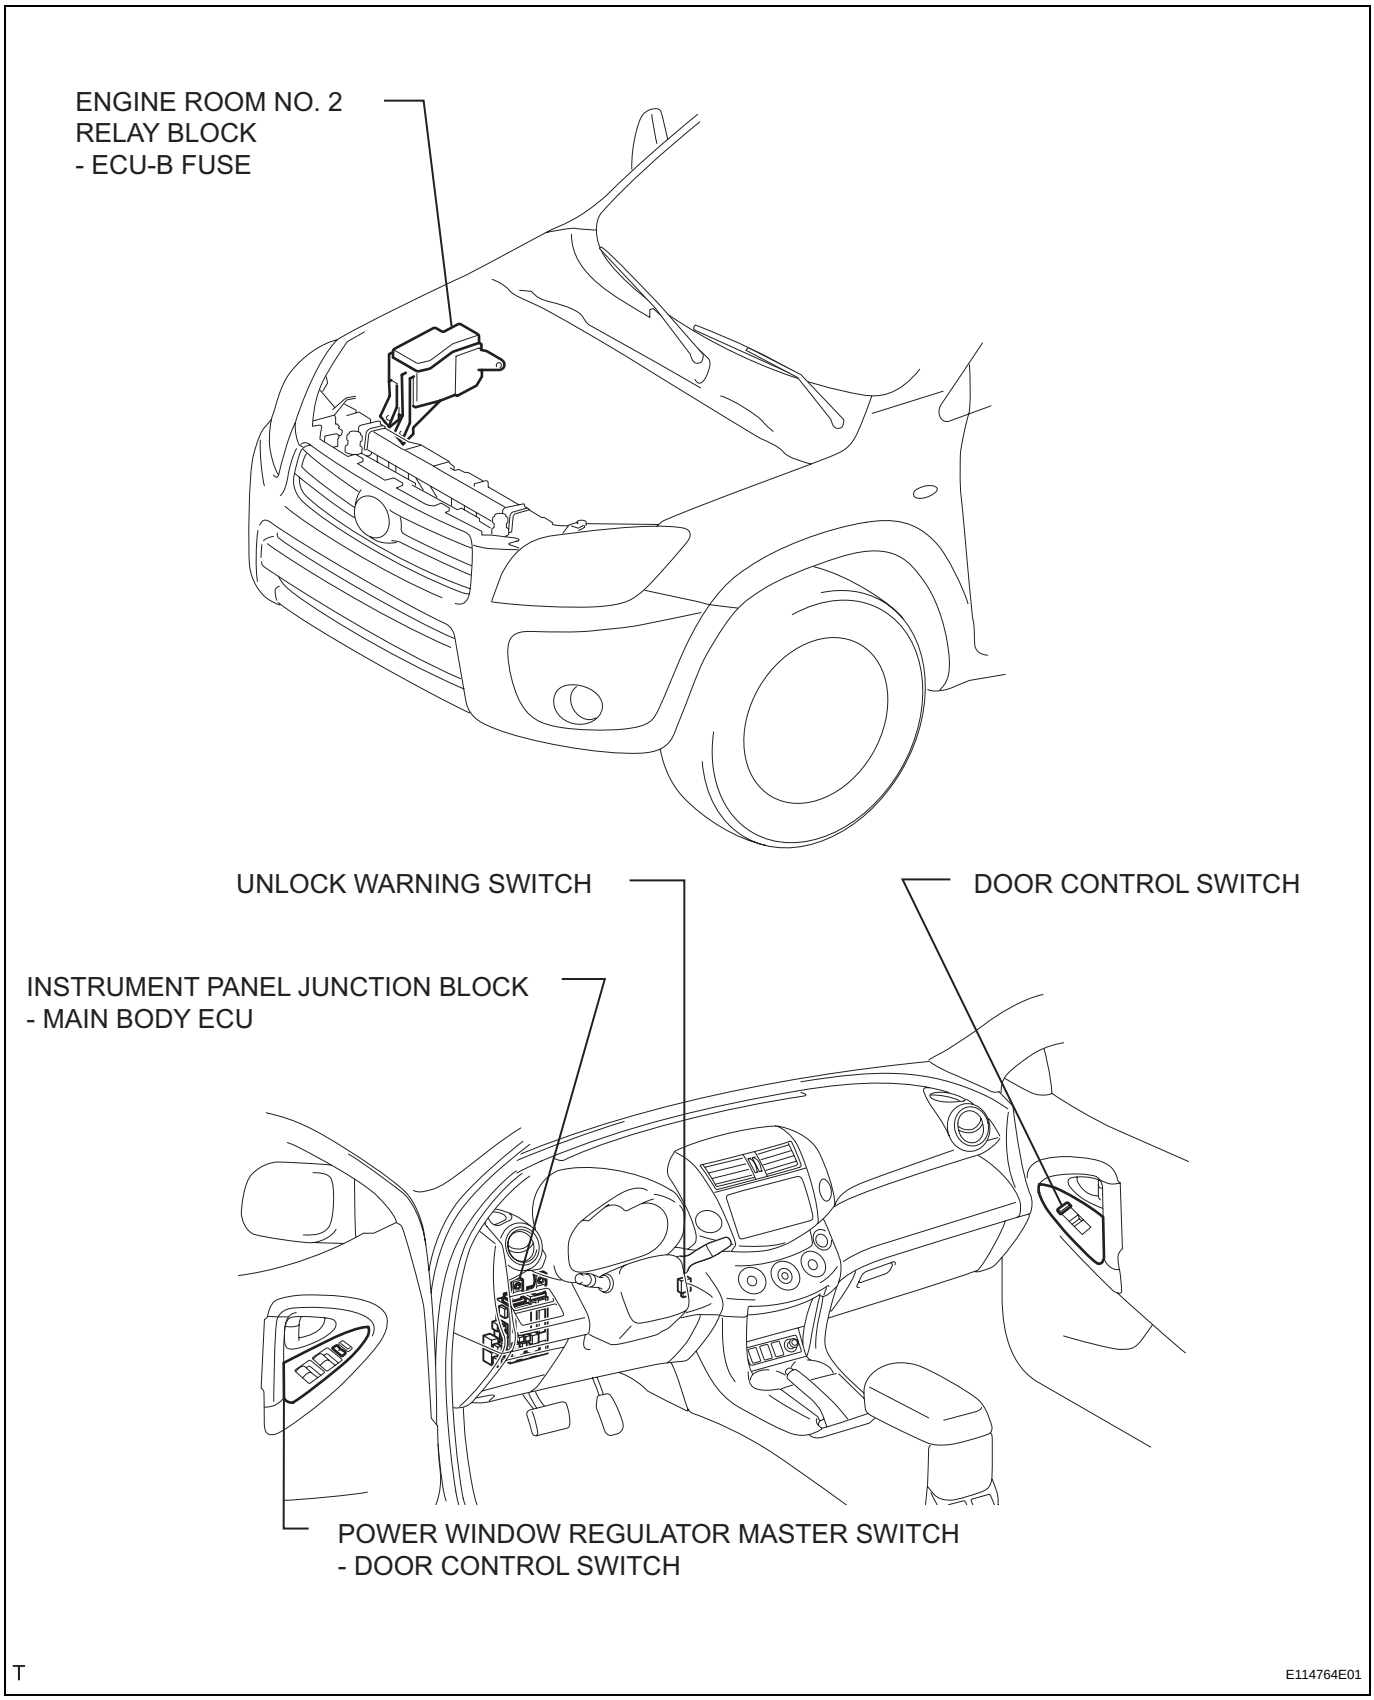
Standard resistance

Tester Connection	Specified Condition
E6-1 - Body ground	Below 1 Ω
E6-1 - IE26 (KSW)	Below 1 Ω



NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK



REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

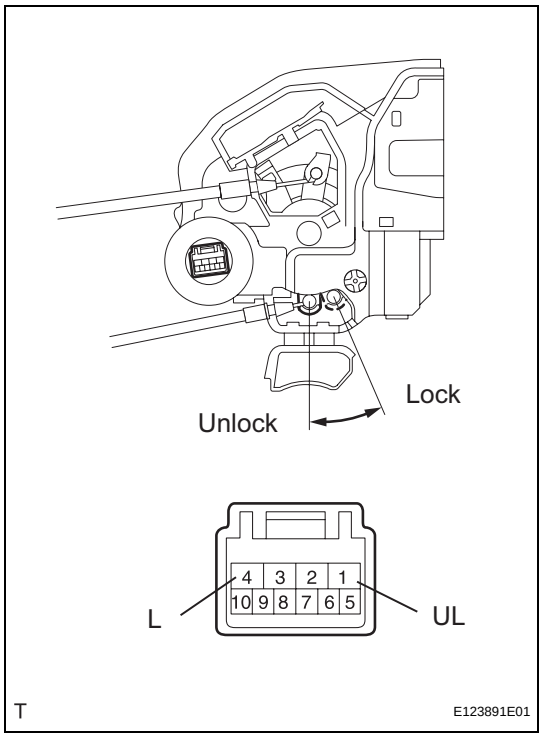
REAR DOOR LOCK



INSPECTION

1. INSPECT REAR DOOR WITH MOTOR LOCK ASSEMBLY LH

(a) Apply the battery voltage to the door lock motor and check the operation of the door lock motor.
OK

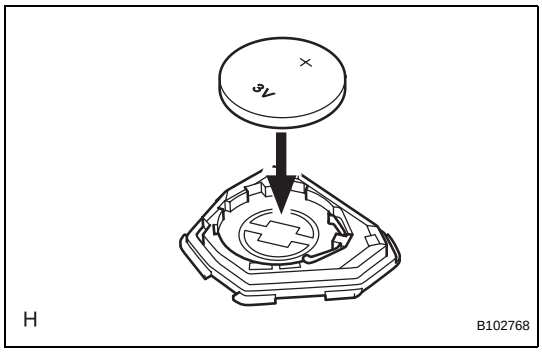
Measurement Condition	Specified Condition
Battery positive (+) → 4 (L) Battery negative (-) → 1 (UL)	Lock
Battery positive (+) → 1 (UL) Battery negative (-) → 4 (L)	Unlock

If the result is not as specified, replace the door lock assembly.

2. INSPECT REAR DOOR WITH MOTOR LOCK ASSEMBLY RH

(a) Apply the battery voltage to the door lock motor and check the operation of the door lock motor.
OK

Measurement Condition	Specified Condition
Battery positive (+) → 4 (L) Battery negative (-) → 1 (UL)	Lock
Battery positive (+) → 1 (UL) Battery negative (-) → 4 (L)	Unlock

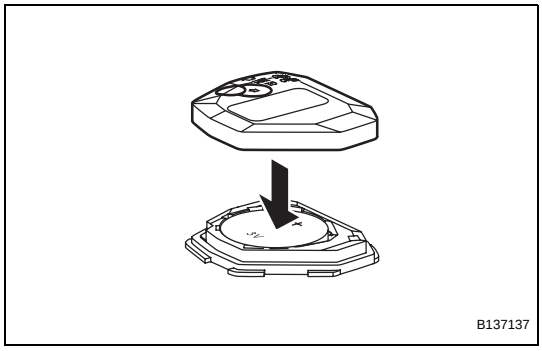


If the result is not as specified, replace the door lock assembly.

INSTALLATION

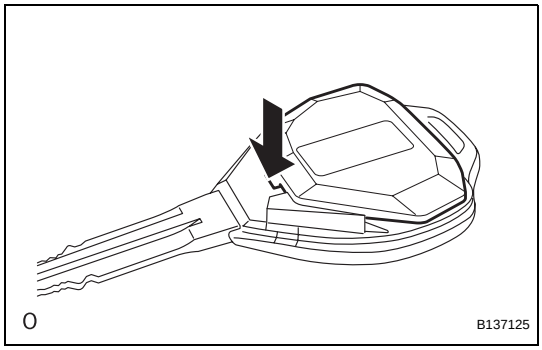
1. INSTALL TRANSMITTER BATTERY

NOTICE:



Take extra care when handling these precision electronic components.

(a) Install a battery (lithium battery: CR2016) with the positive (+) side facing upward, as shown in the illustration.

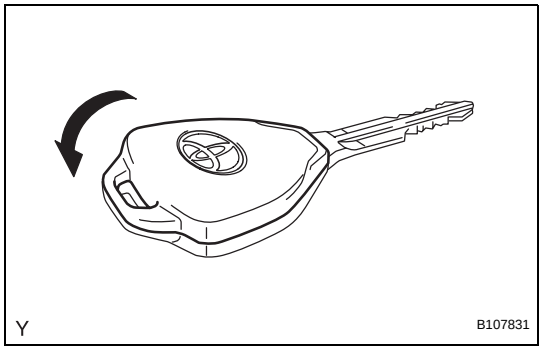


NOTICE:

- **Be careful not to bend the transmitter battery electrode during insertion.**
- **Keep the transmitter cover interior free of dust and oil.**

(b) Install the cover.

2. INSTALL DOOR CONTROL TRANSMITTER MODULE

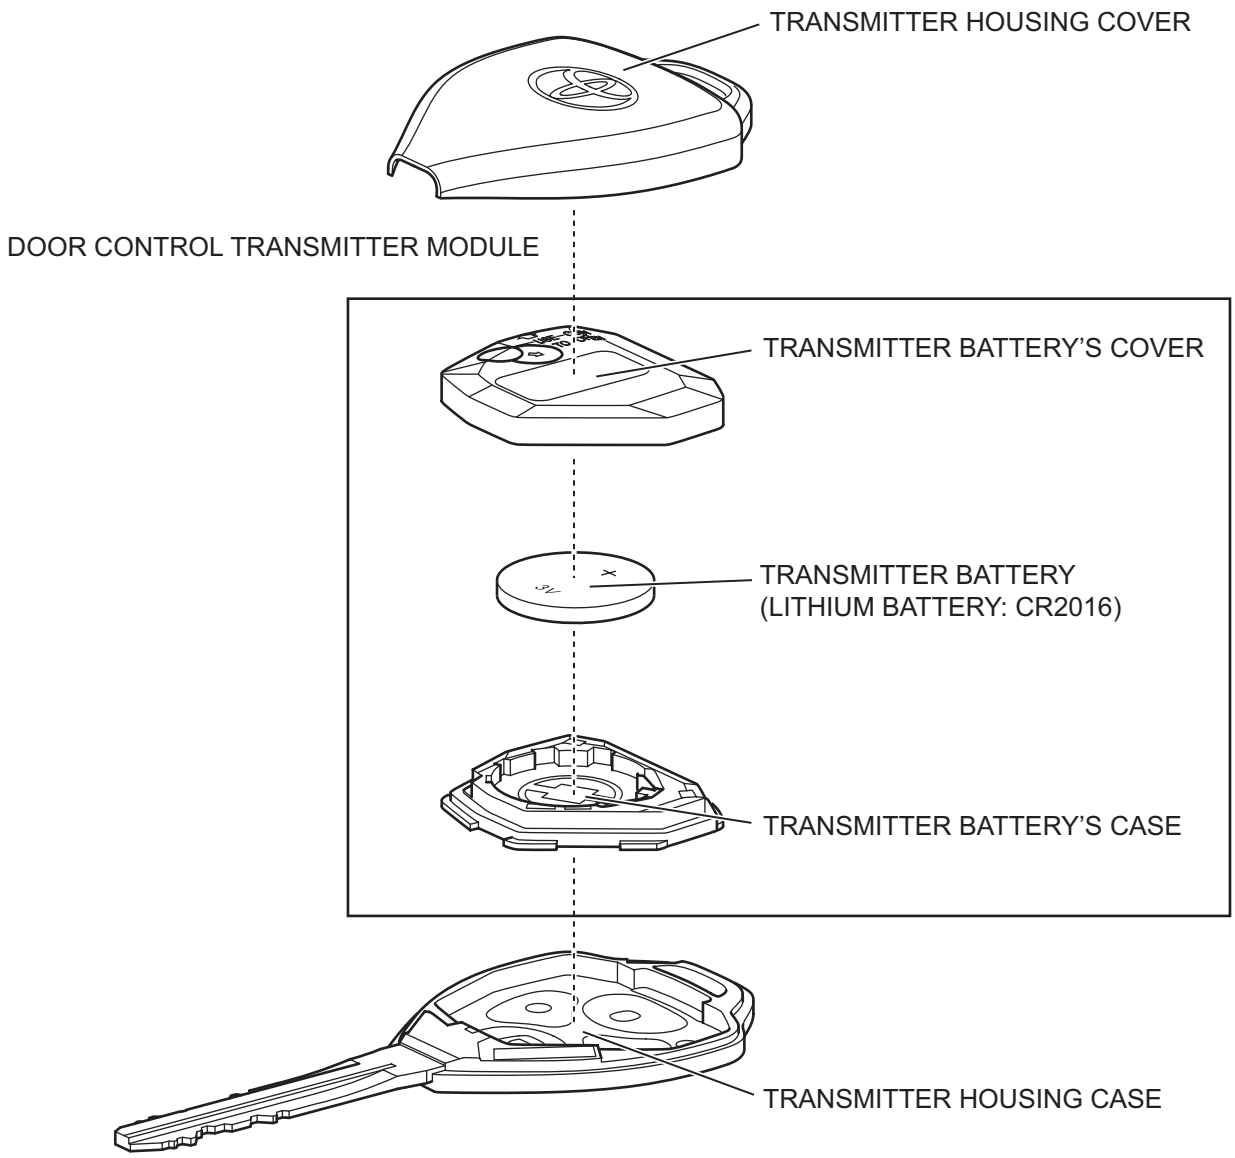


3. INSTALL TRANSMITTER HOUSING COVER

(a) Install the transmitter housing cover to the transmitter housing case.

(b) Check that the transmitter's LED illuminates 3 times when the switch is pressed 3 times.

OK:



Transmitter's LED illuminates 3 times when switch is pressed 3 times.

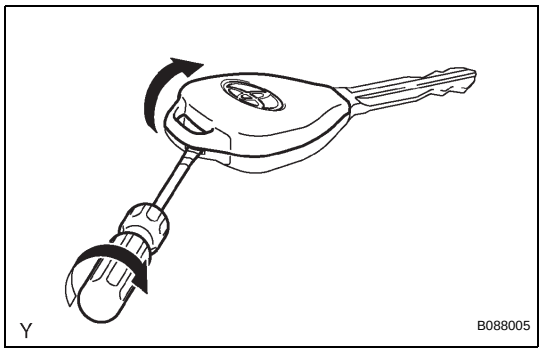
DL

TRANSMITTER BATTERY

COMPONENTS

DL

H



B137121E01

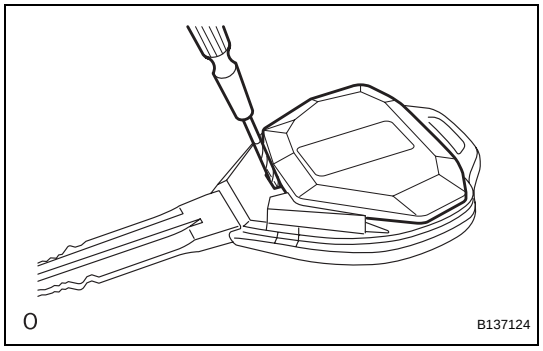
REMOVAL

1. REMOVE TRANSMITTER HOUSING COVER

NOTICE:

Take extra care when handling these precision electronic components.

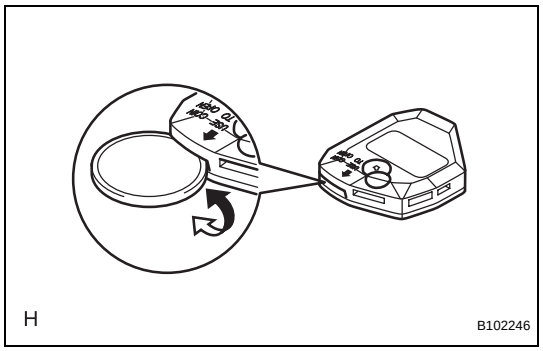
(a) Twist the screwdriver in the direction of the arrow mark in the illustration, and open the transmitter housing cover.



NOTICE:

Do not forcibly pry the cover.

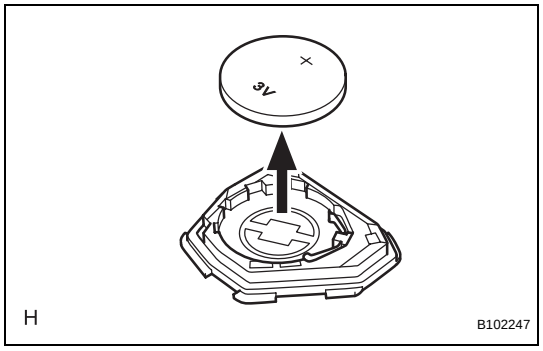
HINT:



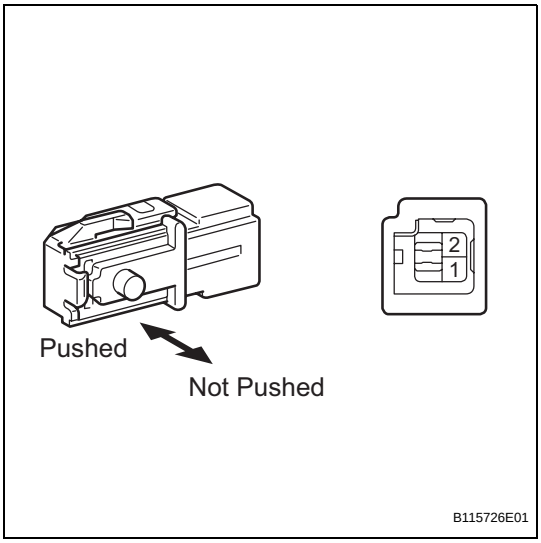
Tape the screwdriver tip before use.

2. REMOVE DOOR CONTROL TRANSMITTER MODULE

3. REMOVE TRANSMITTER BATTERY



(a) Twist the coin in the direction of the arrow mark in illustration, and remove the transmitter battery's cover.



(b) Remove the battery (lithium battery: CR2016).

NOTICE:

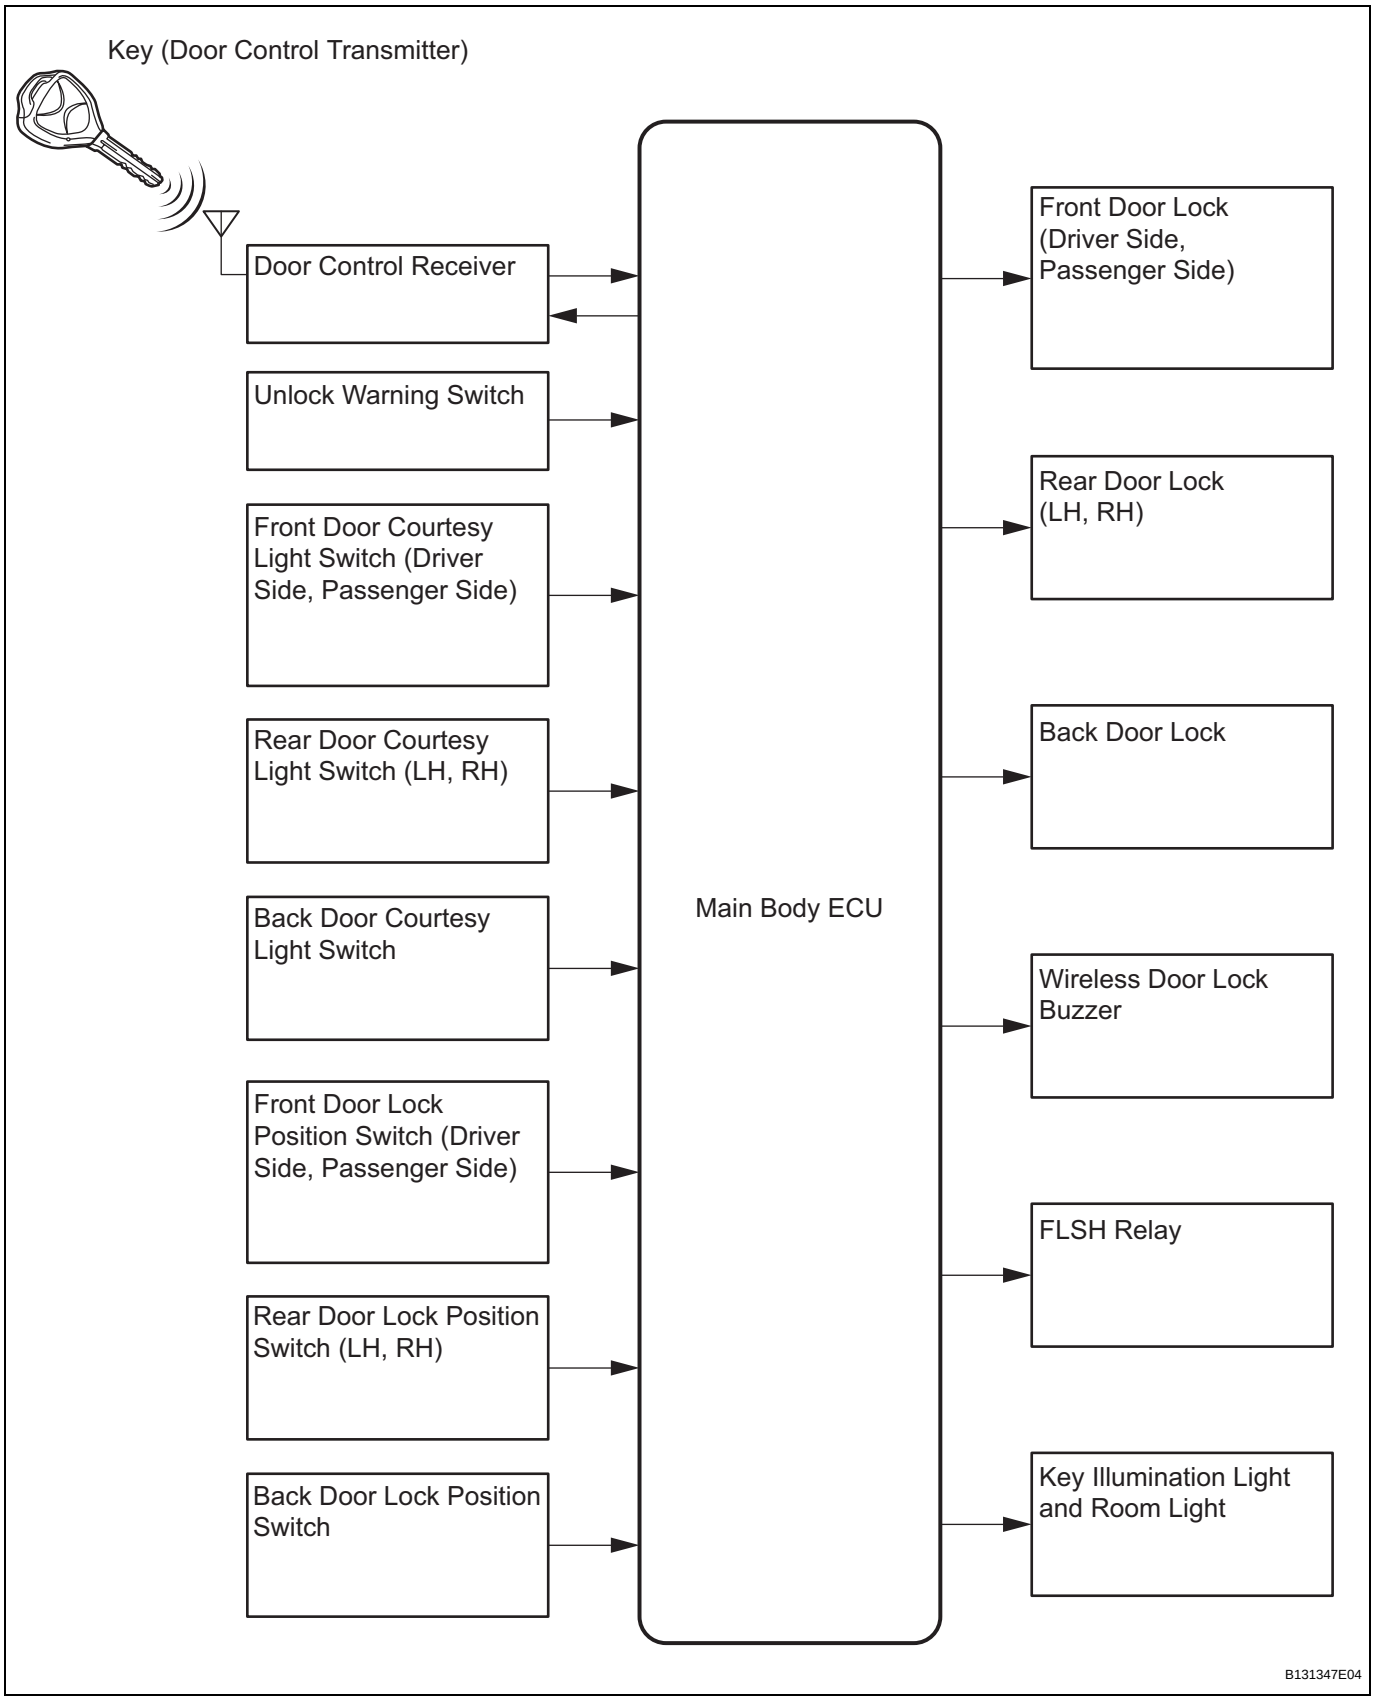
- **Do not push the terminals with your finger.**
- **Do not forcibly pry up the battery. The terminals may become damaged.**
- **Do not touch the battery with wet hands. Water may cause rust.**
- **Do not touch or move any components inside the transmitter. It may cease to work.**

DL

UNLOCK WARNING SWITCH

INSPECTION

1. INSPECT UNLOCK WARNING SWITCH ASSEMBLY



(a) Measure the resistance of the switch.

Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 - 2	Not pushed	10 kΩ higher
1 - 2	Pushed	Below 1 Ω

If the result is not as specified, replace the unlock warning switch assembly.

SYSTEM DIAGRAM

SYSTEM DESCRIPTION

1. WIRELESS DOOR CONTROL SYSTEM DESCRIPTION

(a) This system locks and unlocks the vehicle's doors remotely. The wireless control system has the following features:

- The door control receiver performs the code identification procedure and the main body ECU operates the door lock control. A serial data link is provided for communication between the receiver and main body ECU.
- A key-integrated type transmitter is used and it contains the following 3 switches: the door lock switch, door unlock switch and panic alarm switch.
- An LED is built into the transmitter so that the battery status can be checked.

2. FUNCTION OF MAIN COMPONENTS

Components	Functions
Door control transmitter	• Contains LOCK, UNLOCK and PANIC switches • Transmits faint electric waves (recognition codes and function codes) to door control receiver • Illuminates indicator light (LED) during transmission
Door control receiver	Receives weak electric waves (recognition codes and function codes) from door control transmitter, and changes waves to code data
Door lock (door lock position switch)	Transmits door lock conditions of each door to main body ECU
Unlock warning switch	Detects if key is in ignition key cylinder
Door courtesy light switch	Turns ON when door is open and turns OFF when door is closed. Outputs door status (open or closed) to main body ECU.

3. SYSTEM FUNCTION

(a) Door lock / unlock function:
With no key in the ignition key cylinder (unlock warning switch is OFF) and all door courtesy light switches OFF, pressing the door control transmitter's LOCK / UNLOCK switch causes the transmitter to output faint electric waves. The transmitter sends a faint electrical wave to the door control receiver. The high frequency circuit built into the door control receiver demodulates the wave into code data, computes the data, and compares the data with previously registered ID codes. If the data is verified, a door lock / unlock request signal is output to the main body ECU. When the request signal is received, the main body ECU outputs a door lock / unlock control signal to each door lock. Each door lock then locks / unlocks its respective door and turns ON / OFF its door lock position switch in accordance with the signal.

(b) Answer-back function:
The main body ECU receives the door unlock detection switch's ON / OFF signals and uses these signals to confirm if the door control operation has been completed. The main body ECU then outputs the hazard warning light control signals to flash the hazard warning lights as an answer-back indication and wireless door lock buzzer signals to cause the wireless door buzzer to sound as an answer-back.

(c) Panic function:
When the door control transmitter's PANIC switch is pressed, the main body ECU receives the code data (recognition codes and function codes) from the door control transmitter in the same way as when the LOCK / UNLOCK switch is pressed. Upon receiving a theft deterrent alarm control signal, the ECU sends a signal to sound the security horn, and transmits several kinds of warning control signals (hazard warning light control signal, vehicle horn warning control signal, and room light control signal) in order to output a theft deterrent alarm.

(d) The wireless door lock control system has the following functions.

Function	Outline
All door lock function	Pressing LOCK switch locks all doors
All door unlock operation (2 step unlock operation) function	Pressing UNLOCK switch twice within 3 seconds unlocks all doors after driver side door is unlocked
Answer-back function	• Hazard warning lights flash once when doors are locked, and flash twice when doors are unlocked to indicate that operation has been completed • Wireless door lock buzzer sounds once when doors are locked and sounds twice when doors are unlocked to inform that operation has been completed
Automatic locking function	If no doors are opened within 30 seconds after being unlocked by wireless transmitter, all doors are locked again automatically
Door ajar warning function	If any door is open or ajar, pressing LOCK switch will cause wireless door lock buzzer to sound for about 10 seconds
Illuminated entry function	If locked doors are unlocked through wireless operation, ignition key cylinder light and room light illuminate. If one of following situations occurs, lights fade out: • Within 15 seconds, doors are not opened and doors are locked through wireless operation • Within 15 seconds, key is inserted into ignition key cylinder and ignition switch is turned ON • No operations or actions are performed within 15 seconds
Panic function	Pressing PANIC switch for more than 1 second sounds horn
Security function	Sends signal as rolling code
Transmitter recognition code registration function	Enables 4 modes for registering (writing and storing) transmitter recognition codes in EEPROM, built into door control receiver

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- The wireless door lock control system troubleshooting procedures are based on the premise that the power door lock system is operating normally. Check the power door lock system first before troubleshooting the wireless door lock control system (see page DL-7).
- Use these procedures to troubleshoot the wireless door lock control system.
- *: Use the intelligent tester.

OPERATION CHECK

1. NOTICES WHEN CHECKING

(a) Wireless door LOCK / UNLOCK function:
This function operates only when the vehicle is in its initial condition (the following 3 conditions are met).
- No key is inserted into the ignition key cylinder.
- All the doors are closed.
- The power door lock system is functioning normally.

HINT:
- The UNLOCK function operates even when one of the doors is open.
- The UNLOCK function operates even when the key is inserted into the ignition key cylinder. However, the ignition switch must be OFF.

(b) The operating range differs depending on the situation.
- The operating range differs depending on the user, the way the transmitter is held and the location.
- In certain areas, the operating range will be reduced due to the vehicle body shape and the influence of the surrounding environment.
- The transmitter's faint electric waves may be affected if the area has strong electric waves or noise. The transmitter's operating range may be reduced or the transmitter may not function.
- When the battery weakens, the operating range is reduced or the transmitter may not function.

HINT:
If the transmitter has had prolonged exposure to direct sunlight, such as being left on the instrument panel, the battery may weaken or other problems may occur.

2. CHECK WIRELESS DOOR LOCK CONTROL FUNCTIONS

HINT:
- The switches described below transmit signals and are built into the door control transmitter.
- The transmitter's operating range must be taken into account while checks are being made.

(a) Make sure the vehicle is in a condition in which the wireless control functions can be operated (see above).

(b) Check the basic functions:
- Check that the transmitter's LED illuminates 3 times when each switch is pressed 3 times.

HINT:
If the LED does not illuminate when the switch has been pressed 3 times or more, the battery may be depleted.

(c) Check the chattering prevention function:
- When a switch is pressed, check that the corresponding operation occurs only once. When the switch is held down, check that the corresponding operation occurs only once and does not repeatedly activate. Lastly, when the switch is pressed at 1 second intervals, check that the corresponding operation activates once for each press of the switch.

(d) Check the automatic locking function:
- When all doors are unlocked with the UNLOCK switch and none of the doors are opened or locked within 30 seconds, check that the doors are relocked automatically.

(e) Check the switch operation fail-safe function:
- If the key is in the ignition key cylinder, check that the doors cannot be locked by the LOCK switch. However, this does not apply when the system is in recognition code registration mode.

(f) Check the door ajar warning function:
- If a door is open or not completely closed, check that the doors cannot be locked by the LOCK switch and that the wireless door lock buzzer sounds for 10 seconds.

(g) Check the answer-back function:
- When the LOCK switch is pressed, confirm the simultaneous occurrence of all the hazard warning lights flashing once, the buzzer sounding once and all the doors locking.
- When the UNLOCK switch is pressed, confirm the simultaneous occurrence of all the hazard warning lights flashing twice, the buzzer sounding twice and the driver side door unlocking.
- When UNLOCK switch is pressed again within 3 seconds, conform the simultaneous occurrence of all the hazard warning lights flashing twice, the buzzer sounding twice and all the doors unlocking.

(h) Check the illuminated entry function:
- When all the doors are locked, pressing the UNLOCK switch causes the room light (when the light switch is in the DOOR position) to illuminate simultaneously with the unlock operation.
- Check that the room light turns off in approximately 15 seconds if doors have not been opened.

(i) Check the panic function:
- Check that if PANIC switch is held down for 0.8 seconds or more, the theft deterrent alarm function sounds the horn and flashes the headlights and taillights for 60 seconds. And, with the theft alarm function active, check if pressing any switch on the transmitter causes the horn to stop sounding and the headlights and taillights to stop flashing.

(j) All door unlock operation function (2 step unlock function).
- Pressing the UNLOCK switch twice within 3 seconds unlocks all the doors after the driver side door is unlocked.

REGISTRATION

1. DESCRIPTION OF CODE REGISTRATION

HINT:

- Recognition code registration is necessary when replacing the door control transmitter and/or the door control receiver.
- Add mode is used to register new recognition codes while still retaining codes already registered. This mode is used when a new transmitter is added. If the number of registered codes exceeds 5, the previously registered codes will be erased in order, starting from the first registered code.
- Rewrite mode is used to erase all the previously registered recognition codes in order to register new recognition codes. This mode is used when the transmitter or the door control receiver is exchanged for a new one.
- Confirmation mode is used to confirm how many recognition codes have already been registered before registering any additional recognition codes.
- Prohibition mode is used to erase all the registered codes and disables the wireless door lock function. This mode is used when the transmitter is lost.
- All of the following registration procedures must be performed in order and in a continuous sequence.

2. REGISTER RECOGNITION CODE (USING INTELLIGENT TESTER)

HINT:

For detailed procedures, refer to the prompts on the tester screen. The number of currently registered codes can be checked out on the first screen of the WIRELESS REGIST.

(a) Turn the ignition switch ON.

(b) Select the menu on the intelligent tester.

HINT:

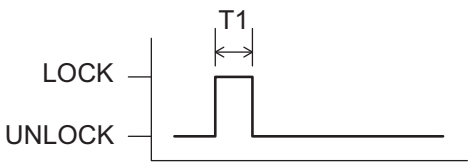
After the following operations, proceed to the succeeding operations according to the prompts on the tester screen.

(1) Select "RAV4" from the menu.

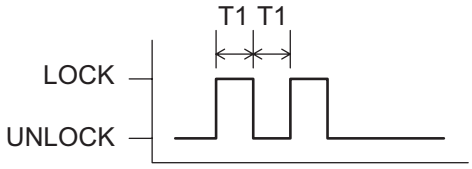
(2) Select "MAIN BODY".

(3) Select "WIRELESS REGIST".

(c) Press both LOCK and UNLOCK switches between 1 to 1.5 seconds.



(d) Press either switch for more than 1 second within 3 seconds.



(e) Check the response to the registration completion.

Response to registration completion:

Main body ECU automatically performs power door LOCK-UNLOCK operation to show whether registration has been completed correctly or not.

LOCK-UNLOCK Occurs Once	LOCK-UNLOCK Occurs Twice
Registration of recognition code has been completed.	Registration of recognition code has failed.

T1: Approx. 1 second

B111915E05

HINT:
- If the LOCK-UNLOCK operation occurs twice, the registration of recognition code has failed. Perform the registration procedures again from the beginning.
- If registering another transmitter, repeat the procedures after the tester operation. All 4 recognition codes can be registered consecutively.

(f) Perform either of the following to complete the registration of recognition codes:
- Use the intelligent tester to send completion command.
- Disconnect the intelligent tester.

3. REGISTER RECOGNITION CODE (USING SWITCH OPERATION)

(a) The following conditions should be met.
- No key in the ignition key cylinder.
- The driver side door is open (the other doors are closed).
- The driver side door is unlocked.

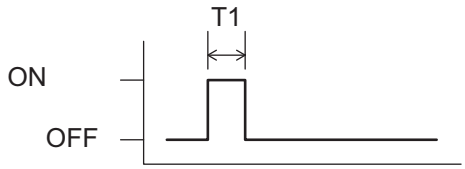
(b) Insert and remove the key into / from the ignition key cylinder twice (Insert → Remove →Insert → Remove) within 5 seconds.
HINT:
The procedure should end with the key removed.

(c) Perform the following operations within 40 seconds.
(1) Close and open the driver side door twice (Close → Open → Close → Open).
HINT:
The procedure should end with the door open.

DL

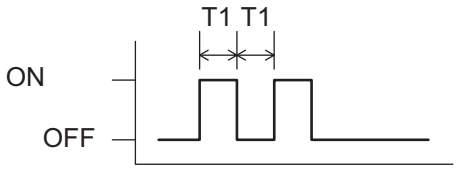
(2) Insert and remove the key into / from the ignition key cylinder (Insert → Remove).
HINT:
The procedure should end with the key removed.

(3) Close and open the driver side door twice (Close → Open → Close → Open).
HINT:
The procedure should end with the door open.



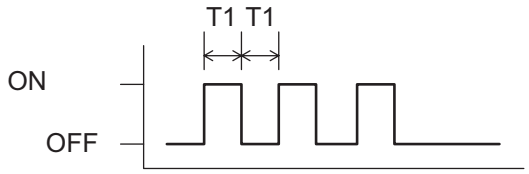
(4) Insert the key into the ignition key cylinder and close all doors.

(d) Perform the following operations within 40 seconds.

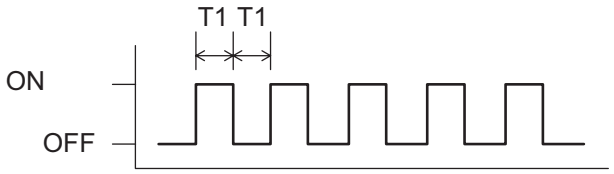


(1) Turn the ignition switch from ON to OFF at approximately 1 second intervals, operate the ignition switch according to the number of times shown below.

Number of ON - OFF operations of ignition switch:



Add Mode — ON - OFF operation: Once



Rewrite Mode — ON - OFF operation: Twice

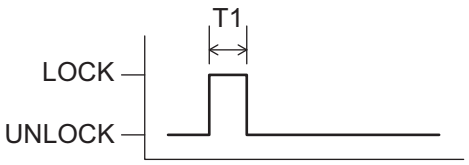
Confirmation Mode — ON - OFF operation: 3 times

Prohibition Mode — ON - OFF operation: 5 times

T1: Approx. 1 second

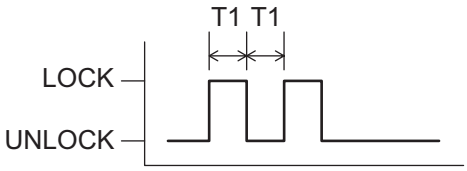
B111914E07

HINT:
If the number of ignition switch ON - OFF operations is 0, 4, 6 or more, there will be no response (the power door lock and unlock operation) to show which mode has been selected.



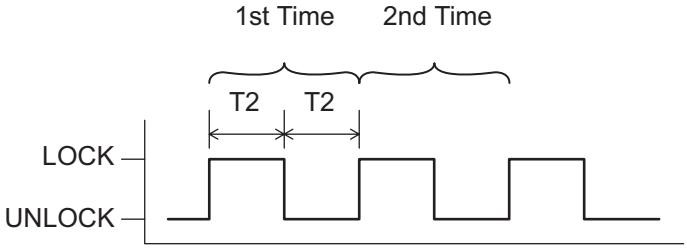
(2) Remove the key from the ignition key cylinder.

(e) Check the response of the selected mode within 5 seconds.



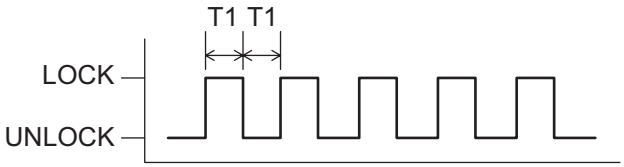
Response to selected mode (power door lock operation):

Main body ECU automatically performs power door LOCK-UNLOCK operations to indicate which mode has been selected.



Add Mode — LOCK-UNLOCK operation: Once

Rewrite Mode — LOCK-UNLOCK operation: Twice



Confirmation Mode — LOCK-UNLOCK operation: The number of registered codes (1 to 5 times)

T1: Approx. 1 second
T2: Approx. 2 seconds

Prohibition Mode — LOCK-UNLOCK operation: 5 times

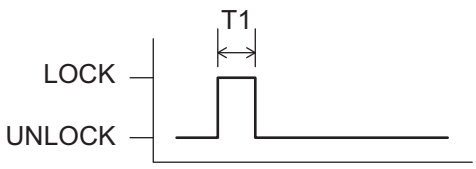
B111913E04

NOTICE:
After the system has been set to the prohibition mode, enter the confirmation mode and check that the number of registered keys is 0.

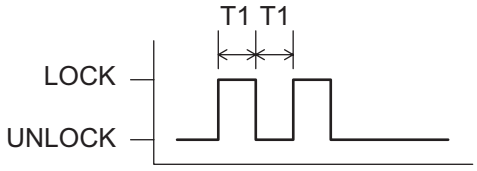
HINT:

- In the confirmation mode, LOCK-UNLOCK operation will occur once for each recognition code that has been registered. For example, if 2 recognition codes have been registered, LOCK-UNLOCK operation will occur twice.
- In the confirmation mode, if no recognition codes have been registered, LOCK-UNLOCK operation will occur 5 times.
- If confirmation mode or prohibition mode is selected, the operation ends after the response to the selected mode completes.

(f) Within 40 seconds of completing the confirmation mode operation, press the LOCK and UNLOCK switches on the transmitter simultaneously.



(g) After completing the above step, press a single switch (LOCK or UNLOCK) within 5 seconds.



(h) After completing the above step, check the response to the registration completion within 3 seconds.

Response to registration completion:

Main body ECU automatically performs power door LOCK-UNLOCK operation to show whether registration has been completed correctly or not.

LOCK-UNLOCK Occurs Once	LOCK-UNLOCK Occurs Twice
Registration of recognition code has been completed.	Registration of recognition code has failed.

T1: Approx. 1 second

B111915E06

HINT:

- If the LOCK-UNLOCK operation occurs twice, the registration of recognition code has failed. Perform registration procedures again from the beginning.

DL

- If registering another transmitter, repeat the procedures after the response to the selected mode confirmation. All 4 recognition codes can be registered consecutively.

(i) Perform either of the following to complete the registration of recognition codes:
- Open the door.
- Insert the key into the ignition key cylinder.

CUSTOMIZE PARAMETERS

1. CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER (REFERENCE)

HINT:

The following items can be customized.

NOTICE:

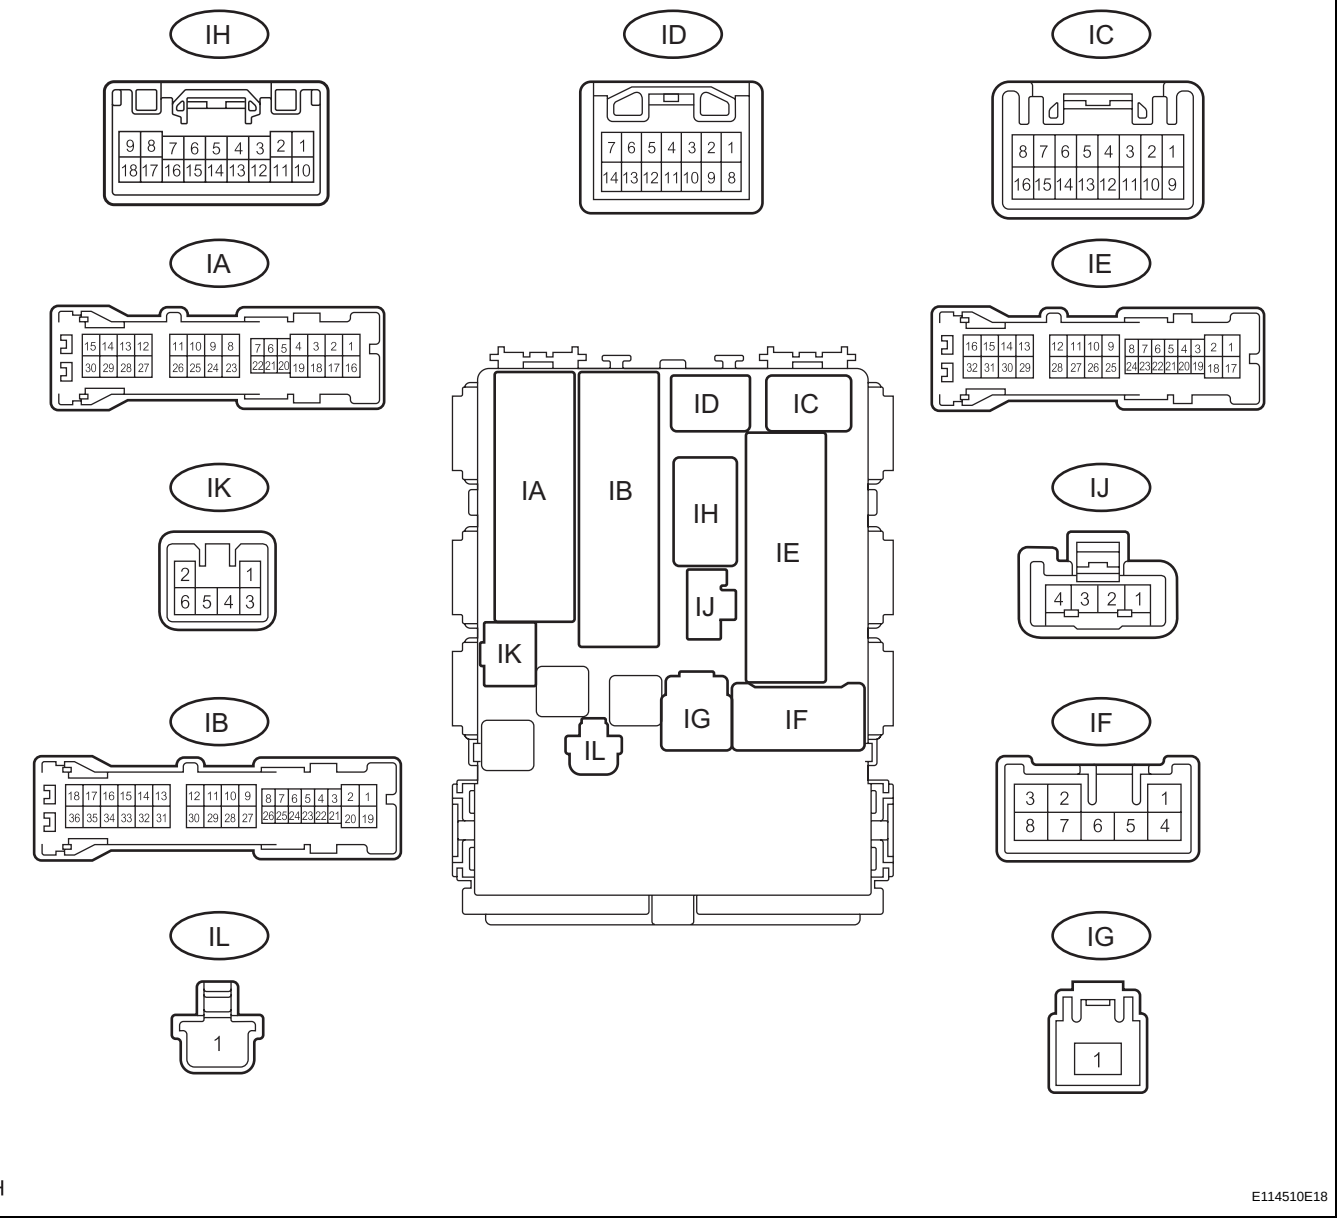
- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Record the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

Wireless door lock control system:

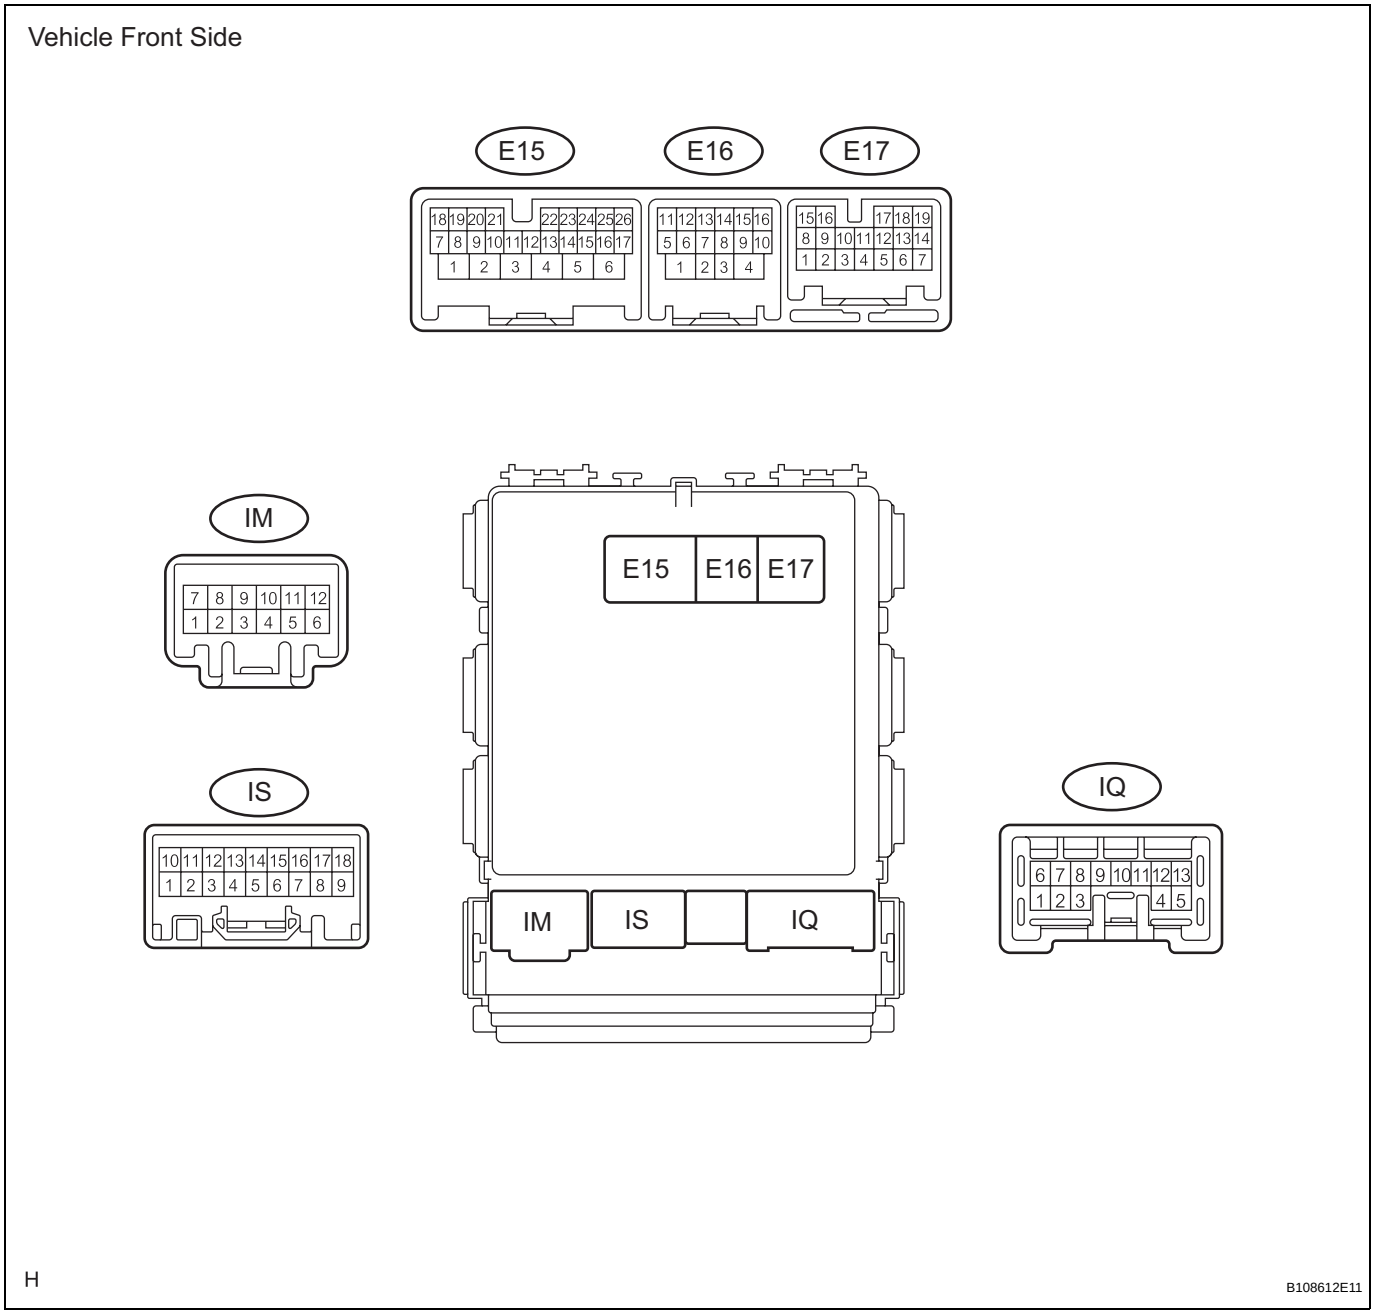
Display (Item)	Default	Contents	Setting
HAZARD ANS BACK	ON	When LOCK switch on transmitter pressed, all hazard warning lights illuminate once. When UNLOCK switch pressed, all hazard warning lights illuminate twice	ON / OFF
WIRLS BUZZ OPER	ON	Function that makes wireless buzzer sound for answer-back when transmitter LOCK / UNLOCK switch pressed	ON / OFF
OPEN DOOR WARN	ON	If door is not completely closed and transmitter LOCK switch is pressed, this function sounds a buzzer for 10 seconds	ON / OFF
WIRELESS OPER	ON	ON / OFF of wireless door lock function	ON / OFF
ALARM FUNCTION	ON	Operates security alarm when PANIC switch on transmitter continuously pressed for 1 second	ON / OFF
UNLOCK / 2 OPER	ON	Function that unlocks driver side door when unlock switch on transmitter is pressed once, and unlocks all doors when pressed twice. If setting is OFF, pressing unlock switch once makes all doors unlock.	ON / OFF
AUTO LOCK DELAY	30s	This function controls amount of time from unlocking doors to automatic re-locking function	30s / 60s

PROBLEM SYMPTOMS TABLE

HINT:



- Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Are" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.



Wireless door lock control system:

Symptom	Suspected area	See page
Only wireless control function is inoperative	1. Door control transmitter module	DL-64
	2. Transmitter battery	DL-64
	3. Lighting system	DL-64
	4. Instrument panel junction block (main body ECU)	DL-64
	5. Door control receiver	DL-64
	6. Unlock warning switch	DL-64
	7. Wire harness	DL-64
No answer-back	1. Instrument panel junction block (main body ECU)	DL-73
	2. Lighting system	DL-73
	3. Wireless door lock buzzer	DL-73
	4. Wire harness	DL-73

TERMINALS OF ECU

1. CHECK INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

(a) Disconnect the IB and IE junction block connectors.
(b) Measure the resistance and voltage of the wire harness side connectors.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND1 (IE-17) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
BECU (IB-30) - GND1 (IE-17)	R - W-B	Battery (power supply)	Always	10 to 14 V

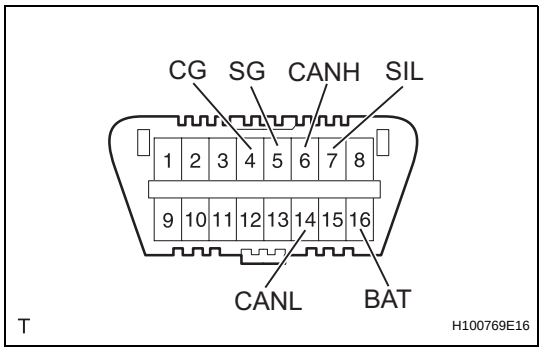
If the result is not as specified, there may be a malfunction in the wire harness.
(c) Reconnect the IB and IE junction block connectors.

DL

(d) Measure the voltage of the wire harness side connectors.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
KSW (IE-26) - GND1 (IE-17)	L - W-B	Key unlock warning switch input	Key inserted	10 to 14 V
			No key in ignition key cylinder	Below 1 V
DCTY (IA-21) - Body ground	W - Body ground	Driver side door courtesy switch input	Driver side door closed	10 to 14 V
			Driver side door open	Below 1 V
PCTY (IC-14) - Body ground	BR - Body ground	Passenger side door courtesy switch input	Passenger side door closed	10 to 14 V
			Passenger side door open	Below 1 V
RRCY (ID-7) - Body ground	LG - Body ground	Rear RH door courtesy switch input	Rear RH door closed	10 to 14 V
			Rear RH door open	Below 1 V
LCTY (E15-8) - Body ground	SB - Body ground	Rear LH door courtesy switch input	Rear LH door closed	10 to 14 V
			Rear LH door open	Below 1 V
BCTY (IA-7) - Body ground	LG - Body ground	Back door courtesy switch input	Back side door closed	10 to 14 V
			Back side door open	Below 1 V
L1 (IH-4) - Body ground	P - Body ground	Door lock motor LOCK drive output	Master switch (door control switch) OFF	Below 1 V
			Master switch (door control switch) ON (LOCK)	10 to 14 V → Below 1 V
UL1 (IH-5) - Body ground	B - Body ground	Door lock motor UNLOCK drive output	Master switch (door control switch) OFF	Below 1 V
			Master switch (door control switch) ON (UNLOCK)	10 to 14 V → Below 1 V
ACTD (E15-5) - Body ground	B - Body ground	Door lock motor UNLOCK drive output	Master switch (door control switch) or driver side door key cylinder OFF	Below 1 V
			Master switch (door control switch) or driver side door key cylinder ON (UNLOCK)	10 to 14 V → Below 1 V
ACT+ (IH-8) - Body ground	R - Body ground	Door lock motor LOCK drive output	Master switch (door control switch) or driver side door key cylinder OFF	Below 1 V
			Master switch (door control switch) or driver side door key cylinder ON (LOCK)	10 to 14 V → Below 1 V
ACT- (IH-18) - Body ground	B - Body ground	Door lock motor UNLOCK drive output	Master switch (door control switch) or driver side door key cylinder OFF	Below 1 V
			Master switch (door control switch) or driver side door key cylinder ON (UNLOCK)	10 to 14 V → Below 1 V
LSWD (E15-25) - Body ground	Y - Body ground	Driver side door lock position switch input	Driver side door UNLOCK	Below 1 V
			Driver side door LOCK	10 to 14 V
LSWP (E15-10) - Body ground	Y - Body ground	Passenger side door lock position switch input	Passenger side door UNLOCK	Below 1 V
			Passenger side door LOCK	10 to 14 V
UL3 (E15-9) - Body ground	LG - Body ground	Door lock motor UNLOCK drive output	Driver side door key cylinder OFF	Below 1 V
			Driver side door key cylinder ON (UNLOCK)	10 to 14 V → Below 1 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
L2 (IH-7) - Body ground	SB - Body ground	Door lock motor LOCK drive output	Master switch or driver side door key cylinder OFF	Below 1 V
			Master switch or driver side door key cylinder ON (LOCK)	10 to 14 V → Below 1 V
PRG (E17-6) - Body ground	Y - Body ground	Door control receiver output	Transmitter switch ON → OFF (No key in ignition key cylinder, all doors closed)	6 to 7 V → Below 1 V → 6 to 7 V
RDA (E17-5) - Body ground	G - Body ground	Door control receiver input	Transmitter switch ON → OFF (No key in ignition key cylinder, all doors closed)	Below 1 V → 6 to 7 V → Below 1 V
HAZ (IS-17) - Body ground	GR- Body ground	Hazard warning light signal	Answer-back ON	Pulse generation
			Answer-back OFF	Below 1 V
BZR (E17-2) - Body ground	L- Body ground	Wireless door lock buzzer signal	Answer-back ON	Pulse generation
			Answer-back OFF	Below 1 V



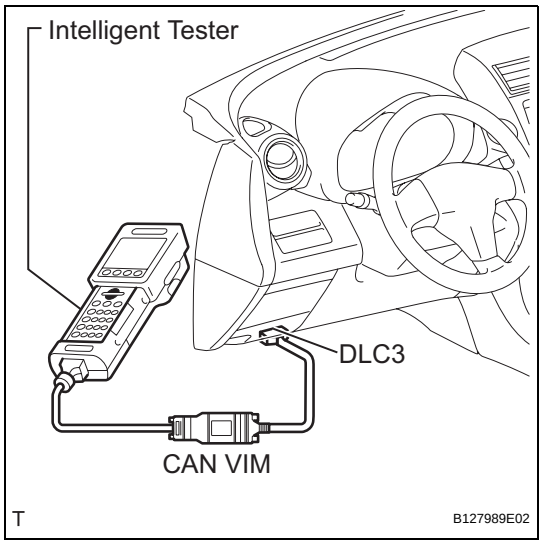
If the result is not as specified, the junction block (ECU) may have a malfunction.

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Wireless door lock control system data and Diagnostic Trouble Codes (DTCs) can be read through the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3



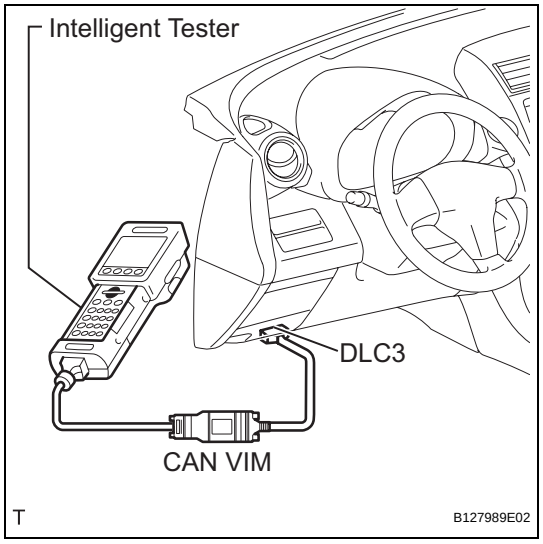
The vehicle's ECU uses the ISO 15765-4 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	HIGH-level CAN bus line	Ignition switch off*	54 to 69 Ω
CANH (6) - Battery positive	HIGH-level CAN bus line	Ignition switch off*	1 kΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch off*	1 kΩ or higher
CANL (14) - Battery positive	LOW-level CAN bus line	Ignition switch off*	1 MΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch off*	1 MΩ or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, other switches or doors.**



HINT:

Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the ignition switch ON and attempt to use the intelligent tester. If the screen displays UNABLE TO CONNECT TO VEHICLE, a problem exists in the vehicle side or the tester side.

If the communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.

If the communication is still not possible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON and turn the intelligent tester ON.

(c) Select the following menu items: DIAGNOSIS / OBD/MOBD / MAIN BODY / DTC INFO / CURRENT CODES.

(d) Check DTCs and then write them down.
HINT:
Refer to the intelligent tester operator's manual for further details.

(e) Confirm the details of the DTCs (see page DL-60).

2. CLEAR DTC

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON (do not start the engine) and turn the intelligent tester ON.

(c) Select the following menu items: DIAGNOSIS / OBD/MOBD / MAIN BODY / DTC INFO / CLEAR CODES.
HINT:
Refer to the intelligent tester operator's manual for further details.

(d) Erase DTCs by pressing the YES button on the tester.
HINT:
Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON.
(c) Select the following menu items: DIAGNOSIS / OBD/MOBD / MAIN BODY / DATA LIST.
(d) Check the results by referring to the table below.

Main body ECU:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
D DOR CTY SW	Driver side door courtesy light switch signal / ON or OFF	ON: Driver side door is open OFF: Driver side door is closed	-
D LOCK POS SW	Driver side door lock position switch signal / ON or OFF	ON: Driver side door is unlocked OFF: Driver side door is locked	-
D/L SW-LOCK	Door manual lock switch signal / ON or OFF	ON: Door control switch (for front driver door side) is turned to lock position OFF: Door control switch (for front driver door side) is turned to unlock position	-
D/L SW-UNLOCK	Door manual unlock switch signal / ON or OFF	ON: Door control switch (for front driver door side) is turned to unlock position OFF: Door control switch (for front driver door side) is turned to lock position	-
DOR KEY SW-LOCK	Door key linked lock switch signal / ON or OFF	ON: Driver side door key cylinder is turned to lock position OFF: Driver side door key cylinder is turned to unlock position	-
D DOR KEY SW-UL	Driver side door key linked unlock switch signal / ON or OFF	ON: Driver side door key cylinder is turned to unlock position OFF: Driver side door key cylinder is turned to lock position	-
P DOR CTY SW	Passenger side door courtesy light switch signal / ON or OFF	ON: Passenger side door is open OFF: Passenger side door is closed	-
P LOCK POS SW	Passenger side door lock position switch signal / ON or OFF	ON: Passenger side door is unlocked ON: Passenger side door is locked	-
RR DOR CTY SW	Rear door RH courtesy light switch signal / ON or OFF	ON: Rear door RH is open OFF: Rear door RH is closed	-
RL DOR CTY SW	Rear door LH courtesy light switch signal / ON or OFF	ON: Rear door LH is open OFF: Rear door LH is closed	-
BK DOR CTY SW	Back door courtesy light switch signal / ON or OFF	ON: Back door is open OFF: Back door is closed	-
KEY UNLK WRN SW	Unlock warning switch / ON or OFF	ON: Ignition key is inserted OFF: Ignition key is not inserted	-

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relays, VSV, actuators and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

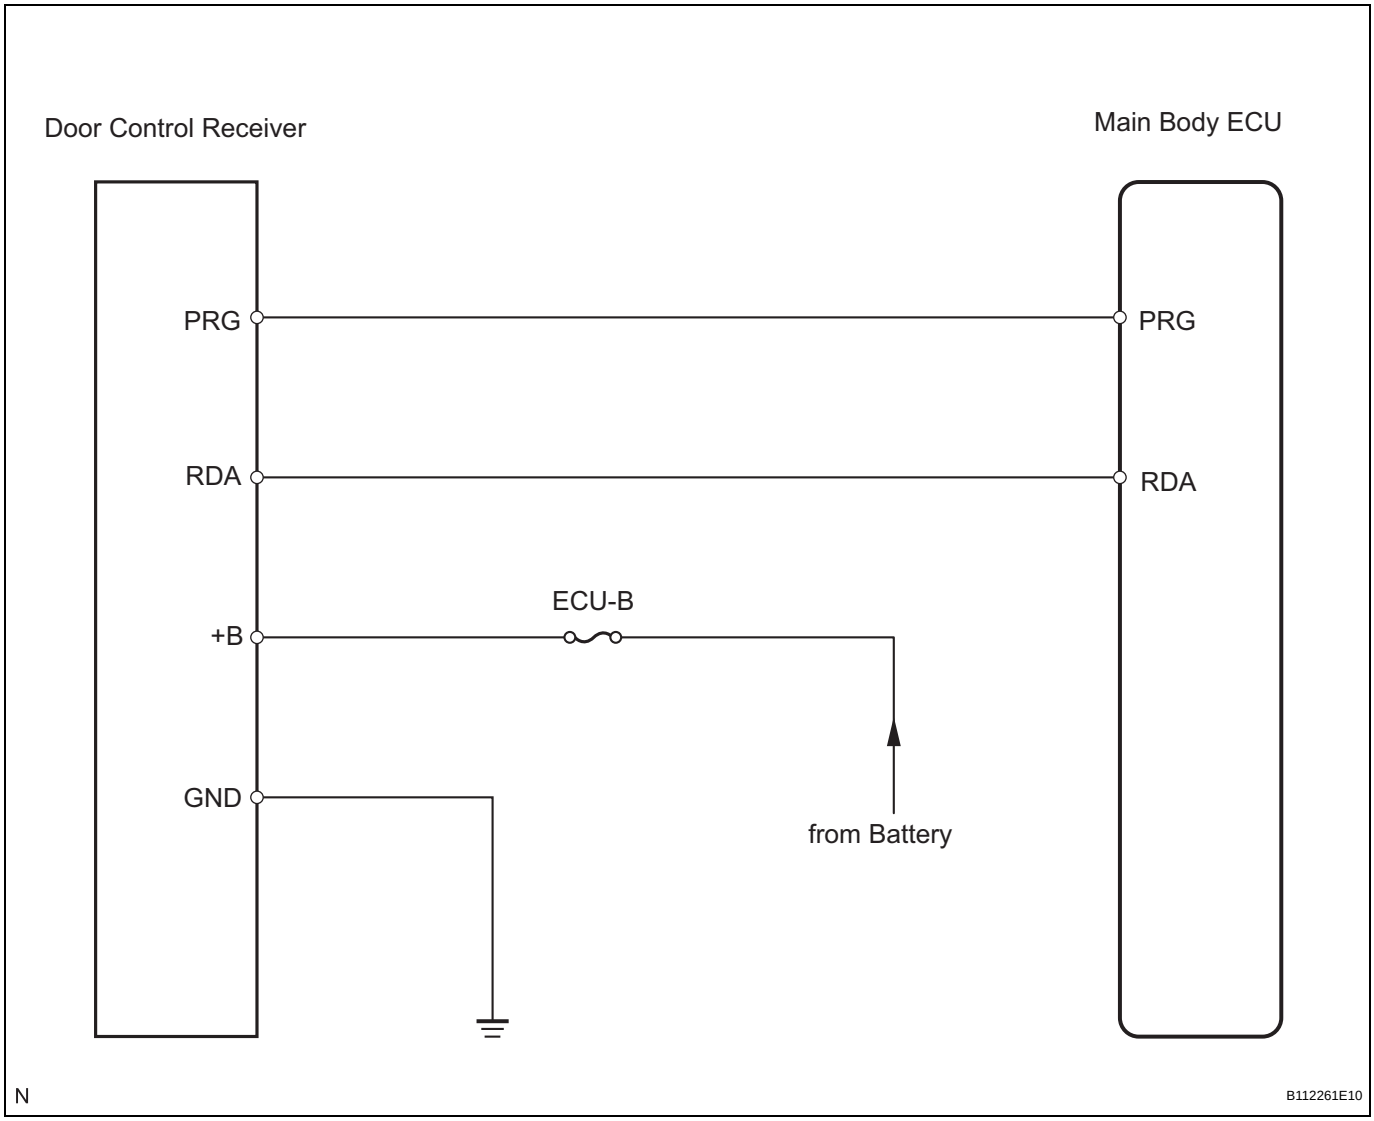
(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON.
(c) Select the following menu items: DIAGNOSIS / OBD/MOBD / MAIN BODY / ACTIVE TEST.
(d) Perform the ACTIVE TEST by referring to the table below.

Main body ECU:

Tester Display	Test Part	Control Range
DOOR LOCK	Operate door lock motor LOCK / UNLOCK	-
D DOOR UNLOCK	Operate driver door lock motor unlock side ON / OFF	-
VEHICLE HORN	Sounds vehicle horn ON / OFF	-
HAZARD	Turns FLSH relay ON / OFF	-

DIAGNOSTIC TROUBLE CODE CHART

DTC No.	Detection Item	Trouble Area	See page
B1242	Wireless Door Lock Tuner Circuit Malfunction	- Wire harness - Door control receiver - Instrument panel junction block (main body ECU)	DL-61

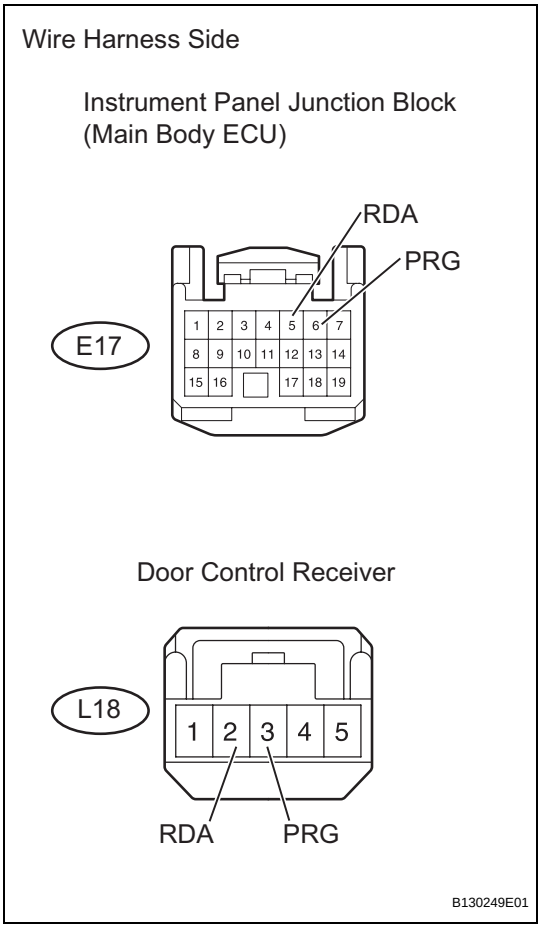


DTC	B1242	Wireless Door Lock Tuner Circuit Malfunction

DESCRIPTION

The door control receiver receives signals from the transmitter and sends these signals to the main body ECU. This DTC is output when the applicable RDA signal cannot be received within 1 second of PRG signal being output from the main body ECU.

DTC No.	DTC Detection Condition	Trouble Area
B1242	In diagnostic mode, applicable RDA signal cannot be received within 1 second of PRG signal being output from main body ECU	• Wire harness • Door control receiver • Instrument panel junction block (main body ECU)



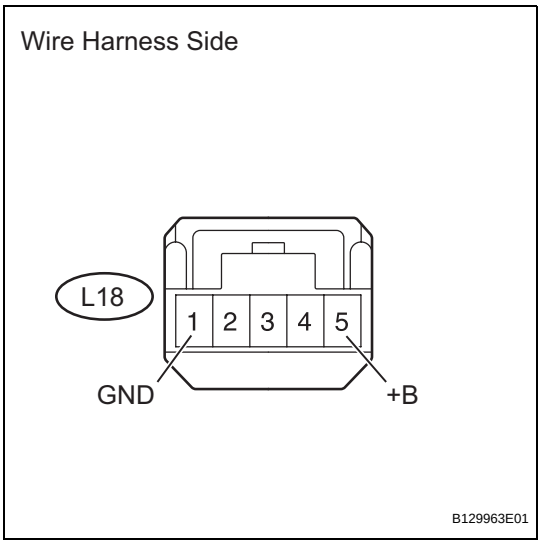
WIRING DIAGRAM

DL

INSPECTION PROCEDURE

1 CHECK WIRE HARNESS (MAIN BODY ECU - DOOR CONTROL RECEIVER)

(a) Disconnect the E17 ECU connector.
(b) Disconnect the L18 receiver connector.
(c) Measure the resistance of the wire harness side connectors.



Standard resistance

Tester Connection	Specified Condition
E17-5 (RDA) - L18-2 (RDA)	Below 1 Ω
E17-6 (PRG) - L18-3 (PRG)	
E17-5 (RDA) or L18-2 (RDA) - Body ground	10 kΩ or higher
E17-6 (PRG) or L18-3 (PRG) - Body ground	

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

2 CHECK WIRE HARNESS (DOOR CONTROL RECEIVER - BATTERY AND BODY GROUND)

(a) Disconnect the L18 receiver connector.
(b) Measure the resistance and voltage of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
L18-1 (GND) - Body ground	Below 1 Ω

Standard voltage

Tester Connection	Specified Condition
L18-5 (+B) - Body ground	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

DL

OK

3	REPLACE DOOR CONTROL RECEIVER

(a) Temporarily replace the door control receiver with a new or normally functioning one.
(b) Perform the REGISTRATION procedures (see page DL-46).

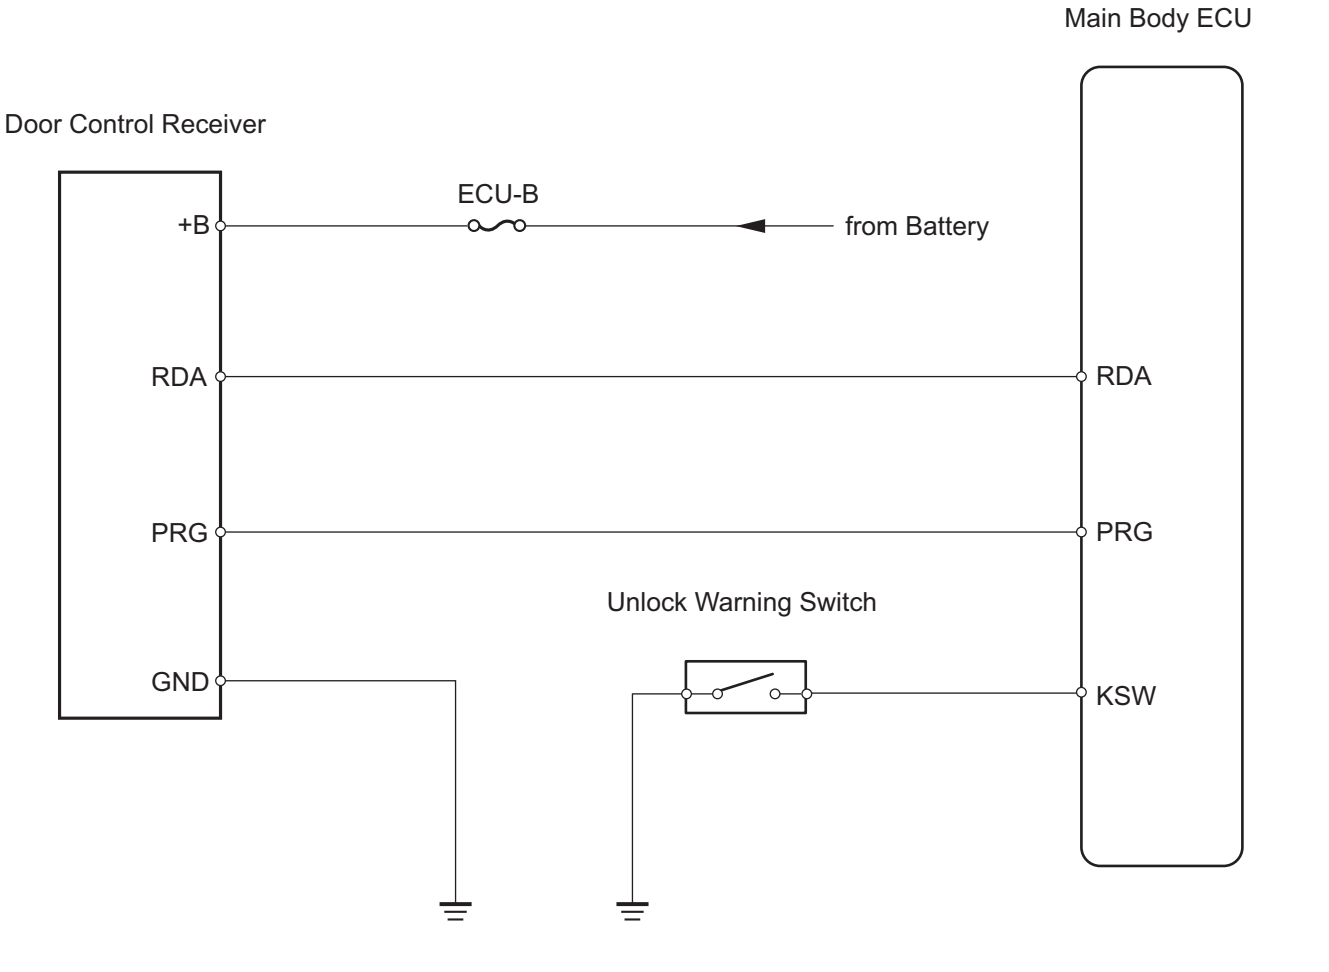
NEXT

4	CHECK FOR DTC

(a) Clear the DTC (see page DL-58).
(b) Recheck for DTC.
OK:
DTC B1242 is not output.

NG → **REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)**

OK



END (DOOR CONTROL RECEIVER IS DEFECTIVE)

Only Wireless Control Function is Inoperative

DESCRIPTION

The door control receiver receives signals from the transmitter and sends these signals to the main body ECU. The main body ECU then controls all doors by sending lock / unlock signals to each door, and sends hazard flasher relay signals to the turn signal flasher relay (hazard warning lights).

WIRING DIAGRAM

DL

INSPECTION PROCEDURE

1	CHECK WIRELESS DOOR LOCK CONTROL FUNCTIONS

(a) Check the wireless door lock control functions (see page DL-44).

OK:

Each function of wireless door lock control system operates normally using transmitter switch.

OK → END

NG

2	CHECK TRANSMITTER LED ILLUMINATION

(a) Check that the transmitter's LED illuminates 3 times when the switch is pressed 3 times.
OK:
Transmitter's LED illuminates 3 times when switch is pressed 3 times.

NG → Go to step 4

OK

3	CHECK WIRELESS DOOR LOCK CONTROL FUNCTIONS (STANDARD OPERATION FUNCTION)

HINT:
Use the following standard test procedure to check the transmitter again.
(a) Hold the transmitter approximately 1 m (3.28 ft.) from the driver side door outside handle. The transmitter must be held parallel to the ground and perpendicular to the side of the vehicle.
(b) Press and hold either the LOCK or UNLOCK transmitter switch for 1 second, and check that the doors are locked or unlocked accordingly.
OK:
Doors can be locked and unlocked with transmitter switches.

NG → Go to step 5

OK

4	CHECK TRANSMITTER BATTERY (OPERATION)

(a) Temporarily replace the transmitter battery with a new or normally functioning one. (see page DL-89)
(b) Check that the doors can be locked and unlocked using the transmitter switches.
OK:
Doors can be locked and unlocked with transmitter.

NG → REPLACE DOOR CONTROL TRANSMITTER MODULE

OK

END (TRANSMITTER BATTERY IS DEFECTIVE)

5	CHECK ROOM LIGHT (WIRELESS DOOR LOCK BUZZER)

(a) Check that the room light illumination operates normally.
(b) Inspect the wireless door lock buzzer (see page DL-79).

Result:

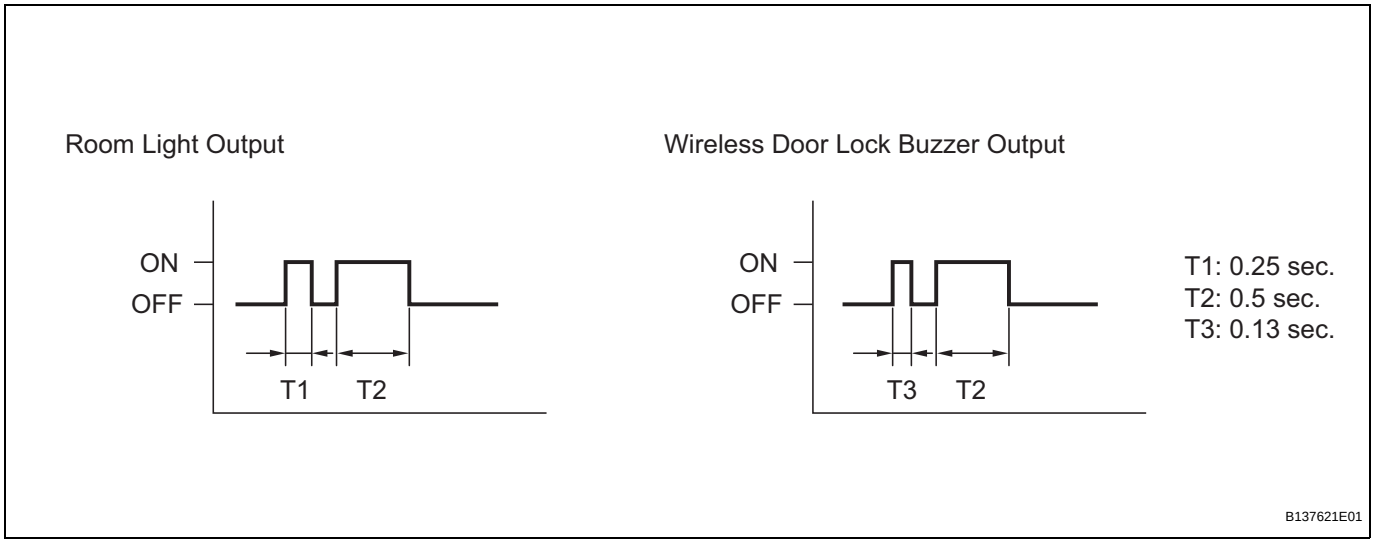
Result	Proceed to
Room light and wireless door lock buzzer is normally	A
Room light is malfunction	B
Wireless door lock buzzer is malfunction	C

B → **Go to LIGHTING SYSTEM**

C → **REPLACE WIRELESS DOOR LOCK BUZZER**

A

6	SWITCH TO SELF-DIAGNOSTIC MODE



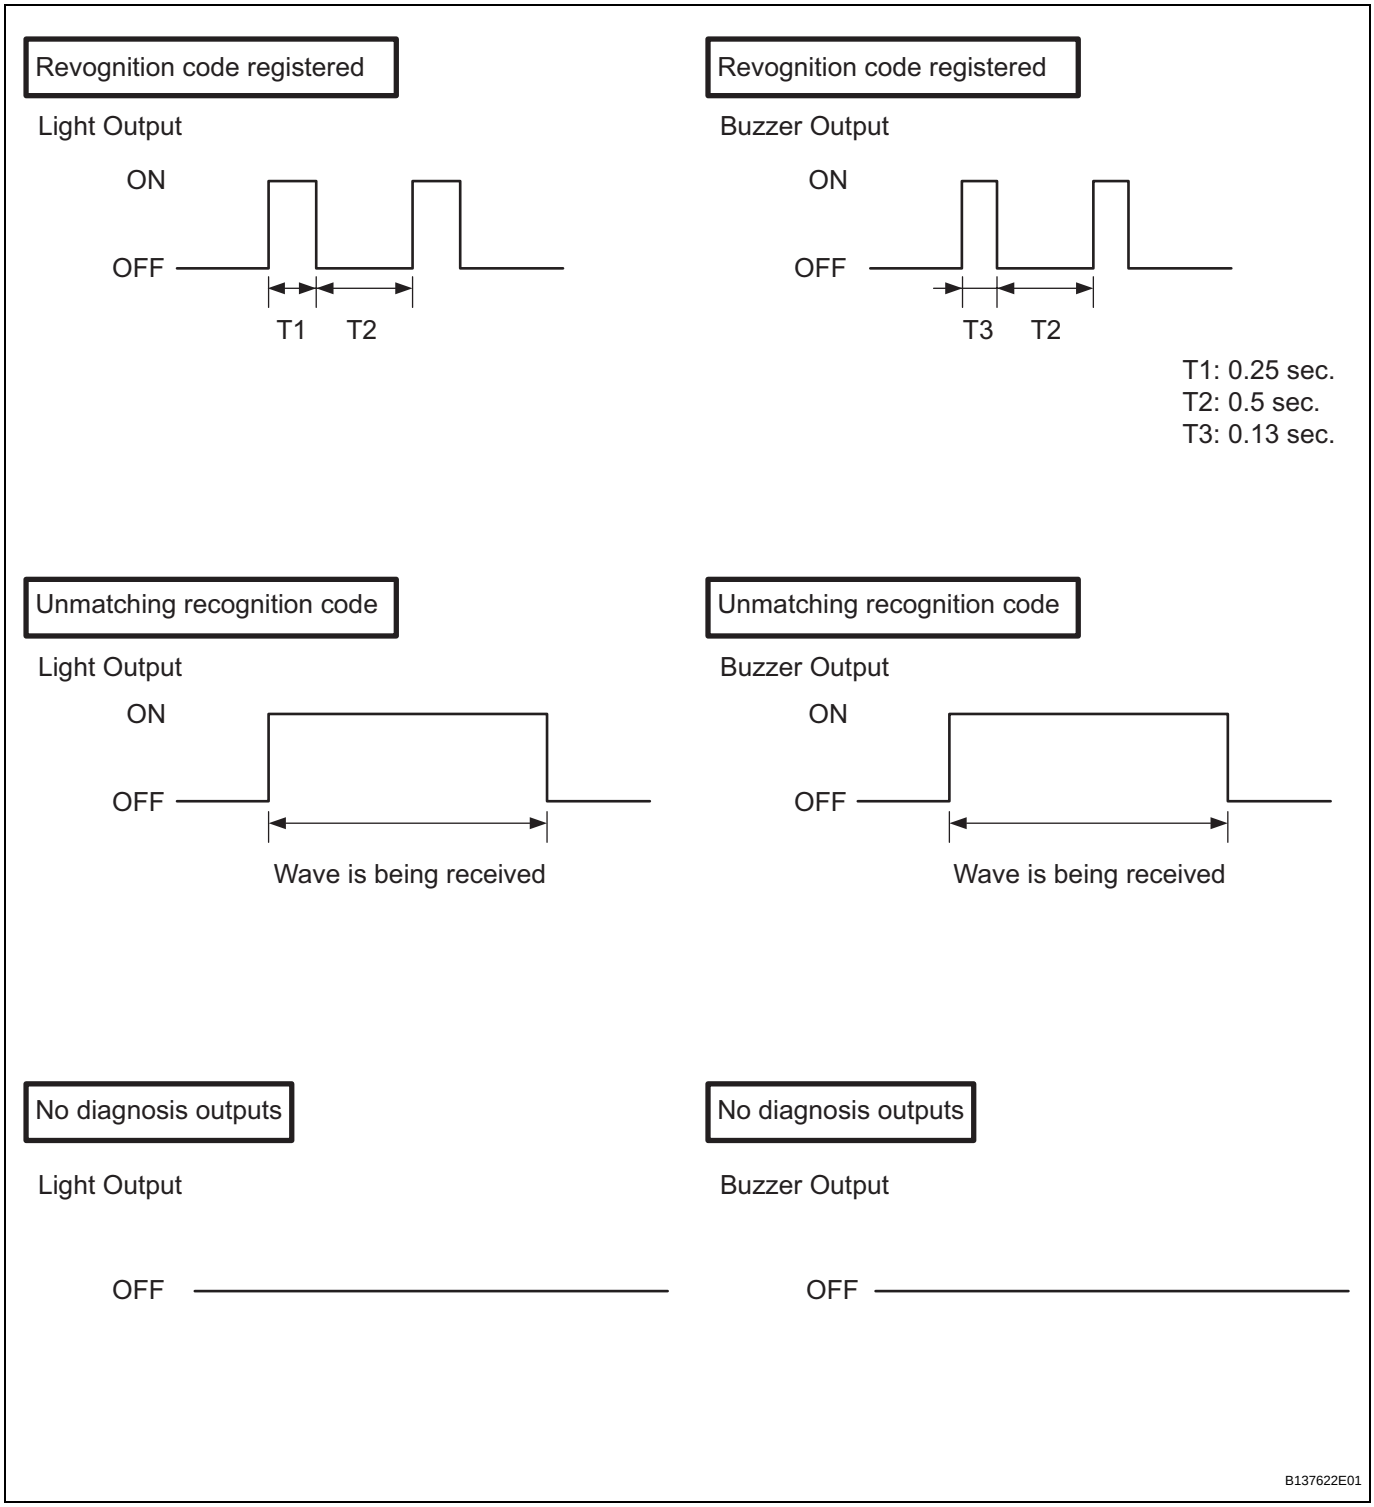
(a) Switch to self-diagnostic mode by operating the ignition key cylinder.
  (1) Make sure the vehicle is in its initial condition. Then insert the key into the ignition key cylinder and remove it.
  (2) Within 5 seconds of removing the key, insert the key into the ignition key cylinder (ignition switch OFF). Then turn the ignition switch ON and OFF.
  (3) Within 30 seconds of turning the ignition switch OFF, perform the following operation 9 times: turn the ignition switch ON and OFF.

NOTICE:

If the system cannot enter self-diagnostic mode, the system returns to normal mode.

HINT:

- Turning the ignition switch ON after the above operations have been completed ends self-diagnostic mode.
- Do not lock or unlock doors during self-diagnostic mode.



(b) Check that the system has switched to self-diagnostic mode by checking the room light flash (wireless door lock buzzer sound) pattern.
OK:
Flash (sound) pattern is same as illustration.

NG → **Go to step 11**

OK

7	CHECK BY SELF DIAGNOSTIC MODE

(a) Inspect the diagnosis outputs when the door control transmitter switch is held down. The diagnosis outputs can be checked by the flash patterns of the room light (wireless door lock buzzer).

Result:

Result	Proceed to
Unmatching recognition code is output	A

DL

Result	Proceed to
Normal waves (light flash or buzzer sound patterns) is output	B
No diagnosis outputs	C

B → **REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)**

C → **Go to step 9**

A

8 REGISTER RECOGNITION CODE

(a) Check that the system can be switched to rewrite mode or add mode, and that a recognition code can be registered (see page DL-46).
OK:
Recognition code can be registered.

NG → **Go to step 15**

OK

END

9 CHECK DOOR CONTROL RECEIVER (RESPONSE)

(a) Temporarily replace the door lock control transmitter with a new or normally functioning one (see page DL-105).
(b) Held down the door control transmitter's switch.
(c) Check that an unmatching recognition code is output.
OK:
Unmatching recognition code is output.

OK → **REPLACE DOOR CONTROL TRANSMITTER MODULE**

NG

10 CHECK DOOR CONTROL RECEIVER (OPERATION)

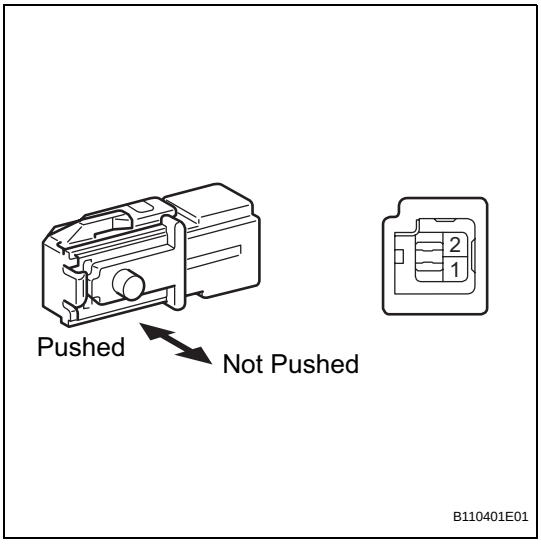
(a) Temporarily replace the door lock control receiver with a new or normally functioning one (see page DL-105).
(b) Check that the doors can be locked and unlocked by using the transmitter LOCK and UNLOCK switches.
OK:
Doors can be locked and unlocked with transmitter.

NG → **REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)**

OK

END (DOOR CONTROL RECEIVER IS DEFECTIVE)

11 CONFIRM PROCEDURES TO ENTER SELF-DIAGNOSTIC MODE



Result:

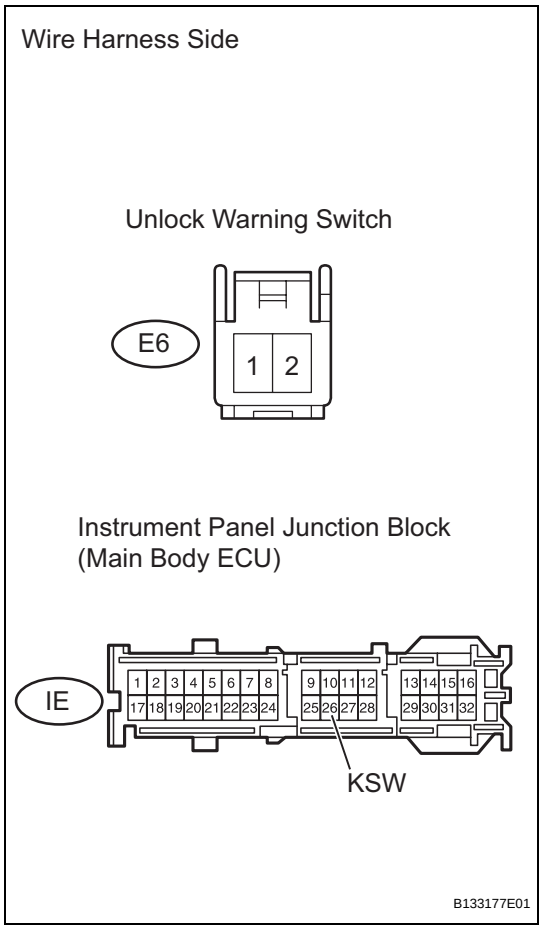
Result	Proceed to
Self-diagnostic mode entry successful	A
Self-diagnostic mode entry unsuccessful	B

B → **Go to step 6**

A

12 INSPECT UNLOCK WARNING SWITCH ASSEMBLY

(a) Remove the switch.
(b) Measure the resistance of the switch.
Standard resistance



Tester Connection	Condition	Specified Condition
1 - 2	Not pushed	10 kΩ or higher
	Pushed	Below 1 Ω

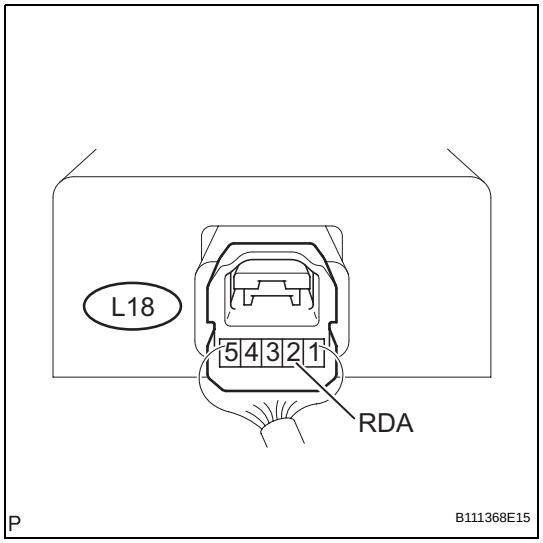
NG → **REPLACE UNLOCK WARNING SWITCH ASSEMBLY**

OK

DL

13 CHECK WIRE HARNESS (UNLOCK WARNING SWITCH - MAIN BODY ECU AND BODY GROUND)

(a) Disconnect the E6 receiver connector.
(b) Disconnect the IE junction block connector.
(c) Measure the resistance of the wire harness side connectors.



Standard resistance

Tester Connection	Specified Condition
IE-26 (KSW) - E6-1	Below 1 Ω
E6-2 - Body ground	
IE-26 (KSW) or E6-1 - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

14 CHECK DOOR CONTROL RECEIVER (OUTPUT)

(a) Reconnect the L18 receiver connector.
(b) Measure the voltage of the connector.

Standard voltage

Tester Connection	Condition	Specified Condition
L18-2 (RDA) - Body ground	Transmitter switch ON → OFF (No key in ignition key cylinder, all doors closed)	Below 1 V → 6 to 7 V → Below 1 V

OK → **REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)**

DL

NG

15	CHECK DOOR CONTROL TRANSMITTER MODULE

(a) Temporarily replace the door control transmitter module with a new or normally functioning one (see page DL-92).

(b) Check that the doors can be locked and unlocked by using the transmitter LOCK and UNLOCK switches.

OK:

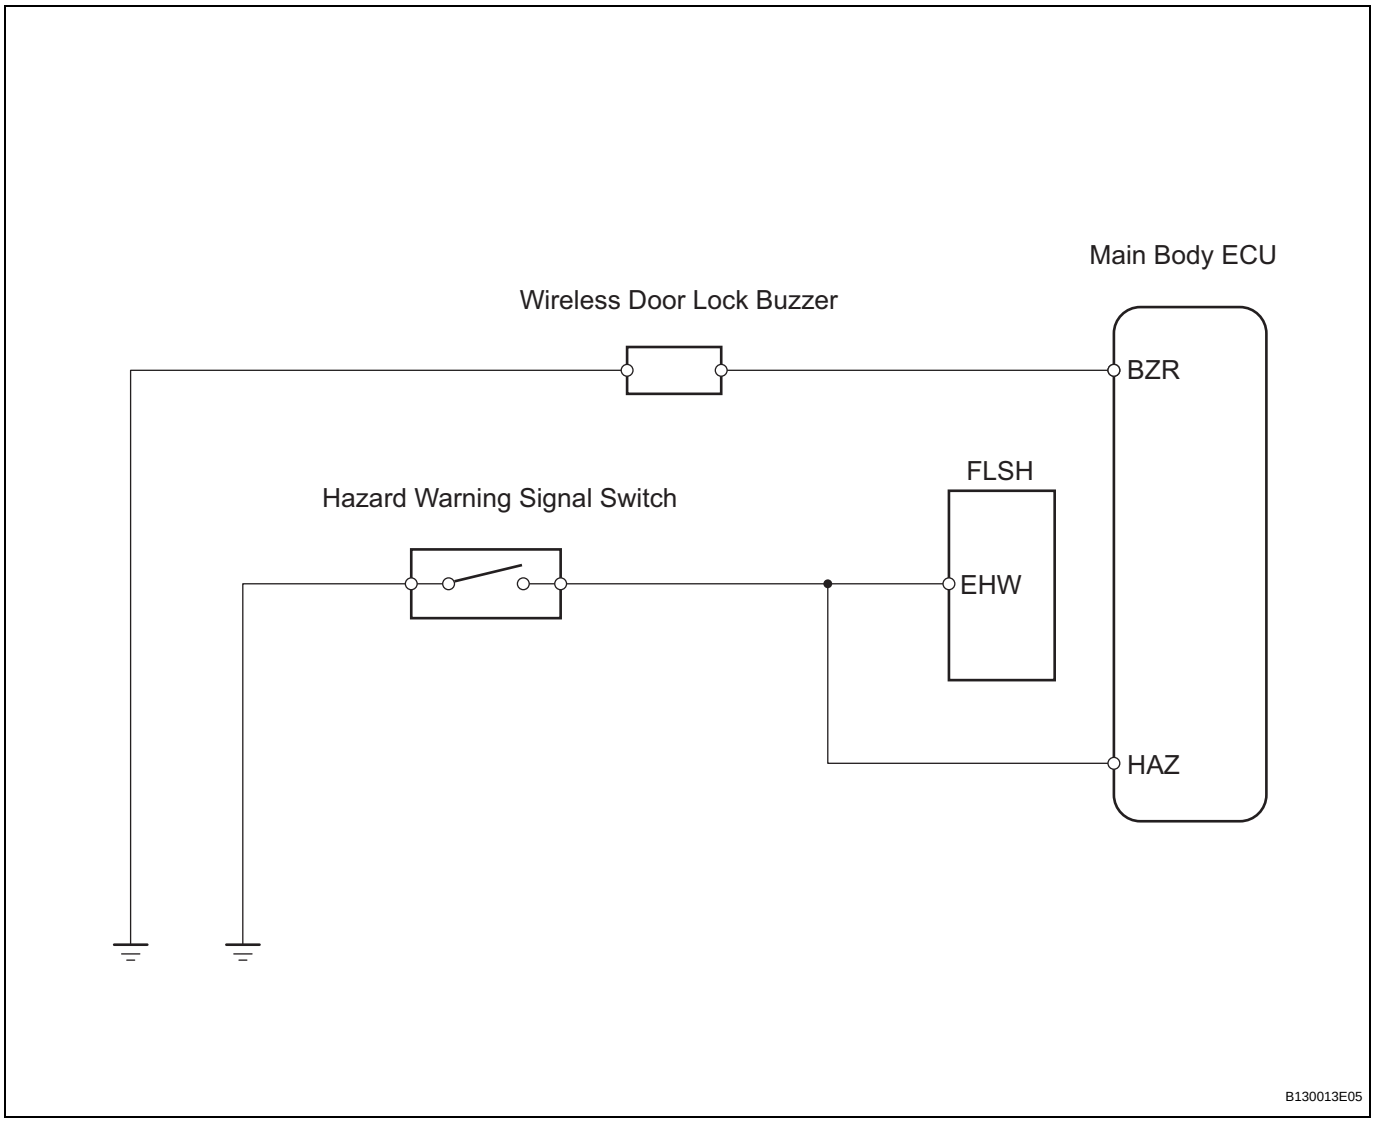
Doors can be locked and unlocked with transmitter.

NG → **REPLACE DOOR CONTROL RECEIVER**

OK

END (DOOR CONTROL TRANSMITTER MODULE IS DEFECTIVE)

No Answer-Back



DESCRIPTION

In some cases, wireless door lock control functions are normal but the hazard warning lights and / or wireless door lock buzzer answer-back function(s) is not operate. In such cases, the main body ECU's hazard warning lights and wireless door lock buzzer signal outputs may be malfunctioning.

NOTICE:

Troubleshooting should be started after confirming that the customize status of the answer-back function has been switched ON.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK WIRELESS DOOR LOCK CONTROL FUNCTION

(a) Check the wireless door lock control functions by operating the transmitter switch.

Result:

Result	Proceed to
Wireless door lock functions are normal but hazard warning lights answer-back does not occur	A
Wireless door lock functions are normal but wireless door lock buzzer answer-back does not occur	B
Doors cannot be locked and unlocked with transmitter	C

B → **Go to step 4**

C → **Go to FLOWCHART**

A

2	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (FLSH RELAY)

(a) Select the ACTIVE TEST, use the intelligent tester to generate a control command, and then check that the hazard warning lights flash.

Main body ECU:

Item	Test Details	Diagnostic Note
HAZARD	Turns FLSH relay ON / OFF	-

OK:

Hazard warning lights are turned ON / OFF.

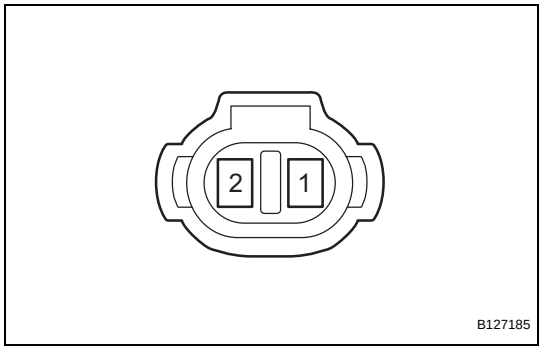
OK → **REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)**

NG

3	CHECK HAZARD WARNING LIGHT

(a) Check that the hazard warning lights flash continuously when the hazard warning signal switch is pressed.

OK:



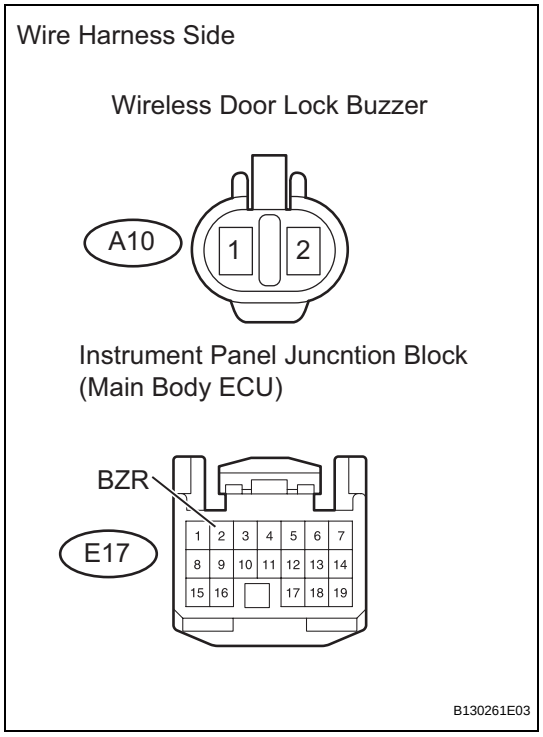
Hazard warning lights flash continuously.

NG → **Go to LIGHTING SYSTEM**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

4	INSPECT WIRELESS DOOR LOCK BUZZER



(a) Measure the resistance between terminals 1 and 2 of the buzzer.
Standard resistance:
Approximately 1 kΩ
NOTICE:
- **The buzzer circuit is built into the body ECU, not into the buzzer itself.**
- **When battery voltage is directly applied to the buzzer, the buzzer does not sound.**

NG → **REPLACE WIRELESS DOOR LOCK BUZZER**

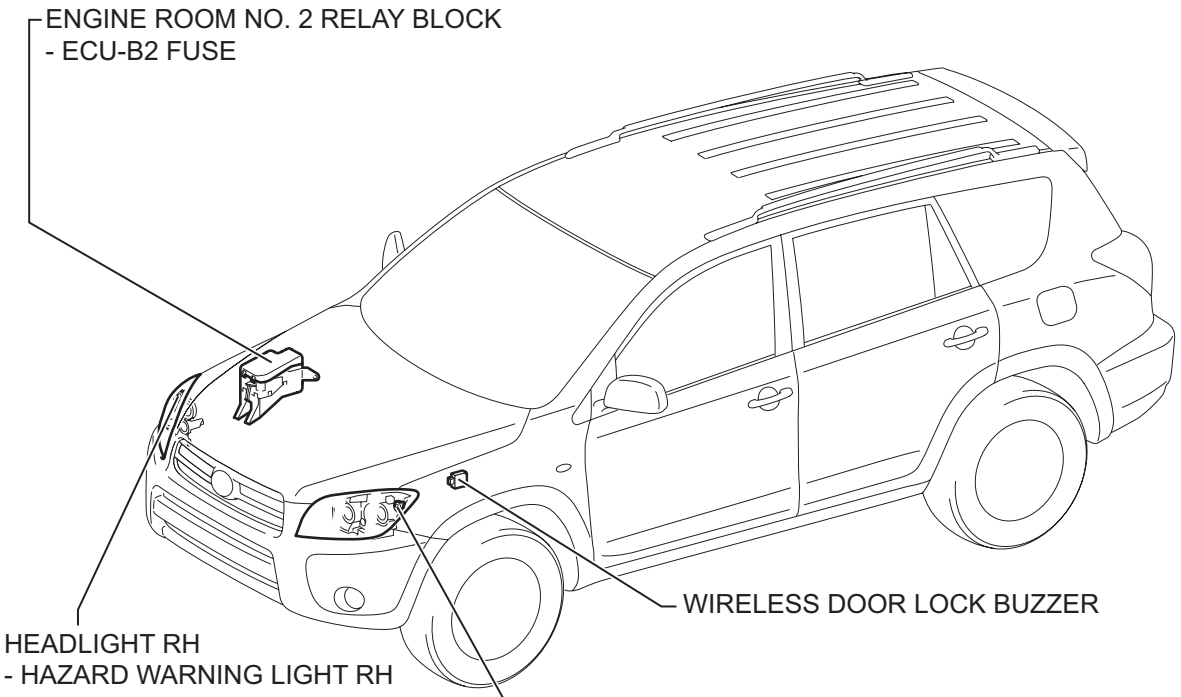
OK

5	CHECK WIRE HARNESS (WIRELESS DOOR LOCK BUZZER - MAIN BODY ECU AND BODY GROUND)

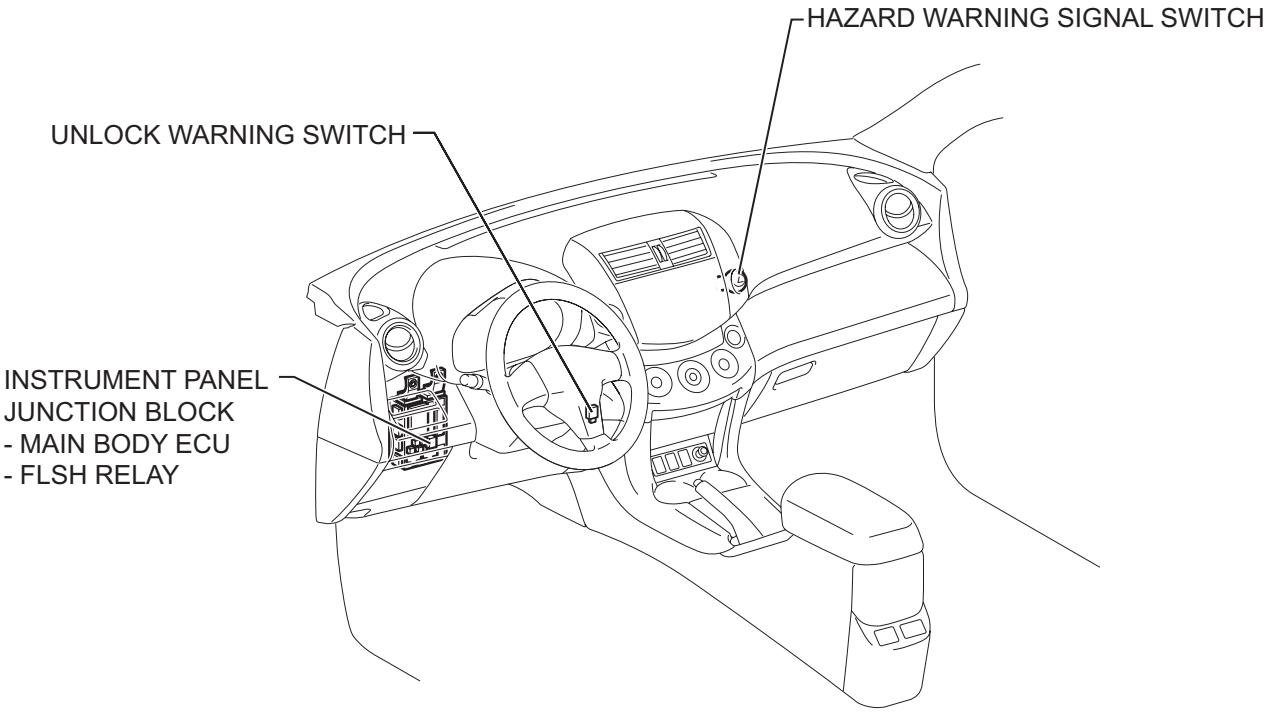
(a) Disconnect the A10 buzzer connector.
(b) Disconnect the E17 ECU connector.
(c) Measure the resistance of the wire harness side connectors.
Standard resistance

Tester Connection	Specified Condition
A10-1 - E17-2 (BZR)	Below 1 Ω
A10-2 - Body ground	
A10-1 or E17-2 (BZR) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**



OK



REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

   HINT:
   Use the same procedures described for the LH side.
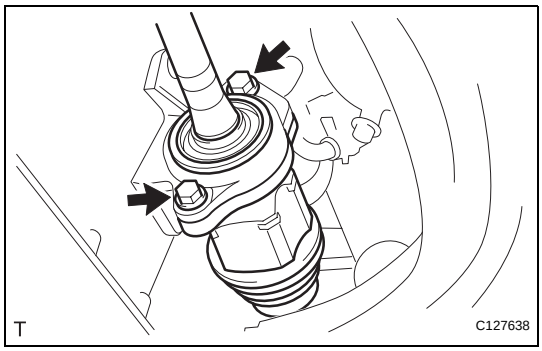
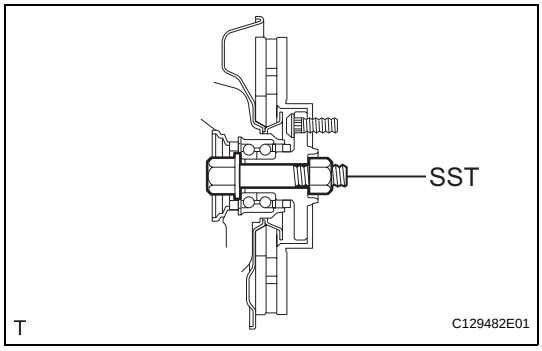
10. **DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM SUB-ASSEMBLY LH (See page AH-7)**
11. **DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM SUB-ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.
12. **DISCONNECT STEERING KNUCKLE WITH AXLE HUB LH**
    (a) Put matchmarks on the drive shaft and axle hub.
    NOTICE:
    Do not punch the marks.
    (b) Using a plastic-faced hammer, disconnect the steering knuckle with axle hub.
    NOTICE:
    Be careful not to damage the boot and speed sensor rotor.
    Do not excessively push out the drive shaft from the axle assembly.
13. **DISCONNECT STEERING KNUCKLE WITH AXLE HUB RH**
    HINT:
    Use the same procedures described for the LH side.



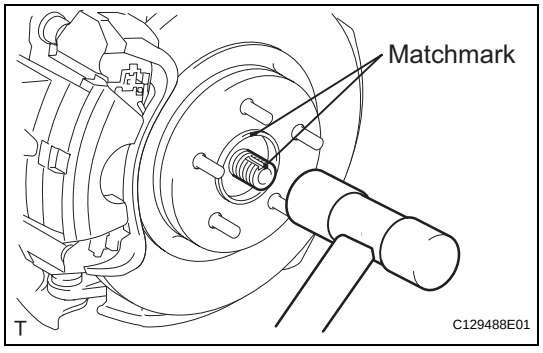
14. DISCONNECT TIE ROD END SUB-ASSEMBLY LH
(See page PS-42)



15. DISCONNECT TIE ROD END SUB-ASSEMBLY RH
HINT:
Use the same procedures described for the LH side.

16. REMOVE FRONT DRIVE SHAFT ASSEMBLY LH
(a) Using SST, remove the front drive shaft.
SST 09520-01010, 09520-24010 (09520-32040)
NOTICE:
- **Be careful not to damage the transaxle case oil seal, inboard joint boot and drive shaft dust cover.**
- **Be careful not to drop the drive shaft.**

17. REMOVE FRONT DRIVE SHAFT ASSEMBLY RH
(a) Remove the 2 bolts and pull out the drive shaft together with the drive shaft bearing case.
(b) Remove the drive shaft from the transaxle.
NOTICE:
- **Be careful not to damage the inboard joint boot and drive shaft dust cover.**
- **Be careful not to drop the drive shaft.**



18. FIX FRONT AXLE ASSEMBLY
NOTICE:
The hub bearing could be damaged if it is subjected to the vehicle weight, such as when moving the vehicle with the drive shaft removed. Therefore, if it is absolutely necessary to place the vehicle weight on the hub bearing, first support it with SST.
SST 09608-16042 (09608-02021, 09608-02041)

DS

REMOVAL

(2006/01-)

1. **REMOVE FRONT WHEEL**
2. **DRAIN AUTOMATIC TRANSAXLE FLUID**
   (a) Drain the automatic transaxle fluid for U140F (see page AX-147).
   (b) Drain the automatic transaxle fluid for U241E (see page AX-146).
   (c) Drain the automatic transaxle fluid for U151E (see page AX-172).
3. **REMOVE FRONT AXLE HUB NUT (See page AH-8)**
4. **DISCONNECT FRONT SPEED SENSOR LH**
   (a) Disconnect the speed sensor (see page BC-191).
5. **REMOVE FRONT SPEED SENSOR RH**
   HINT:
   Use the same procedures described for the LH side.
6. **DISCONNECT FRONT DISC BRAKE CYLINDER ASSEMBLY LH (See page BR-40)**
7. **DISCONNECT FRONT DISC BRAKE CYLINDER ASSEMBLY RH**
   HINT:
   Use the same procedures described for the LH side.
8. **REMOVE FRONT STABILIZER LINK ASSEMBLY LH (See page SP-30)**
9. **REMOVE FRONT STABILIZER LINK ASSEMBLY RH**
   HINT:
   Use the same procedures described for the LH side.
10. **DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM SUB-ASSEMBLY LH (See page SP-21)**
11. **DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM SUB-ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.
12. **DISCONNECT STEERING KNUCKLE WITH AXLE HUB LH**
    (a) Put matchmarks on the drive shaft and axle hub.
    NOTICE:
    Do not punch the marks.
    (b) Using a plastic-faced hammer, disconnect the steering knuckle with axle hub.
    NOTICE:
    Be careful not to damage the boot and speed sensor rotor.
    Do not excessively push out the drive shaft from the axle assembly.

13. DISCONNECT STEERING KNUCKLE WITH AXLE HUB RH

HINT:

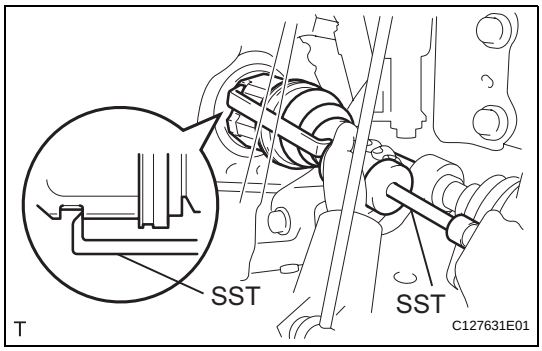
Use the same procedures described for the LH side.

14. DISCONNECT TIE ROD END SUB-ASSEMBLY LH (See page PS-42)

15. DISCONNECT TIE ROD END SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.



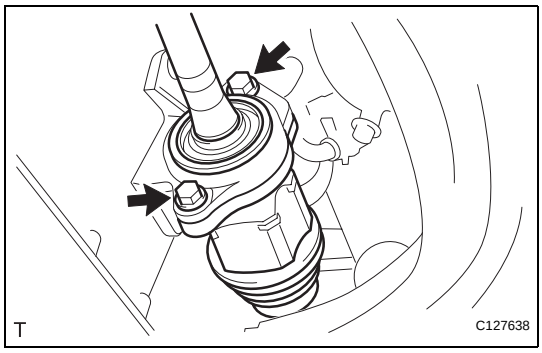
16. REMOVE FRONT DRIVE SHAFT ASSEMBLY LH

(a) Using SST, remove the front drive shaft.

SST 09520-01010, 09520-24010 (09520-32040)

NOTICE:

- **Be careful not to damage the transaxle case oil seal, inboard joint boot and drive shaft dust cover.**
- **Be careful not to drop the drive shaft.**



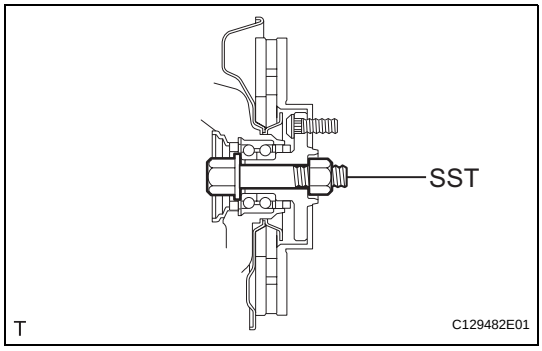
17. REMOVE FRONT DRIVE SHAFT ASSEMBLY RH

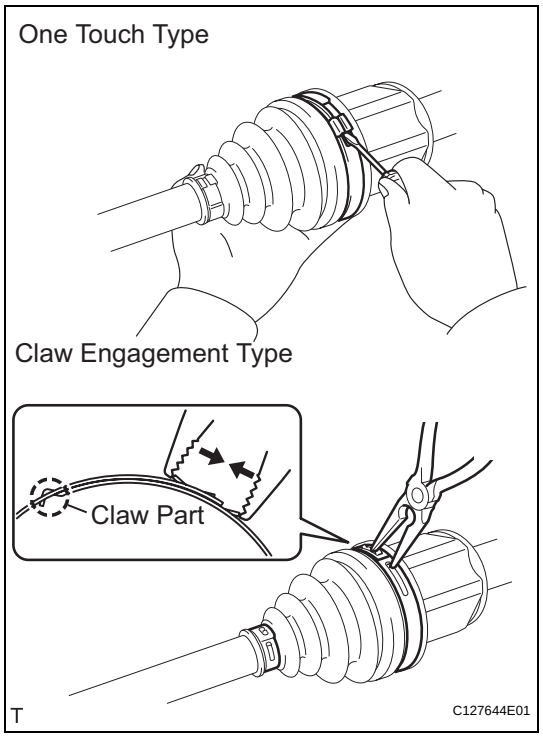
(a) Remove the 2 bolts and pull out the drive shaft together with the drive shaft bearing case.

(b) Remove the drive shaft from the transaxle.

NOTICE:

- **Be careful not to damage the transaxle case oil seal, inboard joint boot and drive shaft dust cover.**
- **Be careful not to drop the drive shaft.**





18. FIX FRONT AXLE ASSEMBLY

NOTICE:

The hub bearing could be damaged if it is subjected to the vehicle weight, such as when moving the vehicle with the drive shaft removed. Therefore, if it is absolutely necessary to place the vehicle weight on the hub bearing, first support it with SST.

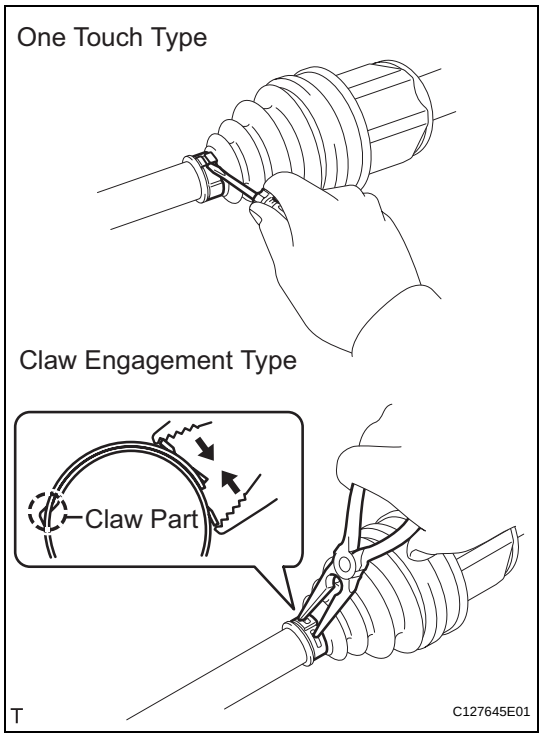
SST 09608-16042 (09608-02021, 09608-02041)

DISASSEMBLY

(2005/11-2006/01)

1. REMOVE FRONT AXLE INBOARD JOINT BOOT NO. 2 CLAMP LH

(a) One touch type:
  (1) Using a screwdriver, remove the inboard joint boot clamp, as shown in the illustration.



(b) Claw engagement type:
  (1) Using needle-nose pliers, remove the inboard joint boot clamp, as shown in the illustration.

2. REMOVE FRONT AXLE INBOARD JOINT BOOT NO. 2 CLAMP RH

HINT:

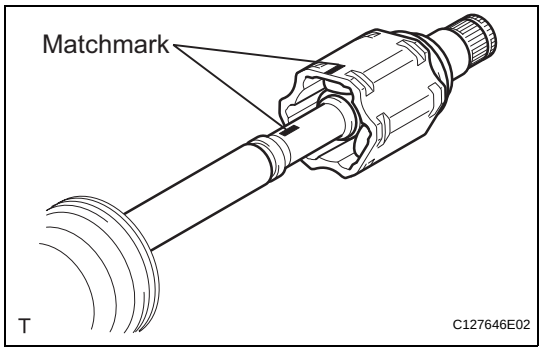
Use the same procedures described for the LH side.

DS

3. REMOVE FRONT AXLE INBOARD JOINT BOOT CLAMP LH

(a) One touch type:
  (1) Using a screwdriver, remove the inboard joint boot clamp, as shown in the illustration.

(b) Claw engagement type:
  (1) Using needle-nose pliers, remove the inboard joint boot clamp, as shown in the illustration.



4. REMOVE FRONT AXLE INBOARD JOINT BOOT CLAMP RH

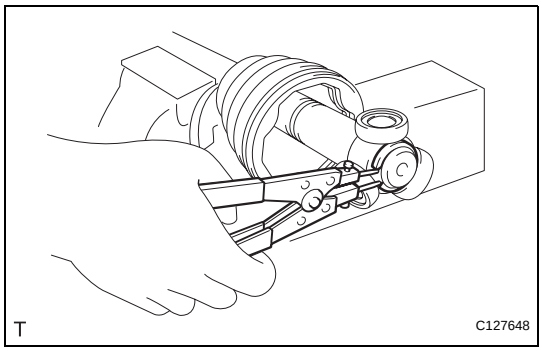
HINT:

Use the same procedures described for the LH side.

5. REMOVE FRONT AXLE INBOARD JOINT BOOT

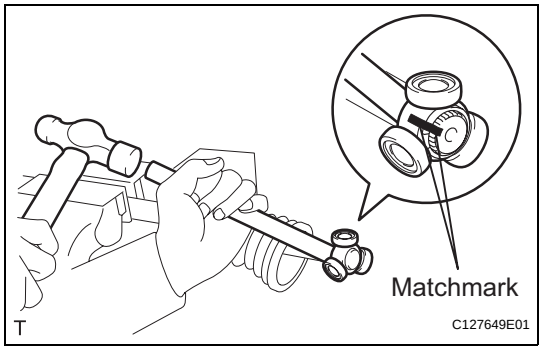
(a) Remove the boot from the inboard joint.

6. REMOVE FRONT DRIVE INBOARD JOINT ASSEMBLY LH



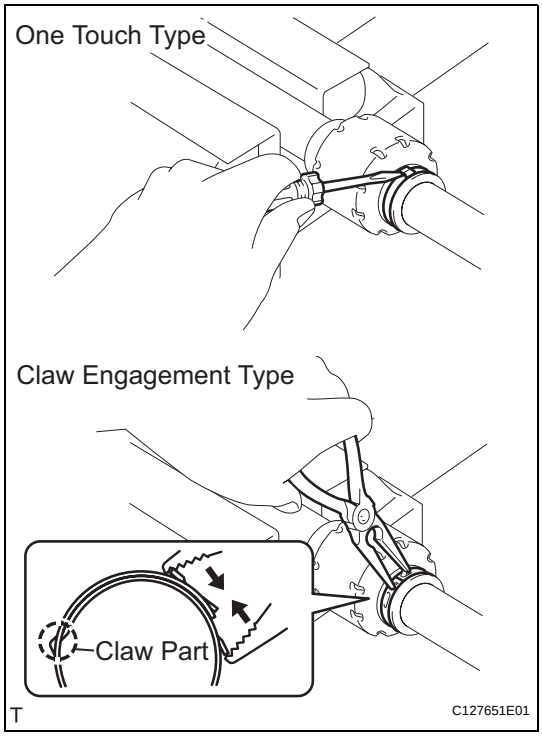
(a) Remove any old grease from the inboard joint.

(b) Put matchmarks on the inboard joint and outboard joint shaft.



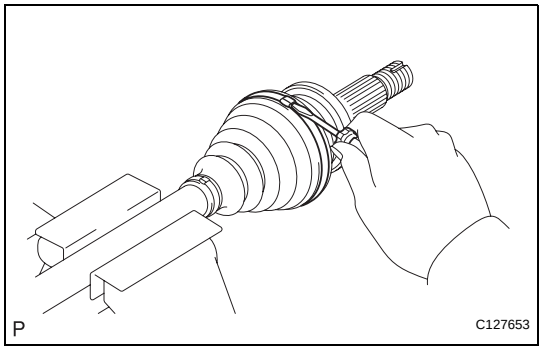
NOTICE:

Do not punch the marks.

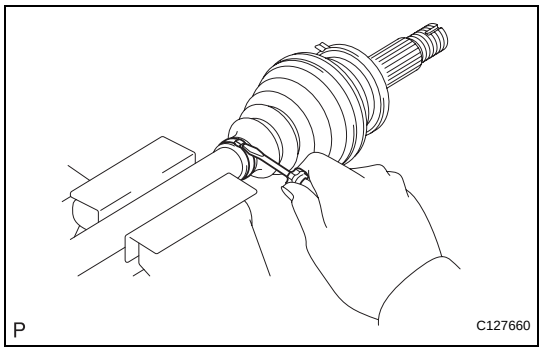


(c) Remove the inboard joint from the outboard joint shaft.

(d) Using a snap ring expander, remove the shaft snap ring.



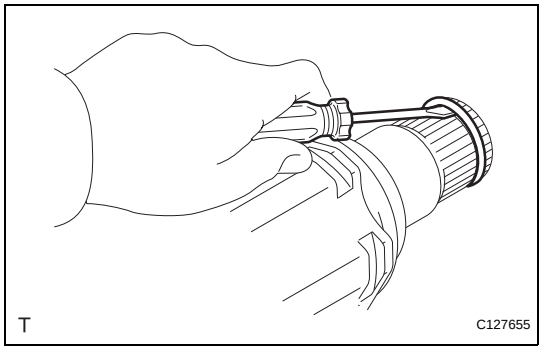
(e) Put matchmarks on the outboard joint shaft and tripod joint.
NOTICE:
Do not punch the marks.
(f) Using a brass bar and hammer, tap out the tripod joint from the outboard joint shaft.
NOTICE:
Do not tap the rollers.
(g) Remove the inboard joint boot.



7. REMOVE FRONT DRIVE SHAFT DAMPER CLAMP LH
(a) One touch type:
(1) Using a screwdriver, remove the drive shaft damper clamp, as shown in the illustration.
(b) Claw engagement type:
(1) Using needle-nose pliers, remove the drive shaft damper clamp, as shown in the illustration.

8. REMOVE FRONT DRIVE SHAFT DAMPER LH
(a) Remove the front drive shaft damper from the outboard joint shaft.

9. REMOVE FRONT AXLE OUTBOARD JOINT BOOT NO. 2 CLAMP LH
(a) Using a screwdriver, remove the outboard joint boot clamp, as shown in the illustration.

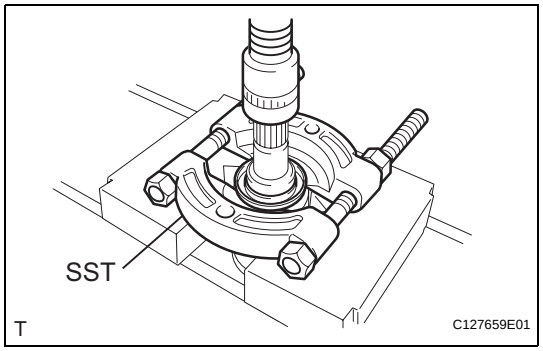


10. REMOVE FRONT AXLE OUTBOARD JOINT BOOT CLAMP LH

(a) Using a screwdriver, remove the outboard joint boot clamp, as shown in the illustration.

11. REMOVE FRONT AXLE OUTBOARD JOINT BOOT

(a) Remove the outboard joint boot from the outboard joint shaft.



(b) Remove any old grease from the outboard joint.

12. REMOVE FRONT DRIVE SHAFT HOLE SNAP RING LH

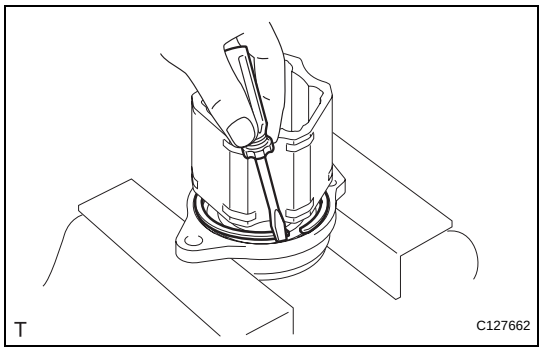
(a) Using a screwdriver, remove the hole snap ring.

DS

13. REMOVE FRONT DRIVE SHAFT DUST COVER LH

(a) Using SST and a press, press out the shaft dust cover.

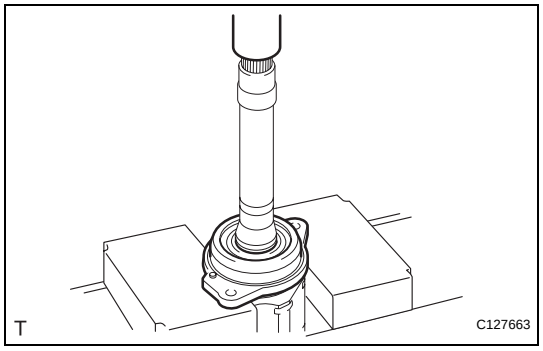
SST 09950-00020



NOTICE:

Be careful not to drop the inboard joint

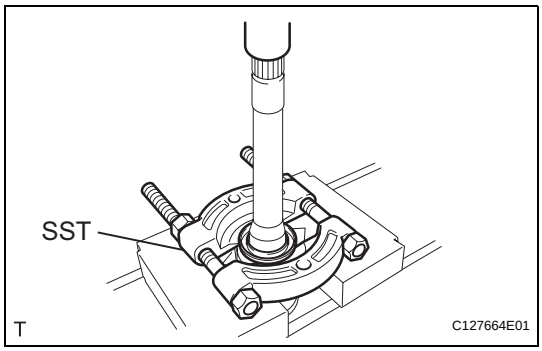
14. REMOVE FRONT DRIVE SHAFT DUST COVER RH



HINT:

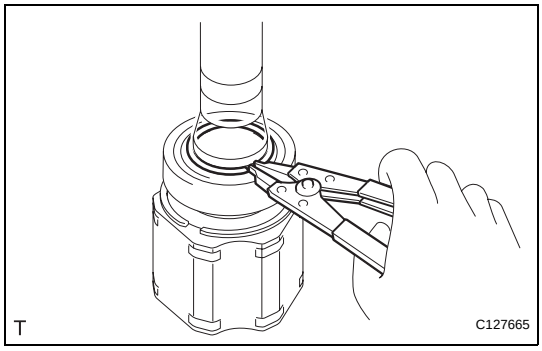
Use the same procedures described for the LH side.

15. REMOVE DRIVE SHAFT BEARING CASE



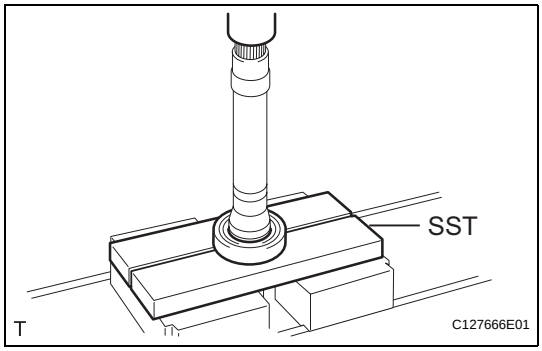
(a) Using a screwdriver, remove the bearing case snap ring.

(b) Using a press, press out the drive shaft bearing case.



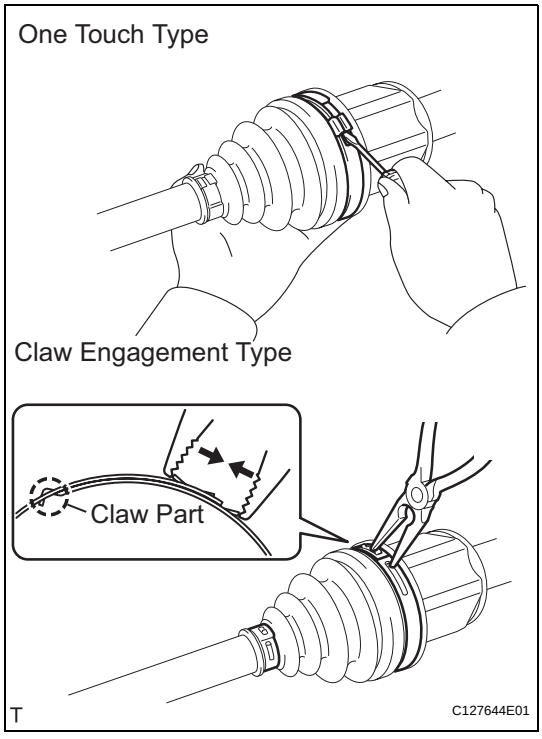
HINT:

Be careful not to drop the inboard joint



16. REMOVE FRONT DRIVE SHAFT DUST COVER

(a) Using SST and a press, press out the drive shaft dust cover.
SST 09950-00020
HINT:
Be careful not to drop the inboard joint

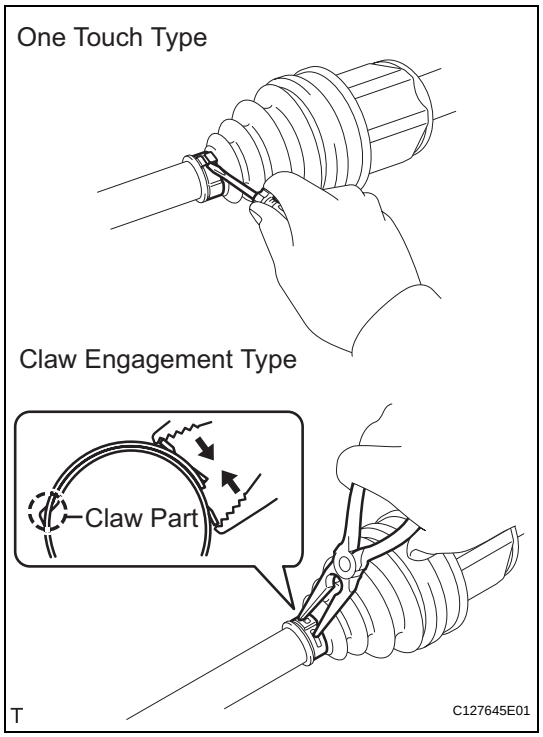


17. REMOVE FRONT DRIVE SHAFT BEARING

(a) Using a snap ring expander, remove the snap ring.

(b) Using SST and a press, press out the drive shaft bearing.
SST 09527-10011

(c) Remove the snap ring.



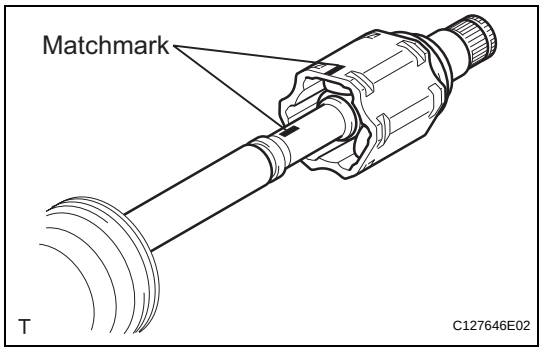
DISASSEMBLY

(2006/01-)

1. REMOVE FRONT AXLE INBOARD JOINT BOOT NO. 2 CLAMP

(a) One touch type:
Using a screwdriver, remove the inboard joint boot clamp, as shown in the illustration.

(b) Claw engagement type:
Using needle-nose pliers, remove the inboard joint boot clamp, as shown in the illustration.



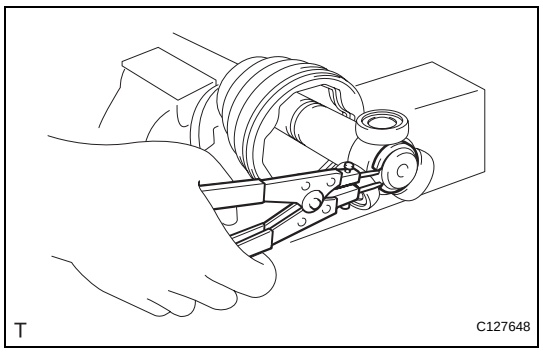
2. REMOVE FRONT AXLE INBOARD JOINT BOOT CLAMP

(a) One touch type:
Using a screwdriver, remove the inboard joint boot clamp, as shown in the illustration.

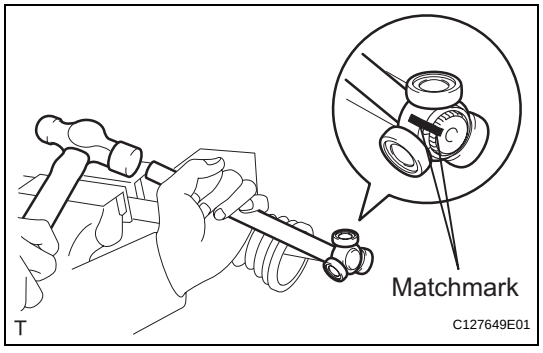
(b) Claw engagement type:
Using needle-nose pliers, remove the inboard joint boot clamp, as shown in the illustration.

3. REMOVE FRONT AXLE INBOARD JOINT BOOT

(a) Remove the boot from the inboard joint.



4. REMOVE FRONT DRIVE INBOARD JOINT ASSEMBLY LH



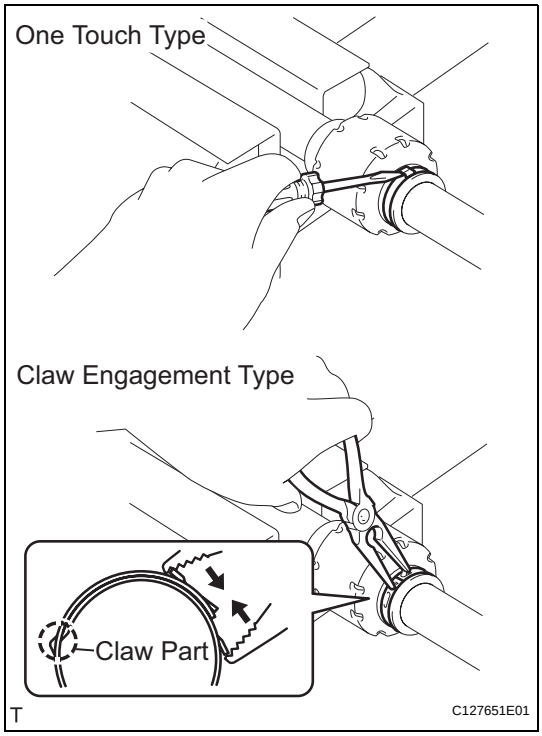
(a) Remove any old grease from the inboard joint.

(b) Put matchmarks on the inboard joint and outboard joint shaft.
NOTICE:
Do not punch the marks.

(c) Remove the inboard joint from the outboard joint shaft.

(d) Using a snap ring expander, remove the shaft snap ring.

(e) Put matchmarks on the outboard joint shaft and tripod joint.
NOTICE:
Do not punch the marks.



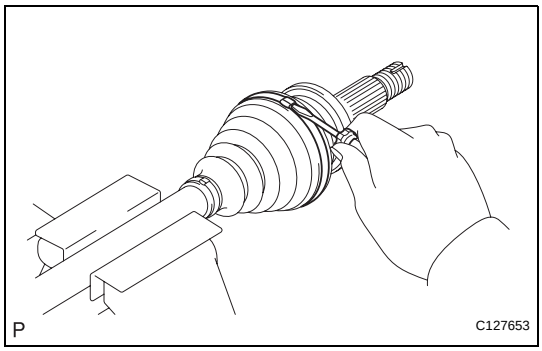
(f) Using a brass bar and hammer, tap out the tripod joint from the outboard joint shaft.
NOTICE:
Do not tap the rollers.

(g) Remove the inboard joint boot.

5. REMOVE FRONT DRIVE INBOARD JOINT ASSEMBLY RH

HINT:

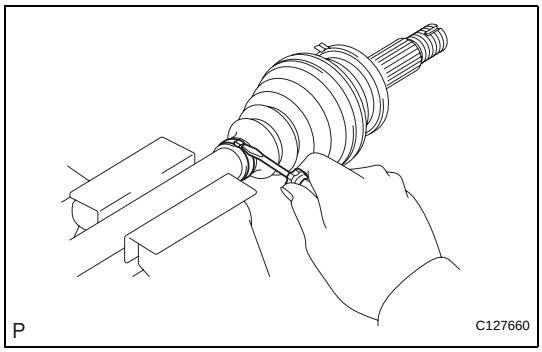
Use the same procedures described for the LH side.



6. REMOVE FRONT DRIVE SHAFT DAMPER CLAMP LH

(a) One touch type:
Using a screwdriver, remove the drive shaft damper clamp, as shown in the illustration.

(b) Claw engagement type:
Using needle-nose pliers, remove the drive shaft damper clamp, as shown in the illustration.

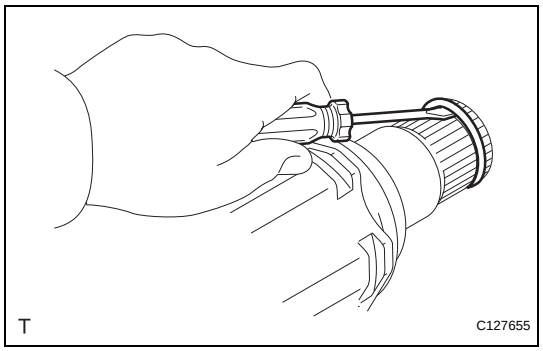


7. REMOVE FRONT DRIVE SHAFT DAMPER LH

(a) Remove the front drive shaft damper from the outboard joint shaft.

8. REMOVE FRONT AXLE OUTBOARD JOINT BOOT NO. 2 CLAMP

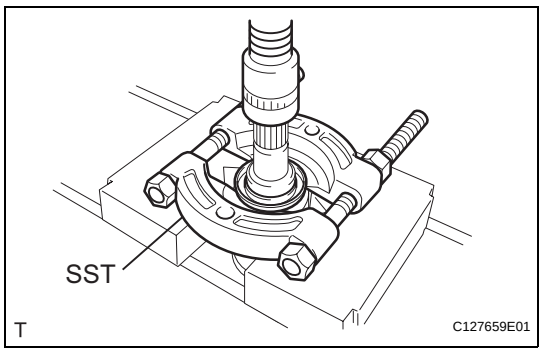
(a) Using a screwdriver, remove the outboard joint boot clamp, as shown in the illustration.



9. REMOVE FRONT AXLE OUTBOARD JOINT BOOT CLAMP

(a) Using a screwdriver, remove the outboard joint boot clamp, as shown in the illustration.

10. REMOVE FRONT AXLE OUTBOARD JOINT BOOT

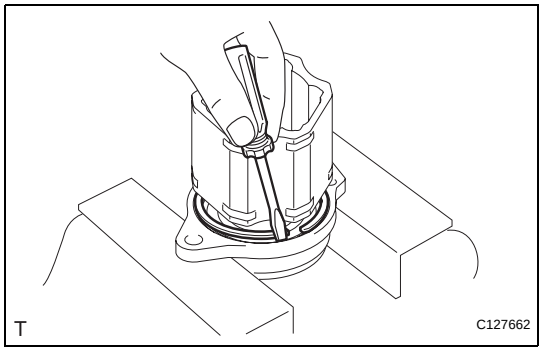


(a) Remove the outboard joint boot from the outboard joint shaft.

(b) Remove any old grease from the outboard joint.

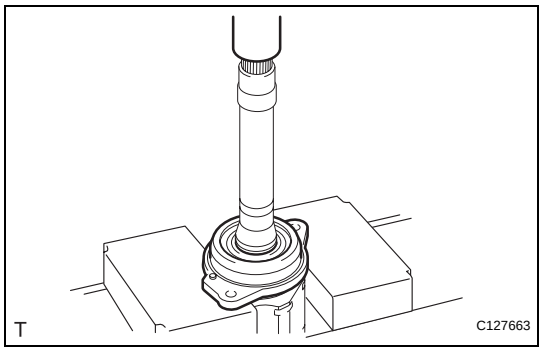
11. REMOVE FRONT DRIVE SHAFT HOLE SNAP RING LH

(a) Using a screwdriver, remove the hole snap ring.



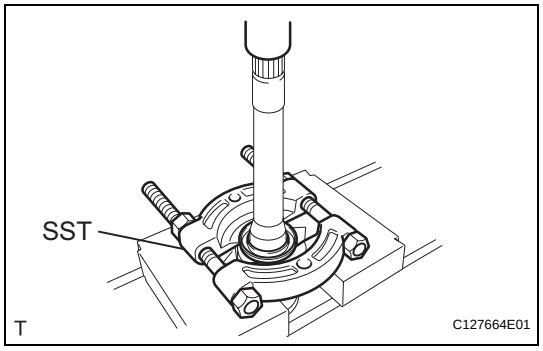
12. REMOVE FRONT DRIVE SHAFT DUST COVER LH

(a) Using SST and a press, press out the shaft dust cover.
SST 09950-00020
NOTICE:
Be careful not to drop the inboard joint.



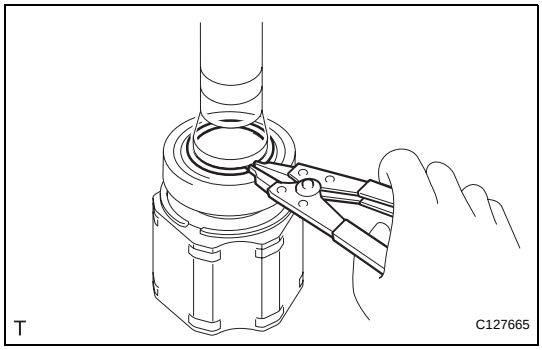
13. REMOVE FRONT DRIVE SHAFT DUST COVER RH

HINT:
Use the same procedures described for the LH side.



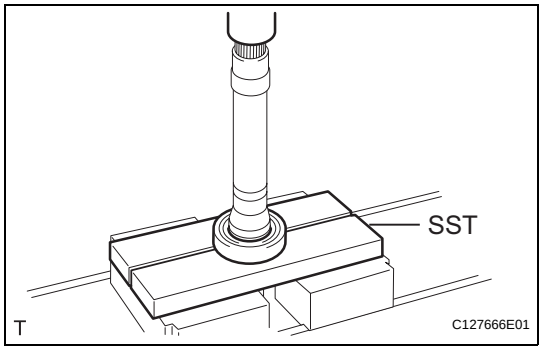
14. REMOVE DRIVE SHAFT BEARING CASE (for RH)

(a) Using a screwdriver, remove the bearing case snap ring.



(b) Using a press, press out the drive shaft bearing case.
HINT:
Be careful not to drop the inboard joint.

15. REMOVE FRONT DRIVE SHAFT DUST COVER (for RH)

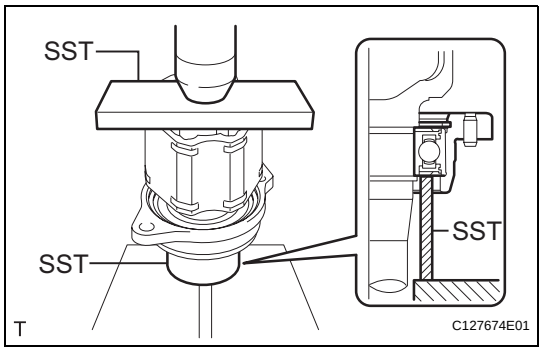


(a) Using SST and a press, press out the drive shaft dust cover.
SST 09950-00020
NOTICE:
Be careful not to drop the inboard joint.

DS

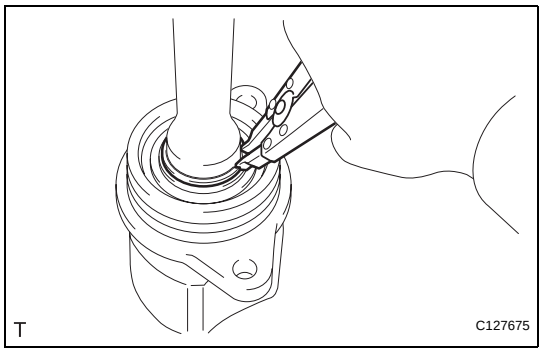
16. REMOVE FRONT DRIVE SHAFT BEARING

(a) Using a snap ring expander, remove the snap ring.



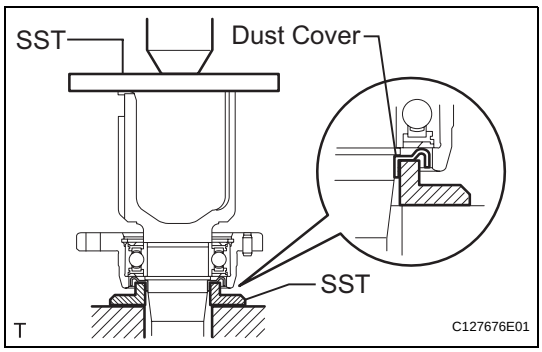
(b) Using SST and a press, press out the drive shaft bearing.
SST 09527-10011

(c) Remove the bearing case snap ring.



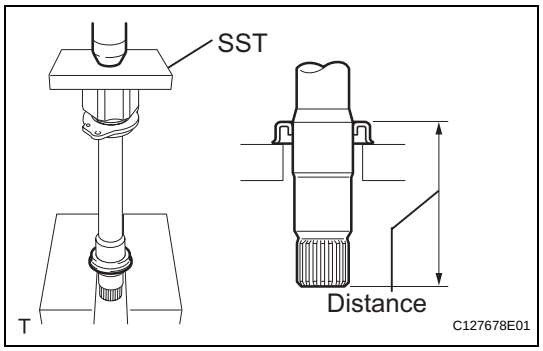
REASSEMBLY

(2005/11-2006/01)



1. INSTALL DRIVE SHAFT BEARING CASE SUB-ASSEMBLY

(a) Using SST and a press, press in the drive shaft bearing case to the inboard joint RH.
SST 09527-10011, 09710-04081
NOTICE:
The bearing should be installed completely.



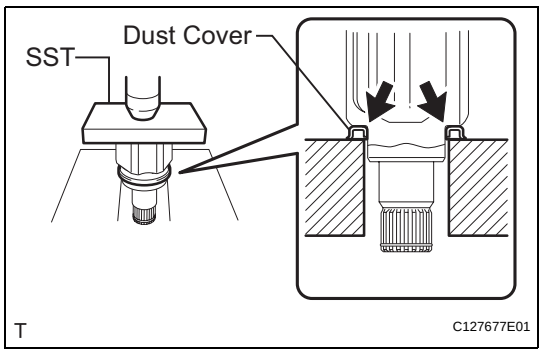
(b) Using a snap ring expander, install a new drive shaft hole snap ring.

2. INSTALL FRONT DRIVE SHAFT DUST COVER

(a) Using SST and a press, press in a new drive shaft dust cover.
SST 09726-40010, 09527-10011
NOTICE:
Be careful not to damage the dust cover.

3. INSTALL FRONT DRIVE SHAFT DUST COVER RH

(a) Using SST and a press, press in a new drive shaft dust cover until the distance from the tip of the center drive shaft to the drive shaft dust cover reaches the specification, as shown in the illustration.



SST 09527-10011

Standard distance:

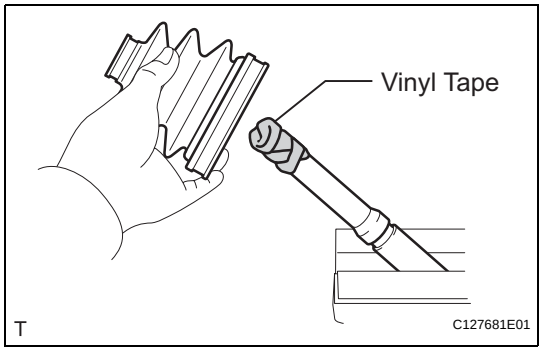
91.0 to 92.0 mm (3.583 to 3.622 in.)

NOTICE:

- **The dust cover should be installed completely.**
- **Be careful not to damage the dust cover.**

4. INSTALL FRONT DRIVE SHAFT DUST COVER LH

(a) Using SST and a press, press in a new drive shaft dust cover.



SST 09527-10011

NOTICE:

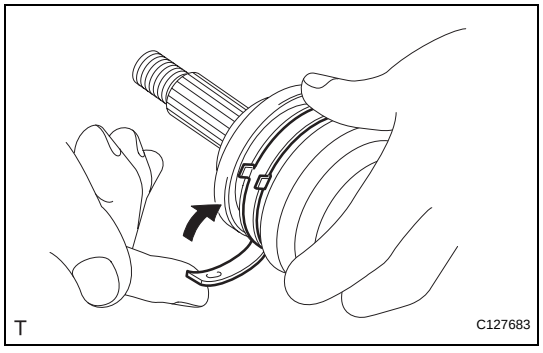
- **The dust cover should be installed completely.**
- **Be careful not to damage the dust cover.**

5. INSTALL FRONT DRIVE SHAFT LH HOLE SNAP RING

(a) Install a new hole snap ring.

6. INSTALL FRONT AXLE OUTBOARD JOINT BOOT

HINT:



Before installing the boots, wrap the spline of the drive shaft with vinyl tape to prevent the boots from being damaged.

(a) Install new parts to the outboard joint shaft in the following order.
  (1) No. 2 outboard joint boot clamp
  (2) Outboard joint boot
  (3) Outboard joint boot clamp

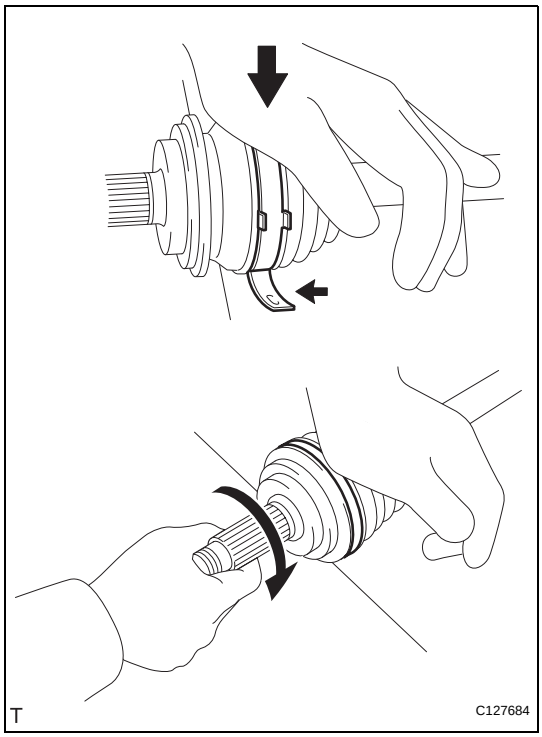
(b) Pack the outboard joint shaft and boot with grease from the boot kit.

Standard grease capacity:

190 to 200 g (6.7 to 7.1 oz.)

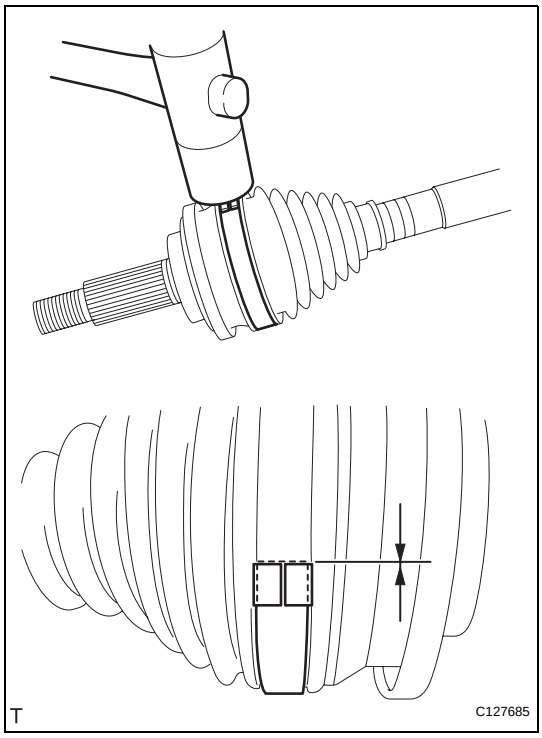
7. INSTALL FRONT AXLE OUTBOARD JOINT BOOT NO. 2 CLAMP LH

CAUTION:



Wear protective gloves while performing the operation and be careful to avoid cutting your hands or other body parts.

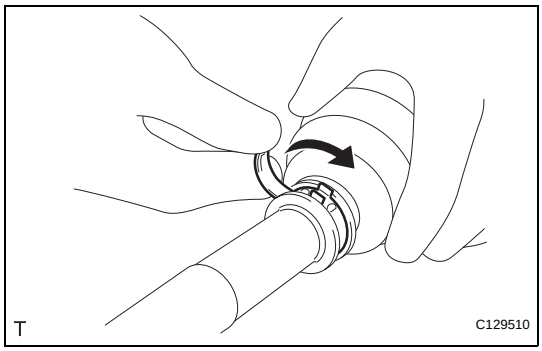
(a) Install a new boot clamp to the outboard joint boot and temporarily bend the lever.



NOTICE:

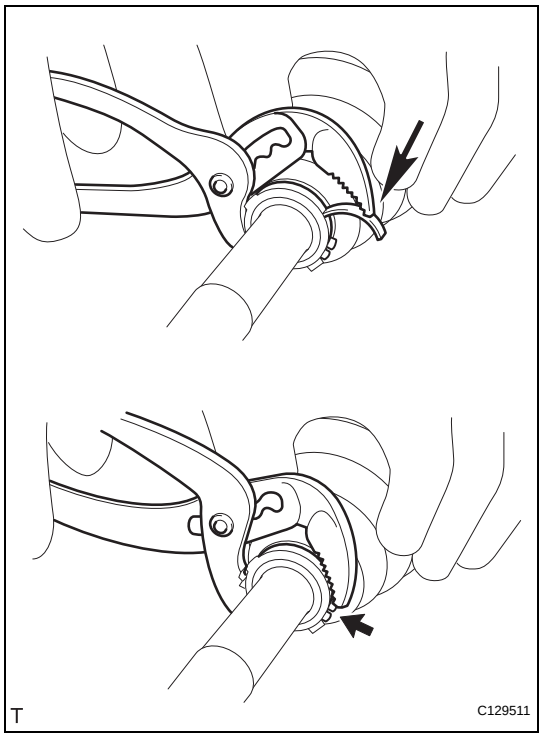
- **When temporarily bending the lever, make sure not to deform the band and lever.**
- **Set the clamp correctly in the guide groove and align it with the interior of the vehicle as much as possible.**

DS

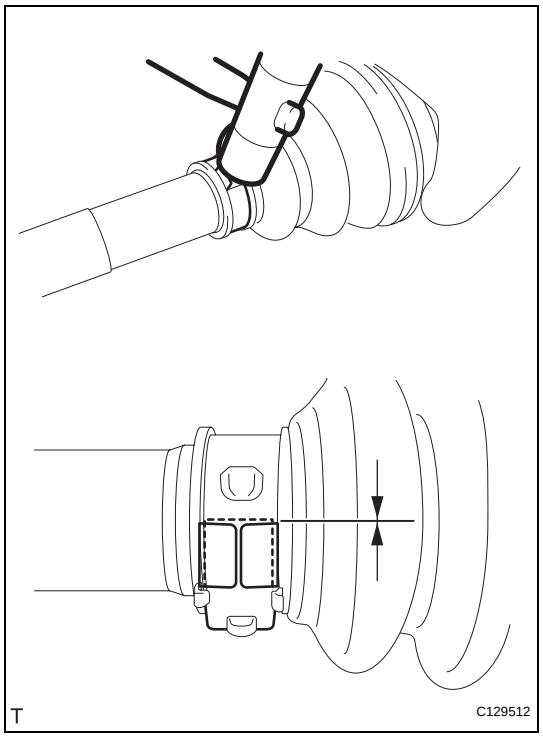


(b) With the joint on the working surface, use your body weight to press down on the joint with one hand. Then, roll the joint forward, as shown in the illustration, and press the lever in until a "click" sound is heard.
NOTICE:
- **Do not damage the deflector.**
- **Make sure the joint is in full contact with the joint surface at all times.**

(c) Using a plastic-faced hammer, fix the buckle into place by tapping it. At the same time, use the plastic-faced hammer to adjust the lift of the lever so that the gaps between the buckle flange and lever end flange become even.
NOTICE:
Do not damage the boot.



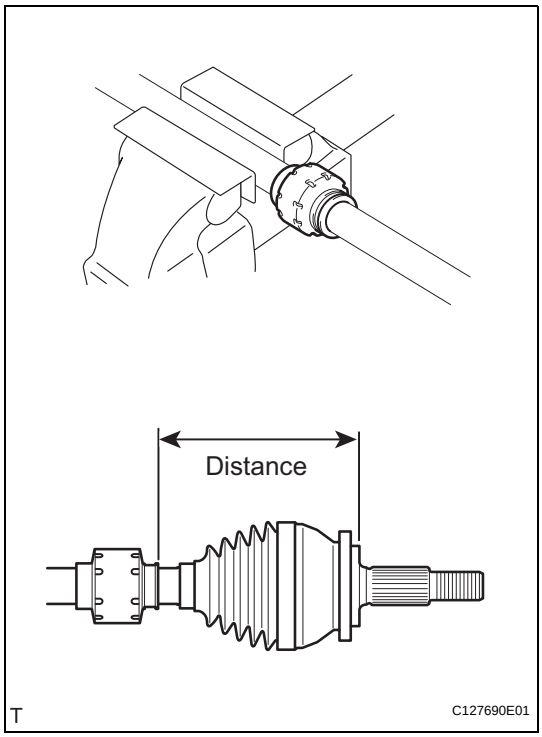
8. INSTALL FRONT AXLE OUTBOARD JOINT BOOT NO. 2 CLAMP RH
HINT:
Use the same procedures described for the LH side.



9. INSTALL FRONT AXLE OUTBOARD JOINT BOOT CLAMP LH
CAUTION:
Wear protective gloves while performing the operation and be careful to avoid cutting your hands or other body parts.

(a) Install a new boot clamp to the outboard joint boot and temporarily bend the lever.
NOTICE:
When temporarily bending the lever, make sure not to deform the band and lever.

(b) Using water pump pliers, temporarily lock the boot clamp by clamping it down until a "click" sound is heard.



(c) Using a plastic-faced hammer, fix the buckle into place by tapping it. At the same time, use the plastic-faced hammer to adjust the lift of the lever so that the gaps between the buckle flange and lever end flange become even.
NOTICE:
Do not strike the drive shaft forcefully with the plastic-faced hammer.

10. INSTALL FRONT AXLE OUTBOARD JOINT BOOT RH CLAMP

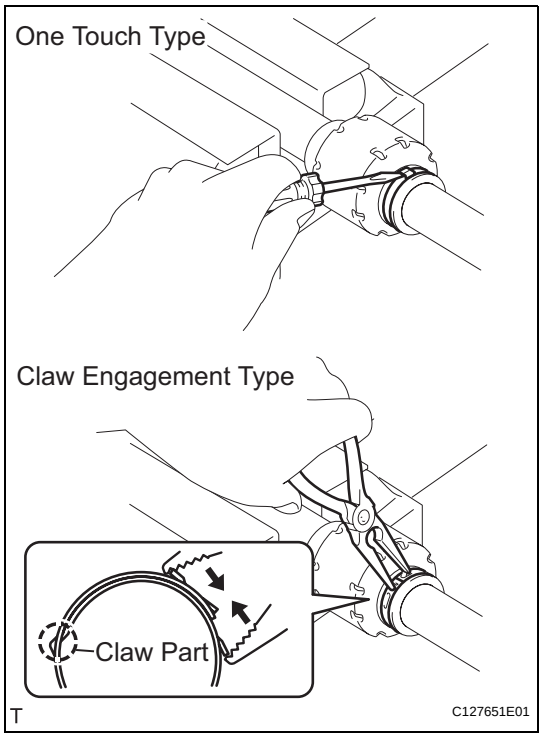
HINT:
Use the same procedures described for the LH side.

DS

11. INSTALL FRONT DRIVE SHAFT DAMPER LH

HINT:

Install the damper clamp to outboard joint side.



(a) Install a new drive shaft damper clamp and the drive shaft damper to the drive shaft.

(b) Make sure that the damper is on the shaft groove.

(c) Set the distance, as described below.

Standard distance:

161 to 165 mm (6.339 to 6.496 in.)

12. INSTALL FRONT DRIVE SHAFT DAMPER CLAMP LH

(a) Hold the front drive shaft lightly in a soft vise.

(b) Install the drive shaft damper clamp to the damper.

NOTICE:

Be sure to install the clamp in the correct position.

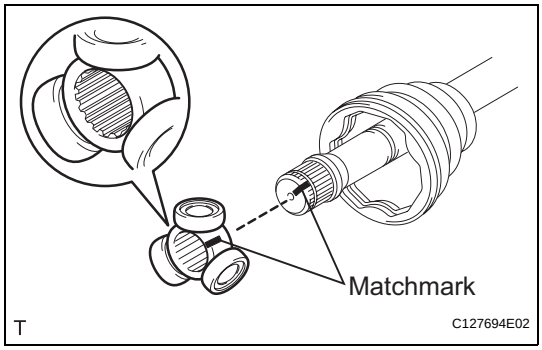
(c) One touch type:

(1) Using a screwdriver, install the drive shaft damper clamp, as shown in the illustration.

(d) Claw engagement type:

(1) Using needle-nose pliers, install the drive shaft damper clamp, as shown in the illustration.

13. INSTALL FRONT DRIVE INBOARD JOINT ASSEMBLY LH



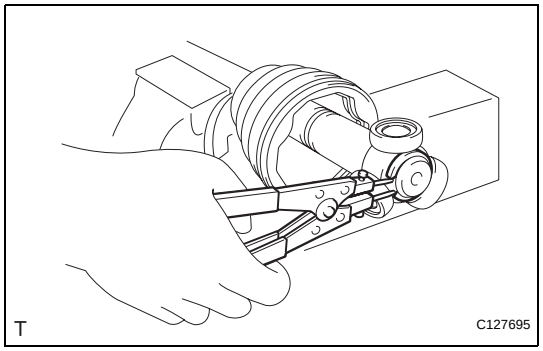
(a) Wrap the spline of the outboard joint shaft with vinyl tape to prevent the boots from being damaged.

(b) Install new parts to the outboard joint shaft in the following order.

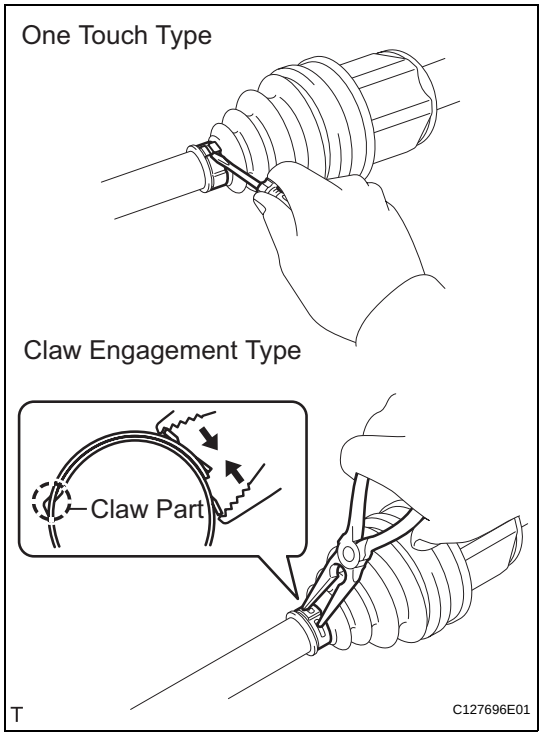
(1) Inboard joint boot clamp

(2) No. 2 inboard joint boot clamp

(3) Inboard joint boot



(c) Place the beveled side of the tripod axial spline toward the outboard joint.



(d) Align the matchmarks placed before removal.

(e) Using a brass bar and hammer, tap the tripod joint onto the drive shaft.

NOTICE:

- **Do not tap the rollers.**
- **Be sure to install the tripod joint in the correct direction.**

(f) Pack the inboard joint shaft and boot with grease from the boot kit.
Standard grease capacity:
175 to 185 g (6.2 to 6.5 oz.)

(g) Using a snap ring expander, install a new shaft snap ring.

(h) Align the matchmarks, and install the inboard joint to the outboard joint shaft.

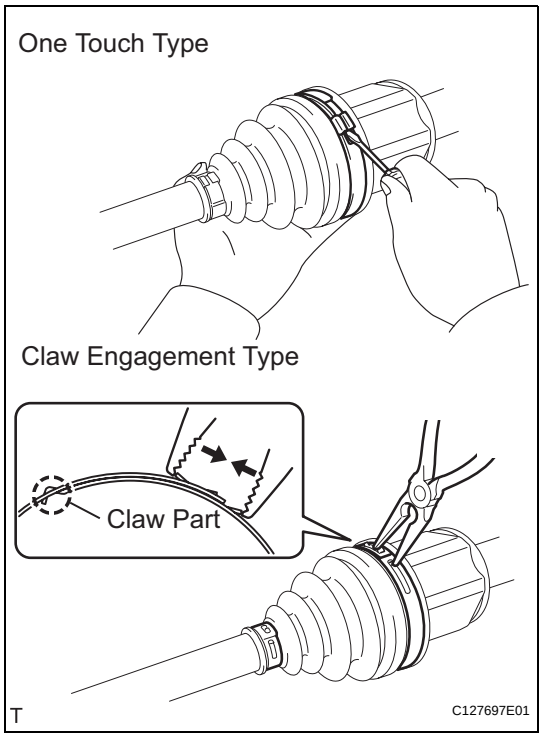
14. INSTALL FRONT DRIVE INBOARD JOINT ASSEMBLY RH

HINT:
Use the same procedures described for the LH side.

15. INSTALL FRONT AXLE INBOARD JOINT BOOT

(a) Install the inboard joint boot to the inboard joint.

16. INSTALL FRONT AXLE INBOARD JOINT BOOT CLAMP LH



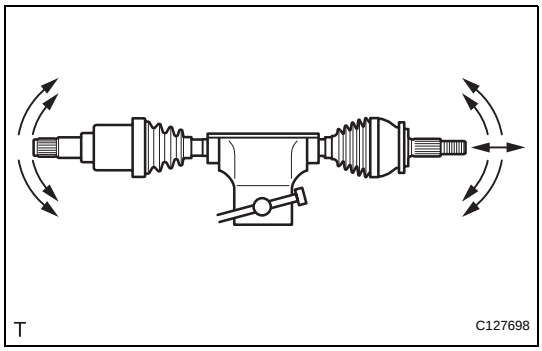
(a) One touch type:
(1) Using a screwdriver, install the inboard joint boot clamp, as shown in the illustration.
NOTICE:
Be careful not to damage the boot.

(b) Claw engagement type:
(1) Using needle-nose pliers, install the inboard joint boot clamp, as shown in the illustration.
NOTICE:
Be careful not to damage the boot.

17. INSTALL FRONT AXLE INBOARD JOINT BOOT CLAMP RH

HINT:
Use the same procedures described for the LH side.

DS



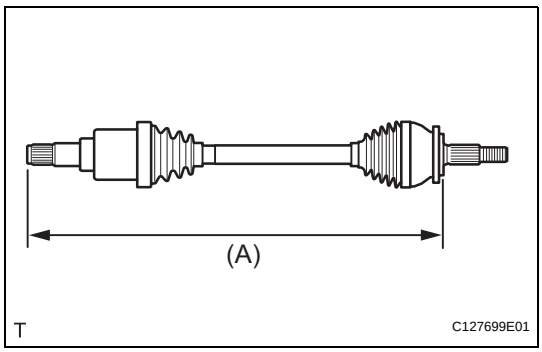
18. INSTALL FRONT AXLE INBOARD JOINT BOOT NO. 2 CLAMP LH

(a) One touch type:
  (1) Using a screwdriver, install the No. 2 inboard joint boot clamp, as shown in the illustration.
  NOTICE:
  Be careful not to damage the boot.

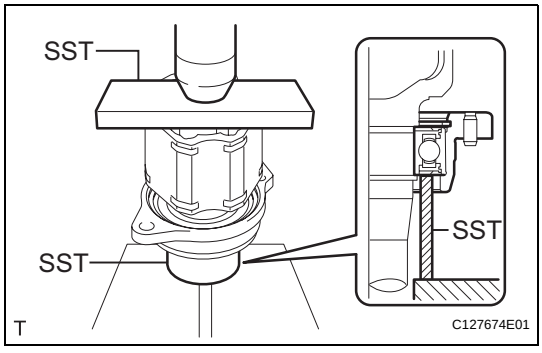
(b) Claw engagement type:
  (1) Using needle-nose pliers, install the No. 2 inboard joint boot clamp, as shown in the illustration.
  NOTICE:
  Be careful not to damage the boot.

19. INSTALL FRONT AXLE INBOARD JOINT BOOT NO. 2 CLAMP RH

HINT:
Use the same procedures described for the LH side.



20. INSPECT FRONT DRIVE SHAFT

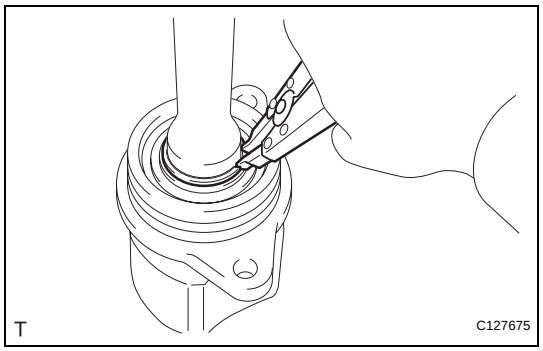


(a) Check that there is no severe play in the radial direction of the outboard joint.

(b) Check that the inboard joint slides smoothly in the thrust direction.

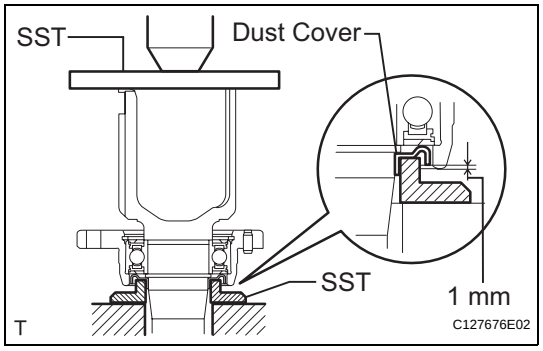
(c) Check that there is no severe play in the radial direction of the inboard joint.

(d) Check the boots for damage.
  NOTICE:
  Keep the drive shaft assembly level during inspection.
  HINT:
  For dimension (A), refer to the following values.
  Reference value:
  585.2 mm (23.039 in.) for LH side
  902 mm (35.512 in.) for RH side



REASSEMBLY

(2006/01-)



1. INSTALL DRIVE SHAFT BEARING CASE SUB-ASSEMBLY (for RH)

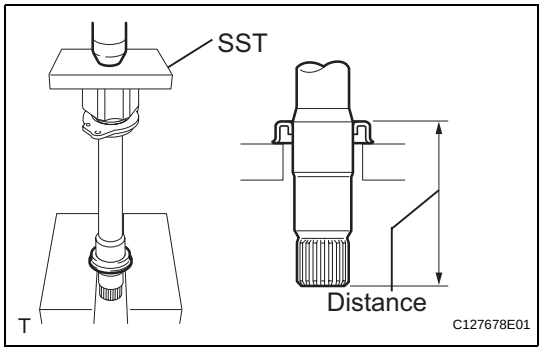
(a) Install the bearing snap ring.

(b) Using SST and a press, press in the drive shaft bearing case to the inboard joint RH.
  SST 09527-10011, 09710-04081
  NOTICE:
  The bearing should be installed completely.

(c) Using a snap ring expander, install a new snap ring.

2. INSTALL FRONT DRIVE SHAFT DUST COVER (for RH)

(a) Using SST and a press, press in a new drive shaft dust cover.



SST 09726-40010, 09527-10011

Standard dust cover depth::

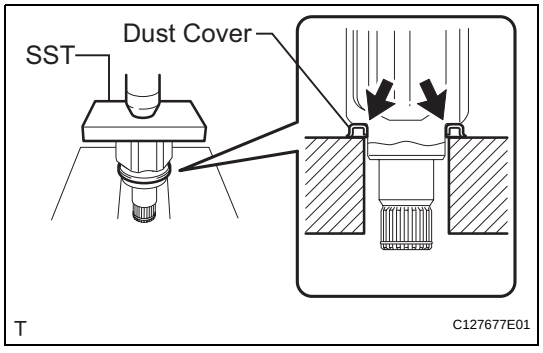
1 mm (0.04 in.)

NOTICE:

Be careful not to damage the dust cover.

3. INSTALL FRONT DRIVE SHAFT DUST COVER RH

(a) Using SST and a press, press in a new drive shaft dust cover until the distance from the tip of the center drive shaft to the drive shaft dust cover reaches the specification, as shown in the illustration.



SST 09527-10011

Standard distance

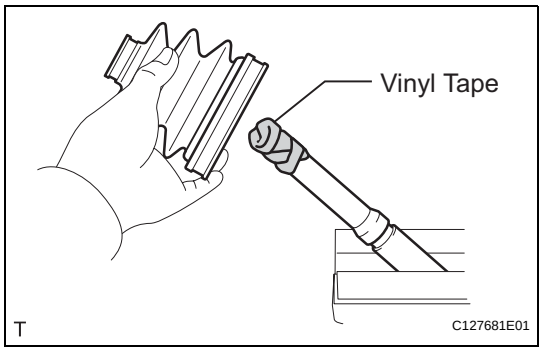
Item	Distance
2AZ-FE	91.0 to 92.0 mm (3.583 to 3.622 in.)
2GR-FE	110 to 111 mm (4.330 to 4.370 in.)

NOTICE:

Be careful not to damage the dust cover.

4. INSTALL FRONT DRIVE SHAFT DUST COVER LH

(a) Using SST and a press, press in a new drive shaft dust cover.



SST 09527-10011

NOTICE:

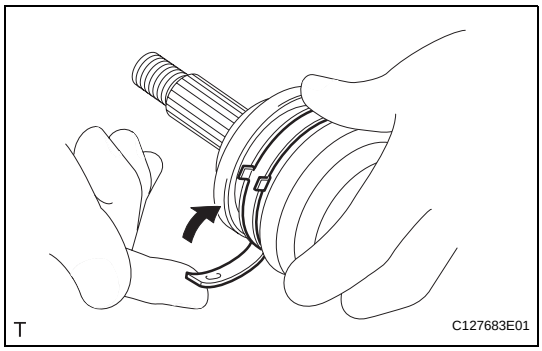
- **The dust cover should be installed so that the drive shaft contacts the dust cover at the location indicated by the arrows in the illustration.**
- **Be careful not to damage the dust cover.**

5. INSTALL FRONT DRIVE SHAFT HOLE SNAP RING LH

(a) Install a new hole snap ring.

6. INSTALL FRONT AXLE OUTBOARD JOINT BOOT

HINT:



Before installing the boots, wrap the spline of the drive shaft with vinyl tape to prevent the boots from being damaged.

(a) Install new parts to the outboard joint shaft in the following order.
  (1) Outboard joint boot No. 2 clamp
  (2) Outboard joint boot
  (3) Outboard joint boot clamp

(b) Pack the outboard joint shaft and boot with grease from the boot kit.

Standard grease capacity

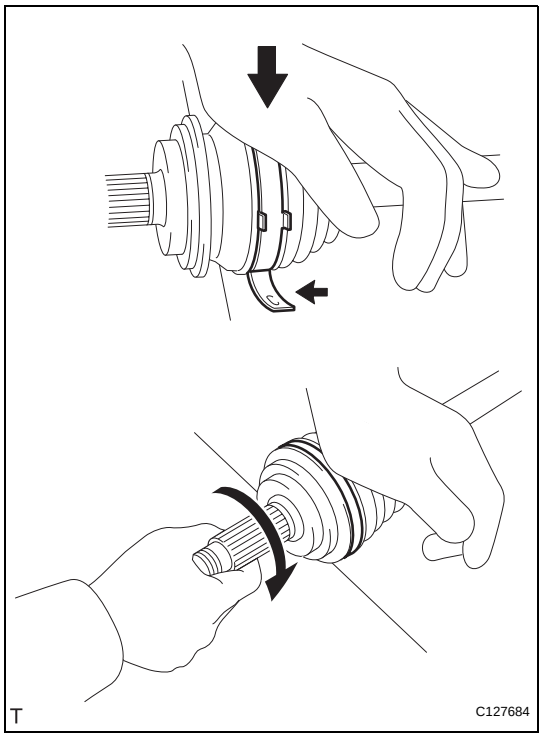
Item	Grease capacity
2AZ-FE	190 to 200 g (6.7 to 7.1 oz.)
2GR-FE	205 to 215 g (7.2 to 7.6 oz.)

7. INSTALL FRONT AXLE OUTBOARD JOINT BOOT NO. 2 CLAMP

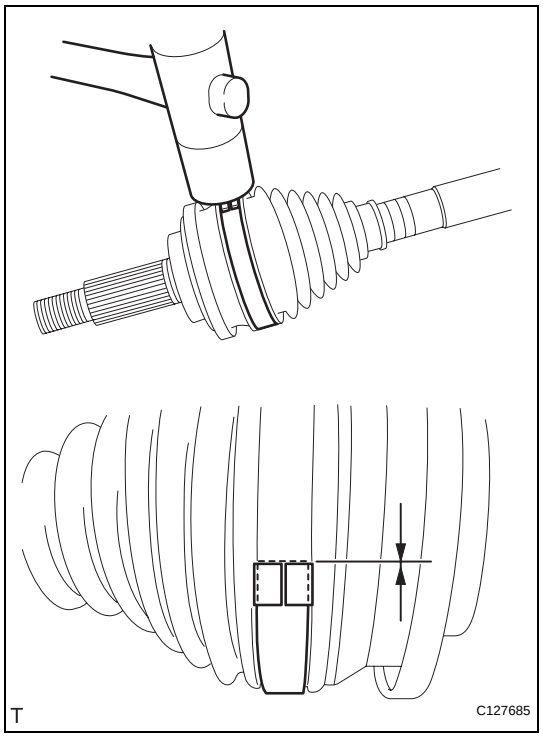
CAUTION:

Wear protective gloves while performing the operation and be careful to avoid cutting your hands or other body parts.

(a) Install a new boot clamp to the outboard joint boot and temporarily bend the lever.

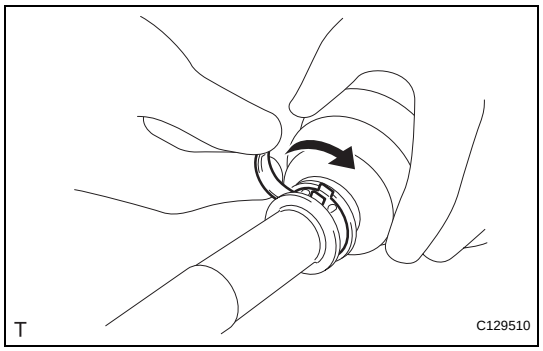


NOTICE:



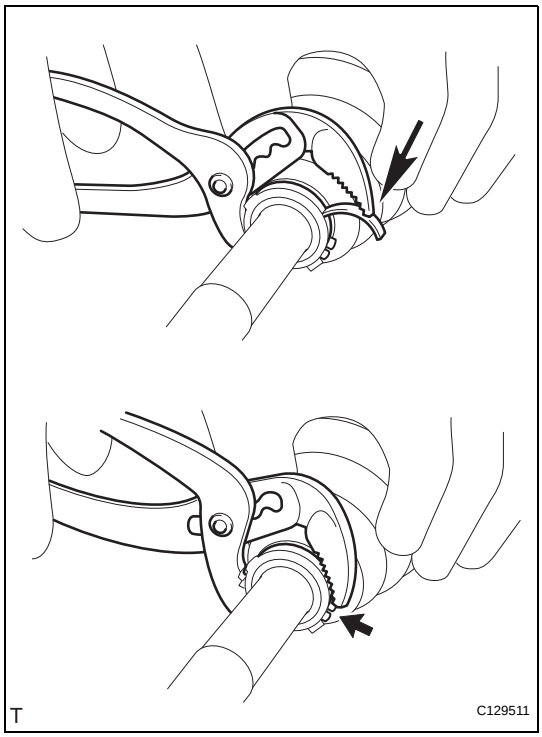
- **When temporarily bending the lever, make sure not to deform the band and lever.**
- **Set the clamp correctly in the guide groove and align it with the interior of the vehicle as much as possible.**

(b) With the joint on the working surface, use your body weight to press down on the joint with one hand. Then, roll the joint forward, as shown in the illustration, and press the lever in until a "click" sound is heard.

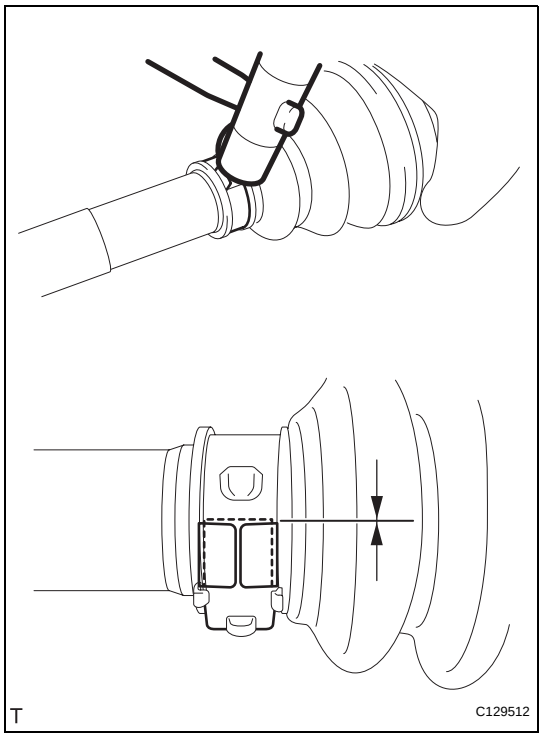


NOTICE:

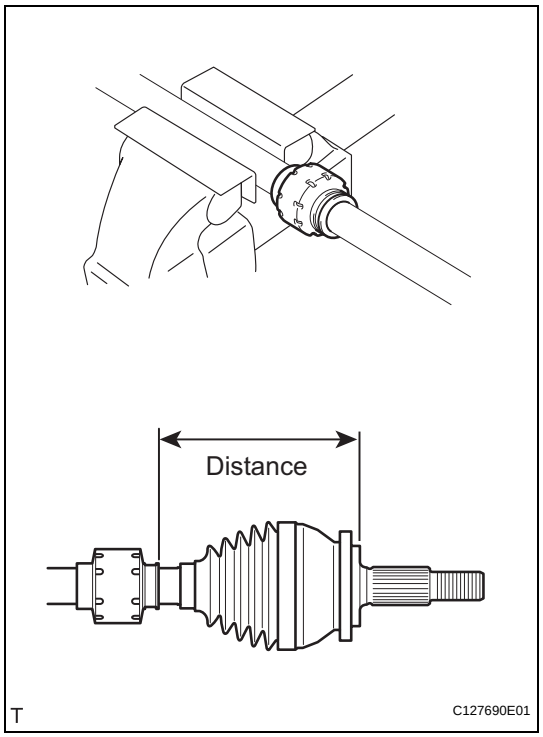
- **Do not damage the deflector.**
- **Make sure the joint is in full contact with the joint surface at all times.**



(c) Using a plastic-faced hammer, fix the buckle into place by tapping it. At the same time, use the plastic-faced hammer to adjust the lift of the lever so that the gaps between the buckle flange and lever end flange become even.
NOTICE:
Do not damage the boot.

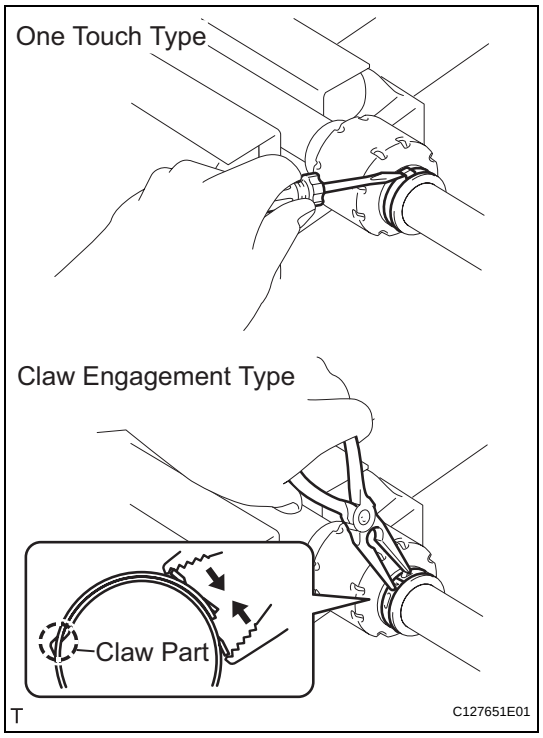


8. INSTALL FRONT AXLE OUTBOARD JOINT BOOT CLAMP
CAUTION:
Wear protective gloves while performing the operation and be careful to avoid cutting your hands or other body parts.



(a) Install a new boot clamp to the outboard joint boot and temporarily bend the lever.
NOTICE:
When temporarily bending the lever, make sure not to deform the band and lever.

(b) Using water pump pliers, temporarily lock the boot clamp by clamping it down until a "click" sound is heard.



(c) Using a plastic-faced hammer, fix the buckle into place by tapping it. At the same time, use the plastic-faced hammer to adjust the lift of the lever so that the gaps between the buckle flange and lever end flange become even.
NOTICE:
Do not strike the drive shaft forcefully with the plastic-faced hammer.

9. INSTALL FRONT DRIVE SHAFT DAMPER LH (for LH)

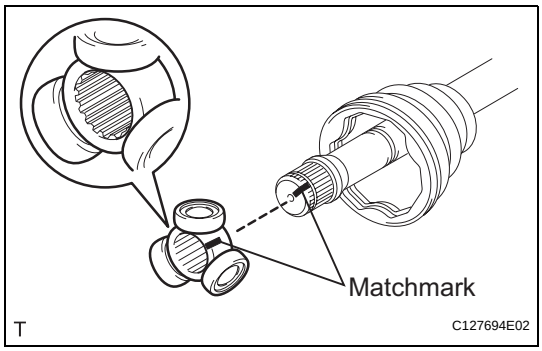
(a) Install a new drive shaft damper clamp and the drive shaft damper to the drive shaft.
HINT:
Install the damper clamp to outboard joint side.

(b) Set the distance, as described below.
Standard distance:
161 to 165 mm (6.339 to 6.496 in.)

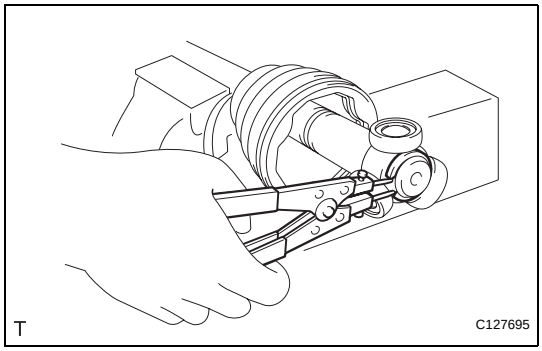
10. INSTALL FRONT DRIVE SHAFT DAMPER CLAMP LH (for LH)

(a) Hold the front drive shaft lightly in a soft vise.

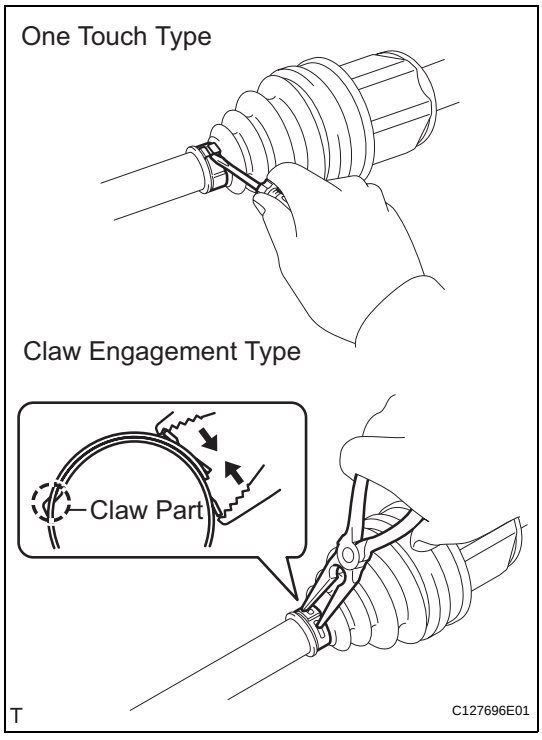
(b) Install the drive shaft damper clamp to the damper.
NOTICE:
Be sure to install the clamp in the correct position.



(c) One touch type:
Using a screwdriver, install the drive shaft damper clamp, as shown in the illustration.



(d) Claw engagement type:
Using needle-nose pliers, install the drive shaft damper clamp, as shown in the illustration.

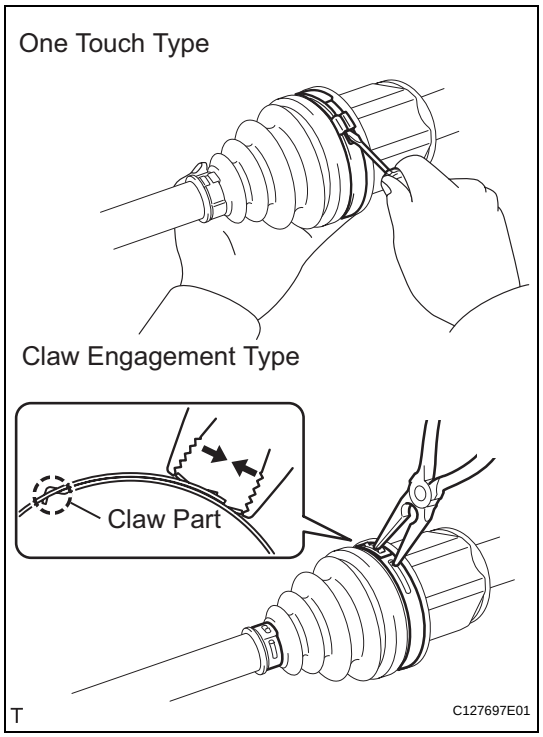


11. INSTALL FRONT DRIVE INBOARD JOINT ASSEMBLY LH

(a) Wrap the spline of the outboard joint shaft with vinyl tape to prevent the boots from being damaged.

(b) Install new parts to the outboard joint shaft in the following order.
(1) Inboard joint boot clamp
(2) Inboard joint boot No. 2 clamp
(3) Inboard joint boot

(c) Place the beveled side of the tripod axial spline toward the outboard joint.
(d) Align the matchmarks placed before removal.
(e) Using a brass bar and hammer, tap the tripod joint onto the drive shaft.
NOTICE:
- **Do not tap the rollers.**
- **Be sure to install the tripod joint in the correct direction.**



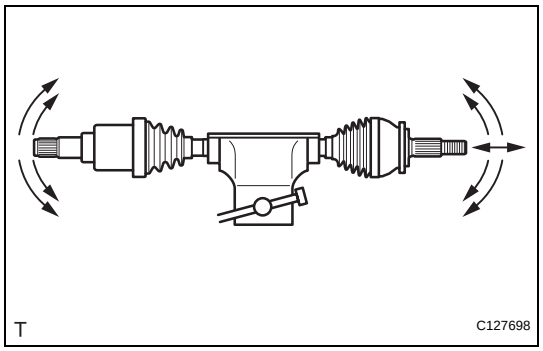
(f) Pack the inboard joint shaft and boot with grease from the boot kit.
Standard grease capacity:
175 to 185 g (6.2 to 6.5 oz.)

(g) Using a snap ring expander, install a new shaft snap ring.
(h) Align the matchmarks, and install the inboard joint to the outboard joint shaft.

12. INSTALL FRONT DRIVE INBOARD JOINT ASSEMBLY RH
HINT:
Use the same procedures described for the LH side.

13. INSTALL FRONT AXLE INBOARD JOINT BOOT
(a) Install the inboard joint boot to the inboard joint.

14. INSTALL FRONT AXLE INBOARD JOINT BOOT CLAMP
(a) One touch type:
Using a screwdriver, install the inboard joint boot clamp, as shown in the illustration.
NOTICE:
Be careful not to damage the boot.
(b) Claw engagement type:
Using needle-nose pliers, install the inboard joint boot clamp, as shown in the illustration.
NOTICE:
Be careful not to damage the boot.

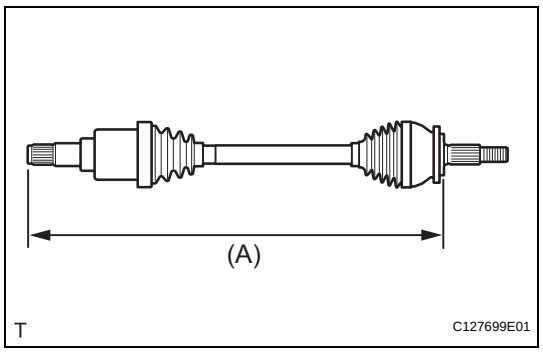


15. INSTALL FRONT AXLE INBOARD JOINT BOOT NO. 2 CLAMP

(a) One touch type:
Using a screwdriver, install the No. 2 inboard joint boot clamp, as shown in the illustration.
NOTICE:
Be careful not to damage the boot.

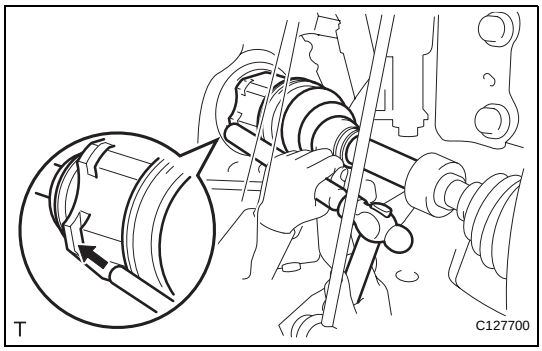
(b) Claw engagement type:
Using needle-nose pliers, install the No. 2 inboard joint boot clamp, as shown in the illustration.
NOTICE:
Be careful not to damage the boot.

DS

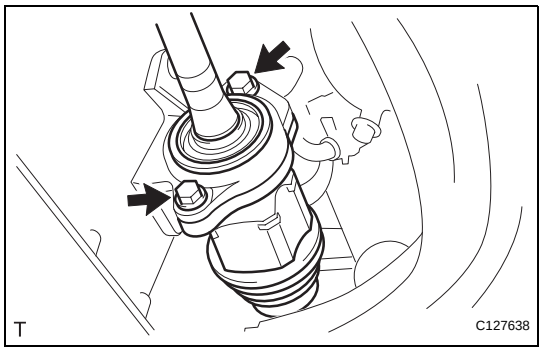


16. INSPECT FRONT DRIVE SHAFT

(a) Check that there is no severe play in the radial direction of the outboard joint.



(b) Check that the inboard joint slides smoothly in the thrust direction.



(c) Check that there is no severe play in the radial direction of the inboard joint.

(d) Check the boots for damage.
NOTICE:
Keep the drive shaft assembly level during inspection.
HINT:
For dimension (A), refer to the following values.
Standard reference value

Item	Drive shaft LH (Dimension)	Drive shaft RH (Dimension)
2AZ-FE	585.2 mm (23.039 in.)	902.0 mm (35.512 in.)
2GR-FE	570.9 mm (22.476 in.)	914.4 mm (36.000 in.)

INSTALLATION

(2005/11-2006/01)

1. **INSTALL FRONT DRIVE SHAFT ASSEMBLY LH**
   (a) Coat the spline of the inboard joint shaft with gear oil.
   (b) Using a brass bar and hammer, align the shaft splines in the drive shaft.
   NOTICE:
   - **Set the snap ring with the opening side facing downwards.**
   - **Be careful not to damage the oil seal, boot and dust cover.**

2. **INSTALL FRONT DRIVE SHAFT ASSEMBLY RH**
   (a) Coat the spline of the inboard joint shaft with gear oil.
   (b) Align the shaft spline and install the drive shaft with 2 bolts.
   Torque: 63.7 N*m (650 kgf*cm, 47 ft.*lbf)
   NOTICE:
   Do not damage the oil seal, boot and dust cover.

3. **CONNECT STEERING KNUCKLE WITH AXLE HUB LH**
   (a) Align the shaft splines in the drive shaft to the steering knuckle with axle hub.

4. **CONNECT STEERING KNUCKLE WITH AXLE HUB RH**
   HINT:
   Use the same procedures described for the LH side.

5. **CONNECT FRONT SUSPENSION NO. 1 LOWER ARM SUB-ASSEMBLY LH (See page AH-10)**

6. **CONNECT FRONT SUSPENSION NO. 1 LOWER ARM SUB-ASSEMBLY RH**
   HINT:
   Use the same procedures described for the LH side.

7. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page SP-31)**

8. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH**
   HINT:
   Use the same procedures described for the LH side.

9. **CONNECT TIE ROD END SUB-ASSEMBLY LH (See page PS-45)**

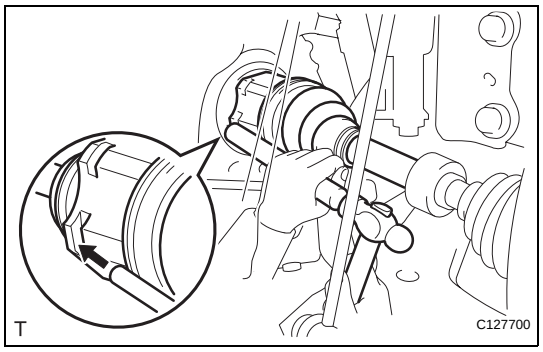
10. **CONNECT TIE ROD END SUB-ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.

11. **CONNECT FRONT SPEED SENSOR LH**
    (a) Connect the speed sensor (see page BC-191).

12. **CONNECT FRONT SPEED SENSOR RH**
HINT:
Use the same procedures described for the LH side.

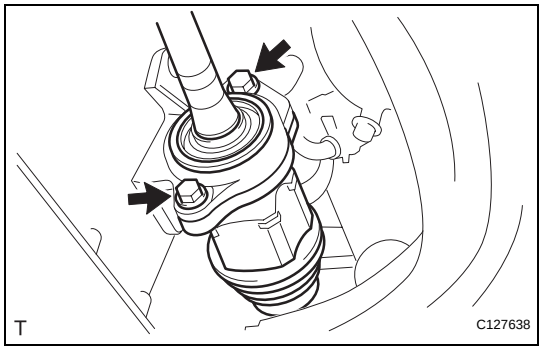
13. **INSTALL FRONT AXLE HUB NUT (See page AH-10)**

14. **INSTALL FRONT WHEEL**
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)



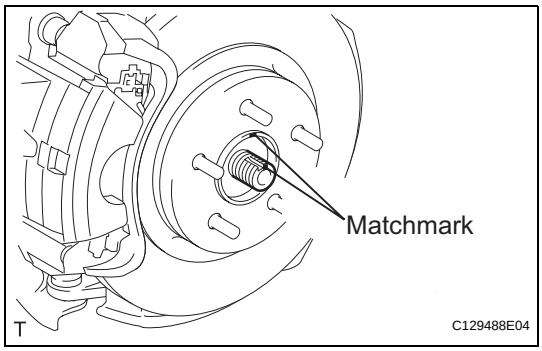
15. **ADD AUTOMATIC TRANSAXLE FLUID**
(a) Add automatic transaxle fluid for U140F (see page AX-152).
(b) Add automatic transaxle fluid for U241E (see page AX-151).

16. **CHECK FOR AUTOMATIC TRANSAXLE OIL LEAKAGE**



17. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
(a) Inspect and adjust the front wheel alignment (see page SP-3).

INSTALLATION



(2006/01-)

1. **INSTALL FRONT DRIVE SHAFT ASSEMBLY LH**
(a) Coat the spline of the inboard joint shaft with gear oil.
(b) Align the shaft splines and tap in the drive shaft with a brass bar and hammer.
NOTICE:
- **Set the snap ring with the opening side facing downwards.**
- **Be careful not to damage the oil seal, boot and dust cover.**

2. **INSTALL FRONT DRIVE SHAFT ASSEMBLY RH**
(a) Coat the spline of the inboard joint shaft with gear oil.
(b) Align the shaft splines and securely insert the drive shaft.
(c) Install the 2 bearing bracket bolts.
Torque: 63.7 N*m (650 kgf*cm, 47 ft.*lbf)
NOTICE:
Do not damage the oil seal, boot and dust cover.

3. **CONNECT STEERING KNUCKLE WITH AXLE HUB LH**
   (a) Align the shaft splines in the drive shaft to the steering knuckle with axle hub, and connect the steering knuckle with axle hub.

4. **CONNECT STEERING KNUCKLE WITH AXLE HUB RH**
   HINT:
   Use the same procedures described for the LH side.

5. **CONNECT FRONT SUSPENSION NO. 1 LOWER ARM SUB-ASSEMBLY LH (See page SP-24)**

6. **CONNECT FRONT SUSPENSION NO. 1 LOWER ARM SUB-ASSEMBLY RH**
   HINT:
   Use the same procedures described for the LH side.

7. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page SP-31)**

8. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH**
   HINT:
   Use the same procedures described for the LH side.

9. **CONNECT TIE ROD END SUB-ASSEMBLY LH (See page PS-45)**

10. **CONNECT TIE ROD END SUB-ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.

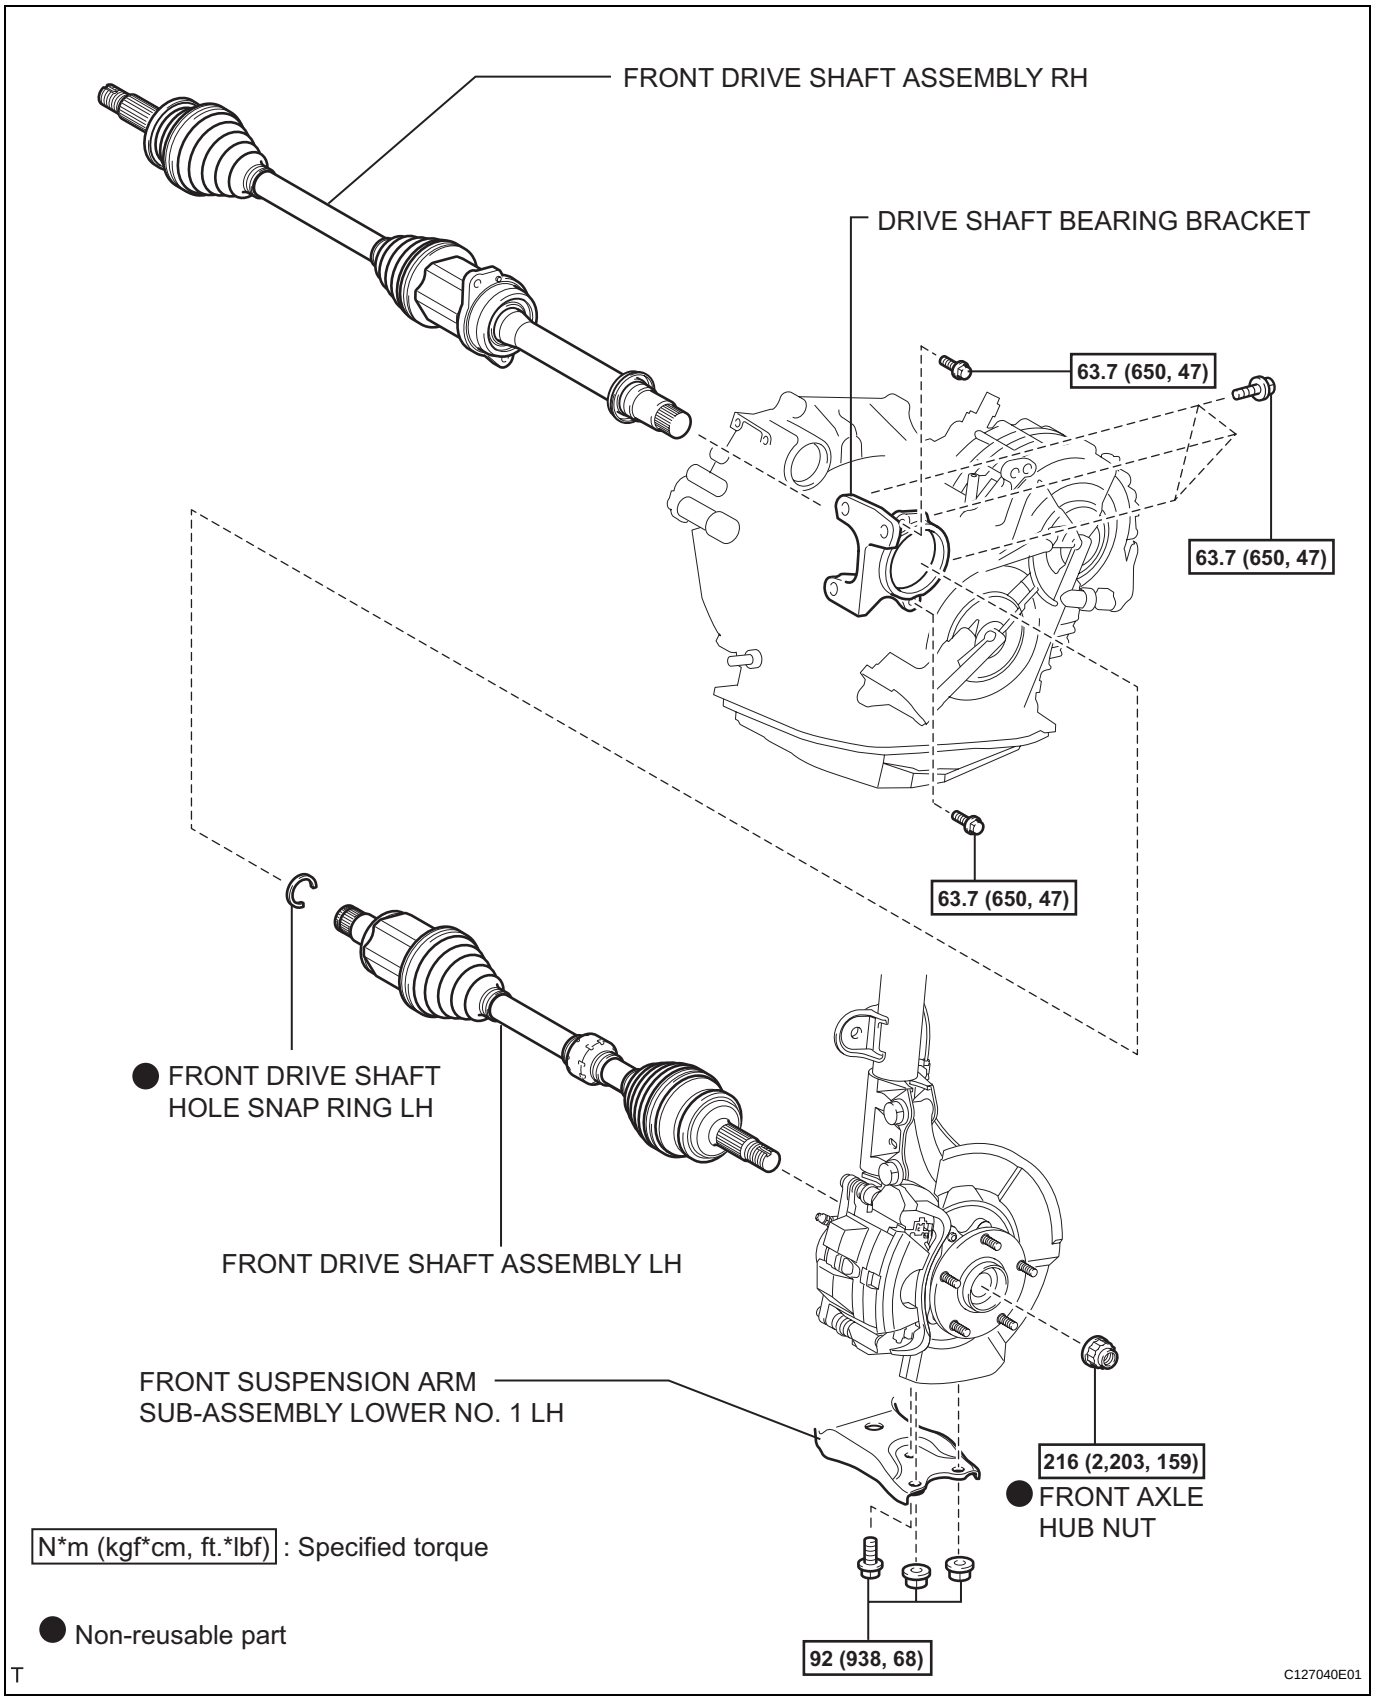
11. **CONNECT FRONT SPEED SENSOR LH**
    (a) Connect the speed sensor (see page BC-193).

12. **INSTALL FRONT SPEED SENSOR RH**
    HINT:
    Use the same procedures described for the LH side.

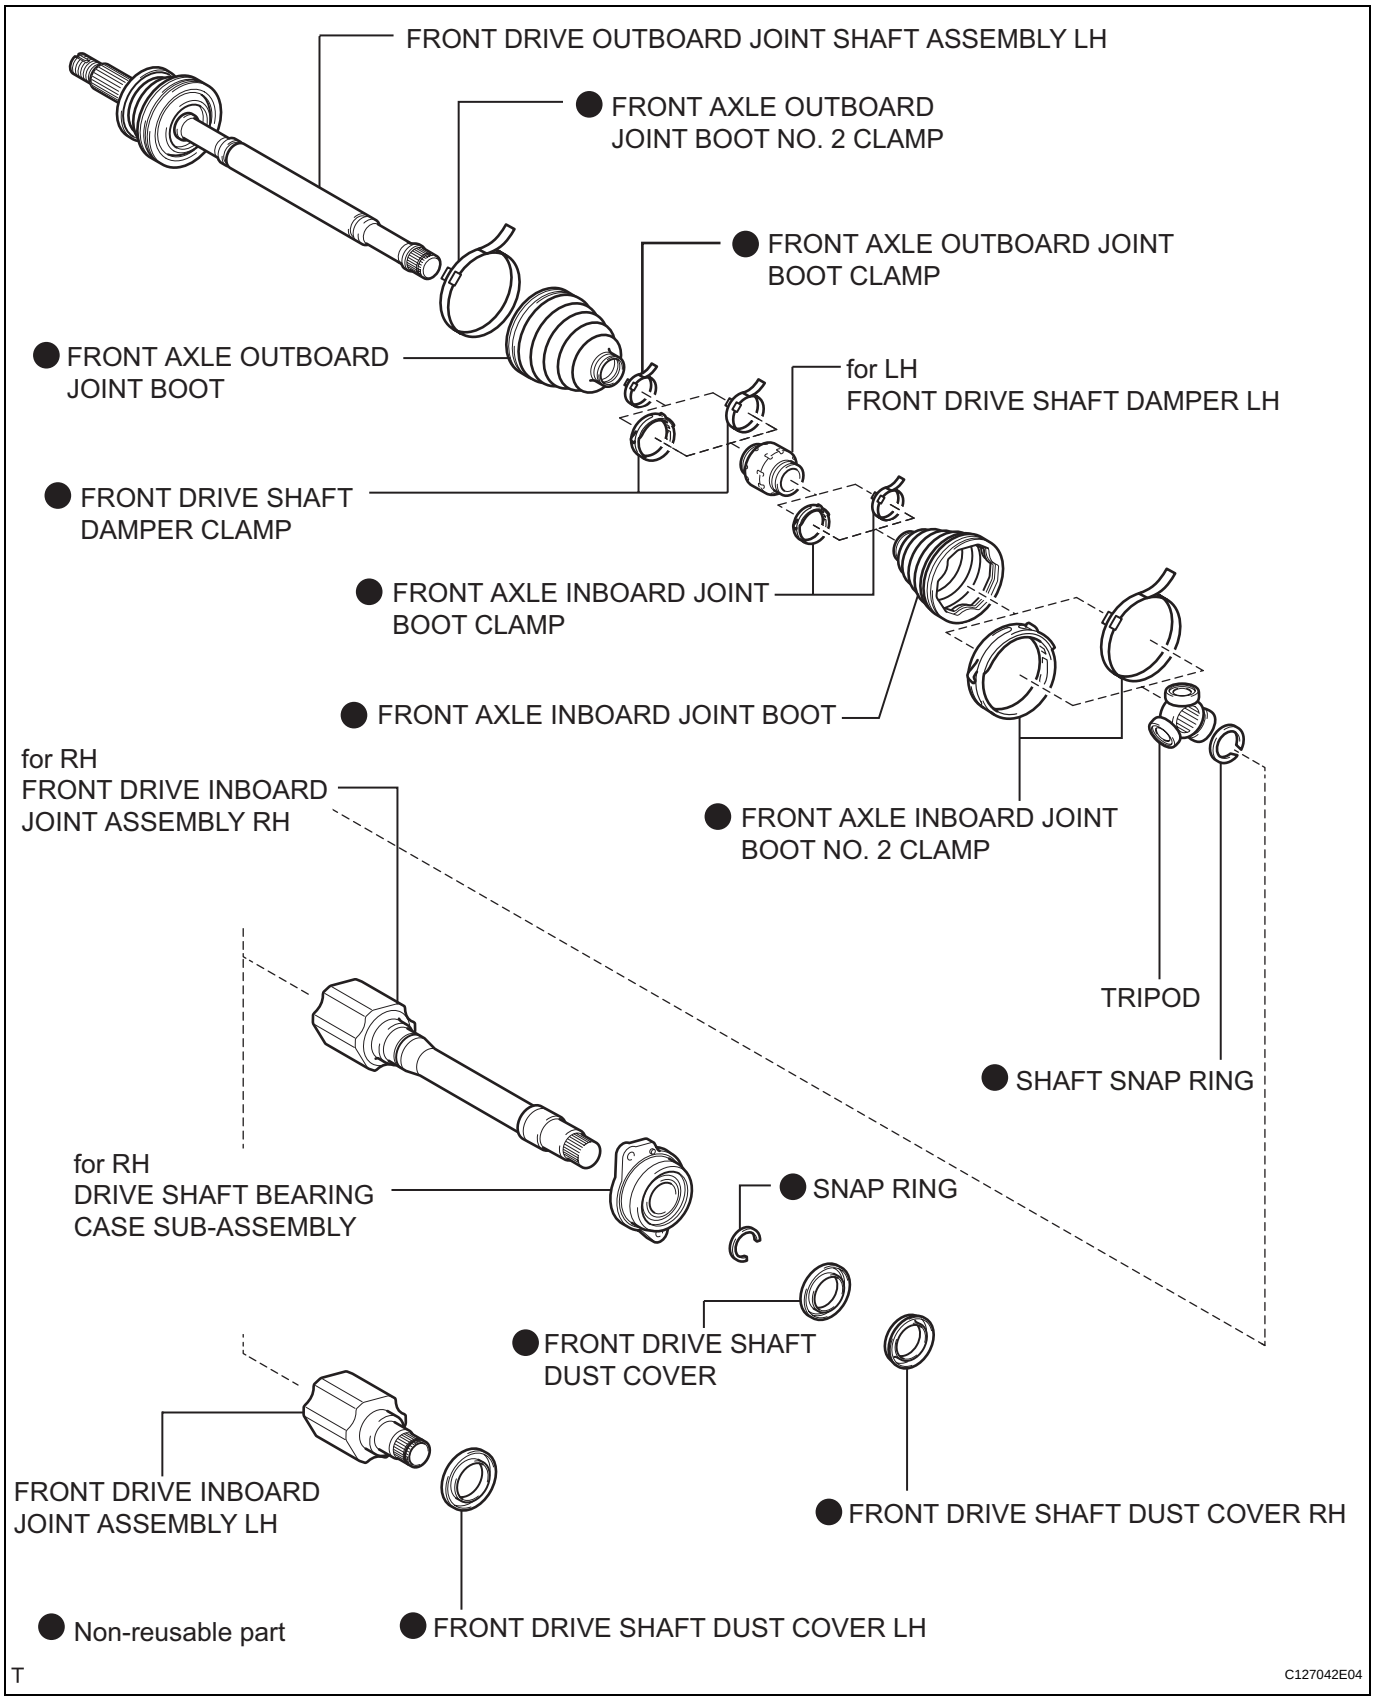
13. **INSTALL FRONT AXLE HUB NUT (See page AH-11)**

14. **INSTALL FRONT WHEEL**
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

15. **ADD AUTOMATIC TRANSAXLE FLUID**
    (a) Add automatic transaxle fluid for U140F (see page AX-152).
    (b) Add automatic transaxle fluid for U241E (see page AX-151).
    (c) Add automatic transaxle fluid for U151E (see page AX-177).



16. **CHECK FOR AUTOMATIC TRANSAXLE OIL LEAKAGE**



17. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
    (a) Inspect and adjust the front wheel alignment (see page SP-3).

FRONT DRIVE SHAFT ASSEMBLY (for 2WD)

COMPONENTS

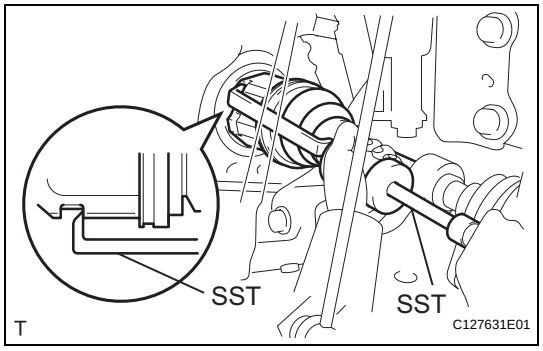
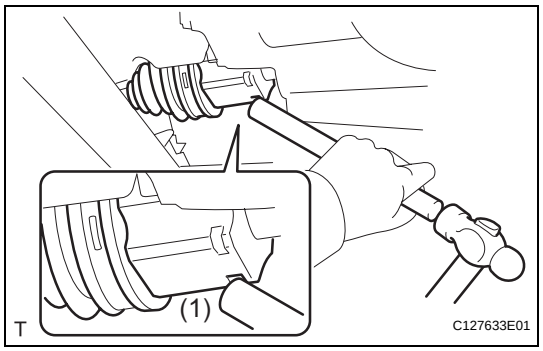
REMOVAL

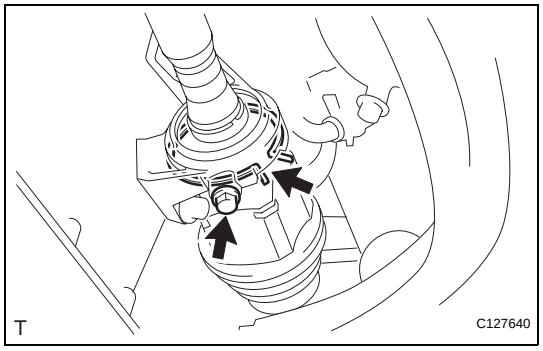


(2005/11-2006/01)

1. **REMOVE FRONT WHEEL**
2. **DRAIN AUTOMATIC TRANSAXLE FLUID**
   (a) Drain the automatic transaxle fluid for U140F (see page AX-147).
   (b) Drain the automatic transaxle fluid for U241E (see page AX-146).
3. **REMOVE FRONT AXLE HUB NUT (See page AH-6)**
4. **DISCONNECT FRONT SPEED SENSOR LH (See page BC-191)**
5. **DISCONNECT FRONT SPEED SENSOR RH**
   HINT:
   Use the same procedures described for the LH side.
6. **DISCONNECT FRONT DISC BRAKE CYLINDER ASSEMBLY LH (See page BR-40)**
7. **DISCONNECT FRONT DISC BRAKE CYLINDER ASSEMBLY RH**
   HINT:
   Use the same procedures described for the LH side.
8. **DISCONNECT FRONT STABILIZER LINK ASSEMBLY LH (See page SP-9)**
9. **DISCONNECT FRONT STABILIZER LINK ASSEMBLY RH**
   HINT:
   Use the same procedures described for the LH side.
10. **DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM SUB-ASSEMBLY LH (See page AH-7)**
11. **DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM SUB-ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.
12. **DISCONNECT STEERING KNUCKLE WITH AXLE HUB LH**
    (a) Put matchmarks on the drive shaft and axle hub.
    NOTICE:
    Do not punch the marks.
    (b) Using a plastic-faced hammer, disconnect the steering knuckle with axle hub.
    NOTICE:
    Be careful not to damage the boot and speed sensor rotor.
    Do not excessively push out the drive shaft from the axle assembly.
13. **DISCONNECT STEERING KNUCKLE WITH AXLE HUB RH**
    HINT:
    Use the same procedures described for the LH side.

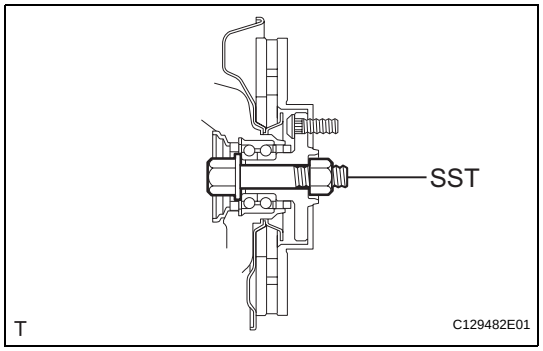


14. DISCONNECT TIE ROD END SUB-ASSEMBLY LH (See page PS-42)



15. DISCONNECT TIE ROD END SUB-ASSEMBLY RH
HINT:
Use the same procedures described for the LH side.

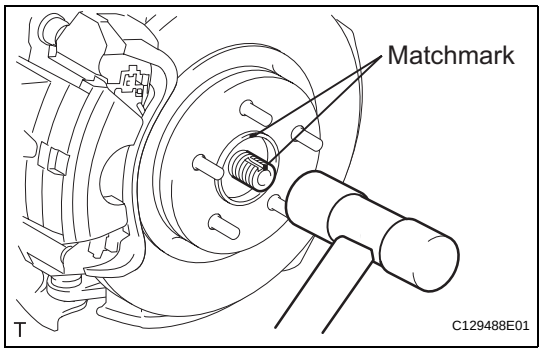
16. REMOVE FRONT DRIVE SHAFT ASSEMBLY LH
(a) Using SST, remove the front drive shaft.
SST 09520-01010, 09520-24010 (09520-32040)
NOTICE:
- **Be careful not to damage the transaxle case oil seal, inboard joint boot and drive shaft dust cover.**
- **Be careful not to drop the drive shaft.**



17. REMOVE FRONT DRIVE SHAFT ASSEMBLY RH
(a) Using a brass bar and hammer, set the brass bar against position (1) as shown in the illustration and remove the drive shaft.
NOTICE:
- **Do not damage the oil seal.**
- **Do not damage the drive shaft boot.**
- **Do not allow the drive shaft to fall off.**

(b) Squeeze the ends of the snap ring, and remove the snap ring from the bearing bracket.
(c) Remove the bearing bracket bolt and remove the front drive shaft from the bearing bracket.
NOTICE:
- **Do not damage the oil seal.**
- **Do not damage the boot.**
- **Do not allow the drive shaft to fall off.**

HINT:
If the connection is stiff, use a brass bar and hammer to lightly tap the edge of the inboard joint RH and remove it.

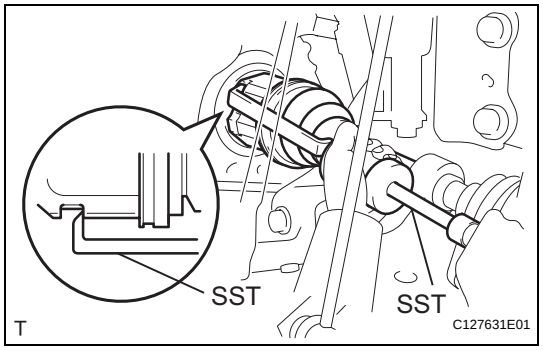


18. FIX FRONT AXLE ASSEMBLY
NOTICE:
The hub bearing could be damaged if it is subjected to the vehicle weight, such as when moving the vehicle with the drive shaft removed. Therefore, if it is absolutely necessary to place the vehicle weight on the hub bearing, first support it with SST.
SST 09608-16042 (09608-02021, 09608-02041)

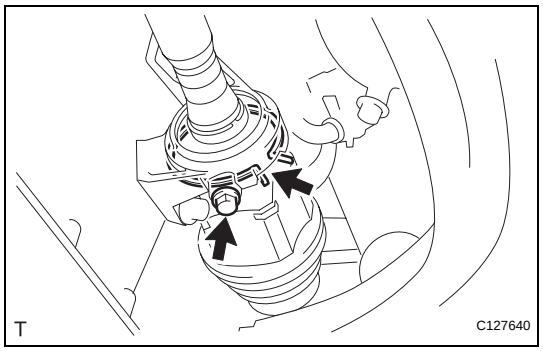
DS

REMOVAL

(2006/01-)



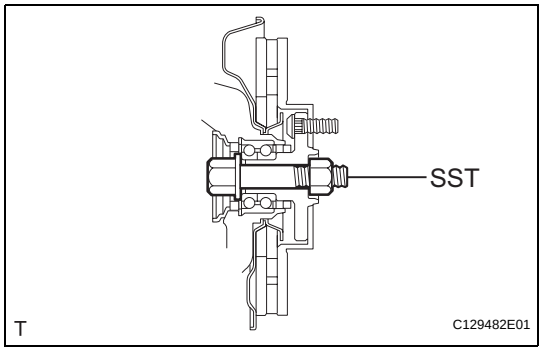
1. **REMOVE FRONT WHEEL**
2. **DRAIN AUTOMATIC TRANSAXLE FLUID**
   (a) Drain the automatic transaxle fluid for U140F (see page AX-147).
   (b) Drain the automatic transaxle fluid for U241E (see page AX-146).
   (c) Drain the automatic transaxle fluid for U151F (see page AX-173).
3. **REMOVE FRONT AXLE HUB NUT (See page AH-8)**
4. **DISCONNECT FRONT SPEED SENSOR LH (See page BC-191)**
5. **DISCONNECT FRONT SPEED SENSOR RH**
   HINT:
   Use the same procedures described for the LH side.
6. **DISCONNECT FRONT DISC BRAKE CYLINDER ASSEMBLY LH (See page BR-40)**
7. **DISCONNECT FRONT DISC BRAKE CYLINDER ASSEMBLY RH**
   HINT:
   Use the same procedures described for the LH side.
8. **DISCONNECT FRONT STABILIZER LINK ASSEMBLY LH (See page SP-30)**
9. **DISCONNECT FRONT STABILIZER LINK ASSEMBLY RH**
10. **DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM SUB-ASSEMBLY LH (See page SP-22)**
11. **DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM SUB-ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.
12. **DISCONNECT STEERING KNUCKLE WITH AXLE HUB LH**
    (a) Put matchmarks on the drive shaft and axle hub.
    NOTICE:
    Do not punch the marks.
    (b) Using a plastic-faced hammer, disconnect the steering knuckle with axle hub.
    NOTICE:
    Be careful not to damage the boot and speed sensor rotor.
    Do not excessively push out the drive shaft from the axle assembly.



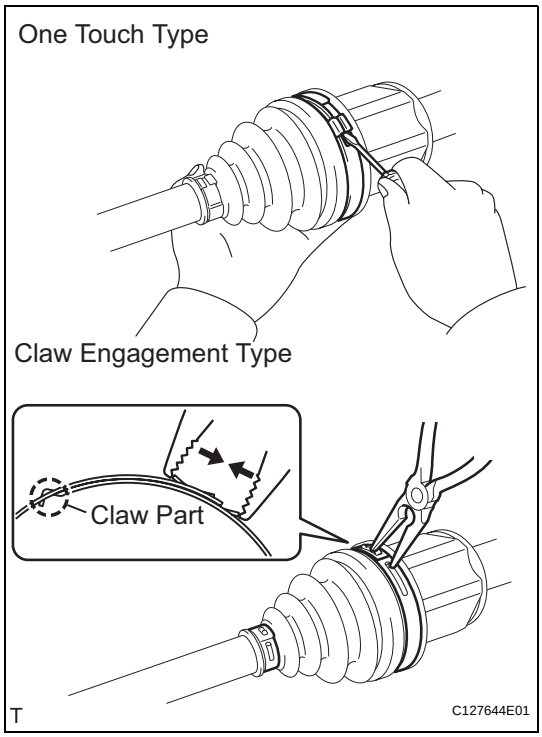
13. **DISCONNECT STEERING KNUCKLE WITH AXLE HUB RH**
    HINT:
    Use the same procedures described for the LH side.

14. DISCONNECT TIE ROD END SUB-ASSEMBLY LH
(See page PS-42)

15. DISCONNECT TIE ROD END SUB-ASSEMBLY RH
HINT:
Use the same procedures described for the LH side.



16. REMOVE FRONT DRIVE SHAFT ASSEMBLY LH
(a) Using SST, remove the front drive shaft.
SST 09520-01010, 09520-24010 (09520-32040)
NOTICE:
- **Be careful not to damage the transaxle case oil seal, inboard joint boot and drive shaft dust cover.**
- **Be careful not to drop the drive shaft.**



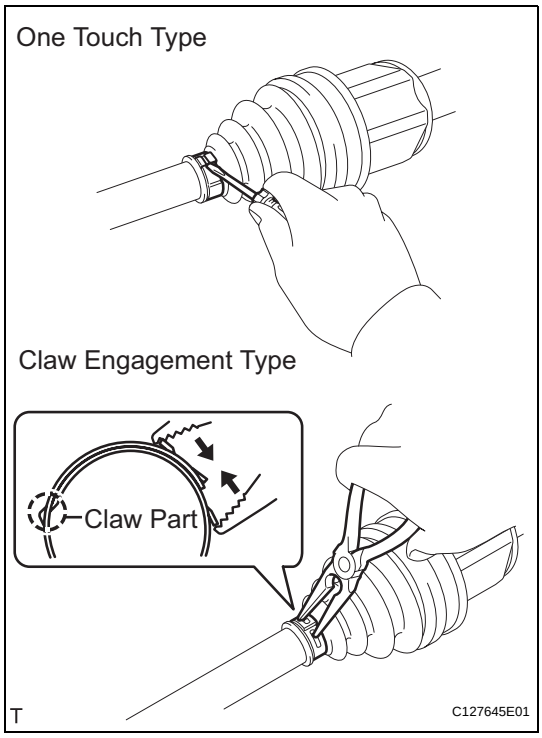
17. REMOVE FRONT DRIVE SHAFT ASSEMBLY RH
(a) Squeeze the ends of the snap ring, and remove the snap ring from the bearing bracket.
(b) Remove the bearing bracket bolt and remove the front drive shaft from the bearing bracket.
NOTICE:
- **Do not damage the oil seal.**
- **Do not damage the boot.**
- **Do not allow the drive shaft to fall off.**

HINT:
If the connection is stiff, use a brass bar and hammer to lightly tap the edge of the inboard joint RH and remove it.

18. FIX FRONT AXLE ASSEMBLY
NOTICE:
The hub bearing could be damaged if it is subjected to the vehicle weight, such as when moving the vehicle with the drive shaft removed. Therefore, if it is absolutely necessary to place the vehicle weight on the hub bearing, first support it with SST.
SST 09608-16042 (09608-02021, 09608-02041)

DISASSEMBLY

(2005/11-2006/01)



1. REMOVE FRONT AXLE INBOARD JOINT BOOT NO. 2 CLAMP LH

(a) One touch type:
  (1) Using a screwdriver, remove the No. 2 inboard joint boot clamp, as shown in the illustration.

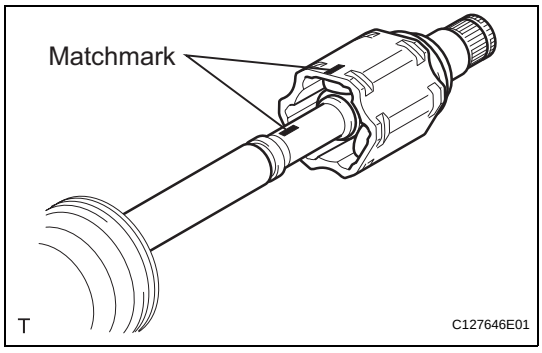
(b) Claw engagement type:
  (1) Using needle-nose pliers, remove the No. 2 inboard joint boot clamp, as shown in the illustration.

2. REMOVE FRONT AXLE INBOARD JOINT BOOT NO. 2 CLAMP RH

HINT:
Using needle-nose pliers, remove the No. 2 inboard joint boot clamp, as shown in the illustration.

3. REMOVE FRONT AXLE INBOARD JOINT BOOT CLAMP LH

(a) One touch type:
  (1) Using a screwdriver, remove the inboard joint boot clamp, as shown in the illustration.



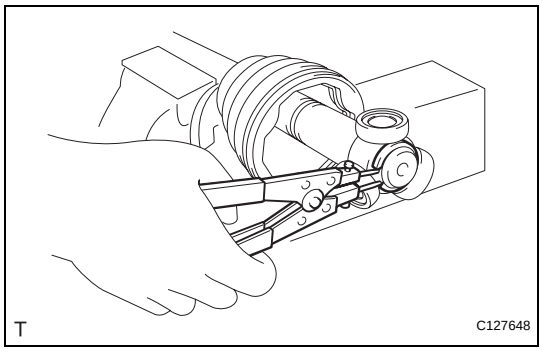
(b) Claw engagement type:
  (1) Using needle-nose pliers, remove the inboard joint boot clamp, as shown in the illustration.

4. REMOVE FRONT AXLE INBOARD JOINT BOOT CLAMP RH

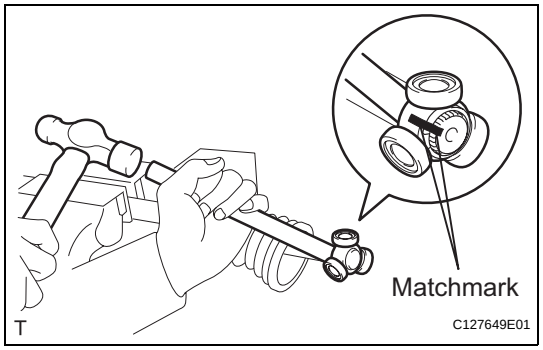
HINT:
Use the same procedures described for the LH side.

5. REMOVE FRONT AXLE INBOARD JOINT BOOT

(a) Remove the boot from the inboard joint.

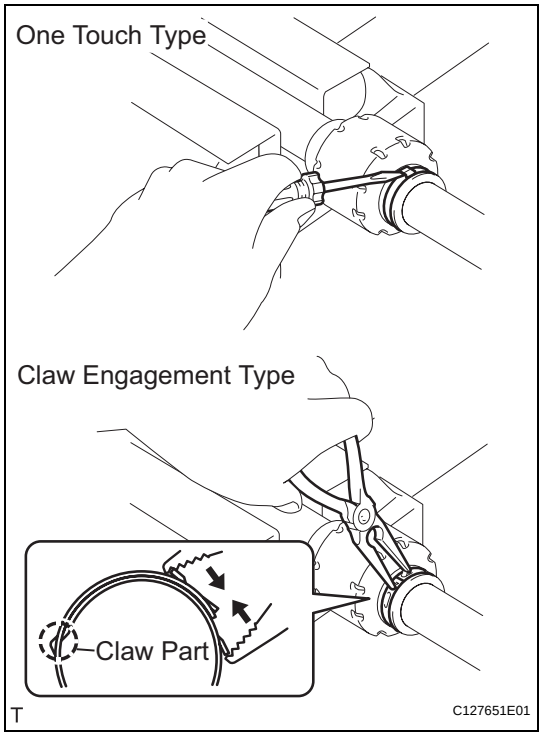


6. REMOVE FRONT DRIVE INBOARD JOINT ASSEMBLY LH



(a) Remove any old grease from the inboard joint.

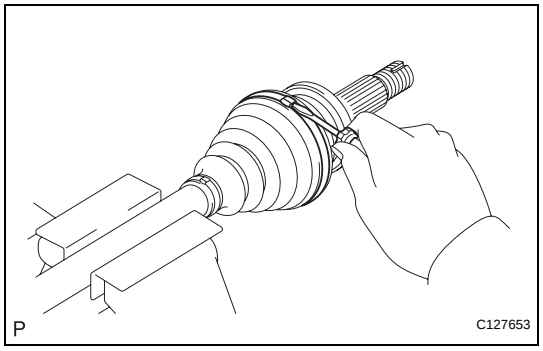
(b) Put matchmarks on the inboard joint and outboard joint shaft.
NOTICE:
Do not punch the marks.



(c) Remove the inboard joint from the outboard joint shaft.

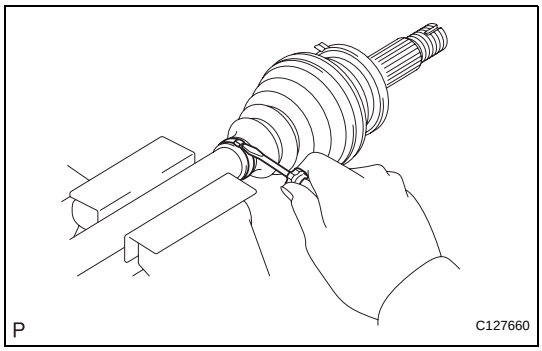
(d) Using a snap ring expander, remove the shaft snap ring.

(e) Put matchmarks on the outboard joint shaft and tripod joint.
NOTICE:
Do not punch the marks.
(f) Using a brass bar and hammer, tap out the tripod joint from the outboard joint shaft.
NOTICE:
Do not tap the rollers.
(g) Remove the inboard joint boot.



7. REMOVE FRONT DRIVE SHAFT DAMPER CLAMP LH
(a) One touch type:
(1) Using a screwdriver, remove the drive shaft damper clamp, as shown in the illustration.
(b) Claw engagement type:
(1) Using needle-nose pliers, remove the drive shaft damper clamp, as shown in the illustration.

8. REMOVE FRONT DRIVE SHAFT DAMPER LH
(a) Remove the front drive shaft damper.

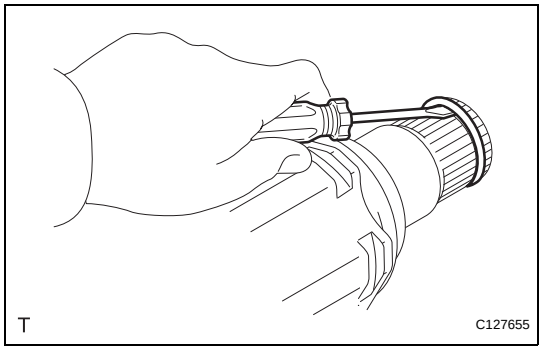


9. REMOVE FRONT DRIVE SHAFT DAMPER CLAMP RH
HINT:
Use the same procedures described for the LH side.

10. REMOVE FRONT DRIVE SHAFT DAMPER RH
HINT:
Use the same procedures described for the LH side.

11. REMOVE FRONT AXLE OUTBOARD JOINT BOOT NO. 2 CLAMP LH
(a) Using a screwdriver, remove the No. 2 outboard joint boot clamp, as shown in the illustration.

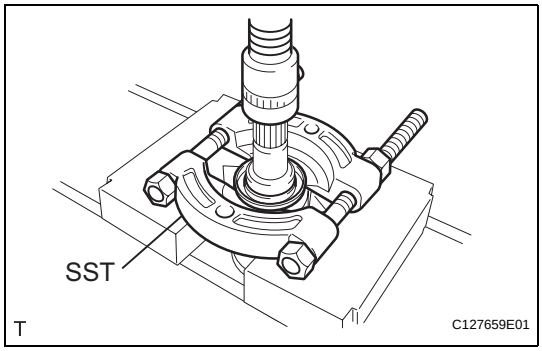
DS



12. REMOVE FRONT AXLE OUTBOARD JOINT BOOT CLAMP LH

(a) Using a screwdriver, remove the outboard joint boot clamp, as shown in the illustration.

13. REMOVE FRONT AXLE OUTBOARD JOINT BOOT



(a) Remove the outboard joint boot from the outboard joint shaft.

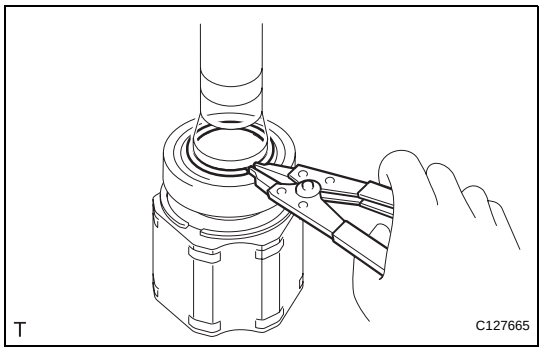
(b) Remove any old grease from the outboard joint.

14. REMOVE FRONT DRIVE SHAFT HOLE SNAP RING LH

(a) Using a screwdriver, remove the hole snap ring.

15. REMOVE FRONT DRIVE SHAFT DUST COVER LH

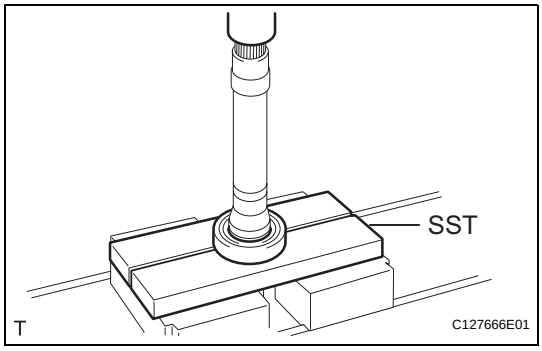
(a) Using SST and a press, press out the front drive shaft dust cover.



SST 09950-00020

NOTICE:

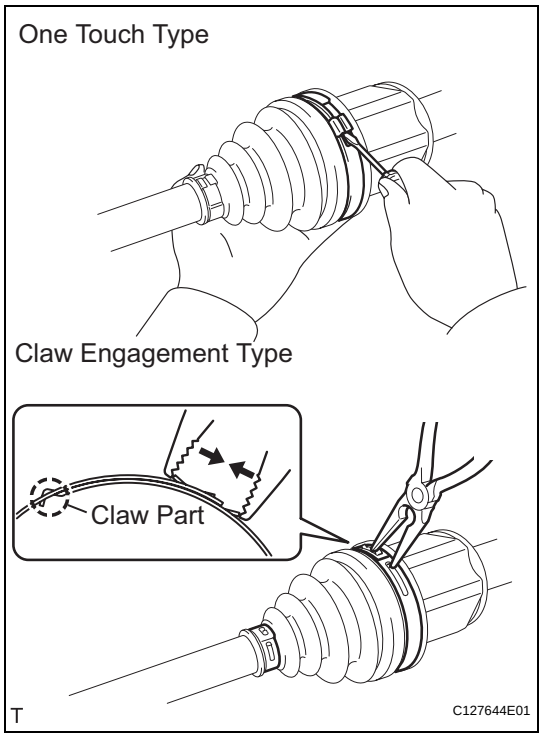
Be careful not to drop the inboard joint



16. REMOVE FRONT DRIVE SHAFT DUST COVER RH

(a) Using a press, press out the drive shaft dust cover.

17. REMOVE FRONT DRIVE SHAFT BEARING

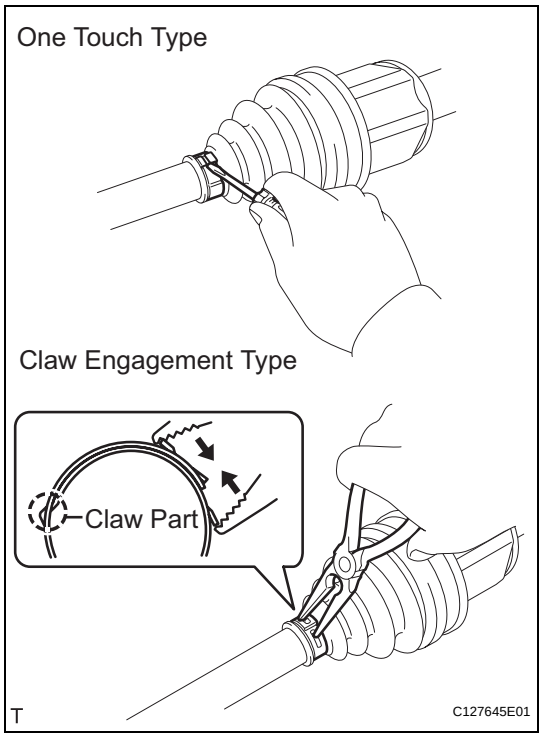


(a) Using a snap ring expander, remove the drive shaft hole snap ring.

(b) Using SST and a press, press out the drive shaft bearing.

SST 09527-10011

(c) Remove the snap ring.



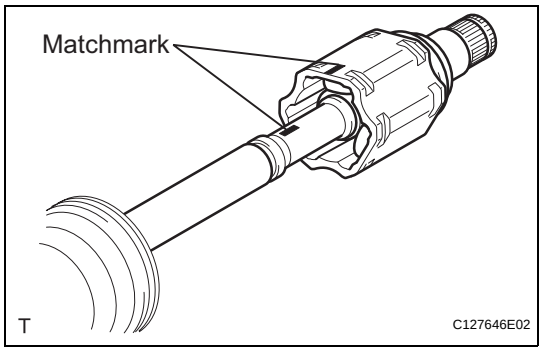
DISASSEMBLY

(2006/01-)

1. REMOVE FRONT AXLE INBOARD JOINT BOOT NO. 2 CLAMP

(a) One touch type:
Using a screwdriver, remove the No. 2 inboard joint boot clamp, as shown in the illustration.

(b) Claw engagement type:
Using needle-nose pliers, remove the No. 2 inboard joint boot clamp, as shown in the illustration.



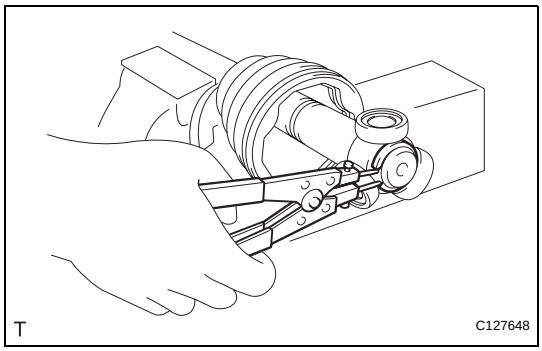
2. REMOVE FRONT AXLE INBOARD JOINT BOOT CLAMP

(a) One touch type:
Using a screwdriver, remove the inboard joint boot clamp, as shown in the illustration.

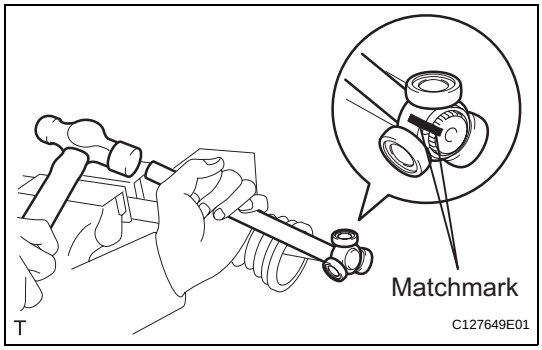
(b) Claw engagement type:
Using needle-nose pliers, remove the inboard joint boot clamp, as shown in the illustration.

3. REMOVE FRONT AXLE INBOARD JOINT BOOT

(a) Remove the boot from the inboard joint.



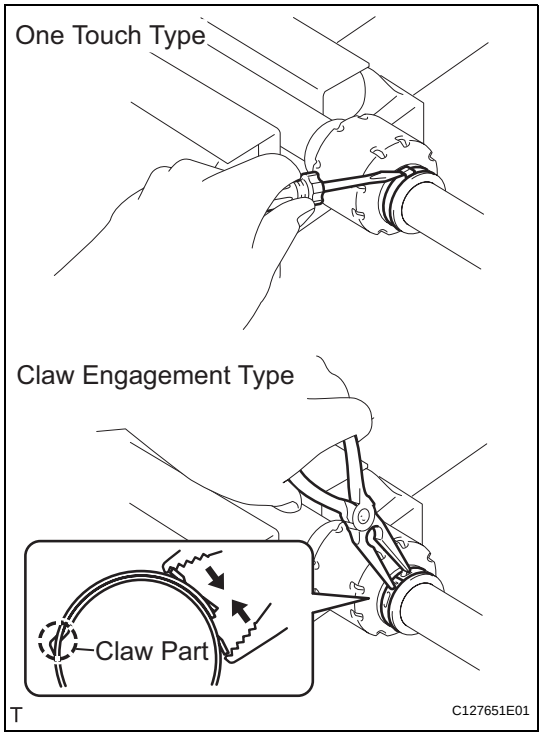
4. REMOVE FRONT DRIVE INBOARD JOINT ASSEMBLY LH



(a) Remove any old grease from the inboard joint.

(b) Put matchmarks on the inboard joint and outboard joint shaft.
NOTICE:
Do not punch the marks.

(c) Remove the inboard joint from the outboard joint shaft.



(d) Using a snap ring expander, remove the shaft snap ring.

(e) Put matchmarks on the outboard joint shaft and tripod joint.
NOTICE:
Do not punch the marks.
(f) Using a brass bar and hammer, tap out the tripod joint from the outboard joint shaft.
NOTICE:
Do not tap the rollers.
(g) Remove the inboard joint boot.

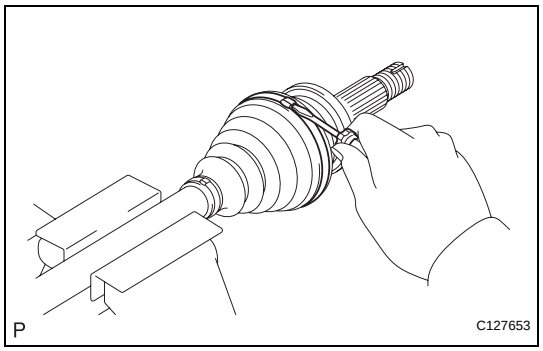
5. REMOVE FRONT DRIVE SHAFT INBOARD JOINT ASSEMBLY RH

HINT:
Use the same procedures described for the LH side.

6. REMOVE FRONT DRIVE SHAFT DAMPER CLAMP LH

(a) One touch type:
Using a screwdriver, remove the drive shaft damper clamp, as shown in the illustration.
(b) Claw engagement type:
Using needle-nose pliers, remove the drive shaft damper clamp, as shown in the illustration.

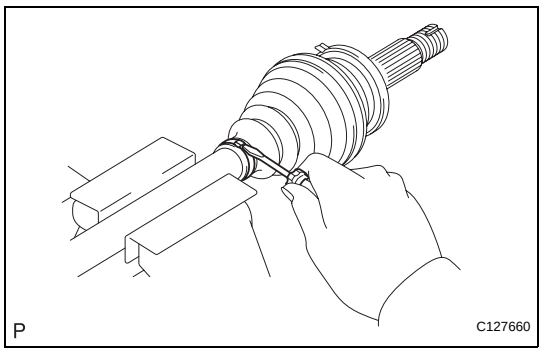
7. REMOVE FRONT DRIVE SHAFT DAMPER LH



(a) Remove the front drive shaft damper.

8. REMOVE FRONT DRIVE SHAFT DAMPER CLAMP RH

HINT:
Use the same procedures described for the LH side.

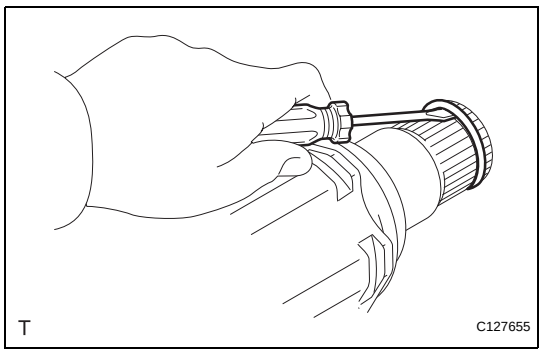


9. REMOVE FRONT DRIVE SHAFT DAMPER RH

HINT:
Use the same procedures described for the LH side.

10. REMOVE FRONT AXLE OUTBOARD JOINT BOOT NO. 2 CLAMP

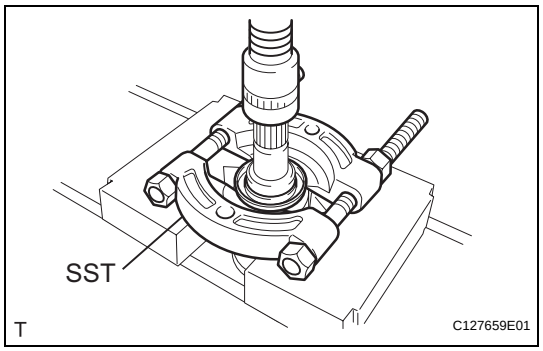
(a) Using a screwdriver, remove the No. 2 outboard joint boot clamp, as shown in the illustration.



11. REMOVE FRONT AXLE OUTBOARD JOINT BOOT CLAMP

(a) Using a screwdriver, remove the outboard joint boot clamp, as shown in the illustration.

12. REMOVE FRONT AXLE OUTBOARD JOINT BOOT



(a) Remove the outboard joint boot from the outboard joint shaft.

(b) Remove any old grease from the outboard joint.

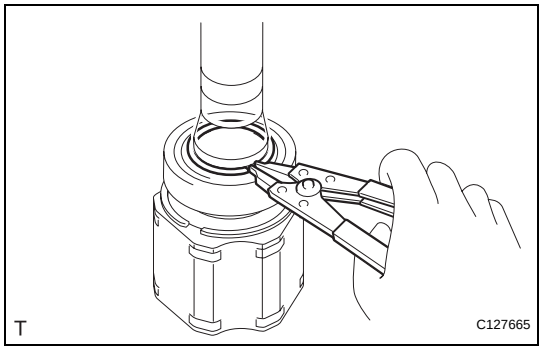
13. REMOVE FRONT DRIVE SHAFT HOLE SNAP RING LH

(a) Using a screwdriver, remove the hole snap ring.

14. REMOVE FRONT DRIVE SHAFT DUST COVER LH

(a) Using SST and a press, press out the front drive shaft dust cover.

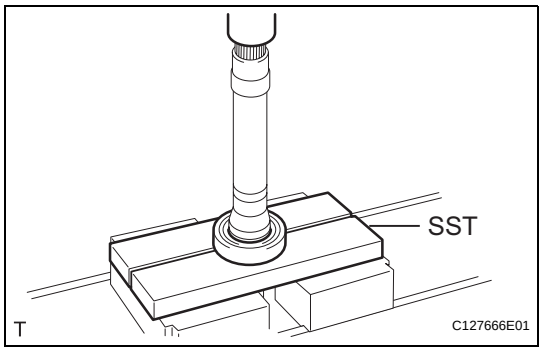
SST 09950-00020



NOTICE:

Be careful not to drop the inboard joint.

15. REMOVE FRONT DRIVE SHAFT DUST COVER RH

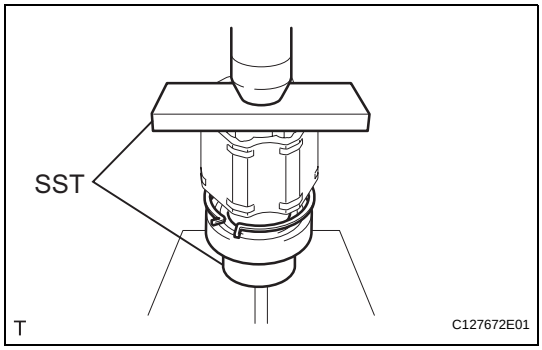


HINT:

Use the same procedures described for the LH side.

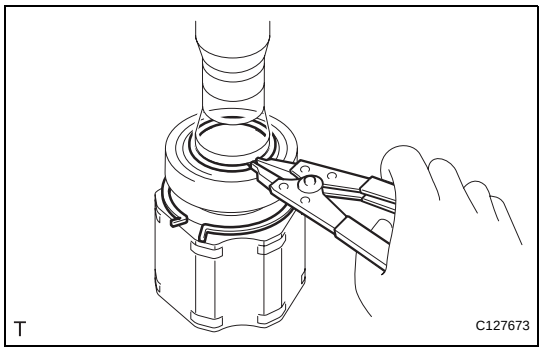
16. REMOVE FRONT DRIVE SHAFT BEARING (for RH)

(a) Using a snap ring expander, remove the drive shaft hole snap ring.



(b) Using SST and a press, press out the drive shaft bearing.
SST 09527-10011

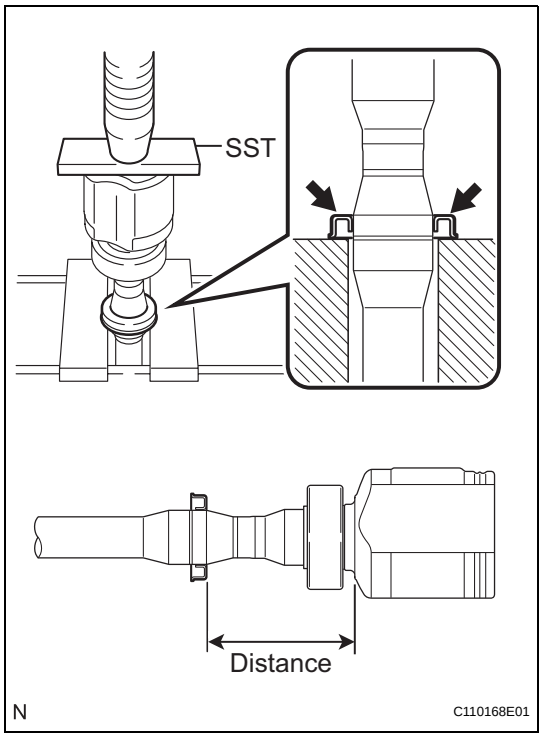
(c) Remove the bearing bracket snap ring.



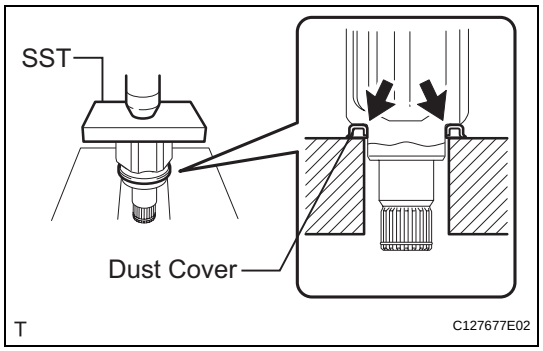
REASSEMBLY

(2005/11-2006/01)

1. INSTALL FRONT DRIVE SHAFT BEARING



(a) Using SST and a press, press in the drive shaft bearing to the inboard joint RH.
SST 09527-10011, 09710-04081
NOTICE:
The bearing should be installed completely.



(b) Using a snap ring expander, install a new drive shaft hole snap ring.

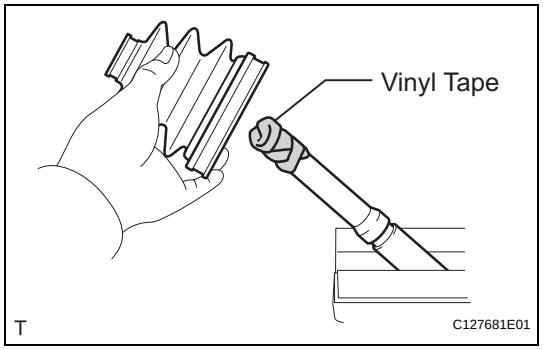
2. REMOVE FRONT DRIVE SHAFT DUST COVER RH

(a) Using SST and a press, press in a new drive shaft dust cover until the distance from the tip of the center drive shaft to the drive shaft dust cover reaches the specification, as shown in the illustration.
SST 09527-10011
Standard distance:
104 +-0.5 mm (4.09 +-0.02 in.)
NOTICE:
- **The dust cover should be installed completely.**
- **Be careful not to damage the dust cover.**

3. INSTALL FRONT DRIVE SHAFT DUST COVER LH

(a) Using SST and a press, press in a new drive shaft dust cover.

SST 09527-10011



NOTICE:

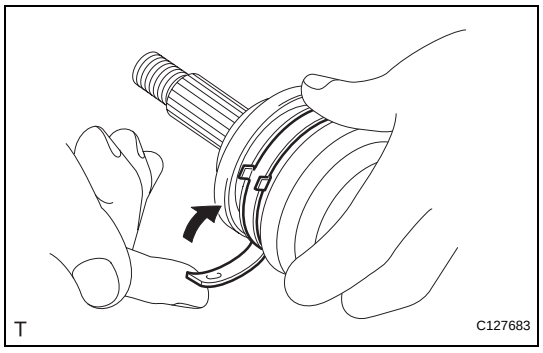
- **The dust cover should be installed completely.**
- **Be careful not to damage the dust cover.**

4. INSTALL FRONT DRIVE SHAFT HOLE SNAP RING LH

(a) Install a new hole snap ring.

5. INSPECT FRONT DRIVE SHAFT

6. INSTALL FRONT AXLE OUTBOARD JOINT BOOT



HINT:

Before installing the boots, wrap the spline of the drive shaft with vinyl tape to prevent the boots from being damaged.

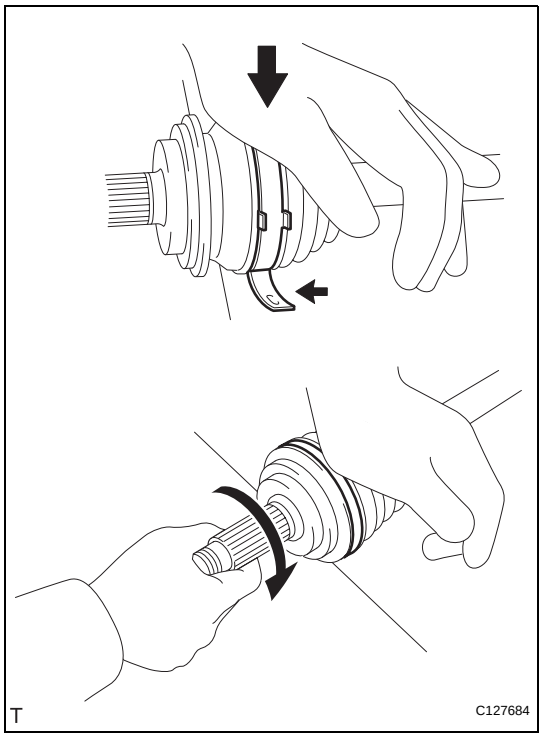
(a) Install new parts to the outboard joint shaft in the following order.
  (1) No. 2 outboard joint boot clamp
  (2) Outboard joint boot
  (3) Outboard joint boot clamp

(b) Pack the outboard joint shaft and boot with grease from the boot kit.

Standard grease capacity:
190 to 200 g (6.7 to 7.1 oz.)

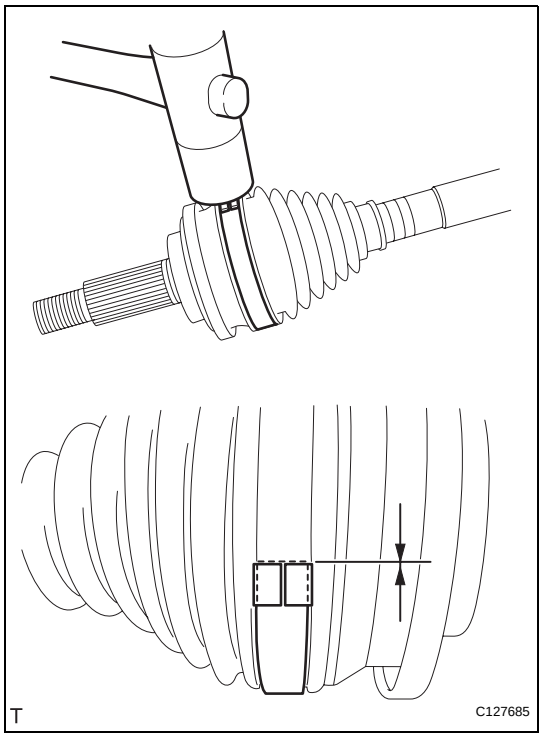
7. INSTALL FRONT AXLE OUTBOARD JOINT BOOT LH NO.2 CLAMP

CAUTION:



Wear protective gloves while performing the operation and be careful to avoid cutting your hands or other body parts.

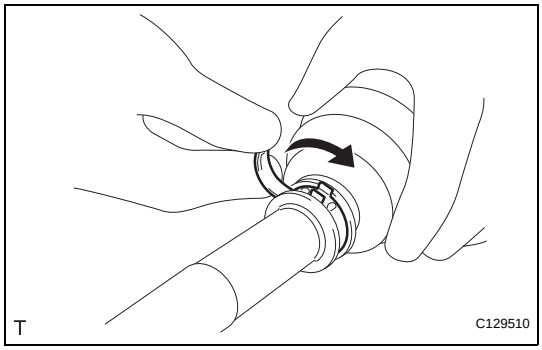
(a) Install a new boot clamp to the outboard joint boot and temporarily bend the lever.



NOTICE:

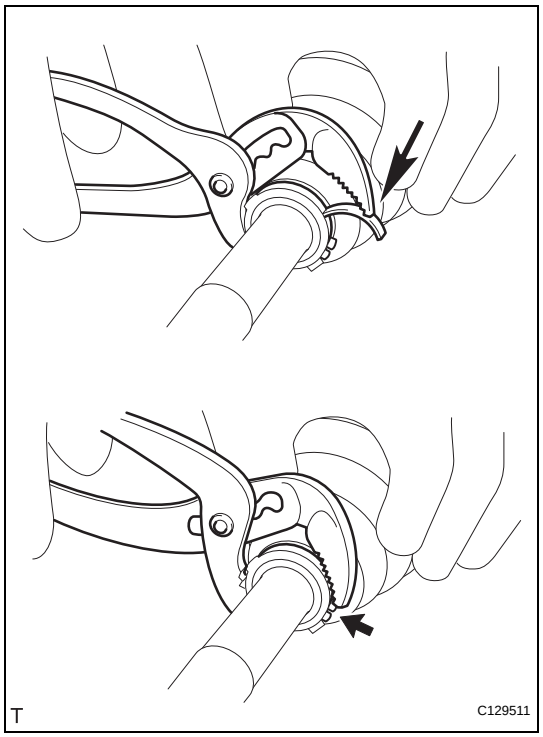
- **When temporarily bending the lever, make sure not to deform the band and lever.**
- **Set the clamp correctly in the guide groove and align it with the interior of the vehicle as much as possible.**

DS

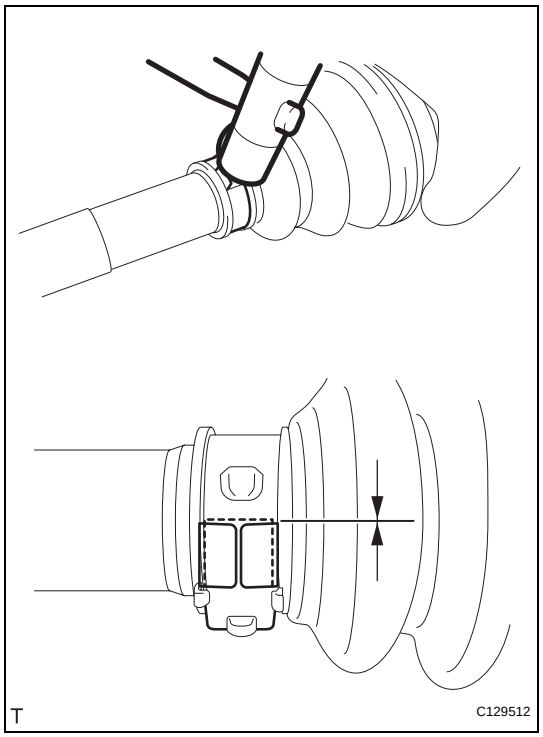


(b) With the joint on the working surface, use your body weight to press down on the joint with one hand. Then, roll the joint forward, as shown in the illustration, and press the lever in until a "click" sound is heard.
NOTICE:
- **Do not damage the deflector.**
- **Make sure the joint is in full contact with the joint surface at all times.**

(c) Using a plastic-faced hammer, fix the buckle into place by tapping it. At the same time, use the plastic-faced hammer to adjust the lift of the lever so that the gaps between the buckle flange and lever end flange become even.



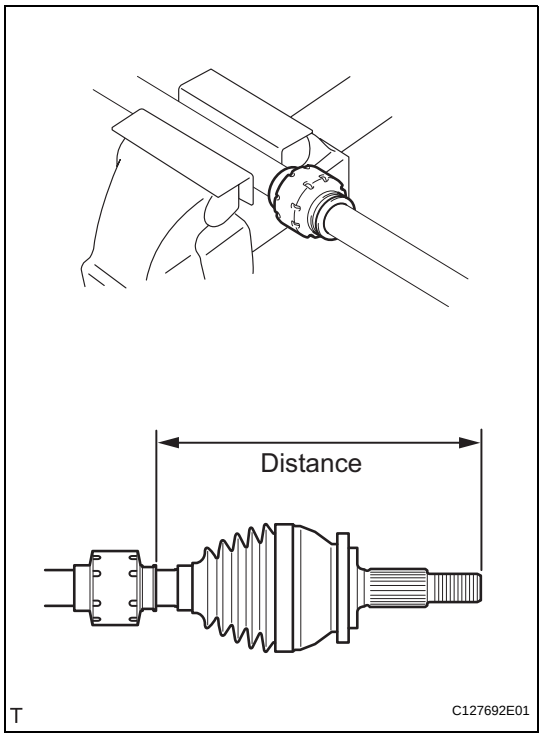
8. INSTALL FRONT AXLE OUTBOARD JOINT BOOT NO. 2 CLAMP RH
HINT:
Use the same procedures described for the LH side.



9. INSTALL FRONT AXLE OUTBOARD JOINT BOOT CLAMP LH
CAUTION:
Wear protective gloves while performing the operation and be careful to avoid cutting your hands or other body parts.

(a) Install a new boot clamp to the outboard joint boot and temporarily bend the lever.
NOTICE:
When temporarily bending the lever, make sure not to deform the band and lever.

(b) Using water pump pliers, temporarily lock the boot clamp by clamping it down until a "click" sound is heard.



(c) Using a plastic-faced hammer, fix the buckle into place by tapping it. At the same time, use the plastic-faced hammer to adjust the lift of the lever so that the gaps between the buckle flange and lever end flange become even.
NOTICE:
Do not strike the drive shaft forcefully with the plastic-faced hammer.

10. INSTALL FRONT AXLE OUTBOARD JOINT BOOT CLAMP RH

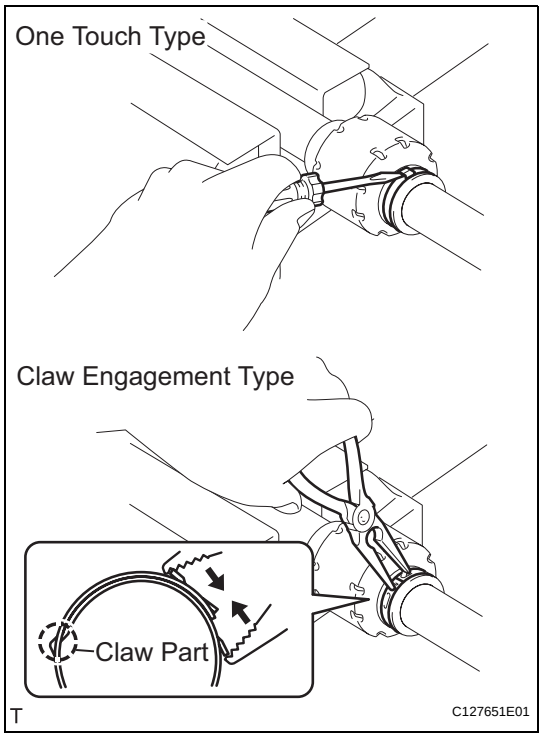
HINT:
Use the same procedures described for the LH side.

DS

11. INSTALL FRONT DRIVE SHAFT DAMPER LH

HINT:

Install the damper clamp to the outboard joint side.



(a) Install a new drive shaft damper clamp and the drive shaft damper to the drive shaft.

(b) Make sure that the damper is on the shaft groove.

(c) Set the distance, as described below.

Standard distance:

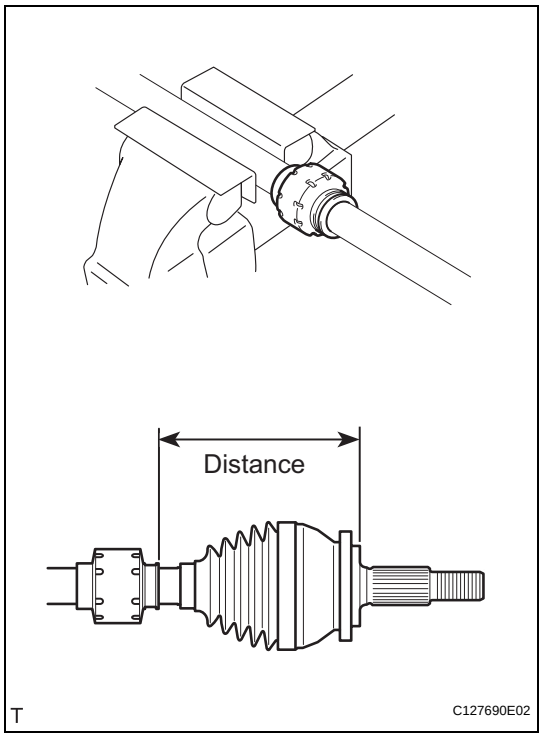
161 to 165 mm (6.339 to 6.496 in.)

12. INSTALL FRONT DRIVE SHAFT DAMPER CLAMP LH

(a) Hold the front drive shaft lightly in a soft vise.

(b) Install the drive shaft damper clamp to the damper.

NOTICE:



Be sure to install the clamp in the correct position.

(c) One touch type:

(1) Using a screwdriver, install the drive shaft damper clamp, as shown in the illustration.

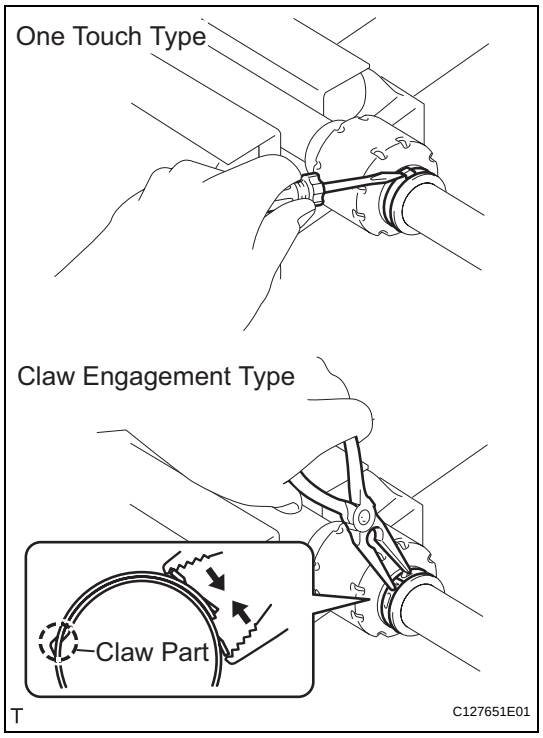
(d) Claw engagement type:

(1) Using needle-nose pliers, install the drive shaft damper clamp, as shown in the illustration.

13. INSTALL FRONT DRIVE SHAFT DAMPER RH

HINT:

Install the damper clamp to outboard joint side.



(a) Install a new drive shaft damper clamp and the drive shaft damper to the drive shaft.

(b) Make sure that the damper is on the shaft groove.

(c) Set the distance, as described below.

Standard distance:

161 to 165 mm (6.339 to 6.496 in.)

14. INSTALL FRONT DRIVE SHAFT DAMPER CLAMP RH

(a) Hold the front drive shaft lightly in a soft vise.

(b) Install the drive shaft damper clamp to the damper.

NOTICE:

Be sure to install the clamp in the correct position.

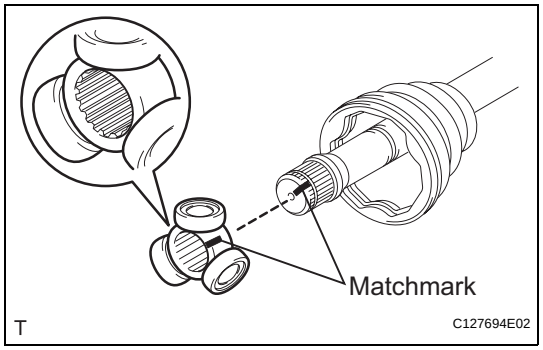
(c) One touch type:

(1) Using a screwdriver, install the drive shaft damper clamp, as shown in the illustration.

(d) Claw engagement type:

(1) Using needle-nose pliers, install the drive shaft damper clamp, as shown in the illustration.

15. INSTALL FRONT DRIVE INBOARD JOINT ASSEMBLY LH



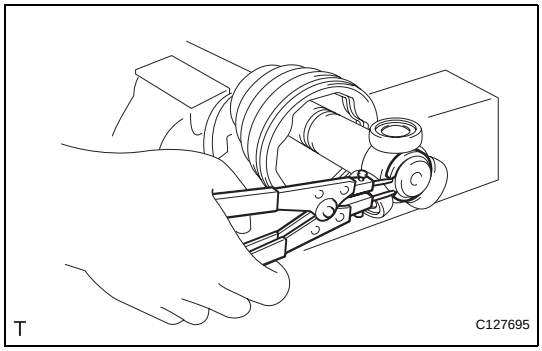
(a) Wrap the spline of the outboard joint shaft with vinyl tape to prevent the boots from being damaged.

(b) Install new parts to the outboard joint shaft in the following order.

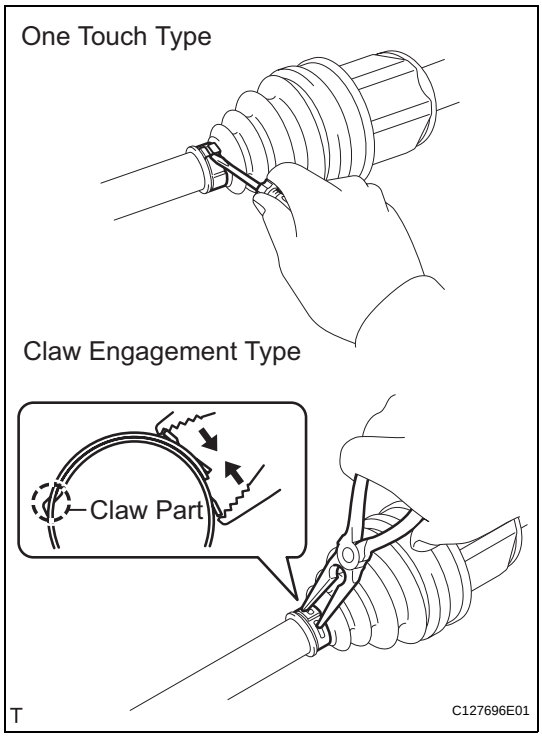
(1) Inboard joint boot clamp

(2) No. 2 inboard joint boot clamp

(3) Inboard joint boot



(c) Place the beveled side of the tripod axial spline toward the outboard joint.



(d) Align the matchmarks placed before removal.

(e) Using a brass bar and hammer, tap the tripod joint onto the drive shaft.

NOTICE:

- **Do not tap the rollers.**
- **Be sure to install the tripod joint in the correct direction**

(f) Pack the inboard joint shaft and boot with grease from the boot kit.
Standard grease capacity:
175 to 185 g (6.2 to 6.5 oz.)

(g) Using a snap ring expander, install a new shaft snap ring.

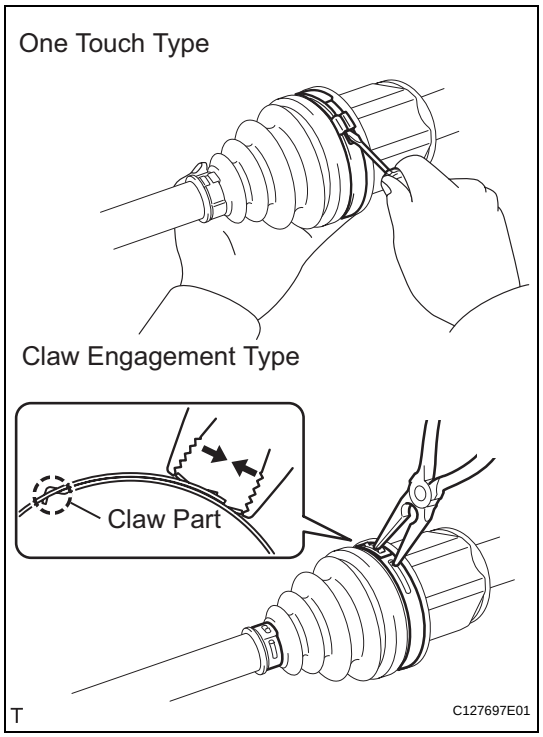
(h) Align the matchmarks, and install the inboard joint to the outboard joint shaft.

16. INSTALL FRONT DRIVE INBOARD JOINT ASSEMBLY RH

HINT:
Use the same procedures described for the LH side.

17. INSTALL FRONT AXLE INBOARD JOINT BOOT

(a) Install the inboard joint boot to the inboard joint.



18. INSTALL FRONT AXLE INBOARD JOINT BOOT CLAMP LH

(a) One touch type:
(1) Using a screwdriver, install the inboard joint boot clamp, as shown in the illustration.
NOTICE:
Be careful not to damage the boot.

(b) Claw engagement type:
(1) Using needle-nose pliers, install the inboard joint boot clamp, as shown in the illustration.
NOTICE:
Be careful not to damage the boot.

19. INSTALL FRONT AXLE INBOARD JOINT BOOT CLAMP RH

HINT:
Use the same procedures described for the LH side.

20. INSTALL FRONT AXLE INBOARD JOINT BOOT NO. 2 CLAMP LH

(a) One touch type:

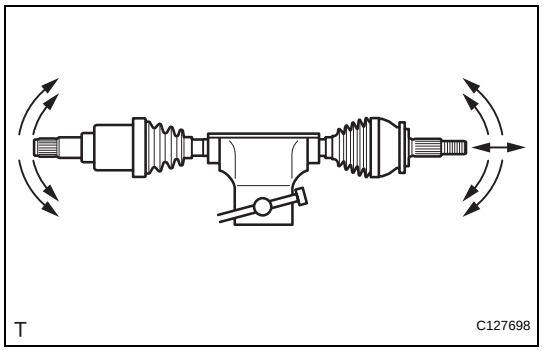
(1) Using a screwdriver, install the No. 2 inboard joint boot clamp, as shown in the illustration.

NOTICE:

Be careful not to damage the boot.

(b) Claw engagement type:

(1) Using needle-nose pliers, install the No. 2 inboard joint boot clamp, as shown in the illustration.



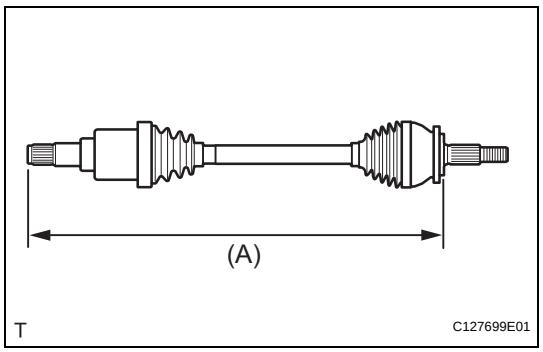
NOTICE:

Be careful not to damage the boot.

21. INSTALL FRONT AXLE INBOARD JOINT BOOT NO. 2 CLAMP RH

HINT:

Use the same procedures described for the LH side.



22. INSPECT FRONT DRIVE SHAFT

(a) Check that there is no severe play in the radial direction of the outboard joint.

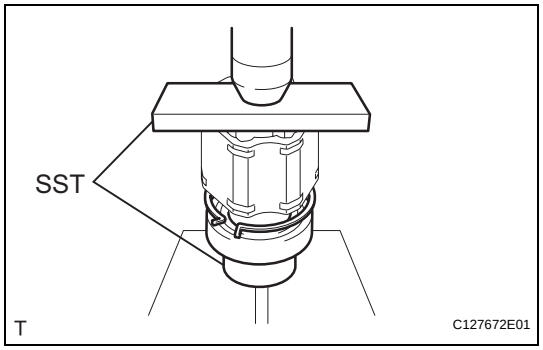
(b) Check that the inboard joint slides smoothly in the thrust direction.

(c) Check that there is no severe play in the radial direction of the inboard joint.

(d) Check the boots for damage.

NOTICE:

Keep the drive shaft assembly level during inspection.



HINT:

For dimension (A), refer to the following values.

Reference value:

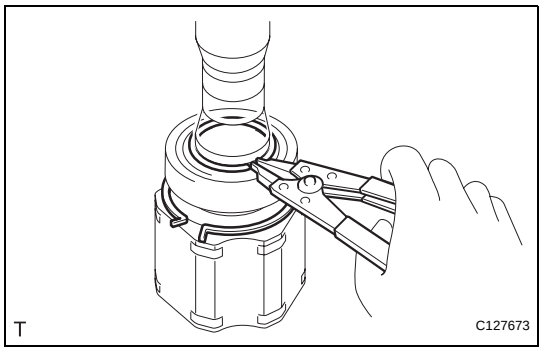
572.5 mm (22.539 in.) for LH side

918 mm (36.142 in.) for RH side

REASSEMBLY

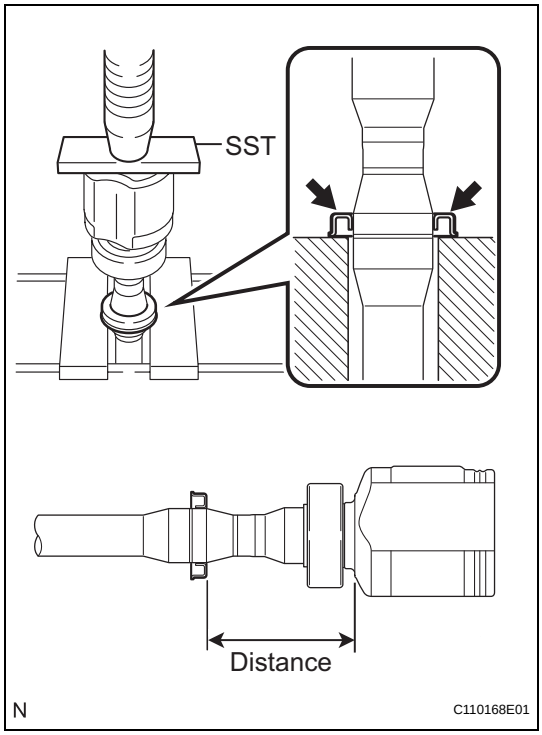
(2006/01-)

1. INSTALL FRONT DRIVE SHAFT BEARING (for RH)



(a) Install the bearing bracket snap ring to the inboard shaft.

(b) Using SST and a press, press in the drive shaft bearing to the inboard joint RH.



SST 09527-10011, 09710-04081

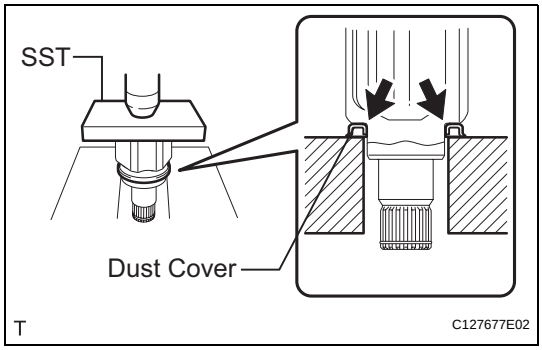
NOTICE:

The bearing should be installed completely.

(c) Using a snap ring expander, install a new drive shaft hole snap ring.

2. REMOVE FRONT DRIVE SHAFT DUST COVER RH

(a) Using SST and a press, press in a new drive shaft dust cover until the distance from the tip of the center drive shaft to the drive shaft dust cover reaches the specification, as shown in the illustration.



SST 09527-10011

Standard distance:

104 +-0.5 mm (4.09 +-0.02 in.)

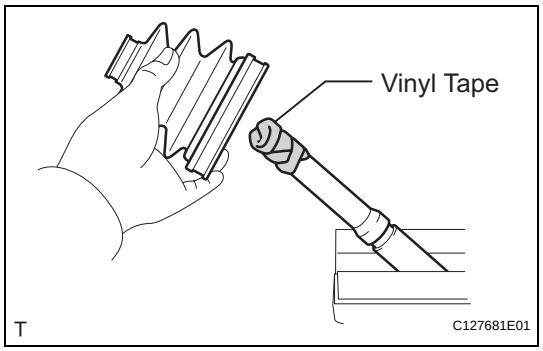
NOTICE:

Be careful not to damage the dust cover.

3. INSTALL FRONT DRIVE SHAFT DUST COVER LH

(a) Using SST and a press, press in a new drive shaft dust cover.

SST 09527-10011



NOTICE:

- **The dust cover should be installed so that the drive shaft contacts the dust cover at the location indicated by the arrows in the illustration.**
- **Be careful not to damage the dust cover.**

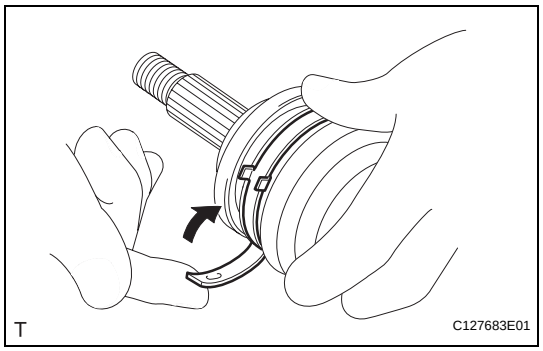
4. INSTALL FRONT DRIVE SHAFT HOLE SNAP RING LH

(a) Install a new hole snap ring.

5. INSPECT FRONT DRIVE SHAFT

6. INSTALL FRONT AXLE OUTBOARD JOINT BOOT

HINT:



Before installing the boots, wrap the spline of the drive shaft with vinyl tape to prevent the boots from being damaged.

(a) Install new parts to the outboard joint shaft in the following order.
  (1) Outboard joint boot No. 2 clamp
  (2) Outboard joint boot
  (3) Outboard joint boot clamp

(b) Pack the outboard joint shaft and boot with grease from the boot kit.

Standard grease capacity

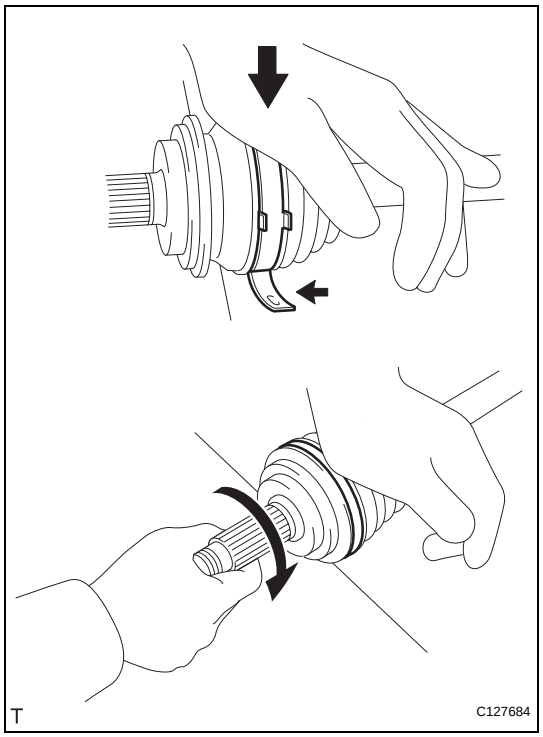
Item	Grease capacity
2AZ-FE	190 to 200 g (6.7 to 7.1 oz.)
2GR-FE	205 to 215 g (7.2 to 7.6 oz.)

7. INSTALL FRONT AXLE OUTBOARD JOINT BOOT NO. 2 CLAMP

CAUTION:

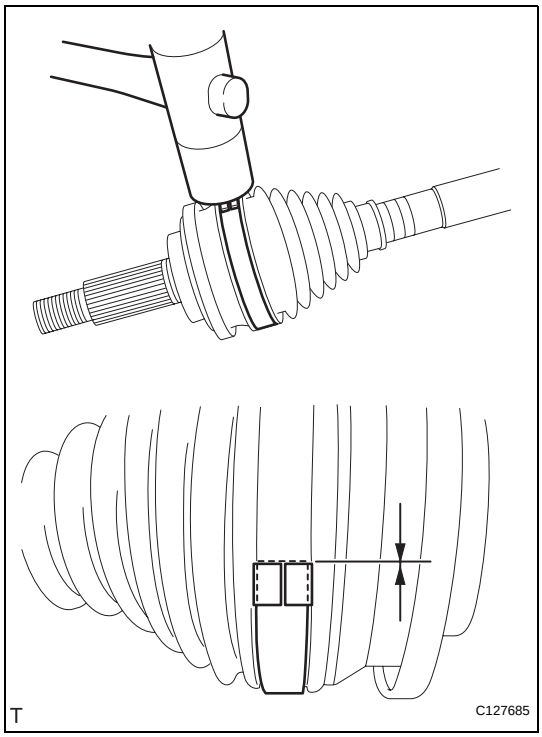
Wear protective gloves while performing the operation and be careful to avoid cutting your hands or other body parts.

(a) Install a new boot clamp to the outboard joint boot and temporarily bend the lever.



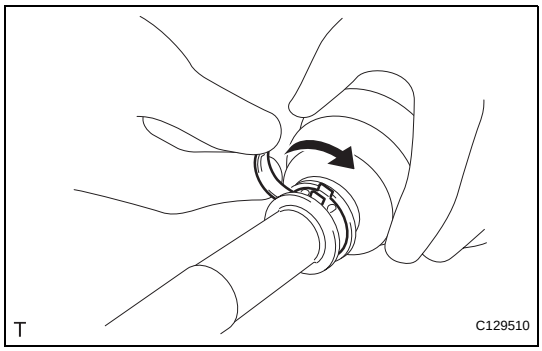
NOTICE:

- **When temporarily bending the lever, make sure not to deform the band and lever.**
- **Set the clamp correctly in the guide groove and align it with the interior of the vehicle as much as possible.**



(b) With the joint on the working surface, use your body weight to press down on the joint with one hand. Then, roll the joint forward, as shown in the illustration, and press the lever in until a "click" sound is heard.

NOTICE:

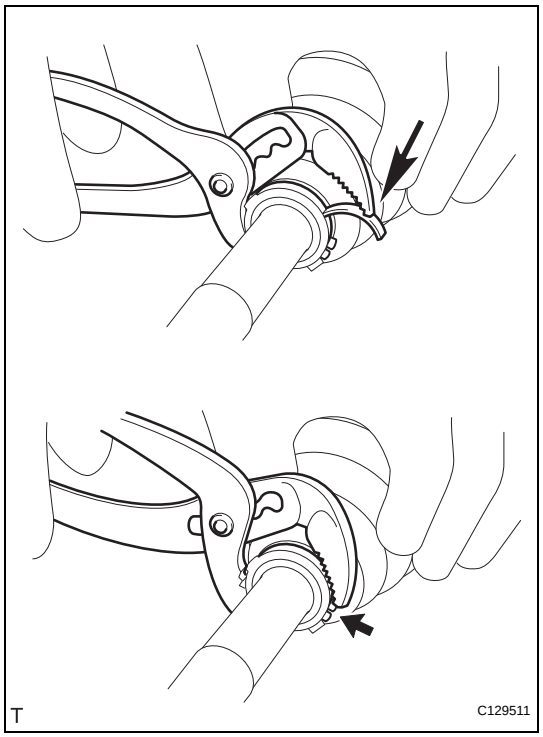


- **Do not damage the deflector.**
- **Make sure the joint is in full contact with the joint surface at all times.**

DS

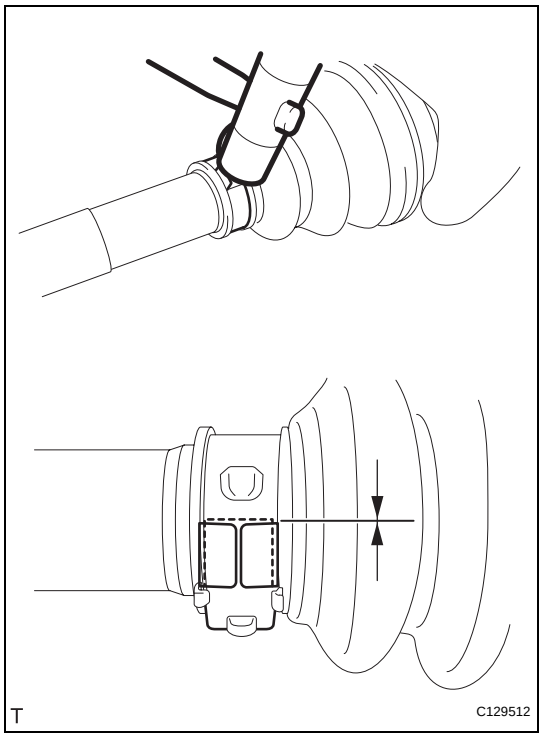
(c) Using a plastic-faced hammer, fix the buckle into place by tapping it. At the same time, use the plastic-faced hammer to adjust the lift of the lever so that the gaps between the buckle flange and lever end flange become even.

8. INSTALL FRONT AXLE OUTBOARD JOINT BOOT CLAMP



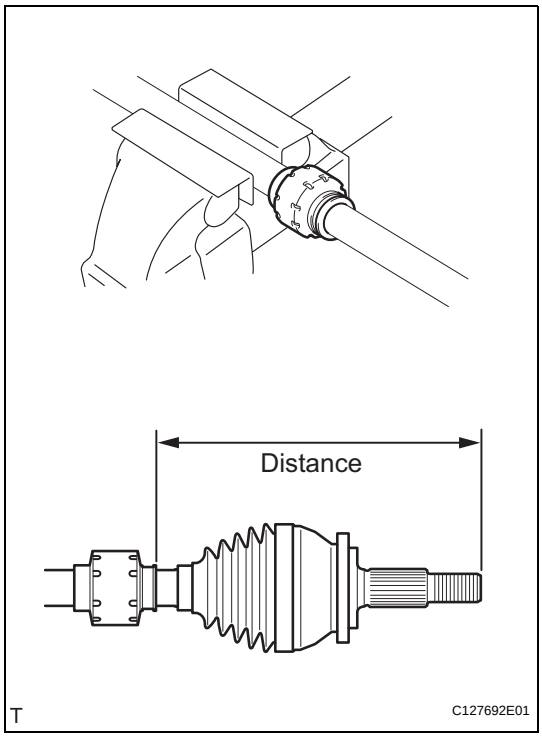
CAUTION:

Wear protective gloves while performing the operation and be careful to avoid cutting your hands or other body parts.



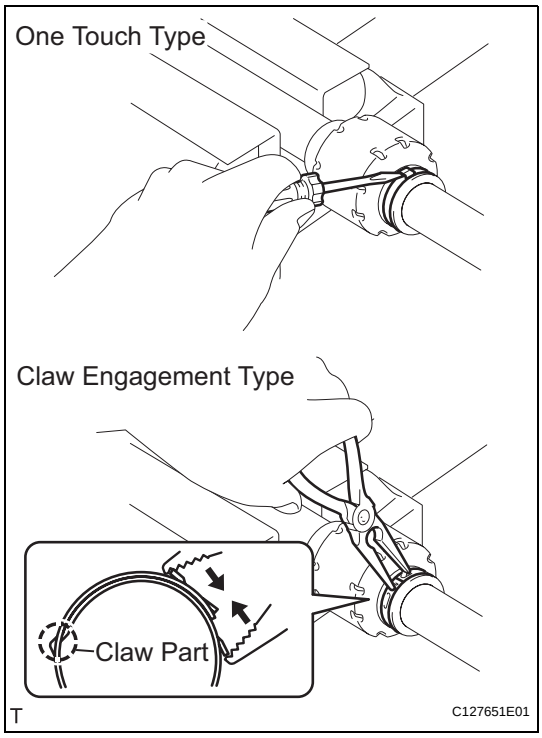
(a) Install a new boot clamp to the outboard joint boot and temporarily bend the lever.

NOTICE:



When temporarily bending the lever, make sure not to deform the band and lever.

(b) Using water pump pliers, temporarily lock the boot clamp by clamping it down until a "click" sound is heard.



(c) Using a plastic-faced hammer, fix the buckle into place by tapping it. At the same time, use the plastic-faced hammer to adjust the lift of the lever so that the gaps between the buckle flange and lever end flange become even.
NOTICE:
Do not strike the drive shaft forcefully with the plastic-faced hammer.

9. INSTALL FRONT DRIVE SHAFT DAMPER LH

(a) Install a new drive shaft damper clamp and the drive shaft damper to the drive shaft.
HINT:
Install the damper clamp to the outboard joint side.

(b) Set the distance, as described below.
Standard distance:
161 to 165 mm (6.339 to 6.496 in.)

10. INSTALL FRONT DRIVE SHAFT DAMPER CLAMP LH

(a) Hold the front drive shaft lightly in a soft vise.

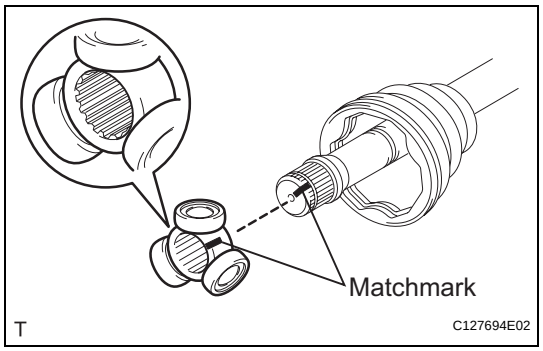
(b) Install the drive shaft damper clamp to the damper.
NOTICE:
Be sure to install the clamp in the correct position.

(c) One touch type:
Using a screwdriver, install the drive shaft damper clamp, as shown in the illustration.

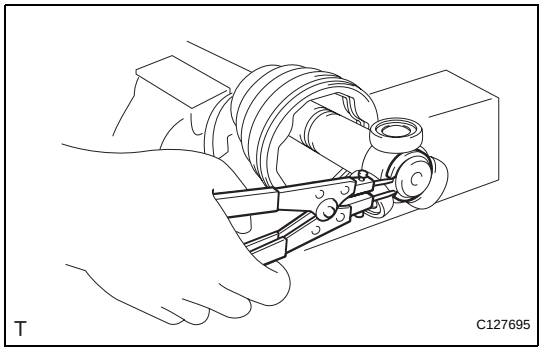
(d) Claw engagement type:
Using needle-nose pliers, install the drive shaft damper clamp, as shown in the illustration.

11. INSTALL FRONT DRIVE SHAFT DAMPER RH

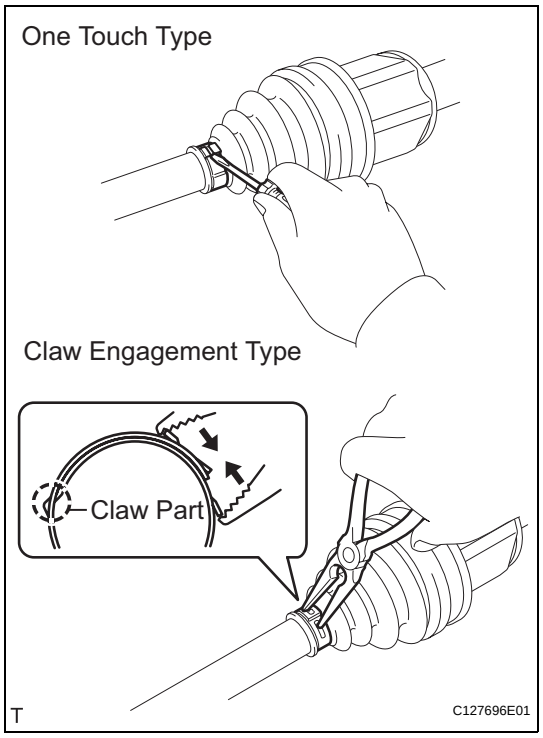
HINT:
Use the same procedures described for the LH side.



12. INSTALL FRONT DRIVE SHAFT DAMPER CLAMP RH



HINT:
Use the same procedures described for the LH side.



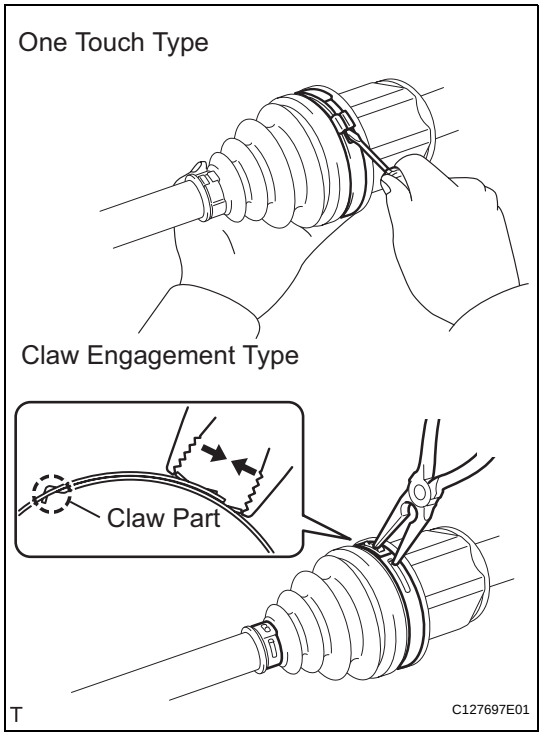
13. INSTALL FRONT DRIVE INBOARD JOINT ASSEMBLY LH

(a) Wrap the spline of the outboard joint shaft with vinyl tape to prevent the boots from being damaged.

(b) Install new parts to the outboard joint shaft in the following order.
(1) Inboard joint boot clamp
(2) Inboard joint boot No. 2 clamp
(3) Inboard joint boot

(c) Place the beveled side of the tripod axial spline toward the outboard joint.
(d) Align the matchmarks placed before removal.
(e) Using a brass bar and hammer, tap the tripod joint onto the drive shaft.
NOTICE:
- **Do not tap the rollers.**
- **Be sure to install the tripod joint in the correct direction.**

(f) Pack the inboard joint shaft and boot with grease from the boot kit.
Standard grease capacity:
175 to 185 g (6.2 to 6.5 oz.)

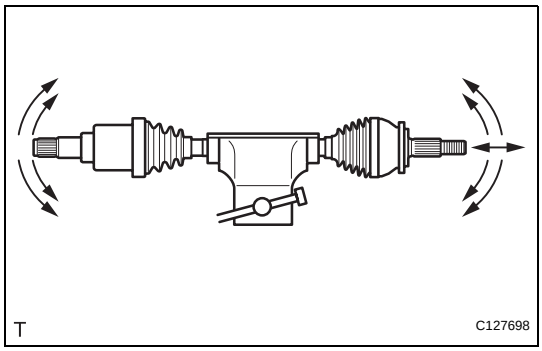


(g) Using a snap ring expander, install a new shaft snap ring.
(h) Align the matchmarks, and install the inboard joint to the outboard joint shaft.

14. INSTALL FRONT DRIVE INBOARD JOINT ASSEMBLY RH
HINT:
Use the same procedures described for the LH side.

15. INSTALL FRONT AXLE INBOARD JOINT BOOT
(a) Install the inboard joint boot to the inboard joint.

16. INSTALL FRONT AXLE INBOARD JOINT BOOT CLAMP
(a) One touch type:
Using a screwdriver, install the inboard joint boot clamp, as shown in the illustration.
NOTICE:
Be careful not to damage the boot.
(b) Claw engagement type:
Using needle-nose pliers, install the inboard joint boot clamp, as shown in the illustration.
NOTICE:
Be careful not to damage the boot.

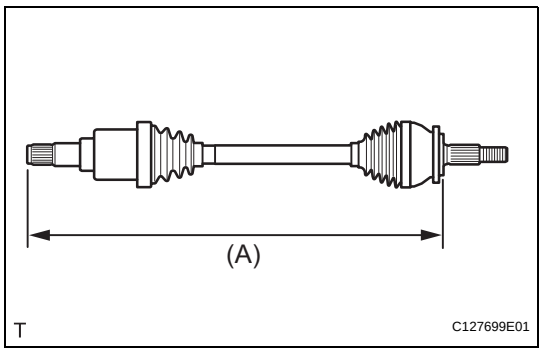


DS

17. INSTALL FRONT AXLE INBOARD JOINT BOOT NO. 2 CLAMP

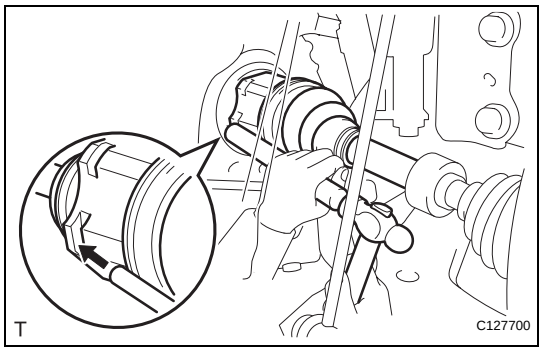
(a) One touch type:
Using a screwdriver, install the No. 2 inboard joint boot clamp, as shown in the illustration.
NOTICE:
Be careful not to damage the boot.

(b) Claw engagement type:
Using needle-nose pliers, install the No. 2 inboard joint boot clamp, as shown in the illustration.
NOTICE:
Be careful not to damage the boot.



18. INSPECT FRONT DRIVE SHAFT

(a) Check that there is no severe play in the radial direction of the outboard joint.

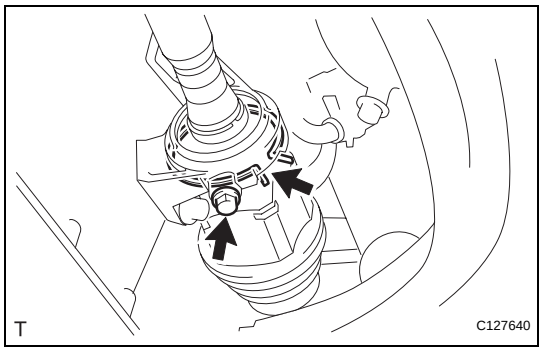


(b) Check that the inboard joint slides smoothly in the thrust direction.

(c) Check that there is no severe play in the radial direction of the inboard joint.

(d) Check the boots for damage.
NOTICE:
Keep the drive shaft assembly level during inspection.
HINT:
For dimension (A), refer to the following values.
Standard reference value

Item	Drive shaft LH (Dimension)	Drive shaft RH (Dimension)
2AZ-FE	585.2 mm (23.039 in.)	893.9 mm (35.193 in.)
2GR-FE	570.9 mm (22.476 in.)	922.4 mm (36.315 in.)



INSTALLATION

(2005/11-2006/01)

1. **INSTALL FRONT DRIVE SHAFT ASSEMBLY LH**
   (a) Coat the spline of the inboard joint shaft with gear oil.
   (b) Using a brass bar and hammer, align the shaft splines in the drive shaft.
   NOTICE:
   - **Set the snap ring with the opening side facing downwards.**
   - **Be careful not to damage the oil seal, boot and dust cover.**

2. **INSTALL FRONT DRIVE SHAFT ASSEMBLY RH**
   (a) Coat the spline of the inboard joint shaft with gear oil.
   (b) Align the shaft splines and securely insert the drive shaft.
   NOTICE:
   Do not damage the oil seal.

   (c) Squeeze the ends of the bracket hole snap ring and install it to the bearing bracket.
   (d) Install the bearing bracket bolt
   Torque: 32.4 N*m (330 kgf*cm, 24 ft.*lbf)

3. **CONNECT STEERING KNUCKLE WITH AXLE HUB LH**
   (a) Align the shaft splines in the drive shaft to the steering knuckle with axle hub.

4. **CONNECT STEERING KNUCKLE WITH AXLE HUB RH**
   HINT:
   Use the same procedures described for LH side.

5. **CONNECT FRONT SUSPENSION LOWER NO. 1 ARM SUB-ASSEMBLY LH (See page AH-10)**

6. **CONNECT FRONT SUSPENSION LOWER NO. 1 ARM SUB-ASSEMBLY RH**
   HINT:
   Use the same procedures described for LH side.

7. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page SP-31)**

8. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH**
   HINT:
   Use the same procedures described for LH side.

9. **INSTALL TIE ROD END SUB-ASSEMBLY LH (See page PS-45)**

10. **INSTALL TIE ROD END SUB-ASSEMBLY RH**
    HINT:
    Use the same procedures described for LH side.

11. **CONNECT FRONT SPEED SENSOR LH**
    (a) Connect the speed sensor (see page BC-193).

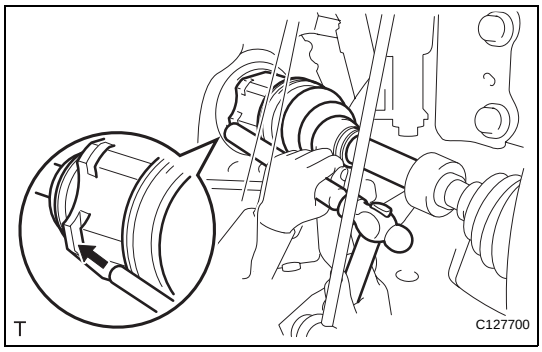
DS

12. CONNECT FRONT SPEED SENSOR RH
HINT:
Use the same procedures described for the LH side.

13. INSTALL FRONT AXLE HUB NUT (See page AH-10)

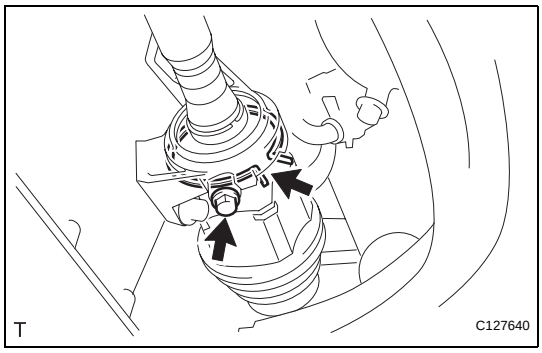
14. INSTALL FRONT WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

15. ADD AUTOMATIC TRANSAXLE FLUID
(a) Add automatic transaxle fluid for U140F (see page AX-152).
(b) Add automatic transaxle fluid for U241E (see page AX-151).

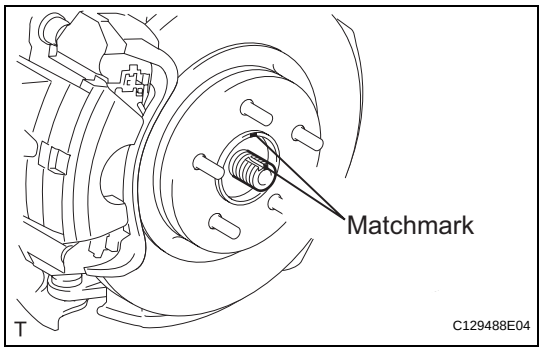


16. CHECK FOR AUTOMATIC TRANSAXLE FLUID LEAKAGE

17. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT
(a) Inspect and adjust front wheel alignment (see page SP-3).



INSTALLATION



(2006/01-)

1. INSTALL FRONT DRIVE SHAFT ASSEMBLY LH
(a) Coat the spline of the inboard joint shaft with gear oil.
(b) Align the shaft splines and tap in the drive shaft with a brass bar and hammer.
NOTICE:
- **Set the snap ring with the opening side facing downwards.**
- **Be careful not to damage the oil seal, boot and dust cover.**

2. INSTALL FRONT DRIVE SHAFT ASSEMBLY RH
(a) Coat the spline of the inboard joint shaft with gear oil.
(b) Align the shaft splines and securely insert the drive shaft.
NOTICE:
Do not damage the oil seal.
(c) Squeeze the ends of the bracket hole snap ring and install it to the bearing bracket.
(d) Install the bearing bracket bolt.
Torque: 32.4 N*m (330 kgf*cm, 24 ft.*lbf)

3. **CONNECT STEERING KNUCKLE WITH AXLE HUB LH**
   (a) Align the shaft splines in the drive shaft to the steering knuckle with axle hub, and connect the steering knuckle with axle hub.

4. **CONNECT STEERING KNUCKLE WITH AXLE HUB RH**
   HINT:
   Use the same procedures described for the LH side.

5. **CONNECT FRONT SUSPENSION LOWER NO. 1 ARM SUB-ASSEMBLY LH (See page SP-24)**

6. **CONNECT FRONT SUSPENSION LOWER NO. 1 ARM SUB-ASSEMBLY RH**
   HINT:
   Use the same procedures described for the LH side.

7. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page SP-31)**

8. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH**
   HINT:
   Use the same procedures described for the LH side.

9. **INSTALL TIE ROD END SUB-ASSEMBLY LH (See page PS-45)**

10. **INSTALL TIE ROD END SUB-ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.

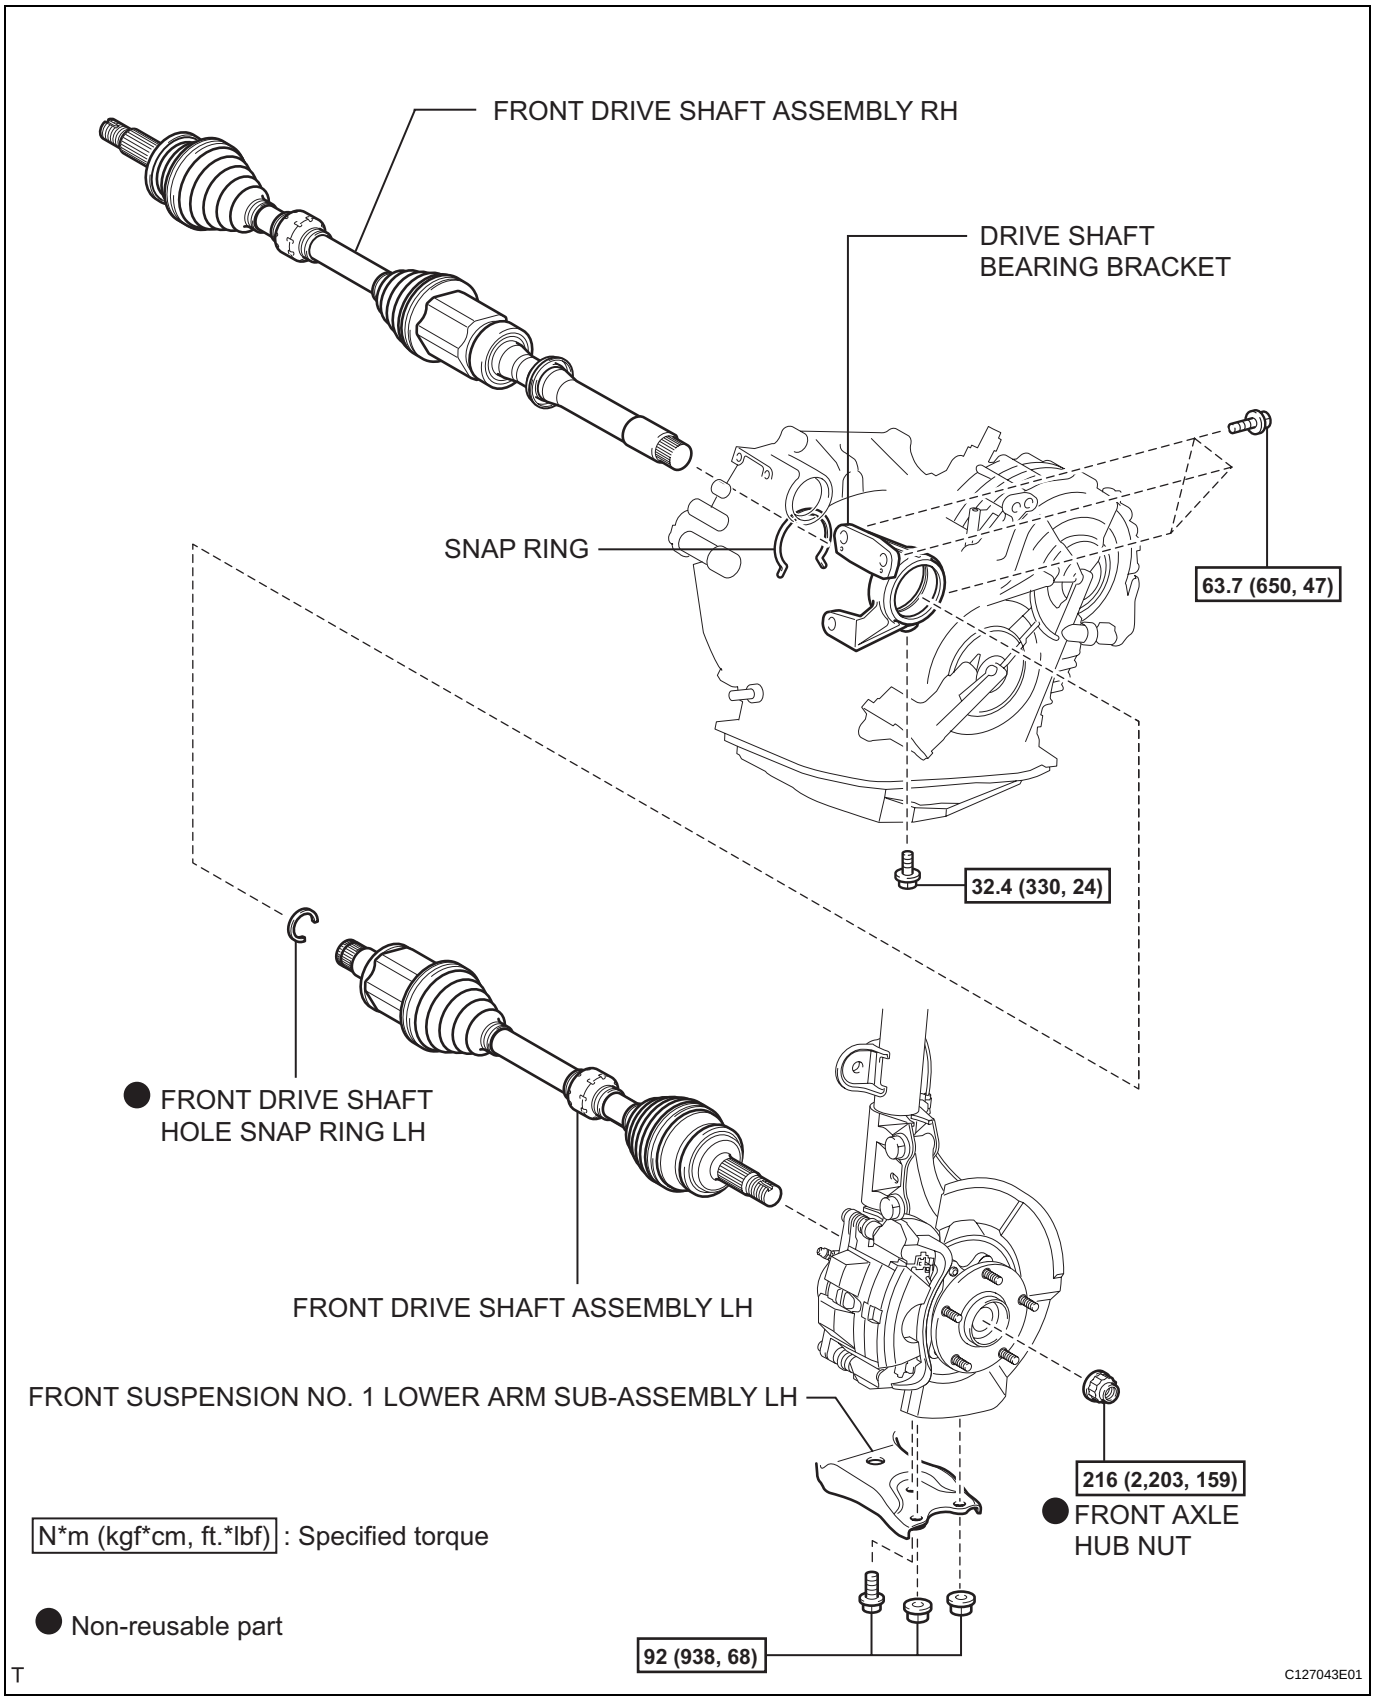
11. **CONNECT FRONT SPEED SENSOR LH**
    (a) Connect the speed sensor (see page BC-193).

12. **CONNECT FRONT SPEED SENSOR RH**
    HINT:
    Use the same procedures described for the LH side.

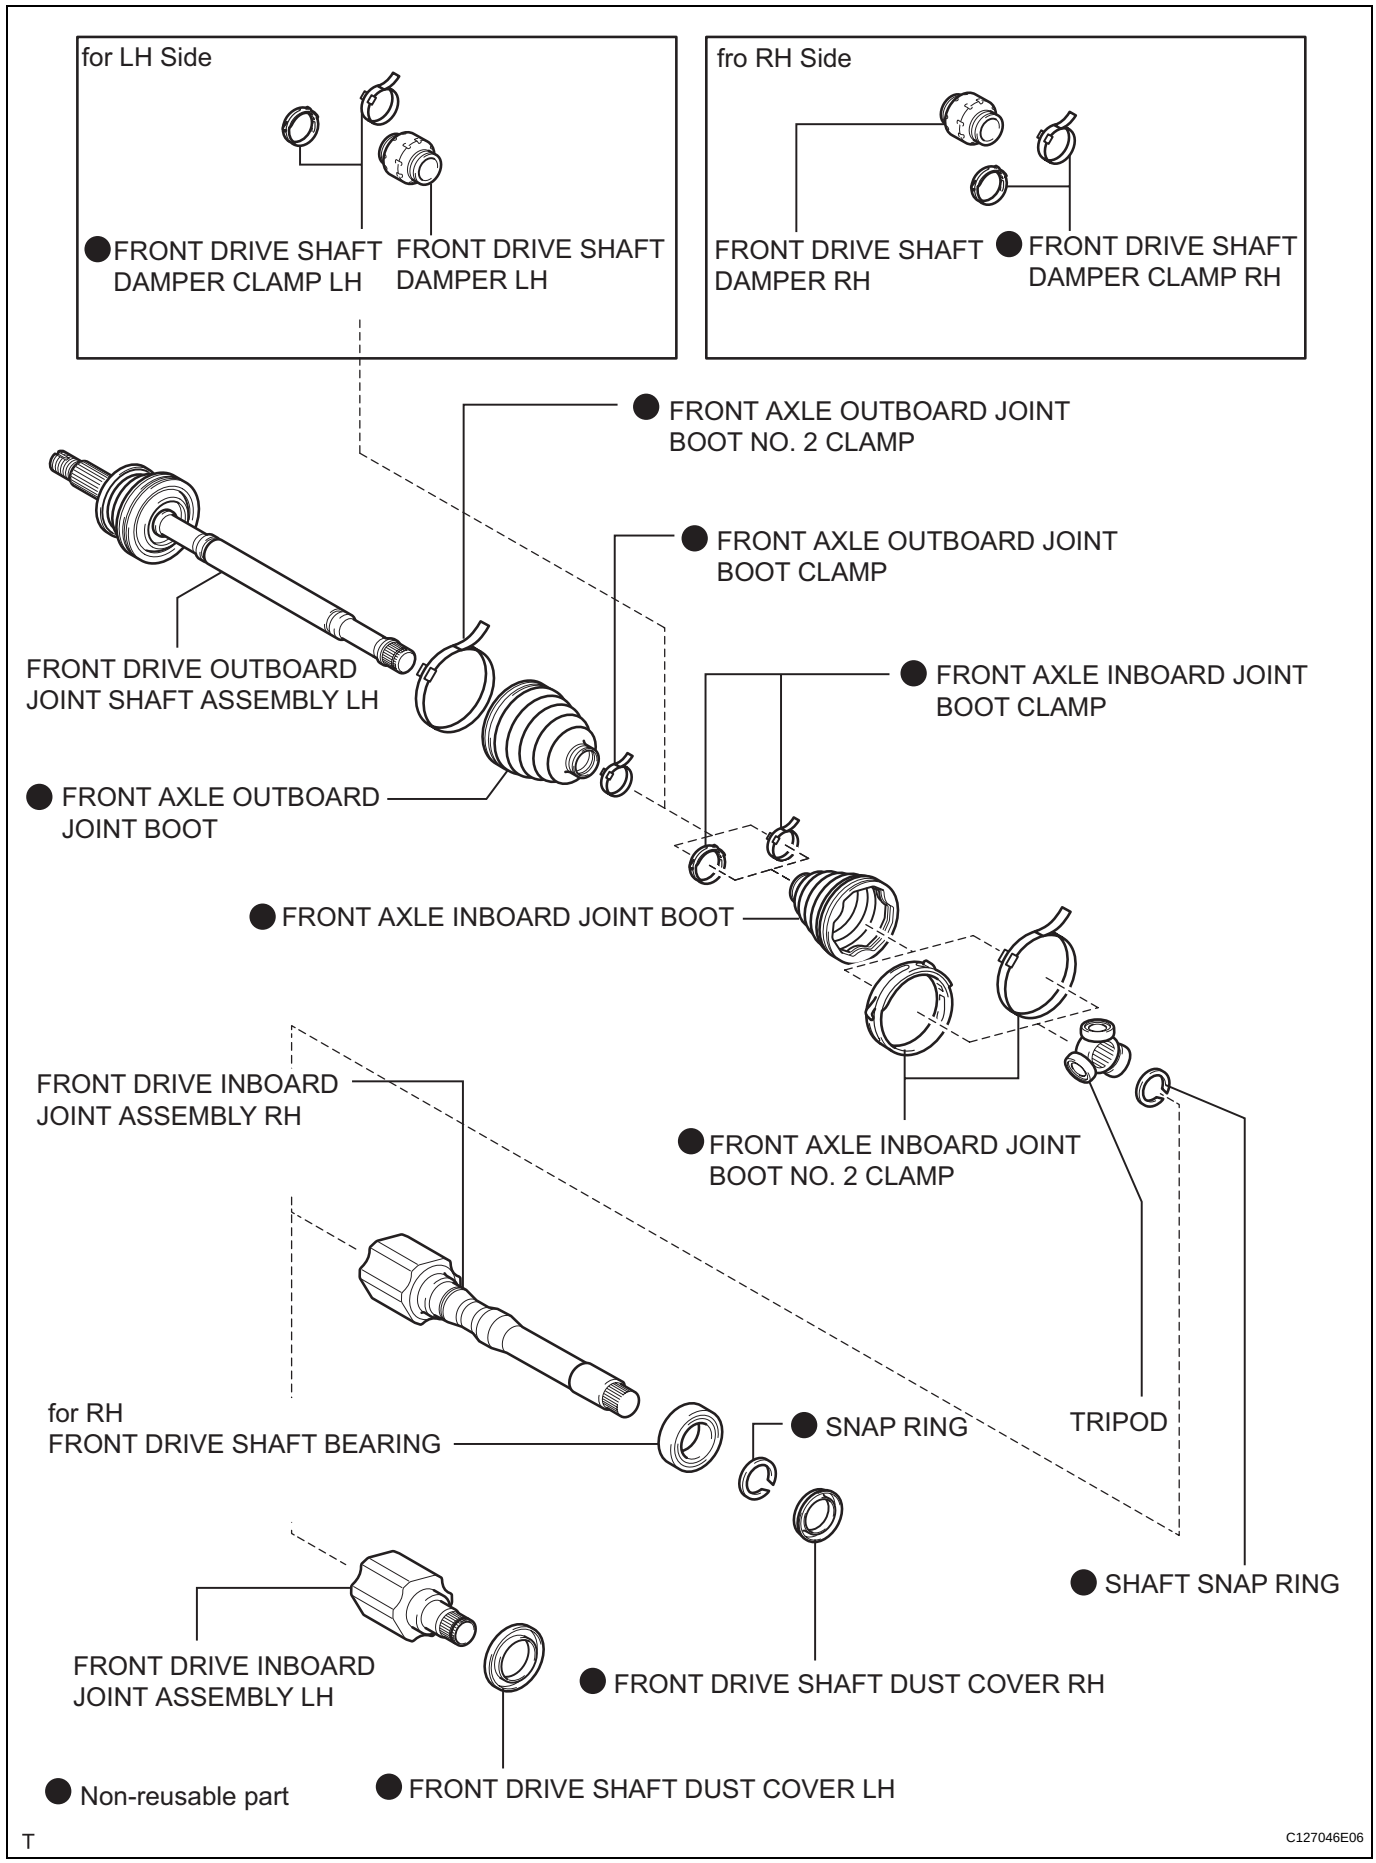
13. **INSTALL FRONT AXLE HUB NUT (See page AH-11)**

14. **INSTALL FRONT WHEEL**
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

15. **ADD AUTOMATIC TRANSAXLE FLUID**
    (a) Add automatic transaxle fluid for U140F (see page AX-152).
    (b) Add automatic transaxle fluid for U241E (see page AX-151).
    (c) Add automatic transaxle fluid for U151F (see page AX-178).



16. **CHECK FOR AUTOMATIC TRANSAXLE FLUID LEAKAGE**



17. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
    (a) Inspect and adjust the front wheel alignment (see page SP-3).

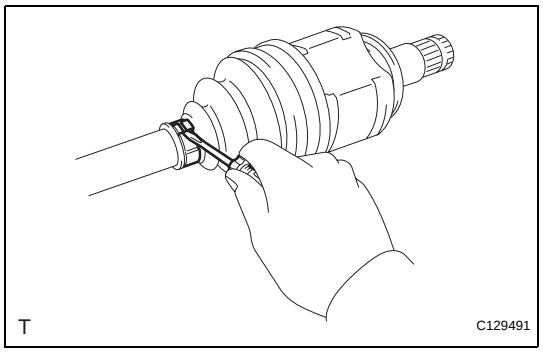
DISASSEMBLY

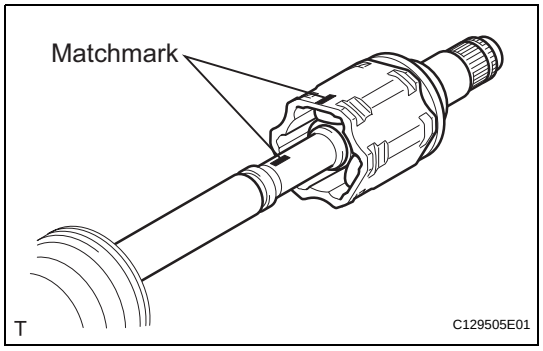


HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. REMOVE REAR DRIVE SHAFT INBOARD JOINT BOOT NO. 2 CLAMP LH

(a) Using needle-nose pliers, remove the inboard joint boot clamp, as shown in the illustration.



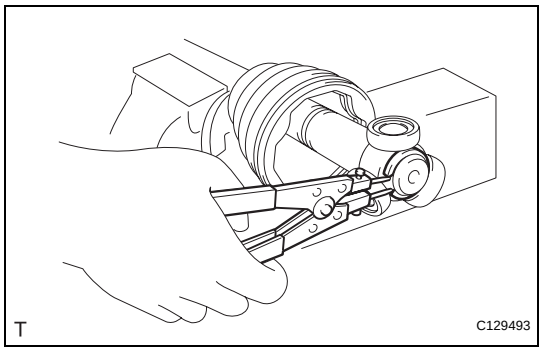
2. REMOVE REAR DRIVE SHAFT INBOARD JOINT BOOT CLAMP LH

(a) Using needle-nose pliers, remove the inboard joint boot clamp, as shown in the illustration.

3. REMOVE REAR AXLE INBOARD JOINT BOOT

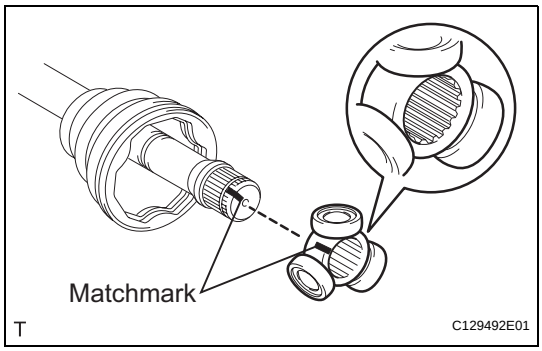
(a) Remove the boot from the inboard joint.

4. REMOVE REAR DRIVE SHAFT INBOARD JOINT ASSEMBLY LH



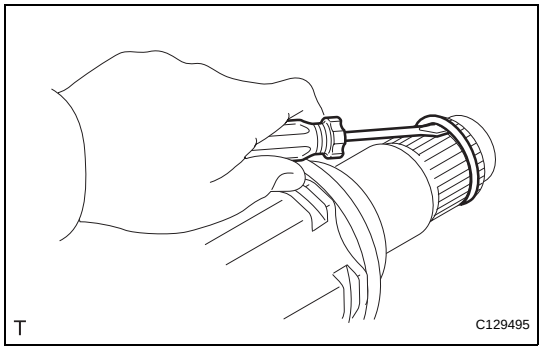
(a) Remove any old grease from the inboard joint.

(b) Put matchmarks on the inboard joint and outboard joint shaft.

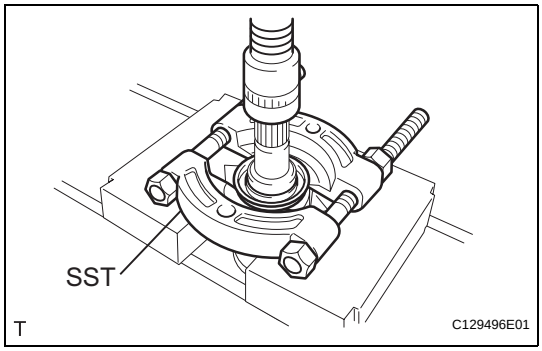


NOTICE:

Do not punch the marks.

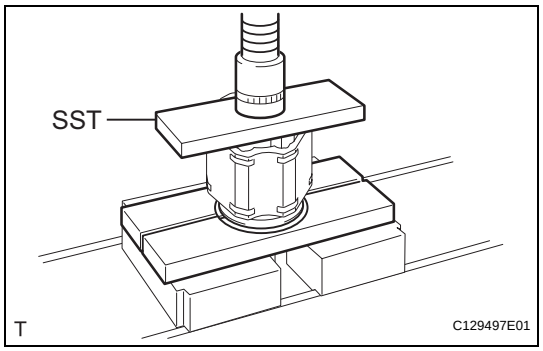


(c) Remove the inboard joint from the outboard joint shaft.



(d) Using a snap ring expander, remove the shaft snap ring.

(e) Put matchmarks on the outboard joint shaft and tripod joint.
NOTICE:
Do not punch the marks.
(f) Using a brass bar and hammer, tap out the tripod joint from the outboard joint shaft.
NOTICE:
Do not tap the rollers.
(g) Remove the inboard joint boot.



5. REMOVE REAR DRIVE SHAFT INBOARD JOINT LH SHAFT SNAP RING
(a) Using a screwdriver, remove the hole snap ring.

6. REMOVE REAR DRIVE SHAFT DUST COVER LH
(a) Using SST and a press, press out the shaft dust cover.
SST 09950-00020
NOTICE:
Be careful not to drop the inboard joint.

REASSEMBLY

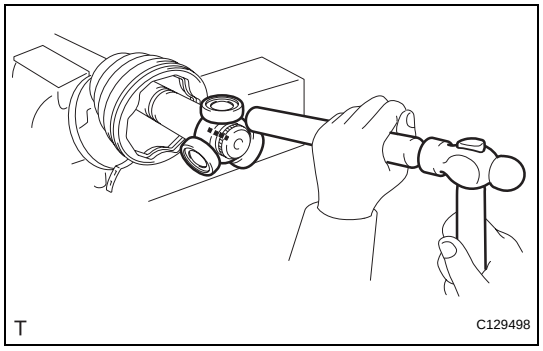
HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. INSTALL REAR DRIVE SHAFT DUST COVER LH

(a) Using SST and a press, press in a new drive shaft dust cover.
SST 09527-10011
NOTICE:
- **The dust cover should be installed completely.**
- **Be careful not to damage the dust cover.**

2. INSTALL REAR DRIVE SHAFT INBOARD JOINT SHAFT SNAP RING LH

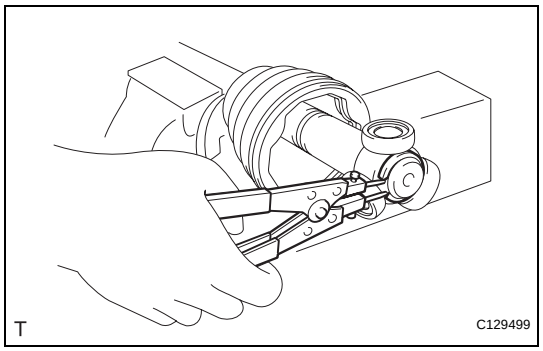
(a) Install a new hole snap ring.



3. INSTALL REAR DRIVE SHAFT INBOARD JOINT ASSEMBLY LH

(a) Wrap the spline of the outboard joint shaft with vinyl tape to prevent the boots from being damaged.

(b) Install new parts to the outboard joint shaft in the following order.
(1) Inboard joint boot clamp
(2) No. 2 inboard joint boot clamp
(3) Inboard joint boot

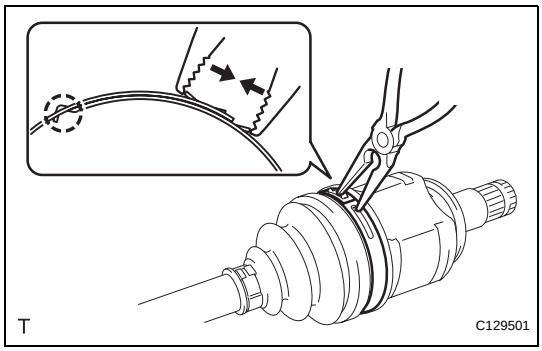


(c) Place the beveled side of the tripod axial spline toward the outboard joint.

(d) Align the matchmarks placed before removal.

(e) Using a brass bar and hammer, tap the tripod joint onto the drive shaft.
NOTICE:
- **Do not tap the rollers.**
- **Be sure to install the tripod joint in the correct direction.**

(f) Pack the inboard joint shaft and boot with grease from the boot kit.
Standard grease capacity:
86 to 96 g (3.0 to 3.4 oz.)



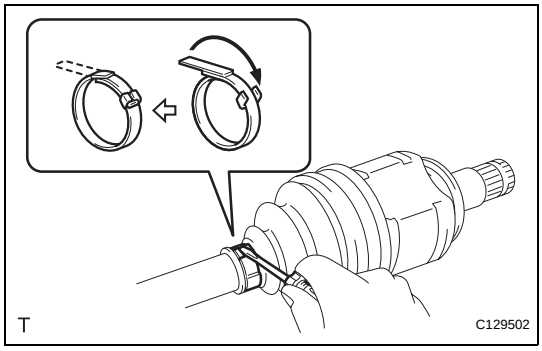
(g) Using a snap ring expander, install a new shaft snap ring.

(h) Align the matchmarks, and install the inboard joint to the outboard joint shaft.

4. INSTALL REAR AXLE INBOARD JOINT BOOT

(a) Install the inboard joint boot to the inboard joint.

DS

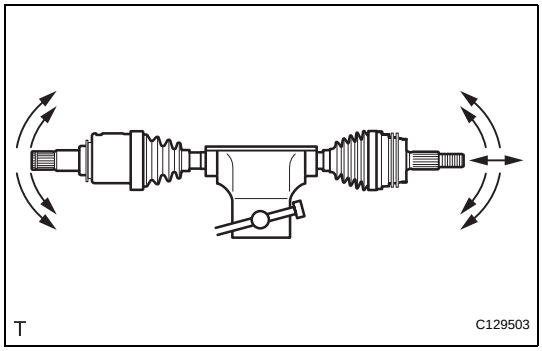


5. INSTALL REAR DRIVE SHAFT INBOARD JOINT BOOT NO. 2 CLAMP LH

(a) Using needle-nose pliers, install the No. 2 inboard joint boot clamp, as shown in the illustration.

NOTICE:

Be careful not to damage the boot.

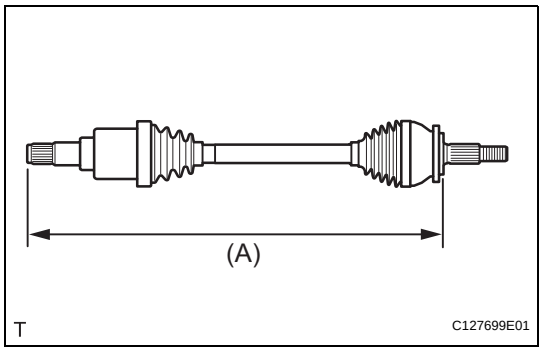


6. INSTALL REAR DRIVE SHAFT INBOARD JOINT BOOT CLAMP LH

(a) Using a screwdriver, install the inboard joint boot clamp, as shown in the illustration.

NOTICE:

Be careful not to damage the boot.



7. INSPECT REAR DRIVE SHAFT

(a) Check that there is no severe play in the radial direction of the outboard joint.

(b) Check that the inboard joint slides smoothly in the thrust direction.

(c) Check that there is no severe play in the radial direction of the inboard joint.

(d) Check the boots for damage.

NOTICE:

Keep the drive shaft assembly level during inspection.

HINT:

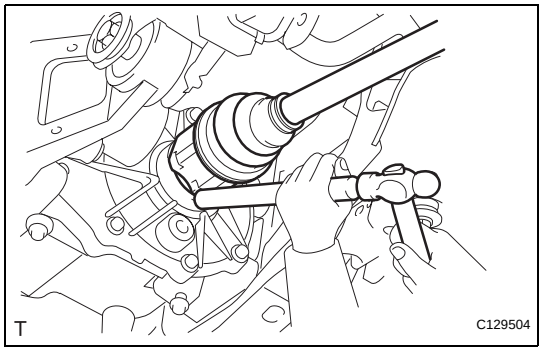
For dimension (A), refer to the following values.

Reference value:

733.8 mm (28.890 in.)

INSTALLATION

HINT:



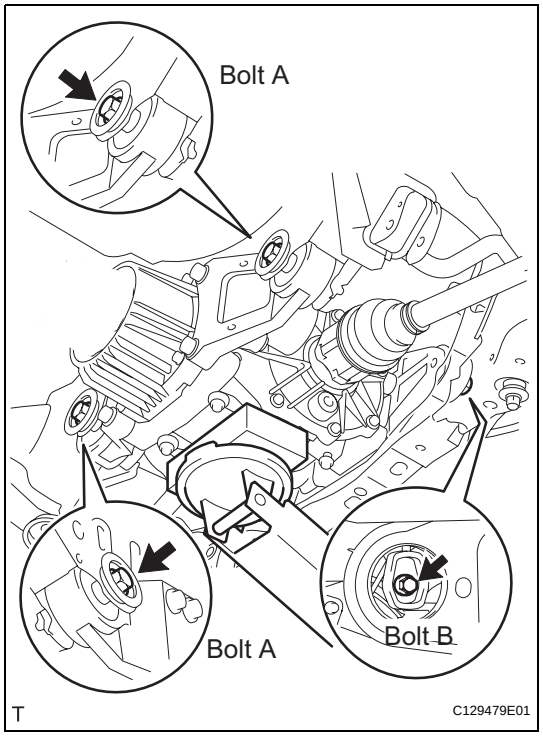
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. INSTALL REAR DRIVE SHAFT ASSEMBLY LH

(a) Align the splines of the rear drive shaft outboard joints and, install the left and right rear drive shafts to the axle hub.

2. INSTALL DIFFERENTIAL CARRIER ASSEMBLY

(a) Apply hypoid gear oil to the splines of the left and right rear drive shaft inboard joints.



(b) Align the splines of the rear drive shaft inboard joints and, using a brass bar and hammer, tap in the left and right rear drive shafts.

NOTICE:

- **Face the cutout section of the snap ring downward.**
- **Do not damage the oil seal during the insertion.**
- **Do not strike the tip of the outboard joint with the hammer.**

HINT:

Determine whether or not the rear drive shaft is completely tapped in by checking for changes in sound or the reaction force of the brass bar

(c) Slowly raise the transmission jack, fix the nuts in place and install the 3 bolts.

Torque: 86 N*m (877 kgf*cm, 63 ft.*lbf) for bolt A
140 N*m (1,428 kgf*cm, 103 ft.*lbf) for bolt B

NOTICE:

Tighten the bolts, not the nuts.

3. INSTALL SKID CONTROL SENSOR WIRE (for 2WD) (See page BC-201)

4. INSTALL REAR SPEED SENSOR LH (for 4WD) (See page BC-206)

5. INSTALL REAR AXLE SHAFT NUT (See page AH-18)

6. TEMPORARILY INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-5)

7. TIGHTEN PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-6)

8. INSPECT AND ADJUST JOINT ANGLE (See page PR-4)

9. INSTALL CENTER EXHAUST PIPE ASSEMBLY (See page EX-5)

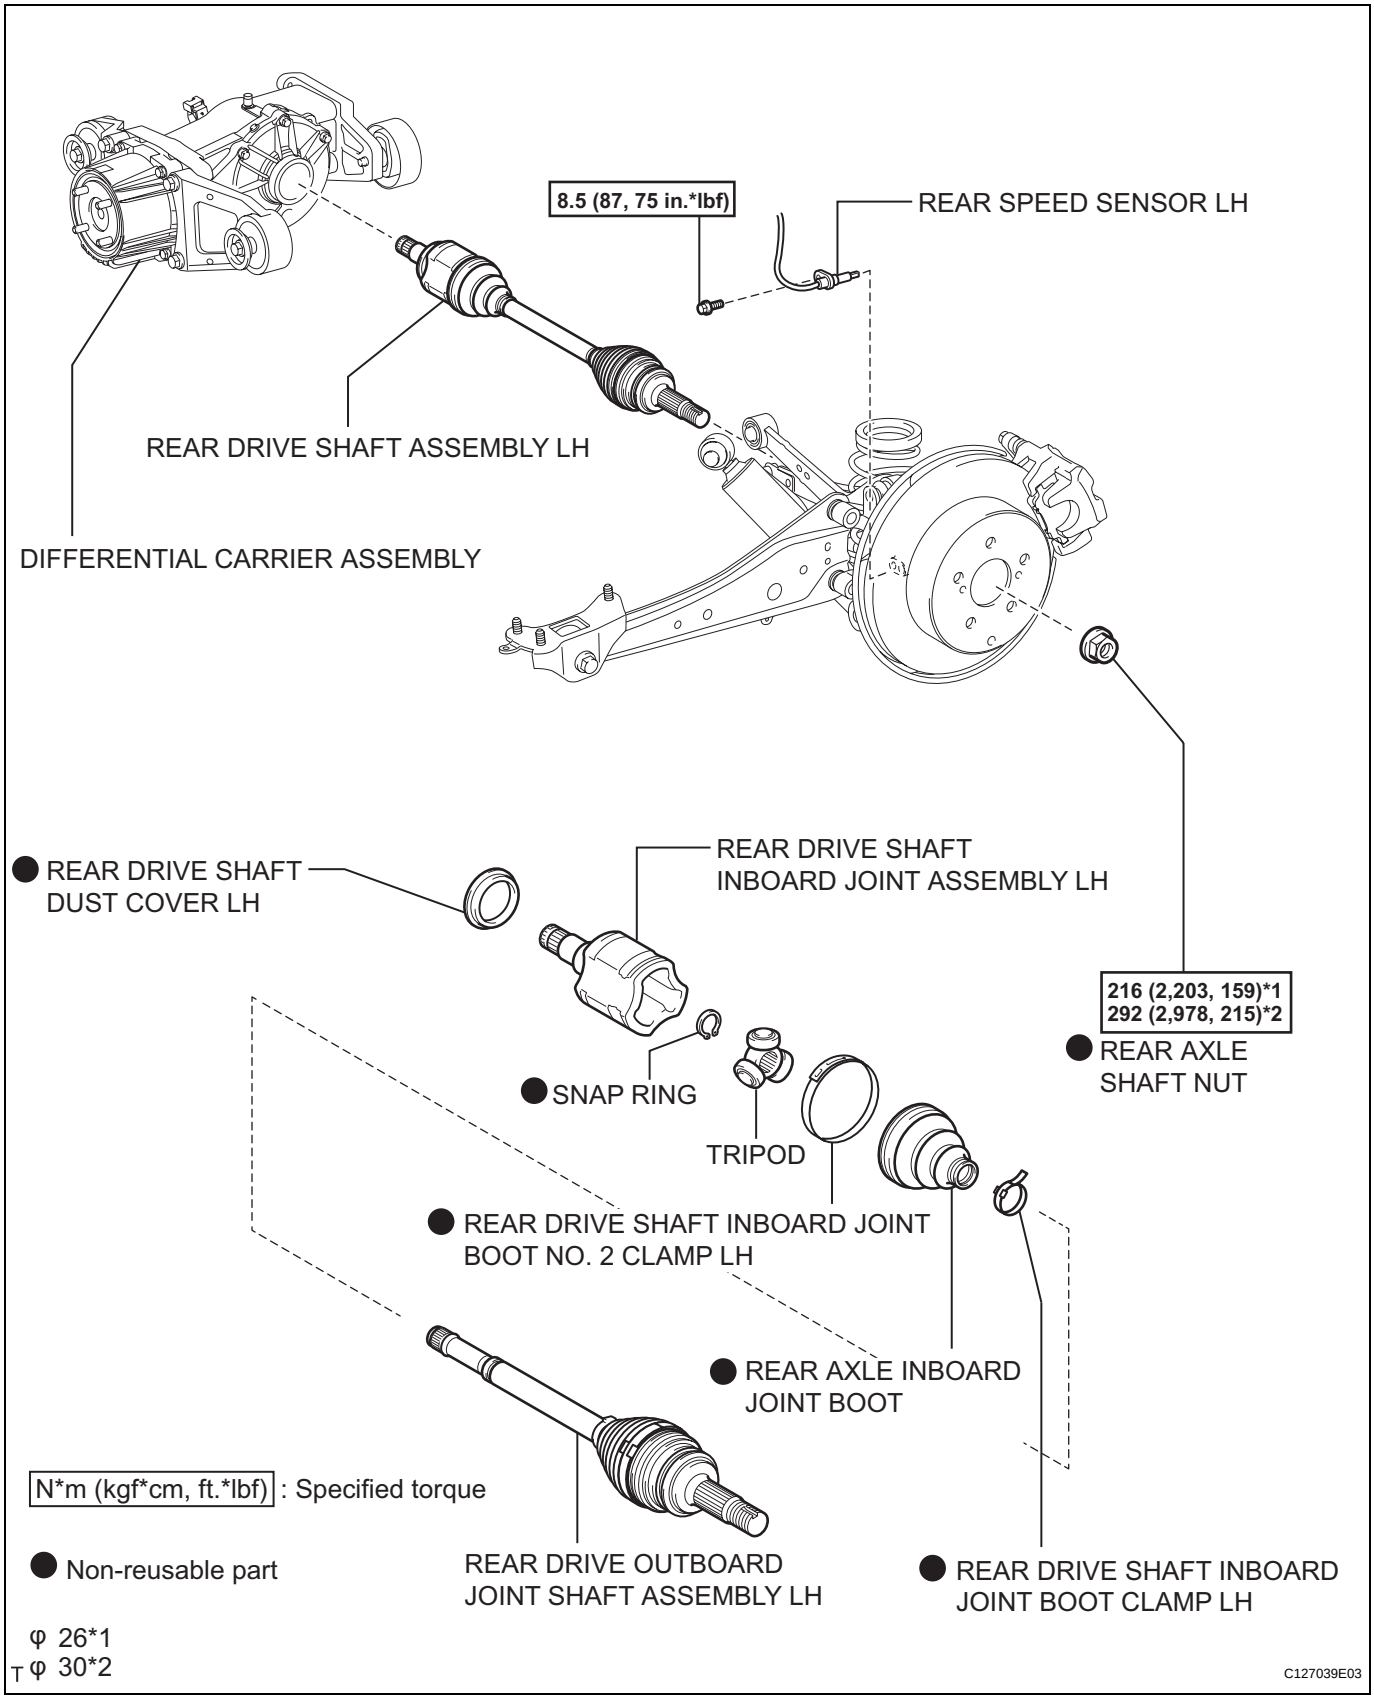
10. INSTALL TAILPIPE ASSEMBLY (See page EX-6)

DS

11. INSTALL REAR WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

12. ADD DIFFERENTIAL OIL (See page DF-3)

13. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
NOTICE:
When the warning light is illuminated or the battery has been disconnected and reconnected, turning the power switch may not start the system on the first try. If so, turn the power switch again.



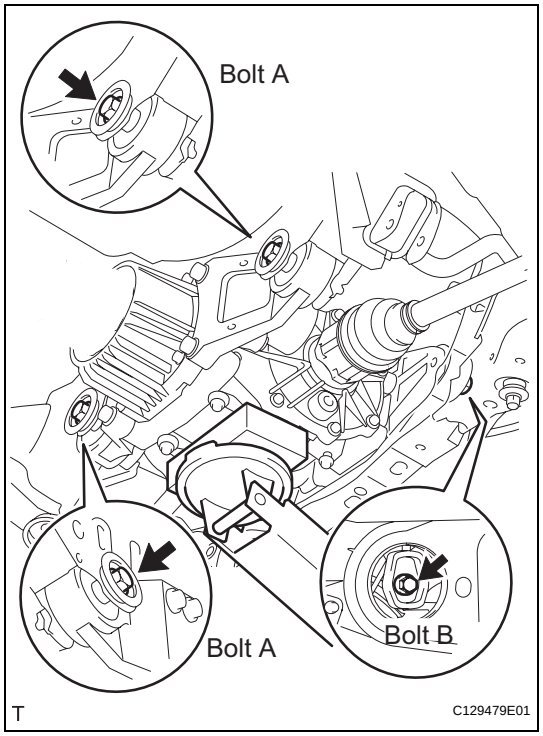
14. CHECK FOR DIFFERENTIAL OIL LEAKAGE

15. CHECK FOR EXHAUST GAS LEAKAGE
If gas is leaking, tighten the areas necessary to stop the leak. Replace damaged parts as necessary.

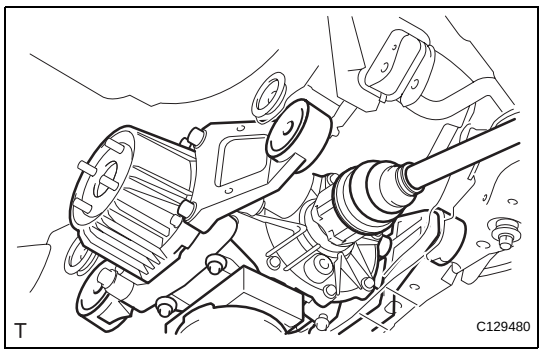
16. INSPECT REAR WHEEL ALIGNMENT
(a) Inspect the rear wheel alignment (see page SP-7).

REAR DRIVE SHAFT ASSEMBLY

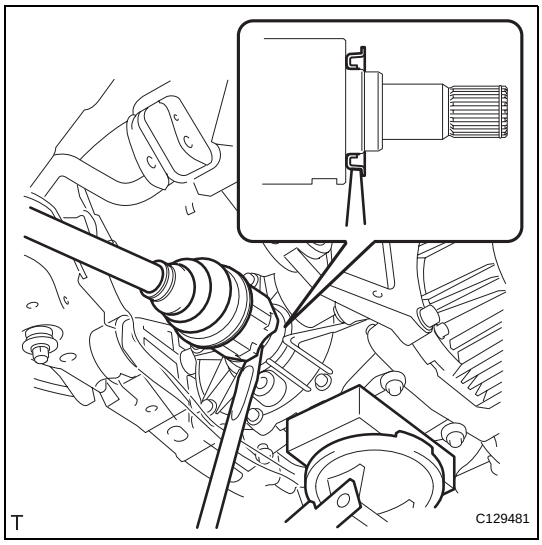
COMPONENTS



REMOVAL



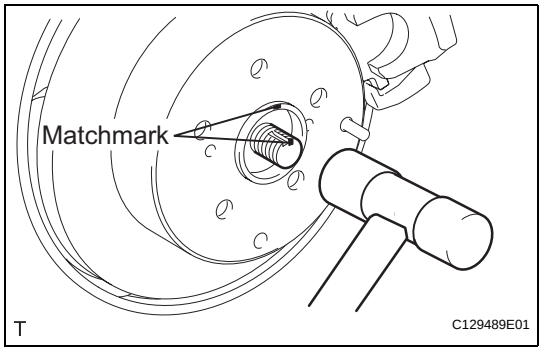
HINT:



- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

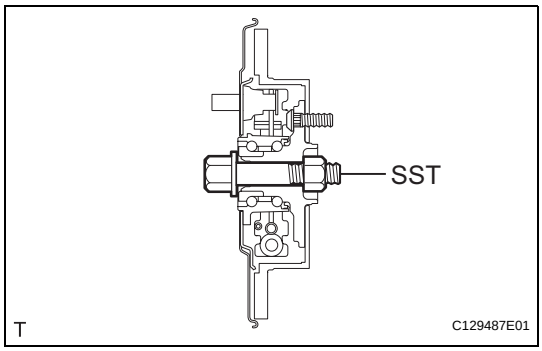
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **DRAIN DIFFERENTIAL OIL (See page DF-10)**
3. **REMOVE REAR WHEEL**
4. **REMOVE TAILPIPE ASSEMBLY (See page EX-2)**
5. **REMOVE CENTER EXHAUST PIPE ASSEMBLY (See page EX-2)**
6. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-3)**
7. **REMOVE REAR AXLE SHAFT NUT (See page AH-17)**
8. **DISCONNECT DIFFERENTIAL CARRIER ASSEMBLY**
   (a) Support the rear differential carrier with a transmission jack or equivalent.
   (b) Fix the nuts in place and remove bolt A, bolt B and bolt C.
   NOTICE:
   Do not loosen the nuts. Loosen the bolts.

   (c) Slowly lower the jack and then tilt the rear differential carrier as shown in the illustration.



(d) Set the tip of the tire lever to the position on the rear drive shaft inboard joint shown in the illustration. Then, using the ribbed part of the rear differential carrier as a fulcrum, disconnect the left and right rear drive shafts.
NOTICE:
Do not scratch the rear drive shaft dust cover.

9. DISCONNECT SKID CONTROL SENSOR WIRE (for 2WD) (See page BC-198)



10. DISCONNECT REAR SPEED SENSOR LH (for 4WD) (See page BC-205)

11. REMOVE REAR DRIVE SHAFT ASSEMBLY LH

(a) Put matchmarks on the drive shaft and the axle hub.
NOTICE:
Do not punch the marks.

(b) Using a plastic-faced hammer, separate the drive shaft from the axle hub.
NOTICE:
Be careful not to damage the boot and speed sensor rotor. Do not excessively push out the drive shaft from the axle.

12. FIX REAR DRIVE SHAFT ASSEMBLY
NOTICE:
The hub bearing could be damaged if it is subjected to the vehicle weight, such as when moving the vehicle with the drive shaft removed. Therefore, if it is absolutely necessary to place the vehicle weight on the hub bearing, first support it with SST.
SST 09608-16042 (09608-02021, 09608-02041)

SYSTEM DESCRIPTION

1. ENGINE IMMOBILISER SYSTEM DESCRIPTION

The engine immobiliser system is designed to prevent the vehicle from being stolen. This system uses a transponder key ECU that stores the key codes of authorized ignition keys. If an attempt is made to start the engine using an unauthorized key, the ECU sends a signal to the ECM to prohibit fuel delivery and ignition, effectively disabling the engine.

2. FUNCTION OF MAIN COMPONENT

Component	Outline
Transponder key coil/amplifier	When key is inserted into ignition key cylinder, key coil receives key code. Then amplifier amplifies ID code and outputs it to transponder key ECU.
Unlock warning switch assembly	Detects whether key is in ignition key cylinder and outputs results to transponder key ECU
ECM	Through SFI communication, ECM receives ID verification results from transponder key ECU. ECM also verifies ECUs. Then ECM judges whether or not to immobilize engine.
Security indicator light	Depending on operation of transponder key ECU, interior security indicator light comes on or starts blinking

3. SYSTEM FUNCTION

- When the transponder key ECU detects that the unlock warning switch is ON, the ECU provides current to the transponder key coil and produces a faint electric wave. A transponder chip in the key grip receives the wave and outputs a key ID code signal. The transponder key coil receives this signal, the transponder key amplifier amplifies it, and then the signal is transmitted to the ECU. The ECU matches the key's ID code with the vehicle's ID code, which was previously registered in the ECU and then communicates the results to the ECM using SFI communication.
- After the identification results show that the key's ID code matches the vehicle's ID code and the ECU has confirmed their match: 1) the engine immobiliser system is canceled and the engine starting controls (fuel injection control and ignition control) enter standby mode; and 2) the ECU receives a security indicator light signal, and turns the security indicator light OFF.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
Use these procedures to troubleshoot the engine immobiliser system.
*: Use the intelligent tester.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3	CRANK ENGINE FOR MORE THAN 10 SECONDS

NEXT

4	CHECK FOR DTC*

(a) Check for DTCs and make a note of any codes that are output (see page EI-18).
(b) Clear the DTC.
(c) Recheck for DTCs. Based on the DTC output above, try to cause the output of the same SFI system DTC or engine immobiliser system DTC by simulating the original activity indicated by the DTC.

Result:

Result	Proceed to
DTC output does not reoccur	A
SFI system DTC output reoccurs	B
Engine immobiliser system DTC output reoccurs	C

B	Go to SFI SYSTEM
D	Go to step 7

A

6 **OVERALL ANALYSIS AND TROUBLESHOOTING***

(a) DATA LIST / ACTIVE TEST (see page EI-19)
(b) Terminals of ECU (see page EI-13)
(c) Inspection (see page EI-43)

NEXT

7 **ADJUST, REPAIR OR REPLACE**

NEXT

8 **CONFIRMATION TEST**

NEXT

END

REGISTRATION

HINT:
The key has 2 codes: the key code (immobiliser code) and the wireless code (recognition code). Both of these codes need to be registered. For wireless code registration procedures, refer to the following procedures (see page DL-46). For key code registration procedures, refer to the procedures below.

1. DESCRIPTION OF CODE REGISTRATION

(a) When adding master keys and sub-keys (additional registration).
(1) Register the key codes in the transponder key ECU.

Target ECU	See Procedure
Transponder key ECU	Procedure "A"

(b) After replacing the transponder key ECU (new key code registration).
(1) Register the key codes (immobiliser code) in the new transponder key ECU.

Target ECU	See Procedure
Transponder key ECU	Procedure "B"

(2) Register the ECU COMMUNICATION ID between the ECM and the new transponder key ECU.

Target ECU	See Procedure
ECM	Procedure "C"

(c) After replacing the ECM.
(1) Reregister the ECU COMMUNICATION ID between the new ECM and the transponder key ECU.

Target ECU	See Procedure
Transponder key ECU	Procedure "C"

(d) After replacing the transponder key ECU and ECM.
(1) Register the ECU COMMUNICATION ID between the new ECM and the new transponder key ECU.

Target ECU	See Procedure
Transponder key ECU	Procedure "C"

(e) Erasure of key codes.
(1) Erase the key code(s) of the lost key(s).

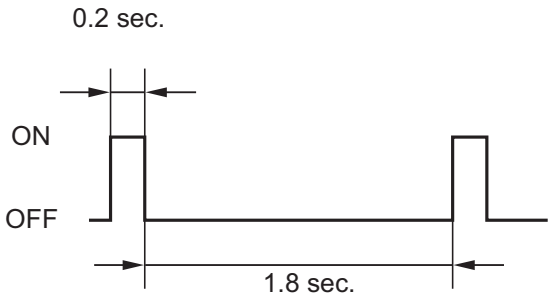
Target ECU	See Procedure
Transponder key ECU	Procedure "D"

2. NEW KEY CODE REGISTRATION (PROCEDURE "B")

(a) New key code registration
Condition:
No key codes are registered in the transponder key ECU.

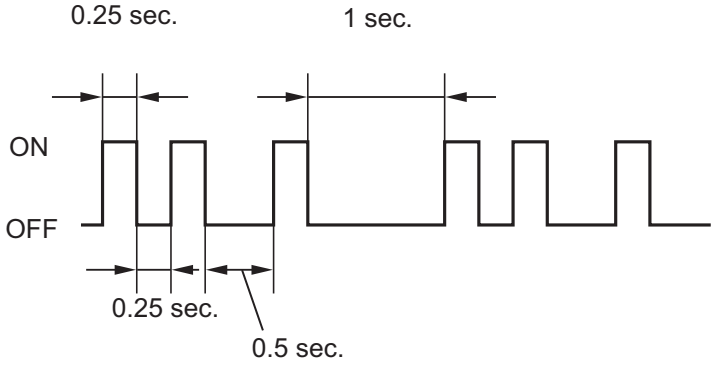
HINT:

- In this mode, a maximum of 3 key codes for 2 master keys and 1 sub-key can be registered. The master keys and sub-key can be registered in any order because the transponder key ECU can distinguish between different types of keys.
- New key codes must be registered with the battery connected. The ignition switch can be either ON or OFF.
- When a new transponder key ECU is installed, key codes must be registered in the transponder key ECU.



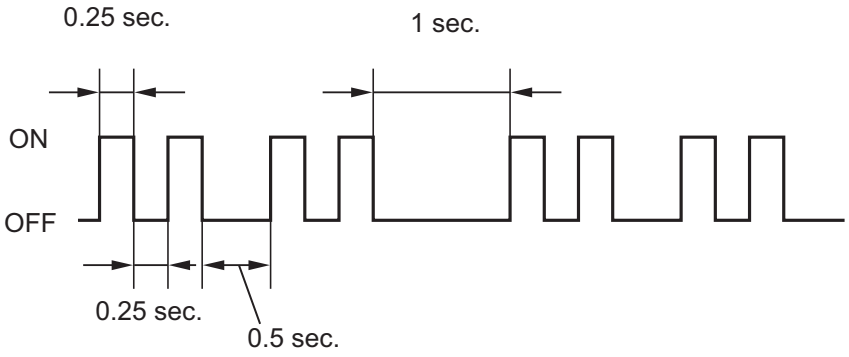
Procedure	Security Indicator Light Condition
1. START	- HINT: Until first key is inserted
2. Insert key into the ignition key cylinder	BLINKING
3. Select following items on the tester: (1) IMMOBILISER (2) ID UTILITY (3) IMMOB CODE REG HINT: After above operation, proceed to next step in accordance with prompts on tester screen	ON HINT: Within 2 minutes
	OFF for 1 second and then ON
4. Remove the key and then push NEXT button on tester	ON
5. Insert master key or sub-key to be registered	OFF for 1 second and then ON
6. Remove key and then push NEXT button on tester	ON
7. Insert a master key or sub-key to be registered	OFF for 1 second and then ON
	OFF HINT: 0.5 seconds after turning ON
8. Remove key	BLINKING
9. END	

HINT:

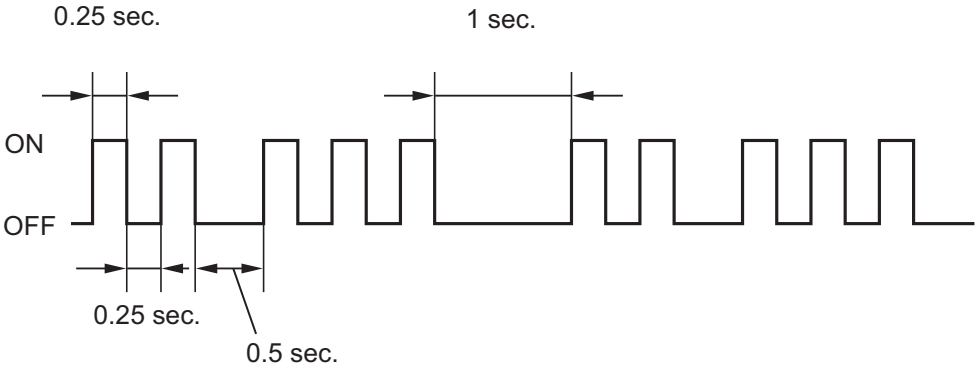


- The new key code registration mode can be deliberately ended by following procedure A or B below when the battery is connected, and at least 1 key code for the master key has been registered.
  (a) Insert the key into the ignition key cylinder and turn the intelligent tester on.
  (b) Follow the instructions on the intelligent tester screen to end the new key code registration mode.
  (c) New key code registration mode ends.
- When the engine immobiliser system is operating normally and the key is pulled out, the security indicator light blinks continuously.
- If the new key code registration fails, code 2-1 is output by the security indicator light. Trying to re-register an already registered key causes code 2-2 to be output when the key is inserted. If the number of registered key codes exceeds the limit, code 2-3 is output by the security indicator light. The output details are shown below.

Security Indicator Light:



Normal (Engine immobiliser system is operating normally)



Code 2-1

Code 2-2

Code 2-3

N

B111593E13

EI

3. REGISTRATION OF ADDITIONAL KEY (PROCEDURE "A")

HINT:

- A maximum of 5 master key codes and 3 sub-key codes can be registered.
- Additional key code registration mode ends if each step is not completed within the specified time.
- When proceeding to the next step while the timer is running, the timer is reset and begins the countdown for the next step.
- When the ignition key cylinder or the ignition key cylinder set is replaced, remove the transmitter module from the original master key. Then install this transmitter module to a new key and use the new key as the master key. If necessary, use this master key to register other keys.

NOTICE:

When the ignition key cylinder has been replaced, locking and unlocking doors are possible with the new master key once the transmitter module from the original master key has been transferred to it. However, the new master key will not be able to lock and unlock doors through the door key cylinder. Keep the original master key. If the new master key's transmitter module battery fails, the original master key can be used to lock and unlock doors through the door key cylinder.

(a) Additional key code registration

Condition:

At least one key code must be registered in the transponder key ECU.

Procedure	Time (Operation completion time)	Security Indicator Light Condition
1. START	-	BLINKING HINT: Until first key is inserted
2. Insert previously registered master key into ignition key cylinder, turn ignition switch to ON position, and turn intelligent tester on	-	OFF
3. Select the following items on the tester: (1) IMMOBILISER (2) ID UTILITY (3) IMMOB CODE REG		ON
4. Remove master key and then push NEXT button on tester. Immediately after above operation, insert previously registered master key into ignition key cylinder, turn ignition switch to ON position, and then push NEXT button on tester.	Within 120 seconds	BLINKING → ON
5. Remove master key and then push NEXT button on tester	Within 20 seconds HINT: After the tester instruction.	ON
6. Insert key to be registered into ignition key cylinder	Within 10 seconds.	BLINKING

EI

Procedure	Time (Operation completion time)	Security Indicator Light Condition
7. After 60 seconds, key is registered HINT: Security indicator light goes off	-	OFF
8. Remove key and then push NEXT button on tester		BLINKING
9. Tester screen displays number of registered key		
10. END		

HINT:

- If the key is removed within 60 seconds in step 6, the additional key code registration mode is canceled.
- A brief outline of the procedures for key code registration is shown above. For more detailed information, refer to the intelligent tester screen's instructions.
- When the engine immobiliser system is operating normally and the key is pulled out, the security indicator light blinks continuously.
- If the additional key code registration fails, code 2-1 is output by the security indicator light. Trying to reregister a previously registered key causes code 2-2 to be output when the key is inserted. If the number of registered key codes exceeds the limit, code 2-3 is output by the security indicator light. The output details are shown in procedure "B".

4. ERASURE OF KEY CODE (PROCEDURE "D")

HINT:

All key codes are erased except for the master key, which is used for erasing the key codes. In order to use a key whose code has been erased, a new key code must be registered.

(a) Erasure of key code

Condition:

At least two key codes must be registered in the transponder key ECU.

EI

Procedure	Time (Operation completion time)	Security Indicator Light Condition
1. START	-	BLINKING HINT: Until first key is inserted
2. Insert previously registered master key into ignition key cylinder, turn ignition switch to ON position, and turn intelligent tester on	-	OFF
3. Select following items on tester: (1) IMMOBILISER (2) ID UTILITY (3) IMMOB CODE ERS		OFF
4. Remove key and then push NEXT button on tester. Immediately after above operation, insert previously registered master key into ignition key cylinder, turn ignition switch to ON position, and then push NEXT button on tester.	Within 120 seconds	BLINKING → ON for 1 second then OFF

Procedure	Time (Operation completion time)	Security Indicator Light Condition
5. Remove master key	Within 10 seconds HINT: After tester instruction	BLINKING
6. END		

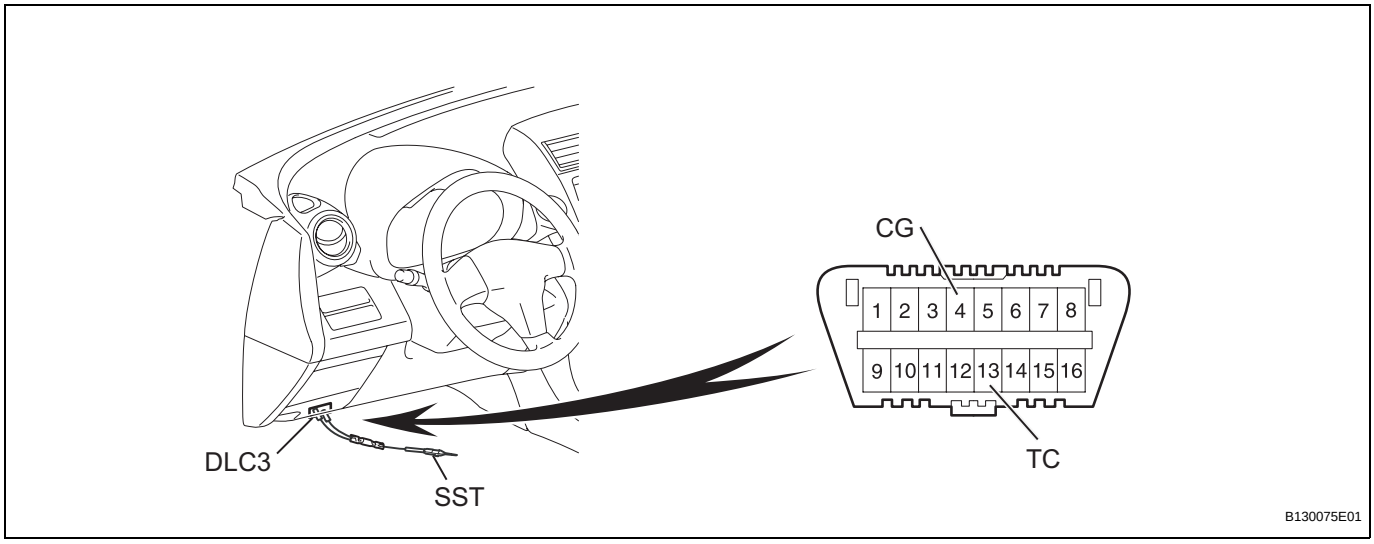
HINT:

- To cancel erasure mode after the erasure request is sent from the tester to the ECU, leave the master key inserted until the timer times out.
- A brief outline of the procedures for key code erasure is shown above. For more detailed information, refer to the intelligent tester screen's instructions.
- When the engine immobiliser system is operating normally and the key is pulled out, the security indicator light blinks continuously.

5. ECU - ECM COMMUNICATION ID REGISTRATION (PROCEDURE "C")

NOTICE:

- **The ECU communication ID should be registered when the transponder key ECU and / or ECM is replaced in order to match the ECU - ECM communication ID.**
- **The engine cannot be started unless the ECU - ECM communication ID matches.**
- **Do not disconnect the battery while the ECU - ECM communication ID is being set.**
- **Do not turn the ignition switch from ON to OFF 20 times or more before setting the ECU - ECM communication ID. If this operation is likely to be performed 20 times or more, disconnect the negative battery terminal cable in order to avoid engine start disablement. Failure to do so will result in the engine not starting unless the transponder key ECU is replaced with a new one.**



(a) After replacing the transponder key ECU

(1) Register the key code(s) by following the new key code registration procedure (procedure "B").

(2) Using SST, connect the TC and CG terminals of the DLC3 before inserting the key into the key cylinder.

SST 09843-18040

EI

(3) Insert a previously registered key into the ignition key cylinder, turn the ignition switch ON (do not start the engine), and leave it as is for 30 minutes.
(4) Turn the ignition switch OFF and disconnect terminals TC and CG.
(5) Start the engine.
(6) Check that the engine starts and stays on for more then 3 seconds. The registration is complete.

(b) After replacing the ECM.
(1) Register the ECU - ECM communication ID

Procedure	Security Indicator Light Condition
1. Insert previously registered key into ignition key cylinder	OFF
2. Start engine	
3. Check that engine starts and stays on for more than 3 seconds. Registration is complete.	

(c) After replacing the transponder key ECU and ECM
(1) Register the key code(s) by following the new key code registration procedure (procedure "B").
(2) Register the ECU - ECM communication ID

Procedure	Security Indicator Light Condition
1. Insert previously registered key into ignition key cylinder	OFF
2. Start engine	
3. Check that engine starts and stays on for more than 3 seconds. Registration is complete.	

EI

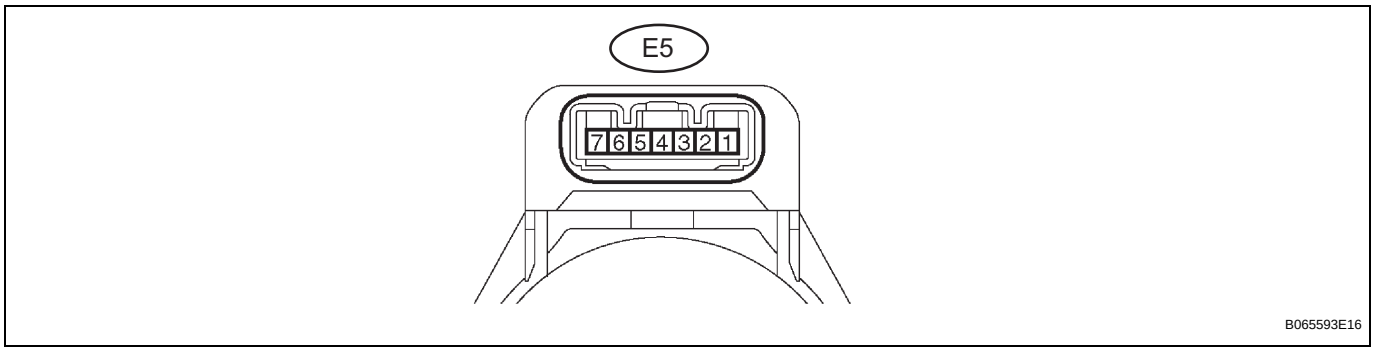
PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Engine immobiliser system:

Symptom	Suspected area	See page
Engine does not start	1. ECU power source circuit	EI-41
	2. SFI system	ES-24
Security indicator light malfunction	1. Clock sub-assembly*1	EI-38
	2. Heater control panel*2	EI-38
	3. Transponder key ECU	EI-38



HINT:

*1: for Manual air conditioning system

*2: for Automatic air conditioning system

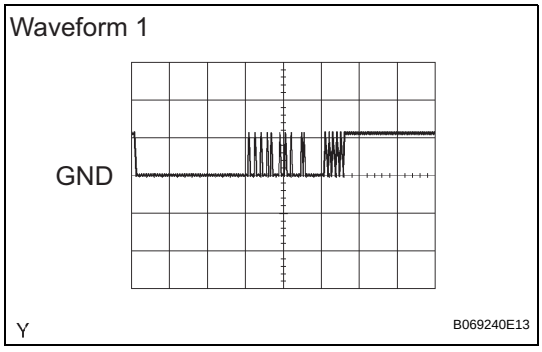
TERMINALS OF ECU

1. CHECK TRANSPONDER KEY AMPLIFIER

(a) Disconnect the E5 amplifier connector.
(b) Measure the resistance of the wire harness side connector.

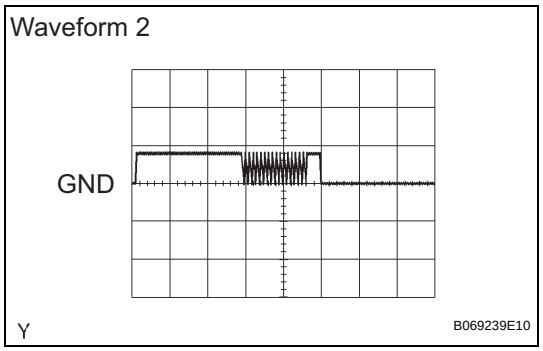
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
AGND (E5-7) - Body ground	R - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.



(c) Reconnect the E5 amplifier connector.
(d) Measure the resistance and voltage of the connector.

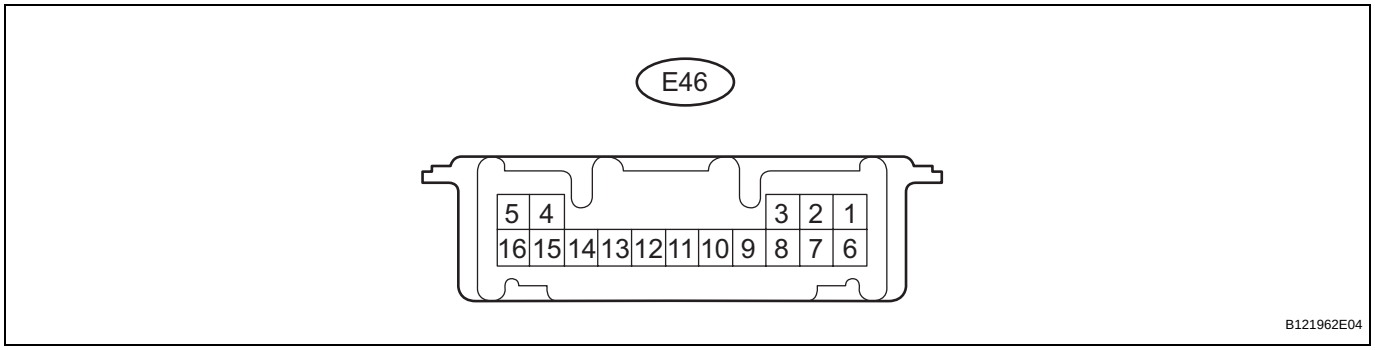
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
AGND (E5-7) - Body ground	R - Body ground	Ground	Always	Below 1 Ω
VC5 (E5-1) - AGND (E5-7)	B - R	Power source	No key is in ignition key cylinder	Below 1 V
			Key inserted	4.6 to 5.4 V
CODE (E5-4) - AGND (E5-7)	P - R	Demodulated signal of key code data	No key is in ignition key cylinder	Below 1 V
			Key inserted	Pulse generation (see waveform 1)
TXCT (E5-5) - AGND (E5-7)	G - R	Key code output signal	No key is in ignition key cylinder	Below 1 V
			Key inserted	Pulse generation (see waveform 2)



If the result is not as specified, there may be a malfunction in the amplifier.

(e) Using an oscilloscope, check the waveform 1.
Waveform 1 (Reference):

Item	Content
Symbols (Terminal No.)	CODE (E5-4) - AGND (E5-7)
Tool Setting	5 V/DIV., 20 msec./DIV.
Condition	Key inserted



EI

(f) Using an oscilloscope, check the waveform 2.
Waveform 2 (Reference):

Item	Content
Symbols (Terminal No.)	TXCT (E5-5) - AGND (E5-7)
Tool Setting	5 V/DIV., 20 msec./DIV.
Condition	Key inserted

2. CHECK TRANSPONDER KEY ECU

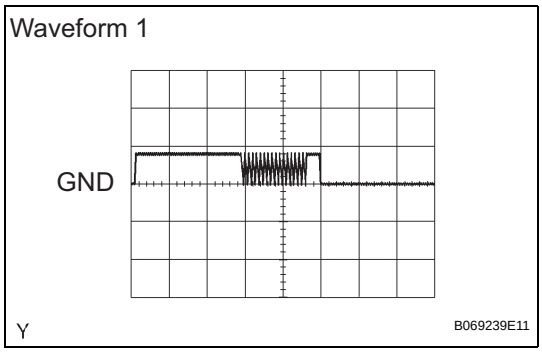
(a) Disconnect the E46 ECU connector.
(b) Measure the resistance and voltage of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND (E46-16) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
+B (E46-1) - GND (E46-16)	R - W-B	Battery	Always	10 to 14 V
IG (E46-2) - GND (E46-16)	B - W-B	Ignition switch	Ignition switch OFF	Below 1 V
			Ignition switch ON	10 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the E46 ECU connector.
(d) Measure the resistance and voltage of the connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
AGND (E46-5) - GND (E46-16)	R - W-B	Amplifier ground circuit	Always	Below 1 Ω
EGND (E46-11) - GND (E46-16)	V - W-B	ECM ground circuit	Always	Below 1 Ω
KSW (E46-3) - GND (E46-16)	L - W-B	Unlock warning switch	No key is in ignition key cylinder	10 to 14 V
			Key inserted	Below 1 V
VC5 (E46-14) - AGND (E46-5)	B - R	Power source	No key is in ignition key cylinder	Below 1 V
			Key inserted	4.6 to 5.4 V
TXCT (E46-4) - AGND (E46-5)	G - R	Transponder key amplifier communication signal	No key is in ignition key cylinder	Below 1 V
			Key inserted	Pulse generation (see waveform 1)

EI

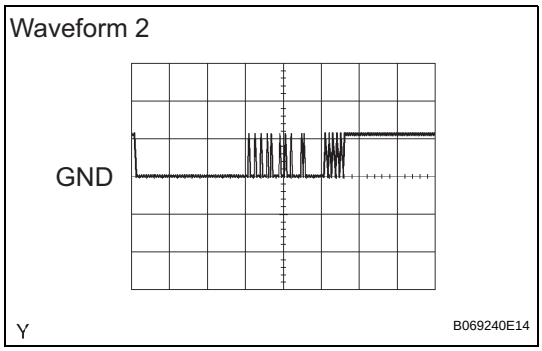


Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
CODE (E46-15) - AGND (E46-5)	P - R	Transponder key amplifier communication signal	No key is in ignition key cylinder	Below 1 V
			Key inserted	Pulse generation (see waveform 2)
EFIO (E46-13) - EGND (E46-11)	P - V	ECM output signal	Ignition switch OFF	Below 1 V
			Ignition switch ON	Pulse generation (see waveform 3)
EFII (E46-12) - EGND (E46-11)	LG - V	ECM input signal	Ignition switch OFF	Below 1 V
			Ignition switch OFF	Pulse generation (see waveform 3)
IND (E46-8)- GND (E46-16)	Y - W-B	Security indicator light signal	Engine immobiliser system SET	3 to 5 V
			Engine immobiliser system UNSET	Below 1 V
D (E46-9) - GND (E46-16)	W - W-B	Diagnosis tester communication	Ignition switch ON	Pulse generation

If the result is not as specified, there may be a malfunction in the ECU.

(e) Using an oscilloscope, check the waveform 1.
Waveform 1 (Reference):

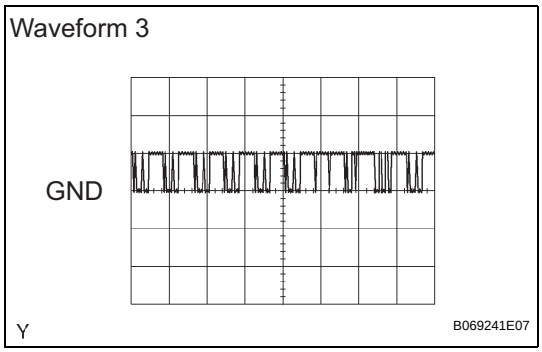
Item	Content
Symbols (Terminal No.)	TXCT (E46-4) - AGND (E46-5)
Tool Setting	5 V/DIV., 20 msec./DIV.
Condition	Key inserted



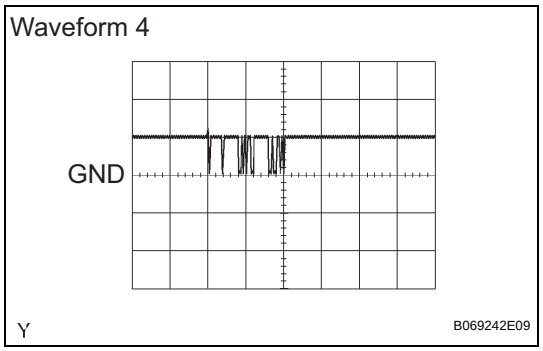
Waveform 1

(f) Using an oscilloscope, check the waveform 2.
Waveform 2 (Reference):

Item	Content
Symbols (Terminal No.)	CODE (E46-15) - AGND (E46-5)
Tool Setting	5 V/DIV., 20 msec./DIV.
Condition	Key inserted



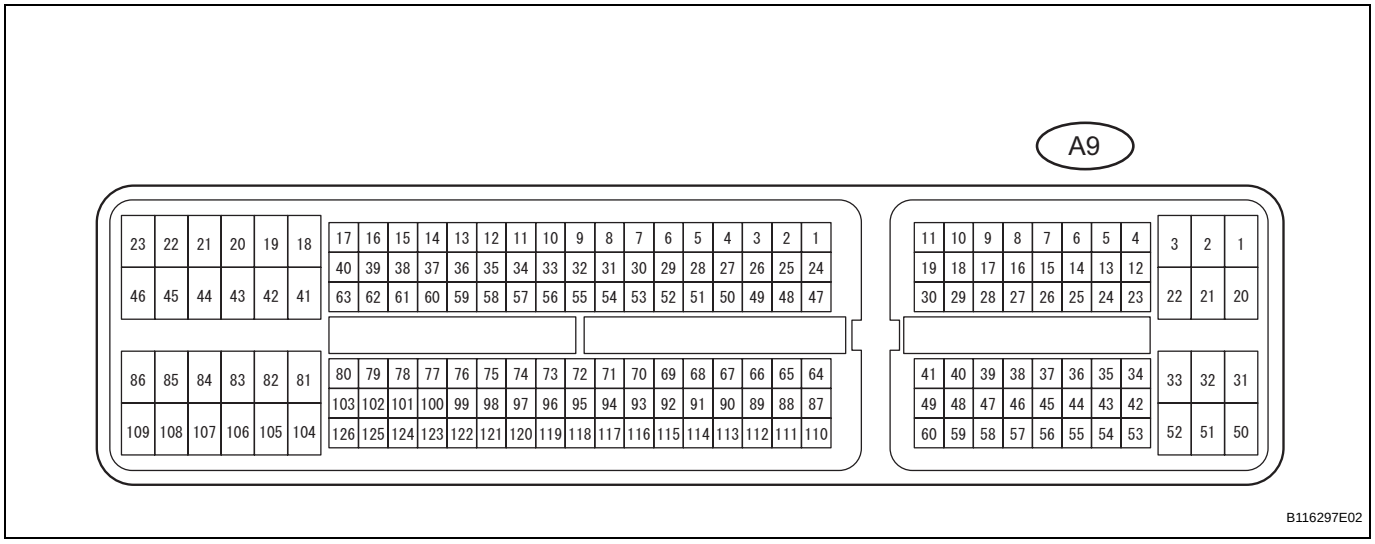
Waveform 2



(g) Using an oscilloscope, check the waveform 3.
Waveform 3 (Reference):

Item	Content
Symbols (Terminal No.)	EFIO (E46-13) - EGND (E46-11)
Tool Setting	10 V/DIV., 500 msec./DIV.
Condition	Ignition switch ON

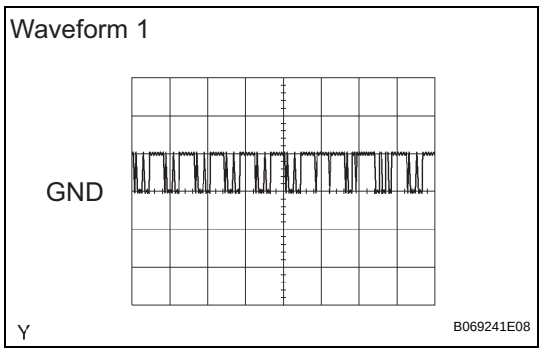
Waveform 3



EI

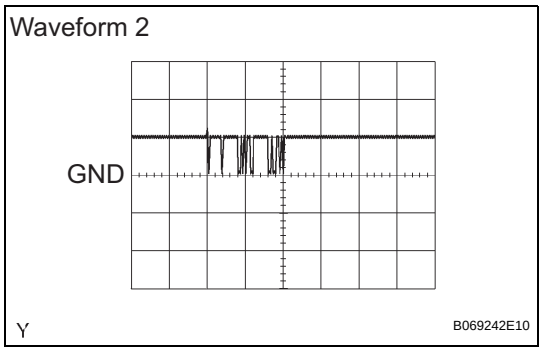
(h) Using an oscilloscope, check the waveform 4.
Waveform 4 (Reference):

Item	Content
Symbols (Terminal No.)	EFII (E46-12) - EGND (E46-11)
Tool Setting	10 V/DIV., 500 msec./DIV.
Condition	Ignition switch ON



3. CHECK ECM

(a) Measure the resistance and voltage of the wire harness side connector.



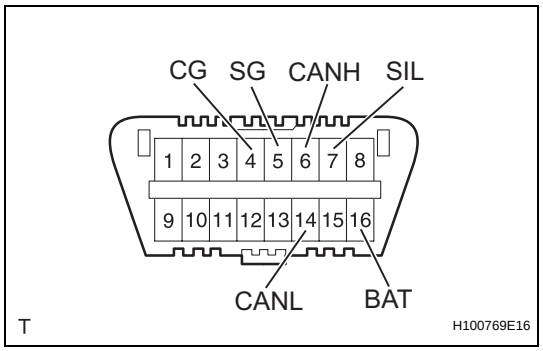
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
EOM (A9-9) - Body ground	V - Body ground	Ground	Always	Below 1 Ω
IMI (A9-11) - EOM (A9-9)	P - V	Transponder key ECU input signal	Ignition switch OFF	Below 1 V
			Ignition switch ON	Pulse generation (see waveform 1)
IMO (A9-10) - EOM (A9-9)	LG - V	Transponder key ECU output signal	Ignition switch OFF	Below 1 V
			Ignition switch ON	Pulse generation (see waveform 2)

If the result is not as specified, there may be a malfunction in the wire harness.

(b) Using an oscilloscope, check the waveform 1.
Waveform 1 (Reference):

Item	Content
Symbols (Terminal No.)	IMI (A9-11) - EOM (A9-9)
Tool Setting	10 V/DIV., 500 msec./DIV.
Condition	Ignition switch ON

(c) Using an oscilloscope, check the waveform 2.
Waveform 2 (Reference):



Item	Content
Symbols (Terminal No.)	IMO (A9-10) - EOM (A9-9)
Tool Setting	10 V/DIV., 500 msec./DIV.
Condition	Ignition switch ON

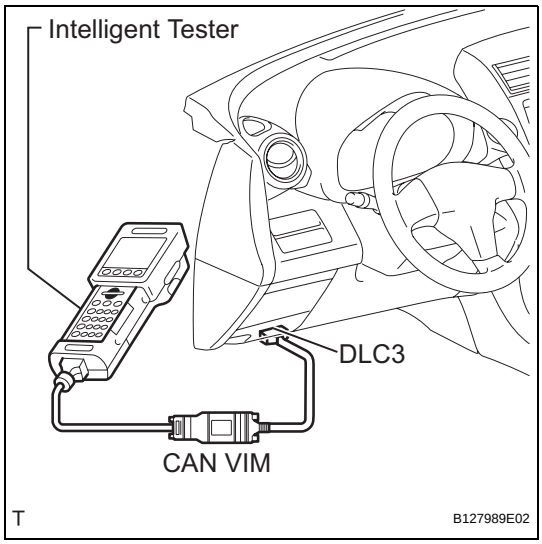
DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Engine immobiliser system data and Diagnostic Trouble Codes (DTCs) can be read through the vehicle's Data Link Connector 3 (DLC3). In some cases, a malfunction may be occurring in the engine immobiliser system even though the security indicator light is not illuminated. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

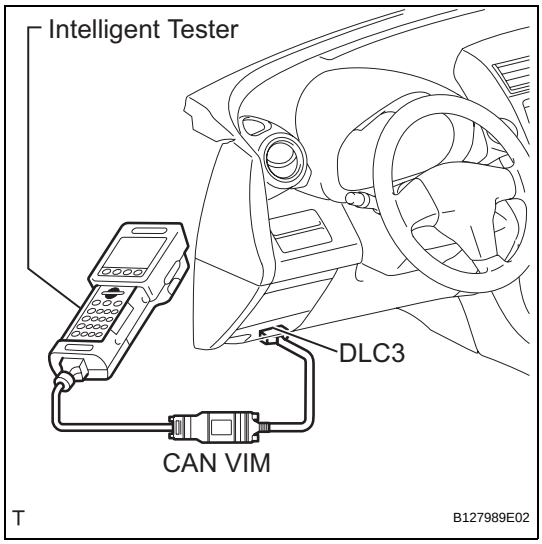
2. CHECK DLC3

The vehicle's ECU uses the ISO 15765-4 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.



Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	HIGH-level CAN bus line	Ignition switch off*	54 to 69 Ω
CANH (6) - Battery positive	HIGH-level CAN bus line	Ignition switch off*	1 kΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch off*	1 kΩ or higher
CANL (14) - Battery positive	LOW-level CAN bus line	Ignition switch off*	1 MΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch off*	1 MΩ or higher

NOTICE:



***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, other switches or doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

EI

HINT:
Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the ignition switch ON and attempt to use the intelligent tester. If the screen displays UNABLE TO CONNECT TO VEHICLE, a problem exists in the vehicle side or the tester side.
If the communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
If the communication is still not possible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON and turn the intelligent tester ON.
(c) Select the following menu items: DIAGNOSIS / OBD/MOBD / IMMOBILISER / DTC INFO / CURRENT CODES.
(d) Check DTCs and then write them down.
HINT:
Refer to the intelligent tester operator's manual for further details.
(e) Confirm the details of the DTCs (see page EI-20).

2. CLEAR DTC

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON (do not start the engine) and turn the intelligent tester ON.
(c) Select the following menu items: DIAGNOSIS / OBD/MOBD / IMMOBILISER / DTC INFO / CLEAR CODES.
HINT:
Refer to the intelligent tester operator's manual for further details.
(d) Erase DTCs by pressing the YES button on the tester.
HINT:
Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON and turn the tester ON.

(c) Select the following menu items: DIAGNOSIS / OBD/MOBD / IMMOBILISER / DATA LIST.

(d) Check the results by referring to the table below.

Transponder key ECU:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
KEY SW	Unlock warning switch signal / ON or OFF	ON: Key is in ignition key cylinder OFF: No key is in ignition key cylinder	-
IG SW	Ignition switch signal / ON or OFF	ON: Ignition switch ON (IG or ACC) OFF: Ignition switch OFF	-
IMMOBILISER	Immobiliser system status / SET or UNSET	SET: No key is in ignition key cylinder UNSET: Key is in ignition key cylinder	-
PERMIT (START)	Engine starting control / OK or NG	OK: Engine start is permitted NG: Engine start is not permitted	-
RESPONSE	Transponder chip data / NG or OK	NG: Data error OK: Data OK	-
FRAME ERROR	Transponder chip data / NG or OK	NG: Data error OK: Data OK	-
SERIAL NUMBER	Transponder chip data / NG or OK	NG: Data error OK: Data OK	-
ENCRYPT CODE	Transponder chip data / NG or OK	NG: Data error OK: Data OK	-
STATUS	Transponder chip data / NG or OK	NG: Data error OK: Data OK	-
BCC	Transponder chip signal / NG or OK	NG: Incorrect data sent OK: Correct data sent	-
SUB KEY	Sub-key code signal / MATCH or NOMATCH	MATCH: Registered sub-key code is sent NOMATCH: Unmatched sub-key code is sent	-
MASTER KEY	Master key code signal / MATCH or NOMATCH	MATCH: Registered master key code is sent NOMATCH: Unmatched master key code is sent	-
REGIST SUB CODE	Number of registered sub-keys / min.: 0, max.: 15	Number of registered sub-keys	-
REGIST MAS CODE	Number of registered master keys / min.: 0, max.: 15	Number of registered master keys	-
REG CODE SPACE	Key registration code memory space full / NOTFULL or FULL	NOTFULL: Possible to register more key codes FULL: Cannot register any more key codes	-

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
+B	+B judgment / NORMAL or BREAK	NORMAL: Battery supply is normal BREAK: Battery supply is malfunctioning	-
ANTENNA COIL	Transponder key coil condition / NORMAL or FAIL	NORMAL: Transponder key coil is normal FAIL: Transponder key coil is malfunctioning	-

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Select the following menu items: DIAGNOSIS / OBD/MOBD / IMMOBILISER / ACTIVE TEST.
(d) Perform the ACTIVE TEST by referring to the table below.

Transponder key ECU:

Item	Test Details	Diagnostic Note
SECURITY INDIC	Turns security indicator light / ON or OFF	-

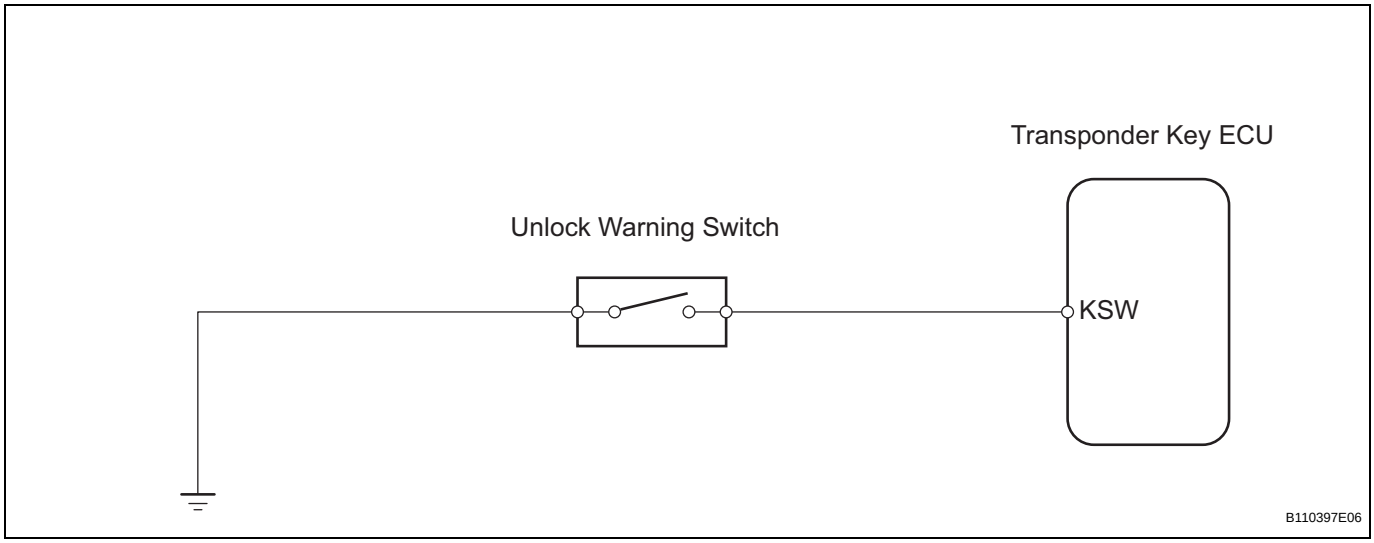
DIAGNOSTIC TROUBLE CODE CHART

Transponder key ECU:

DTC No.	Detection Item	Trouble Area	See page
B2780	Push Switch / Key Unlock Warning Switch Malfunction	- Transponder key ECU - Unlock warning switch - Wire harness	EI-21
B2784	Antenna Coil Open / Short	- Transponder key ECU - Transponder key amplifier - Wire harness	EI-24
B2793	Transponder Chip Malfunction	Key	EI-26
B2794	Unmatched Encryption Code	Key	EI-27
B2795	Unmatched Key Code	Key	EI-28
B2796	No Communication in Immobiliser System	- Transponder key ECU - Key - Wire harness - Transponder key amplifier	EI-29
B2797	Communication Malfunction No. 1	- Key - Wire harness - Transponder key ECU - Transponder key amplifier	EI-32
B2798	Communication Malfunction No. 2	Key	EI-29

ECM:

DTC No.	Detection Item	Trouble Area	See page
B2799	Engine Immobiliser System	- Wire harness - Transponder key ECU - ECM	EI-36



DTC	B2780	Push Switch / Key Unlock Warning Switch Malfunction

DESCRIPTION

This DTC is output if the transponder key ECU does not detect that the unlock warning switch is ON even when the ignition switch is ON. Under normal conditions, the unlock warning switch is ON when the ignition switch is ON.

DTC No.	DTC Detection Condition	Trouble Area
B2780	Unlock warning switch ON is not detected when ignition switch is ON	• Transponder key ECU • Unlock warning switch • Wire harness

WIRING DIAGRAM

INSPECTION PROCEDURE

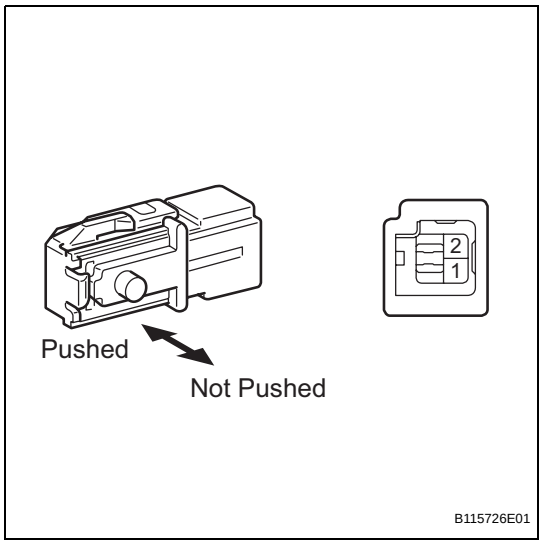
EI

1	READ VALUE OF INTELLIGENT TESTER (UNLOCK WARNING SWITCH)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON with a key that cannot start the engine.
(c) On the intelligent tester, enter the following menus: DIAGNOSIS / OBD/MOBD / IMMOBILISER / DATA LIST / KEY SW. Read the result.

Transponder key ECU:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
KEY SW	Unlock warning switch signal / ON or OFF	ON: Key is in ignition key cylinder OFF: No key is in ignition key cylinder	-



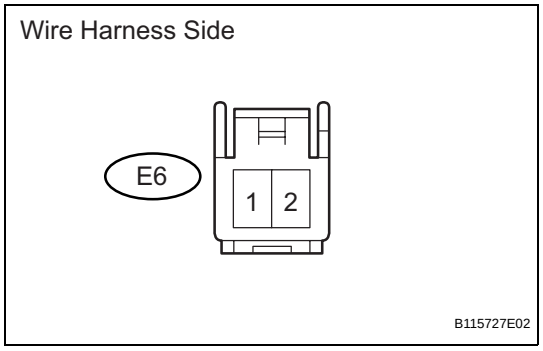
OK:

ON (key is in ignition key cylinder) appears on the screen.

OK → REPLACE TRANSPONDER KEY ECU

NG

2 INSPECT UNLOCK WARNING SWITCH ASSEMBLY



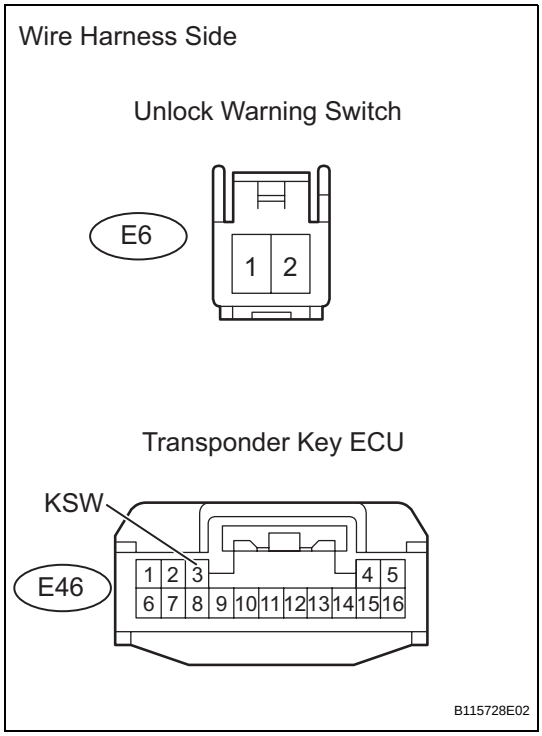
(a) Remove the unlock warning switch.
(b) Measure the resistance of the switch.
Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Pushed	Below 1 Ω
	Not pushed	10 kΩ or higher

NG → REPLACE UNLOCK WARNING SWITCH ASSEMBLY

OK

3 CHECK WIRE HARNESS (UNLOCK WARNING SWITCH - BODY GROUND)



(a) Disconnect the E6 switch connector.
(b) Measure the resistance of the wire harness side connector.
Standard resistance

Tester Connection	Specified Condition
E6-2 - Body ground	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS AND CONNECTOR

OK

4	CHECK WIRE HARNESS (UNLOCK WARNING SWITCH - TRANSPONDER KEY ECU)

(a) Disconnect the E6 switch connector.
(b) Disconnect the E46 ECU connector.
(c) Measure the resistance of the wire harness side connectors.

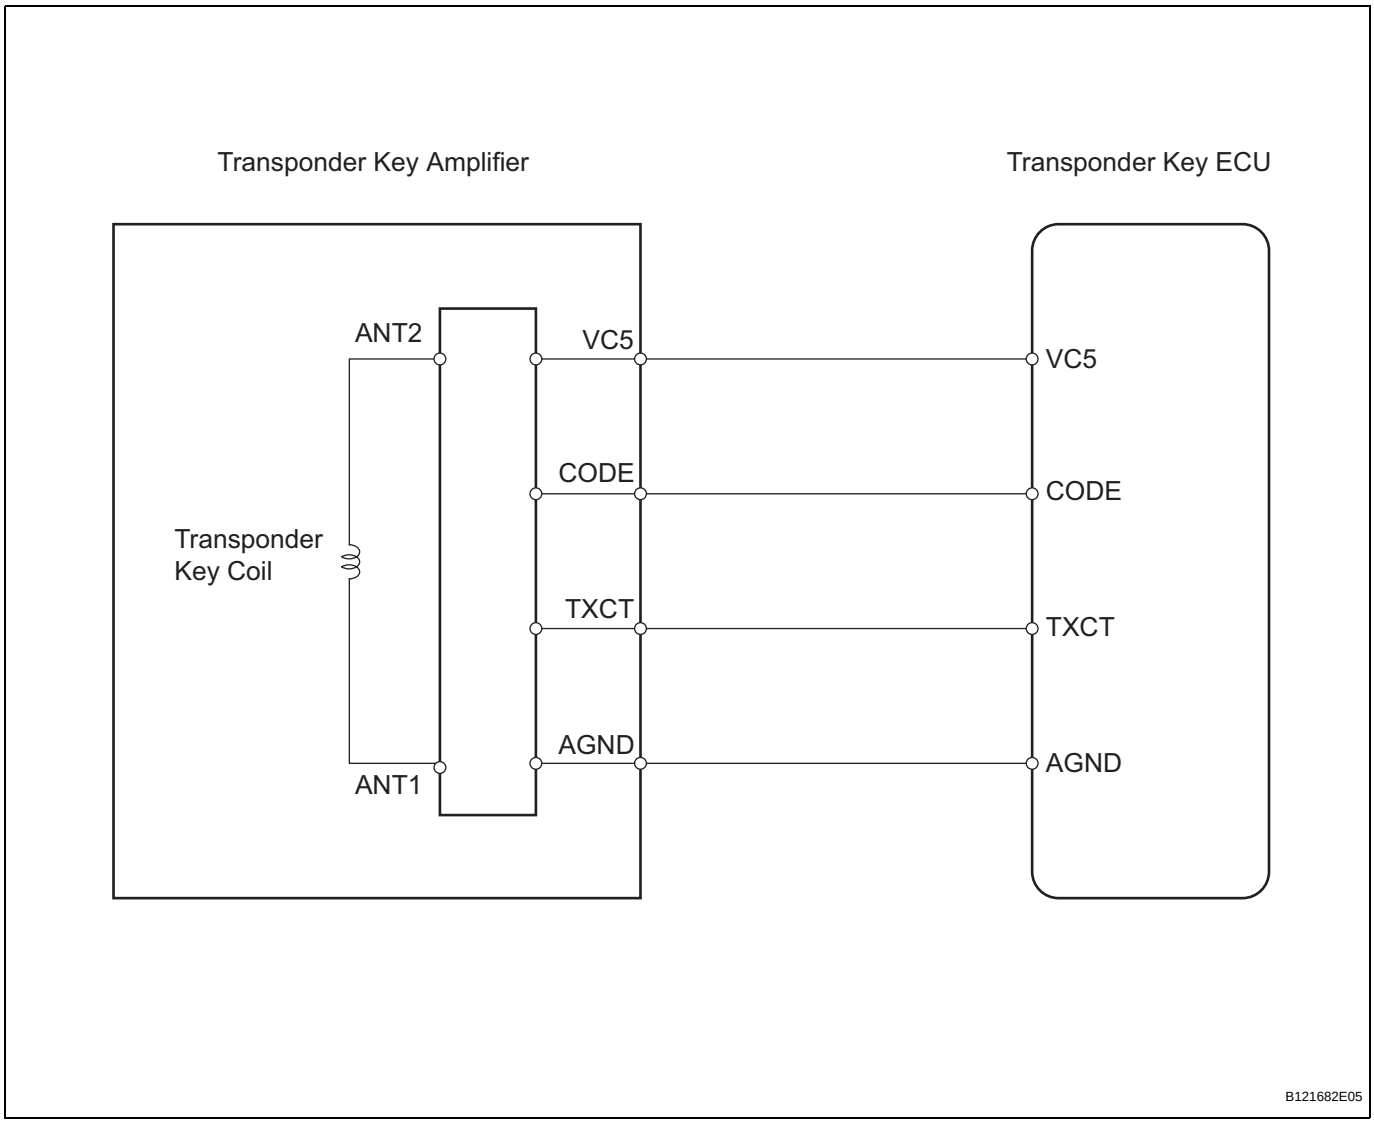
Standard resistance

Tester Connection	Specified Condition
E6-1 - E46-3 (KSW)	Below 1 Ω
E6-1 or E46-3 (KSW) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE TRANSPONDER KEY ECU



DTC	B2784	Antenna Coil Open / Short

DESCRIPTION

The transponder key coil receives key code signals from the transponder chip in the key grip. The coil built into the transponder key amplifier amplifies the key code signals and outputs the signal to the transponder key ECU.

DTC No.	DTC Detection Condition	Trouble Area
B2784	When transponder key coil is open or short	• Transponder key ECU • Transponder key amplifier • Wire harness

WIRING DIAGRAM

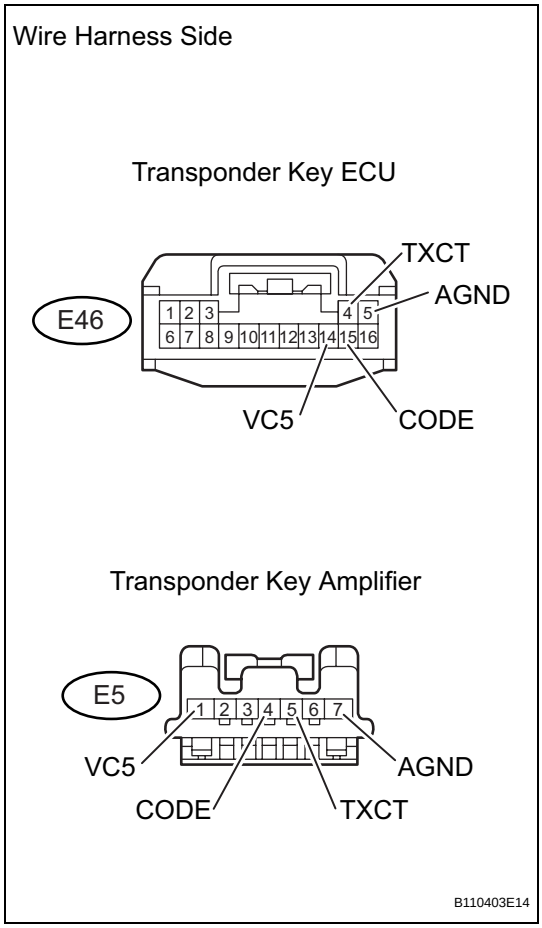
INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER (TRANSPONDER KEY COIL)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON with a key that cannot start the engine.
(c) On the intelligent tester, enter the following menus: DIAGNOSIS / OBD/MOBD / IMMOBILISER / DATA LIST / ANTENNA COIL. Read the result.

Transponder key ECU:



Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
ANTENNA COIL	Transponder key coil condition / NORMAL or FAIL	NORMAL: Transponder key coil is normal FAIL: Transponder key coil is malfunctioning	-

OK:
NORMAL (Transponder key coil is normal) appears on the screen.

OK → **REPLACE TRANSPONDER KEY ECU**

NG

2 CHECK WIRE HARNESS (TRANSPONDER KEY ECU - TRANSPONDER KEY AMPLIFIER)

(a) Disconnect the E46 ECU connector.
(b) Disconnect the E5 amplifier connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
E46-14 (VC5) - E5-1 (VC5)	Below 1 Ω
E46-15 (CODE) - E5-4 (CODE)	
E46-4 (TXCT) - E5-5 (TXCT)	
E46-5 (AGND) - E5-7 (AGND)	
E46-14 (VC5) or E5-1 (VC5) - Body ground	10 kΩ or higher
E46-15 (CODE) or E5-4 (CODE) - Body ground	
E46-4 (TXCT) or E5-5 (TXCT) - Body ground	
E46-5 (AGND) or E5-7 (AGND) - Body ground	

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE TRANSPONDER KEY AMPLIFIER

DTC	B2793	Transponder Chip Malfunction

DESCRIPTION

This DTC is output when: 1) during key code registration, a key malfunction occurs; 2) the key code was unable to be registered properly.

DTC No.	DTC Detection Condition	Trouble Area
B2793	Transponder chip malfunction	Key

INSPECTION PROCEDURE

1	REREGISTER KEY

(a) Clear the DTC (see page EI-18).
(b) Reregister the key code with the transponder key ECU (see page EI-5)
(c) Check that the engine starts with the key.
OK:
Engine starts.

NG → **REPLACE KEY**

OK

END

DTC	B2794	Unmatched Encryption Code

DESCRIPTION

This DTC is output when a key with an incomplete key code is inserted into the ignition key cylinder.

DTC No.	DTC Detection Condition	Trouble Area
B2794	Key with incomplete key code is inserted	Key

INSPECTION PROCEDURE

1	REREGISTER KEY

(a) Clear the DTC (see page EI-18).
(b) Reregister the key code with the transponder key ECU (see page EI-5)
(c) Check that the engine starts with the key.
OK:
Engine starts.

NG → **REPLACE KEY**

OK ↓

END

DTC	B2795	Unmatched Key Code

DESCRIPTION

This DTC is output when a key code that has not been registered in the transponder key ECU is inserted into the ignition key cylinder.

DTC No.	DTC Detection Condition	Trouble Area
B2795	Key with unregistered key code is inserted	Key

INSPECTION PROCEDURE

1	REREGISTER KEY

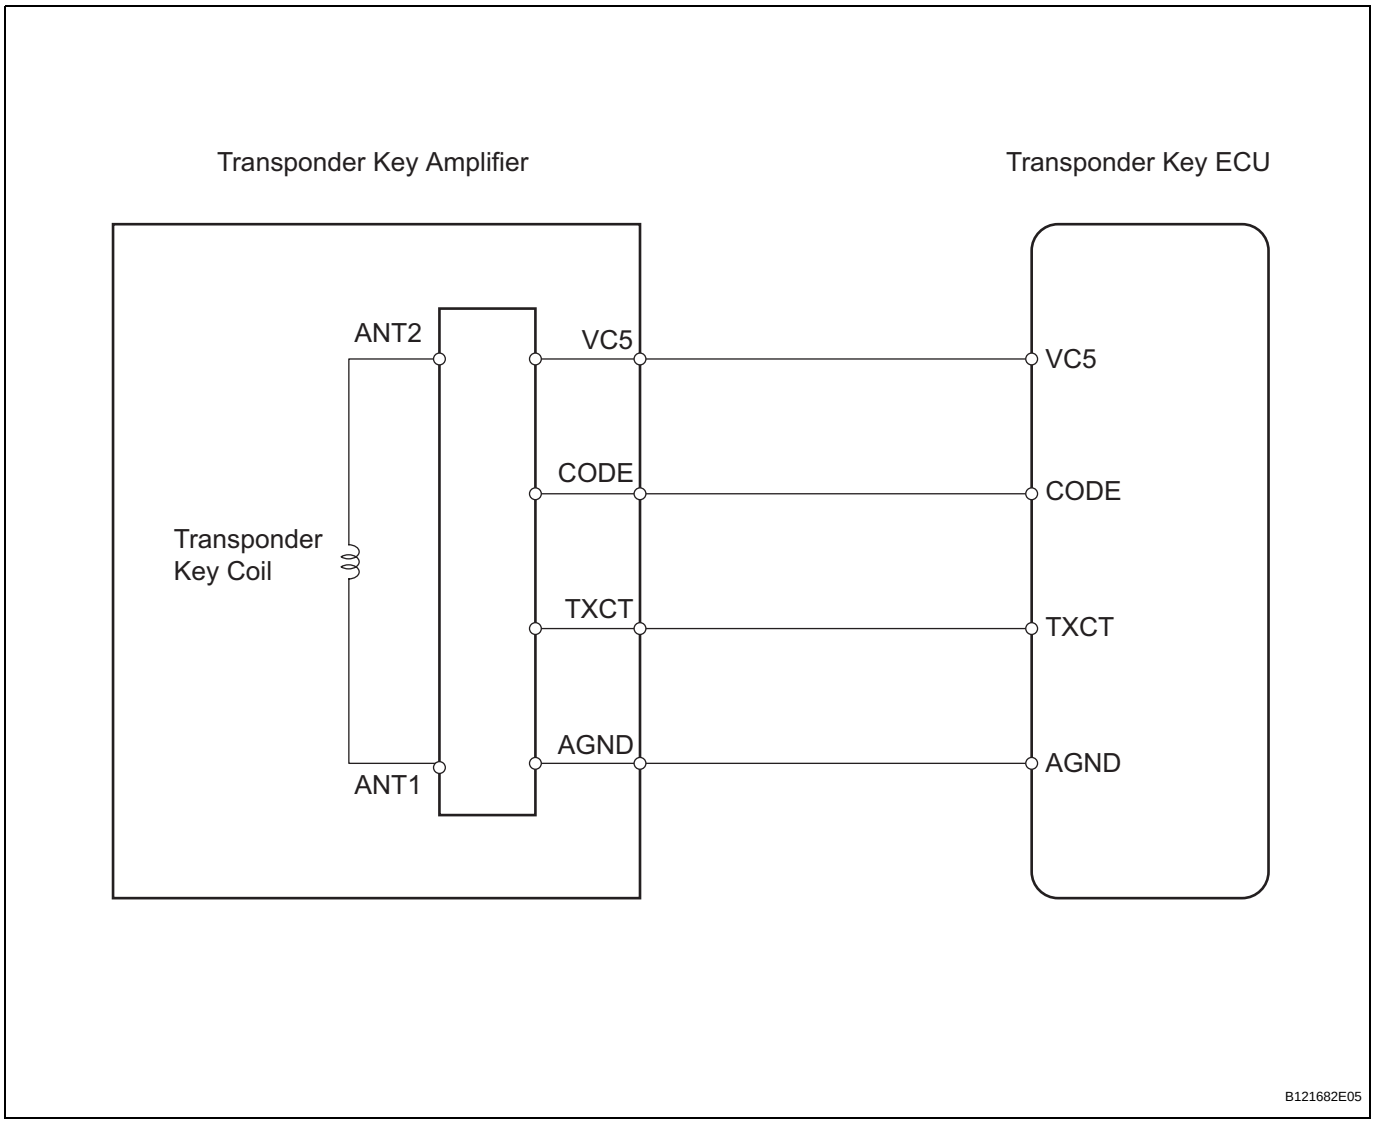
(a) Clear the DTC (see page EI-18).
(b) Reregister the key code with the transponder key ECU (see page EI-5)
(c) Check that the engine starts with the key.
OK:
Engine starts.

NG → **REPLACE KEY**

OK

END

DTC	B2796	No Communication in Immobiliser System



DTC	B2798	Communication Malfunction No. 2

DESCRIPTION

When a key is inserted into the ignition key cylinder but no communication occurs between the key and transponder key ECU, DTC B2796 is output. When a key is inserted into the ignition key cylinder but a communication error occurs between the key and transponder key ECU, DTC B2798 is output.

DTC No.	DTC Detection Condition	Trouble Area
B2796	No communication	• Transponder key ECU • Key • Wire harness • Transponder key amplifier
B2798	Communication error	Key

WIRING DIAGRAM

EI

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER (ENGINE IMMOBILISER SYSTEM)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON with a key that cannot start the engine.
(c) On the intelligent tester, enter the following menus: DIAGNOSIS / OBD/MOBD / IMMOBILISER / DATA LIST / IMMOBILISER. Read the result.

Transponder key ECU:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
IMMOBILISER	Immobiliser system status / SET or UNSET	SET: No key is in ignition key cylinder UNSET: Key is in ignition key cylinder	-

OK:
UNSET (key is in ignition key cylinder) appears on the screen.

OK → **REPLACE TRANSPONDER KEY ECU**

NG

2	CHECK WHETHER ENGINE STARTS WITH OTHER KEY

(a) Check whether the engine starts with the vehicle's other keys.
OK:
Engine starts.

NG → **REREGISTER OR REPLACE KEY THAT CANNOT START ENGINE**

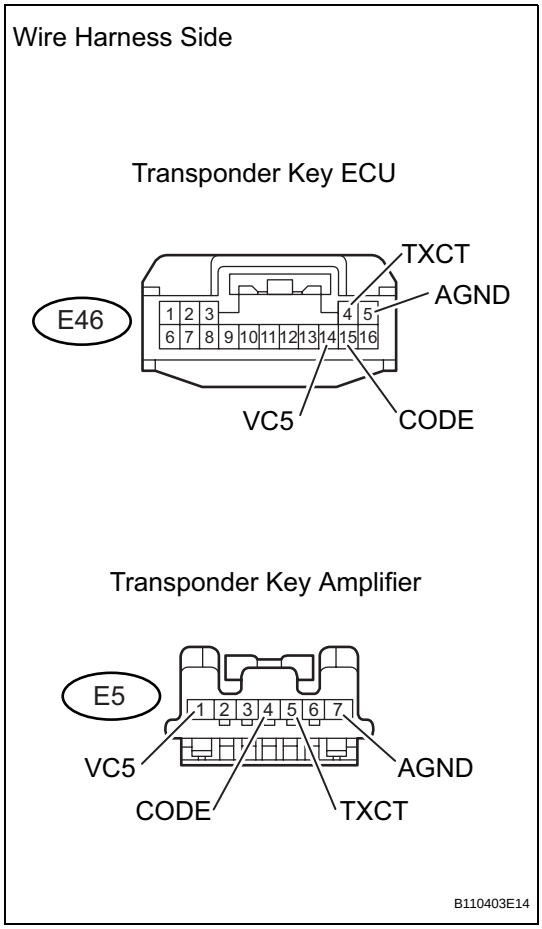
OK

3	READ VALUE OF INTELLIGENT TESTER (TRANSPONDER KEY COIL)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON with a key that cannot start the engine.
(c) On the intelligent tester, enter the following menus: DIAGNOSIS / OBD/MOBD / IMMOBILISER / DATA LIST / ANTENNA COIL. Read the result.

Transponder key ECU:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
ANTENNA COIL	Transponder key coil condition/ NORMAL or FAIL	NORMAL: Transponder key coil is normal FAIL: Transponder key coil is malfunctioning	-



EI

OK:
NORMAL (Transponder key coil is normal) appears on the screen.

OK → **REPLACE TRANSPONDER KEY ECU**

NG

4 CHECK WIRE HARNESS (TRANSPONDER KEY ECU - TRANSPONDER KEY AMPLIFIER)

(a) Disconnect the E46 ECU connector.
(b) Disconnect the E5 amplifier connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
E46-14 (VC5) - E5-1 (VC5)	Below 1 Ω
E46-15 (CODE) - E5-4 (CODE)	
E46-4 (TXCT) - E5-5 (TXCT)	
E46-5 (AGND) - E5-7 (AGND)	
E46-14 (VC5) or E5-1 (VC5) - Body ground	10 kΩ or higher
E46-15 (CODE) or E5-4 (CODE) - Body ground	
E46-4 (TXCT) or E5-5 (TXCT) - Body ground	
E46-5 (AGND) or E5-7 (AGND) - Body ground	

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

EI

OK

5 CHECK TRANSPONDER KEY AMPLIFIER (OPERATION)

(a) Temporarily replace the transponder key amplifier with a new or normally functioning one..
(b) Check that the engine starts normally.

OK:
Engine starts normally.

NG → **REPLACE TRANSPONDER KEY ECU**

OK

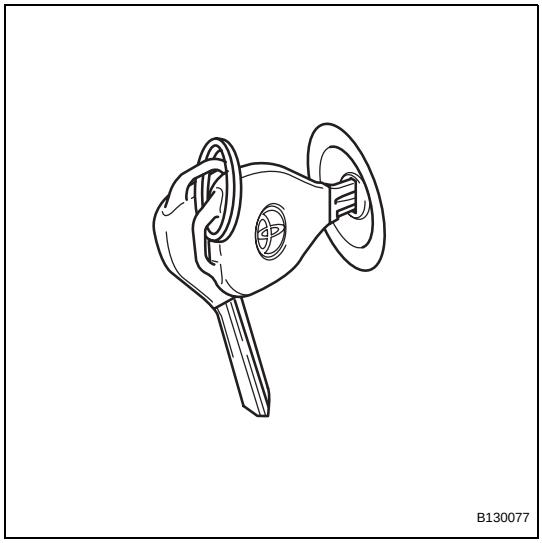
END (TRANSPONDER KEY AMPLIFIER IS DEFECTIVE)

DTC	B2797	Communication Malfunction No. 1

DESCRIPTION

This DTC is output when a communication error occurs between the transponder key amplifier and transponder key ECU. Some possible reasons for the communication error are: 1) 2 or more ignition keys are positioned too close together, or 2) noise is occurring in the communication line.

DTC No.	DTC Detection Condition	Trouble Area
B2797	Keys are positioned too close to each other, or noise occurred in communication line	• Key • Wire harness • Transponder key amplifier • Transponder key ECU



WIRING DIAGRAM

EI

INSPECTION PROCEDURE

1	CHECK KEY

(a) Check if the ignition key being used is near other ignition keys. Also, check if the key ring is in contact with the key grip.

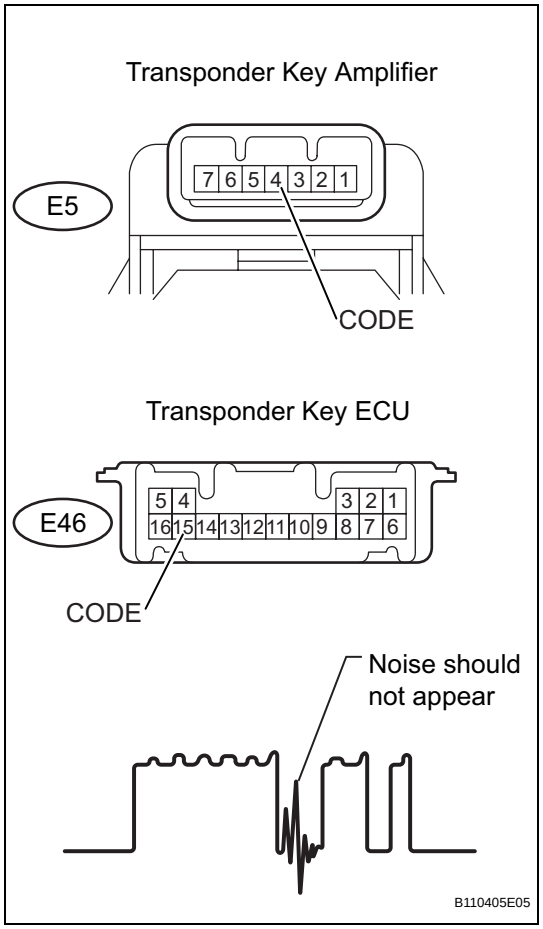
Result:

Result	Proceed to
Key is near other keys and/or key ring is in contact with key grip	A
Key is not near other keys and/or key ring is not in contact with key grip	B

B → **Go to step 3**

A

2	CHECK FOR DTC



(a) Separate the keys from each other and / or remove the key ring.
(b) Clear the DTC (see page EI-18).
(c) Insert a key into the ignition key cylinder. Remove it. Repeat for all other keys.
(d) Check that no DTC is output.
OK:
No DTC is output.

OK → **END**

NG

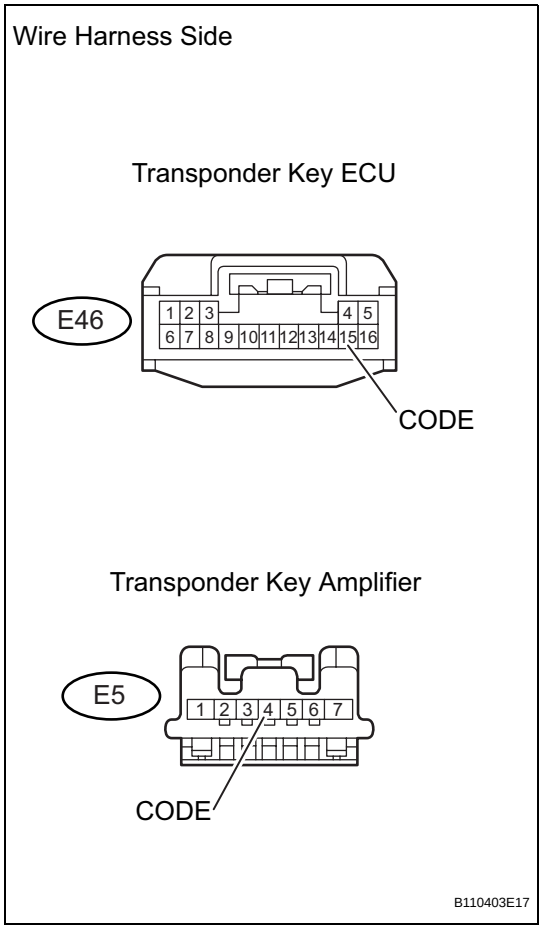
EI

3 CHECK TRANSPONDER KEY ECU (NOISE)

(a) Using an oscilloscope or the intelligent tester, check for noise in the waveform between the terminals of the E5 amplifier connector and E46 ECU connector.

OK:

No noise is present (see illustration).



Tester Connection	Tool Setting	Tool Setting	Specified Condition
E46-15 (CODE) - E5-4 (CODE)	5 V/DIV., 20 msec./DIV.	Key inserted	No noise is present

NG → **FIND CAUSE OF NOISE AND REMOVE IT**

OK

EI

4	CHECK WIRE HARNESS (TRANSPONDER KEY ECU - TRANSPONDER KEY AMPLIFIER)

(a) Disconnect the E46 ECU connector.
(b) Disconnect the E5 amplifier connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
E46-15 (CODE) - E5-4 (CODE)	Below 1 Ω
E46-15 (CODE) or E5-4 (CODE) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

5	CHECK TRANSPONDER KEY AMPLIFIER (OPERATION)

EI

(a) Temporarily replacing the transponder key amplifier with a new or normally functioning one.
(b) Check that the engine starts normally.

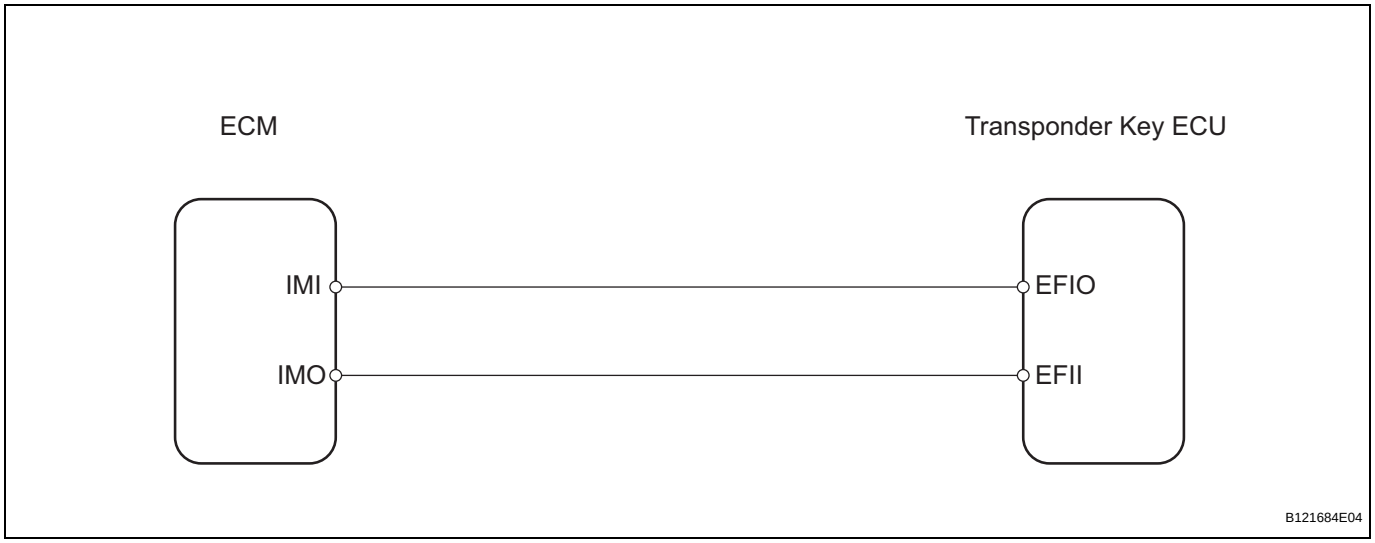
OK:

Engine starts.

NG → **REPLACE TRANSPONDER KEY ECU**

OK

END (TRANSPONDER KEY AMPLIFIER IS DEFECTIVE)



DTC	B2799	Engine Immobiliser System Malfunction

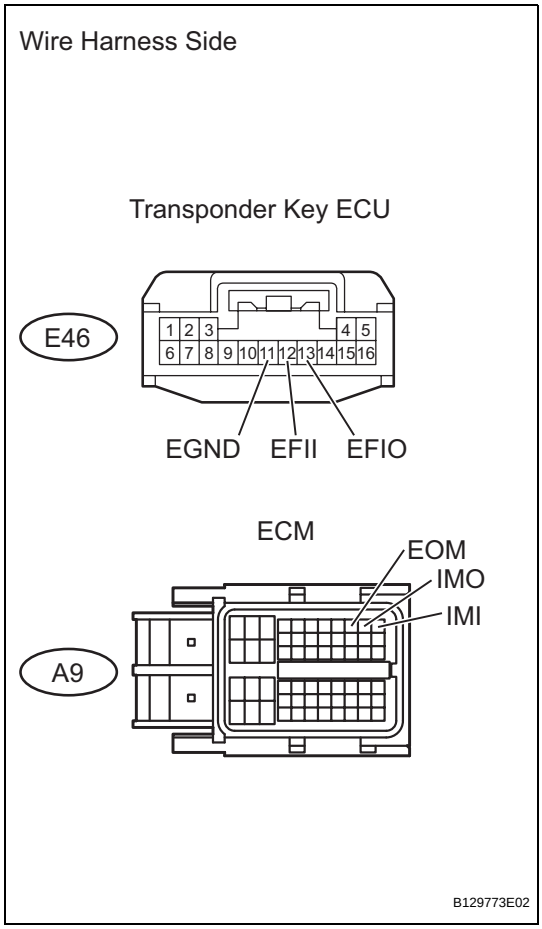
DESCRIPTION

This DTC is output when one of the following occurs: 1) the ECM detects errors in its own communications with the transponder key ECU; 2) the ECM detects errors in the communication lines; or 3) the ECU communication ID between the transponder key ECU and ECM is different and an engine start is attempted. Before troubleshooting for this DTC, make sure no transponder key ECU DTCs are present. If present, troubleshoot the transponder key ECU DTCs first.

DTC No.	DTC Detection Condition	Trouble Area
B2799	One of following conditions is met: • Error in communication between ECM and transponder key ECU • Error in communication lines • Communication ID is different during communication with transponder key ECU	• Wire harness • Transponder key ECU • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE



1	CHECK FOR DTC

(a) Delete the DTC (see page EI-18).
(b) Recheck for DTC.
OK:
B2799 output does not reoccur.

OK → **NORMAL**

NG

2 CHECK WIRE HARNESS (TRANSPONDER KEY ECU - ECM)

(a) Disconnect the E46 ECU connector.
(b) Disconnect the A9 ECM connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
E46-13 (EFIO) - A9-11 (IMI)	Below 1 Ω
E46-12 (EFII) - A9-10 (IMO)	
E46-11 (EGND) - A9-9 (EOM)	
E46-13 (EFIO) or A9-11 (IMI) - Body ground	10 kΩ or higher
E46-12 (EFII) or A9-10 (IMO) - Body ground	

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

3 CHECK TRANSPONDER KEY ECU (OPERATION)

EI

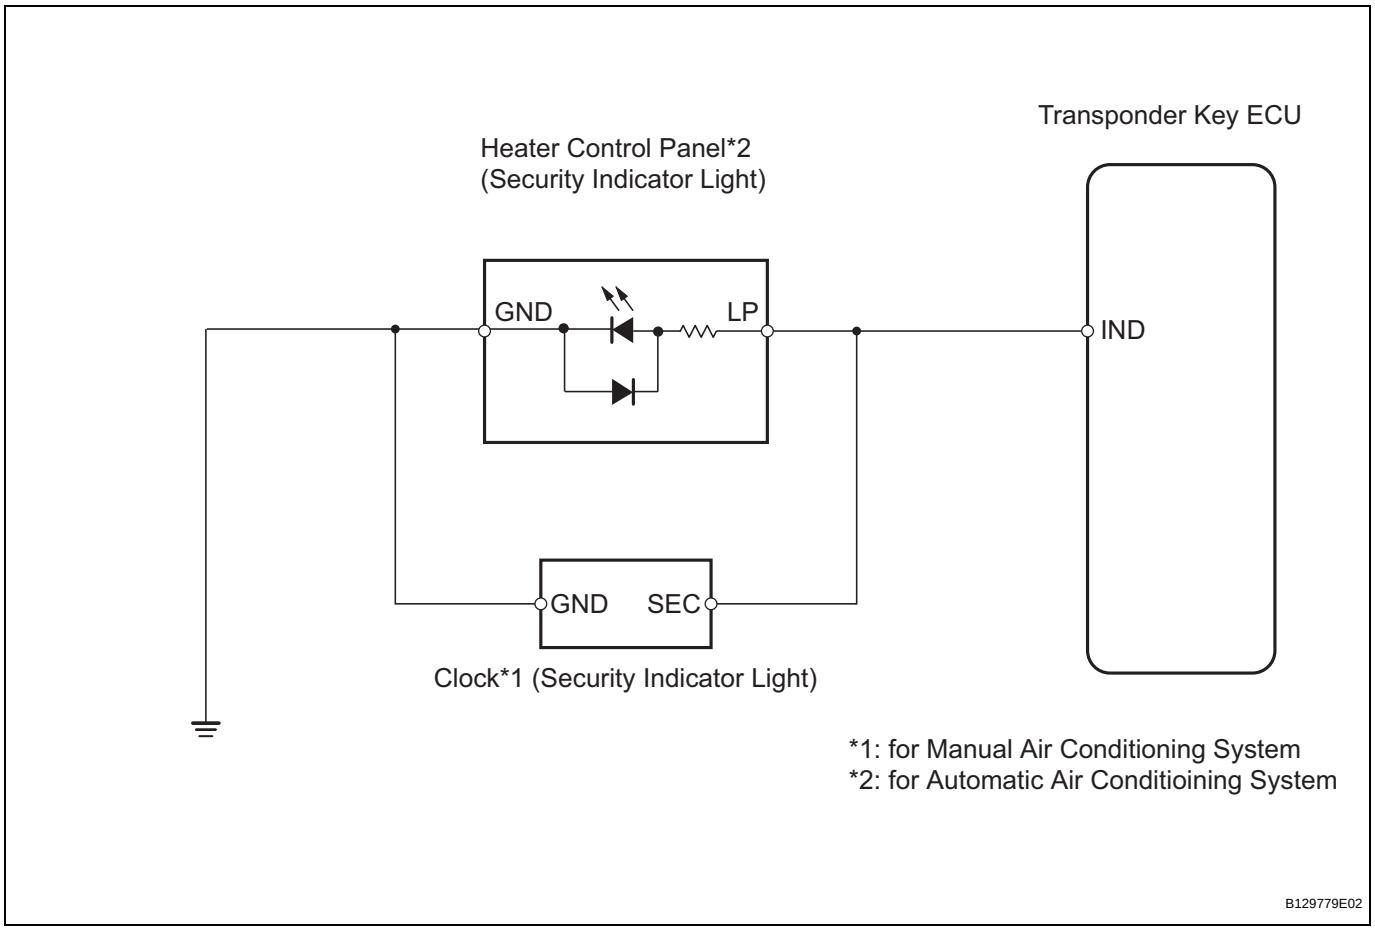
(a) Temporarily replace the transponder key ECU with a new or normally functioning one.
(b) Check that then engine starts normally.

OK:

Engine starts normally.

NG → **REPLACE ECM**

OK



END (TRANSPONDER KEY ECU IS DEFECTIVE)

Security Indicator Light Circuit

DESCRIPTION

When the transponder key is registered, the transponder key ECU indicates the key registration condition by lighting up, blinking or turning off the security indicator.

WIRING DIAGRAM

EI

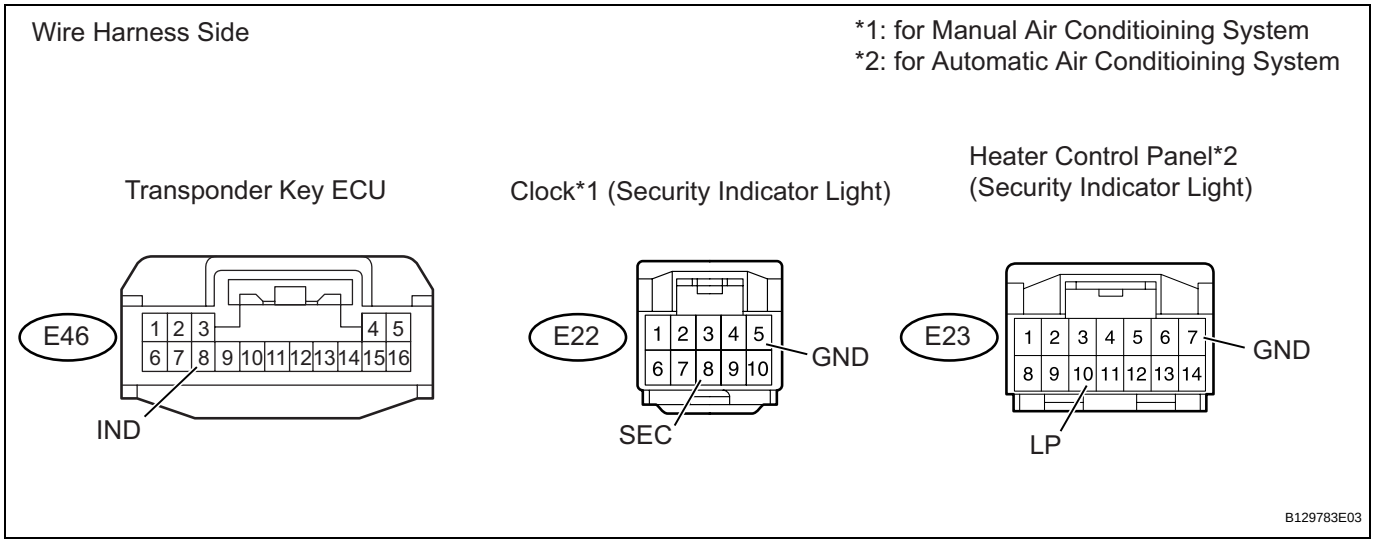
INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (SECURITY INDICATOR LIGHT)

(a) Select the ACTIVE TEST, use the intelligent tester (with CAN VIM) to generate a command, and then check that the security indicator light operation is normal.

Transponder key ECU:

Item	Normal Condition	Diagnostic Note
SECURITY INDIC	Security indicator light turns ON / OFF	-



OK:

Security indicator light turns ON / OFF.

OK → **Go to step 3**

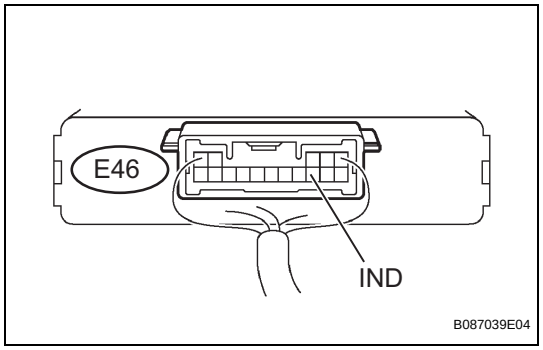
NG

2	CHECK WIRE HARNESS (TRANSPONDER KEY ECU - SECURITY INDICATOR LIGHT)

(a) Disconnect the E46 ECU connector.
(b) Disconnect the E22*1 or E23*2 light connector.
(c) Measure the resistance of the wire harness side connectors.
HINT:
*1: for Manual air conditioning system
*2: for Automatic air conditioning system
Standard resistance:
for Manual Air Conditioning System

Tester Connection	Specified Condition
E46-8 (IND) - E22-8 (SEC)	Below 1 Ω
E22-5 (GND) - Body ground	
E46-8 (IND) or E22-8 (SEC) - Body ground	10 kΩ or higher

for Automatic Air Conditioning System



Tester Connection	Specified Condition
E46-8 (IND) - E23-10 (LP)	Below 1 Ω
E23-7 (GND) - Body ground	
E46-8 (IND) or E23-10 (LP) - Body ground	10 kΩ or higher

EI

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

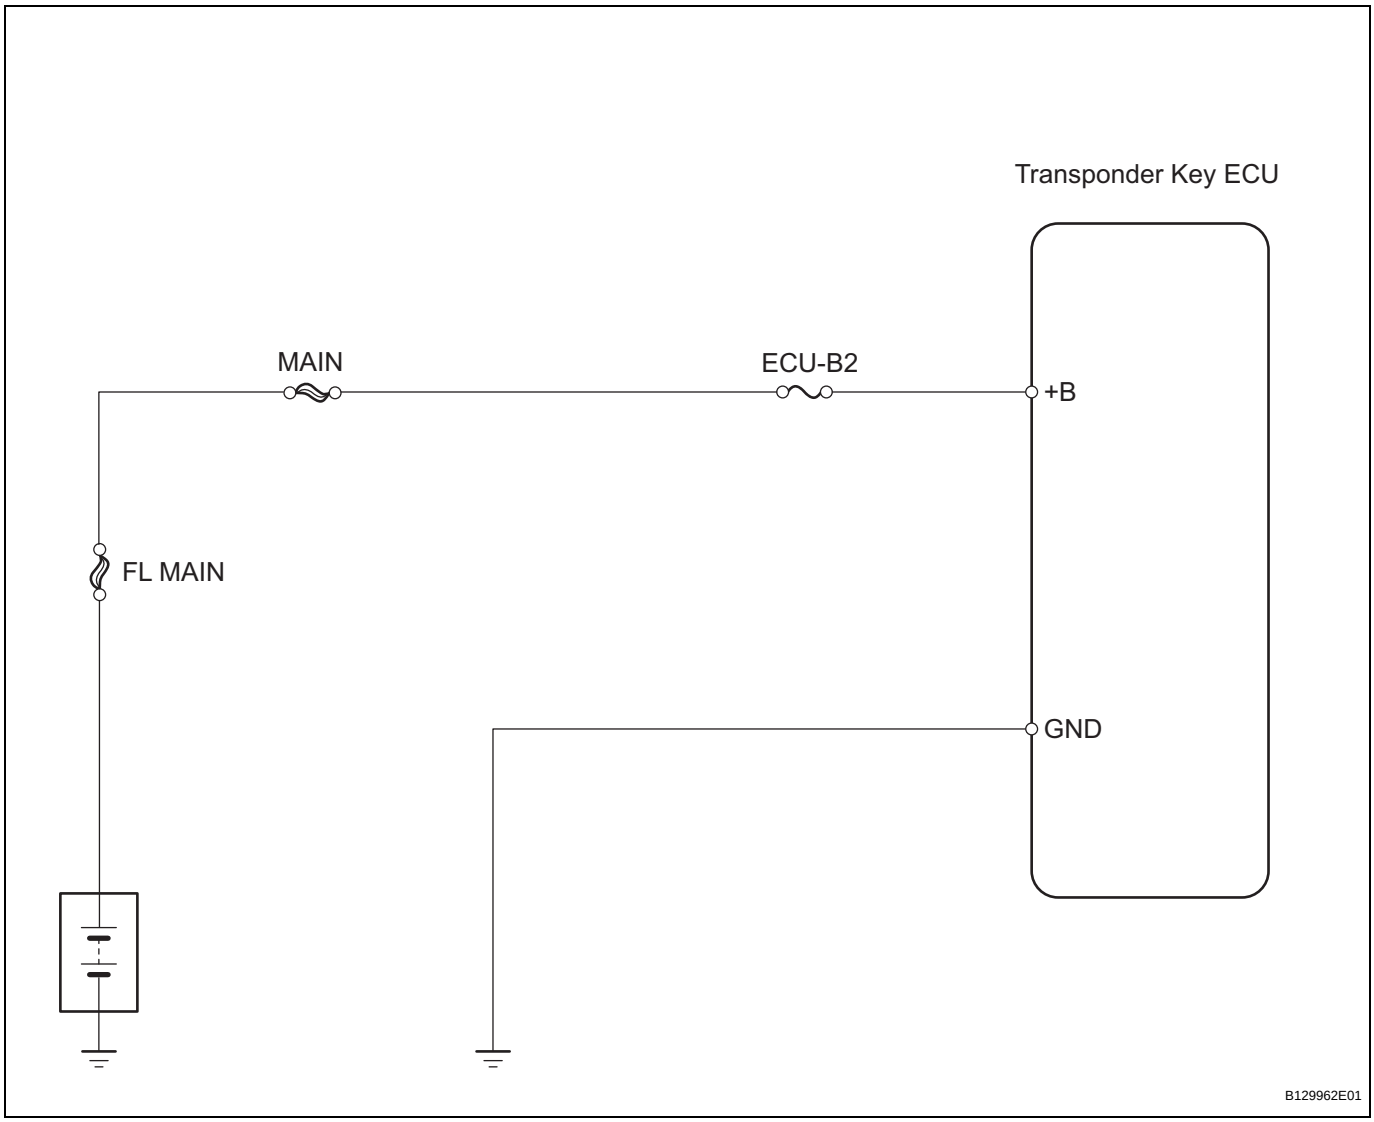
3	INSPECT TRANSPONDER KEY ECU (OUTPUT)

(a) Remove the transponder key ECU with its connectors still connected.
(b) Measure the voltage of the ECU.
Standard voltage

Tester Condition	Condition	Specified Condition
E46-8 (IND) - Body ground	Engine immobiliser system is set	10 to 14 V and below 1 V output alternately

NG → **REPLACE TRANSPONDER KEY ECU**

OK



REPLACE CLOCK SUB-ASSEMBLY (for MANUAL AIR CONDITIONING SYSTEM), HEATER CONTROL PANEL (for AUTOMATIC AIR CONDITIONING SYSTEM)

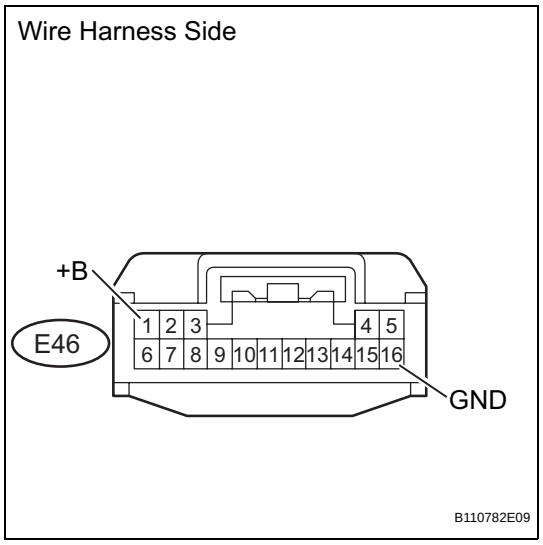
ECU Power Source Circuit

DESCRIPTION

This circuit provides power to operate the transponder key ECU.

WIRING DIAGRAM

INSPECTION PROCEDURE



1	**INSPECT FUSE (ECU-B2)**

(a) Remove the ECU-B2 fuse from the engine room No. 2 relay block.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG	**REPLACE FUSE**

OK

2	CHECK WIRE HARNESS (TRANSPONDER KEY ECU - BATTERY AND BODY GROUND)

(a) Disconnect the E46 ECU connector.
(b) Measure the resistance and voltage of the wire harness side connector.

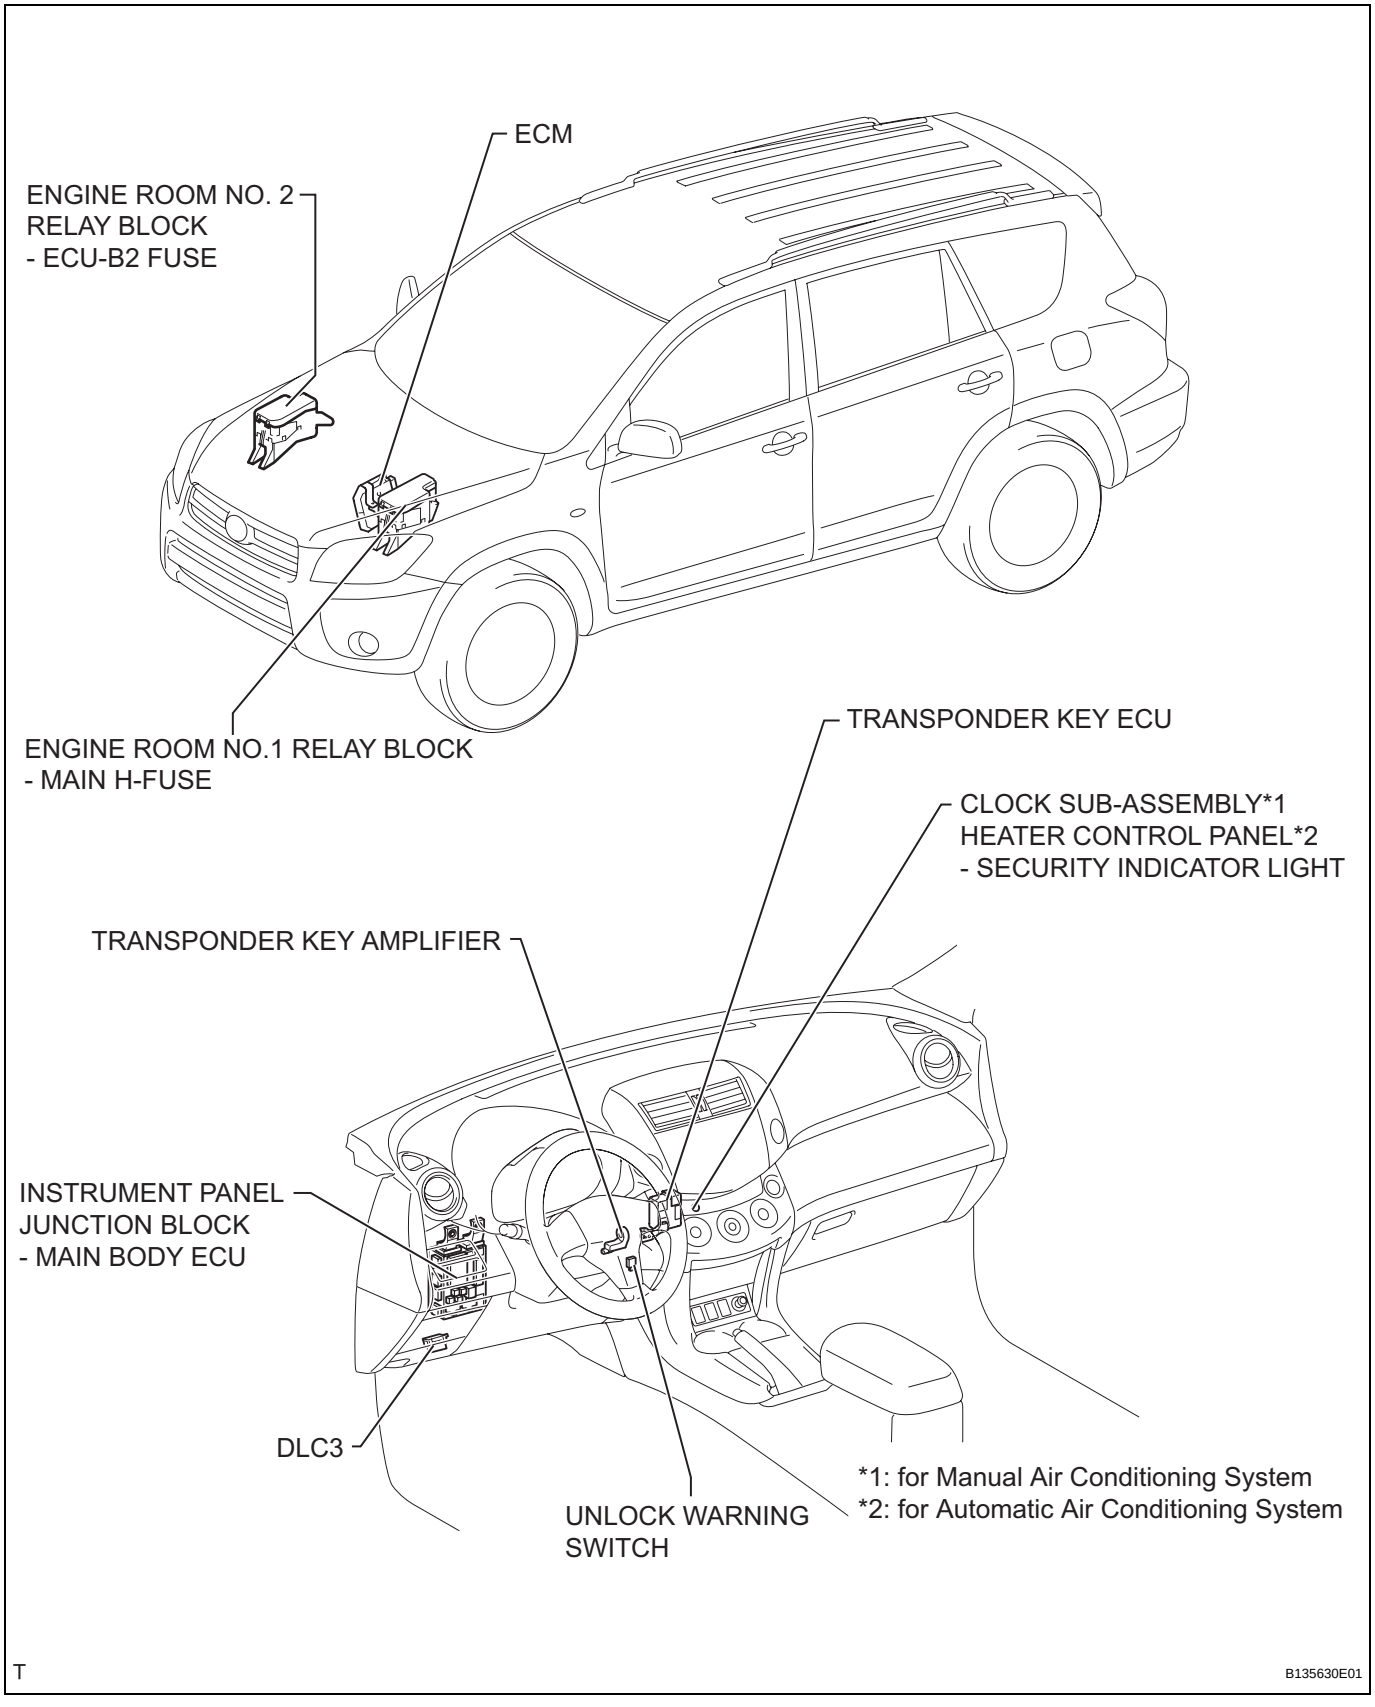
Standard resistance

Tester Connection	Specified Condition
E46-16 (GND) - Body ground	Below 1 Ω

Standard voltage

Tester Connection	Specified Condition
E46-1 (+B) - Body ground	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**



OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

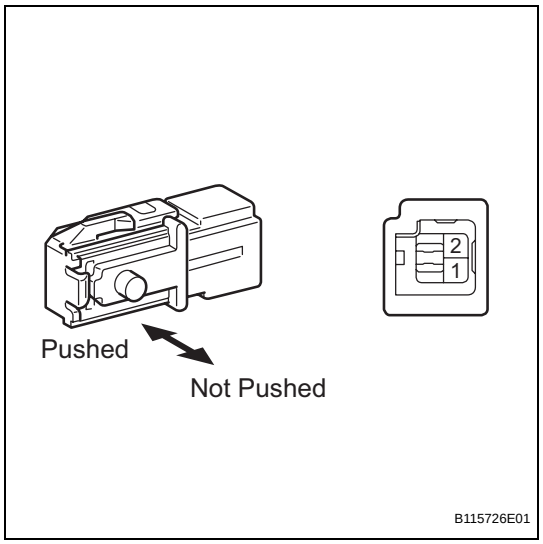
ENGINE IMMOBILISER SYSTEM



PARTS LOCATION

EI

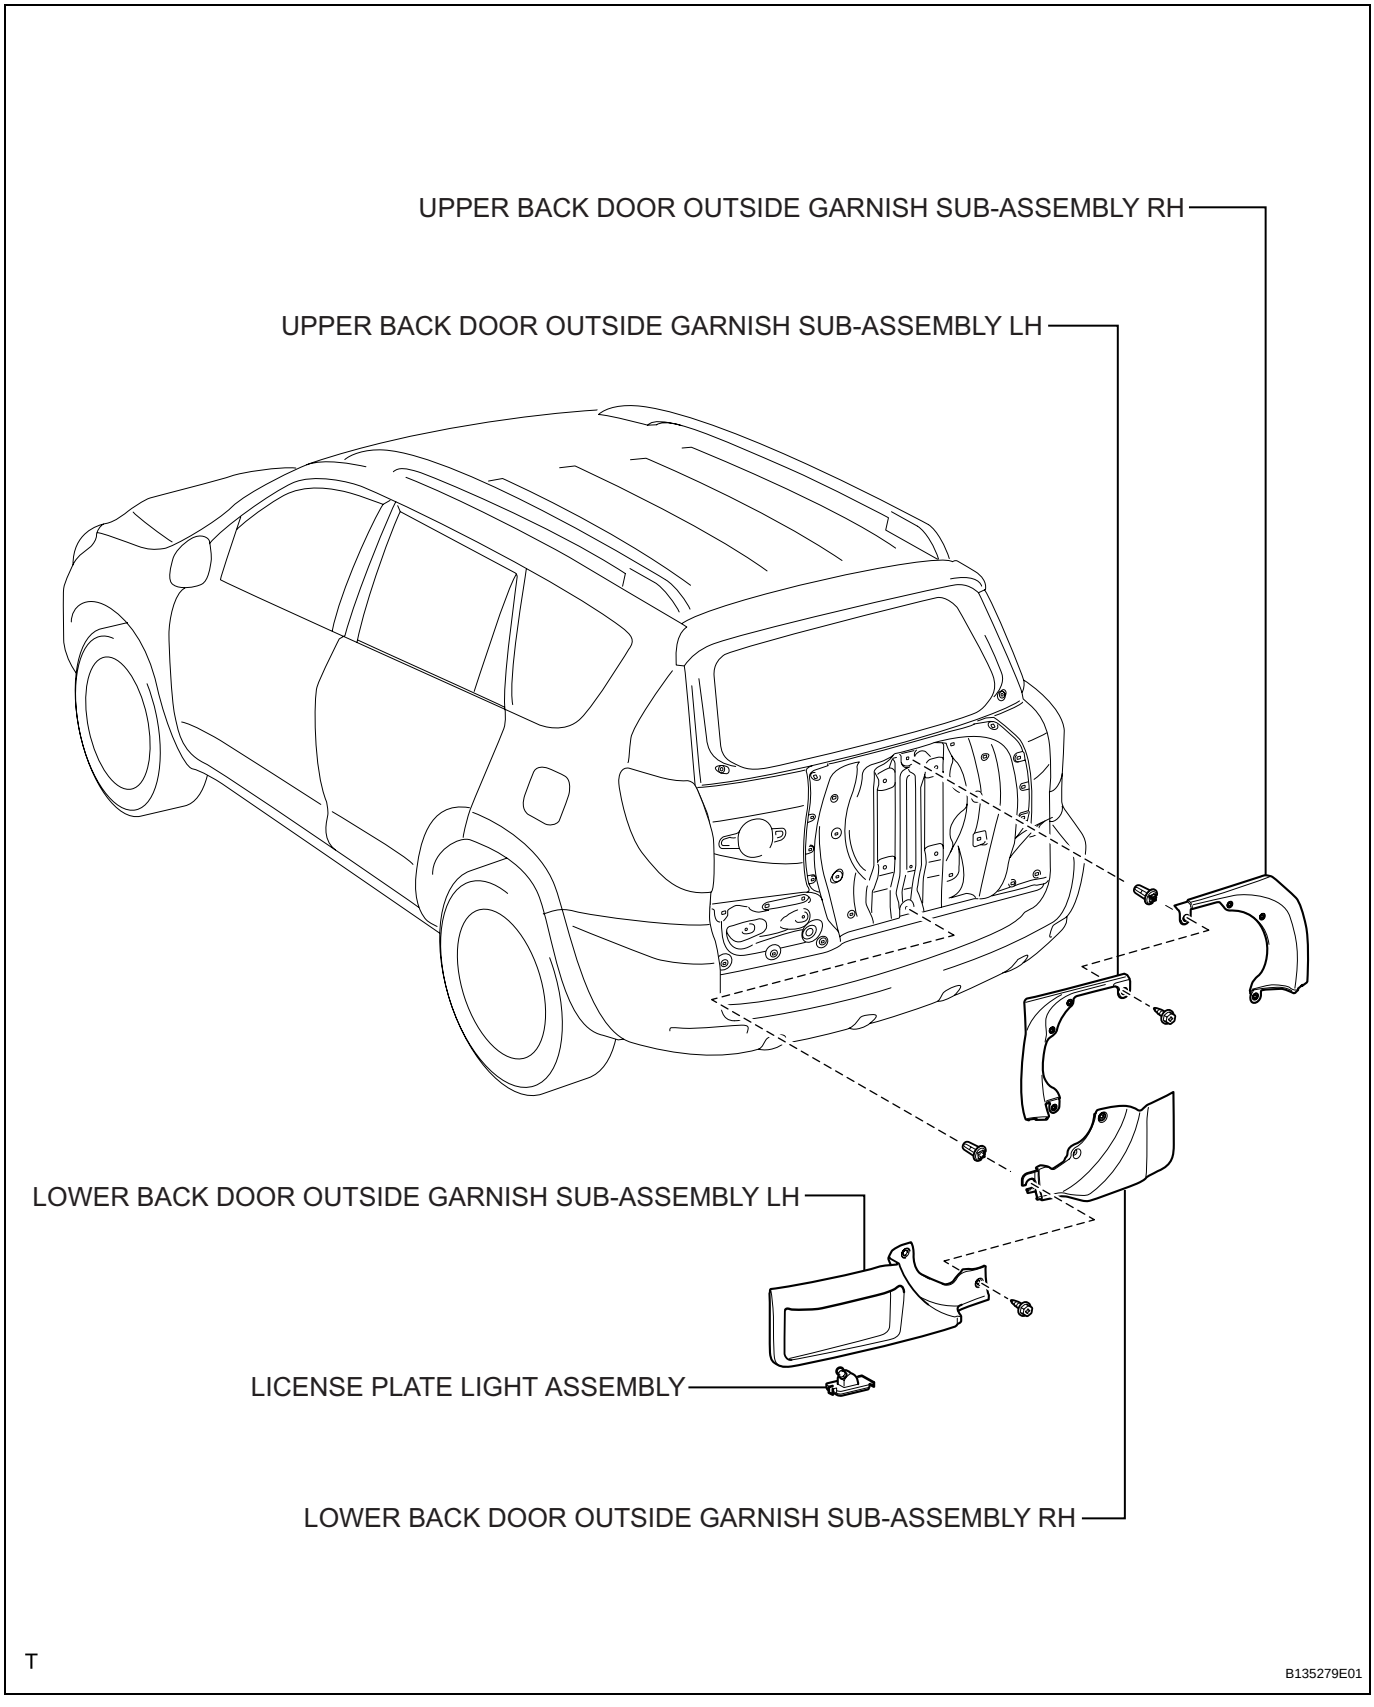
SYSTEM DIAGRAM

UNLOCK WARNING SWITCH

INSPECTION

1. INSPECT UNLOCK WARNING SWITCH ASSEMBLY

(a) Measure the resistance of the switch.



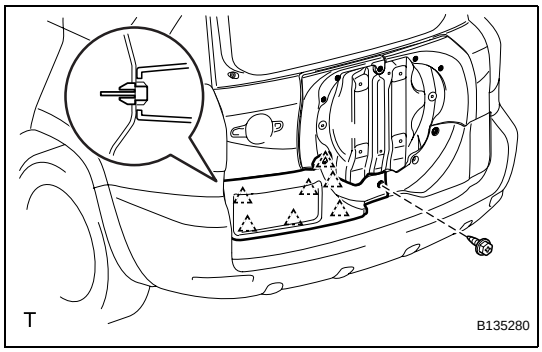
Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Pushed	Below 1 Ω
	Not pushed	10 kΩ or higher

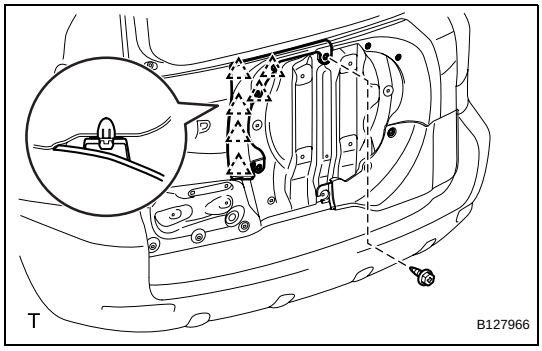
If the result is not as specified, replace the switch assembly.

BACK DOOR OUTSIDE GARNISH

COMPONENTS

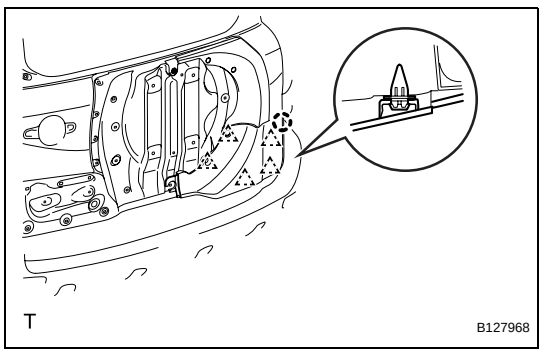


ET

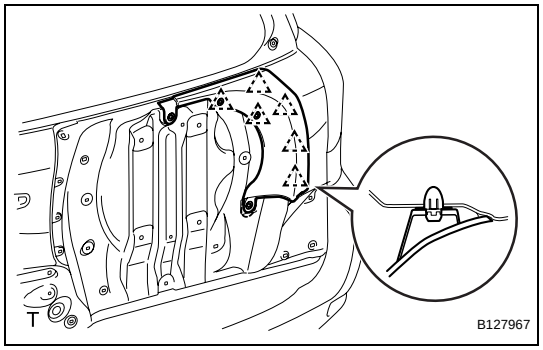


ET

REMOVAL

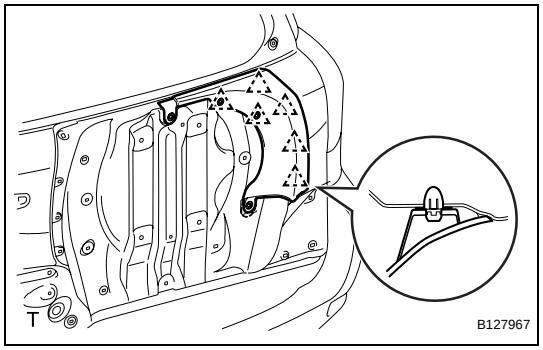


1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE BACK DOOR CENTER GARNISH (See page ED-59)**
3. **REMOVE BACK DOOR SIDE GARNISH LH (See page ED-59)**
4. **REMOVE BACK DOOR SIDE GARNISH RH (See page ED-59)**
5. **REMOVE BACK DOOR COURTESY LIGHT SWITCH ASSEMBLY (See page LI-122)**
6. **REMOVE BACK DOOR TRIM BOARD (See page ED-59)**
7. **REMOVE LOWER BACK DOOR OUTSIDE GARNISH SUB-ASSEMBLY LH**
   (a) Remove the screw and the 7 clips.
   (b) Remove the back door outside garnish and disconnect the connector.
   (c) Remove the license plate light (see page LI-110).

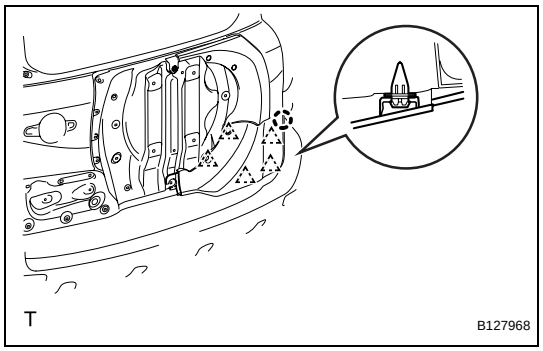


8. **REMOVE UPPER BACK DOOR OUTSIDE GARNISH SUB-ASSEMBLY LH**
   (a) Remove the screw and the 6 clips.
   (b) Remove the back door outside garnish.

9. **REMOVE LOWER BACK DOOR OUTSIDE GARNISH SUB-ASSEMBLY RH**
   (a) Remove the 5 clips and detach the claw.
   (b) Remove the back door outside garnish.

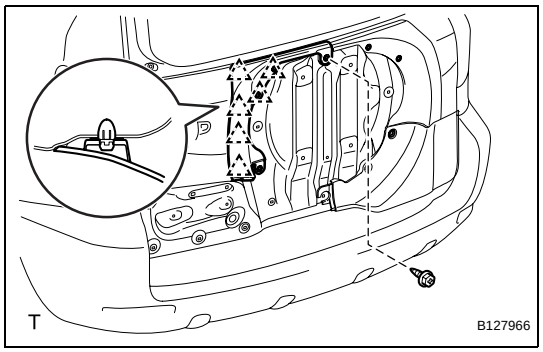


10. REMOVE UPPER BACK DOOR OUTSIDE GARNISH SUB-ASSEMBLY RH



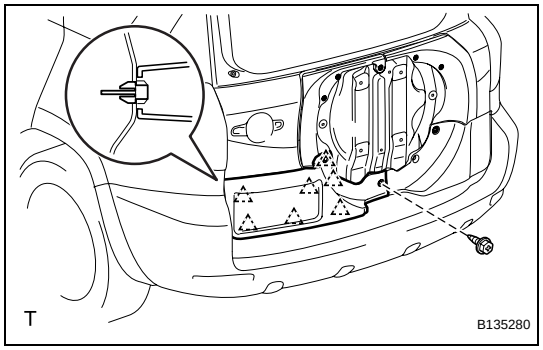
(a) Remove the 6 clips and back door outside garnish.

INSTALLATION



1. INSTALL UPPER BACK DOOR OUTSIDE GARNISH SUB-ASSEMBLY RH

(a) Attach the 6 clips to install the back door outside garnish.



2. INSTALL LOWER BACK DOOR OUTSIDE GARNISH SUB-ASSEMBLY RH

(a) Install the back door outside garnish.
(b) Attach the claw and 5 clips.

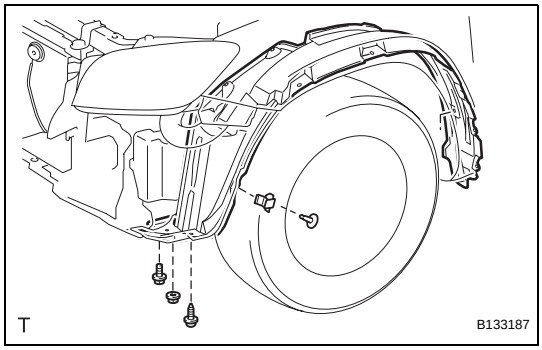
3. INSTALL UPPER BACK DOOR OUTSIDE GARNISH SUB-ASSEMBLY LH

(a) Attach the 6 clips to install the back door outside garnish.
(b) Install the screw.

4. INSTALL LOWER BACK DOOR OUTSIDE GARNISH SUB-ASSEMBLY LH

(a) Install the license plate light (see page LI-111).
(b) Connect the connector.
(c) Attach the 7 clips to install the back door outside garnish.
(d) Install the screw.

5. INSTALL BACK DOOR TRIM BOARD (See page ED-66)



6. **INSTALL BACK DOOR COURTESY LIGHT SWITCH ASSEMBLY (See page LI-123)**
7. **INSTALL BACK DOOR SIDE GARNISH LH (See page ED-67)**
8. **INSTALL BACK DOOR SIDE GARNISH RH (See page ED-67)**
9. **INSTALL BACK DOOR GARNISH CENTER (See page ED-67)**
10. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

REMOVAL

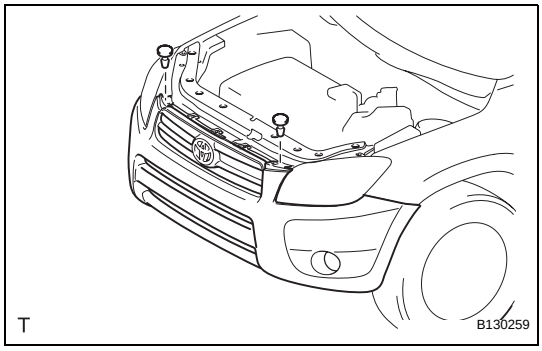
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

2. REMOVE FRONT FENDER LINER LH

(a) Using a screwdriver, remove the fender liner retainer.

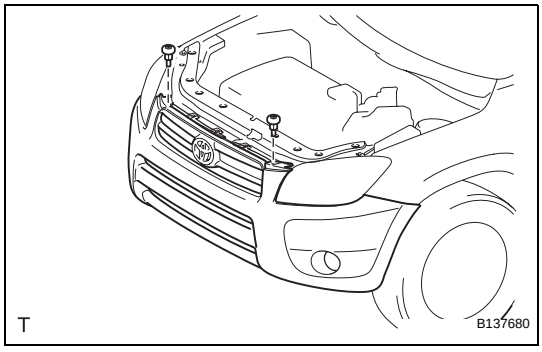


(b) Remove the screw, nut and bolt.

(c) w/ Splash Shield:
Remove the front fender splash shield LH.

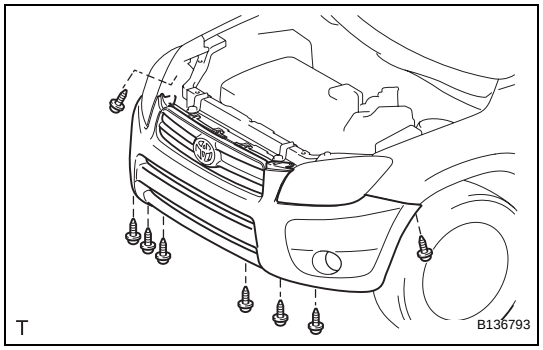
(d) Partially remove the fender liner.
HINT:
It is not necessary to fully remove the fender liner. Partially remove it so that the bumper cover can be removed later.

3. REMOVE FRONT FENDER LINER RH



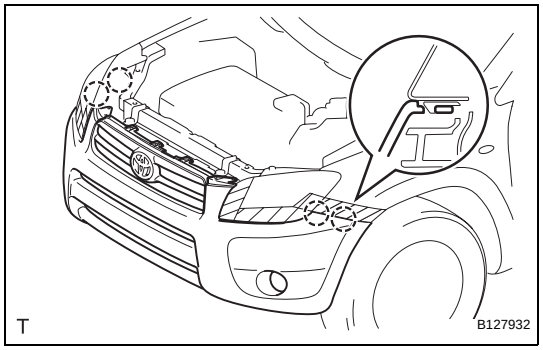
HINT:
Use the same procedures described for the LH side.

4. REMOVE RADIATOR SUPPORT OPENING COVER



(a) Remove the 2 clips.

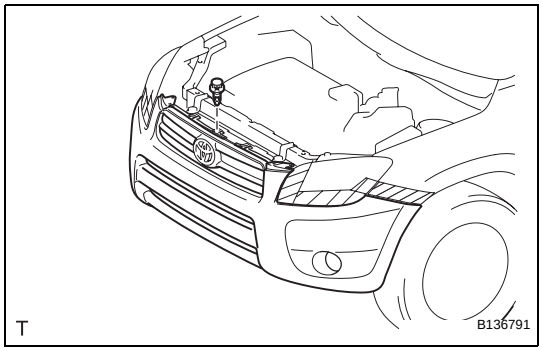
(b) Partially remove the radiator support opening cover.
HINT:
It is not necessary to fully remove the radiator support opening cover. Partially remove it so that the bumper cover can be removed later.



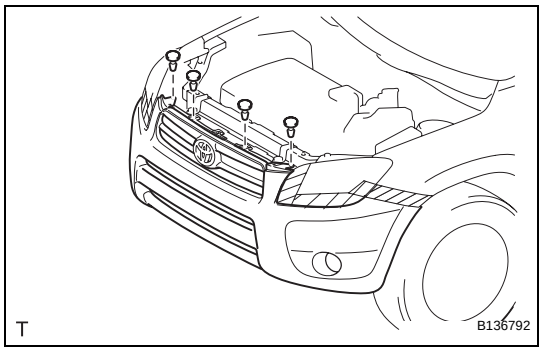
5. REMOVE RADIATOR GRILLE PROTECTOR

(a) Remove the 2 radiator grille protectors.

6. REMOVE FRONT BUMPER COVER

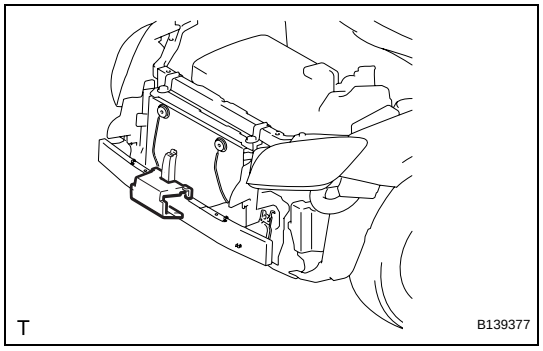


(a) Remove the 8 screws.



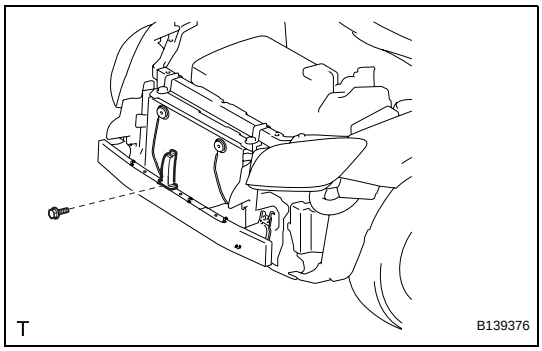
(b) Apply protective tape under the front fender and headlight.

(c) Using a screwdriver, detach the 4 claws.
HINT:
Tape the screwdriver tip before use.



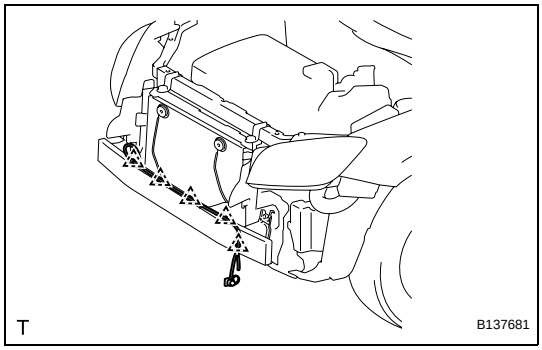
(d) w/ Fog Light:
Disconnect the 2 fog light connectors.

(e) Using a clip remover, remove the hood cushion center.



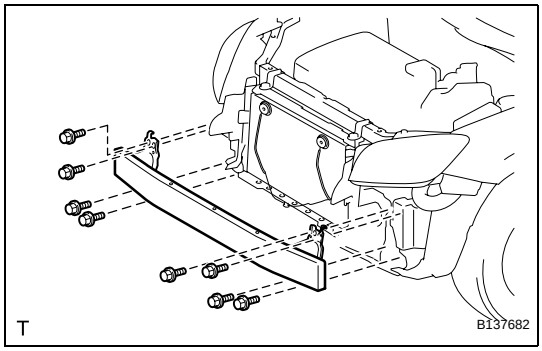
(f) Using a clip remover, remove the 4 clips and remove the front bumper cover.

7. REMOVE NO. 2 FRONT BUMPER ENERGY ABSORBER



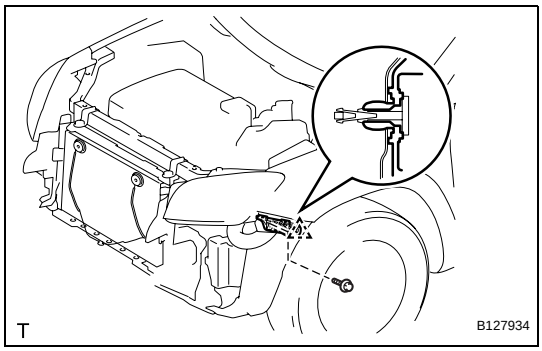
(a) Remove the absorber.

ET



8. REMOVE FRONT BUMPER RETAINER

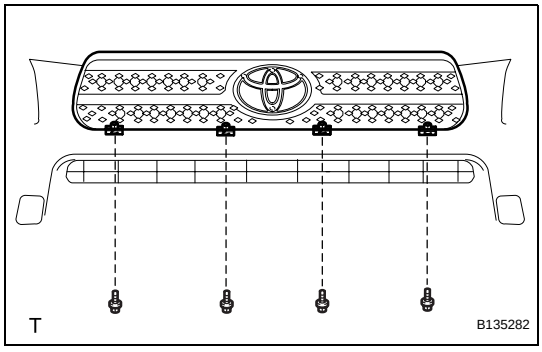
(a) Remove the bolt and retainer.



9. REMOVE FRONT BUMPER REINFORCEMENT SUB-ASSEMBLY

(a) Detach 5 clamps and remove the wire harness.

(b) Remove the 8 bolts and reinforcement.

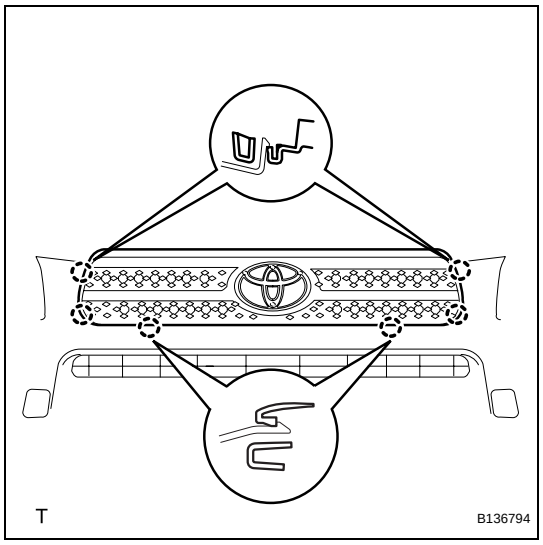


10. REMOVE FRONT BUMPER SIDE RETAINER LH

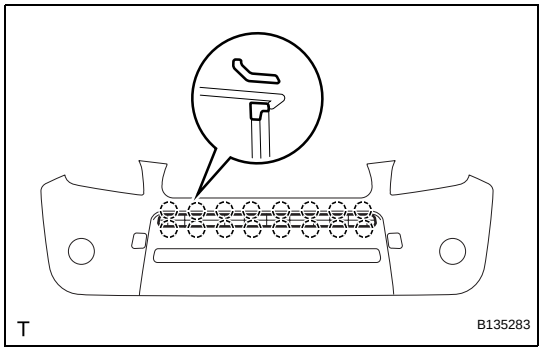
(a) Remove the bolt.

(b) Using a screwdriver, detach the clip and remove the bumper side retainer.
HINT:
Tape the screwdriver tip before use.

11. REMOVE FRONT BUMPER SIDE RETAINER RH



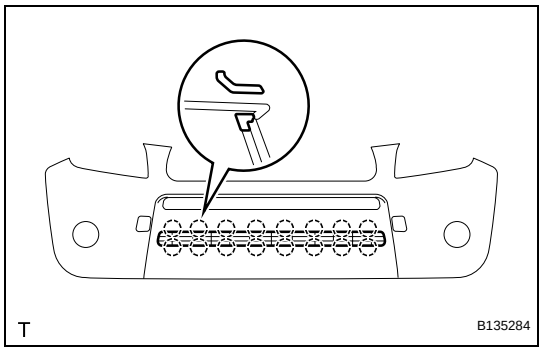
HINT:
Use the same procedures described for the LH side.



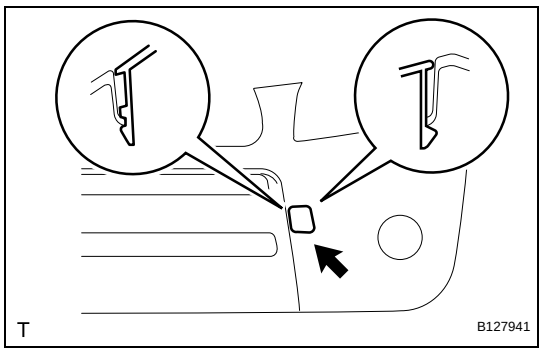
DISASSEMBLY

1. REMOVE RADIATOR GRILLE SUB-ASSEMBLY

(a) Remove the 4 bolts and 4 nuts.



(b) Detach the 6 claws and remove the radiator grille.

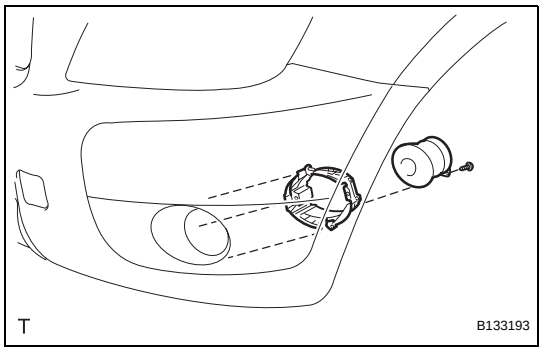


2. REMOVE NO. 1 RADIATOR GRILLE LOWER

(a) Detach the 18 claws and remove the radiator grille.

3. REMOVE NO. 2 RADIATOR GRILLE LOWER

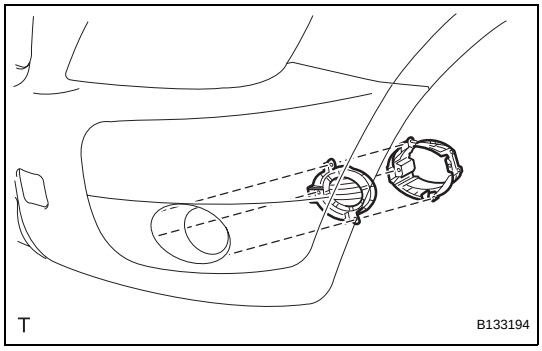
(a) Detach the 16 claws and remove the radiator grille.



4. REMOVE FRONT BUMPER ARM HOLE COVER LH

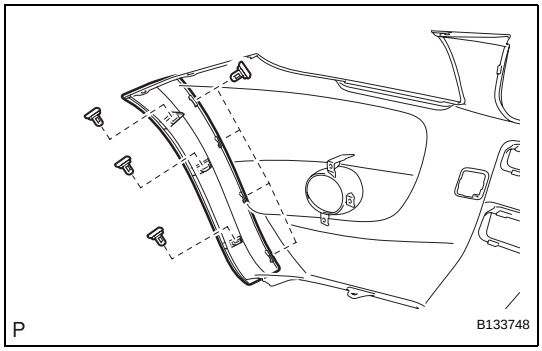
(a) Detach the 2 claws and disconnect the arm hole cover.

(b) Remove the hook and bumper arm hole cover.



5. REMOVE FRONT BUMPER ARM HOLE COVER RH

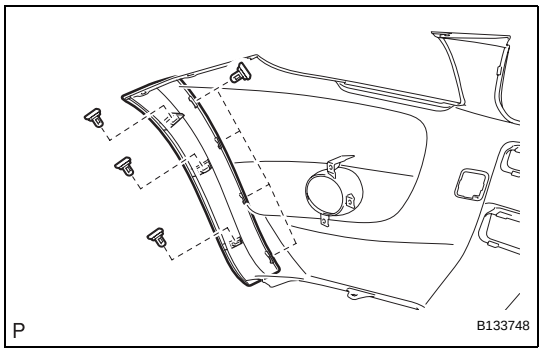
(a) Use the same procedures described for the LH side.



6. REMOVE FOG LIGHT ASSEMBLY LH
(a) Remove the screw and fog light.
(b) Remove the 3 bolts and fog light mounting bracket.

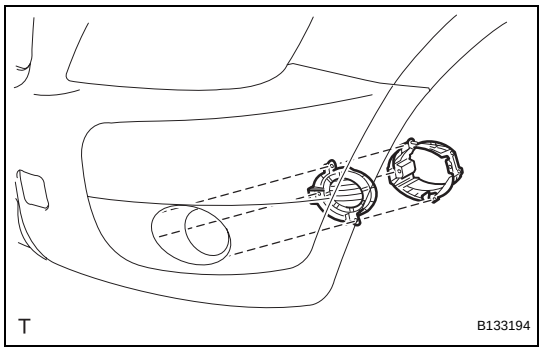
7. REMOVE FOG LIGHT ASSEMBLY RH
HINT:
Use the same procedures described for the LH side.

8. REMOVE FRONT BUMPER HOLE COVER LH (w/o Fog Light)
(a) Remove the 3 bolts, bumper hole cover and fog light mounting bracket.



9. REMOVE FRONT BUMPER HOLE COVER RH (w/o Fog Light)
HINT:
Use the same procedures described for the LH side.

10. REMOVE FRONT BUMPER EXTENSION LH (for Wide Body)
(a) Detach the 7 outside moulding retainers and remove the extension LH.
NOTICE:
- **If reusing the extension, take care not to damage the extension.**
- **Be careful not to damage the vehicle body.**



11. REMOVE FRONT BUMPER EXTENSION RH (for Wide Body)
HINT:
Use the same procedures described for the LH side.

REASSEMBLY

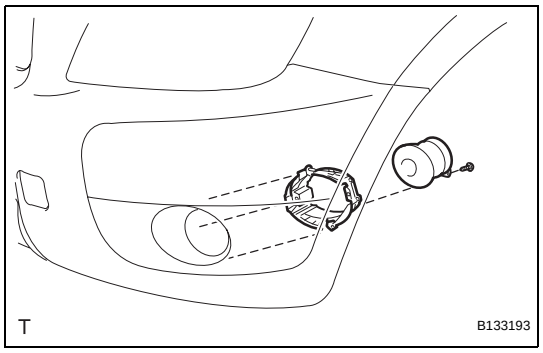
1. INSTALL FRONT BUMPER EXTENSION LH (for Wide Body)
(a) Attach the 7 outside moulding retainers to install the extension.

2. INSTALL FRONT BUMPER EXTENSION RH (for Wide Body)
HINT:
Use the same procedures described for the LH side.

3. INSTALL FRONT BUMPER HOLE COVER LH (w/o Fog Light)

(a) Install the bumper hole cover with the fog light mounting bracket and 3 bolts.

4. INSTALL FRONT BUMPER HOLE COVER RH (w/o Fog Light)



HINT:

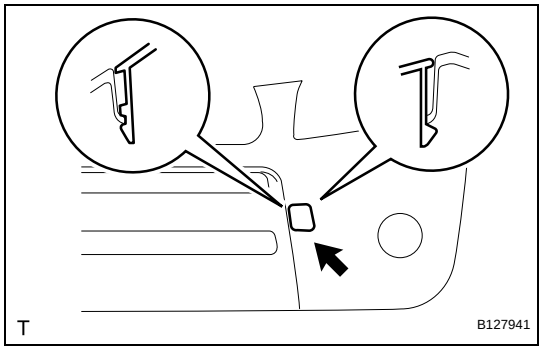
Use the same procedures described for the LH side.

5. INSTALL FOG LIGHT ASSEMBLY LH

(a) Install the fog light mounting bracket with the 3 bolts.

(b) Install the fog light with the screw.

6. INSTALL FOG LIGHT ASSEMBLY RH

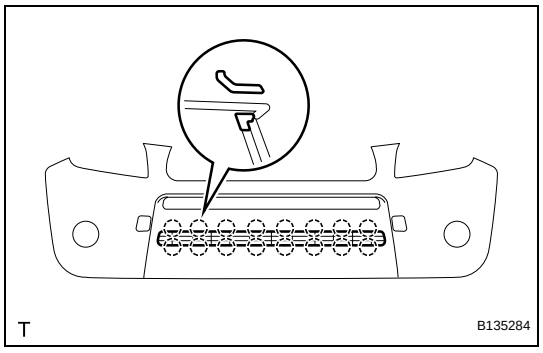


HINT:

Use the same procedures described for the LH side.

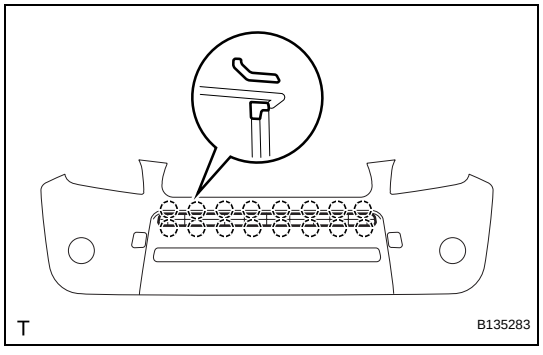
7. INSTALL FRONT BUMPER ARM HOLE COVER LH

(a) Install the hook.



(b) Attach the 2 claws and install the hole cover.

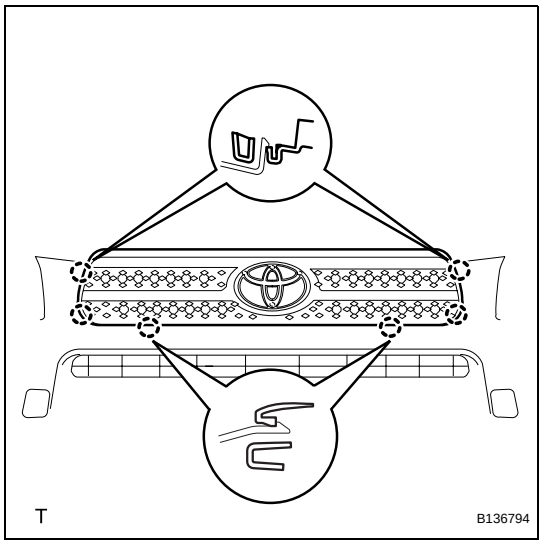
8. INSTALL FRONT BUMPER ARM HOLE COVER RH



HINT:

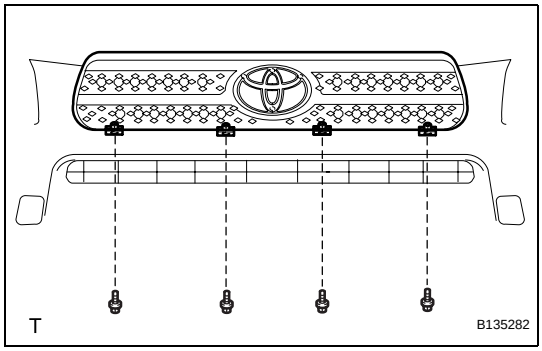
Use the same procedures described for the LH side.

9. INSTALL NO. 2 RADIATOR GRILLE LOWER



(a) Install the radiator grille and attach the 16 claws.

10. INSTALL NO. 1 RADIATOR GRILLE LOWER

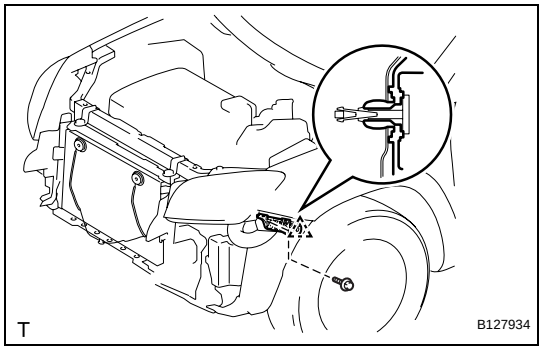


(a) Install the radiator grille and attach the 18 claws.

ET

11. INSTALL RADIATOR GRILLE SUB-ASSEMBLY

(a) Install the radiator grille with the 6 claws.



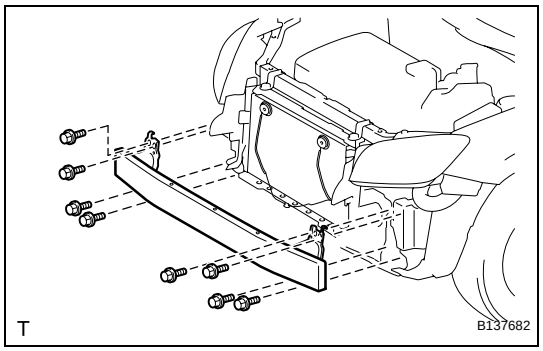
(b) Install the 4 bolts and 4 nuts.

INSTALLATION

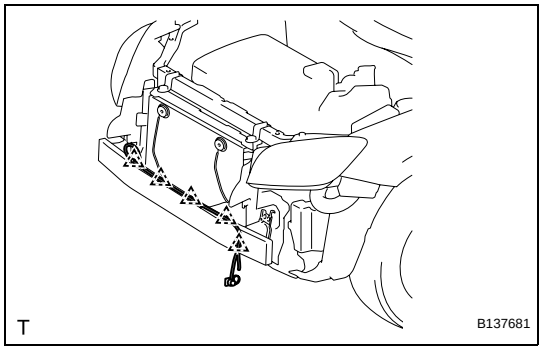
1. INSTALL FRONT BUMPER SIDE RETAINER LH

(a) Install the clip and bumper side retainer.

(b) Install the bolt.
Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)



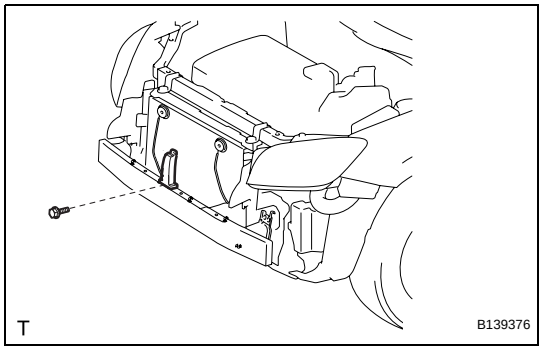
2. INSTALL FRONT BUMPER SIDE RETAINER RH

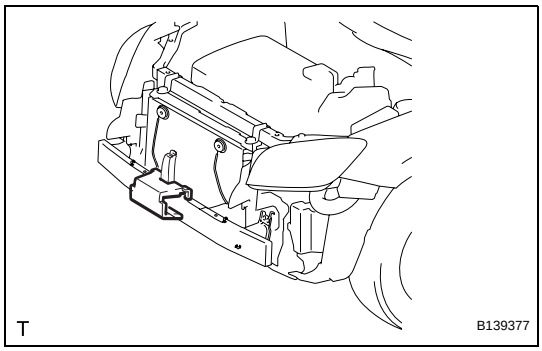


HINT:
Use the same procedures described for the LH side.

3. INSTALL FRONT BUMPER REINFORCEMENT

(a) Install the reinforcement with the 8 bolts.
Torque: 70 N*m (713 kgf*cm, 51 ft.*lbf)

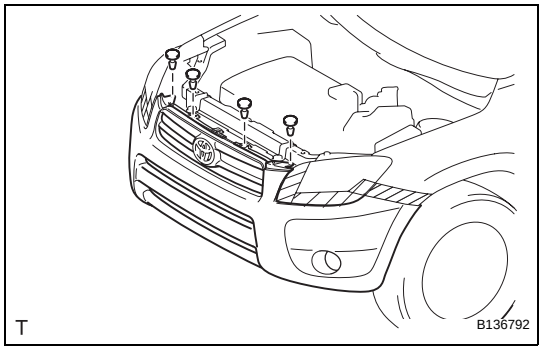




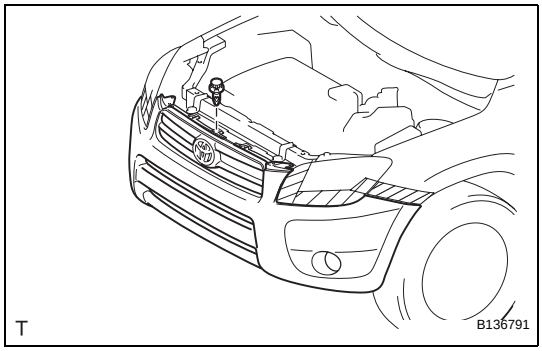
(b) Install the wire harness and attach the 5 claws.

4. INSTALL FRONT BUMPER RETAINER

(a) Install the bolt with the retainer.



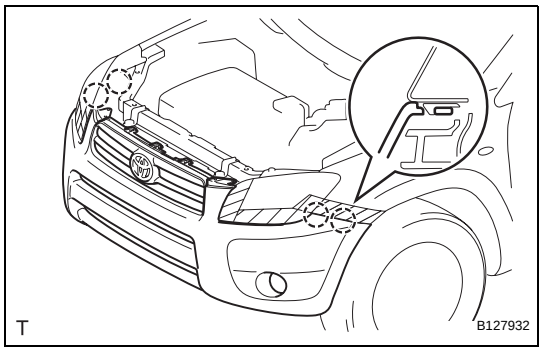
5. INSTALL NO. 2 FRONT BUMPER ENERGY ABSORBER



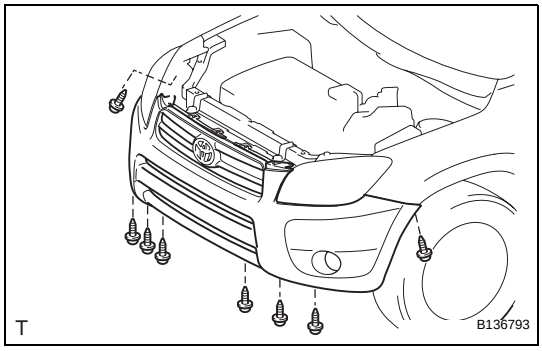
(a) Install the absorber.

6. INSTALL FRONT BUMPER COVER

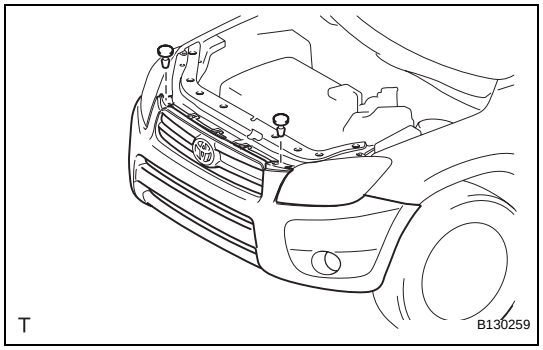
(a) Put protective tape under the front fender and headlight.



(b) Install the 4 clips.

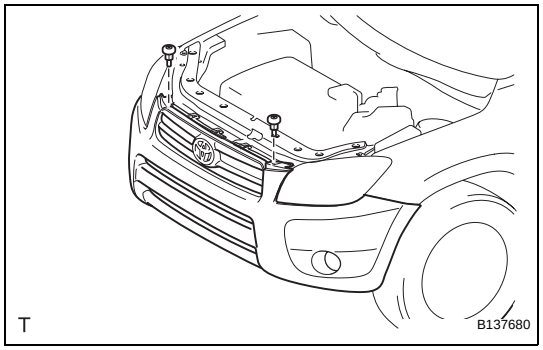


(c) Install the hood cushion center.

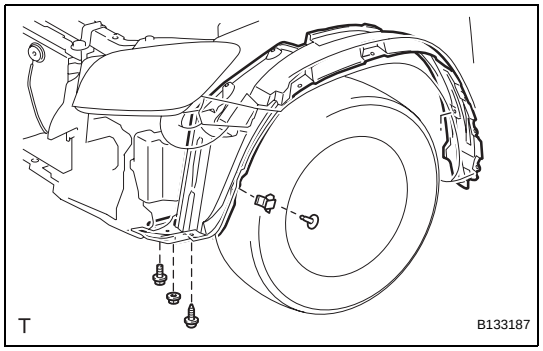


(d) w/ Fog Light:
Connect the 2 fog light connectors.

(e) Attach the 4 claws to install the bumper cover.



(f) Install the 8 screws.



7. INSTALL RADIATOR SUPPORT OPENING COVER

(a) Install the 2 clips.

8. INSTALL RADIATOR GRILLE PROTECTOR

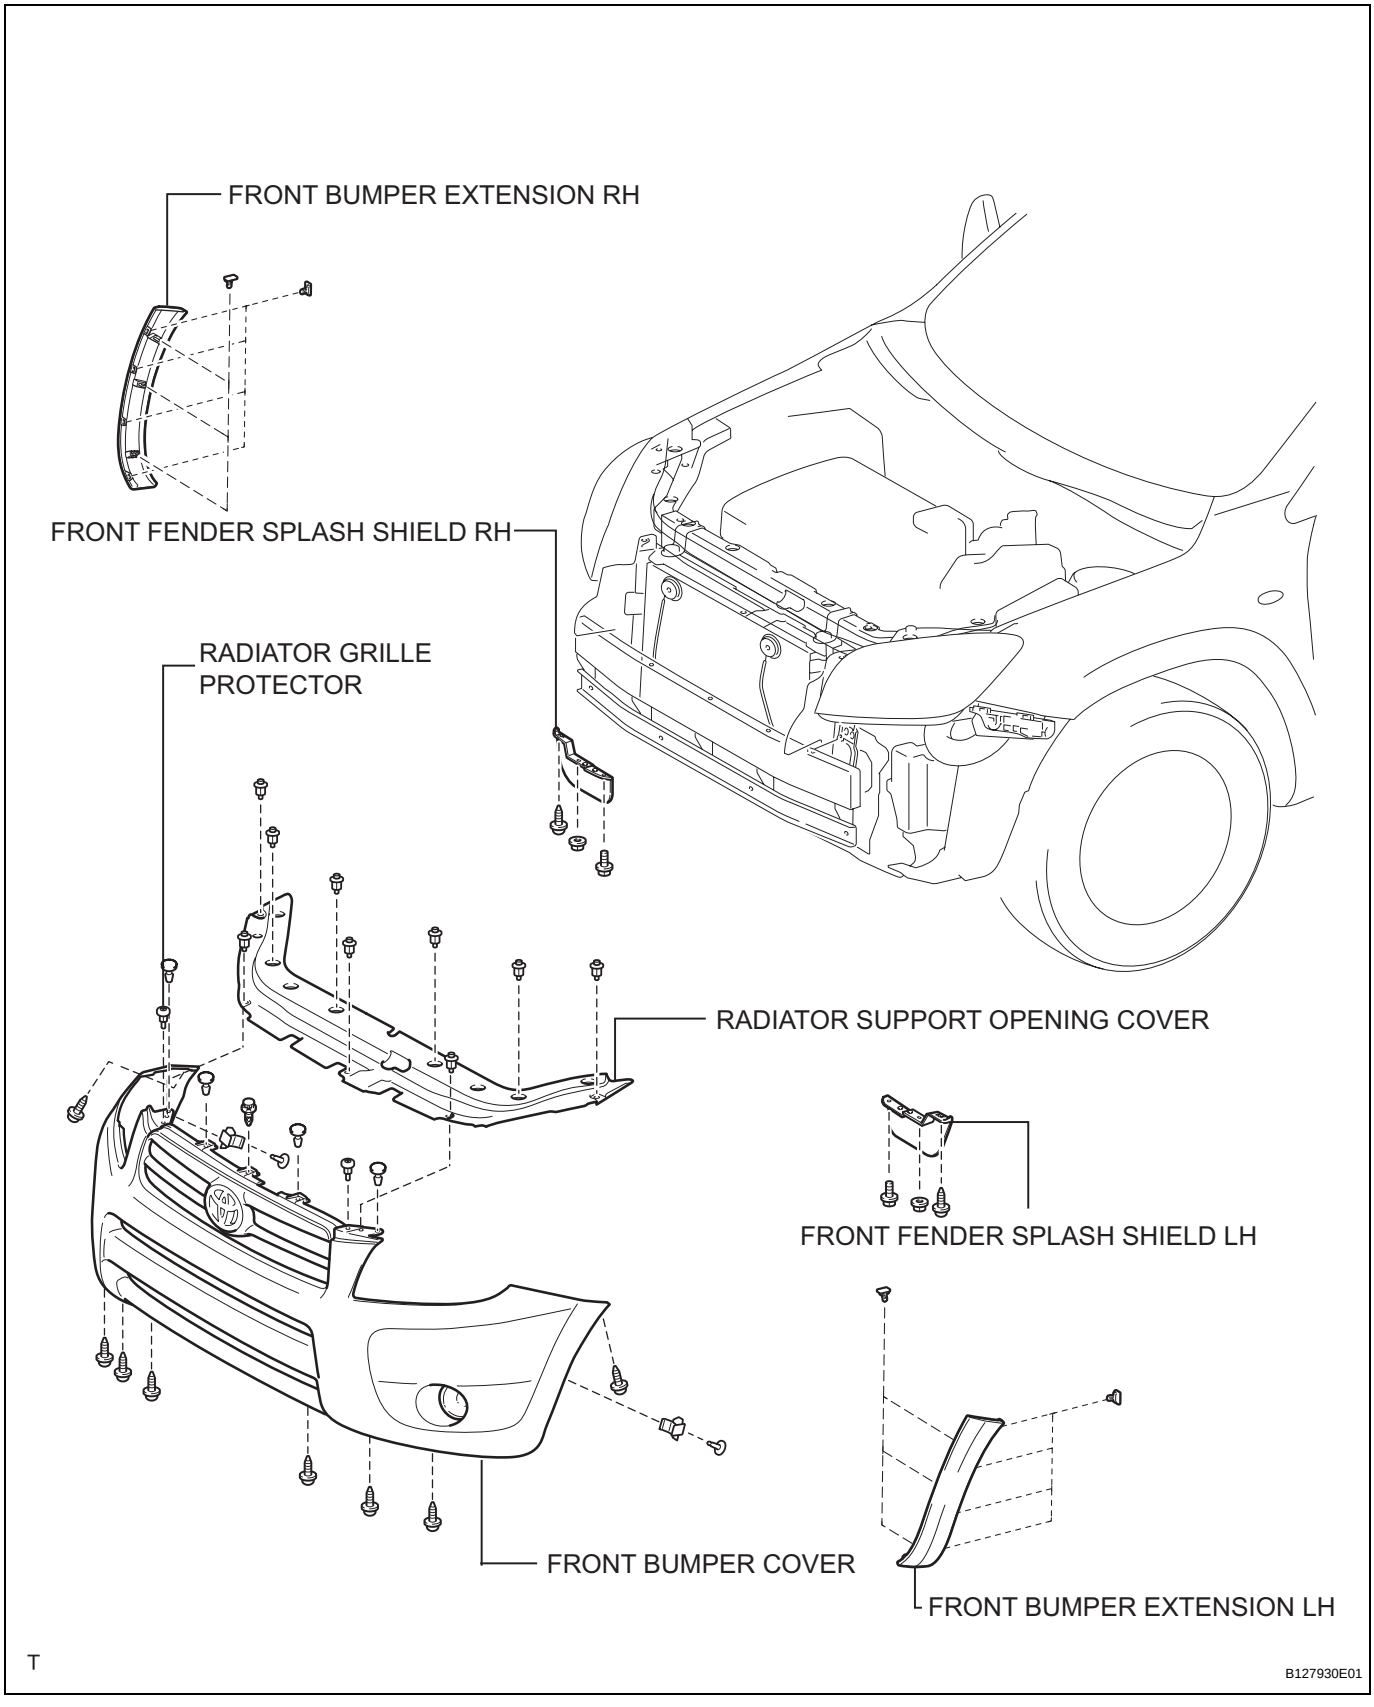
(a) Install the 2 radiator grille protectors.

9. INSTALL FRONT FENDER LINER LH

(a) Install the fender liner with the fender liner retainer.

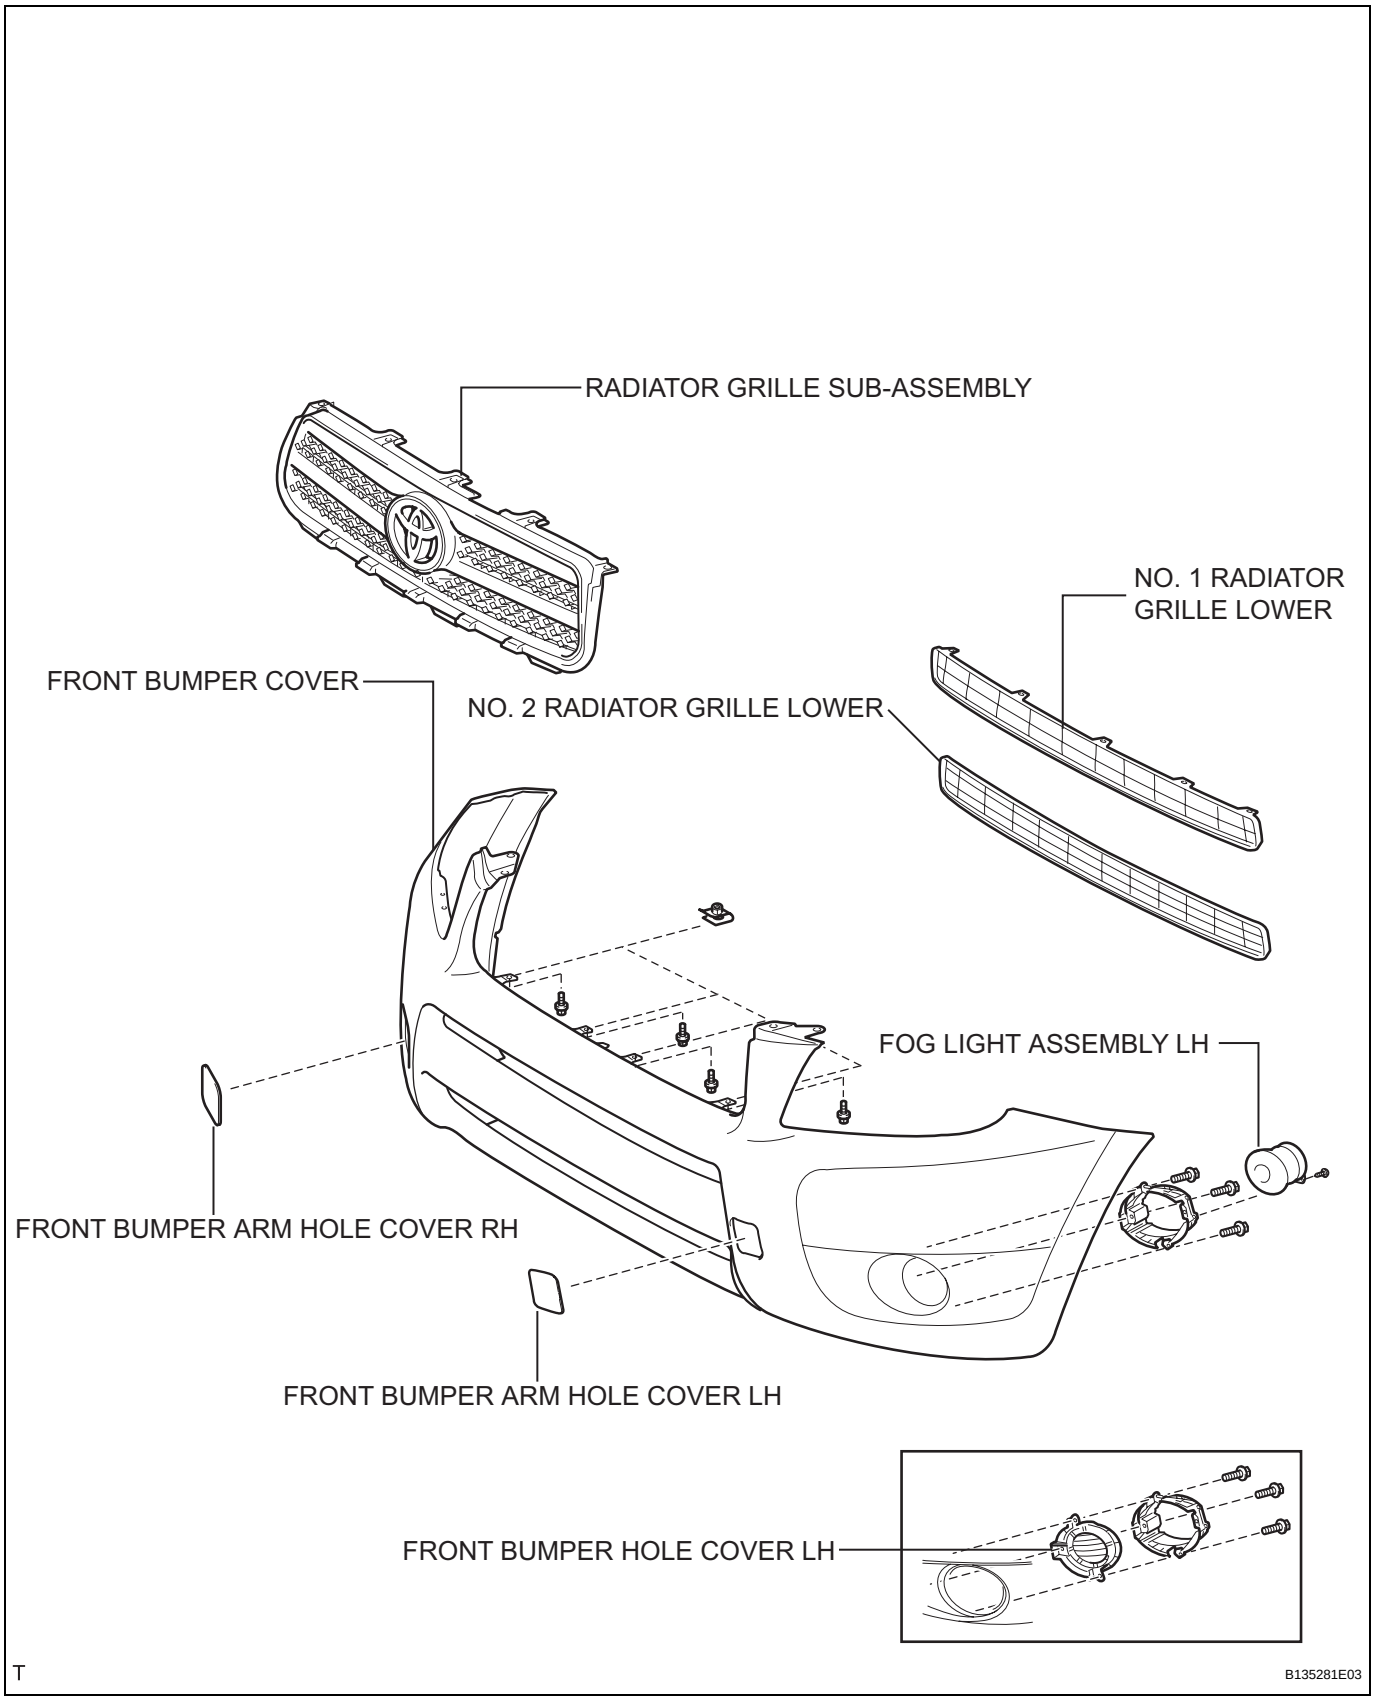
(b) w/ Splash Shield:
Install the front fender splash shield LH.

(c) Install the screw, nut and bolt.



10. INSTALL FRONT FENDER LINER RH

HINT:
Use the same procedures described for the LH side.



11. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

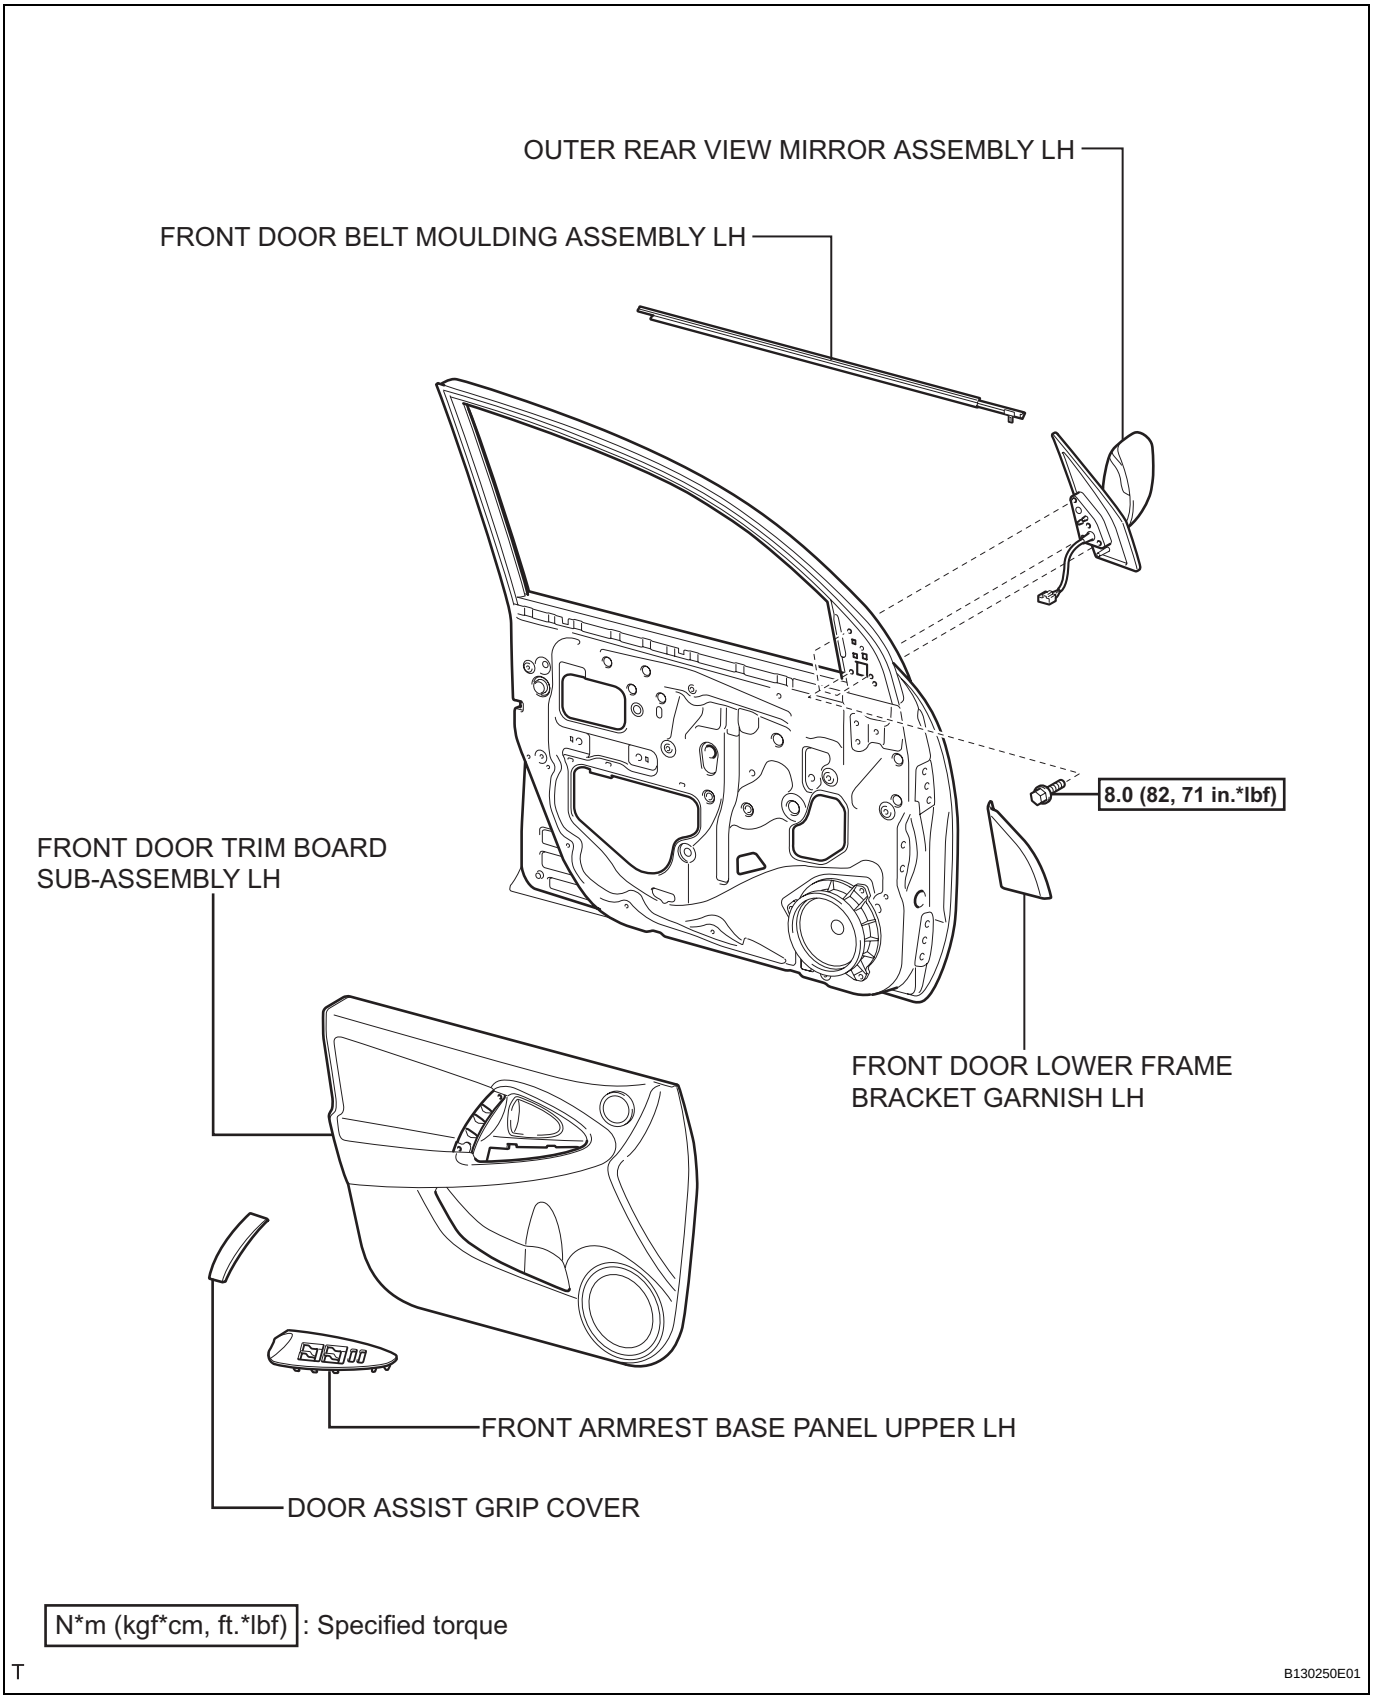
INSTALLATION



HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. **INSTALL FRONT DOOR BELT MOULDING ASSEMBLY LH**
   (a) Attach the claws to install the belt moulding.
   HINT:
   Confirm that the moulding is firmly installed.
2. **INSTALL OUTER REAR VIEW MIRROR ASSEMBLY LH (See page MI-12)**
3. **INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY LH (See page ED-33)**
4. **INSTALL FRONT ARMREST BASE PANEL UPPER LH (See page ED-34)**
5. **INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH LH (See page ED-35)**
6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

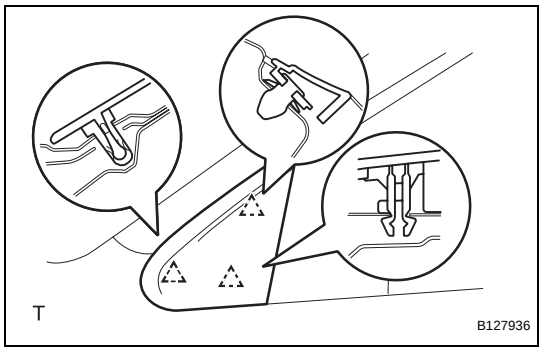
REMOVAL

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

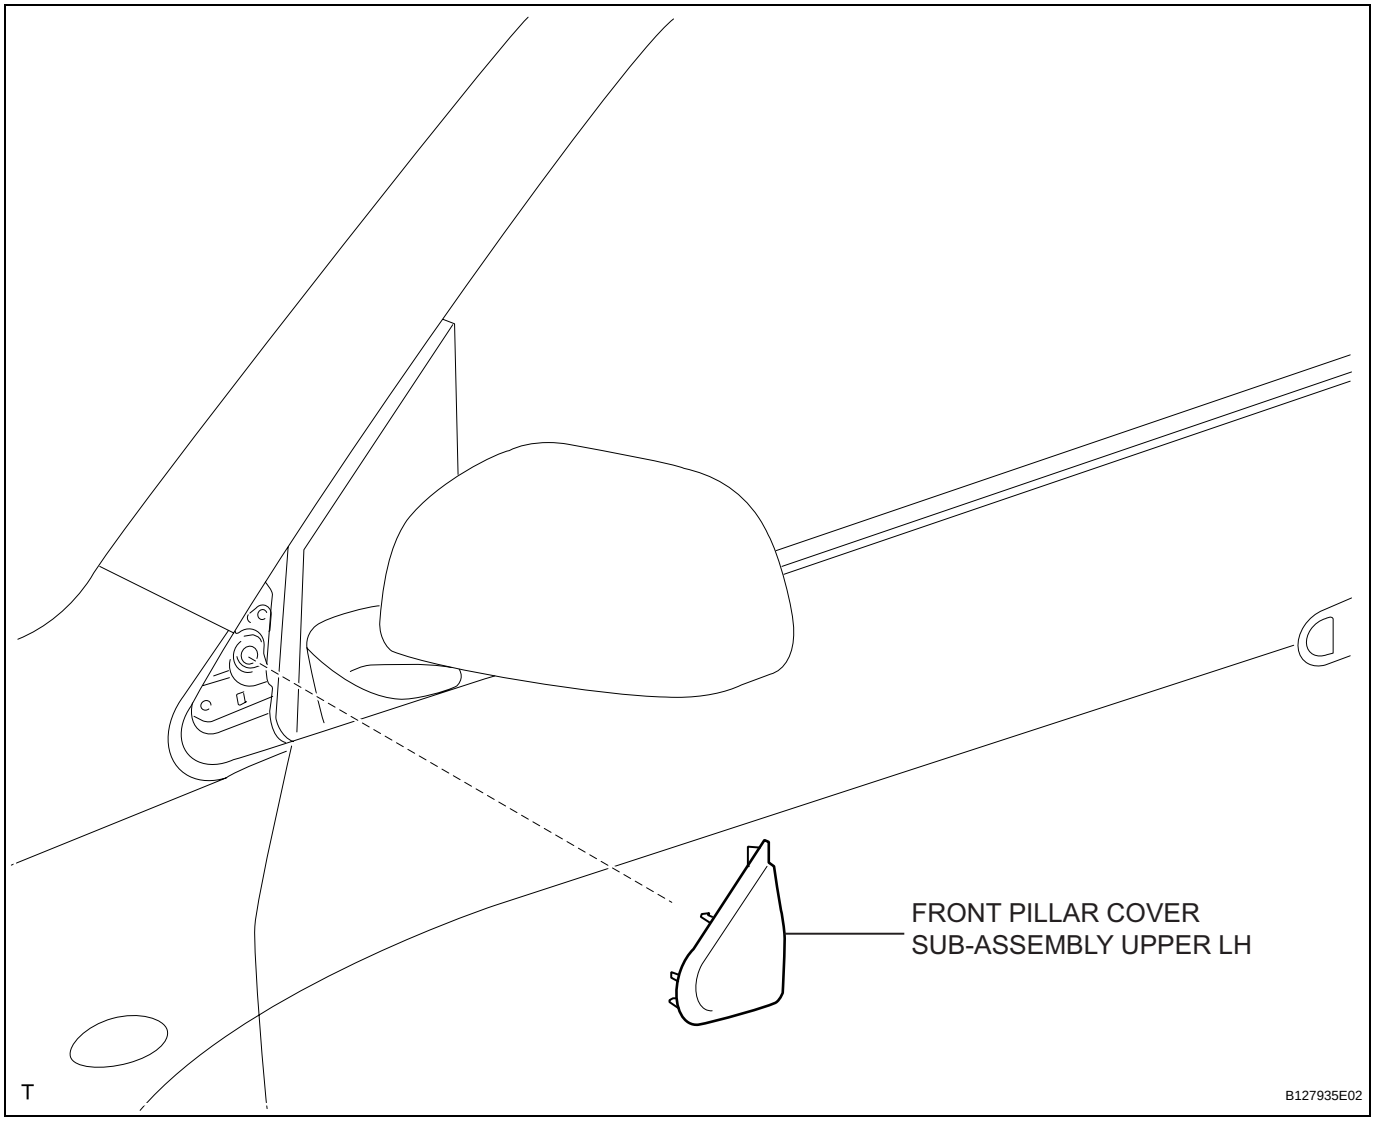


1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   NOTICE:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH LH (See page ED-19)**
3. **REMOVE FRONT ARMREST BASE PANEL UPPER LH (See page ED-19)**
4. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY LH (See page ED-20)**
5. **REMOVE OUTER REAR VIEW MIRROR ASSEMBLY LH (See page MI-8)**
6. **REMOVE FRONT DOOR BELT MOULDING ASSEMBLY LH**
   (a) Put protective tape under the belt moulding.
   (b) Using a moulding remover, detach the claws to remove the belt moulding as shown in the illustration.
   HINT:
   Tape the remover tip before use.
   NOTICE:
   Be careful when removing the belt moulding as there are claws attached to the front and rear ends of the belt moulding.

INSTALLATION

HINT:

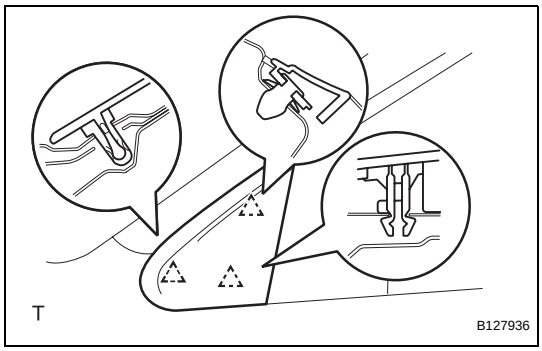
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.



1. INSTALL FRONT PILLAR COVER SUB-ASSEMBLY UPPER LH

(a) Attach the 3 clips to install the pillar cover.

FRONT PILLAR UPPER COVER

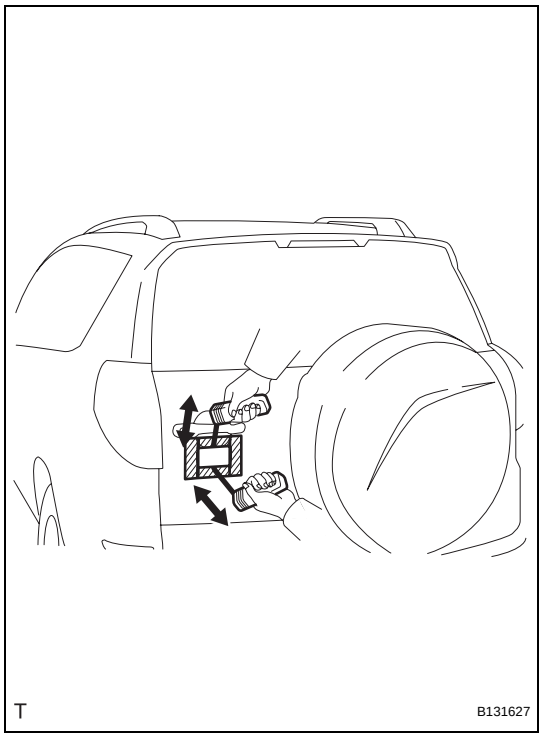


COMPONENTS

REMOVAL

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.



1. REMOVE FRONT PILLAR COVER SUB-ASSEMBLY UPPER LH

(a) Using a moulding remover, detach the 3 clips and remove the pillar cover.

REMOVAL

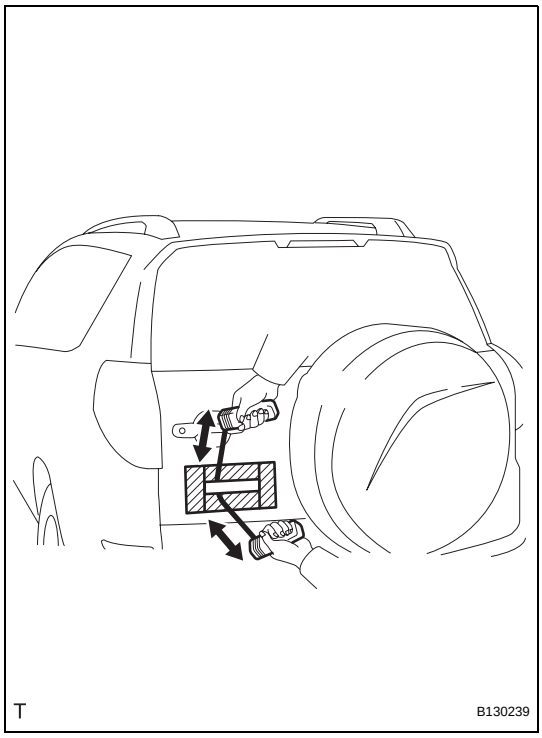
NOTICE:
Do not heat the vehicle body, emblem and name plate excessively.
HINT:
When removing the emblem and name plate, heat the vehicle body, emblem and name plate using a heat light.
Standard heating temperature

Item	Specified Condition
Vehicle body	40 to 60°C (104 to 140°F)
Name plate	20 to 30°C (68 to 86°F)

1. REMOVE NO. 1 BACK DOOR EMBLEM ASSEMBLY

(a) Put protective tape around the emblem.
(b) Insert a piano wire between the vehicle body and emblem.
(c) Tie objects that can serve as handles (for example, wooden blocks) to both wire ends.
(d) Pull the piano wire and scrape off the double-sided tape that holds the emblem to the vehicle body.
NOTICE:
- **If reusing the emblem, take care not to damage the emblem.**
- **Be careful not to damage the vehicle body.**

ET

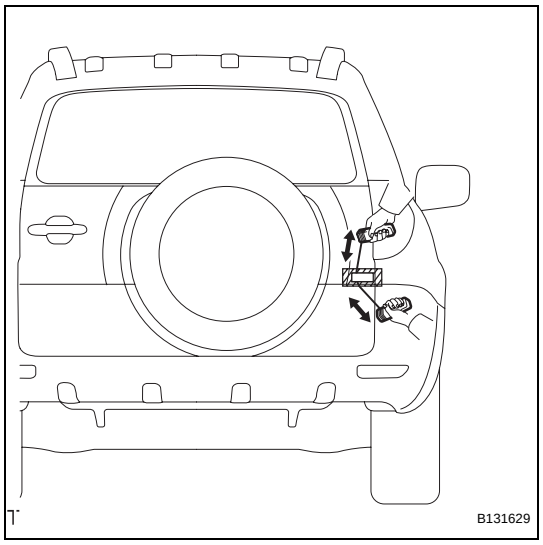


2. REMOVE BACK DOOR NAME PLATE

(a) Put protective tape around the name plate.
(b) Insert a piano wire between the vehicle body and name plate.
(c) Tie objects that can serve as handles (for example, wooden blocks) to both wire ends.
(d) Pull the piano wire and scrape off the double-sided tape that holds the name plate to the vehicle body.

NOTICE:

- **If reusing the name plate, take care not to damage the name plate.**
- **Be careful not to damage the vehicle body.**



3. REMOVE NO. 1 BACK DOOR EMBLEM

(a) Put protective tape around the emblem.
(b) Insert a piano wire between the vehicle body and emblem.
(c) Tie objects that can serve as handles (for example, wooden blocks) to both wire ends.
(d) Pull the piano wire and scrape off the double-sided tape that holds the emblem to the vehicle body.

NOTICE:

- **If reusing the emblem, take care not to damage the emblem.**
- **Be careful not to damage the vehicle body.**

4. REMOVE NO. 4 BACK DOOR NAME PLATE (for 4WD)

(a) Put protective tape around the name plate.

(b) Insert a piano wire between the vehicle body and name plate.

(c) Tie objects that can serve as handles (for example, wooden blocks) to both wire ends.

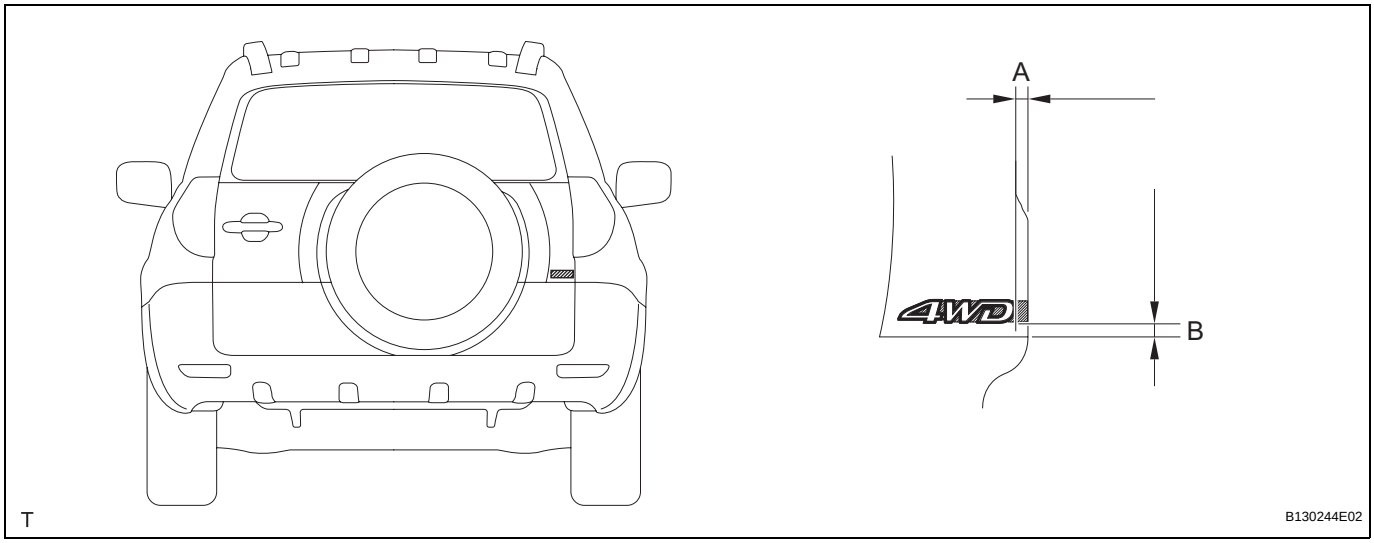
(d) Pull the piano wire and scrape off the double-sided tape that holds the name plate to the vehicle body.

NOTICE:

- **If reusing the name plate, take care not to damage the name plate.**
- **Be careful not to damage the vehicle body.**

INSTALLATION

NOTICE:
Do not heat the vehicle body, emblem and name plate excessively.
HINT:
When installing the emblem and name plate, heat the vehicle body, emblem and name plate using a heat light.
Standard heating temperature



Item	Specified Condition
Vehicle body	40 to 60°C (104 to 140°F)
Name plate	20 to 30°C (68 to 86°F)

1. INSTALL NO. 4 BACK DOOR NAME PLATE (for 4WD)

(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.

(b) If reusing the name plate:
Clean the name plate.
  (1) Using a heat light, heat the name plate.
  (2) Remove the double-sided tape from the name plate.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the name plate.

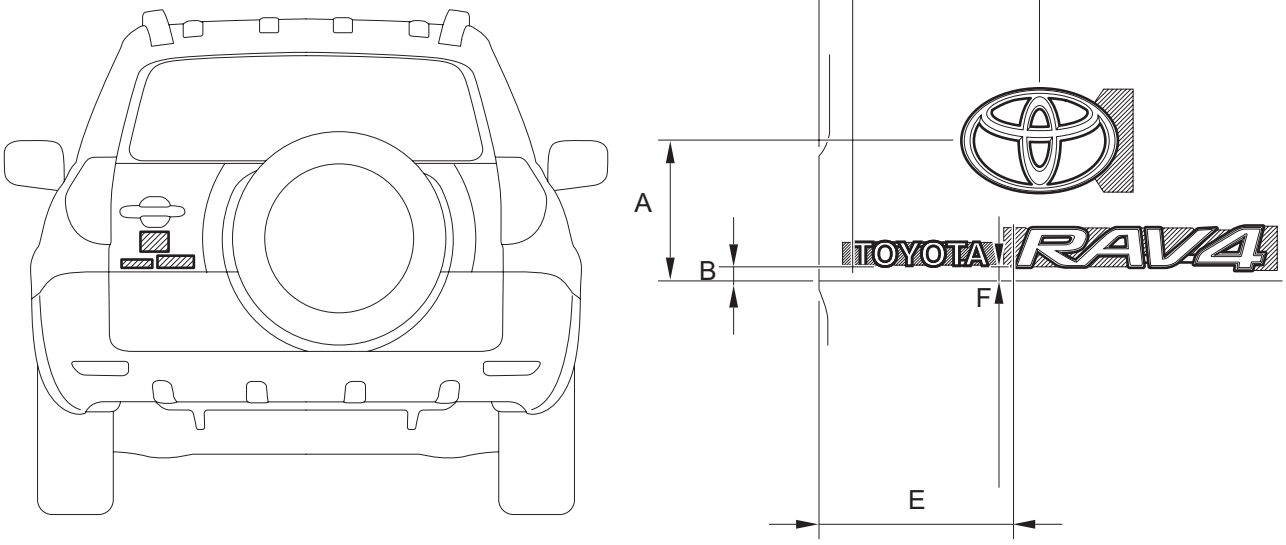
(c) Install the name plate.
  (1) Using a heat light, heat the vehicle body and name plate.
  (2) Remove the peeling paper from the face of the name plate.
  HINT:
  After removing the peeling paper, keep the exposed adhesive free from foreign matter.
  (3) Install the name plate.
  NOTICE:
  Install the name plate exactly according to the specifications below.

Standard measurement

Area	Specified Condition
A	8 mm (0.314 in.)
B	8.6 mm (0.338 in.)

2. INSTALL NO. 1 BACK DOOR EMBLEM

3. INSTALL BACK DOOR NAME PLATE



4. INSTALL NO. 1 BACK DOOR EMBLEM ASSEMBLY

(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.

(b) If reusing the name plate and emblem:
Clean the name plate and emblem.
  (1) Using a heat light, heat the name plate and emblem.
  (2) Remove the double-sided tape from the name plate and emblem.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the name plate and emblem.

(c) Install the name plate and emblem.
  (1) Using a heat light, heat the vehicle body, name plate and emblem.
  (2) Remove the peeling paper from the face of the name plate and emblem.
  HINT:
  After removing the peeling paper, keep the exposed adhesive free from foreign matter.
  (3) Install the name plate and emblem.
  NOTICE:
  Install the name plate and emblem exactly according to the specifications below.

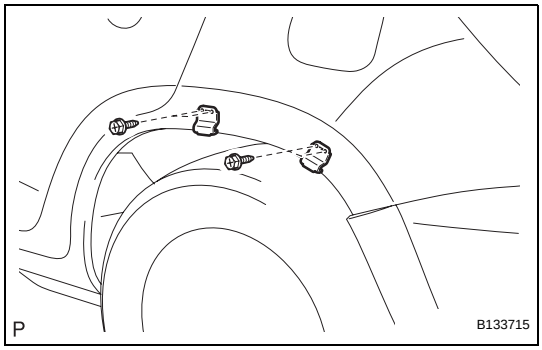
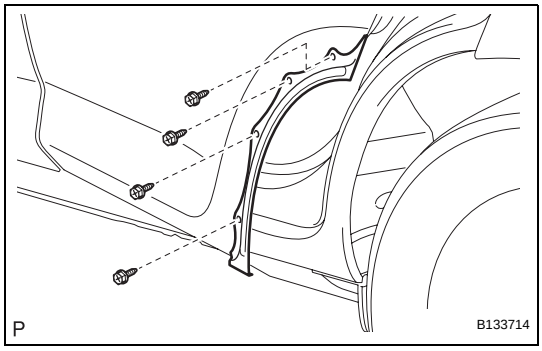
INSTALLATION



HINT:

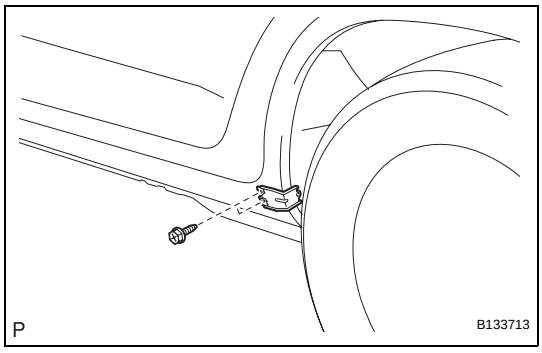
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.
- When installing the moulding, heat the vehicle body and moulding using a heat light.

Standard heating temperature



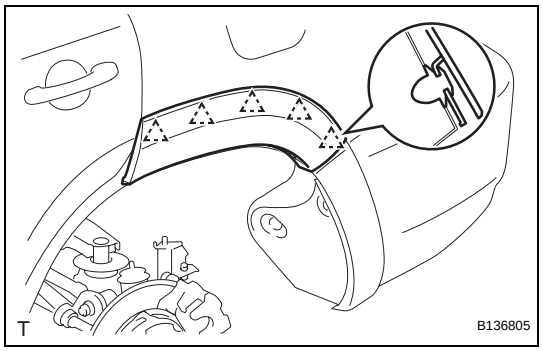
Item	Specified Condition
Vehicle body	40 to 60°C (104 to 140°F)
Moulding	20 to 30°C (68 to 86°F)

NOTICE:
Do not heat the vehicle body and moulding excessively.



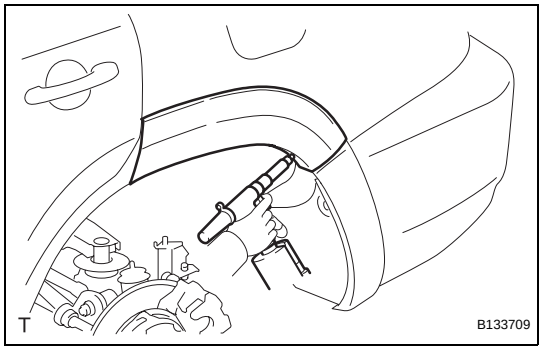
1. INSTALL NO. 1 ROCKER PANEL MOULDING RETAINER LH

(a) Install the 2 retainers with the 4 screws.



2. INSTALL QUARTER OPENING RETAINER LH

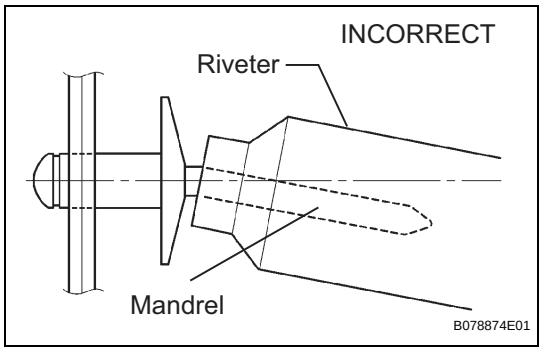
(a) Install the retainer with the 4 screws.



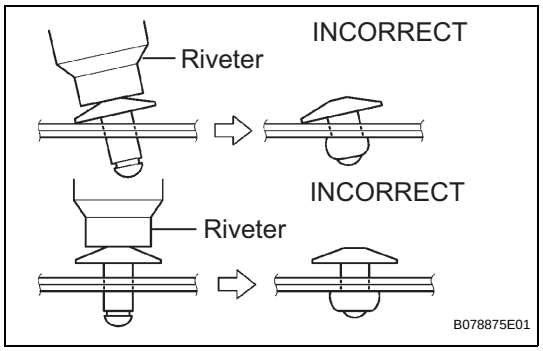
3. INSTALL NO. 2 ROCKER PANEL MOULDING RETAINER LH

(a) Install the retainer with the 2 screws.

4. INSTALL REAR QUARTER OUTSIDE MOULDING LH

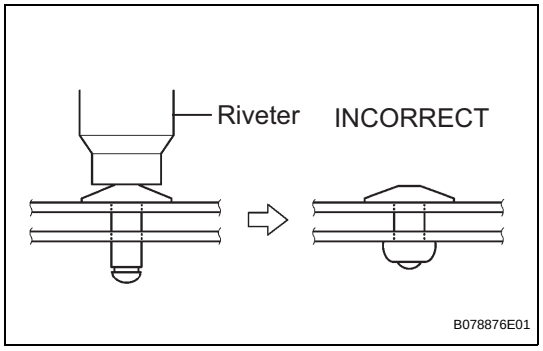


(a) Attach the 5 clips to install the moulding.

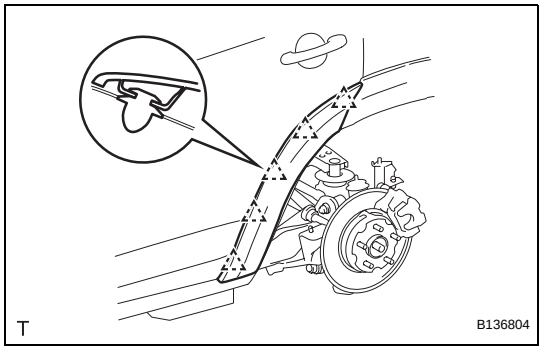


(b) Using an air riveter or hand riveter with a nose piece, strike 2 rivets to the vehicle to install the rear quarter outside moulding to the vehicle.

NOTICE:

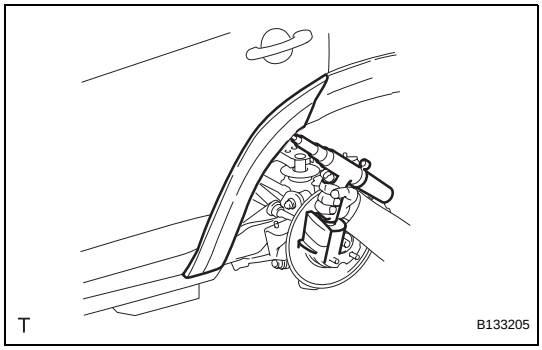


- **If the rivet is not positioned perpendicularly, it will bend the mandrel.**

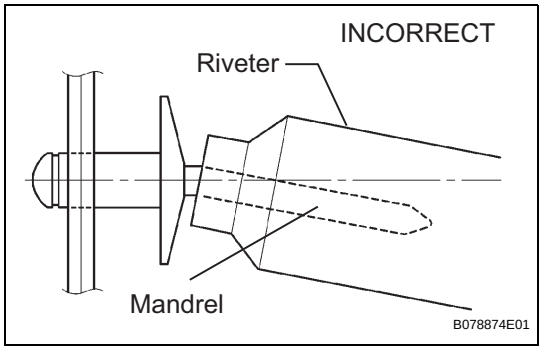


- **Do not pry the rivet with the riveter, as this will cause damage to the riveter and mandrel.**

- **Confirm that the rivets are seated properly against the moulding. Do not tilt the riveter when installing the rivet to the moulding. Do not leave any space between the rivet head and moulding.**

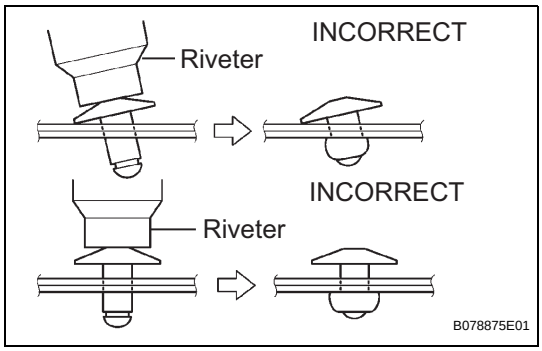


- **Do not leave any space between the moulding and door panel. Firmly hold together the 2 items while installing the rivet.**

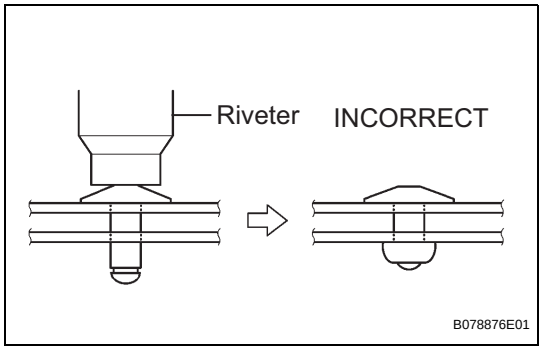


5. INSTALL NO. 1 REAR WHEEL OPENING EXTENSION LH

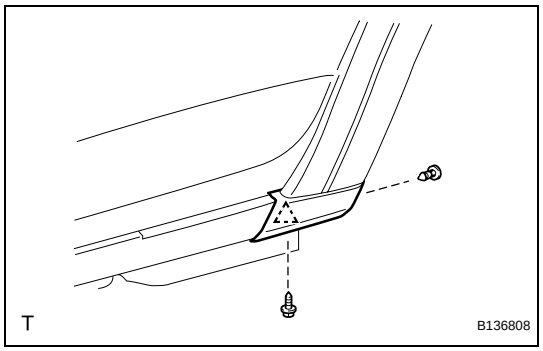
(a) Attach the 5 clips to install the extension.
Using an air riveter or hand riveter with a nose piece, strike 2 rivets to the vehicle to install the rear wheel opening extension to the vehicle.



NOTICE:

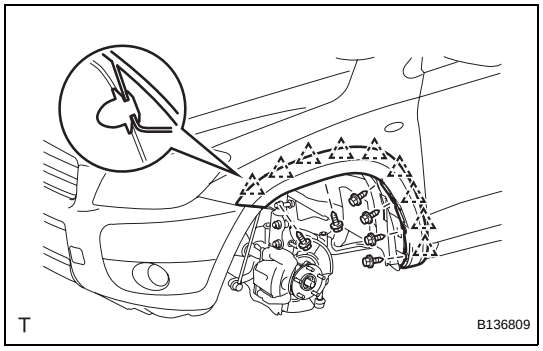


- **If the rivet is not positioned perpendicularly, it will bend the mandrel.**



- **Do not pry the rivet with the riveter, as this will cause damage to the riveter and mandrel.**

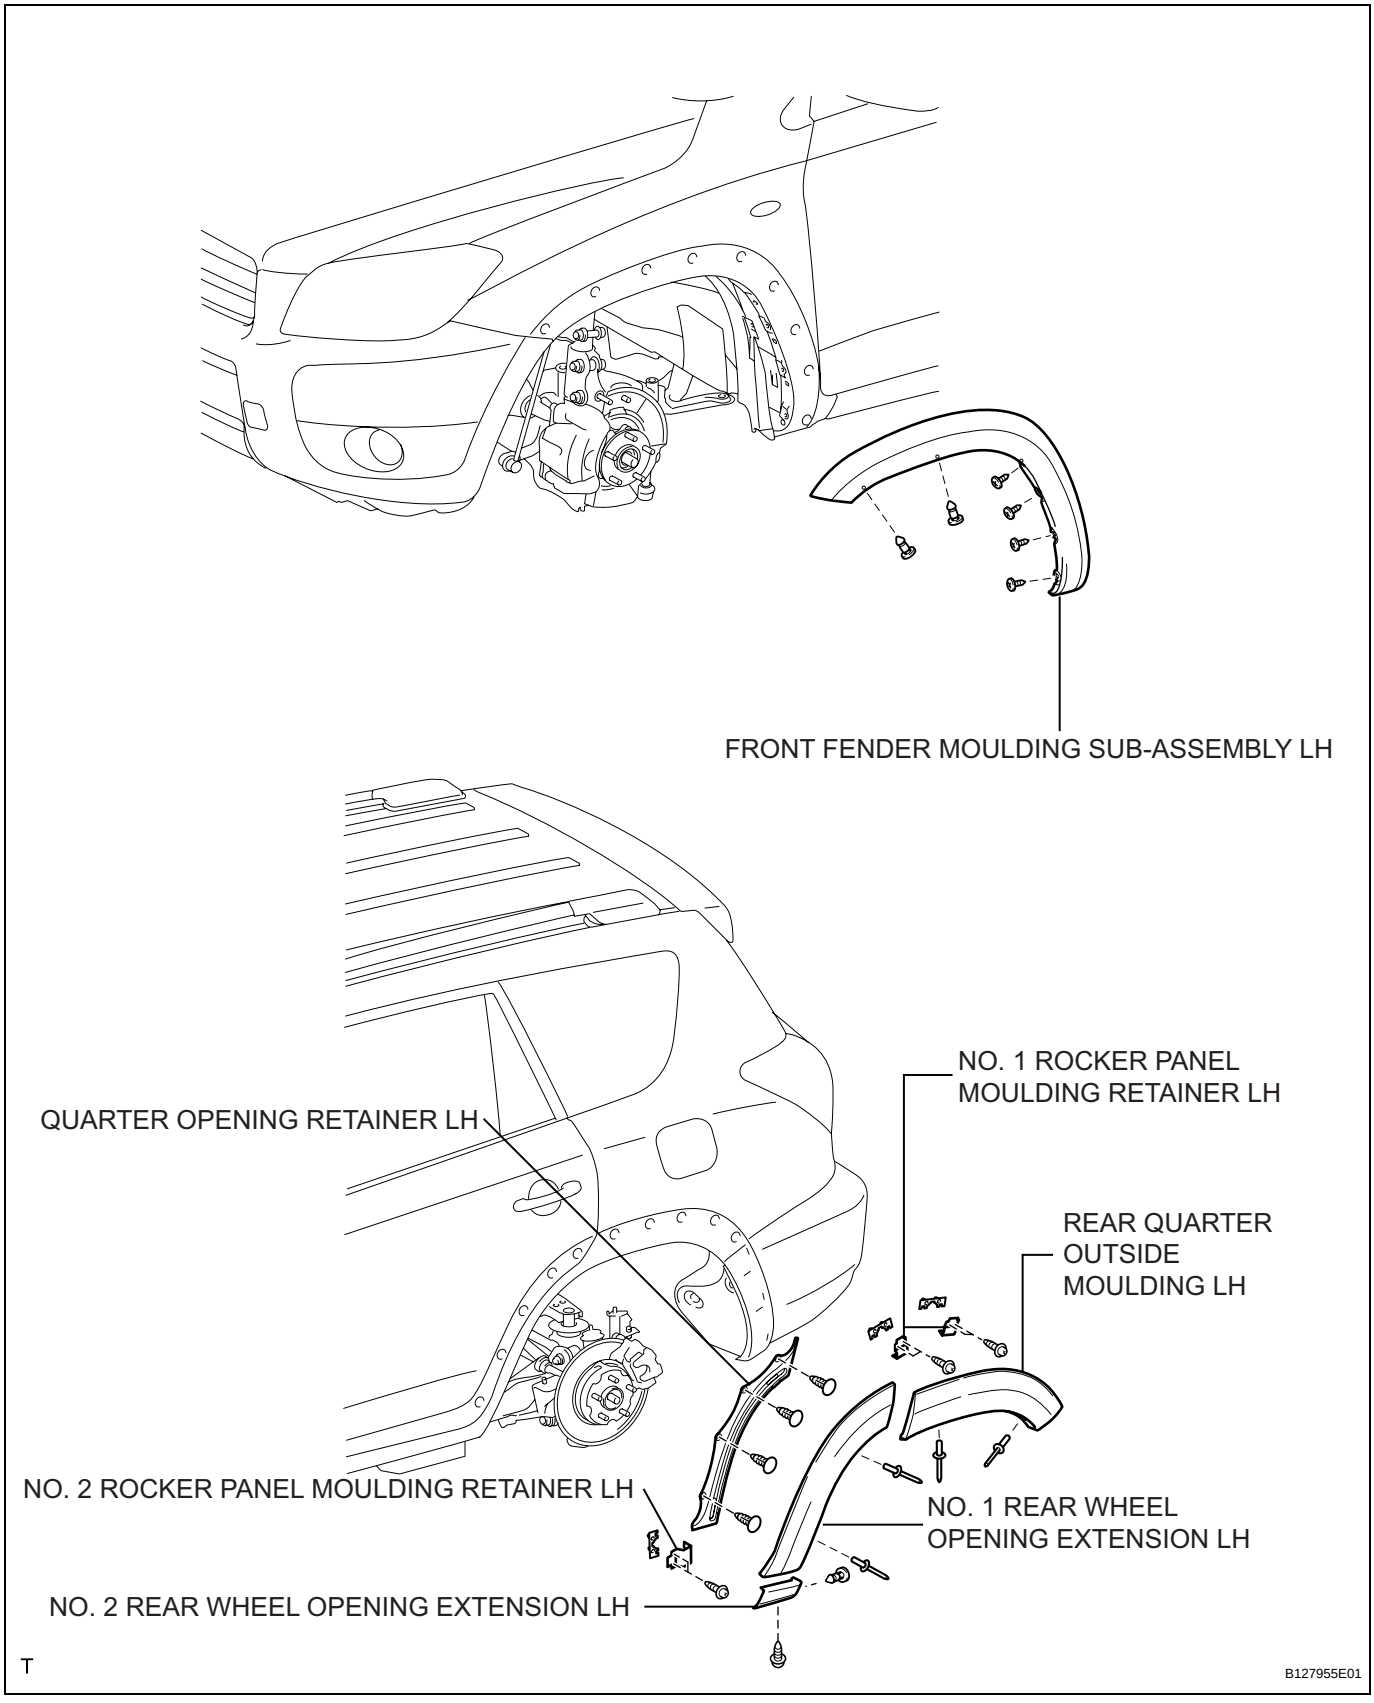
- **Confirm that the rivets are seated properly against the moulding. Do not tilt the riveter when installing the rivet to the moulding. Do not leave any space between the rivet head and moulding.**



- **Do not leave any space between the moulding and door panel. Firmly hold together the 2 items while installing the rivet.**

6. INSTALL NO. 2 REAR WHEEL OPENING EXTENSION LH

(a) Attach the clip to install the extension.
Install the screw and clip.



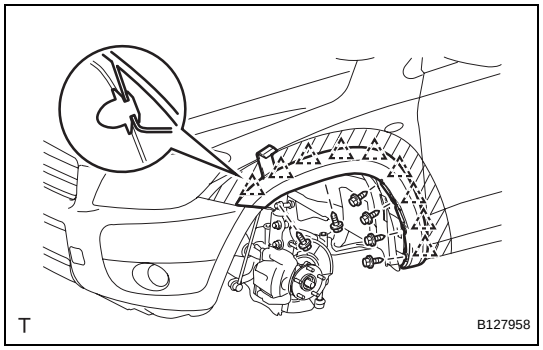
7. INSTALL FRONT FENDER MOULDING SUB-ASSEMBLY LH

(a) Attach the 9 clips to install the extension
(b) Install the 4 screws and 2 clips.

OUTSIDE MOULDING

COMPONENTS

REMOVAL

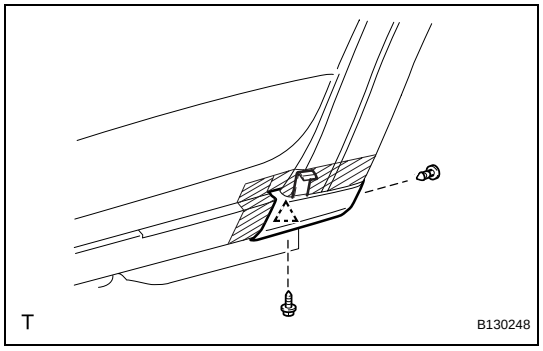


HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.
- When removing the moulding, heat the vehicle body and moulding using a heat light.

Standard heating temperature

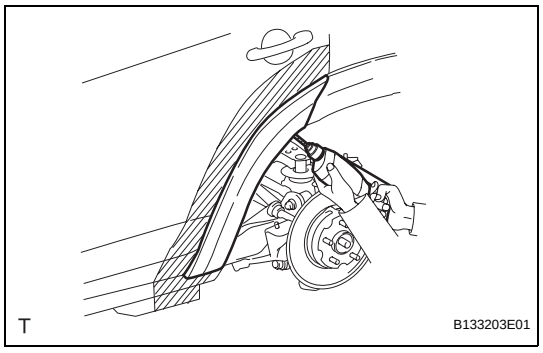
Item	Specified Condition
Vehicle body	40 to 60°C (104 to 140°F)
Clip	20 to 30°C (68 to 86°F)



NOTICE:
Do not heat the vehicle body and moulding excessively.

1. REMOVE FRONT FENDER MOULDING SUB-ASSEMBLY LH

(a) Put protective tape around the moulding.
(b) Remove the 4 screws and detach the 2 clips.
(c) Using a moulding remover, detach the 9 clips and remove the moulding.



NOTICE:
- **If reusing the moulding, take care not to damage the moulding.**
- **Be careful not to damage the vehicle body.**

2. REMOVE NO. 2 REAR WHEEL OPENING EXTENSION LH

(a) Put protective tape around the moulding.
(b) Remove the screw.
(c) Using a clip remover, detach the 2 clips and remove the extension.

NOTICE:
- **If reusing the extension, take care not to damage the extension.**
- **Be careful not to damage the vehicle body.**

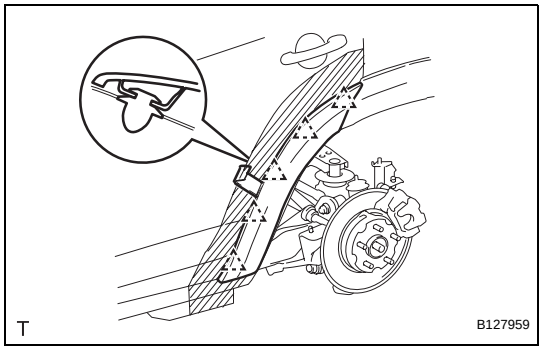
3. REMOVE NO. 1 REAR WHEEL OPENING EXTENSION LH

(a) Put protective tape around the extension.
(b) Using a drill bit of less than ϕ 4 mm (0.16 in.), drill out the 3 rivet flanges.

HINT:
Wind tape around the drill bit approximately 5 mm (0.20 in.) from the tip of the drill.

NOTICE:
- **Do not drill the rivet at an angle as this will cause damage to the drill and drill hole. Line up the drill and rivet, and carefully drill out the rivet head.**
- **Be careful as the cut rivet will be very hot.**

(c) Continue drilling and push out the remaining rivet fragments using the drill.
(d) Using a vacuum cleaner, remove the rivet fragments and shavings from the drilled areas.



(e) Using a heat light, heat the extension and vehicle body.

(f) Cut the double-sided tape that holds the moulding to the vehicle body with a knife.

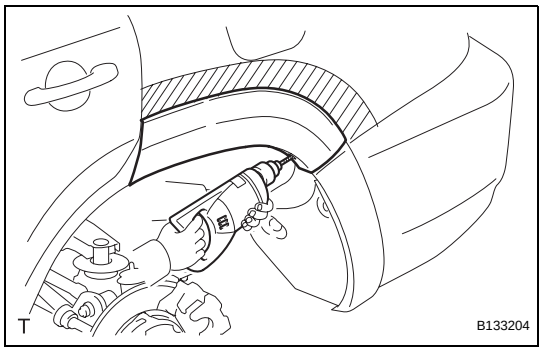
NOTICE:

- **If reusing the extension, take care not to damage the extension.**
- **Be careful not to damage the vehicle body.**

(g) Using a moulding remover, detach the 5 clips and remove the extension.

4. REMOVE REAR QUARTER OUTSIDE MOULDING LH

(a) Put protective tape around the moulding.



(b) Using a drill bit of less than ϕ 4 mm (0.16 in.), drill out the 3 rivet flanges.

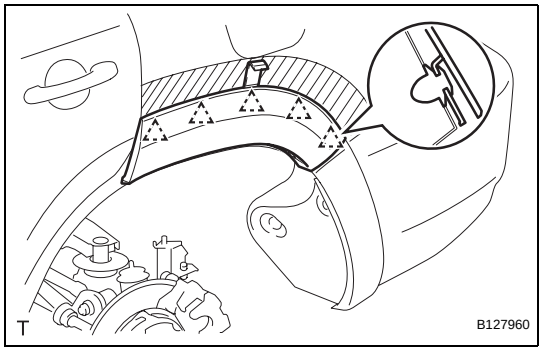
HINT:

Wind tape around the drill bit approximately 5 mm (0.20 in.) from the tip of the drill.

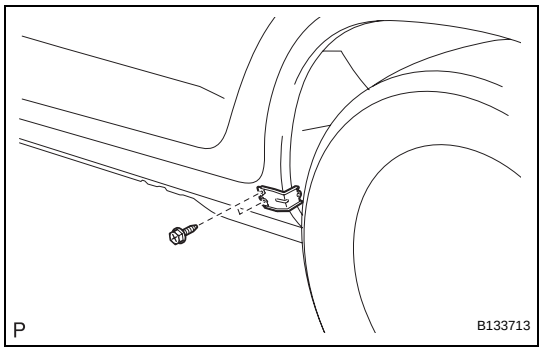
NOTICE:

- **Do not drill the rivet at an angle as this will cause damage to the drill and drill hole. Line up the drill and rivet, and carefully drill out the rivet head.**
- **Be careful as the cut rivet will be very hot.**

(c) Continue drilling and push out the remaining rivet fragments using the drill.



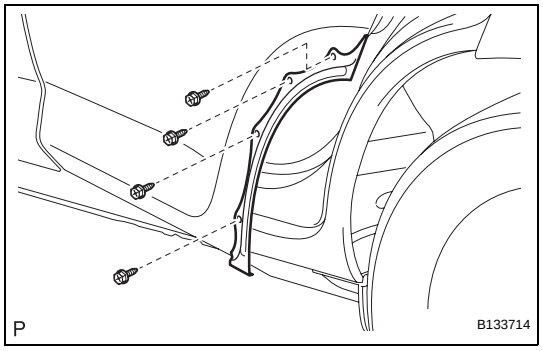
(d) Using a vacuum cleaner, remove the rivet fragments and shavings from the drilled areas.



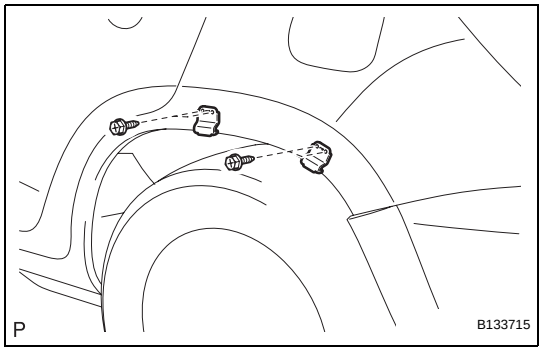
(e) Using a heat light, heat the moulding and vehicle body.

(f) Using a moulding remover, detach the 5 clips and remove the moulding.

NOTICE:



- **If reusing the moulding, take care not to damage the moulding.**
- **Be careful not to damage the vehicle body.**



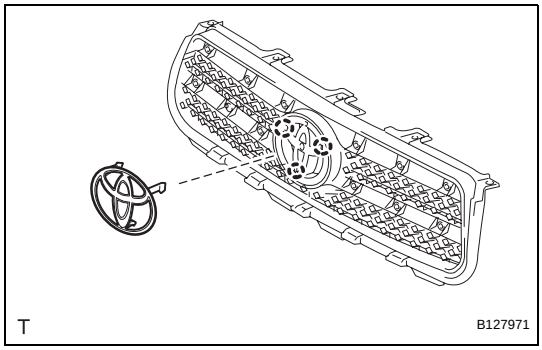
5. REMOVE NO. 2 ROCKER PANEL MOULDING RETAINER LH

(a) Remove the 2 screws and retainer.

6. REMOVE QUARTER OPENING RETAINER LH

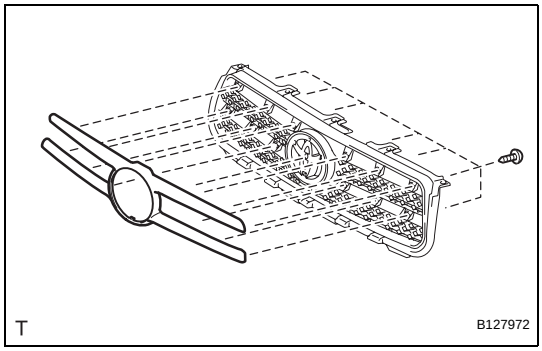
(a) Remove the 4 screws and retainer.

7. REMOVE NO. 1 ROCKER PANEL MOULDING RETAINER LH



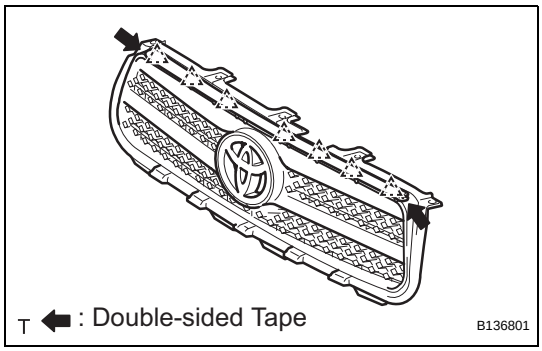
(a) Remove the 4 screws and 2 retainers.

REASSEMBLY



HINT:
When installing the ornament plate and emblem, heat the radiator grille, ornament plate and emblem using a heat light.
Standard heating temperature

Item	Specified Condition
Emblem base, emblem	20 to 30°C (68 to 86°F)



NOTICE:
Do not heat the emblem base and emblem excessively.

1. INSTALL RADIATOR GRILLE EMBLEM
(a) Attach the 4 claws to install the radiator grille.

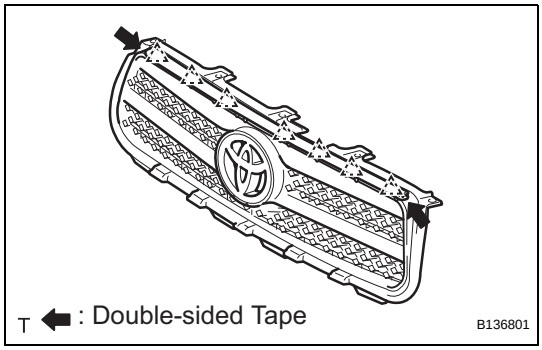
2. INSTALL RADIATOR GRILLE ORNAMENT PLATE (for Separate Type)
(a) Install the ornament plate with the 12 screws.

3. INSTALL HOOD TO RADIATOR GRILLE SEAL
(a) Install the new double-side tape.
(b) Attach the 7 clips and install the hood to radiator grille seal.

INSTALLATION

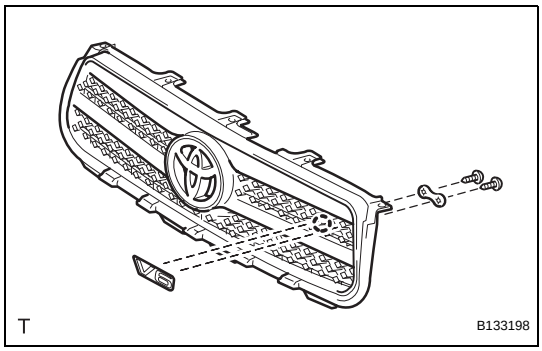
1. **INSTALL NO. 2 RADIATOR GRILLE LOWER (See page ET-9)**
2. **INSTALL NO. 1 RADIATOR GRILLE LOWER (See page ET-9)**
3. **INSTALL RADIATOR GRILLE (See page ET-10)**

DISASSEMBLY



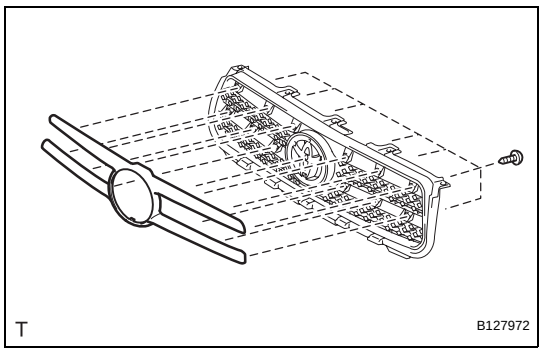
HINT:
When removing the ornament plate and emblem, heat the radiator grille, ornament plate and emblem using a heat light.

Standard heating temperature

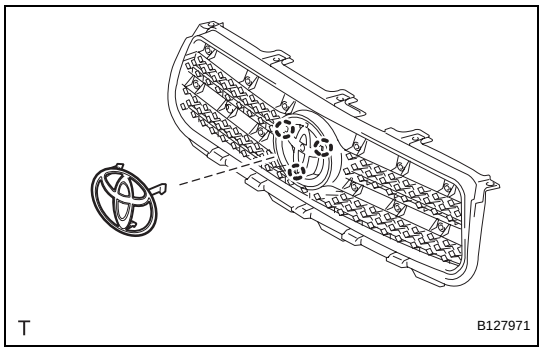


Item	Specified Condition
Radiator grille, ornament plate, emblem	20 to 30°C (68 to 86°F)

NOTICE:
Do not heat the radiator grille, ornament plate and emblem excessively.



ET

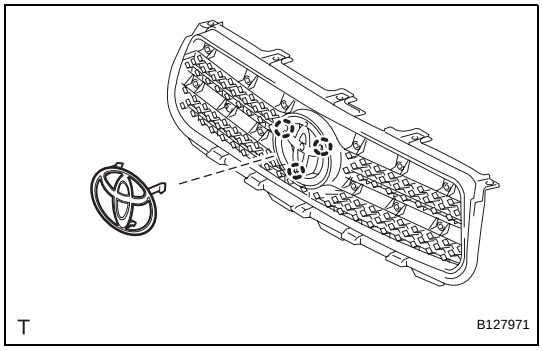


1. REMOVE HOOD TO RADIATOR GRILLE SEAL
(a) Remove the double-sided tape.
(b) Detach the 7 clips and remove the hood to radiator grille seal.

2. REMOVE NO. 2 RADIATOR GRILLE EMBLEM
(a) Remove the 2 screws.
(b) Detach the claw and remove the emblem.

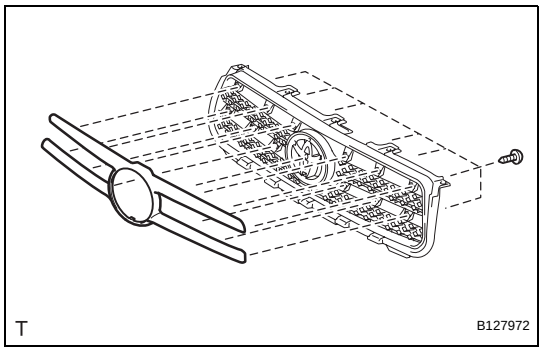
3. REMOVE RADIATOR GRILLE ORNAMENT PLATE (for Separate Type)
(a) Remove the 12 screws and ornament plate.

4. REMOVE RADIATOR GRILLE EMBLEM



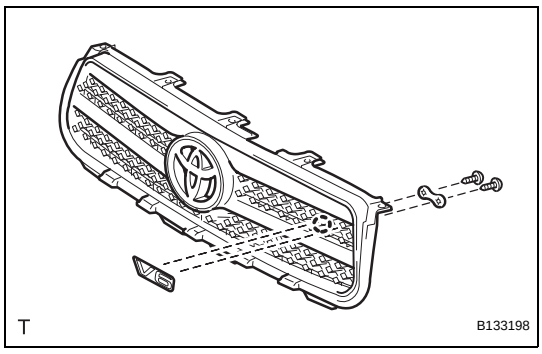
(a) Using a screwdriver, detach the 3 claws and remove the emblem from the radiator grille.
HINT:
Tape the screwdriver tip before use.
NOTICE:
- **If reusing the emblem, take care not to damage the emblem.**
- **Be careful not to damage the emblem base.**

REASSEMBLY

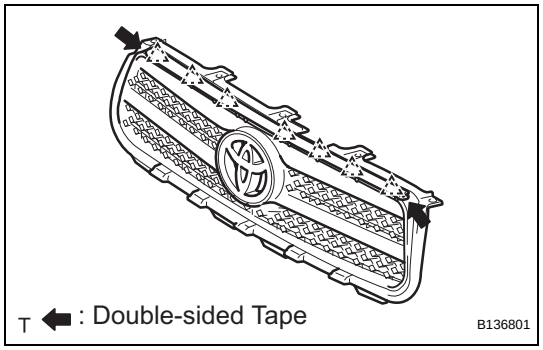


HINT:
When installing the ornament plate and emblem, heat the radiator grille, ornament plate and emblem using a heat light.
Standard heating temperature

Item	Specified Condition
Radiator grille, Ornament plate, emblem	20 to 30°C (68 to 86°F)



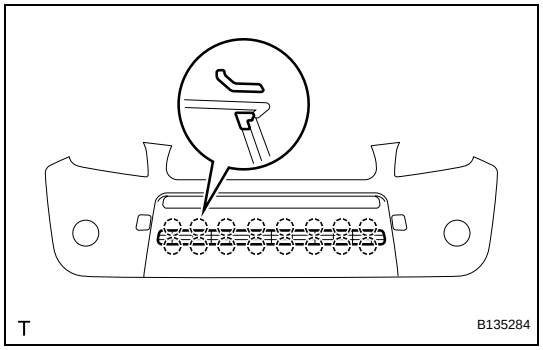
NOTICE:
Do not heat the radiator grille, ornament plate and emblem excessively.



1. INSTALL RADIATOR GRILLE EMBLEM
(a) Attach the 3 claws to install the emblem.

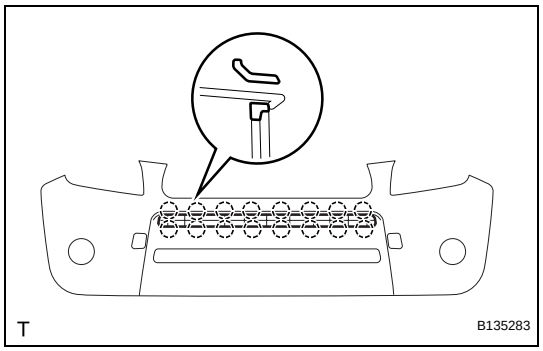
2. INSTALL RADIATOR GRILLE ORNAMENT PLATE (for Separate Type)
(a) Install the ornament plate with the 12 screws.

3. INSTALL NO. 2 RADIATOR GRILLE EMBLEM
(a) Attach the claw to install the emblem.
(b) Install the 2 screws.



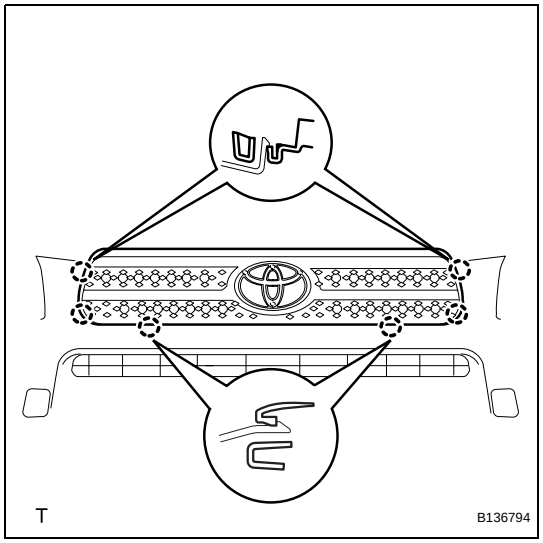
4. INSTALL HOOD TO RADIATOR GRILLE SEAL

(a) Install new double-sided tape.



(b) Attach the 7 clips and install the hood to radiator grille seal.

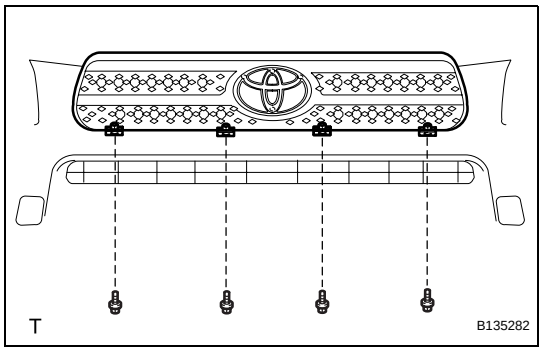
INSTALLATION



1. INSTALL NO. 2 RADIATOR GRILLE LOWER

(a) Install the radiator grille and attach the 16 claws.

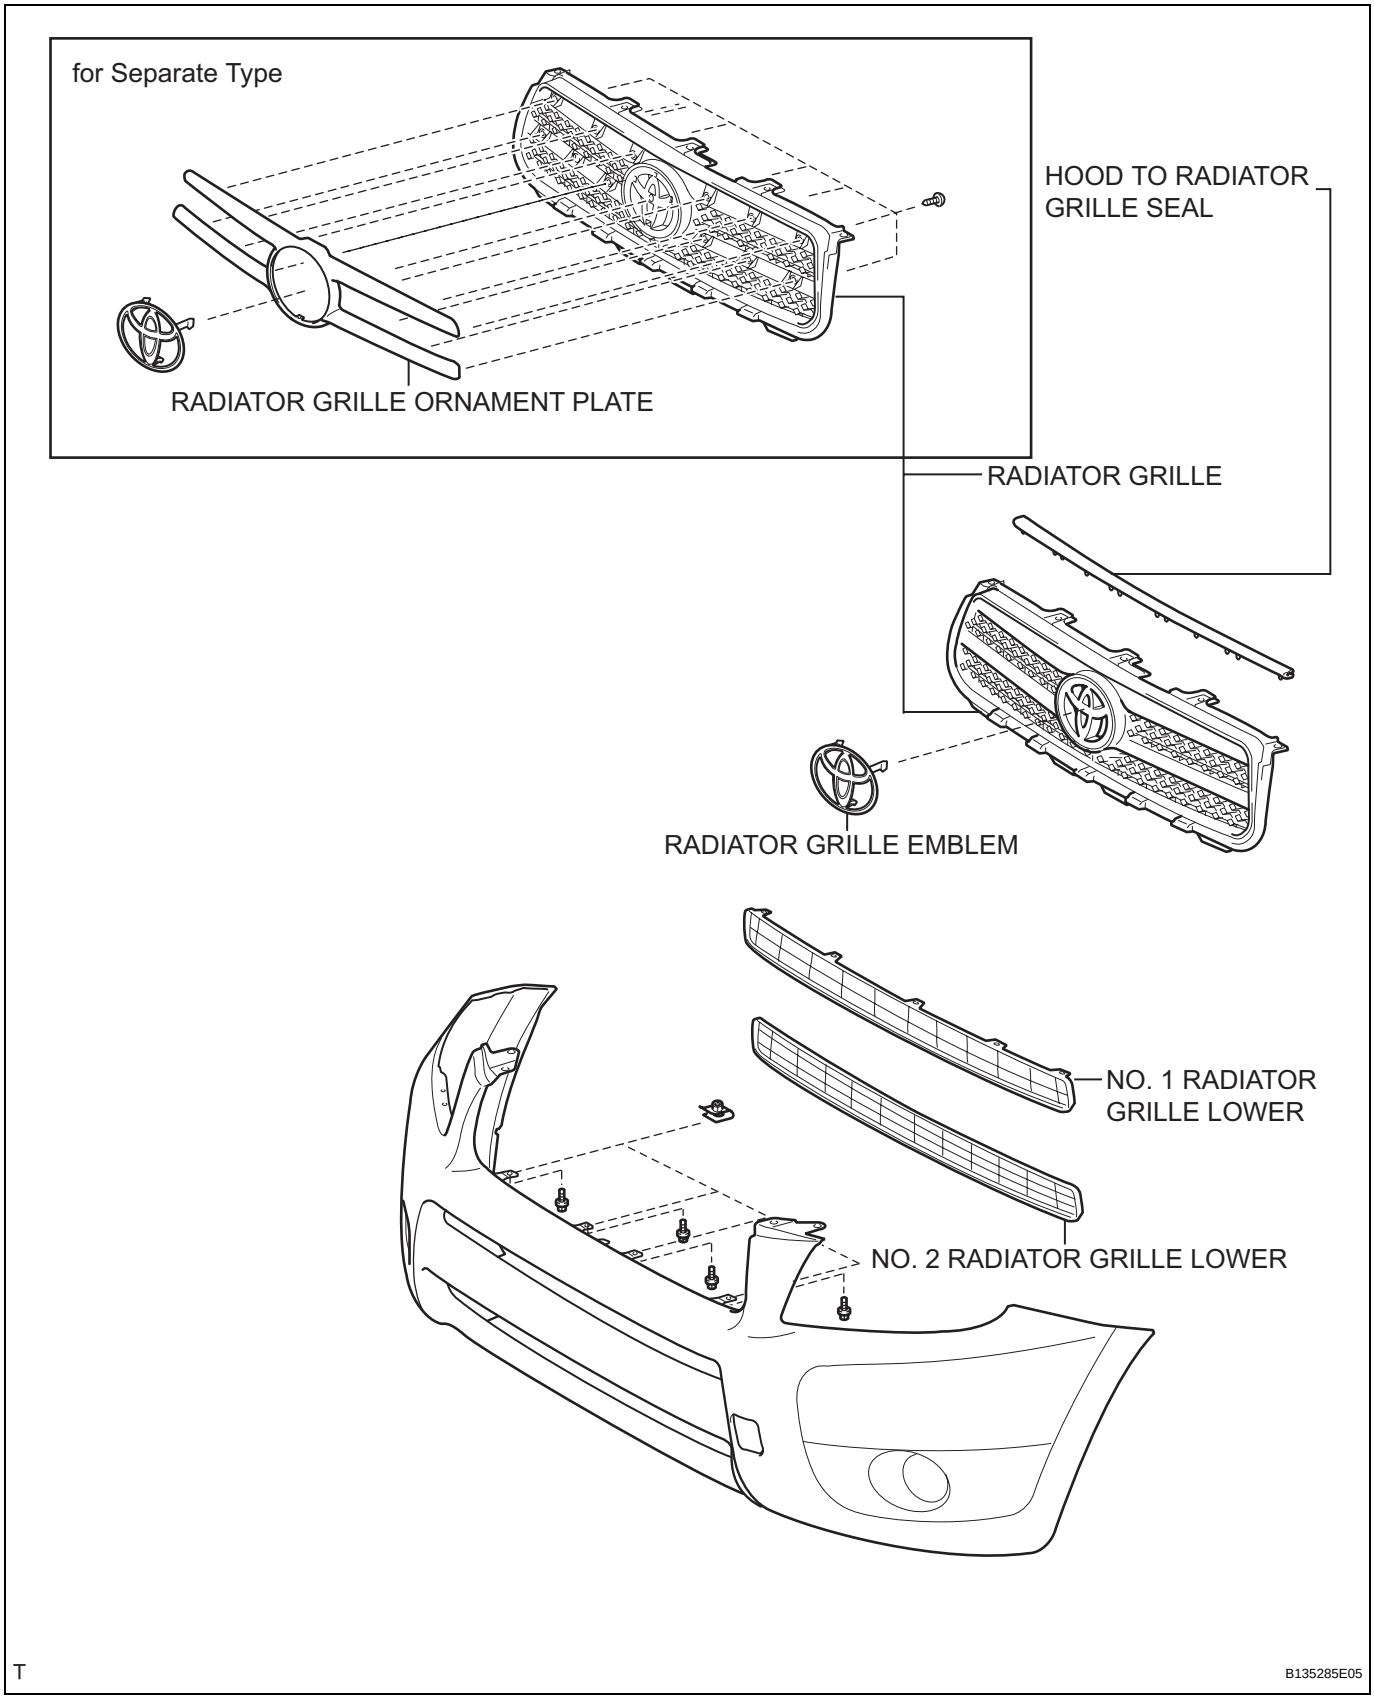
2. INSTALL NO. 1 RADIATOR GRILLE LOWER



(a) Install the radiator grille and attach the 16 claws.

3. INSTALL RADIATOR GRILLE

(a) Install the radiator grille with the 6 claws.



ET

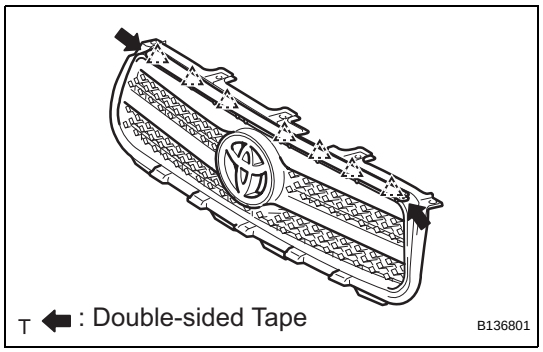
(b) Install the 4 bolts and 4 nuts.

RADIATOR GRILLE

COMPONENTS

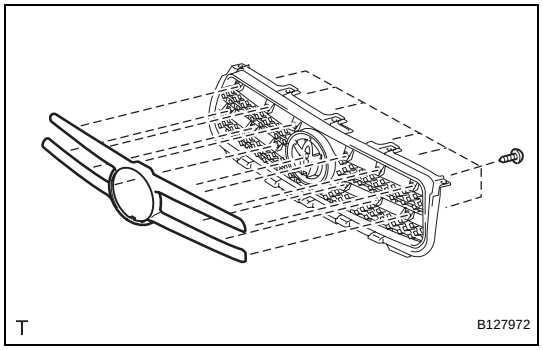
REMOVAL

1. **REMOVE RADIATOR GRILLE (See page ET-6)**
2. **REMOVE NO. 1 RADIATOR GRILLE LOWER (See page ET-7)**
3. **REMOVE NO. 2 RADIATOR GRILLE LOWER (See page ET-7)**



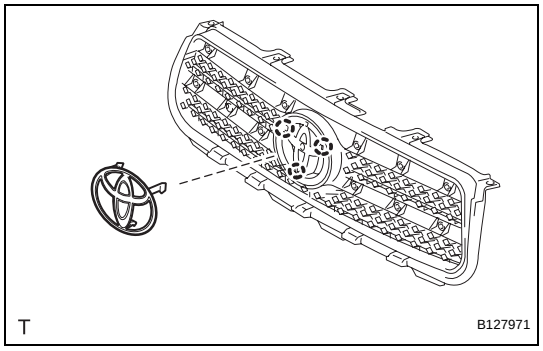
DISASSEMBLY

HINT:
When removing the ornament plate and emblem, heat the radiator grille, ornament plate and emblem using a heat light.



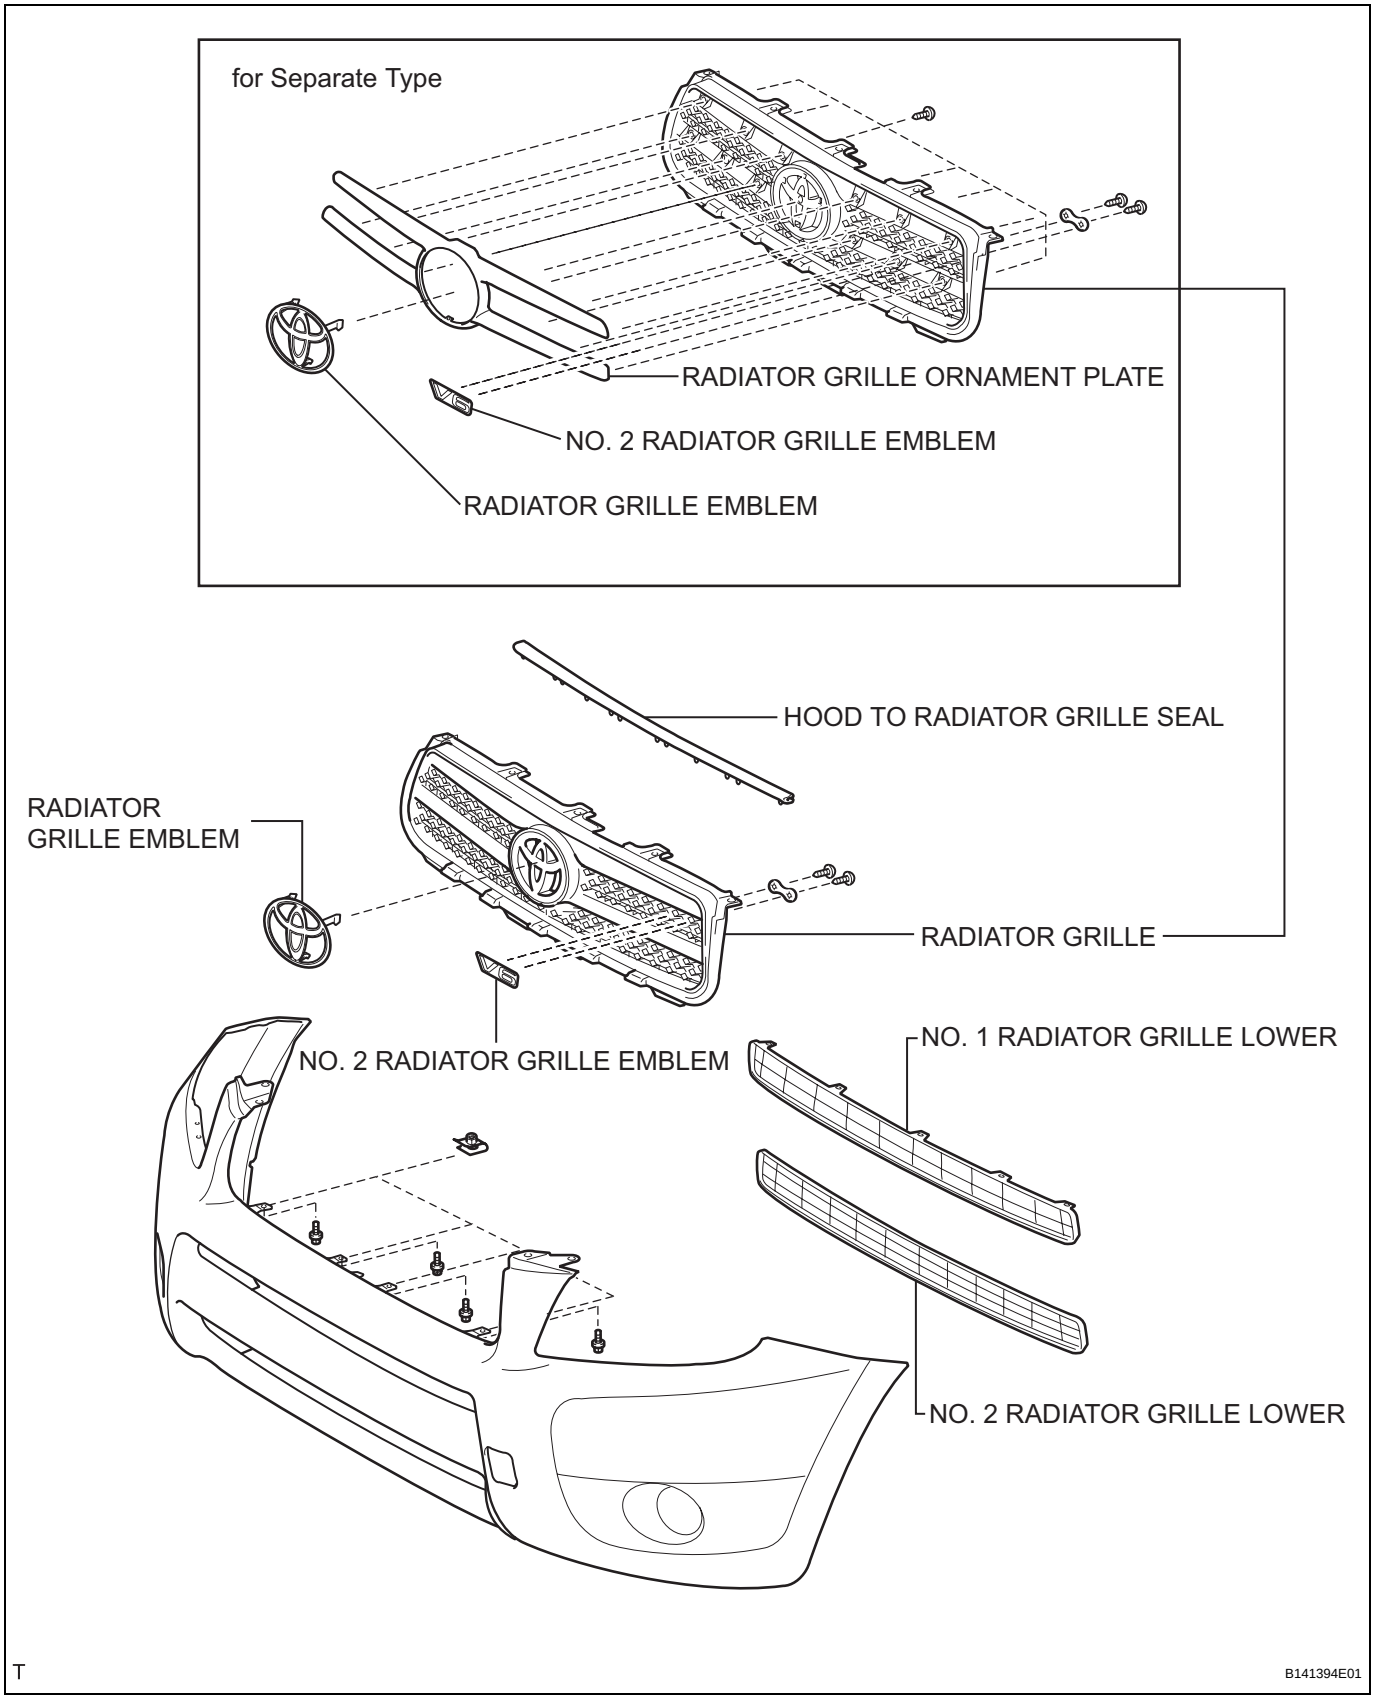
Standard heating temperature

Item	Specified Condition
Radiator grille, ornament plate, emblem	20 to 30°C (68 to 86°F)

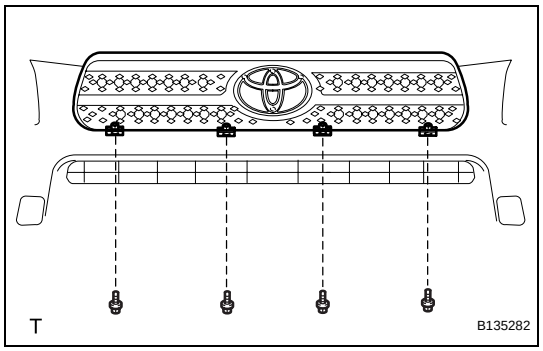


NOTICE:
Do not heat the emblem base and emblem excessively.

1. REMOVE HOOD TO RADIATOR GRILLE SEAL
(a) Remove the double-side tape.
(b) Detach the 7 clips and remove the hood to radiator grille seal.



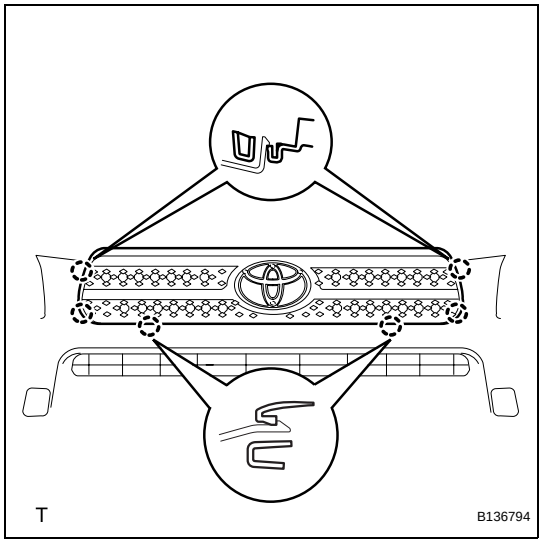
2. REMOVE RADIATOR GRILLE ORNAMENT PLATE (for Separate Type)
(a) Remove the 12 screws and ornament plate.

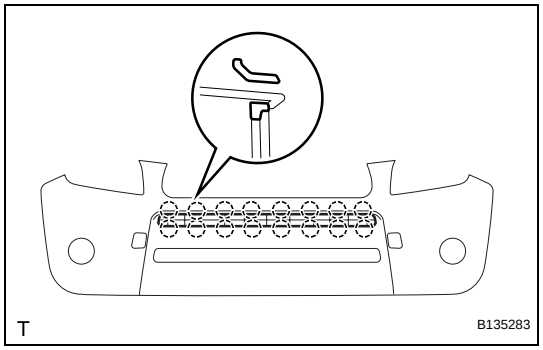


3. REMOVE RADIATOR GRILLE EMBLEM
(a) Using a screwdriver, detach the 4 claws and remove the emblem from the radiator grille.
HINT:
Tape the screwdriver tip before use.
NOTICE:
- **If reusing the emblem, take care not to damage the emblem.**
- **Be careful not to damage the emblem base.**

RADIATOR GRILLE (for 2GR-FE)

COMPONENTS

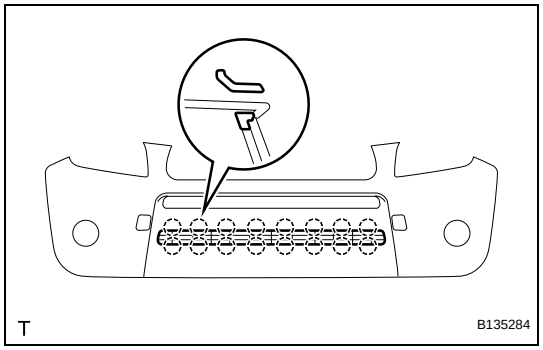




REMOVAL

1. REMOVE RADIATOR GRILLE SUB-ASSEMBLY

(a) Remove the 4 bolts and 4 nuts.



(b) Detach the 6 claws and remove the radiator grille.

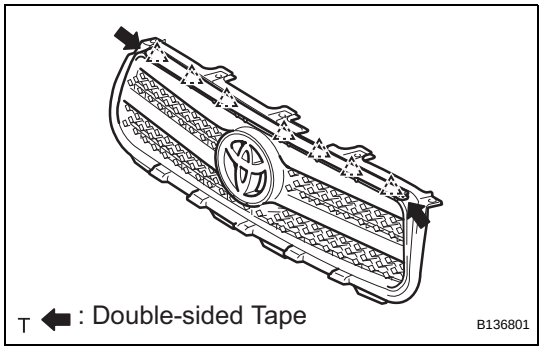
2. REMOVE NO. 1 RADIATOR GRILLE LOWER

(a) Detach the 16 claws and remove the radiator grille.

3. REMOVE NO. 2 RADIATOR GRILLE LOWER

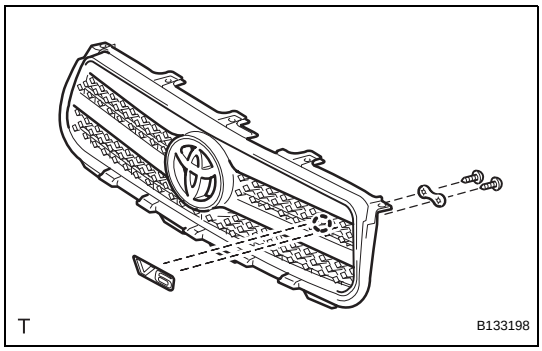
(a) Detach the 16 claws and remove the radiator grille.

DISASSEMBLY



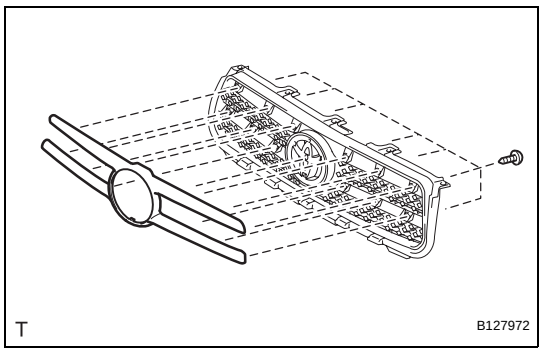
HINT:
When removing the ornament plate and emblem, heat the radiator grille, ornament plate and emblem using a heat light.

Standard heating temperature

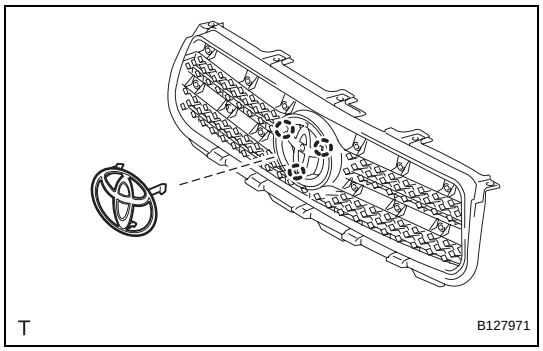


Item	Specified Condition
Radiator grille, ornament plate, emblem	20 to 30°C (68 to 86°F)

NOTICE:
Do not heat the radiator grille, ornament plate and emblem excessively.



ET

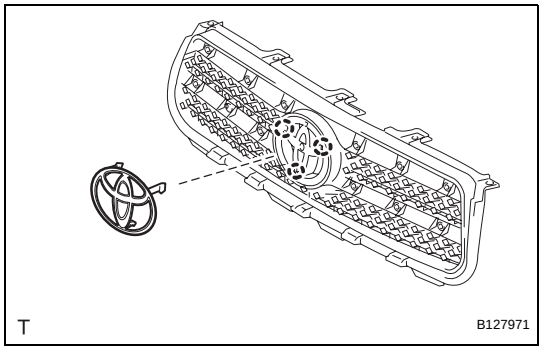


1. REMOVE HOOD TO RADIATOR GRILLE SEAL
(a) Remove the double-sided tape.
(b) Detach the 7 clips and remove the hood to radiator grille seal.

2. REMOVE NO. 2 RADIATOR GRILLE EMBLEM
(a) Remove the 2 screws.
(b) Detach the claw and remove the emblem.

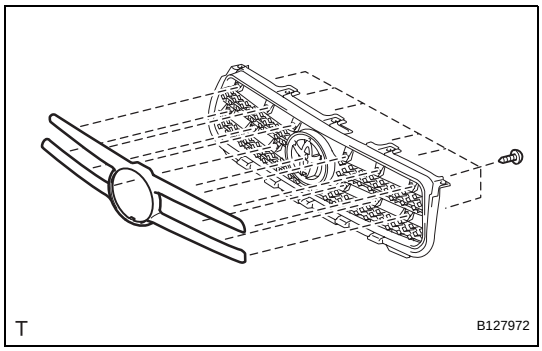
3. REMOVE RADIATOR GRILLE ORNAMENT PLATE (for Separate Type)
(a) Remove the 12 screws and ornament plate.

4. REMOVE RADIATOR GRILLE EMBLEM



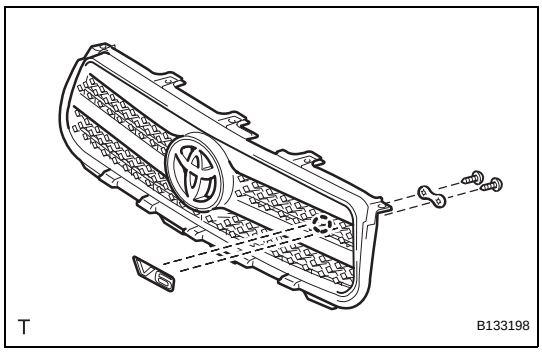
(a) Using a screwdriver, detach the 3 claws and remove the emblem from the radiator grille.
HINT:
Tape the screwdriver tip before use.
NOTICE:
- **If reusing the emblem, take care not to damage the emblem.**
- **Be careful not to damage the emblem base.**

REASSEMBLY

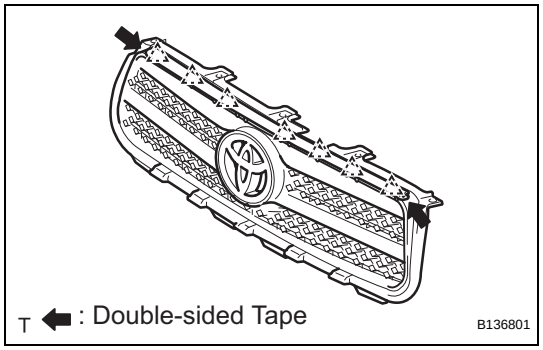


HINT:
When installing the ornament plate and emblem, heat the radiator grille, ornament plate and emblem using a heat light.
Standard heating temperature

Item	Specified Condition
Radiator grille, Ornament plate, emblem	20 to 30°C (68 to 86°F)



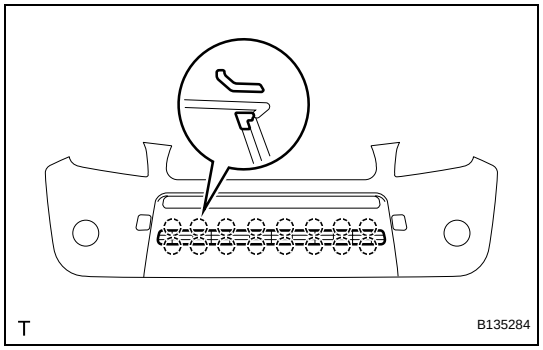
NOTICE:
Do not heat the radiator grille, ornament plate and emblem excessively.



1. INSTALL RADIATOR GRILLE EMBLEM
(a) Attach the 3 claws to install the emblem.

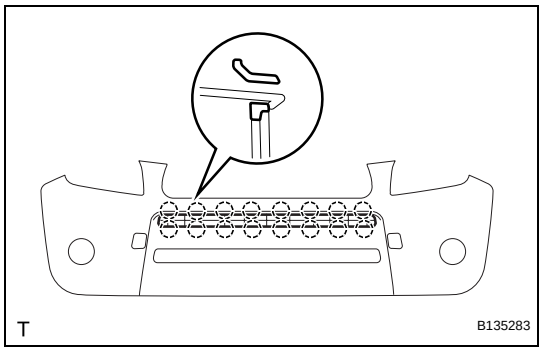
2. INSTALL RADIATOR GRILLE ORNAMENT PLATE (for Separate Type)
(a) Install the ornament plate with the 12 screws.

3. INSTALL NO. 2 RADIATOR GRILLE EMBLEM
(a) Attach the claw to install the emblem.
(b) Install the 2 screws.



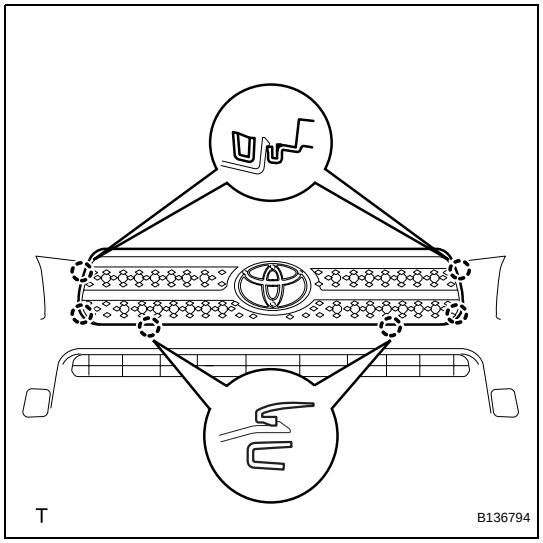
4. INSTALL HOOD TO RADIATOR GRILLE SEAL

(a) Install new double-sided tape.



(b) Attach the 7 clips and install the hood to radiator grille seal.

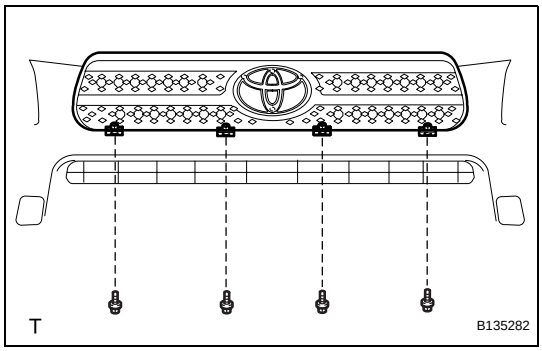
INSTALLATION



1. INSTALL NO. 2 RADIATOR GRILLE LOWER

(a) Install the radiator grille and attach the 16 claws.

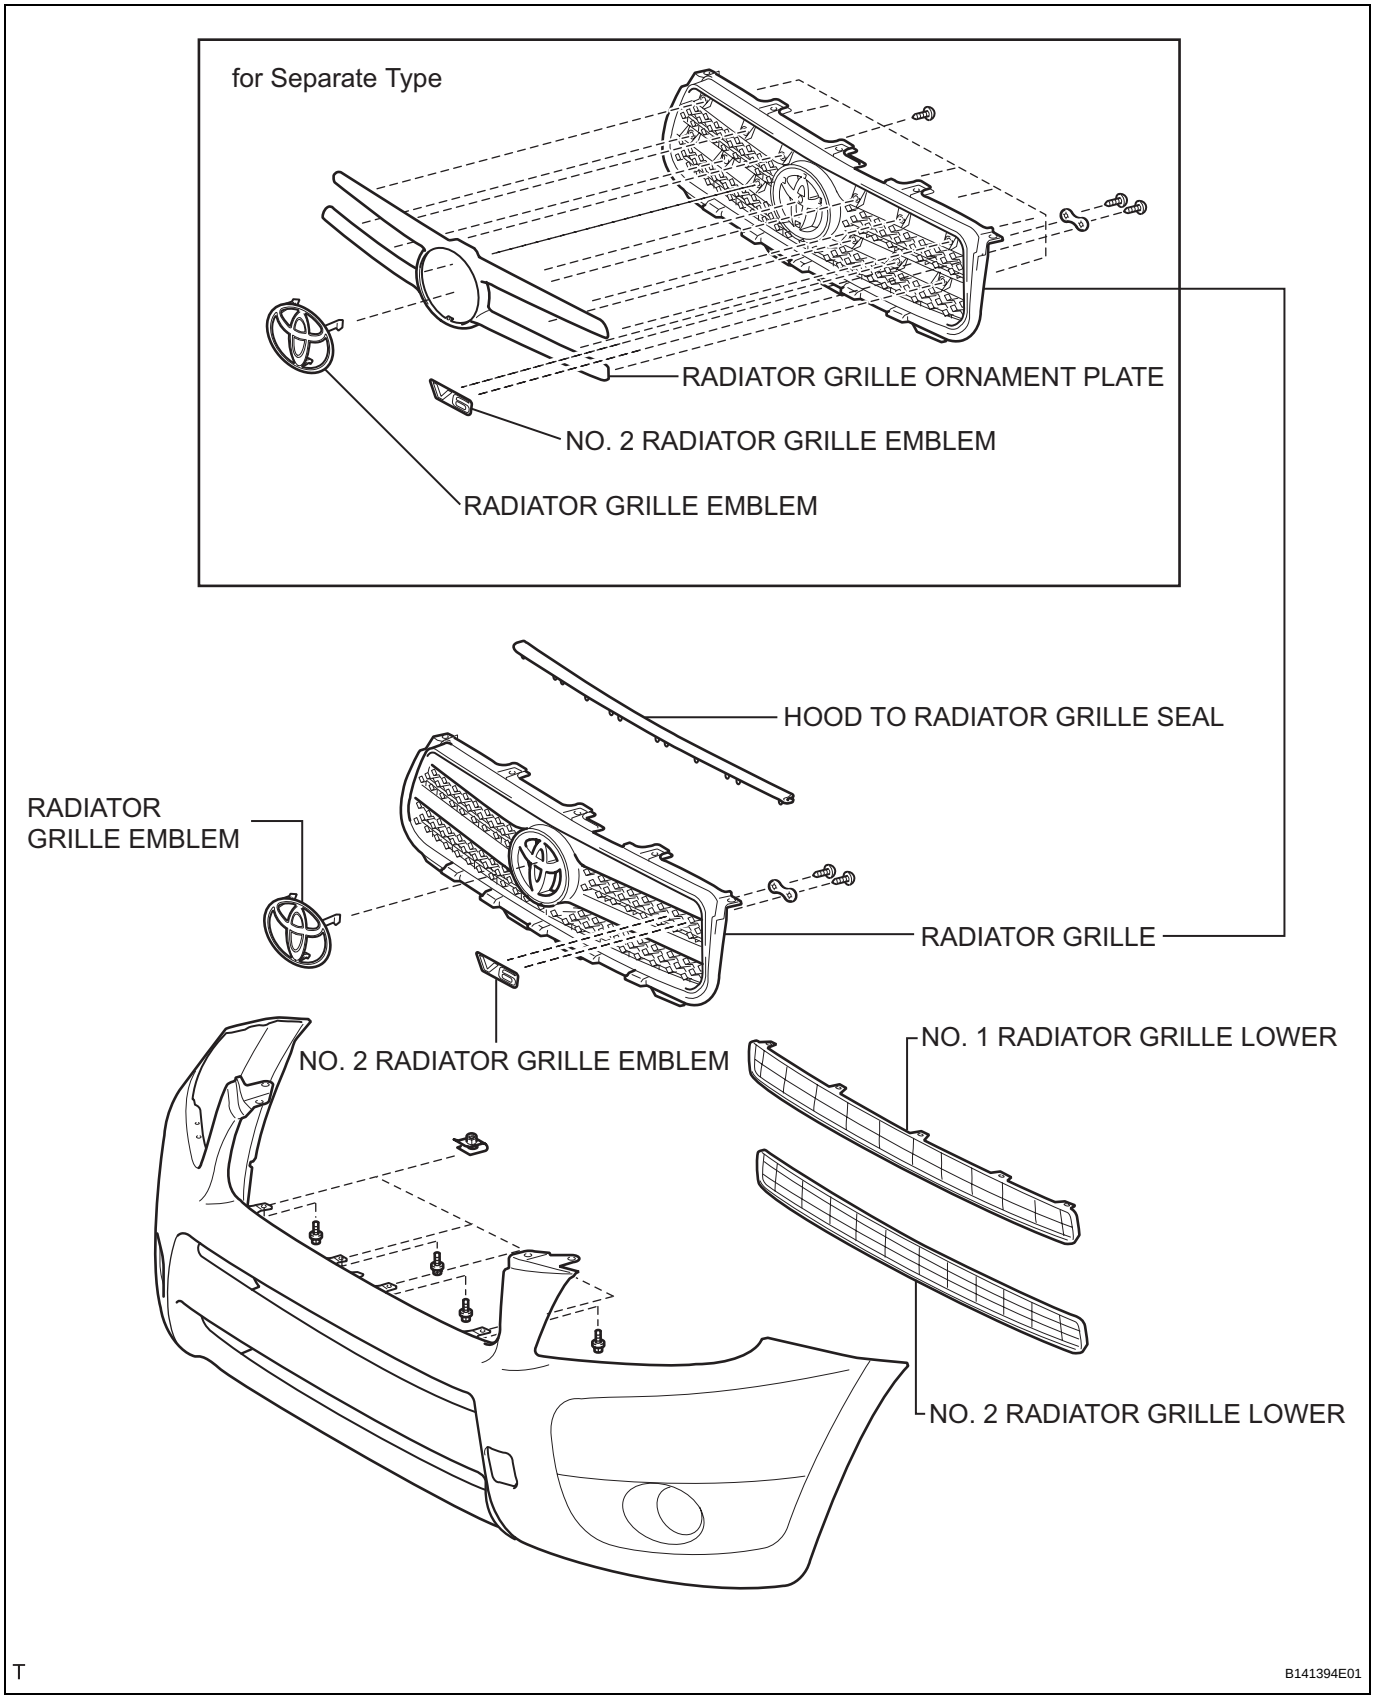
2. INSTALL NO. 1 RADIATOR GRILLE LOWER



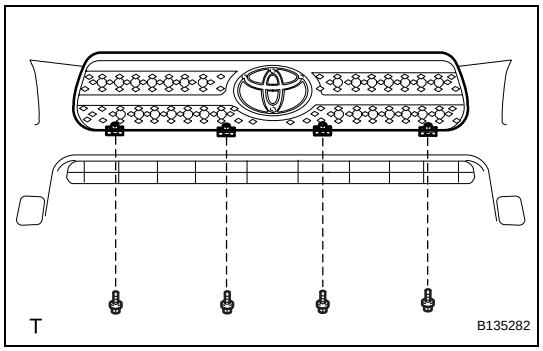
(a) Install the radiator grille and attach the 16 claws.

3. INSTALL RADIATOR GRILLE

(a) Install the radiator grille with the 6 claws.



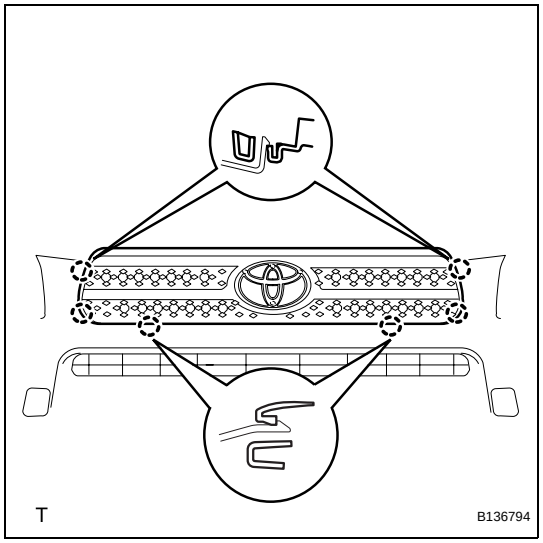
ET

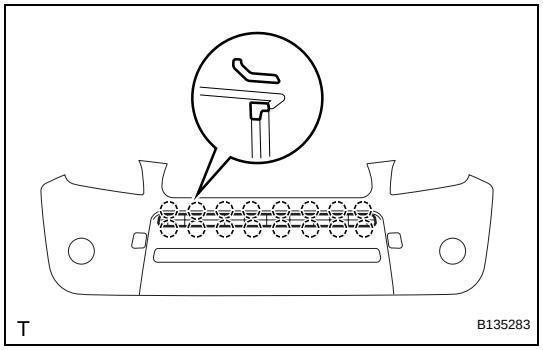


(b) Install the 4 bolts and 4 nuts.

RADIATOR GRILLE (for 2GR-FE)

COMPONENTS

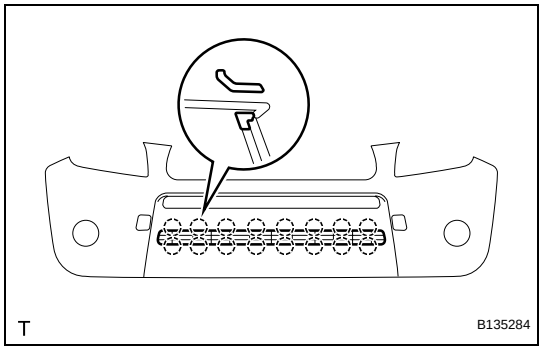




REMOVAL

1. REMOVE RADIATOR GRILLE SUB-ASSEMBLY

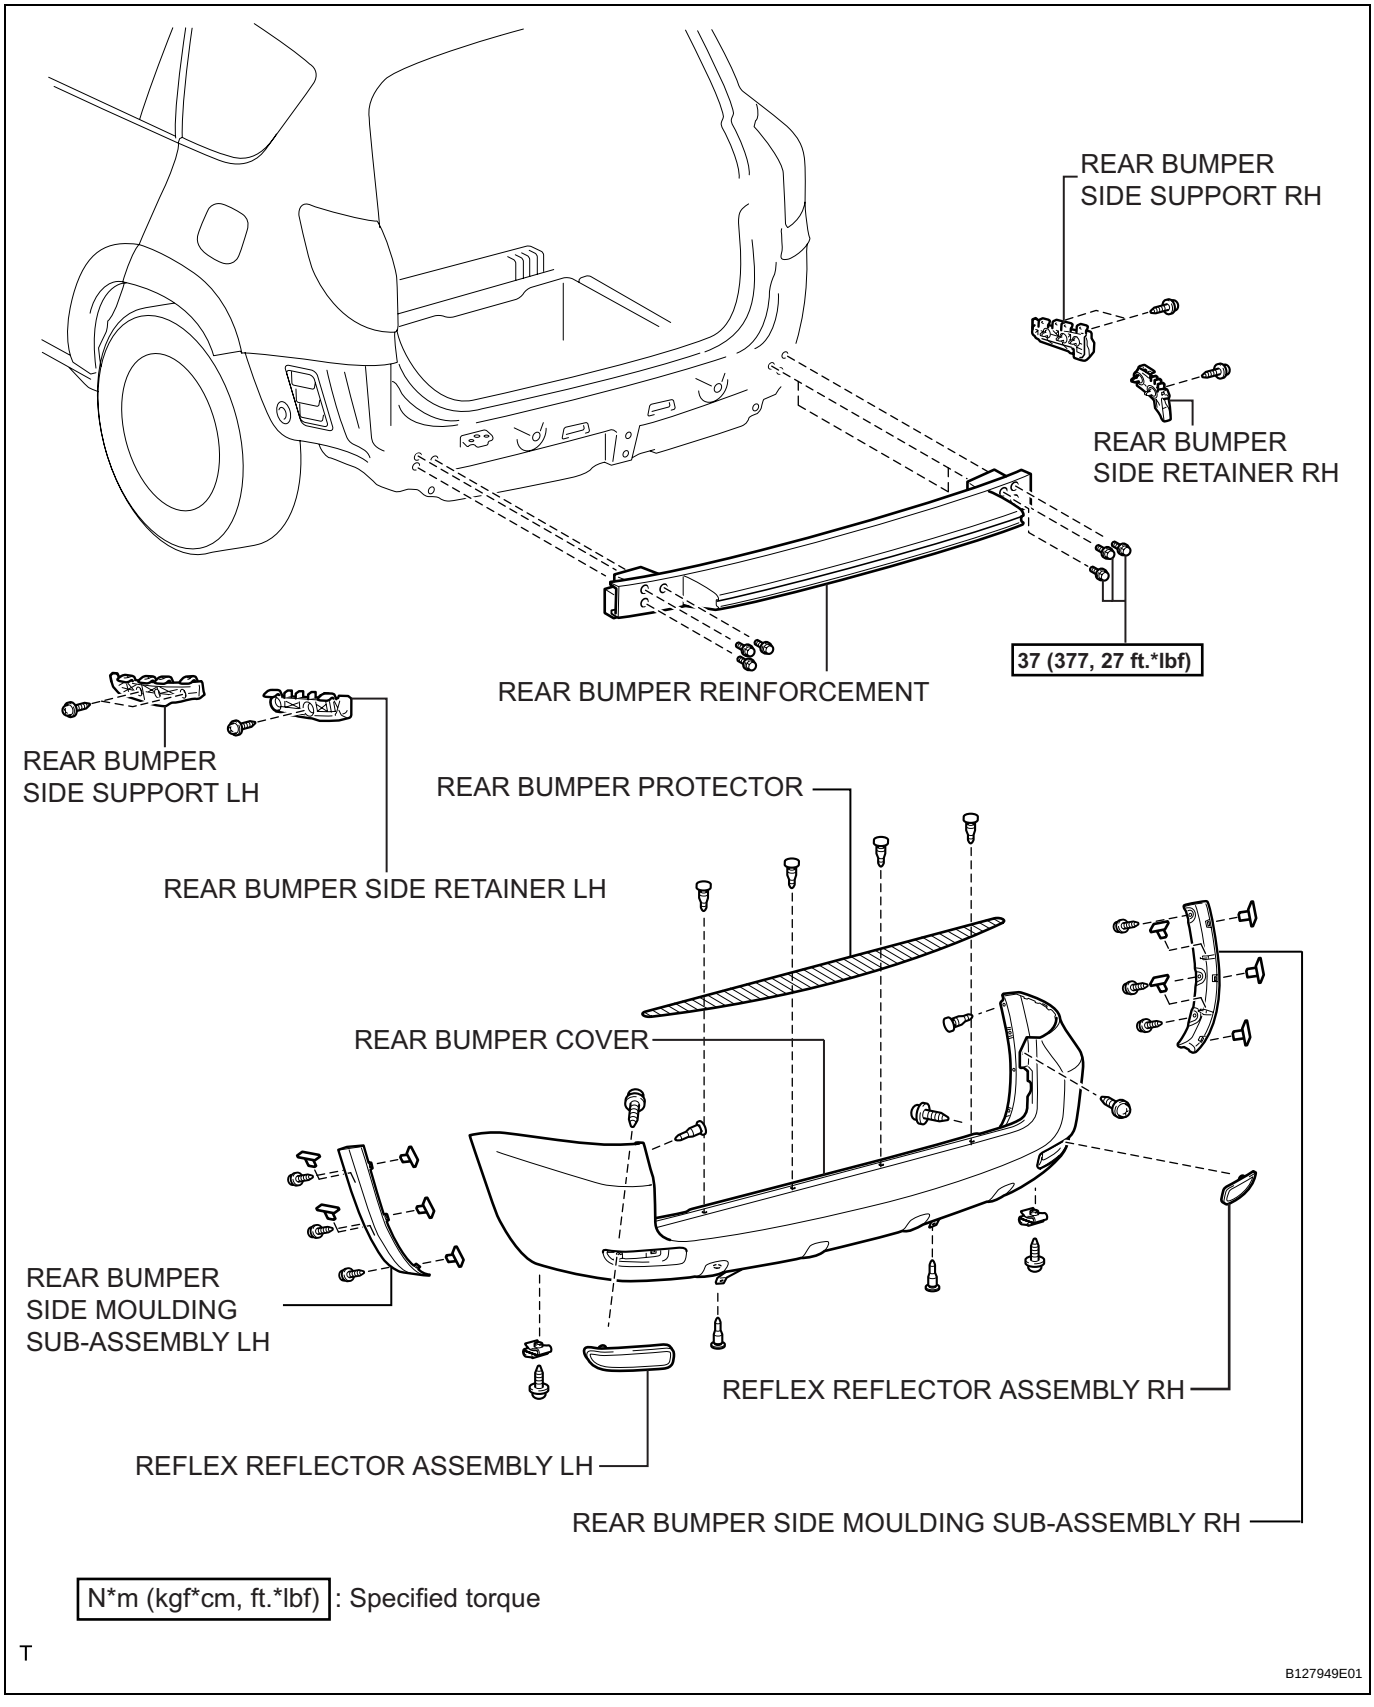
(a) Remove the 4 bolts and 4 nuts.



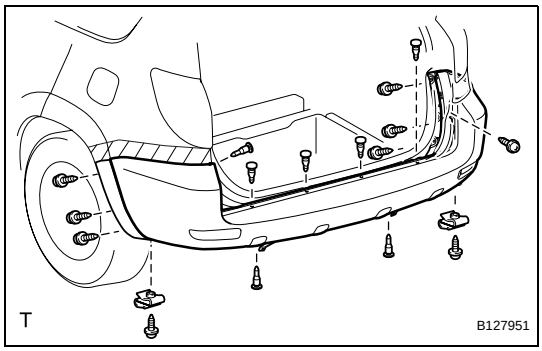
(b) Detach the 6 claws and remove the radiator grille.

2. REMOVE NO. 1 RADIATOR GRILLE LOWER

(a) Detach the 16 claws and remove the radiator grille.



3. REMOVE NO. 2 RADIATOR GRILLE LOWER

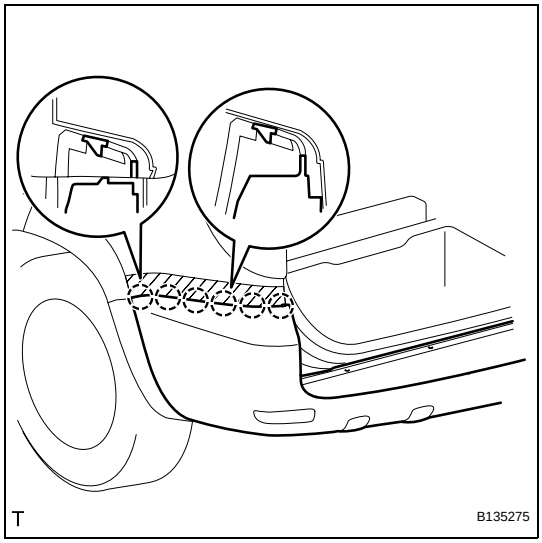


(a) Detach the 16 claws and remove the radiator grille.

REAR BUMPER

COMPONENTS

ET



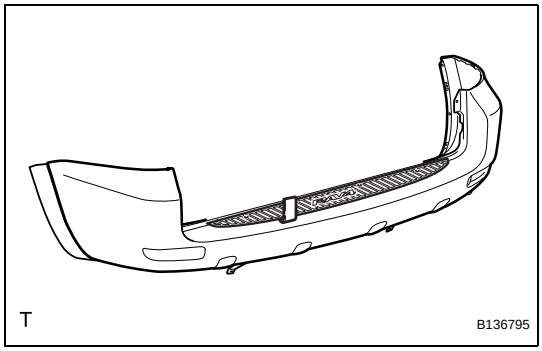
REMOVAL

1. REMOVE REAR BUMPER COVER

(a) Remove the 9 screws and 7 clips.

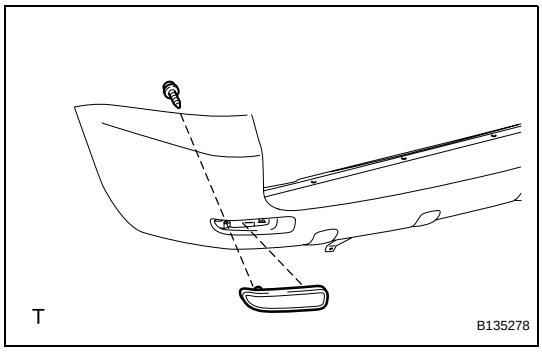
(b) Put protective tape under the quarter panel.

(c) Detach the 12 claws and remove the bumper cover.



2. REMOVE REAR BUMPER PROTECTOR

HINT:

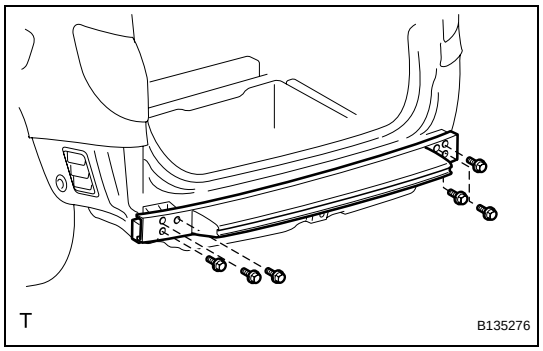


When removing the bumper protector, heat the bumper protector.

Standard heating temperature

Item	Specified Condition
bumper protector	40 to 60°C (104 to 140°F)

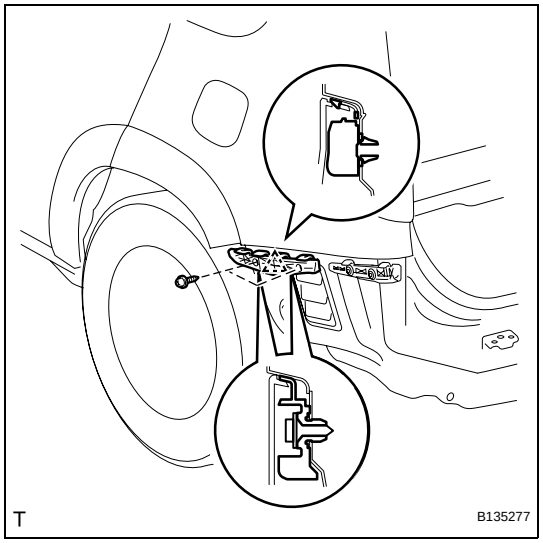
(a) Using a moulding remover, remove the bumper protector.



3. REMOVE REFLEX REFLECTOR ASSEMBLY LH

(a) Remove the screw and reflex reflector.

4. REMOVE REFLEX REFLECTOR ASSEMBLY RH

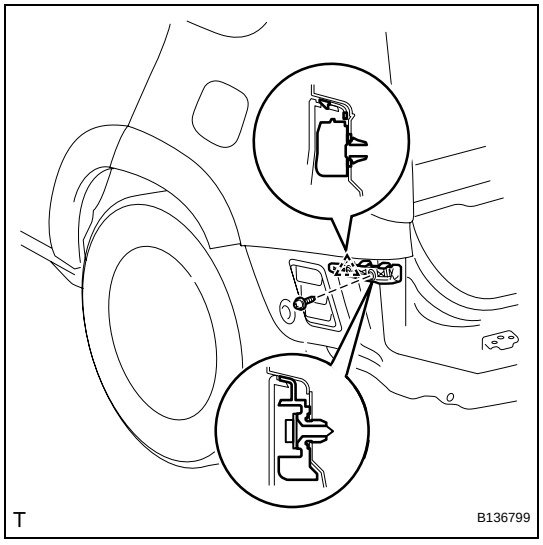


HINT:

Use the same procedures described for the LH side.

5. REMOVE REAR BUMPER REINFORCEMENT

(a) Remove the 6 bolts and reinforcement.



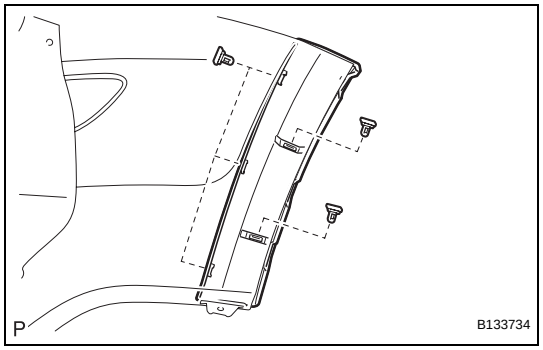
6. REMOVE REAR BUMPER SIDE SUPPORT LH

(a) Remove the 2 screws.

(b) Using a screwdriver, detach the claw and remove the bumper side support.
HINT:
Tape the screwdriver tip before use.

7. REMOVE REAR BUMPER SIDE SUPPORT RH

HINT:
Use the same procedures described for the LH side.



8. REMOVE REAR BUMPER SIDE RETAINER LH

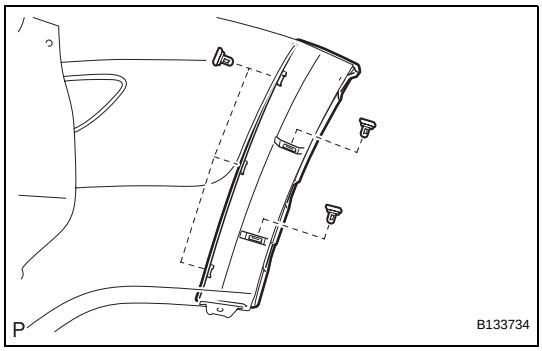
(a) Remove the screw.

(b) Using a screwdriver, detach the claw and remove the side retainer.
HINT:
Tape the screwdriver tip before use.

9. REMOVE REAR BUMPER SIDE RETAINER RH

HINT:
Use the same procedures described for the LH side.

10. REMOVE REAR BUMPER SIDE MOULDING SUB-ASSEMBLY LH (for Wide Body)



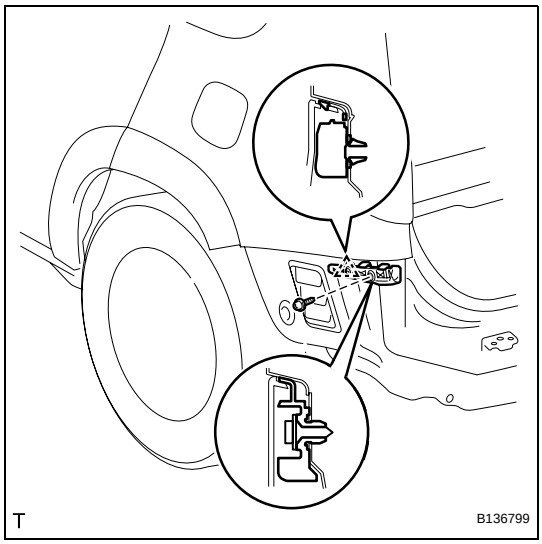
(a) Detach the 5 outside moulding retainers and remove the moulding.
NOTICE:
- **If reusing the extension, take care not to damage the moulding.**
- **Be careful not to damage the vehicle body.**

11. REMOVE REAR BUMPER SIDE MOULDING SUB-ASSEMBLY RH (for Wide Body)

HINT:

Use the same procedures described for the LH side.

INSTALLATION



1. INSTALL REAR BUMPER SIDE MOULDING SUB-ASSEMBLY LH (for Wide Body)

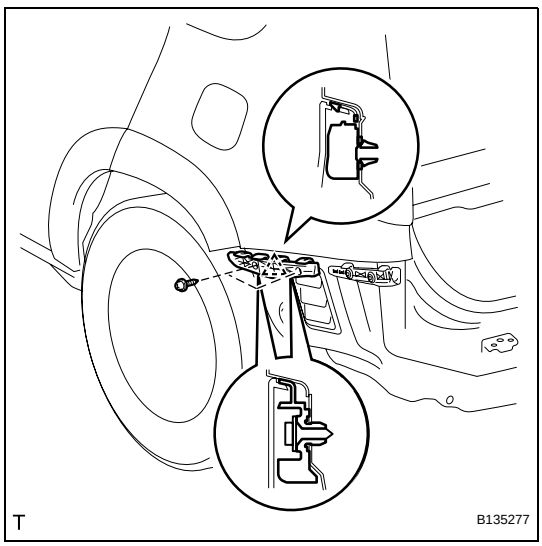
(a) Attach the 5 outside moulding retainers to install the moulding.

2. INSTALL REAR BUMPER SIDE MOULDING SUB-ASSEMBLY RH (for Wide Body)

HINT:

Use the same procedures described for the LH side.

3. INSTALL REAR BUMPER SIDE RETAINER LH



(a) Attach the claw to install the side retainer.

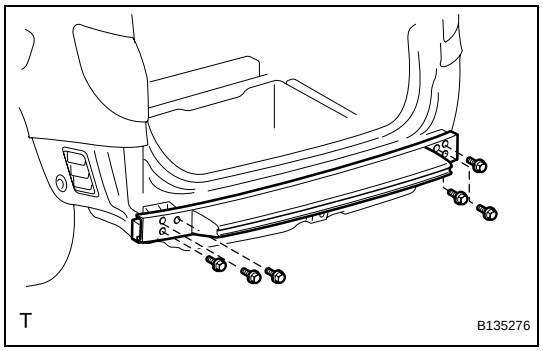
(b) Install the screw.

4. INSTALL REAR BUMPER SIDE RETAINER RH

HINT:

Use the same procedures described for the LH side.

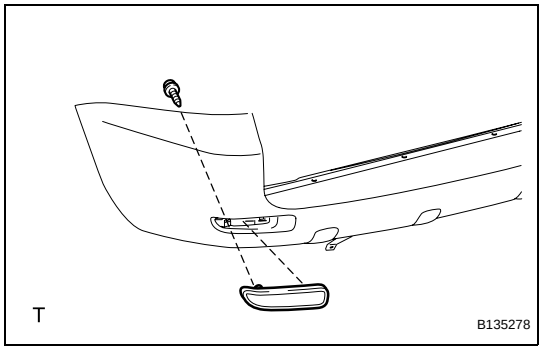
5. INSTALL REAR BUMPER SIDE SUPPORT LH



(a) Attach the claw to install the bumper side support.

(b) Install the 2 screws.

6. INSTALL REAR BUMPER SIDE SUPPORT RH



HINT:

Use the same procedures described for the LH side.

7. INSTALL REAR BUMPER REINFORCEMENT

(a) Install the bumper reinforcement with the 6 bolts.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

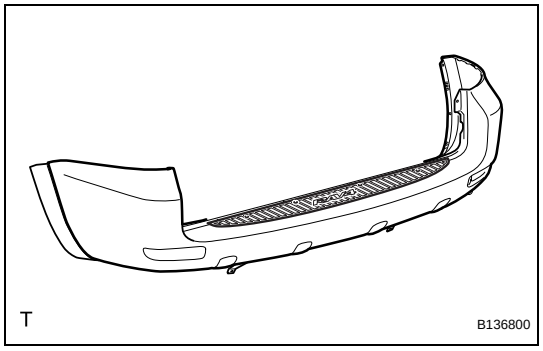
8. INSTALL REFLEX REFLECTOR ASSEMBLY LH

(a) Install the reflex reflector with the screw.

9. INSTALL REFLEX REFLECTOR ASSEMBLY RH

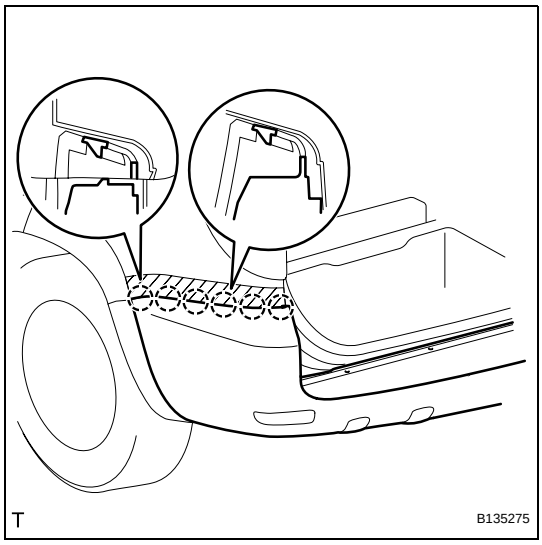
HINT:
Use the same procedures described for the LH side.

10. INSTALL REAR BUMPER PROTECTOR



HINT:
When removing the double-side tape, heat the rear bumper.

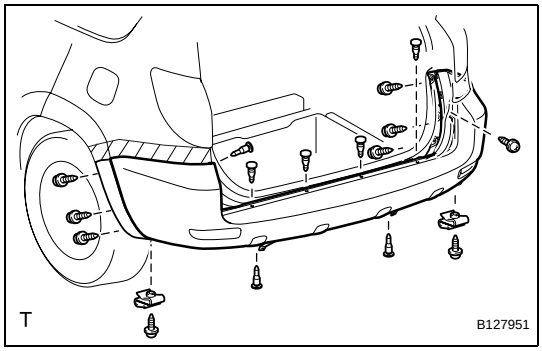
Standard heating temperature



Item	Specified Condition
Rear bumper	40 to 60°C (104 to 140°F)

(a) Clean the bumper surface.
  (1) Using a heat light, heat the bumper surface.
  (2) Remove the double-sided tape from the bumper.
  (3) Wipe off any tape adhesive residue with cleaner.

(b) Install the new bumper protector.

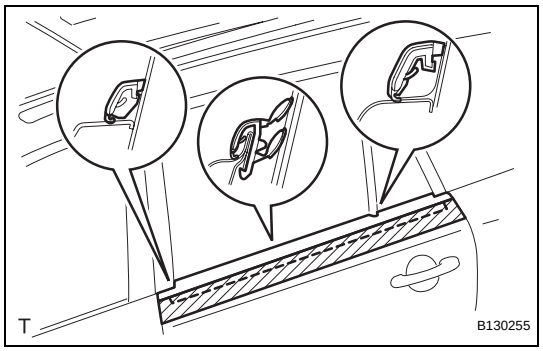


ET

11. INSTALL REAR BUMPER COVER

(a) Put protective tape under the quarter panel.

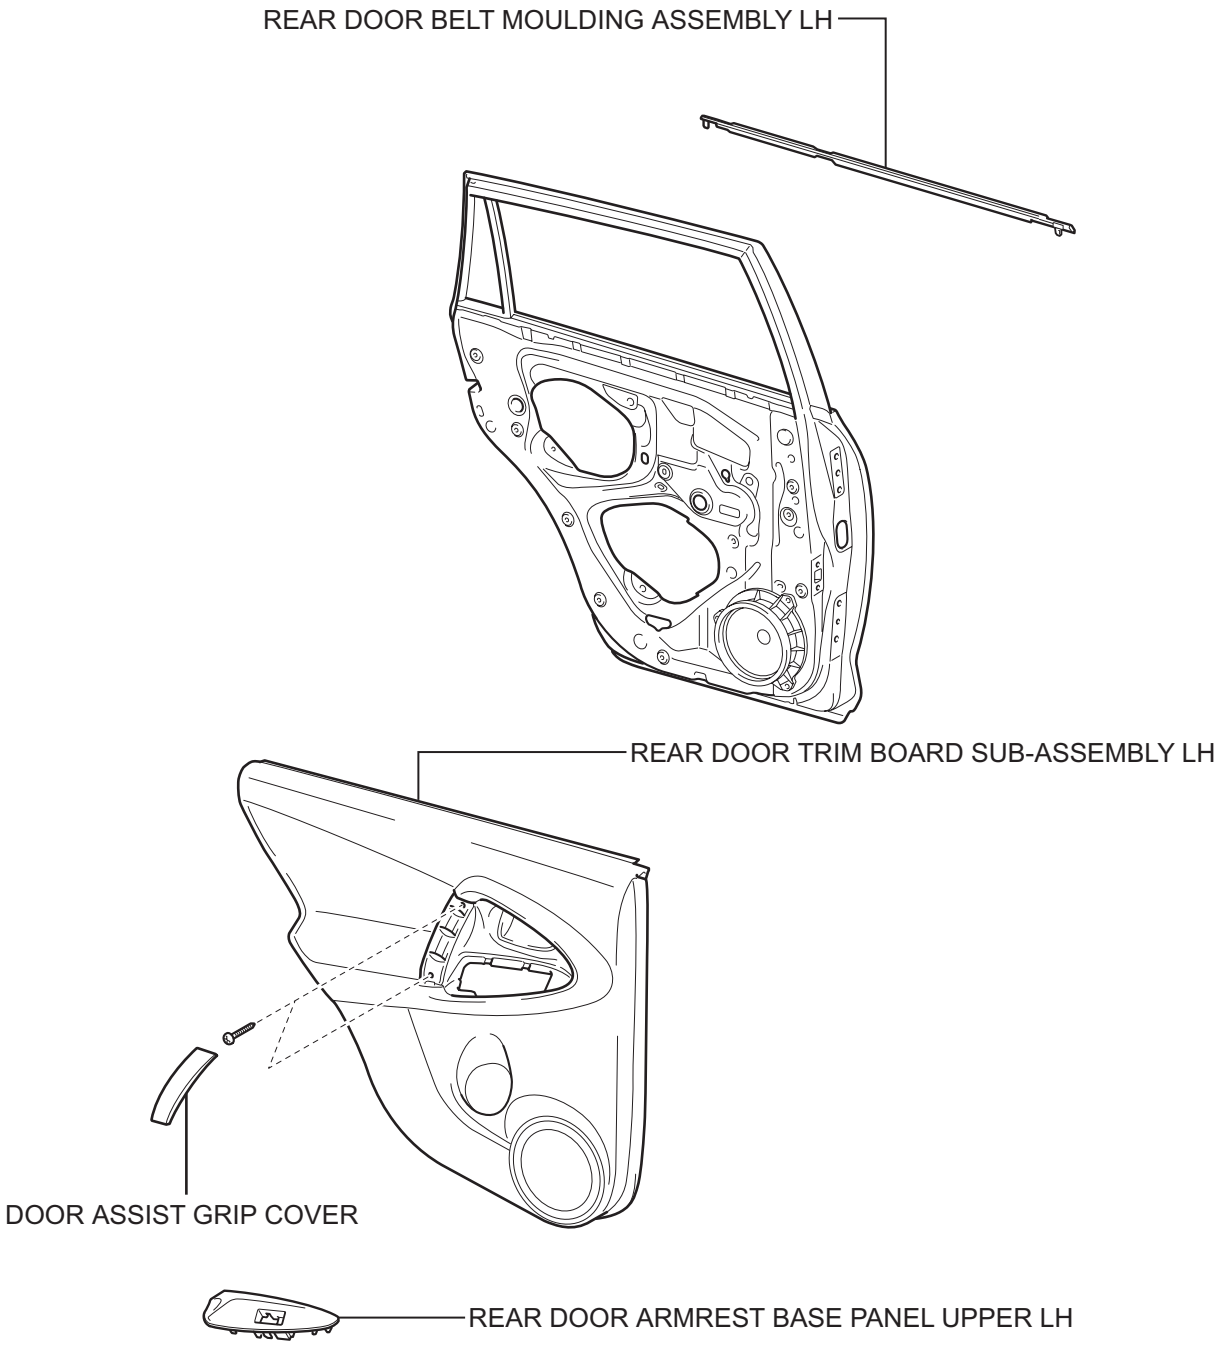
(b) Attach the 12 claws to install the bumper cover.



(c) Install the 9 screws and 7 clips.

INSTALLATION

HINT:



- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

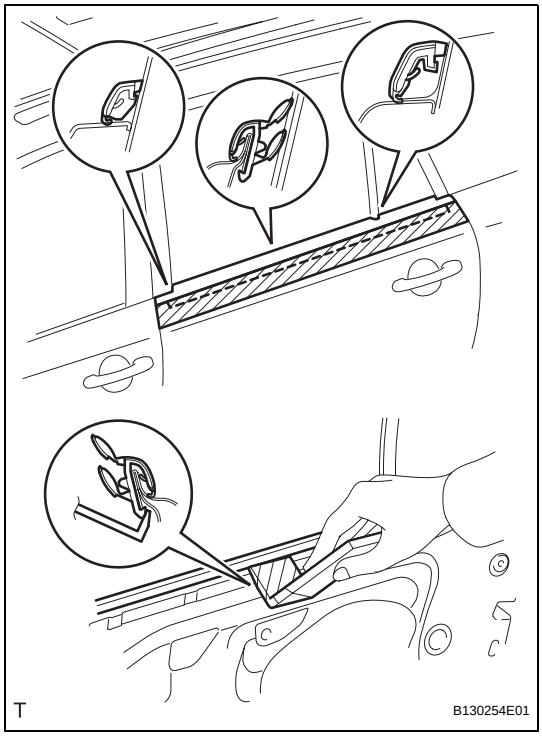
1. **INSTALL REAR DOOR BELT MOULDING ASSEMBLY LH**
   (a) Attach the claws to install the moulding.
   HINT:
   Confirm that the moulding is firmly installed.
2. **INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY LH (See page ED-53)**
3. **INSTALL REAR DOOR ARMREST BASE PANEL UPPER LH (See page ED-54)**
4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

REAR DOOR BELT MOULDING

COMPONENTS

T

B130253E01



ET

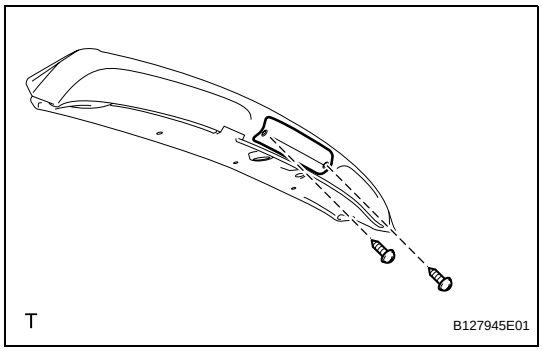
REMOVAL

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE REAR DOOR ARMREST BASE PANEL UPPER LH (See page ED-40)**
3. **REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY LH (See page ED-40)**
4. **REMOVE REAR DOOR BELT MOULDING ASSEMBLY LH**
   (a) Put protective tape under the belt moulding.
   (b) Using a moulding remover, detach the claws to remove the belt moulding as shown in the illustration.
   HINT:
   Tape the remover tip before use.
   NOTICE:
   Be careful when removing the belt moulding as there are claws attached to the front and rear ends of the belt moulding.

INSTALLATION



HINT:

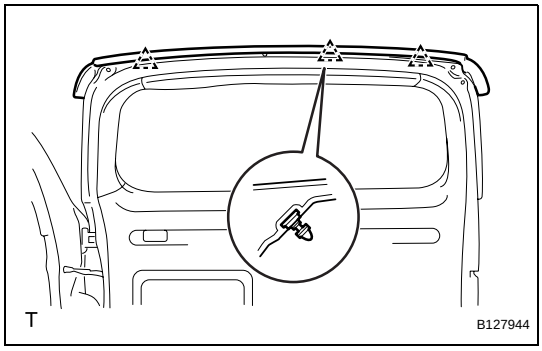
- When installing the spoiler, heat the vehicle body and spoiler using a heat light.

Standard heating temperature

Item	Specified Condition
Vehicle body	40 to 60°C (104 to 140°F)
Spoiler	20 to 30°C (68 to 86°F)

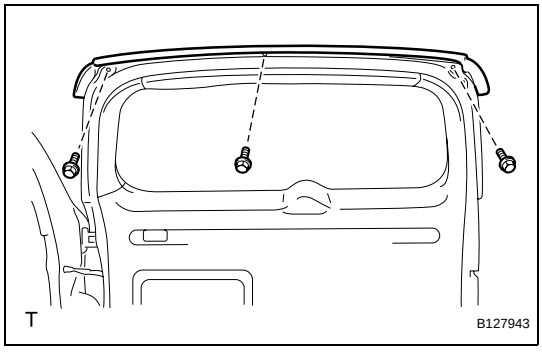
NOTICE:
Do not heat the body and spoiler excessively.

1. INSTALL CENTER STOP LIGHT



(a) Install the center stop light with the 2 screws.

2. INSTALL REAR SPOILER

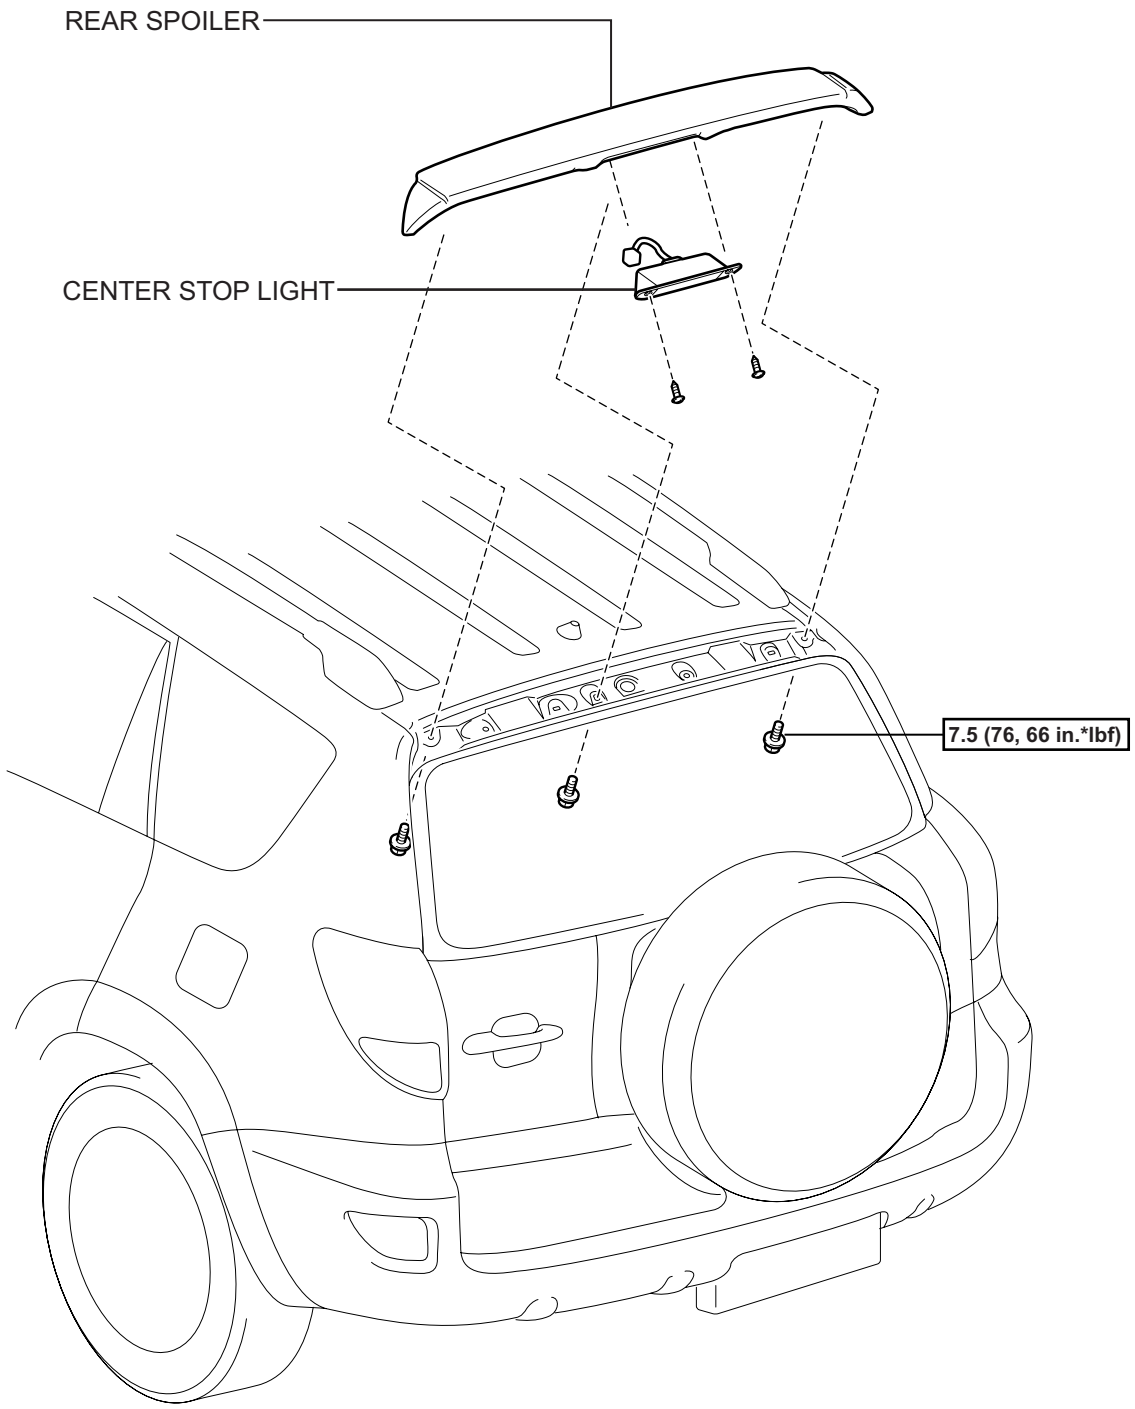


(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.

(b) If reusing the spoiler:
Clean the spoiler.
  (1) Using a heat light, heat the spoiler.

(c) Connect the center stop light connector.

(d) Install the spoiler with 3 clips.



(e) Install the 3 bolts.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)

3. INSTALL BACK DOOR CENTER GARNISH (See page ED-67)

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

REAR SPOILER

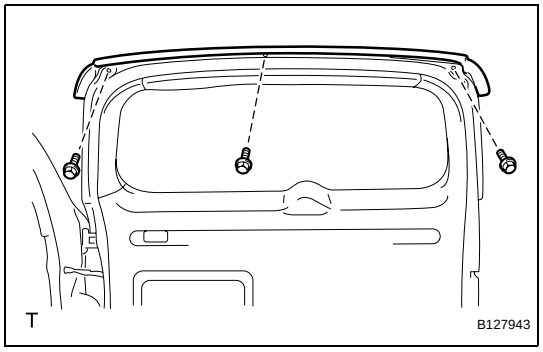
COMPONENTS

N*m (kgf*cm, ft.*lbf) : Specified torque

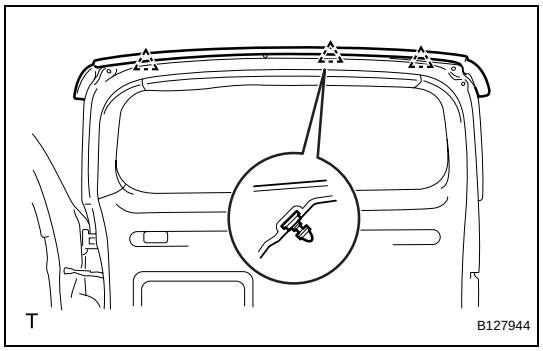
T

B127942E04

REMOVAL

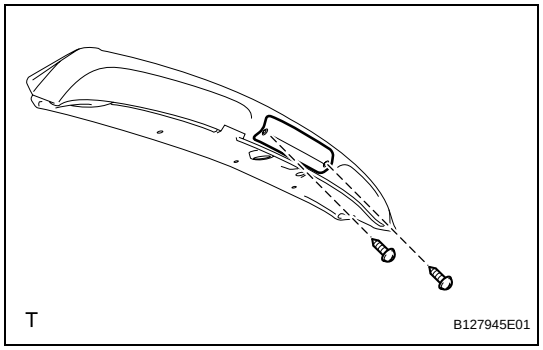


HINT:
When removing the spoiler, heat the vehicle body and spoiler using a heat light.



Standard heating temperature

Item	Specified Condition
Vehicle body	40 to 60°C (104 to 140°F)
Spoiler	20 to 30°C (68 to 86°F)



NOTICE:
Do not heat the vehicle body and spoiler excessively.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE BACK DOOR CENTER GARNISH (See page ED-59)**
3. **REMOVE REAR SPOILER**
   (a) Remove the 3 bolts.

   (b) Remove the 3 clips and spoiler.
   (c) Disconnect the center stop light connector and remove the rear spoiler.
4. **REMOVE CENTER STOP LIGHT**
   (a) Remove the 2 screws and center stop light.

INSTALLATION

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.
- When replacing the clip, heat the clip and body using a heat light.

Standard heating temperature

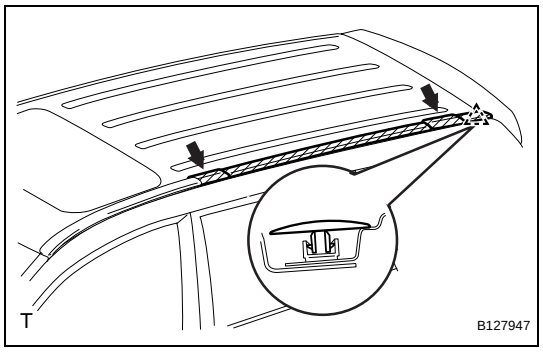
Item	Specified Condition
Vehicle body	40 to 60°C (104 to 140°F)
Clip	20 to 30°C (68 to 86°F)

NOTICE:
Do not heat the clip and vehicle body excessively.

1. REPLACE ROOF DRIP SIDE FINISH MOULDING CLIP

HINT:

Use the procedures below to replace damaged or accidentally removed clips. If this step is not necessary, go to the next step.



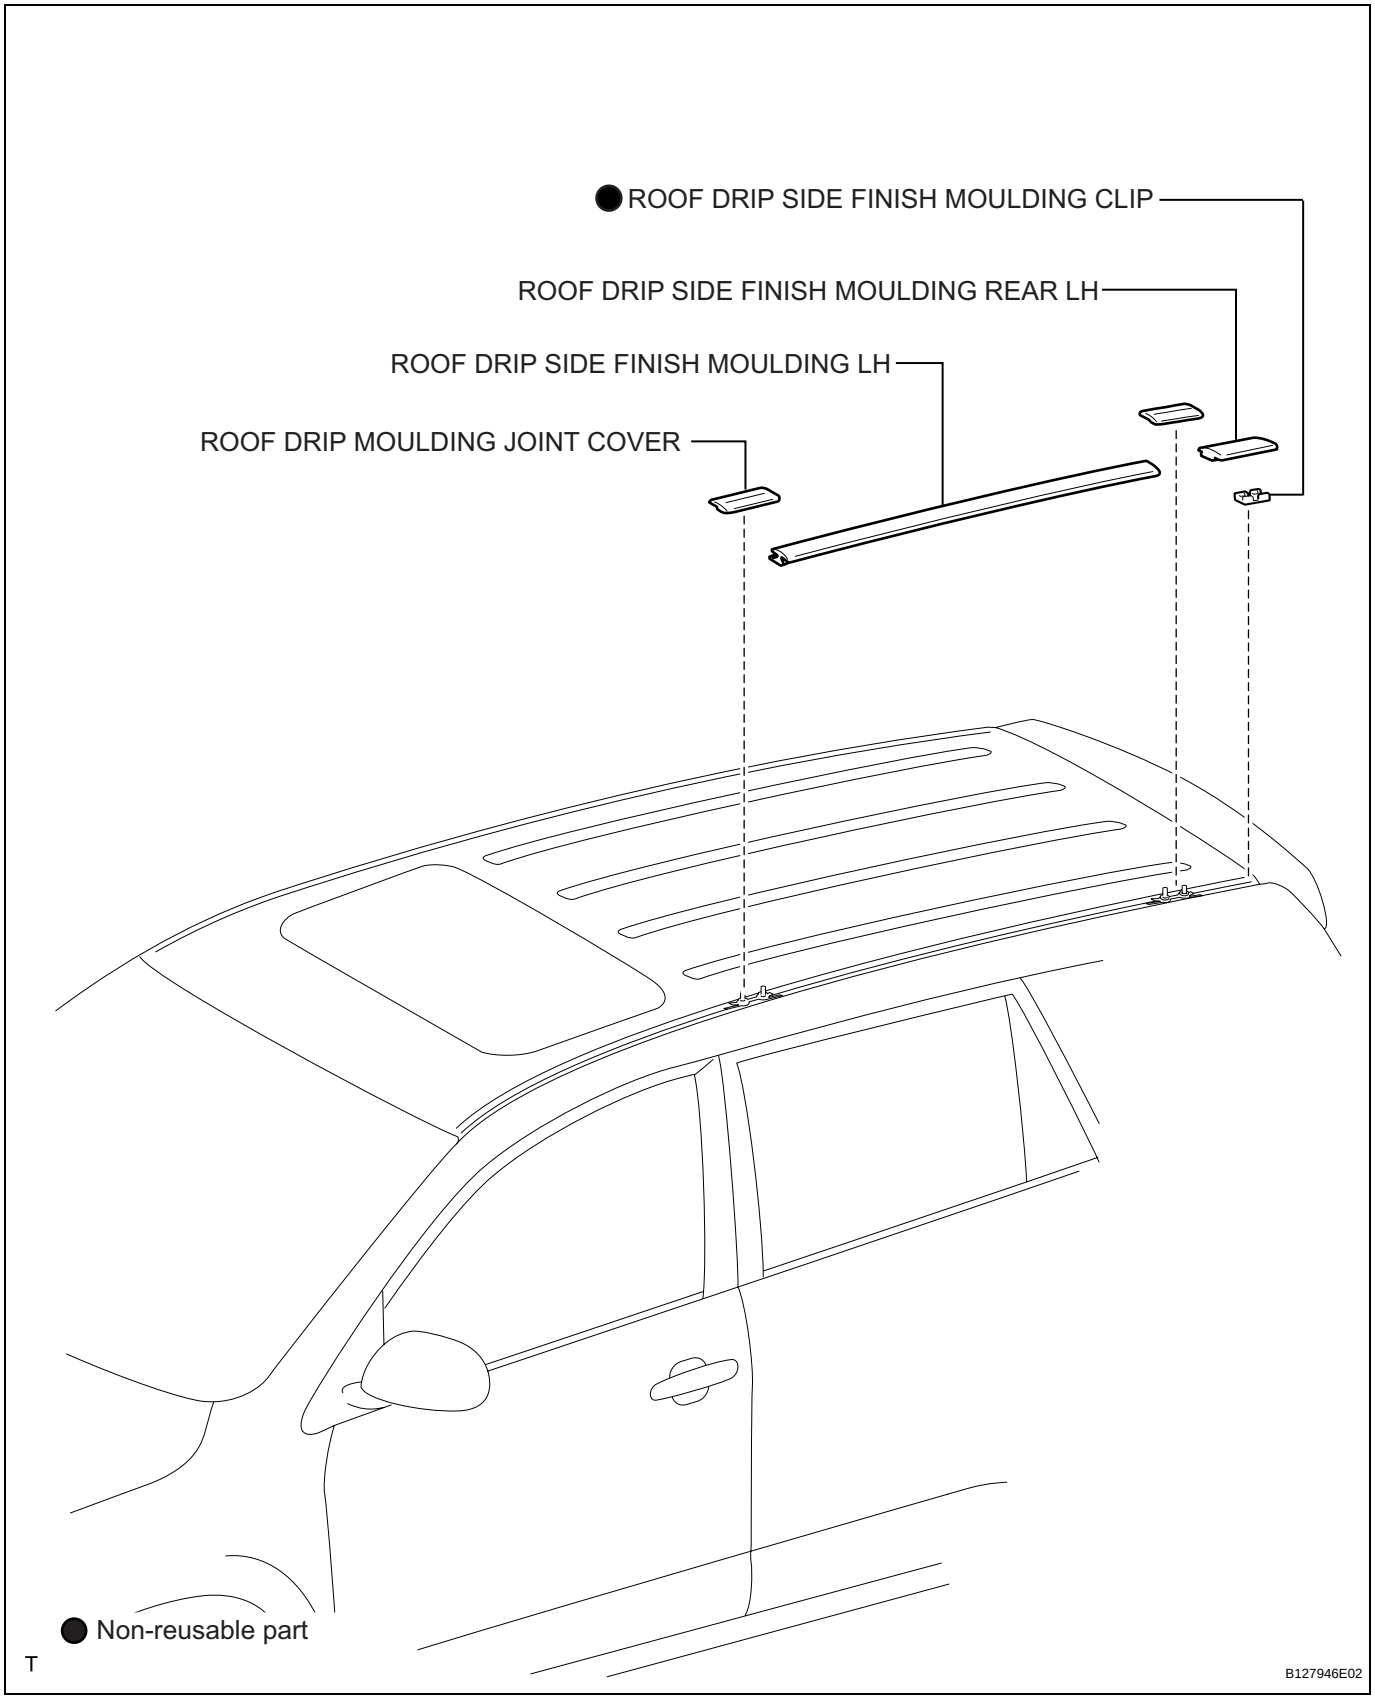
NOTICE:
After press-fitting the clips, wait 30 minutes or more before installing the moulding.

HINT:

- Minimum hardening time: 30 minutes
- Time needed for complete hardening: 24 hours

(a) Remove the double-sided tape that remains on the surfaces of the moulding and vehicle body, and then clean the surface with white gasoline.

(b) Using a heat light, heat the clip installation surface of the vehicle body and installation part of the clips.



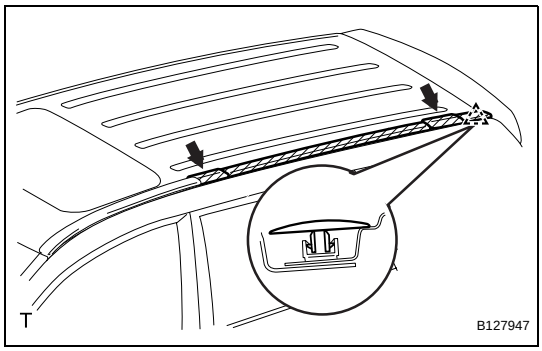
2. INSTALL ROOF DRIP SIDE FINISH MOULDING LH

(a) Install the No. 2 center roof drip side finish moulding and roof drip side finish moulding.

(b) Install the 2 roof drip moulding joint covers to the vehicle body.

ROOF DRIP SIDE FINISH MOULDING

COMPONENTS



ET

REMOVAL

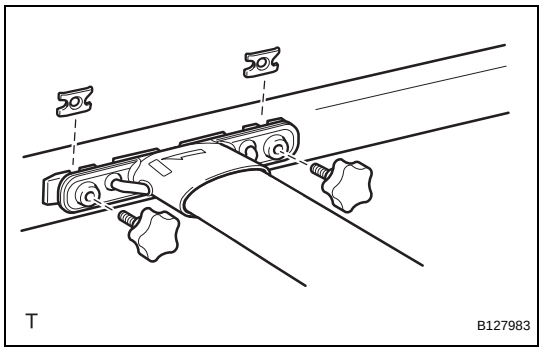
HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. REMOVE ROOF DRIP SIDE FINISH MOULDING LH

(a) Remove the 2 roof drip moulding joint covers from the vehicle body.

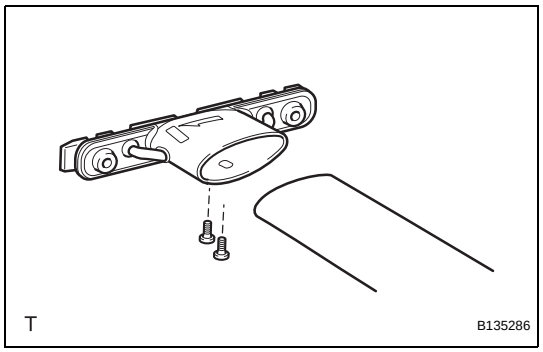
(b) Remove the roof drip side finish moulding and No. 2 center roof drip side finish moulding.



NOTICE:

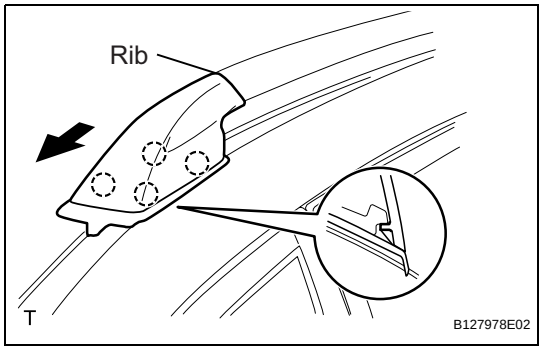
- **Do not remove the clips from the vehicle body.**
- **If the clips are damaged or removed accidentally, replace them.**

ET



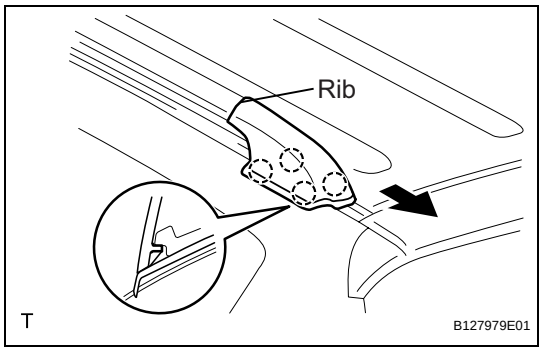
REMOVAL

HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.



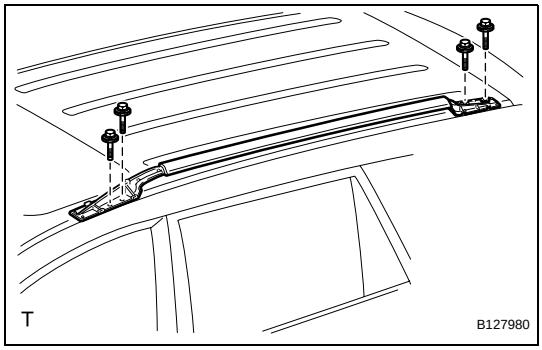
1. REMOVE ROOF RACK SUPPORT SUB-ASSEMBLY CENTER

(a) Remove the 4 roof carrier caps and roof rack support center.



2. REMOVE ROOF RACK BAR FRONT

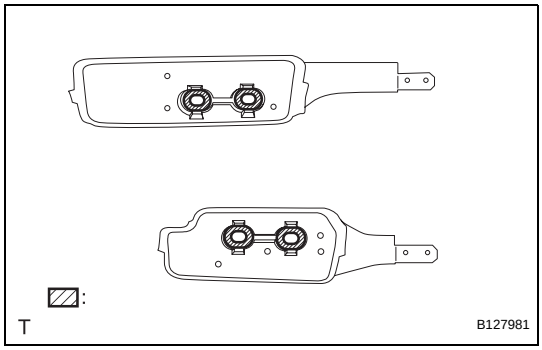
(a) Remove the 4 screws and roof rack bar.



3. REMOVE ROOF RACK LEG COVER FRONT LH

(a) Remove the leg cover.
  (1) Using a screwdriver, detach the 4 claws.
  HINT:
  Tape the screwdriver tip before use.
  (2) Detach the rib from the bar.

4. REMOVE ROOF RACK LEG COVER REAR LH

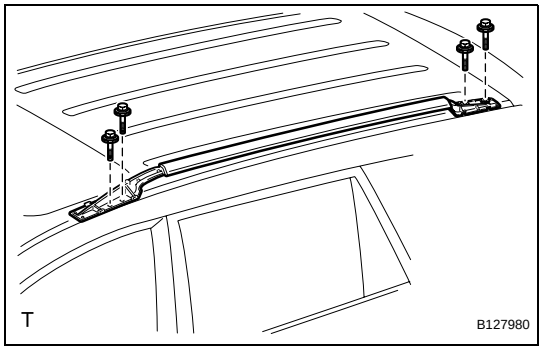


(a) Remove the leg cover.
  (1) Using a screwdriver, detach the 4 claws.
  HINT:
  Tape the screwdriver tip before use.
  (2) Detach the rib from the bar.

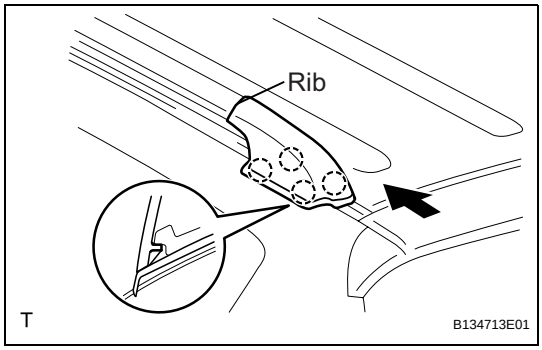
5. REMOVE ROOF RACK ASSEMBLY LH
Remove the 4 bolts and the roof rack.

6. REMOVE ROOF RACK LEG FRONT LH
(a) Remove the 2 screws and roof rack leg front.
(b) Remove the leg cushion front.

7. REMOVE ROOF RACK LEG REAR LH
(a) Remove the 2 screws and roof rack leg rear.
(b) Remove the leg cushion rear.

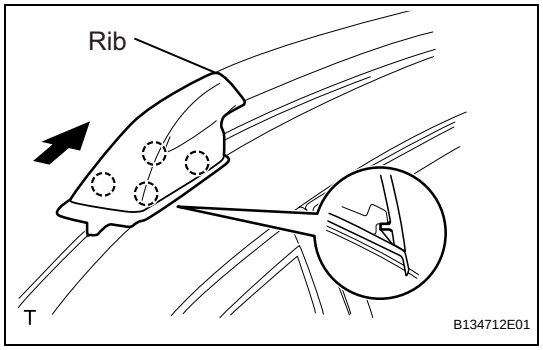


INSTALLATION



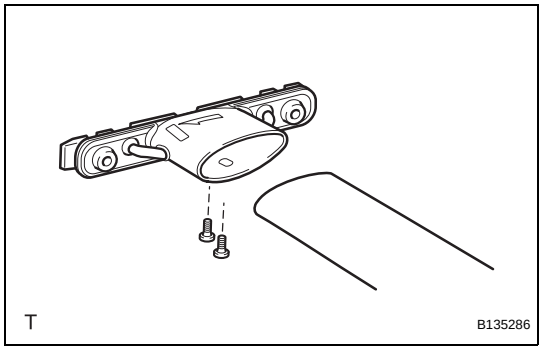
1. REPLACE ROOF CARRIER SEAL
(a) Remove the seals.
(b) Install new seals as shown in the illustration.

2. INSTALL ROOF RACK LEG FRONT LH
(a) Install the leg cushion front.
(b) Install the roof rack leg front with the 2 screws.
Torque: 2.8 to 5.0 N*m (29 to 51 kgf*cm, 25 to 44 in.*lbf)

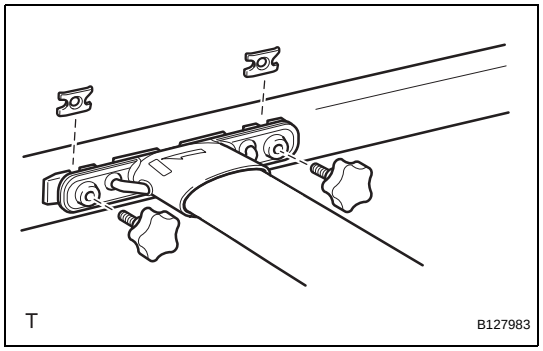


3. INSTALL ROOF RACK LEG REAR LH
(a) Install the leg cushion rear.
(b) Install the roof rack leg rear with the 2 screws.
Torque: 2.8 to 5.0 N*m (29 to 51 kgf*cm, 25 to 44 in.*lbf)

4. INSTALL ROOF RACK ASSEMBLY LH
(a) Install the roof rack with the 4 bolts.
Torque: 38 N*m (387 kgf*cm, 28 ft.*lbf)



5. INSTALL ROOF RACK LEG COVER REAR LH
(a) Install the leg cover.
(1) Attach the rib to the bar.
(2) Attach the 4 claws.

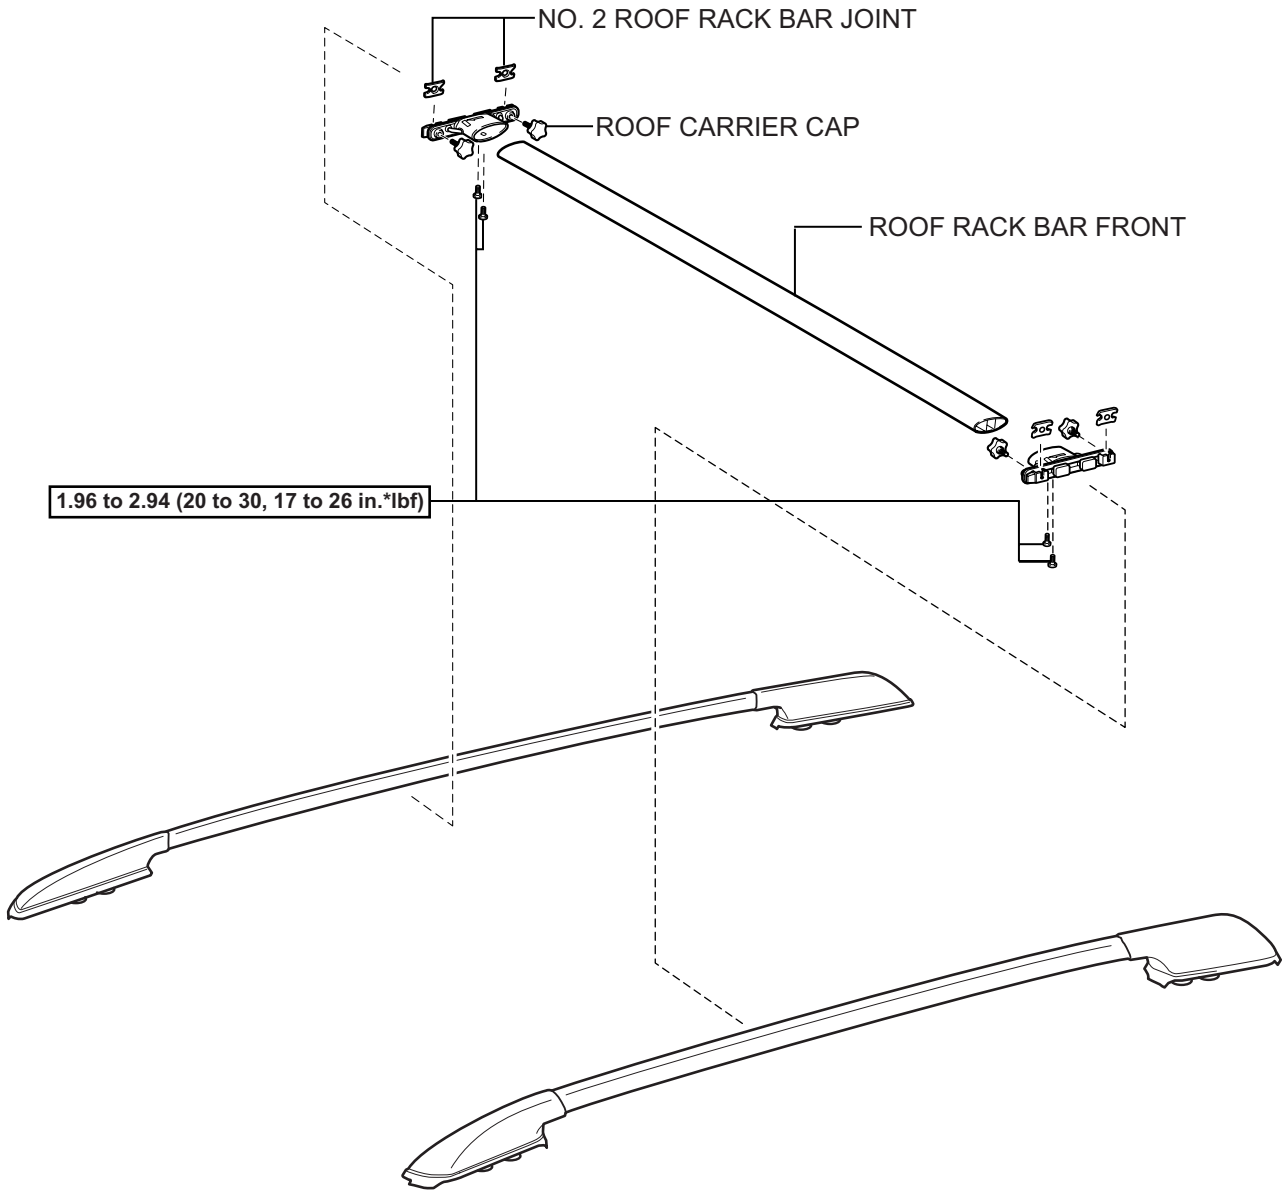


6. INSTALL ROOF RACK LEG COVER FRONT LH

(a) Install the leg cover.
  (1) Attach the rib to the bar.
  (2) Attach the 4 claws.

7. INSTALL ROOF RACK BAR FRONT

(a) Install the roof rack bar with the 4 screws.
  Torque: 1.96 to 2.94 N*m (20 to 30 kgf*cm, 17 to 26 in.*lbf)



8. INSTALL ROOF RACK SUPPORT SUB-ASSEMBLY CENTER

(a) Install the roof rack support center with the 4 roof carrier caps.

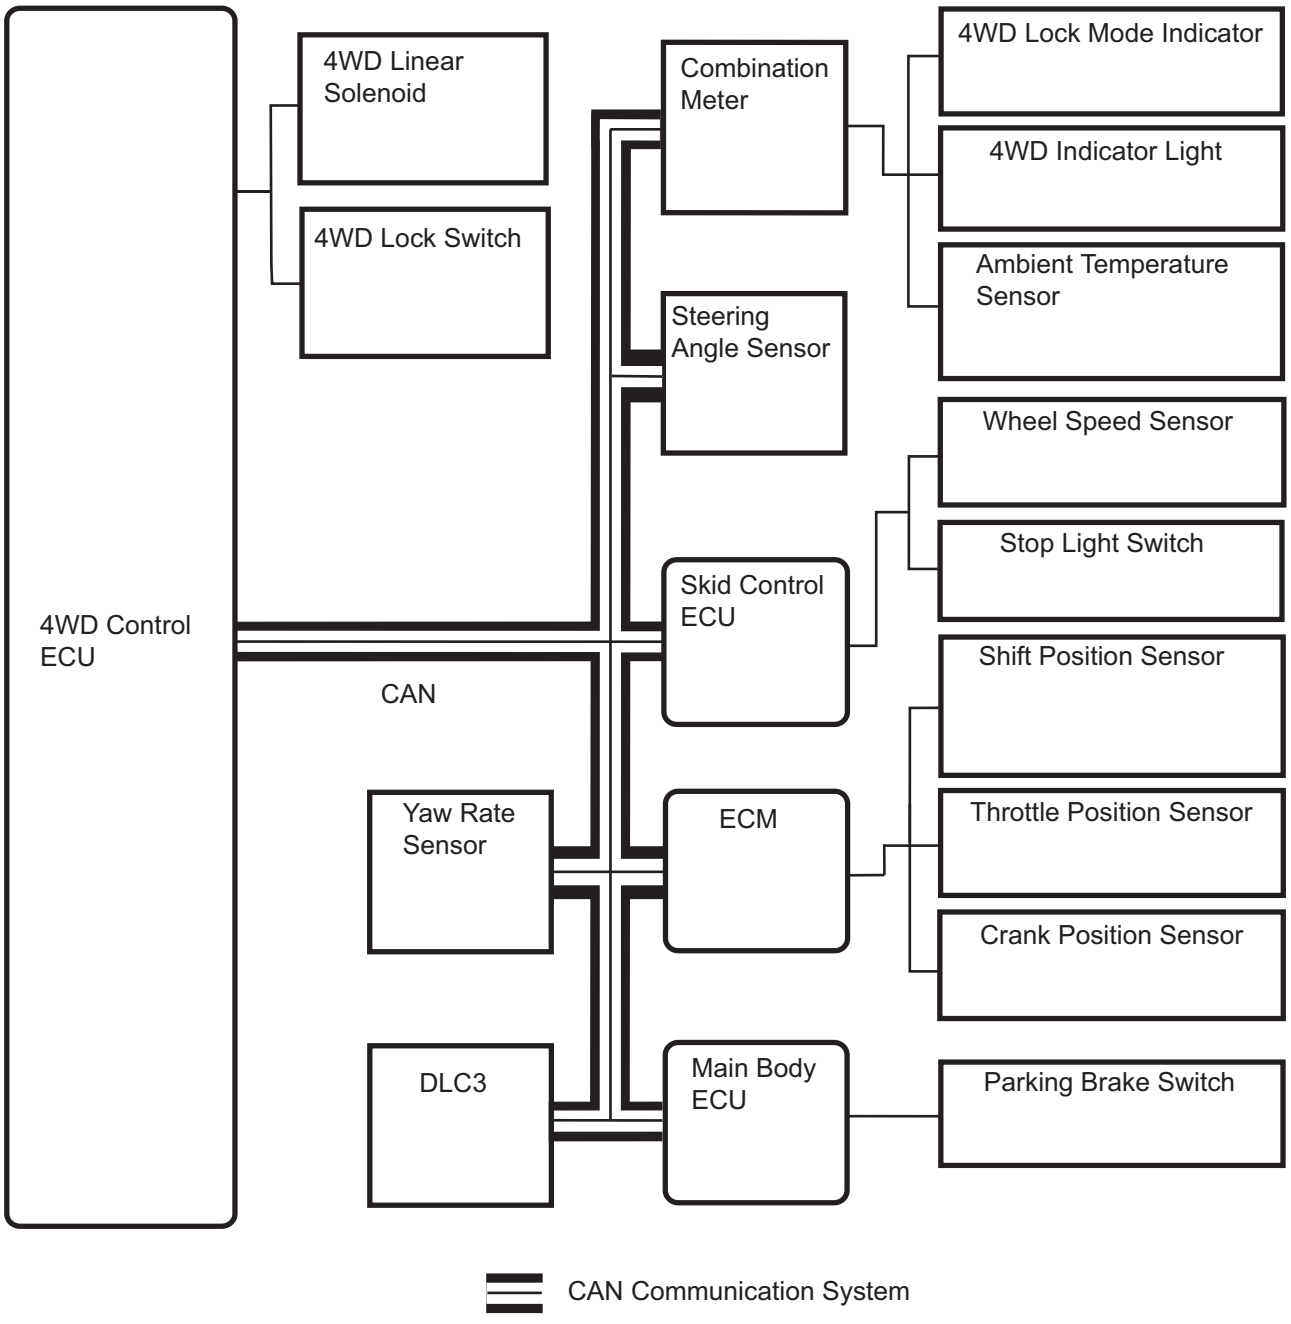
REMOVAL

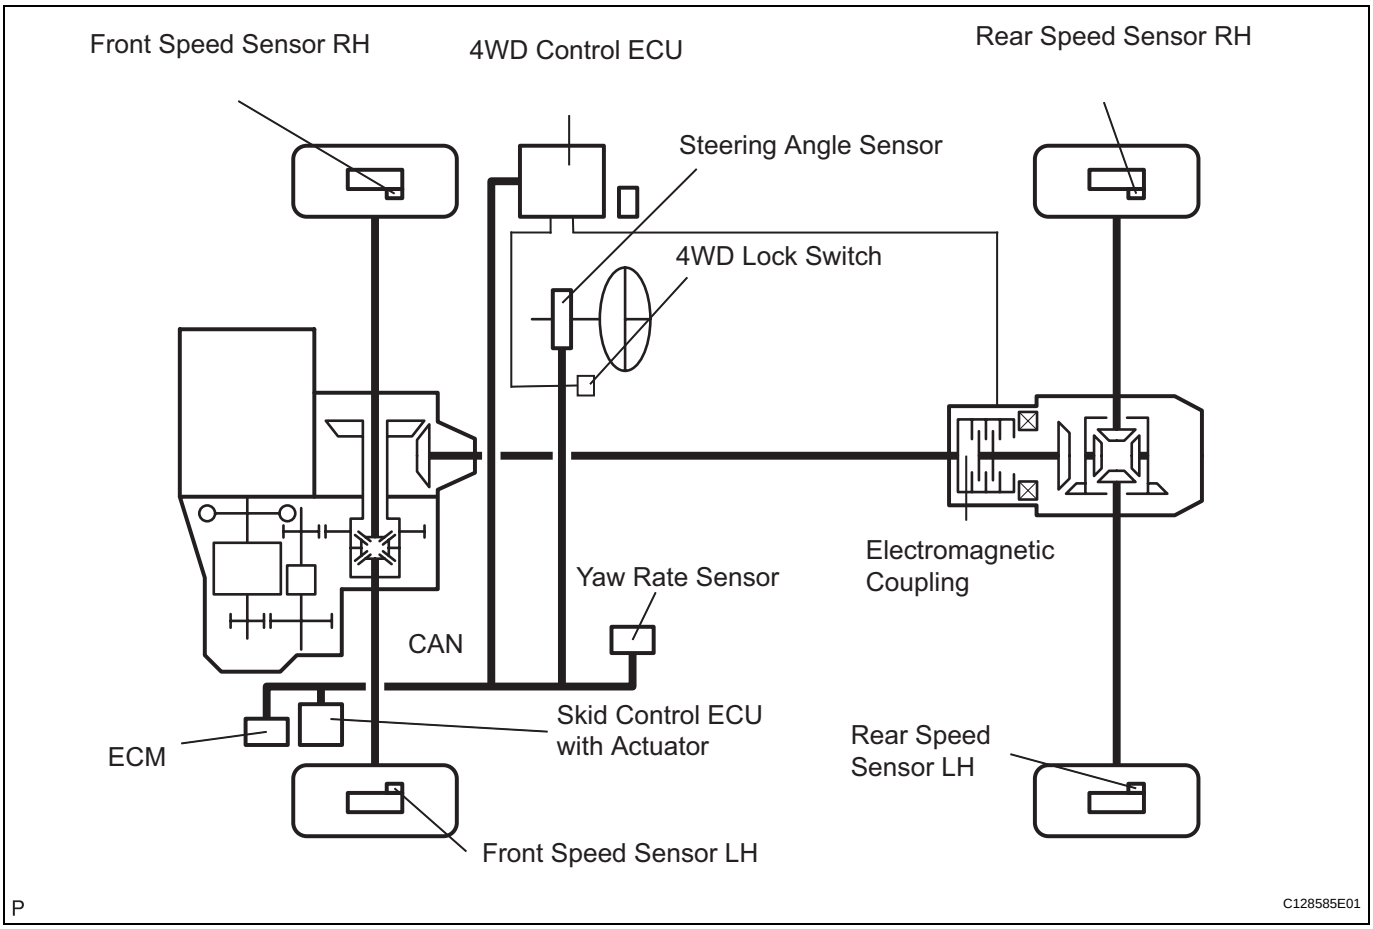
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)**
3. **REMOVE 4WD CONTROL ECU**
   (a) Disconnect the connector.
   (b) Remove the bolt and ECU.



INSTALLATION

1. **INSTALL 4WD CONTROL ECU**
   (a) Install the ECU with the bolt.
   Torque: 4.5 N*m (46 kgf*cm, 40 in.*lbf)
   (b) Connect the connector.
2. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-25)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

SYSTEM DIAGRAM



TF

SYSTEM DESCRIPTION

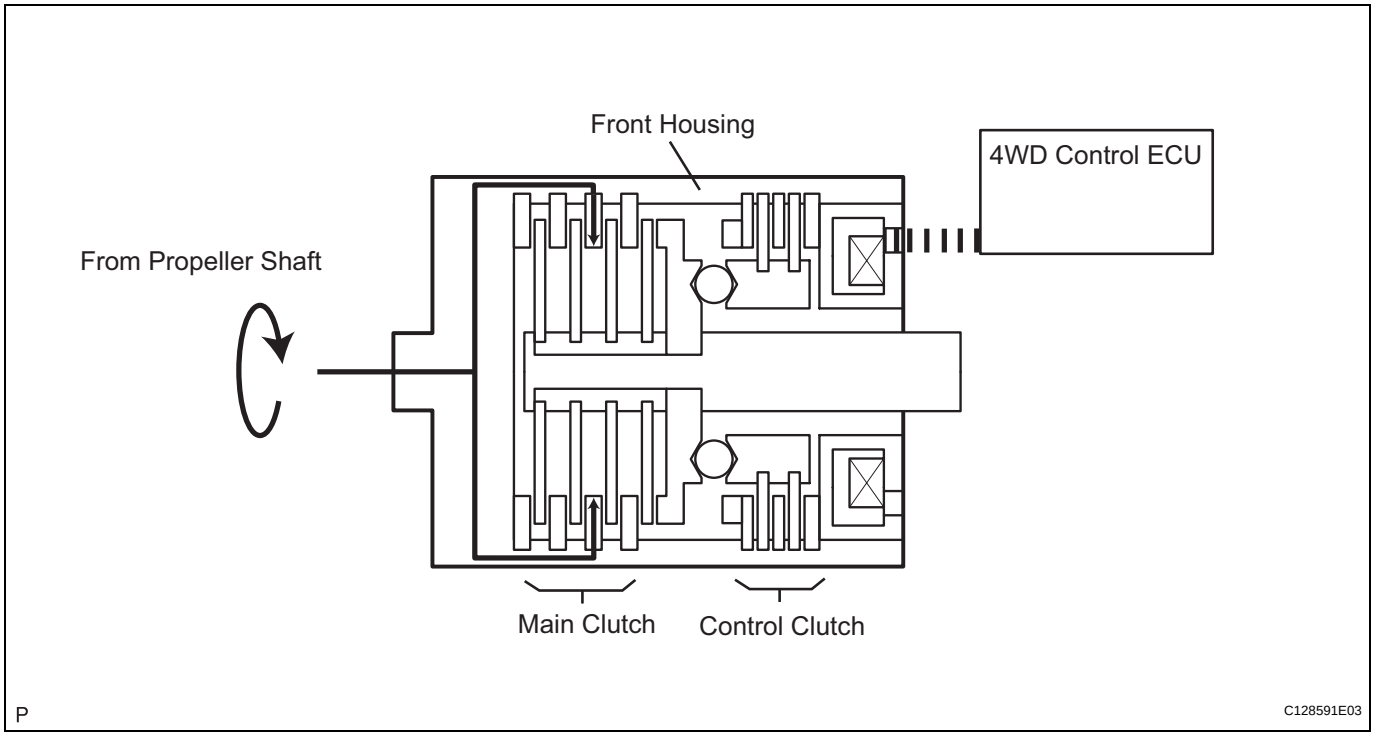
1. GENERAL DESCRIPTION

(a) The active torque control 4WD system detects the driving conditions based on signals from each ECU, each switch, the steering angle sensor, the wheel speed sensor, and the yaw rate sensor. The system controls the electronic current passing through the linear solenoid of the electromagnetic coupling, and performs electronic control to distribute the optimum torque to the rear wheels.

(b) Main components and their functions.

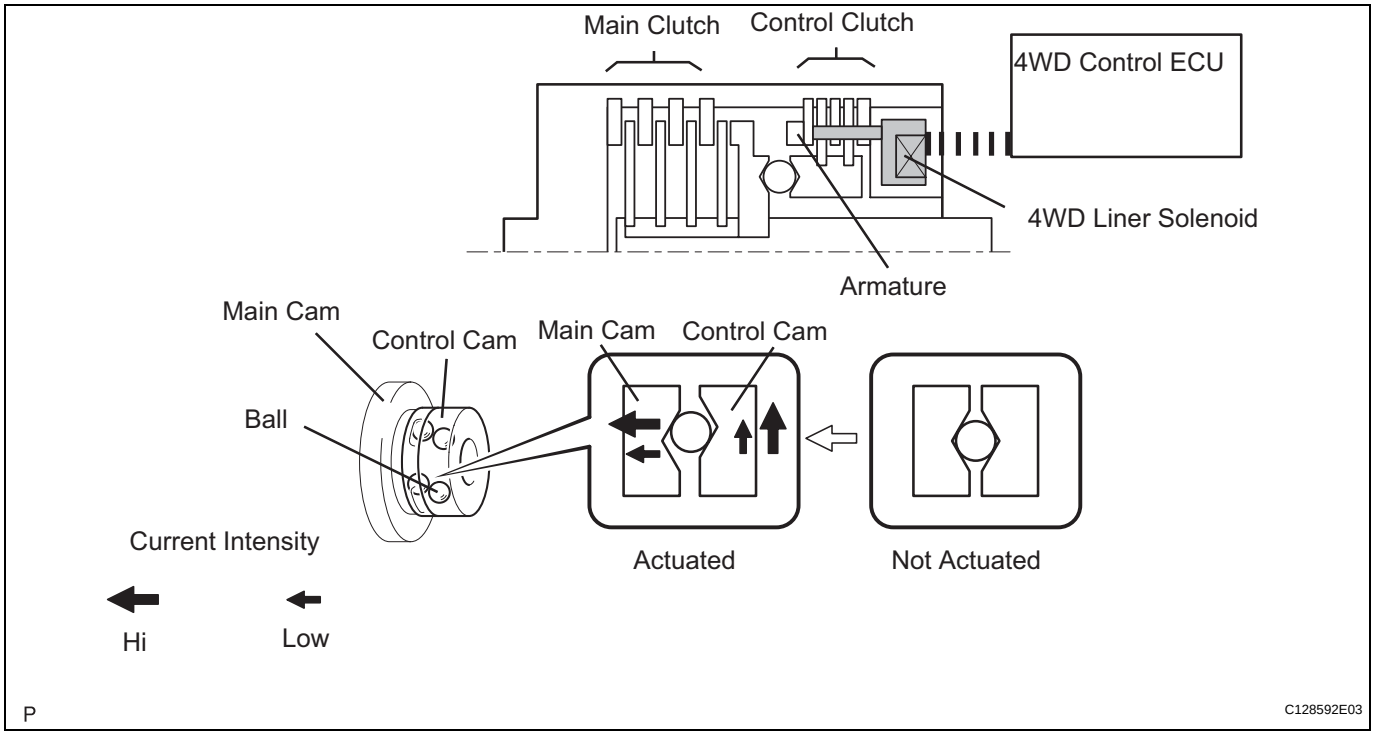
Component	Function
4WD Indicator Light	Displays warning to driver when system malfunctions
Stop Light Switch	Detects brake operation
Throttle Position Sensor	Detects opening angle of throttle
Park/Neutral Position Switch	Detects "P" position
Steering Angle Sensor	Detects turning of steering wheel
4WD Linear Solenoid	Detects electronic control limiting clutch operation using signals from 4WD control ECU
Skid Control ECU with Actuator	Detects signals from each sensor and outputs them to 4WD control ECU
4WD Control ECU	Detects signals from each sensor via skid control ECU to operate linear solenoid and control system
Crankshaft Position Sensor	Detects engine rpm and inputs it into ECM
Yaw Rate Sensor	Detects forward and rearward acceleration of vehicle, and inputs it into skid control ECU

Component	Function
Ambient Temperature	Detects external ambient temperature and inputs it into body ECU
Electromagnetic Coupling	Based on amount of current sent from 4WD control ECU, torque is distributed to rear wheels
4WD Lock Switch	Change of side auto mode for lock mode
4WD Lock Mode Indicator Light	Lock mode control status is communicated to driver through indicator light illumination When lock mode is turned ON, indicator light blinks twice and then remains illuminated. When lock mode is turned OFF, indicator light turns OFF.



2. DRIVING FUNCTION

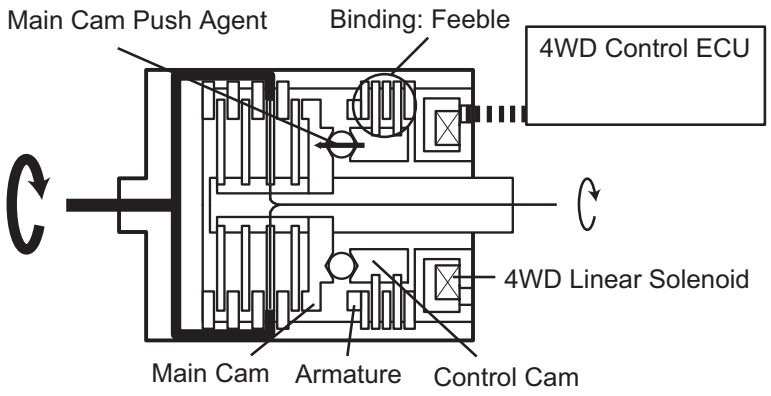
Vehicle Condition	Status
Control at Vehicle Startup	This controls the amount of sideway sliding that occurs at rear of vehicles when accelerating from stop to improve acceleration and hill climbing capacity
Slip Control at Vehicle Startup	This helps prevent vehicle from sliding sideways. When accelerating a stopped vehicle with the steering wheel turned, it ensures steering stability
Slip Control	This ensures high turning performance and that stability is not affected by road surface conditions during mid and high speed running
Control During Acceleration	This controls straight-line running when accelerating during mid and high speeds to ensure straight-line stability of the vehicle



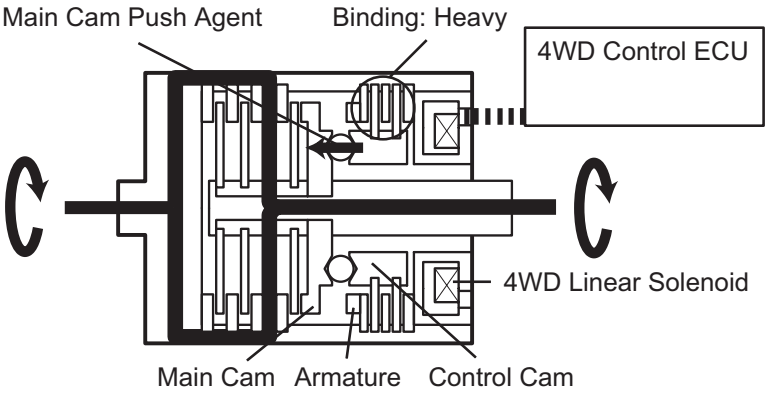
3. REFERENCE MECHANISM

(a) Electromagnetic coupling

(1) The outer part of the main clutch is attached together with the front housing. The inner part of the main clutch is attached together with the shaft. The control clutch is attached together with the control cam. The activation energy from the transfer is transferred from the propeller shaft to the front housing. However, when the linear solenoid is not operating, the main clutch and control clutch are in a free state, and the activation energy from the transfer is not transferred to the rear wheels.



(2) If current is applied to the linear solenoid, the solenoid magnetizes, and the electromagnet pull force causes the armature to attach to the control clutch side. Or, if there is a difference between the rotation speed of the front and rear wheels and the control clutch attaches, a difference occurs in the rotation of the main cam attached to the shaft and the control cam attached to the front housing. As a result, each ball pushes its cam, and the main clutch attaches. The activation energy from the front housing passes through main clutch to the shaft, and then to the rear differential. Then the activation energy is transferred to the rear wheels.



(3) Depending on the rotation difference between the front and rear wheels, the system controls the current flowing to the linear solenoid. Then the activation energy applied to the rear wheels is smoothly controlled. Depending on the amount of current, the restraint energy of the outer and inner side of the main clutch changes, and the activation energy from the propeller shaft is smoothly controlled from a limited condition to condition that is nearly a direct-link 4WD condition.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the active torque control 4WD system.
- *: Use the intelligent tester (with CAN VIM).

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3	CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

(a) Use the intelligent tester (with CAN VIM) to check if the CAN communication system is functioning normally.

Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B → **Go to CAN COMMUNICATION SYSTEM**

A

4	CHECK INDICATOR LIGHT

NEXT

5	CHECK DTC*

(a) Check for DTCs (see page TF-16).
(b) Clear the DTCs.
(c) Recheck for DTCs.

Result

Result	Proceed to
DTC dose not reoccur	A
DTC dose reoccur	B

TEST MODE PROCEDURE

1. DESCRIPTION

HINT:

When using a chassis dynamometer, brake tester, etc. to perform a vehicle test, activate test mode to avoid a "different tire diameter installed" incorrect judgment.

Test mode does not have a 4WD parameter. Test mode is activated because it will prohibit a different tire diameter judgment.

Control Status	4WD Control Status
During test mode	Different tire diameter malfunction judgment (detection that tire diameter of 4 wheels are not same) is not performed. Other than above item, normal control is performed. - 4WD lock switch OFF (4WD auto mode status) - 4WD lock switch ON (4WD lock mode status)

2. ACTIVATE TEST MODE

HINT:

Activate test mode before using a chassis dynamometer, brake tester, etc. to perform a vehicle test.

(a) Check that the ignition switch is OFF.

(b) Use either of the following methods to change the 4WD ECU to test mode.

(1) Test mode activation through intelligent tester (with CAM VIM).

- Connect the intelligent tester (with CAM VIM) to the DLC3 connector and turn the ignition switch ON. Using the test mode activation function (mode 10), activate test mode.

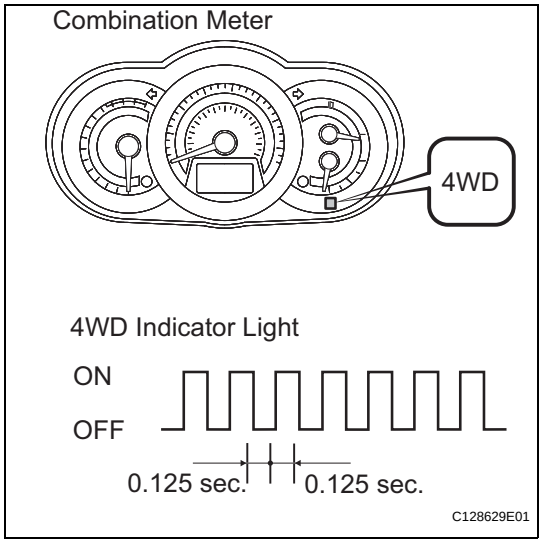
(2) Test mode activation by shorting TS terminal

- With the ignition switch OFF, short-circuit the TS and CG terminals of the DLC3 connector. Then turn the ignition switch ON to activate test mode.

NOTICE:

When the ignition switch is turned from OFF to ON, the 4WD indicator light will illuminate for 4 seconds. Then it will turn off.

4WD Lock Mode indicator



4WD Lock Switch OFF	Illuminates for 4 seconds, then turns OFF
4WD Lock Switch ON	Remains illuminated

HINT:

When the ignition switch is ON and the 4WD lock switch is turned from OFF to ON, the 4WD lock mode indicator blinks twice and then illuminates.

If the indicator does not illuminate, check the bulb for burnout. Also, inspect the wire harness between the 4WD ECU and combination meter.

NOTICE:
If a part of the 4WD system has a defect, the 4WD indicator light will illuminate.

(c) Check if the 4WD indicator light has changed to the test mode display.
(d) Start the engine.

3. CONFIRM MODE CHANGE

HINT:
Operate the 4WD lock switch, and check that the 4WD control mode changes.

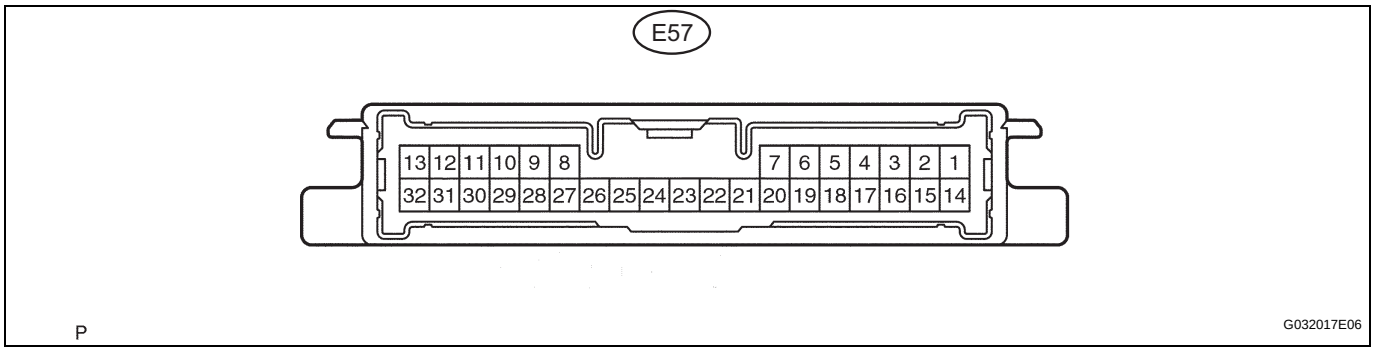
4WD Lock Switch Status	4WD Lock Mode Indicator Status	4WD Control Status
OFF	Turns off	4WD auto mode
ON	Illuminates	4WD lock mode
Switch changed from OFF to ON	Blinks twice, then illuminates	At moment of illumination, changes to 4WD lock mode

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Active torque control 4WD system

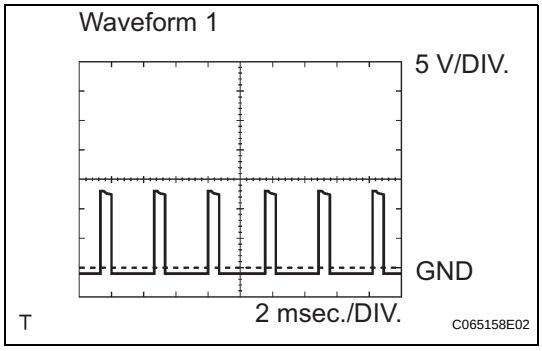


Symptom	Suspected area	See page
Phenomenon of tight-corner braking*	1.Steering angle sensor circuit	TF-27
	2.Linear solenoid circuit	TF-30
	3.4WD control ECU	
4WD indicator light remains ON	4WD indicator light circuit	TF-36
4WD indicator light does not come ON	4WD indicator light circuit	TF-40
The system is in the DTC output mode although terminals TC and CG of the DLC3 are not short circuited	1.TC and CG terminal circuit	TF-42
	2.4WD indicator light circuit	
The system is not in the DTC output mode although terminals TC and CG of the DLC3 are not short circuited	1.TC and CG terminal circuit	TF-42
	2.4WD indicator light circuit	

HINT:

*:When driving 4WD mode, the vehicle is hard to turn, as if the brakes were applied, due to the rotational difference between the front and rear tires while turning.

TERMINALS OF ECU



1. CHECK 4WD CONTROL ECU

(a) Measure the voltage and resistance of the connector.

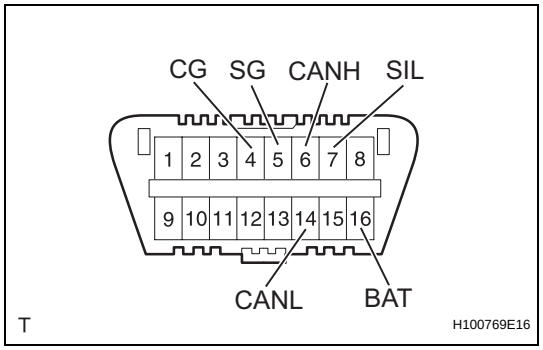
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
CANH (E57-14) - CANL (E57-16)	P - W	CAN communication	Ignition switch OFF	54 to 69 Ω
GND (E57-23) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
4WDL (E57-7) - Body ground	R - W-B	Ground	4WD lock mode switch ON	Below 1 Ω
IG1 (E57-11) - GND (E57-23)	L - W-B	Power source voltage	Ignition switch ON	10 to 14 V
SLC+ (E57-13) - SLC- (E57-32)	W - B	4WD linear solenoid signal	Ignition switch ON	Pulse generation (See waveform 1)
BSLC (E57-9) - GND (E57-23)	R - W-B	Power source voltage	Ignition switch ON	10 to 14 V

If the result is not as specified, the 4WD control ECU may have a malfunction.

(b) Using an oscilloscope, check the waveform 1.

Waveform 1 (Reference)

Symbols (Terminal No.)	Content
Tool setting	5 V/DIV., 2 msec. / DIV.
Vehicle condition	Engine stop, ignition switch ON



DIAGNOSIS SYSTEM

1. DESCRIPTION

Active torque control 4WD system data can be read in the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester (with CAN VIM) to check for malfunctions and perform repairs. Therefore when there seems to be a problem with the active torque control 4WD, use the intelligent tester (with CAN VIM) or SST to check and troubleshoot it.

SST 09843-18040

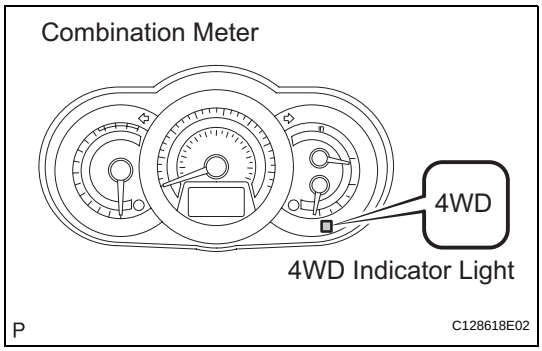
2. CHECK DLC3

(a) The ECU uses CAN (ISO11898-1) and ISO9141-2 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO9141-2 format.
Verify the conditions listed in the table below.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus + line	During transmission	Pulse generation
CG (4) - Body Ground	Chassis ground	Always	Below 1Ω
SG (5) - Body Ground	Signal ground	Always	Below 1Ω
BAT (16) - Body Ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	HIGH-level CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch OFF*	1 MΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch OFF*	1 MΩ or higher
CANL (14) -CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher

NOTICE:

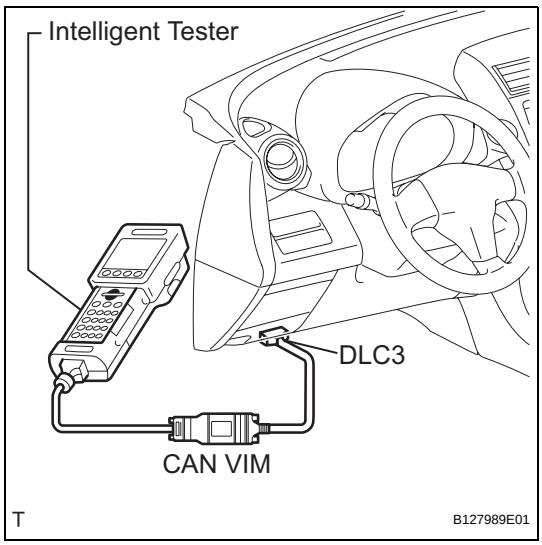
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, other switches or the doors.**



If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

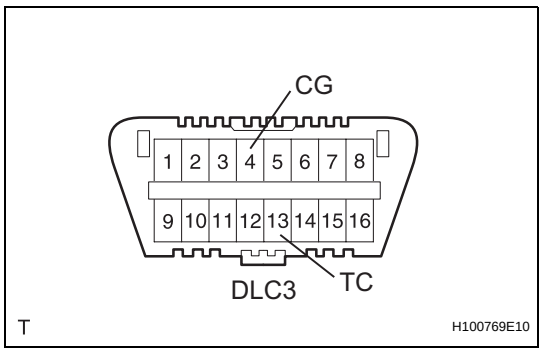


- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.

- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

3. INDICATOR LIGHT

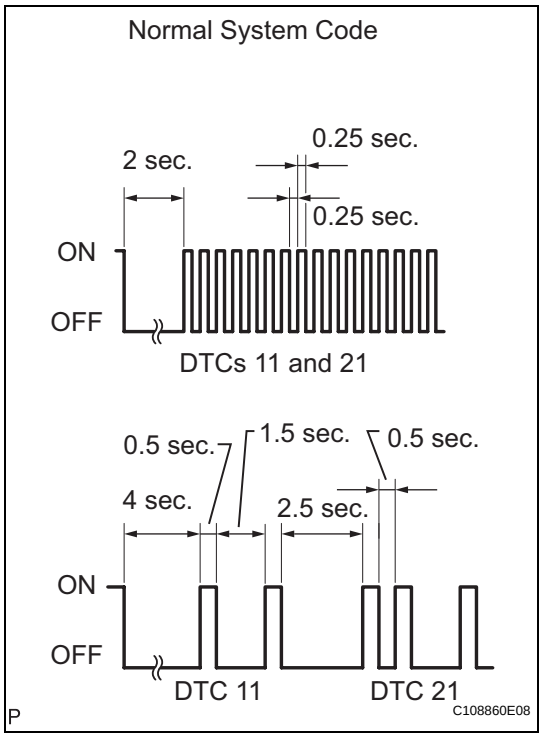
(a) When a problem occurs in the active torque control 4WD system, the 4WD indicator light on the combination meter comes ON to inform the driver of the problem.



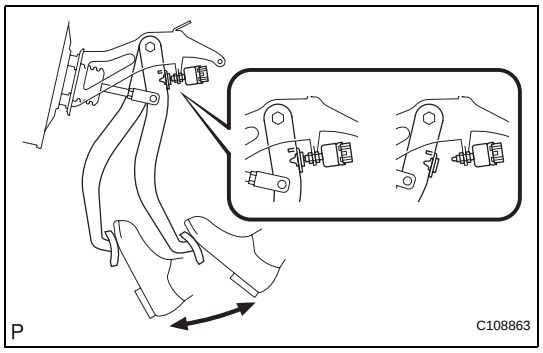
DTC CHECK / CLEAR

1. CHECK DTC (When Using Intelligent Tester)

(a) Check the DTCs.
  (1) Connect the intelligent tester (with CAN VIM) to the DLC3.
  (2) Turn the ignition switch ON.
  (3) Read the DTCs by following the prompts on the tester screen.
  HINT:
  Refer to the intelligent tester (with CAN VIM) operator's manual for further details.



2. CLEAR DTC (When Using Intelligent Tester)



(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON.
(c) Operate the intelligent tester (with CAN VIM) to clear the codes.
  HINT:
  Refer to the intelligent tester (with CAN VIM) operator's manual for further details.

3. CHECK DTC (When not Using Intelligent Tester)

(a) Check the DTCs.
  (1) Using the SST, connect terminals TC (13) and CG (4) of the DLC3
  SST 09843-18040
  (2) Turn the ignition switch ON.

(3) Read DTCs from the 4WD indicator light ON the combination meter.
HINT:
- If the 4WD indicator light does not blink, perform relevant troubleshooting procedures. The relevant troubleshooting procedures are in the sections listed in the table below.
- If more than 1 DTC is detected at the same time, the DTCs will be displayed in numerical order.
- As an example, the blinking patterns of the normal system code and DTCs 11 and 21 are shown below.
- DTCs are explained in "DIAGNOSTIC TROUBLE CODE CHART" (see page TF-19).

Section Title	See Procedure
4WD Indicator Light does not Come ON	TF-40
TC and CG Terminal Circuit	TF-42

4. CLEAR DTC (When not Using Intelligent Tester)

(a) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.
SST 09843-18040

(b) Turn the ignition switch ON.

(c) Clear the DTCs stored in the 4WD control ECU by depressing the brake pedal 8 times or more within 5 seconds.

(d) Check that the warning light blinks in the normal system code pattern.

(e) Remove SST from the terminals of the DLC3.

(f) Turn the ignition switch OFF.
HINT:
DTCs cannot be cleared by disconnecting the cable from the negative (-) battery terminal or removing the ECU-IG1 fuse.

TF

FAIL-SAFE CHART

1. FAIL-SAFE FUNCTION

- If following malfunctions occur, the 4WD control ECU will stop the function of 4WD control system or partly change the function to control the system.
- If a malfunction occurs in the sensor signal or actuator, the flow of electricity to the linear solenoid of the electrical coupling is prohibited. As a result, the system enters front wheel drive condition.
- When a component of the system malfunctions and the fail-safe function activates, the component operation is prohibited. However, if the system is controlling the component and the fail-safe function activates, the system operation is gradually stopped to prevent sudden changes in the vehicle condition.
- When system control is not possible, the warning light is illuminated to stop operation of the system operation.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's (with CAN VIM) DATA LIST allows switch, sensor and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON.

(c) Read the DATA LIST according to the display on the tester.

4WD control ECU

Item	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's (with CAN VIM) ACTIVE TEST allows switch and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester (with CAM VIN) to the DLC3.

(b) Turn the ignition switch ON.

(c) Perform the ACTIVE TEST according to the display on the tester.

4WD control ECU

Item	Test Details	Diagnostic Note
4WD WARN LAMP	4WD indicator light ON / OFF ON: 4WD indicator light ON OFF: 4WD indicator light OFF	Observe combination meter
LOCK LAMP	4WD lock light / ON / OFF OFF: 4WD lock switch OFF ON: 4WD lock switch ON	Observe combination meter

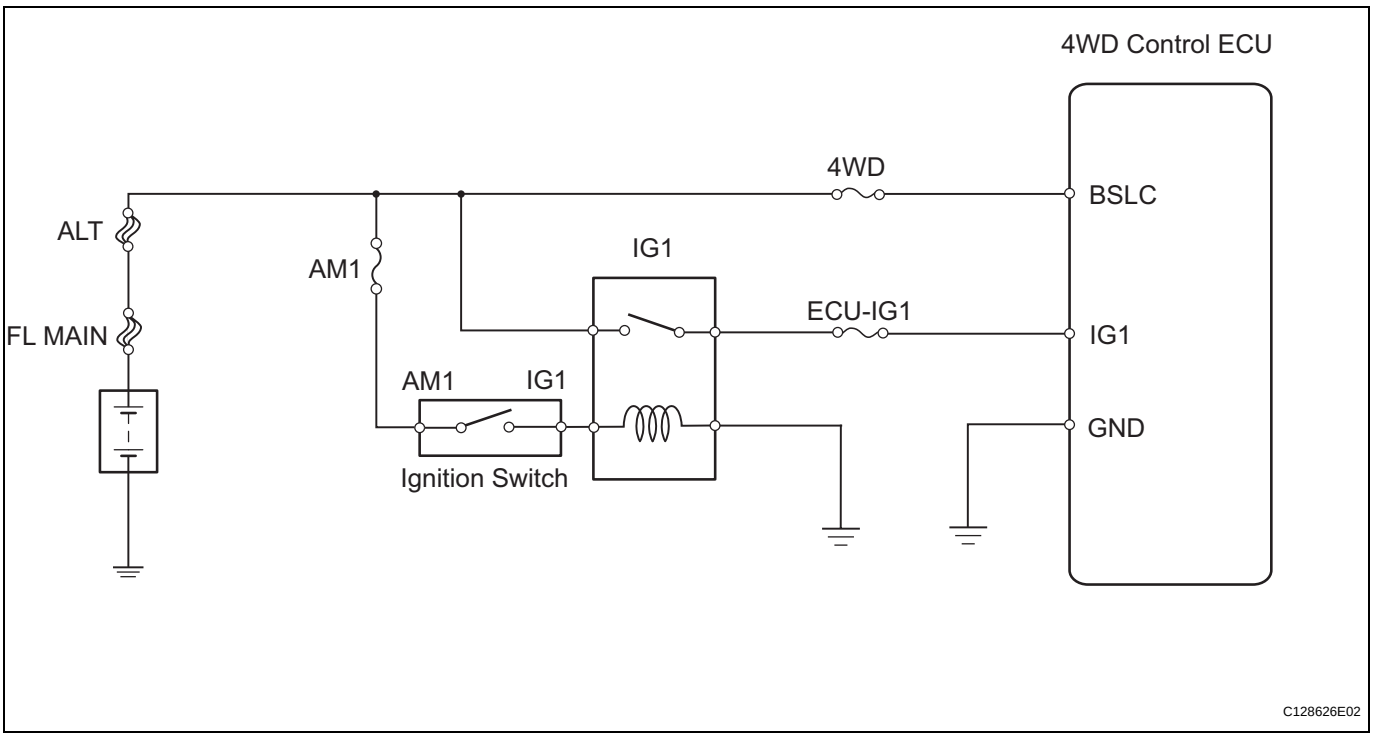
DTC	C1241/94	Low Power Supply Voltage



DESCRIPTION

If a malfunction in the power source circuit occurs, or a malfunction in communication with the skid control ECU or in a speed sensor occurs, the 4WD control ECU will prohibit operations by the fail-safe function.

DTC No.	DTC Detection Condition	Trouble Area
C1241/94	When one of following conditions is met: 1. When following continues for 10 seconds or more: - At a vehicle speed of 3 km/h (2 mph) or more, voltage of IG1 terminal is 9.5 V or less. 2. When both of following continue for 60 seconds or more: - With the voltage of IG1 terminal 9.5 V or less, communication with the skid control ECU cannot be performed. - A malfunction in communication with skid control ECU. 3. When following continue for 3 seconds or more: - With the voltage of IG1 terminal 9.5 V or more, communication with the skid control ECU cannot be performed.	• Battery • Generator • ECU-IG1 • Wire harness (IG1 circuit, GND circuit) • 4WD control ECU

TF

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (see page IN-37).

1	CHECK FOR DTC

(a) Clear the DTC (see page TF-16).
(b) Turn the ignition switch ON and check that no CAN communication system DTC is output.
(c) Start the engine.
(d) Drive the vehicle, accelerate to a speed of 3 km/h (2 mph) or more, and check that no speed sensor DTC (brake control system DTC) is output (see page BC-57).

TF

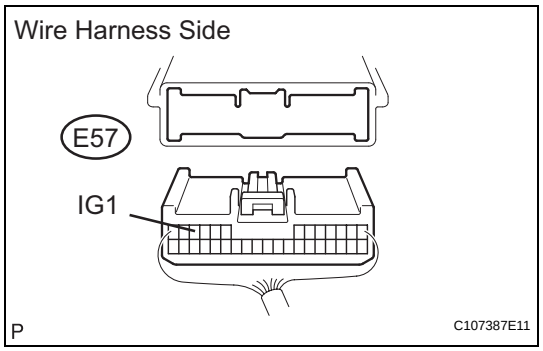
Result

Result	Proceed to
Neither CAN communication system DTC nor speed sensor DTC (Brake control system DTC) is output	A
CAN communication system DTC is output	B
Speed Sensor DTC (Brake control system DTC) is output	C

B → **REPAIR CIRCUIT INDICATOR BY OUTPUT CODE (CAN COMMUNICATION SYSTEM)**

C → **REPAIR CIRCUIT INDICATOR BY OUTPUT CODE (BRAKE CONTROL SYSTEM)**

A



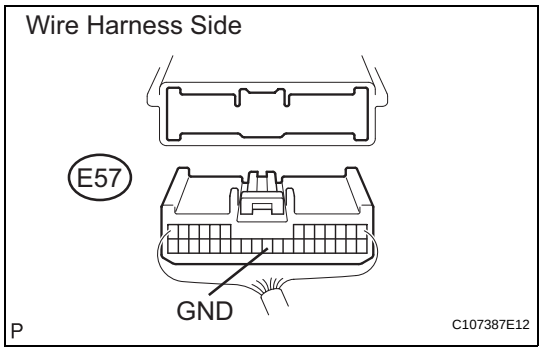
2	INSPECT FUSE (ECU-IG)

(a) Remove the ECU-IG1 fuse from the instrument junction block
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1Ω
HINT:
Check for short circuits in all harnesses and connector connected to the ECU-IG1 fuse (see page IN-5).

NG → **REPLACE FUSE**

OK

3	CHECK WIRE HARNESS (4WD CONTROL ECU - BATTERY)



(a) Disconnect the E57 ECU connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Condition	Specified Condition
E57-11 (IG1) - Body Ground	Ignition switch ON	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

4	CHECK WIRE HARNESS (4WD CONTROL ECU - BODY GROUND)

(a) Disconnect the E57 ECU connector.
(b) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
E57-23 (GND) - Body Ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

5	RECONFIRM DTC

(a) Clear the DTC (see page TF-16).
(b) Start the engine.
(c) Drive the vehicle, accelerate to a speed of 3 km/h (2 mph or more, and check if the same DTC is output.

Result

Result	Proceed to
DTC is output	A
DTC is not output	B

HINT:
Reinstall the sensor, connectors, etc. and restore the vehicle to its prior condition before rechecking DTCs.

B → **END**

A

REPLACE 4WD CONTROL ECU

DTC	C1280/82	Engine Circuit Malfunction

DESCRIPTION

If a malfunction in the engine control ECU circuit occurs, the 4WD control ECU will output this DTC.

DTC No.	DTC Detection Condition	Trouble Area
C1280/82	When the following continues for 5 seconds or more: - Communication with engine control ECU is operating normally, but throttle position sensor is malfunctioning.	• Throttle position sensor • Throttle position sensor wire harness and connector • CAN communication system

INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (see page IN-37).

1	CHECK FOR DTC

(a) Clear the DTC (see page TF-16).

(b) Turn the ignition switch OFF.

(c) Turn the ignition switch ON and check that can communication system DTC is not output.

Result

Result	Proceed to
CAN communication system DTC is output	A
Engine control DTC is output	B

B → **GO TO ENGINE CONTROL SYSTEM**

A

GO TO CAN COMMUNICATION SYSTEM

DTC	C1296/96	ABS Malfunction

DESCRIPTION

If a malfunction in the speed sensor signal circuit yaw rate sensor circuit occurs, the 4WD control ECU will output this DTC.

DTC No.	DTC Detection Condition	Trouble Area
C1296/96	When either condition below is met: 1. Wheel speed sensor malfunction is received from skid control ECU 2. Deceleration sensor malfunction us received from skid control ECU	• CAN communication line • Skid control ECU • Speed sensor • 4WD control ECU • Yaw rate sensor • Wire harness

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (see page IN-37).

1	CHECK FOR DTC

(a) Clear the DTC (see page TF-16).
(b) Turn the ignition switch OFF.
(c) Turn the ignition switch ON again and check that CAN communication system DTC(s) is not output.
(d) Drive the vehicle, accelerate to a speed of 20 km/h (12 mph) or more, and check if the speed sensor DTC (brake control system DTC) is output (see page BC-57).

Result

Result	Proceed to
Neither CAN communication system DTC nor brake control system DTC is out put	A
CAN communication system DTC is output	B
Brake control system DTC (speed sensor DTC) is output	C

HINT:
When DTCs indicating a CAN communication system malfunction are output, repair the CAN communication system before repairing each corresponding sensor.

B → **REPAIR CIRCUIT INDICATOR BY OUTPUT CODE (CAN COMMUNICATION SYSTEM)**

C → **REPAIR CIRCUIT INDICATOR BY OUTPUT CODE (BRAKE CONTROL SYSTEM)**

A

2	CHECK OPERATION OF 4WD CONTROL ECU

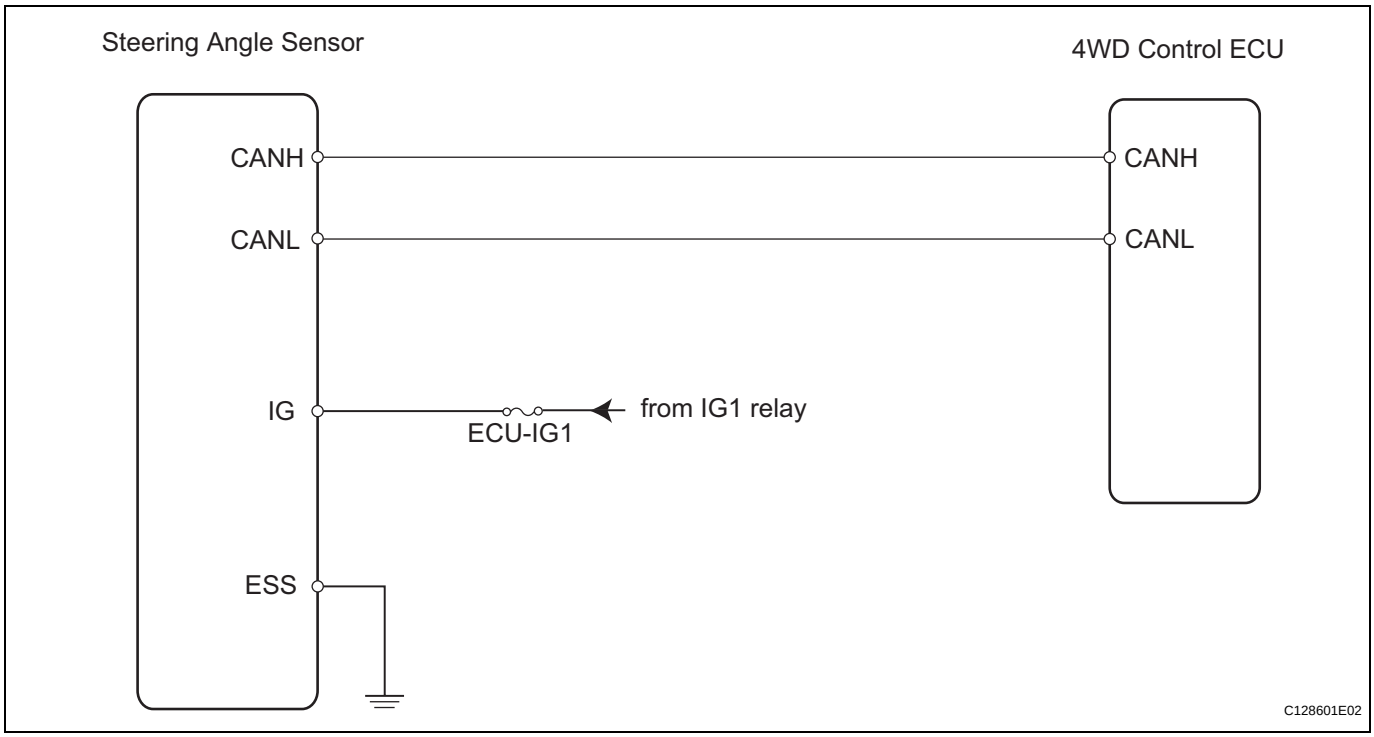
(a) Replace the 4WD control ECU with a normally functioning or new one.
(b) Reconfirm DTC.

OK:
DTC is output.

OK → **REPLACE 4WD CONTROL ECU**

NG

GO TO BRAKE CONTROL SYSTEM (ANTI-LOCK BRAKE SYSTEM OR VEHICLE STABILITY CONTROL SYSTEM)



DTC	C1297/97	Steering Angle Sensor

DESCRIPTION

- The 4WD control ECU determines that the vehicle is turning based on the signals sent from the steering angle sensor.
- The steering angle sensor signal is sent to the 4WD control ECU via the CAN communication system.
- The 4WD control ECU detects the amount of steering wheel movement and performs "slip control at vehicle start up", according to the amount of movement, and "slip control" to secure high turning performance.

DTC No.	DTC Detection Condition	Trouble Area
C1297/97	When voltage of 4WD control ECU IG1 terminal is 9.5 V or more, and steering angle sensor malfunction signal is received.	• Steering angle sensor • CAN communication • 4WD control ECU • Wire harness

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (see page IN-37).

1	CHECK FOR DTC

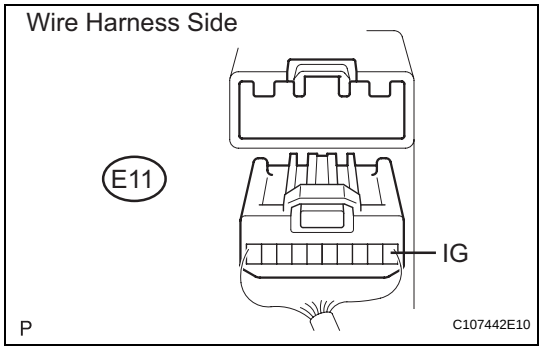
(a) Clear the DTC (see page TF-16).
(b) Turn the ignition switch OFF.
(c) Turn the ignition switch ON again and check that no CAN communication system DTC(s) is output.
(d) Start the engine.

(e) Drive the vehicle and turn the steering wheel to the right and left at a speed of 35 km/h (24 mph) and check that no brake control system (steering angle sensor) DTC (C1231/31) is output (see page BC-57).

Result

Result	Proceed to
Neither CAN communication system DTC nor brake control system DTC is out put	A
CAN communication system DTC is output	B
Brake control system (steering angle sensor) DTC (C1231/31) is output	C

TF



HINT:
When DTCs indicating a CAN communication system malfunction are output, repair the CAN communication system before repairing each corresponding sensor.

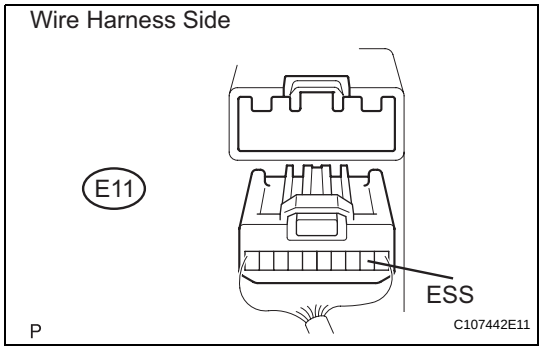
B → **REPAIR CIRCUIT INDICATOR OUTPUT CODE (CAN COMMUNICATION SYSTEM)**

C → **REPAIR OR REPLACE CIRCUIT INDICATOR OUTPUT CODE (STEERING ANGLE SENSOR CIRCUIT)**

A

2 CHECK WIRE HARNESS (STEERING ANGLE SENSOR - BATTERY)

(a) Disconnect the E11 sensor connector.
(b) Measure the voltage of the wire harness side connector.



Standard voltage

Tester Condition	Condition	Specified Condition
E11-1 (IG) - Body ground	Ignition switch ON	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

3 CHECK WIRE HARNESS (STEERING ANGLE SENSOR - BODY GROUND)

(a) Disconnect the E11 sensor connector.
(b) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Condition	Specified Condition
E11-2 (ESS) - Body ground	Below 1 Ω

Result

Result	Proceed to
OK (When troubleshooting according to PROBLEM SYMPTOMS TABLE)	A
OK (When troubleshooting according to DTC chart)	B
NG	C

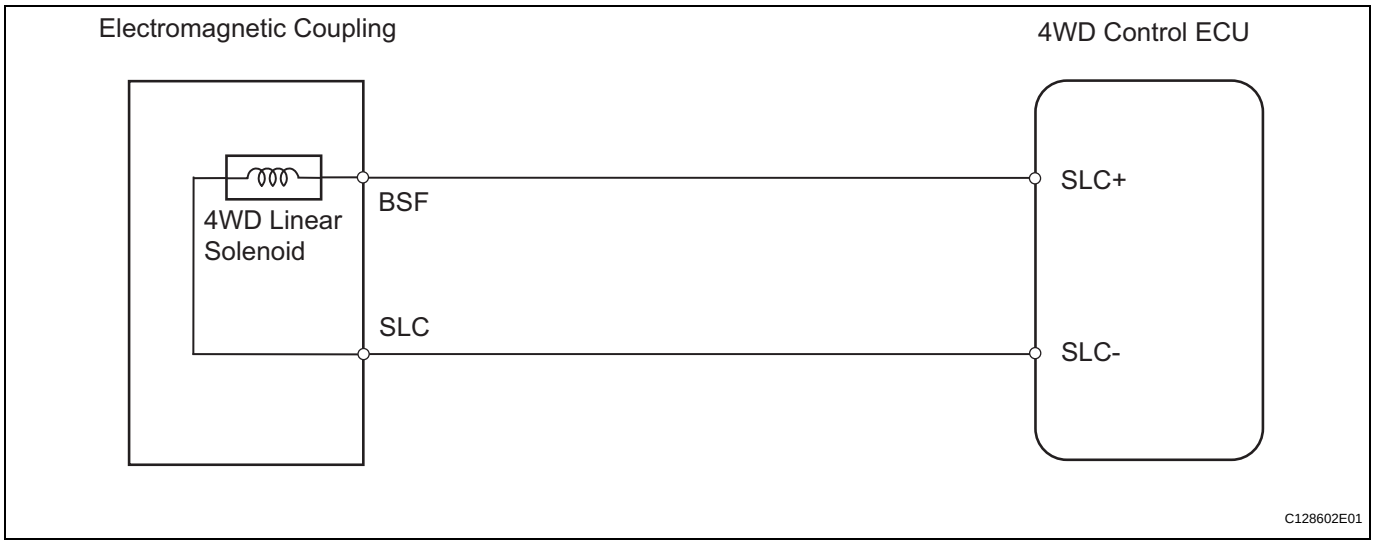
B → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

C → REPAIR OR REPLACE HARNESS AND CONNECTOR

A

REPLACE STEERING ANGLE SENSOR

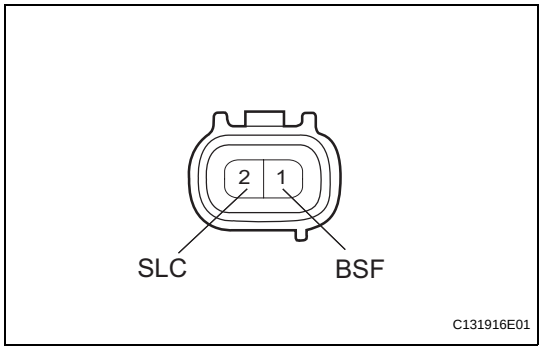
DTC	C1298/98	Linear Solenoid Circuit



DESCRIPTION

The 4WD control ECU receives signals from each sensor to control clutch fluid pressure for limiting the center differential operation, which distributes torque according to the driving conditions.

DTC No.	DTC Detection Condition	Trouble Area
C1298/98	1. When the following continues for 1 second or more: - With the current of the 0.8 A or more, an open or short in the linear solenoid circuit occurs.	• Wire harness • Electromagnetic coupling • 4WD control ECU



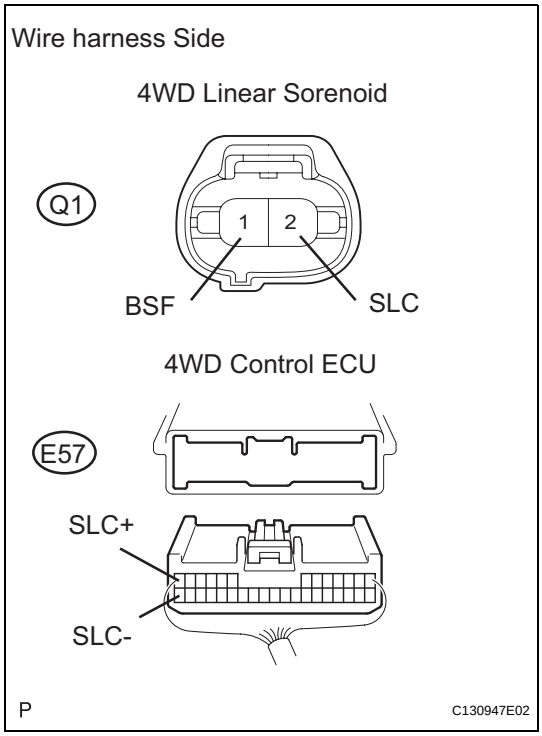
TF

WIRING DIAGRAM

INSPECTION PROCEDURE

1	INSPECT ELECTROMAGNETIC COUPLING (4WD LINEAR SOLENOID)

(a) Remove the coupling connector.
(b) Measure the resistance of the solenoid.



Standard resistance

Tester Connection	Specified Condition
1 (BSF) - 2 (SLC)	2.2 to 2.6 Ω
1 (BSF) - Body ground	10 kΩ or higher
2 (SLC) - Body ground	10 kΩ or higher

NG → REPLACE ELECTROMAGNETIC COUPLING

OK

2	CHECK WIRE HARNESS (COUPLING - 4WD CONTROL ECU)

(a) Disconnect the E57 ECU connector.
(b) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
E57-13 (SLC+) - Q1-1 (BSF)	Below 1 Ω
E57-32 (SLC-) - Q1-2 (SLC)	Below 1 Ω
E57-13 (SLC+) - Body ground	10 kΩ or higher
E57-32 (SLC-) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE 4WD CONTROL ECU

DTC	C1299/99	Cancellation of 4WD Control

DESCRIPTION

- If wheel slip continues, differential control will be disabled when the torque-distribution ratio of the differential clutch exceeds the set value and a malfunction in the output of the wheel speed sensors, etc. occurs.
- If a difference in diameter between the front and rear wheels is determined, differential control will be disabled.

DTC No.	DTC Detection Condition	Trouble Area
C12299/99	When one of following following conditions is met: - Control coupling lock is detected 4 more times. - Condition that controls coupling calorific value is predefined value or more. - Condition that transfer oil temperature is predefined value or more. - Vehicle is driven and energy load tire radius difference between front tires and rear tires is more than 3%	• Electromagnetic coupling • Tire size • 4WD control ECU

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (see page IN-37).

1	CHECK TIRE CONDITION

(a) Check the size and condition of all 4 tires (see page TW-1).

HINT:
This DTC is output when tire deformation or a difference in tire size is detected.

OK:

The diameter and air pressure of all 4 tires are the same.

NG → **REPLACE TIRE SO THAT ALL 4 TIRES ARE THE SAME IN SIZE**

OK

2	RECONFIRM DTC

(a) Clear the DTC (see page TF-16).
(b) Start the engine.
(c) Drive the vehicle at the speed of 20 km/h (12 mph) or more and check that same DTC is output.

Result

Result	Proceed to
DTC is output	A
DTC is not output	B

B → **REPLACE ELECTROMAGNETIC COUPLING**

A

REPLACE 4WD CONTROL ECU

DTC	U0073/86	Control Module Communication Bus OFF

DTC	U0100/85	Lost Communication with ECM / PCM "A"

DTC	U0126/84	Lost Communication with Steering Angle Sensor Module

DTC	U0129/83	Lost Communication with Brake System Control Module

DESCRIPTION

- The 4WD control ECU inputs the signals sent from the ECM, skid control ECU, and steering angle sensor via the CAN communication system.
- When DTCs indicating a CAN communication system malfunction are output, repair the CAN communication system before repairing each corresponding sensor.

DTC No.	DTC Detection Condition	Trouble Aria
U0073/86	1. When the following continues for 5 seconds or more: - Signals from the 4WD control ECU are not received. 2. When the following occurs 10 times consecutively: - A communication malfunction (bus off) occurs one or more times within 0.1 second.	• Wire harness (CANL, CANH circuit) • 4WD control ECU
U0100/85	1. When both of the following continue for 2 seconds or more: - The voltage of the IG1 terminal is 10 V or more. - At a vehicle speed of 60 km/h (38 mph) or more, communication with the ECM cannot be performed	• Wire harness (CANL, CANH circuit) • 4WD control ECU • ECM
U0126/84	1. When both of the following continue for 1 second or more: - The voltage of the IG1 terminal is 10 V or more. - Communication with the steering angle sensor cannot be performed. 2. When all of the following occur 10 times consecutively: - The condition that communication with the steering angle sensor cannot be performed occurs once within 5 seconds - The voltage of the IG1 terminal is 10 V or more. - Occurs 10 times or more within 60 seconds.	• Wire harness (CANL, CANH circuit) • 4WD control ECU • Steering angle sensor
U0129/83	1. When the following continues for 3 seconds or more: - The voltage of the IG1 terminal is 10 V or more. - Communication with the skid control ECU cannot be performed.	• Wire harness (CANL, CANH circuit) • 4WD control ECU • Skid control ECU

INSPECTION PROCEDURE

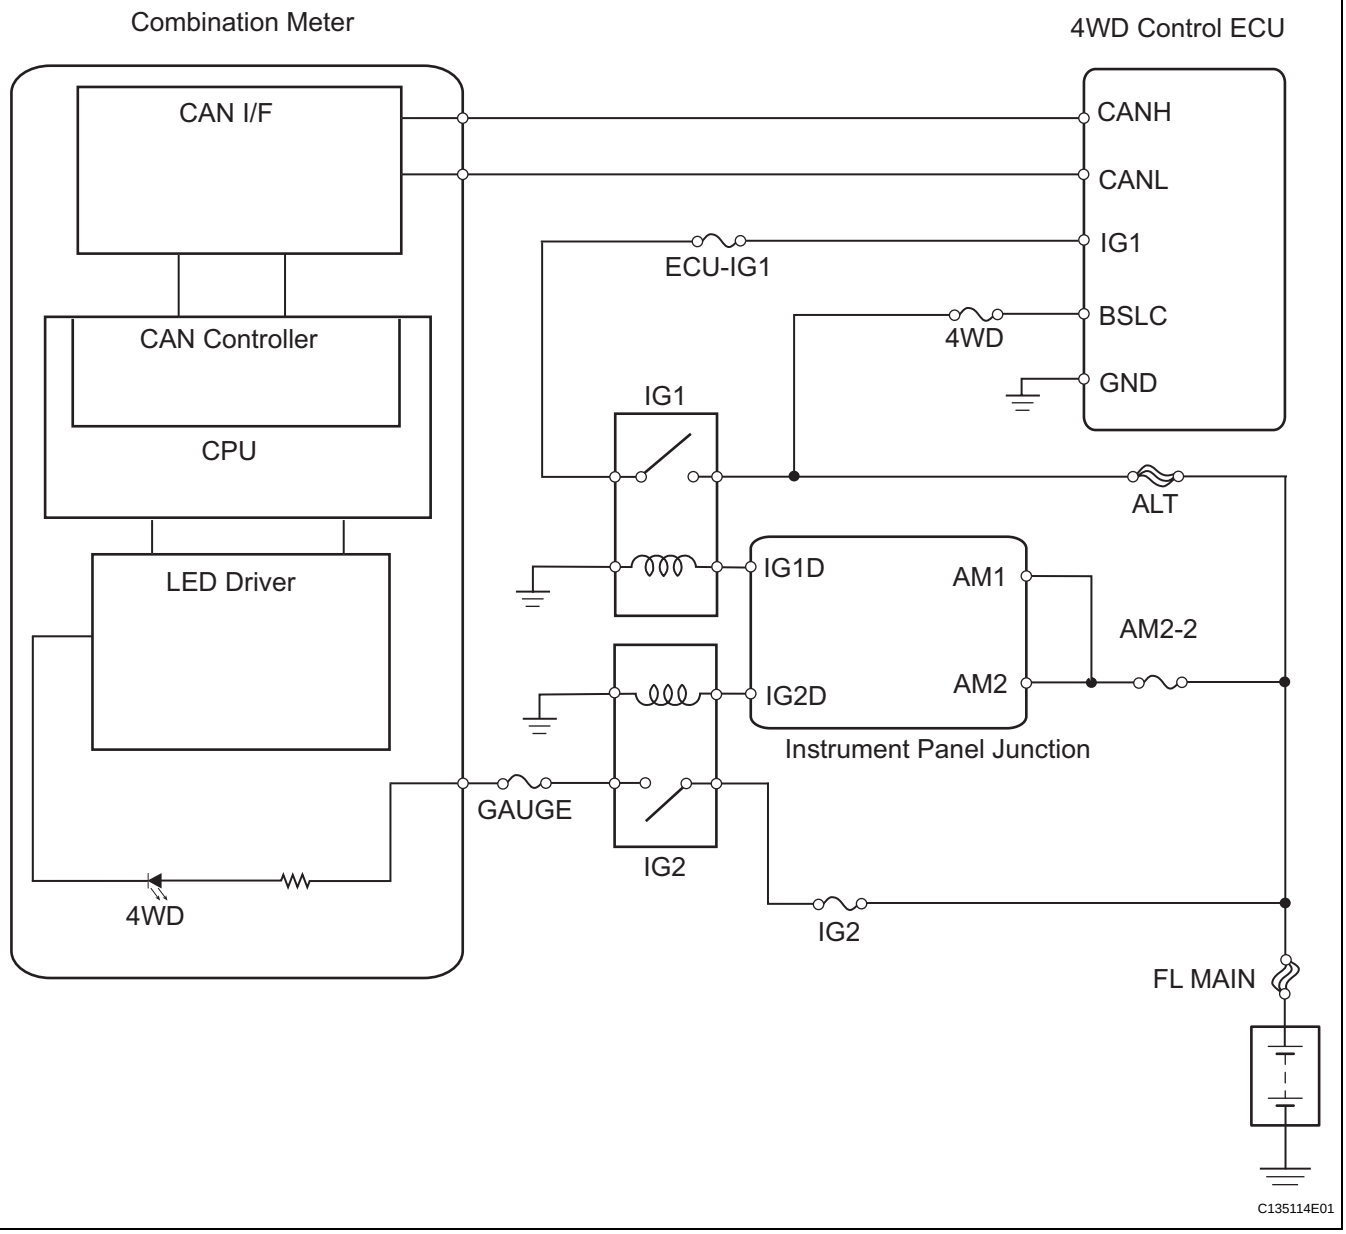
1	CHECK FOR DTC

(a) Check for DTC (see page TF-16).
(b) Record the output DTC (4WD control system).

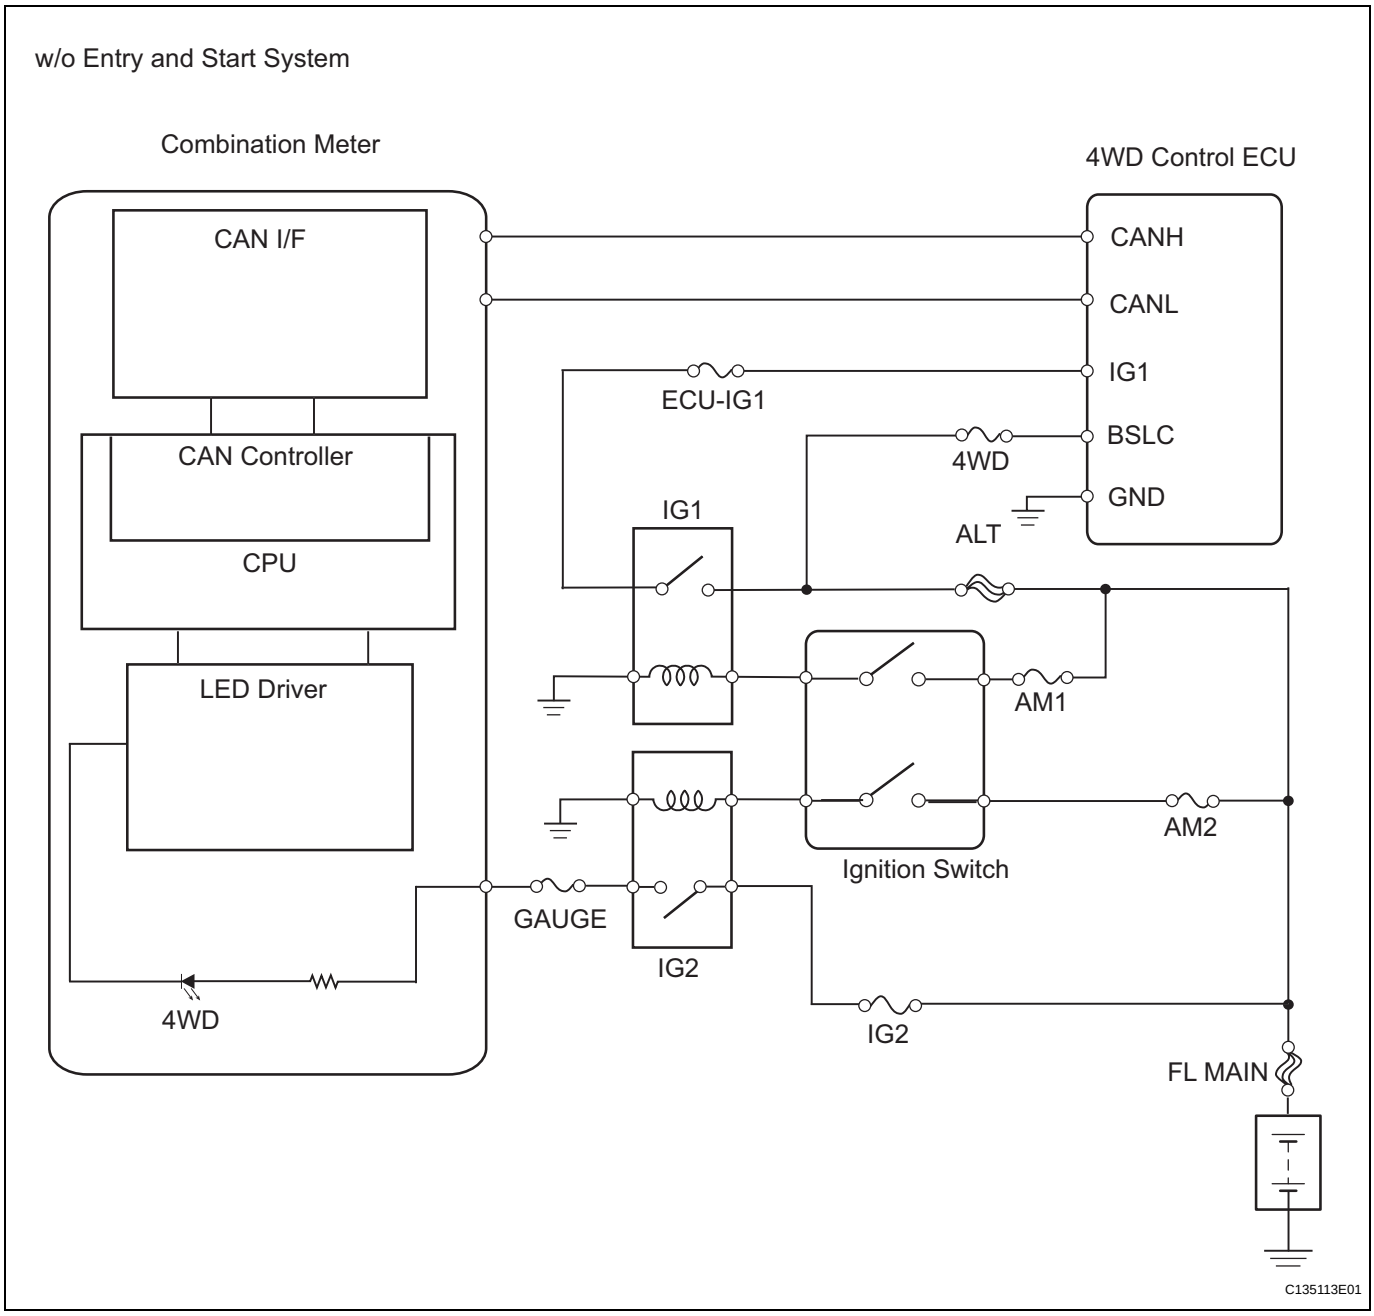
HINT:
When DTCs indicating a CAN communication system malfunction are output, repair the CAN communication system before repairing each corresponding sensor.

NEXT

GO TO CAN COMMUNICATION SYSTEM



4WD Indicator Light Remains ON



DESCRIPTION

The 4WD control ECU is connected to the combination meter via the CAN communication system.
If the 4WD control ECU stores any DTCs which are related to the active torque control 4WD system, the 4WD indicator light comes on in the combination meter.

WIRING DIAGRAM

w/ Entry and Start System

INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (see page IN-37).

1	CHECK FOR DTC

(a) Check the output DTC (see page TF-16).

Result

Result	Proceed to
Neither CAN communication system DTC nor 4WD control system DTC is output	A
CAN communication DTC is output	B
4WD control system DTC is output	C

HINT:
When DTCs indicating a CAN communication system malfunction are output, repair the CAN communication system before repairing each corresponding sensor.

B → REPAIR CIRCUIT INDICATOR BY OUTPUT CODE (CAN COMMUNICATION SYSTEM)

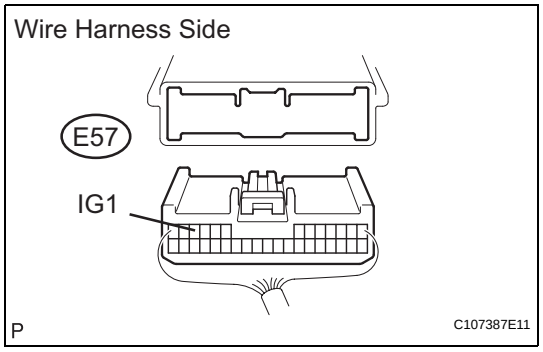
C → REPAIR CIRCUIT INDICATOR BY OUTPUT CODE (4WD CONTROL SYSTEM)

A

2 PERFORM ACTIVE TEST BY INTELLIGENT TESTER (4WD INDICATOR LIGHT)

(a) Using the intelligent tester's (with CAN VIM) ACTIVE TEST, generate a control command, and then check that the 4WD indicator light operates.

Combination Meter



Item	Vehicle Condition / Test Details	Diagnostic Note
4WD Indicator Light	4WD indicator light OFF	Observer combination meter

OK:
The 4WD indicator light turns OFF

OK → REPLACE 4WD CONTROL ECU

NG

3 CHECK WIRE HARNESS (4WD CONTROL ECU - BATTERY)

(a) Disconnect the E57 ECU connector.
(b) Measure the voltage of the wire harness side connector.

Voltage

Tester Connection	Condition	Specified Condition
E57-11 (IG1) - Body Ground	Ignition switch ON	10 to 14 V

NG → REPAIR OR REPLACE HARNESS AND CONNECTOR

OK

4 CHECK COMBINATION METER

(a) Check the combination meter system.
Result:
The combination meter system is normal.

NG → REPLACE COMBINATION METER

OK

REPLACE 4WD CONTROL ECU

4WD Indicator Light does not Come ON

DESCRIPTION

Refer to "4WD Indicator Light Remains ON" (see page TF-36).

WIRING DIAGRAM

Refer to "4WD Indicator Light Remains ON" (see page TF-36).

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (see page IN-37).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output.
Result

Result	Proceed to
DTC is not output	A
DTC is output	B

HINT:
When DTCs indicating a CAN communication system malfunction are output, repair the CAN communication system before repairing each corresponding sensor.

B → REPAIR CAN COMMUNICATION SYSTEM

A

2	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (4WD INDICATOR LIGHT)

(a) Using the intelligent tester's (with CAN VIM) ACTIVE TEST, generate a control command, and then check that the 4WD indicator light operates.

4WD control ECU

Item	Test Details	Diagnostic Note
4WD Indicator light	4WD indicator light ON / OFF	Observe combination meter

OK:
The 4WD indicator light turns ON and OFF.

OK → REPLACE 4WD CONTROL ECU

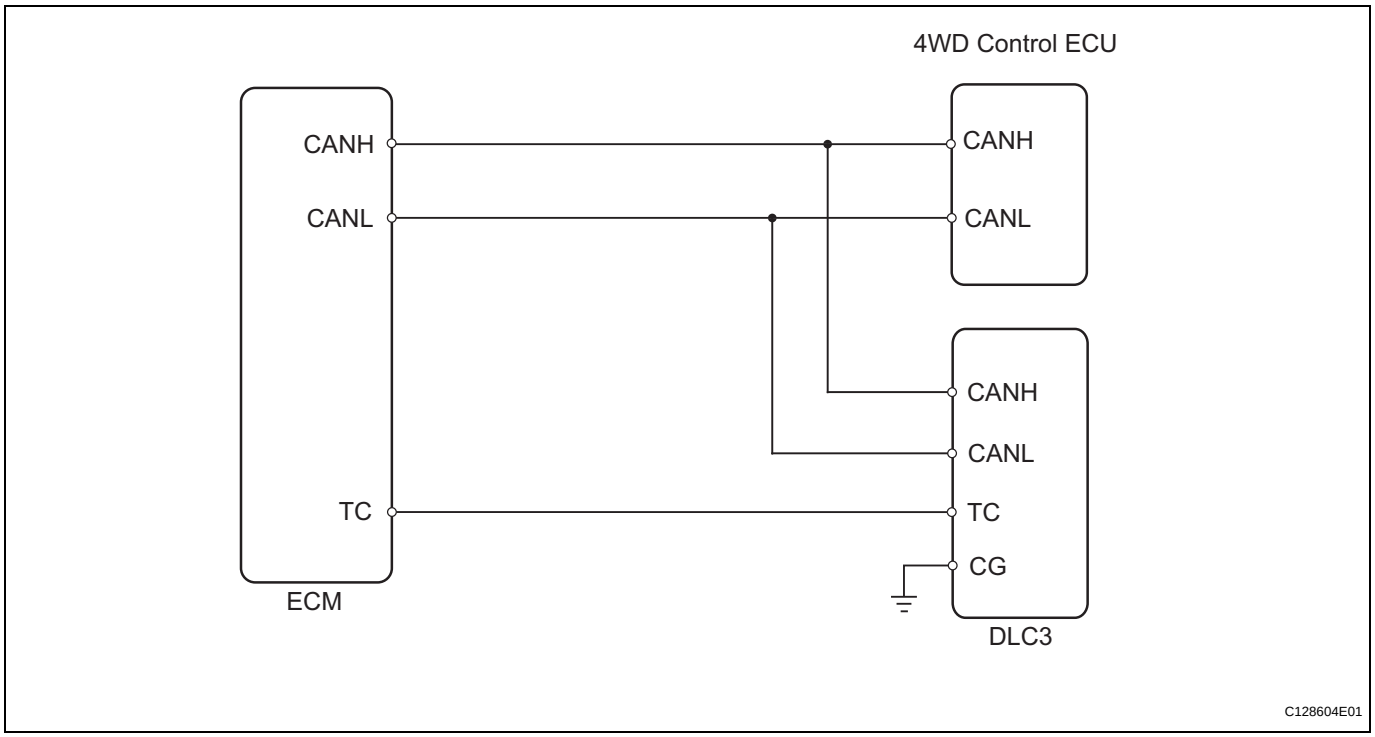
NG

3	CHECK COMBINATION METER

(a) Inspect the combination meter (see page ME-31).
Result:
The combination meter assembly system is normal.

NG → **REPLACE COMBINATION METER**

OK



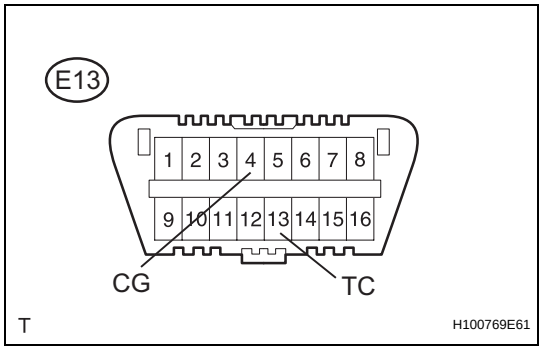
REPLACE 4WD CONTROL ECU

TC and CG Terminal Circuit

DESCRIPTION

Connecting terminals TC and CG of the DLC3 causes the 4WD control ECU to display 2-digit DTCs by flashing the 4WD indicator light.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (see page IN-37).

1	CHECK DLC3 (TC VOLTAGE)

(a) Turn the ignition switch ON.

(b) Measure the voltage of the DLC3.

Standard voltage

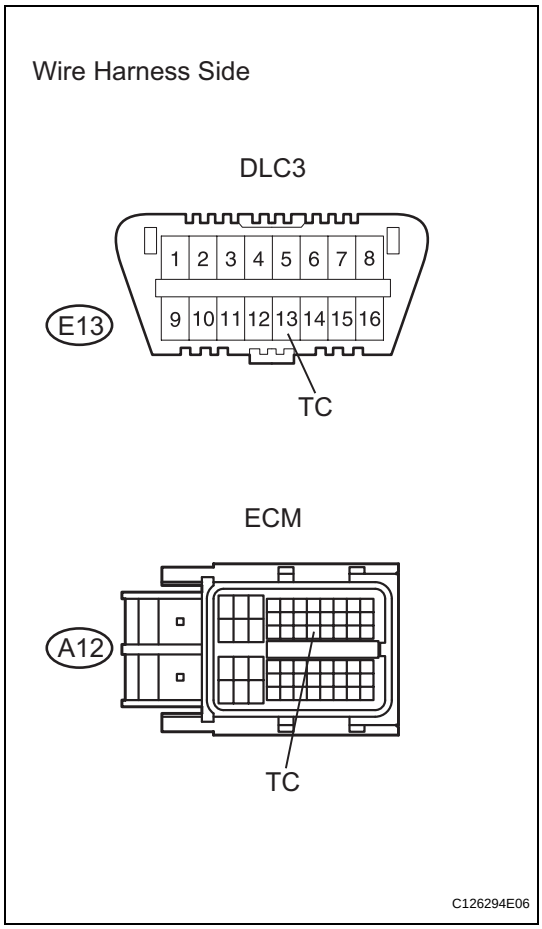
Tester Connection	Specified Condition
E13-13 (TC) - E13- 4 (CG)	10 to 14 V

NG → **Go to step 3**

OK

2	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication DTC is output (see page CA-10).
Result



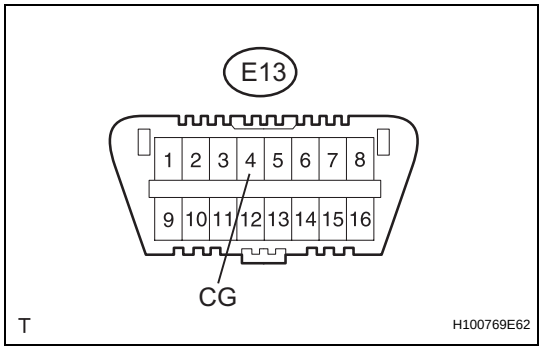
Result	Proceed to
DTC is not output	A
DTC is output	B

B → REPAIR CIRCUIT INDICATED BY OUTPUT DTC

A →

REPLACE 4WD CONTROL ECU

3	CHECK WIRE HARNESS (DLC3 - ECM AND BODY GROUND)



(a) Turn the ignition switch OFF.
(b) Disconnect the A12 ECM connector.
(c) Measure the resistance of the wire harness side connectors.
Standard resistance

Tester Connection	Specified Condition
E13-13 (TC) - A12-27 (TC)	Below 1Ω
E13-13 (TC) - Body Ground	10kΩ or higher

NG → REPAIR OR REPLACE HARNESS AND CONNECTOR

OK →

4	CHECK WIRE HARNESS (DLC3 - BODY GROUND)

(a) Measure the resistance of the DLC3.
Standard resistance

Tester Connection	Specified Condition
E13-4 (CG) - Body ground	Below 1 Ω

B → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

A

5	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication DTC is output (see page CA-10).
Result

Result	Proceed to
DTC is not output	A
DTC is output	B

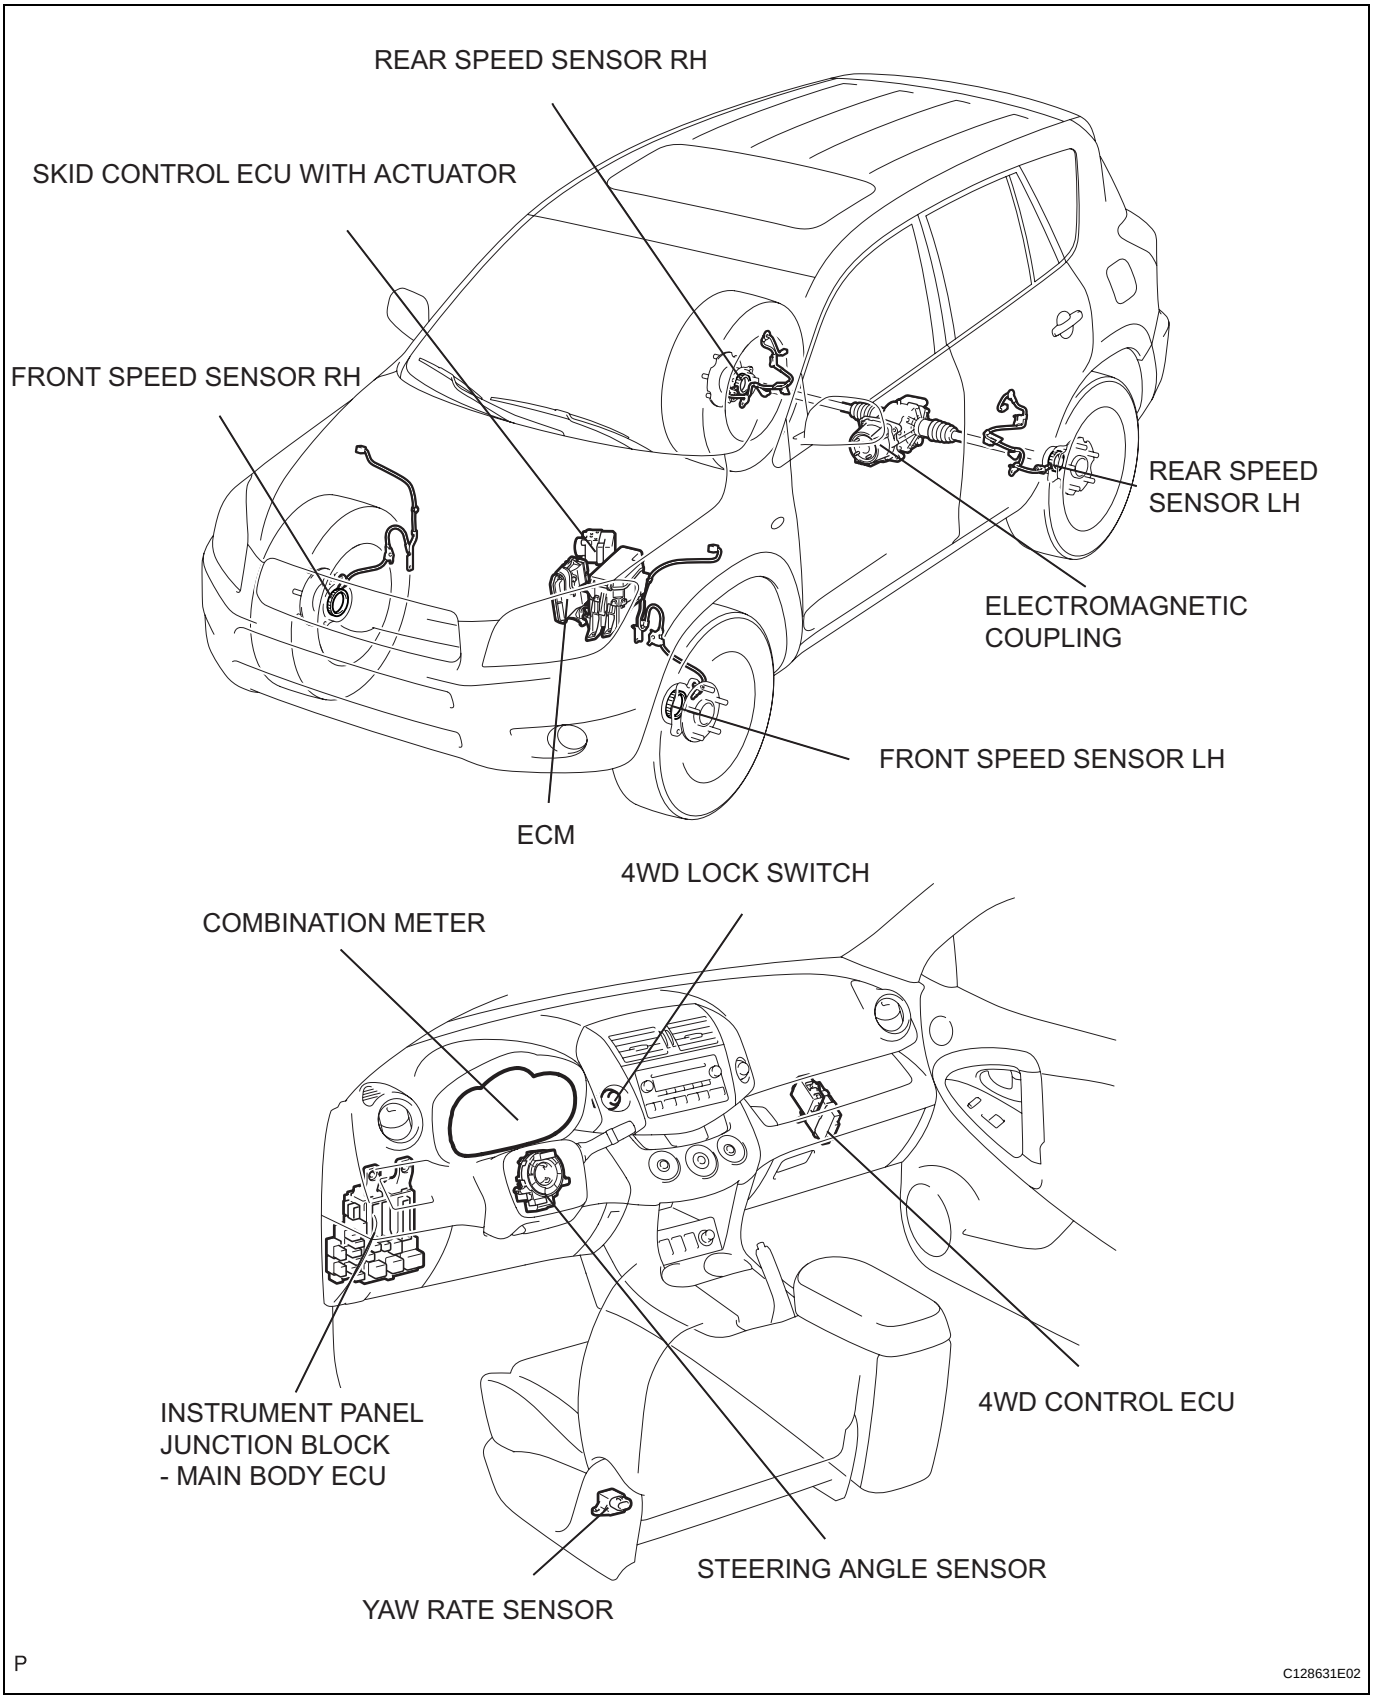
B → **REPAIR CIRCUIT INDICATED BY OUTPUT DTC**

A

REPLACE 4WD CONTROL ECU

TF

ACTIVE TORQUE CONTROL 4WD SYSTEM



PRECAUTION

1. TROUBLESHOOTING PRECAUTION

NOTICE:

- **Since the Active torque control system (4WD control system) may be influenced by a malfunction in other systems, be sure to check for DTCs in the other systems.**
- **When removing and installing the 4WD control ECU and each sensor, be sure to check that the normal display is output in test mode inspection and in DTC output inspection after installing all the parts.**
- **If the DTC of the CAN communication line is output, repair the malfunction in the communication line and troubleshoot the 4WD control system.**
- **Since the CAN communication line has its own length and route, it cannot be repaired temporarily with a bypass wire, etc.**

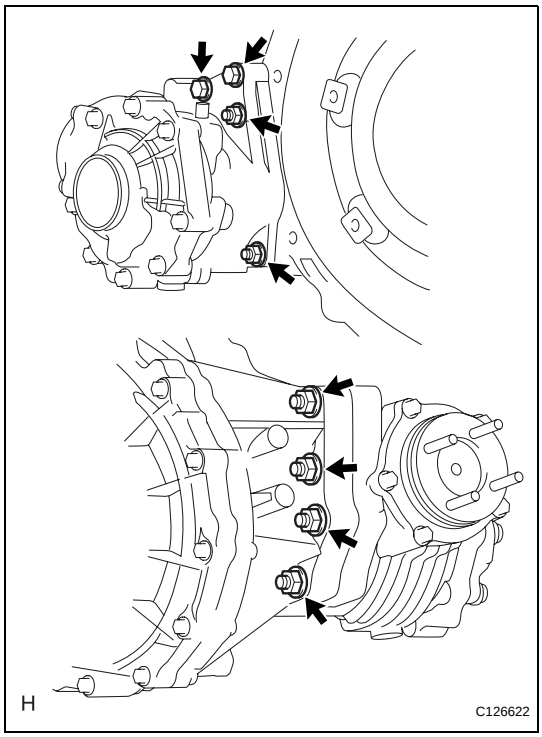
REMOVAL

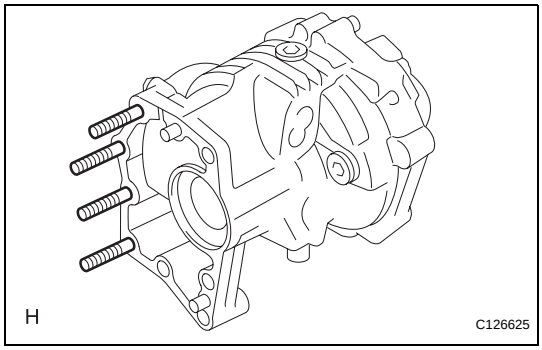
(2005/11-2006/01)

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE ENGINE ASSEMBLY WITH AUTOMATIC TRANSAXLE**
   (a) Remove the engine with automatic transaxle (see page EM-98).
3. **REMOVE REAR ENGINE MOUNTING BRACKET (See page AX-147)**
4. **REMOVE TRANSFER ASSEMBLY**
   (a) Remove the 6 nuts, 2 bolts and transfer from the transaxle.

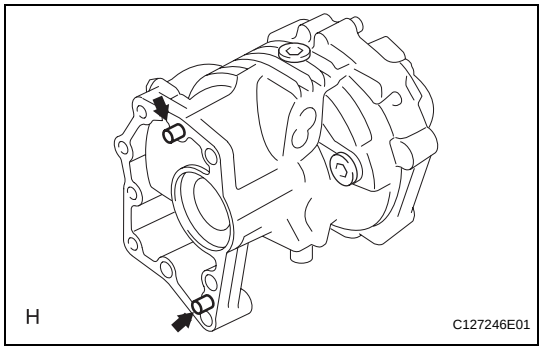


TF

REMOVAL



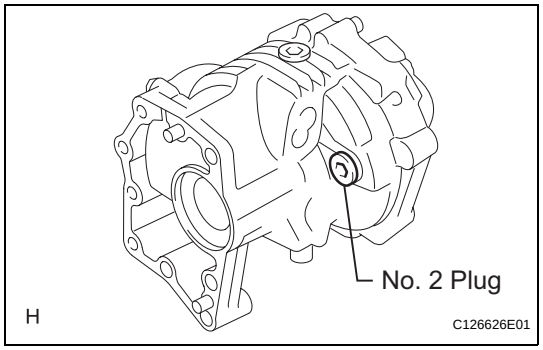
(2006/01-)



1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE ENGINE ASSEMBLY WITH AUTOMATIC TRANSAXLE**
   (a) for 2AZ-FE:
   Remove the engine with automatic transaxle (see page EM-98).
   (b) for 2GR-FE:
   Remove the engine with automatic transaxle (see page EM-21)
3. **REMOVE REAR ENGINE MOUNTING BRACKET (for 2GR-FE) (See page AX-173)**
4. **REMOVE REAR ENGINE MOUNTING BRACKET (for 2AZ-FE) (See page AX-147)**
5. **REMOVE TRANSFER ASSEMBLY**
   (a) Remove the 6 nuts, 2 bolts and transfer from the transaxle.

DISASSEMBLY

1. **REMOVE TRANSFER AND TRANSAXLE SETTING STUD BOLT**
   (a) Remove the stud bolt.

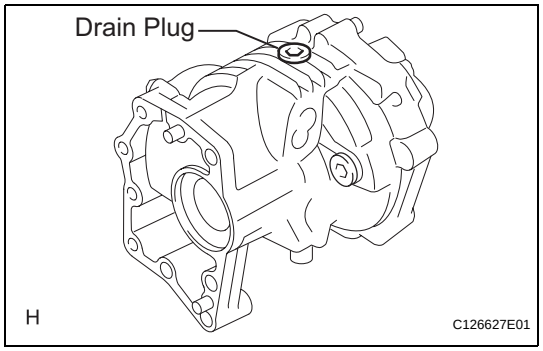


2. REMOVE TRANSFER CASE STRAIGHT PIN

(a) Remove the 2 straight pins.

3. REMOVE TRANSFER CASE NO. 1 PLUG

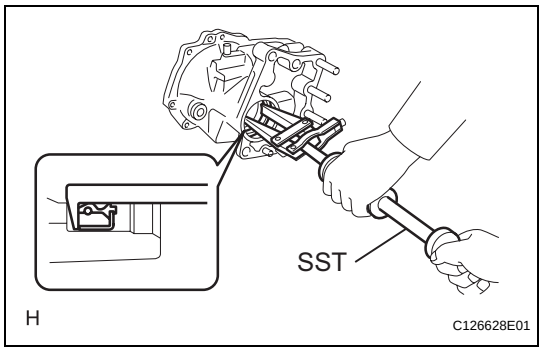
(a) Remove the No. 1 plug.



(b) Remove the gasket from the No. 1 plug.

4. REMOVE TRANSFER CASE NO. 2 PLUG

(a) Remove the No. 2 plug.

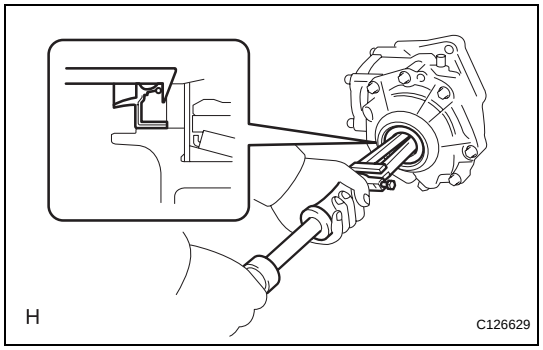


(b) Remove the gasket from the No. 2 plug.

5. REMOVE TRANSFER DRAIN PLUG

(a) Remove the drain plug.

(b) Remove the gasket from the drain plug.



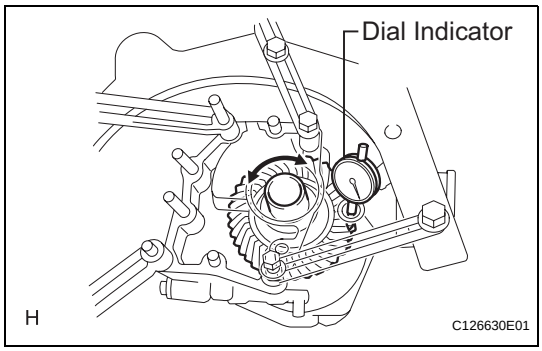
6. REMOVE TRANSFER CASE OIL SEAL LH

(a) Using SST, tap out the oil seal from the case.

SST 09308-00010

NOTICE:

Do not damage the oil seal lip.



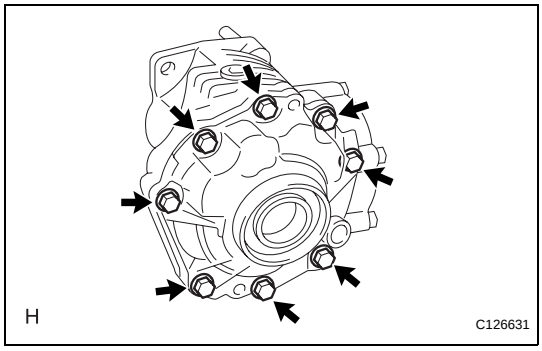
7. REMOVE TRANSFER CASE OIL SEAL RH

(a) Using SST, tap out the oil seal from the case.

SST 09308-00010

NOTICE:

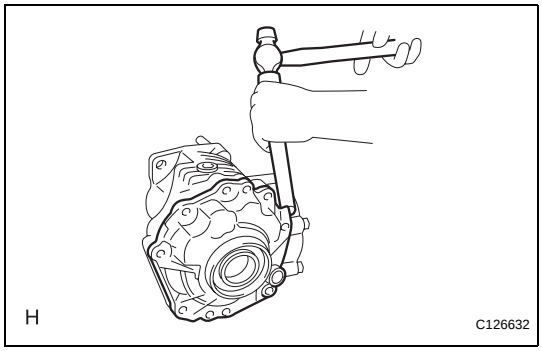
Do not damage the oil seal lip.



8. INSPECT RING GEAR BACKLASH

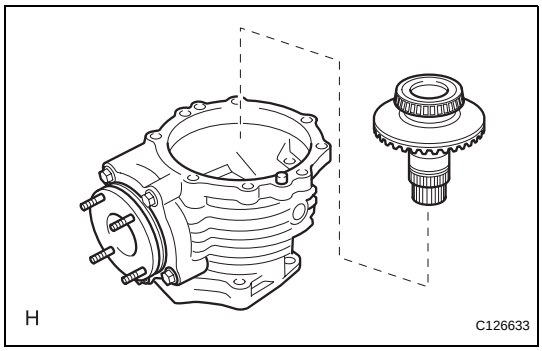
(a) Using a dial indicator, measure the backlash of the ring gear at 3 points.

Standard backlash:



0.10 to 0.20 mm (0.0039 to 0.0079 in.)

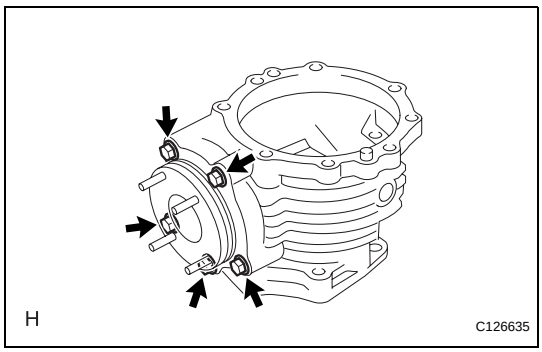
If the backlash is not within the specified range, adjust the backlash or repair as necessary.



9. REMOVE NO. 1 TRANSFER CASE COVER

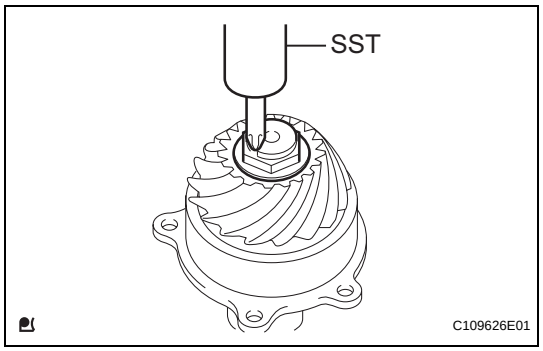
(a) Remove the 8 bolts.

(b) Using a brass bar and hammer, tap out the cover from the case.



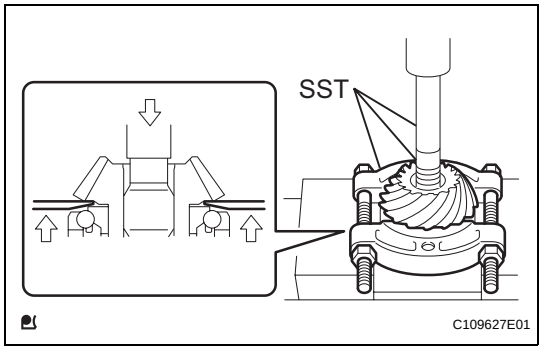
10. REMOVE TRANSFER RING GEAR

(a) Remove the ring gear from the transfer case.

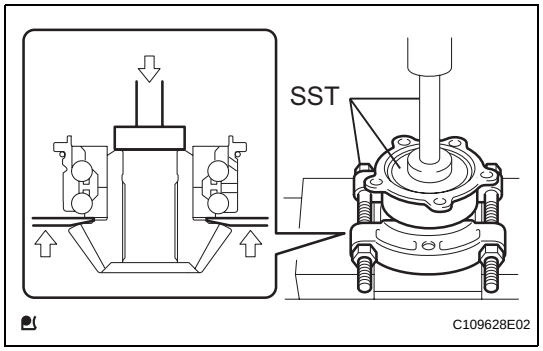


11. REMOVE TRANSFER CASE STRAIGHT PIN

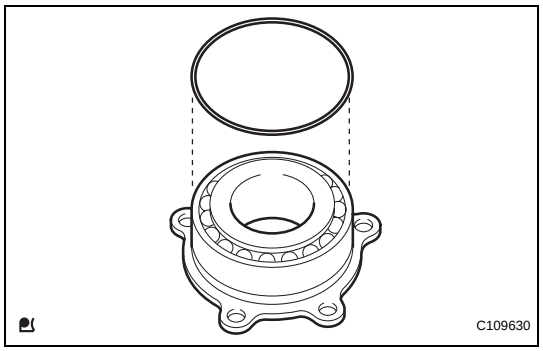
(a) Remove the 2 straight pins from the transfer case.



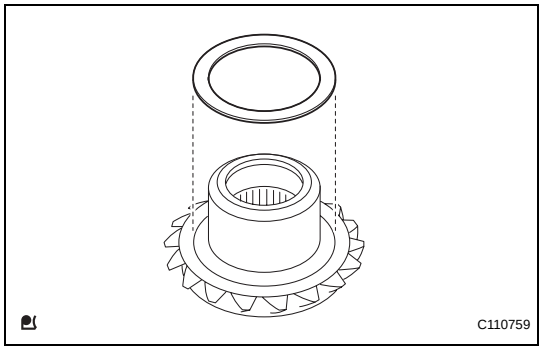
12. REMOVE TRANSFER OUTPUT SHAFT



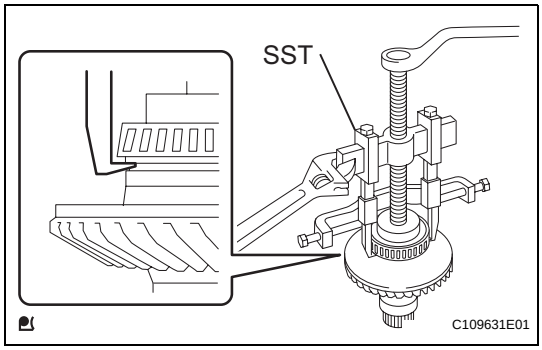
(a) Remove the 5 bolts and output shaft.



(b) Using SST and a hammer, unstake the lock nut.
SST 09930-00010
(c) Remove the lock nut.

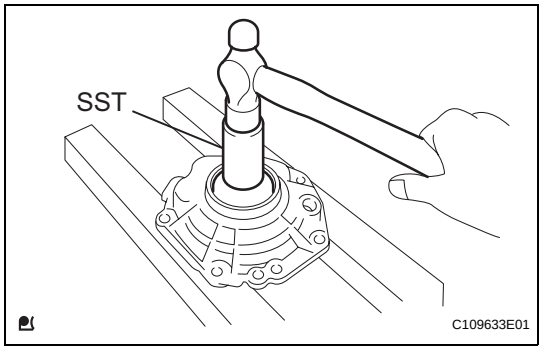


13. REMOVE TRANSFER OUTPUT REAR SHAFT SUB-ASSEMBLY
(a) Using SST and a press, press out the shaft from the driven pinion.
SST 09950-00020, 09950-60010 (09951-00220), 09950-70010 (09951-07100)



14. REMOVE TRANSFER DRIVEN PINION FRONT BEARING
(a) Using SST and a press, press out the driven pinion from the bearing.
SST 09950-00020, 09950-60010 (09951-00220), 09950-70010 (09951-07100)

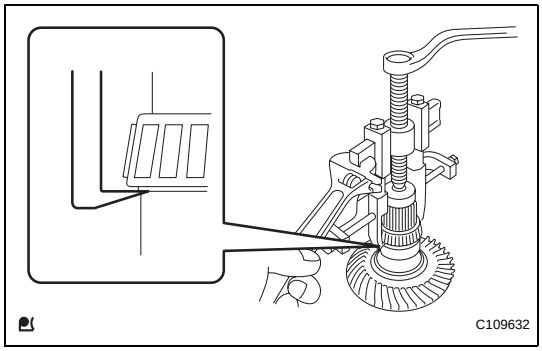
(b) Remove the O-ring from the bearing.



15. REMOVE TRANSFER OUTPUT SHAFT WASHER
(a) Remove the washer from the transfer pinion gear.

16. REMOVE RING GEAR MOUNTING CASE BEARING (for LH side)

(a) Using SST, remove the bearing from the mounting case.



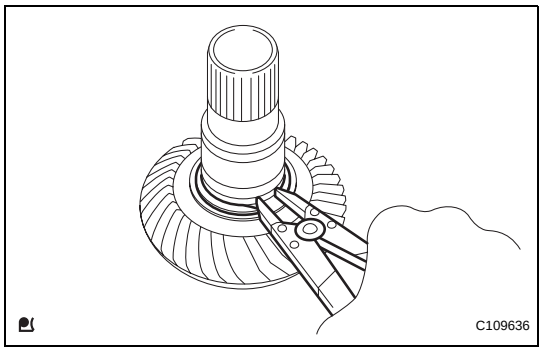
SST 09950-40011 (09951-04010, 09952-04010, 09953-04030, 09954-04010, 09955-04061, 09957-04010, 09958-04011), 09950-60010 (09951-00540)

(b) Using SST and a hammer, tap out the bearing.

SST 09310-35010

17. REMOVE RING GEAR MOUNTING CASE WASHER

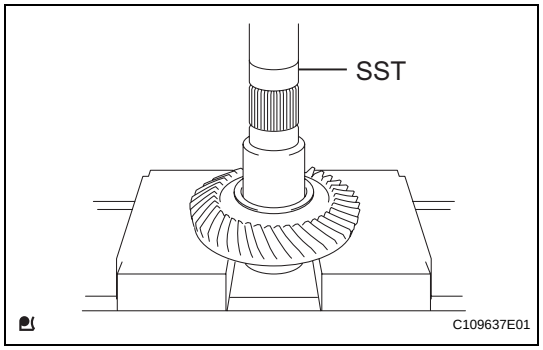
18. REMOVE RING GEAR MOUNTING CASE BEARING (for RH side)



(a) Using SST, remove the bearing from the mounting case.

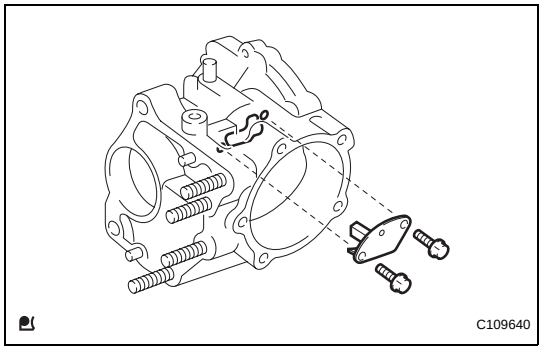
SST 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04061, 09957-04010, 09958-04011), 09950-60010 (09951-00540)

(b) Using SST and a hammer, tap out the bearing (race) from the cover.



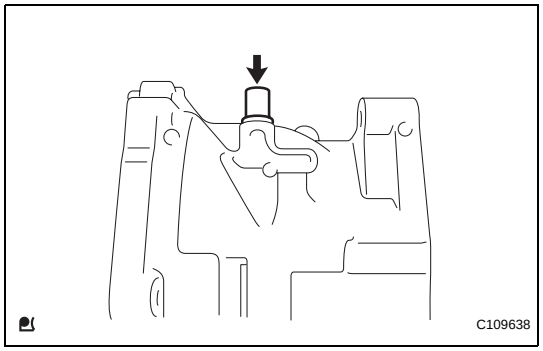
SST 09636-20010

19. REMOVE TRANSFER RING GEAR MOUNTING CASE NO. 2 WASHER



20. REMOVE SHAFT SNAP RING

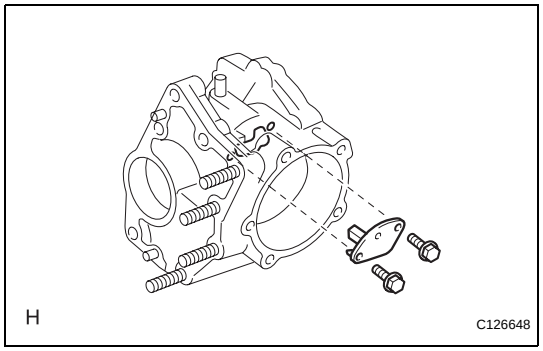
(a) Using a snap ring expander, remove the snap ring.



21. REMOVE TRANSFER RING GEAR MOUNTING CASE

(a) Using SST and a press, press out the ring gear from the mounting case.
SST 09950-60010 (09951-00400)

22. REMOVE BREATHER OIL DEFLECTOR



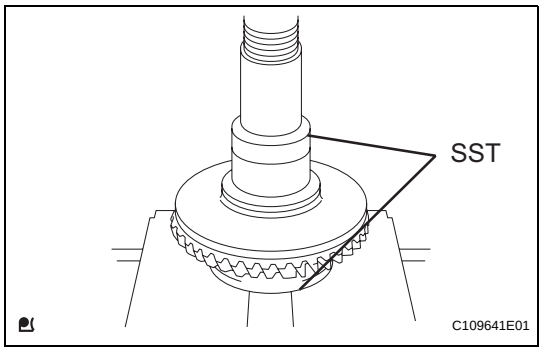
(a) Remove the 2 bolts and oil deflector.

23. REMOVE TRANSFER CASE BREATHER PLUG

(a) Remove the breather plug from the transfer case.

REASSEMBLY

1. INSTALL BREATHER OIL DEFLECTOR

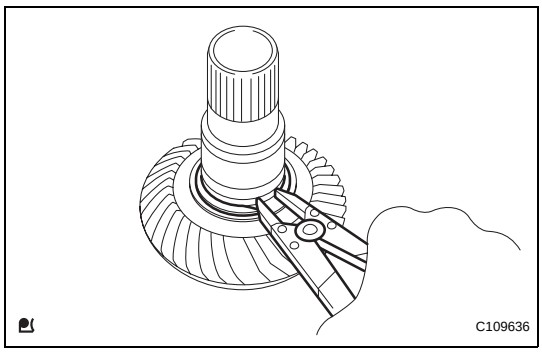


(a) Install the deflector with the 2 bolts.
Torque: 6.5 N*m (66 kgf*cm, 58 in.*lbf)

2. INSTALL RING GEAR MOUNTING CASE PLATE WASHER

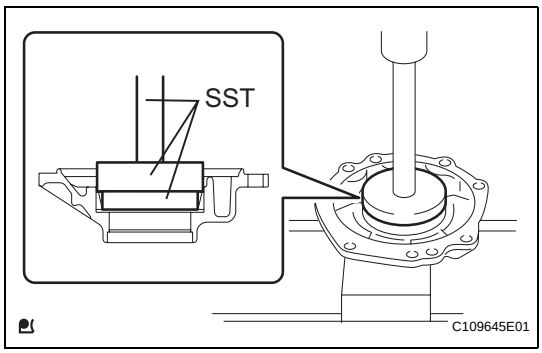
(a) Install a new washer to the transfer case.
HINT:
Install a washer of the same thickness as before.

3. INSTALL TRANSFER RING GEAR MOUNTING CASE NO. 2 WASHER



(a) Install a new washer to the cover.
HINT:
Install a washer of the same thickness as before.

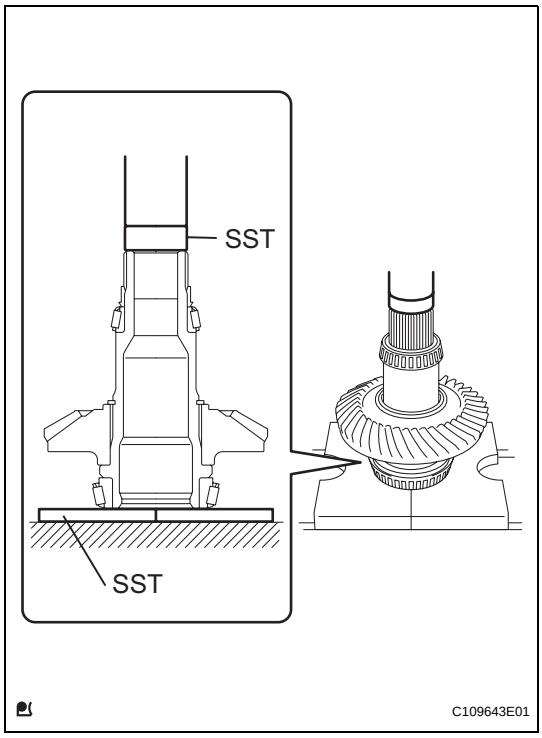
4. INSTALL TRANSFER RING GEAR MOUNTING CASE



(a) Using SST and a press, press in the mounting case to the ring gear.

SST 09316-12010, 09950-60010 (09951-00560)

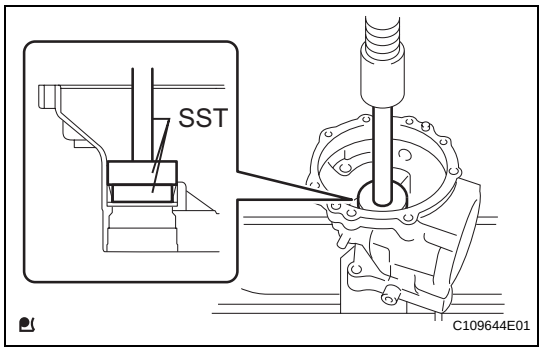
5. INSTALL SHAFT SNAP RING



(a) Using SST, install a new snap ring.

6. INSTALL RING GEAR MOUNTING CASE BEARING (for RH side)

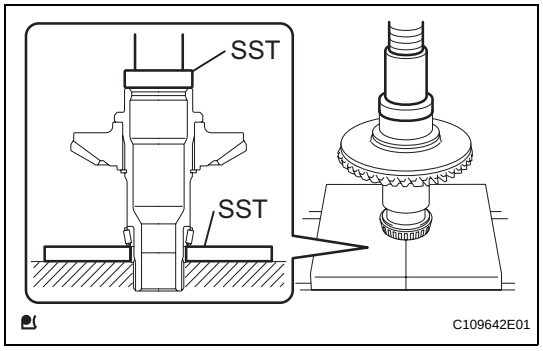
(a) Using SST and a press, press in the bearing (race) to the cover.



SST 09950-60020 (09951-00750, 09952-06010), 09950-70010 (09951-07150)

(b) Using SST and a press, press in the bearing to the mounting case.

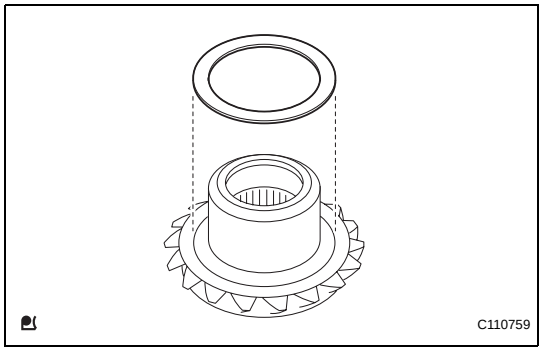
SST 09336-16010, 09950-60010 (09951-00400)



(c) Apply gear oil to the bearing.

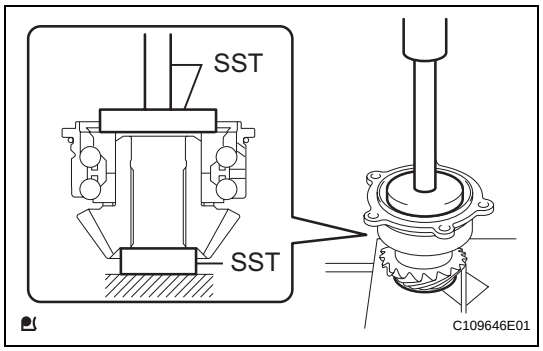
7. INSTALL RING GEAR MOUNTING CASE BEARING (for LH side)

(a) Using SST and a press, press in the bearing (race) to the case.



SST 09950-60010 (09951-00540, 09951-00620, 09952-06010), 09950-70010 (09951-07150)

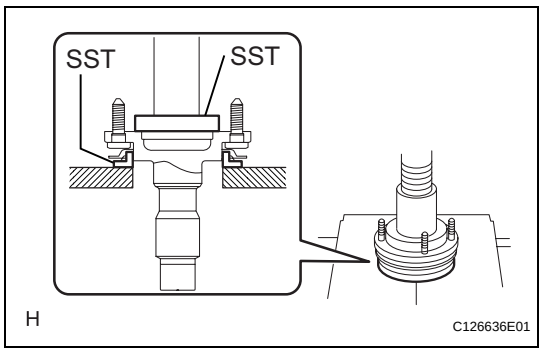
(b) Using SST and a press, press in the bearing to the mounting case.



SST 09336-16010, 09950-60010 (09951-00560)

(c) Apply gear oil to the mounting case bearing.

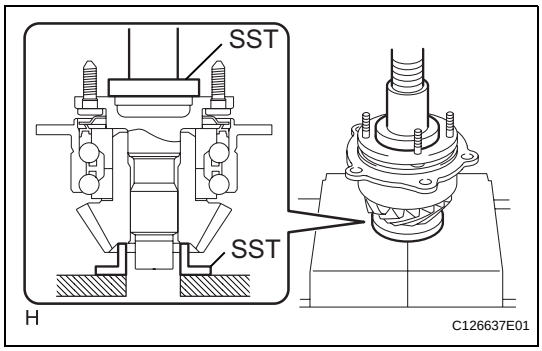
8. INSTALL TRANSFER OUTPUT WASHER



(a) Install the washer to the driven pinion.

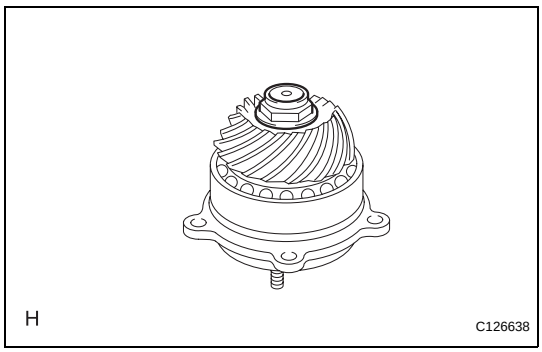
9. INSTALL TRANSFER DRIVEN PINION FRONT BEARING

(a) Using SST and a press, press in the bearing to the driven pinion.



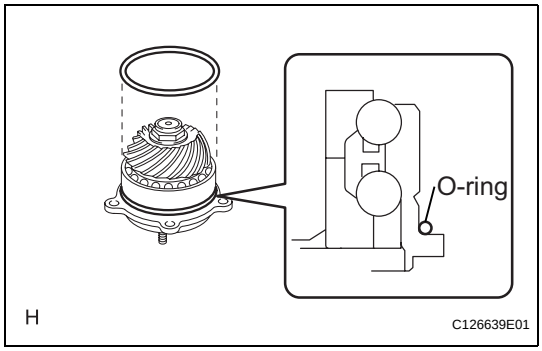
SST 09950-60010 (09951-00440), 09950-60020 (09951-00750), 09950-70010 (09951-07150)

10. INSTALL TRANSFER OUTPUT REAR SHAFT DUST DEFLECTOR



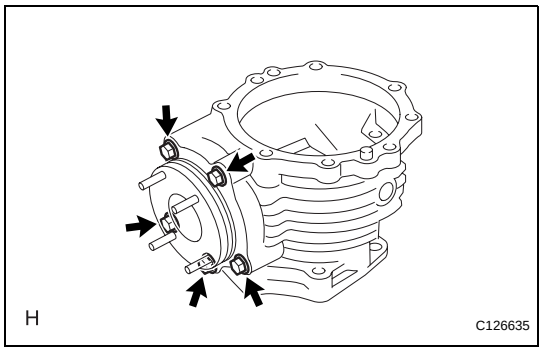
(a) Using SST and a press, press in the dust deflector to the out put shaft.

SST 09316-12010

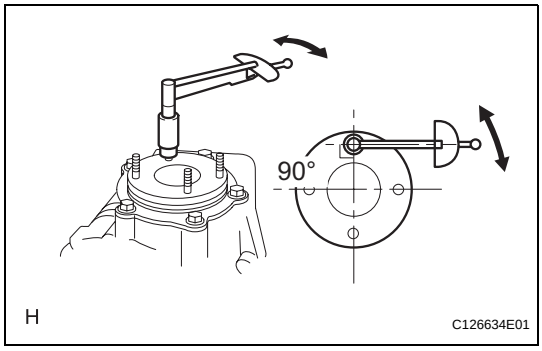


11. INSTALL TRANSFER OUTPUT REAR SHAFT SUB-ASSEMBLY

(a) Using SST and a press, press in the output rear shaft to the driven pinion.
SST 09316-12010

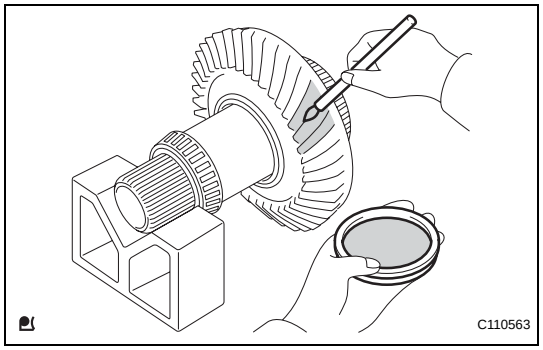


(b) Install a new nut to the output shaft.
Torque: 360 N*m (3700 kgf*cm, 266 ft.*lbf)

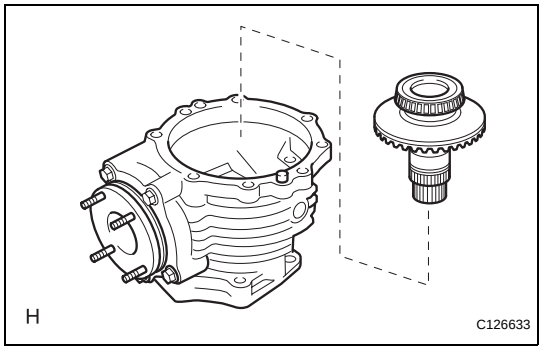


12. INSTALL TRANSFER SHAFT

(a) Install a new O-ring to the driven pinion.

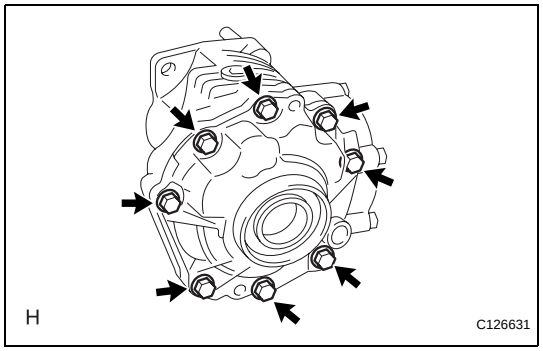


(b) Install the driven pinion to the case with the 5 bolts.
Torque: 38 N*m (390 kgf*cm, 28 ft.*lbf)



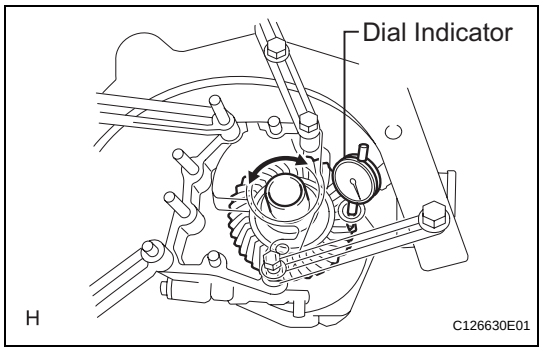
13. INSPECT DRIVEN PINION PRELOAD

(a) Using a torque wrench, measure the preload.
Standard preload (turning):
0.17 to 1.86 N*m (1.7 to 19.0 kgf*cm, 1.5 to 16.5 in.*lbf)



14. INSTALL TRANSFER RING GEAR

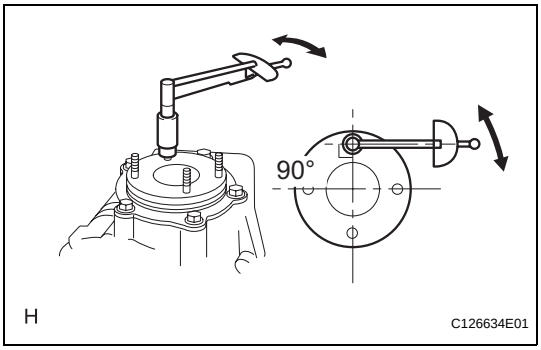
(a) Coat 3 or 4 teeth at the 4 different positions on the ring gear with Prussian blue.



(b) Install the mounting case to the transfer case.

15. INSTALL NO. 1 TRANSFER CASE COVER

(a) Install the transfer cover with the 8 bolts.
Torque: 47 N*m (480 kgf*cm, 35 ft.*lbf)



16. ADJUST RING GEAR BACKLASH

(a) Using a dial indicator, measure the backlash of the ring gear at 3 positions at least.
Standard backlash:
0.10 to 0.20 mm (0.0039 to 0.0079 in.)
HINT:
The measure values should be used as reference when selecting washer, so take a note of the values. If the backlash is not within the specification, replace the washer on the ring gear side with one of a different thickness using the following procedure.
Standard washer thickness

Mark	Thickness	Mark	Thickness
A0	1.97 mm (0.0776 in.)	C0	2.37 mm (0.0933 in.)
A1	1.99 mm (0.0783 in.)	C1	2.39 mm (0.0941 in.)
A2	2.01 mm (0.0791 in.)	C2	2.41 mm (0.0949 in.)
A3	2.03 mm (0.0799 in.)	C3	2.43 mm (0.957 in.)

Mark	Thickness	Mark	Thickness
A4	2.05 mm (0.0807 in.)	C4	2.45 mm (0.0965 in.)
A5	2.07 mm (0.0815 in.)	C5	2.47 mm (0.0972 in.)
A6	2.09 mm (0.0823 in.)	C6	2.49 mm (0.098 in.)
A7	2.11 mm (0.0831 in.)	C7	2.51 mm (0.0988 in.)
A8	2.13 mm (0.0839 in.)	C8	2.53 mm (0.0996 in.)
A9	2.15 mm (0.0846 in.)	C9	2.55 mm (0.1004 in.)
B0	2.17 mm (0.0854 in.)	D0	2.57 mm (0.1012 in.)
B1	2.19 mm (0.0862 in.)	D1	2.59 mm (0.102 in.)
B2	2.21 mm (0.087 in.)	D2	2.61 mm (0.1028 in.)
B3	2.23 mm (0.0878 in.)	D3	2.63 mm (0.1035 in.)
B4	2.25 mm (0.0886 in.)	D4	2.65 mm (0.1043 in.)
B5	2.27 mm (0.0894 in.)	D5	2.67 mm (0.1051 in.)
B6	2.29 mm (0.0902 in.)	D6	2.39 mm (0.0941 in.)
B7	2.31 mm (0.0909 in.)	D7	2.71 mm (0.1067 in.)
B8	2.33 mm (0.0917 in.)	D8	2.73 mm (0.1075 in.)
B9	2.35 mm (0.0925 in.)	D9	2.75 mm (0.1083 in.)

17. ADJUST TOTAL PRELOAD

(a) Using a torque wrench, measure the total preload.

Driven pinion preload:

0.28 to 0.79 N*m (2.86 to 8.06 kgf*cm, 2.48 to 7.0 in.*lbf)

HINT:

Turn the driven pinion counterclockwise and clockwise several times.

If the preload is not as standard, select a proper washer again.

Standard washer thickness

Mark	Thickness	Mark	Thickness
A0	1.18 mm (0.0465 in.)	C2	1.62 mm (0.0638 in.)
A1	1.20 mm (0.0472 in.)	C3	1.64 mm (0.0646 in.)
A2	1.22 mm (0.048 in.)	C4	1.66 mm (0.0654 in.)
A3	1.24 mm (0.0488 in.)	C5	1.68 mm (0.0661 in.)
A4	1.26 mm (0.0496 in.)	C6	1.70 mm (0.067 in.)
A5	1.28 mm (0.0504 in.)	C7	1.72 mm (0.0677 in.)

Mark	Thickness	Mark	Thickness
A6	1.30 mm (0.0512 in.)	C8	1.74 mm (0.0685 in.)
A7	1.32 mm (0.052 in.)	C9	1.76 mm (0.0693 in.)
A8	1.34 mm (0.0528 in.)	D0	1.78 mm (0.0701 in.)
A9	1.36 mm (0.535 in.)	D1	1.80 mm (0.0709 in.)
B0	1.38 mm (0.0543 in.)	D2	1.82 mm (0.0717 in.)
B1	1.40 mm (0.0551 in.)	D3	1.84 mm (0.0724 in.)
B2	1.42 mm (0.0559 in.)	D4	1.86 mm (0.0732 in.)
B3	1.44 mm (0.0567 in.)	D5	1.88 mm (0.074 in.)
B4	1.46 mm (0.0575 in.)	D6	1.90 mm (0.0748 in.)
B5	1.48 mm (0.0583 in.)	D7	1.92 mm (0.0756 in.)
B6	1.50 mm (0.0591 in.)	D8	1.94 mm (0.0764 in.)
B7	1.52 mm (0.0598 in.)	D9	1.96 mm (0.0772 in.)
B8	1.54 mm (0.0606 in.)	E0	1.98 mm (0.0781 in.)
B9	1.56 mm (0.0614 in.)	E1	2.00 mm (0.0787 in.)
C0	1.58 mm (0.0622 in.)	E2	2.02 mm (0.0795 in.)
C1	1.60 mm (0.063 in.)	-	-

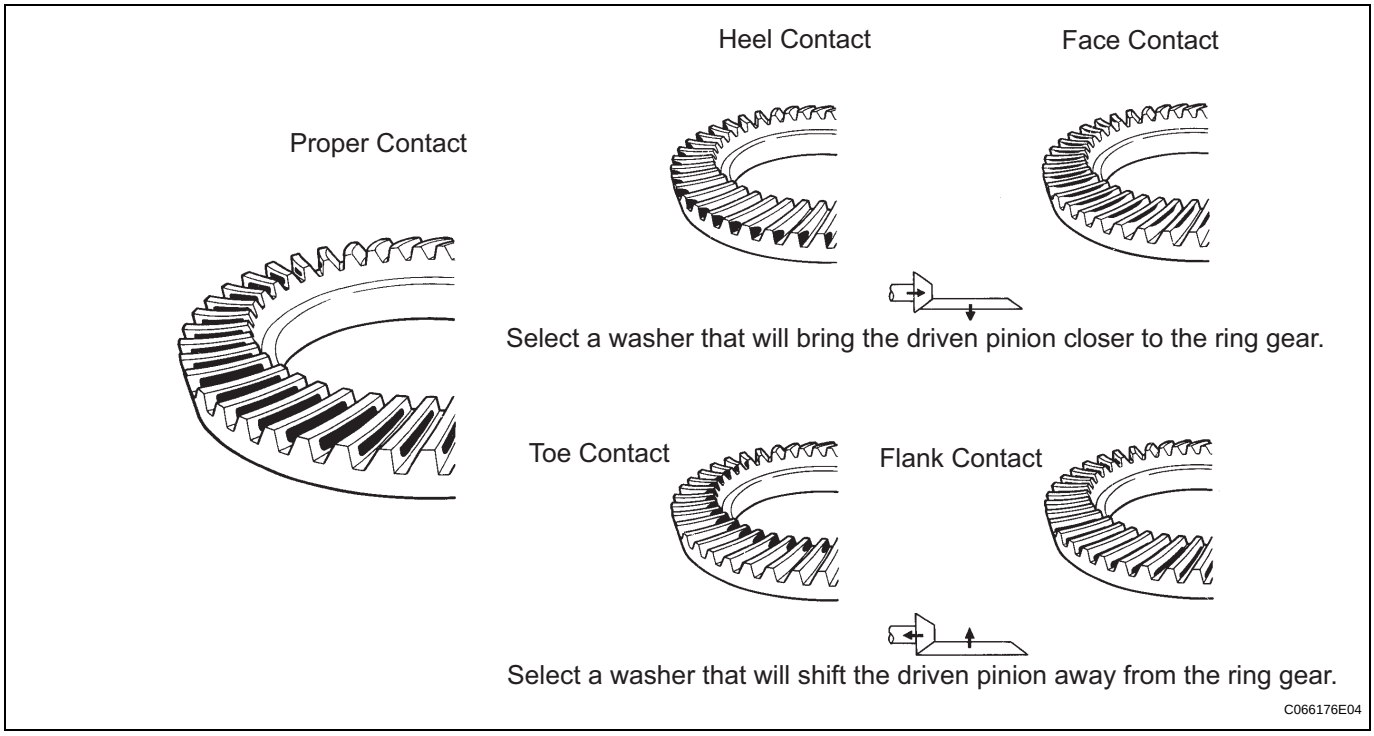
18. INSPECT TOOTH CONTACT BETWEEN RING GEAR AND DRIVE PINION

(a) Rotate the ring gear several times.

(b) Peer into the service filler hole or remove the ring gear to check the tooth contact pattern.

NOTICE:

- **Check the tooth contact pattern at 4 or more positions around the circumference of the ring gear.**
- **When replacing washers (backlash adjustment, preload adjustment or tooth contact adjustment), reapply Prussian blue.**



HINT:

The Prussian blue pattern indicates the tooth contact points.

(c) If the teeth are not contacting properly, select a driven pinion bearing front (outer race) side washer from the chart and install the washer.

NOTICE:

If a washer (for tooth contact adjustment) is replaced with one of a different thickness, the backlash will also change. Therefore, it is necessary to adjust the backlash.

(d) Perform the following procedures for face or flank contact.
  (1) Use the backlash adjustment washer (ring gear mounting case washer) to move and adjust the ring gear. (*1)
  (2) Perform the ring gear and driven pinion tooth contact inspection again.
  HINT:
  If the tooth contact is incorrect, repeat step *1.
  (3) Perform the ring gear and driven pinion backlash inspection. If the ring gear and driven pinion backlash is not within the standard range, replace the ring gear and driven pinion with new ones.

(e) Perform the following procedures for heel or toe contact.
  (1) Select a transfer driven pinion bearing front (outer race) side washer (transfer output shaft washer) from the chart and install the washer.
  NOTICE:
  Do not reuse a transfer pinion bearing spacer.
  Standard washer thickness

Mark	Thickness	Mark	Thickness
01	1.02 mm (0.0402 in.)	15	1.30 mm (0.0512 in.)
02	1.04 mm (0.0409 in.)	16	1.32 mm (0.0520 in.)
03	1.06 mm (0.0417 in.)	17	1.34 mm (0.0528 in.)
04	1.08 mm (0.0425 in.)	18	1.36 mm (0.0535 in.)

Mark	Thickness	Mark	Thickness
05	1.10 mm (0.0433 in.)	19	1.38 mm (0.0543 in.)

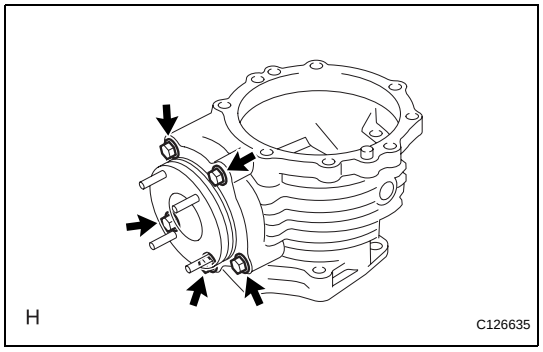
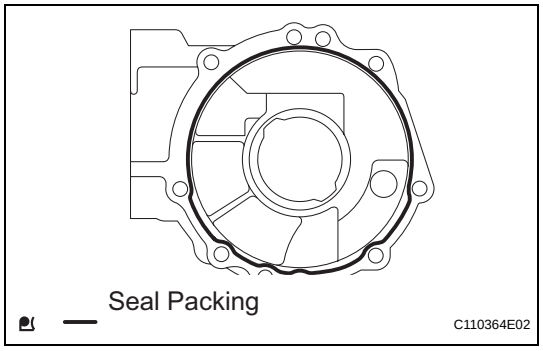
14	1.28 mm (0.0504 in.)	28	1.56 mm (0.0614 in.)

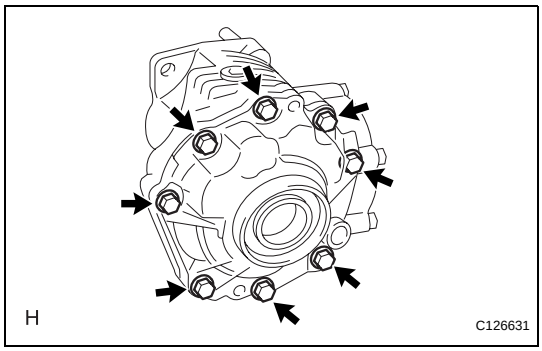


19. COMPLETELY INSTALL TRANSFER SHAFT



(a) Using a screwdriver and hammer, unstake the pinion gear nut.

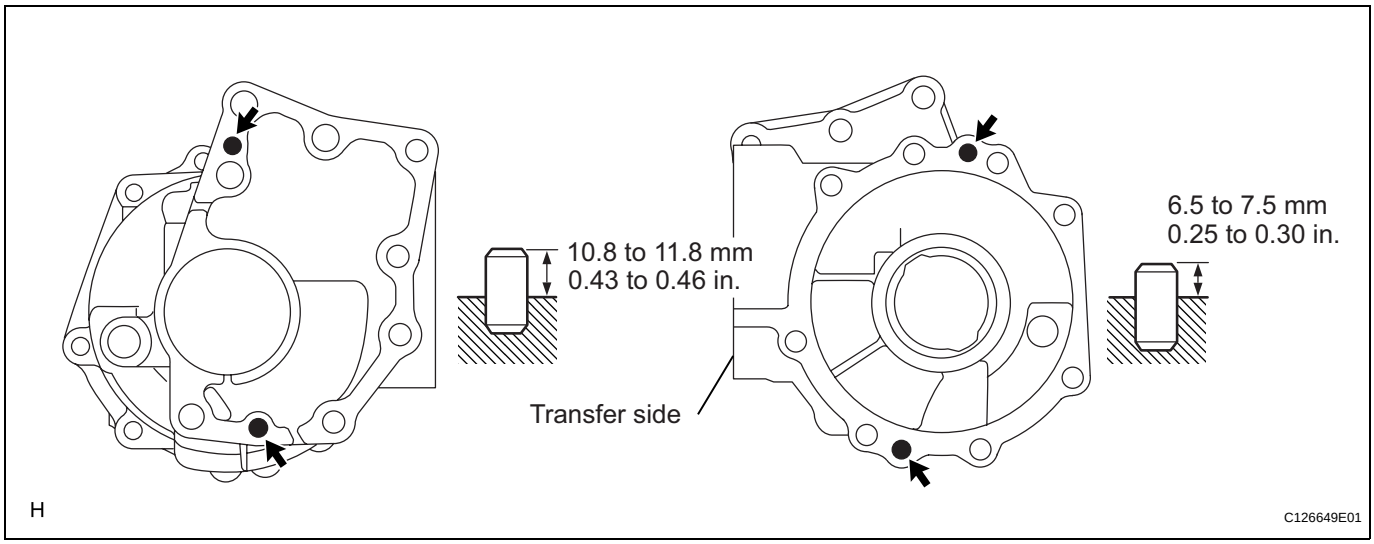
(b) Install the 5 bolts with the transfer shaft to the case.
Torque: 38 N*m (390 kgf*cm, 28 ft.*lbf)



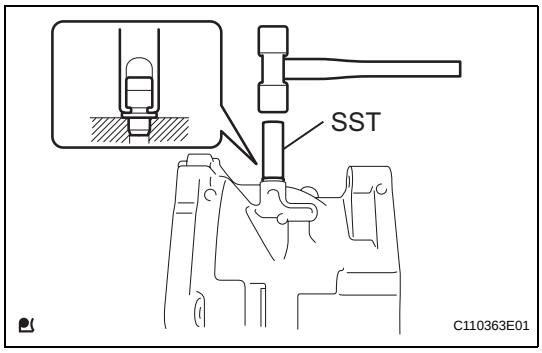
(c) Install the No. 1 transfer case cover.

(1) Using white gasoline, clean the contact surfaces of the housing and cover.

(2) Apply seal packing to the cover as shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent



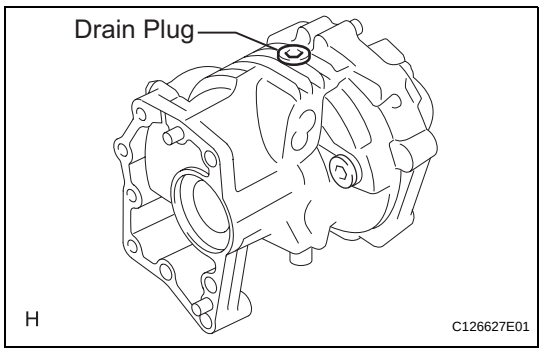
(3) Install the 8 bolts with the cover to the case.
Torque: 47 N*m (480 kgf*cm, 35 ft.*lbf)



20. INSTALL TRANSFER CASE OIL SEAL LH (See page TF-48)

21. INSTALL TRANSFER CASE OIL SEAL RH (See page TF-51)

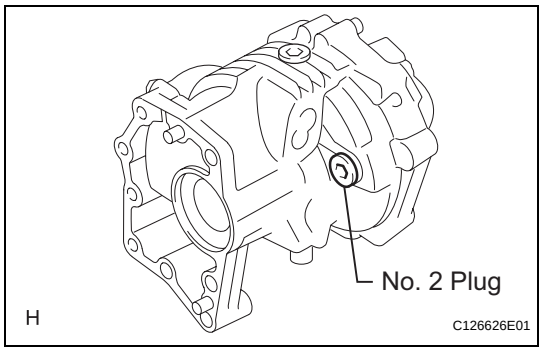
22. INSTALL TRANSFER CASE STRAIGHT PIN



(a) Using a plastic-faced hammer, install the straight pin as shown in the straight pin.

23. INSTALL TRANSFER CASE BREATHER PLUG

(a) Using SST and a hammer, tap in a new breather plug.
SST 09612-10093 (09612-10061)

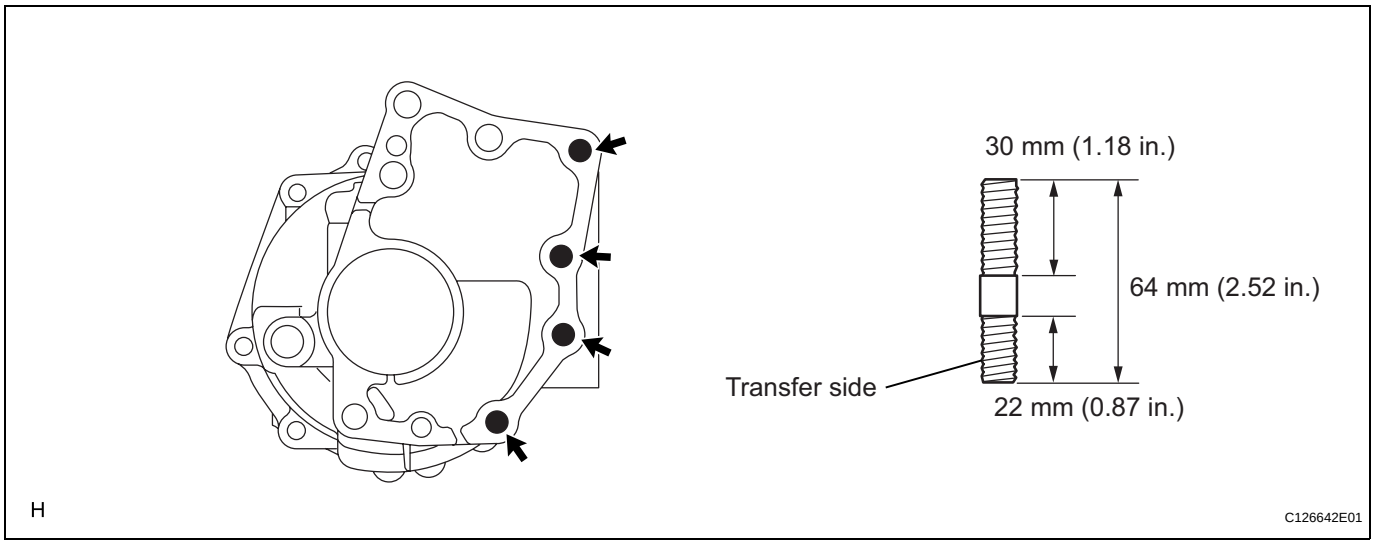


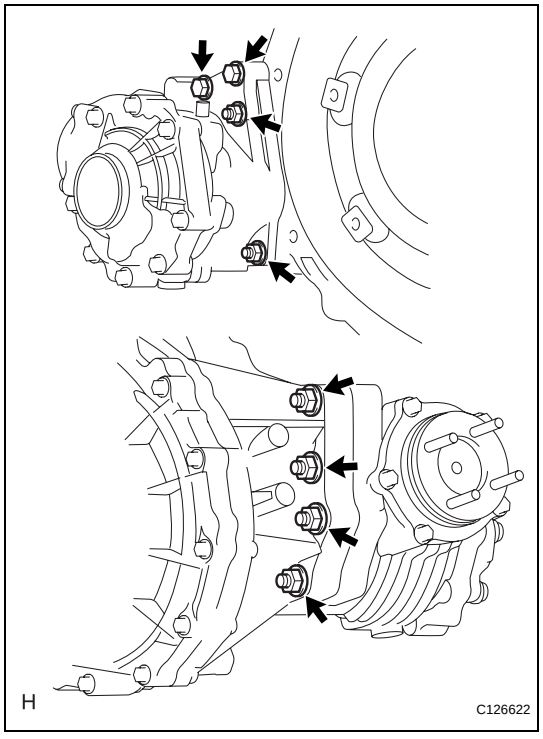
24. INSTALL TRANSFER DRAIN PLUG

(a) Install a new gasket and the plug to the transfer case.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)

25. INSTALL TRANSFER CASE NO. 1 PLUG

(a) Install a new gasket and the plug to the transfer case.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)





26. INSTALL TRANSFER CASE NO. 2 PLUG

(a) Install a new gasket and the plug to the transfer case.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)

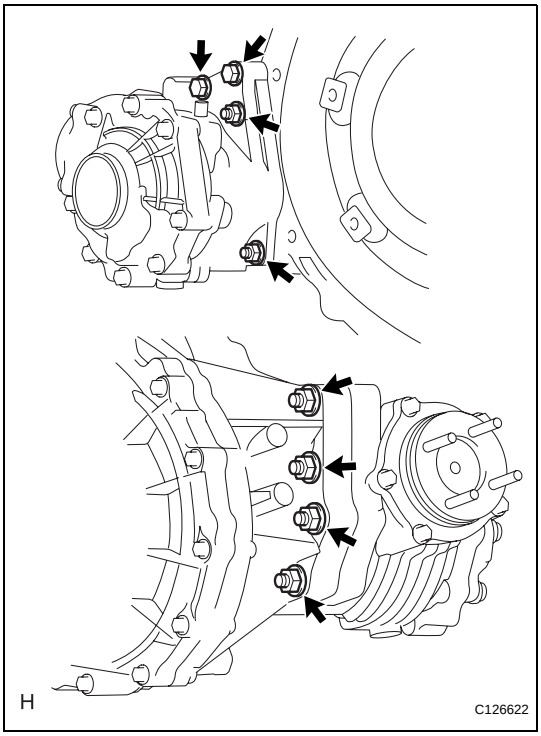
27. INSTALL TRANSFER AND TRANSAXLE SETTING STUD BOLT

(a) Apply sealer to stud bolts.
(b) Install the stud bolts.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)
HINT:
Install the transfer side of the stud bolt (see illustration below) to the case.

INSTALLATION

(2005/11-2006/01)

1. INSTALL TRANSFER ASSEMBLY



(a) Install the transfer to the transaxle with the 6 nuts and 2 bolts.
Torque: 69 N*m (700 kgf*cm, 51 ft.*lbf)

2. INSTALL REAR ENGINE MOUNTING BRACKET (See page AX-151)

3. INSTALL ENGINE ASSEMBLY WITH AUTOMATIC TRANSAXLE

(a) Install the engine with automatic transaxle (see page EM-105).

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

INSTALLATION

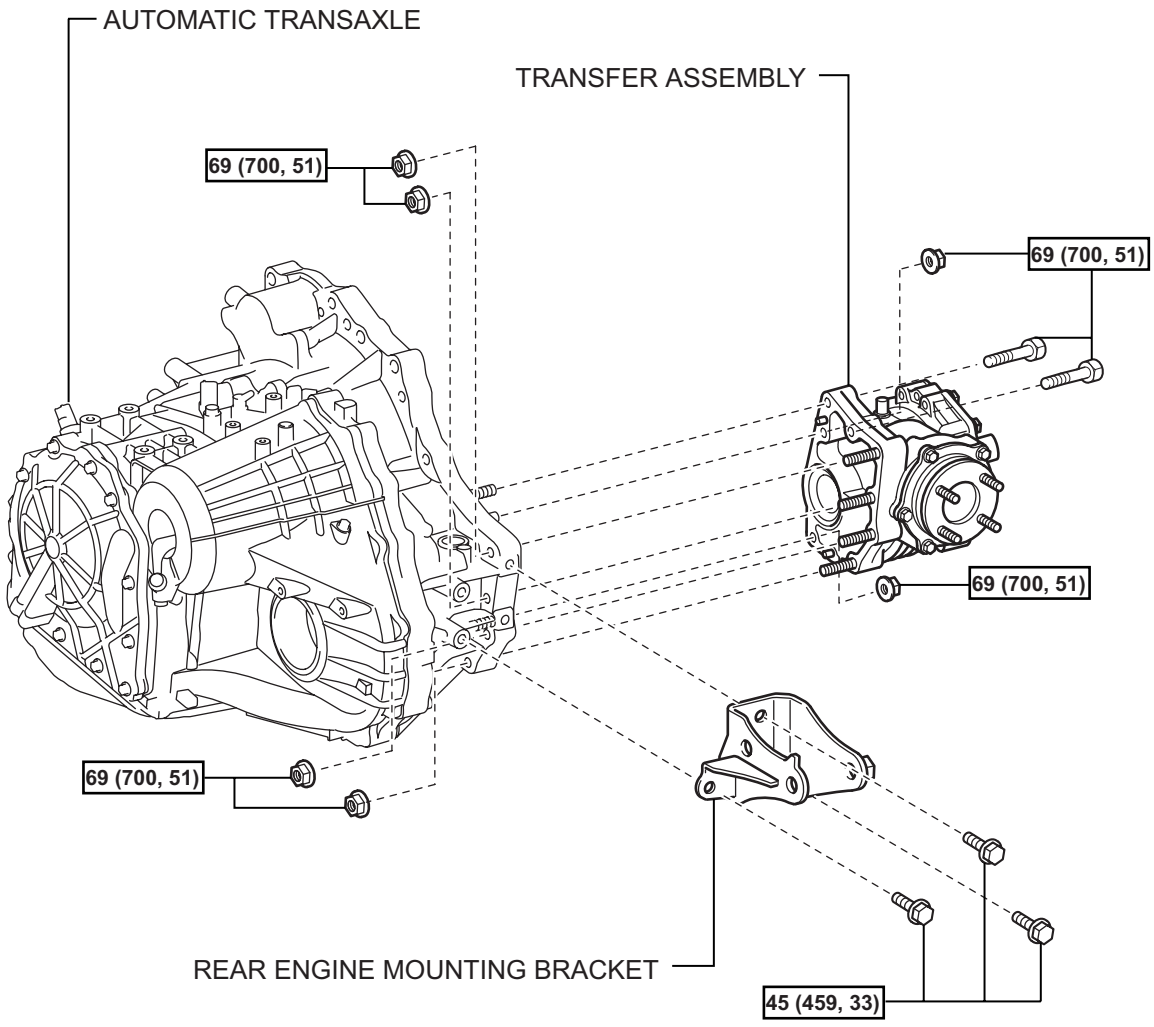
(2006/01-)

1. **INSTALL TRANSFER ASSEMBLY**
   (a) Install the transfer to the transaxle with the 6 nuts and 2 bolts.
   Torque: 69 N*m (700 kgf*cm, 51 ft.*lbf)

2. **REMOVE REAR ENGINE MOUNTING BRACKET (for 2GR-FE) (See page AX-174)**

3. **INSTALL REAR ENGINE MOUNTING BRACKET (for 2AZ-FE) (See page AX-151)**

4. **INSTALL ENGINE ASSEMBLY WITH AUTOMATIC TRANSAXLE**
   (a) for 2GR-FE:
   Install the engine with automatic transaxle (see page EM-21).
   (b) for 2AZ-FE:
   Install the engine with automatic transaxle (see page EM-105).



5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

TRANSFER ASSEMBLY

TRANSFER CASE OIL SEAL (for LH Side)

COMPONENTS

N*m (kgf*cm, ft.*lbf) : Specified torque

● Non-reusable part

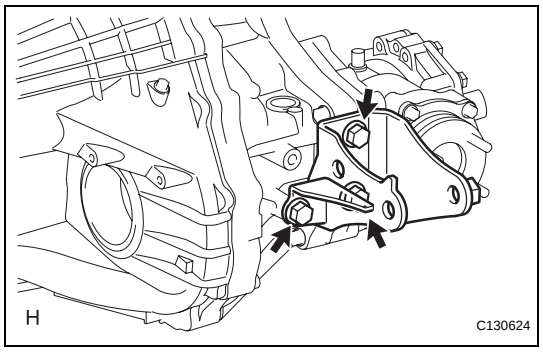
← Apply MP grease

C126557E04

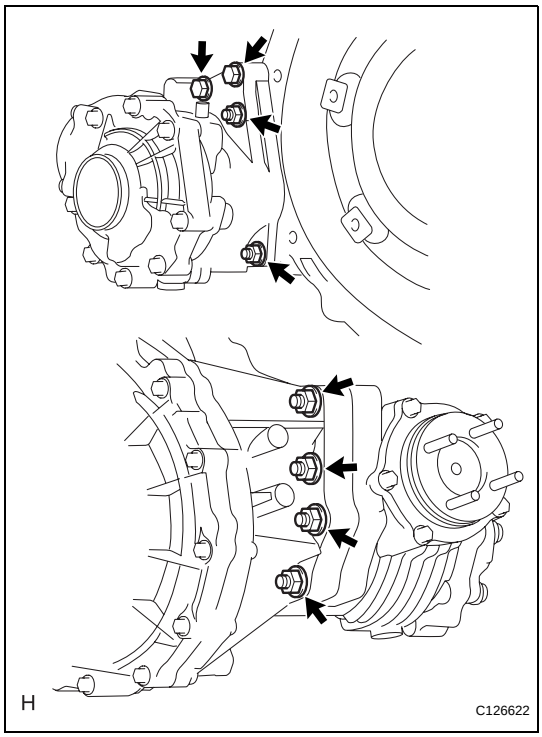
REPLACEMENT

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

2. **DRAIN AUTOMATIC TRANSAXLE FLUID**
   (a) Remove the drain plug and gasket, and drain ATF.
   (b) Install a new gasket and drain plug.
   Torque: 47 N*m (479 kgf*cm, 35 ft.*lbf)



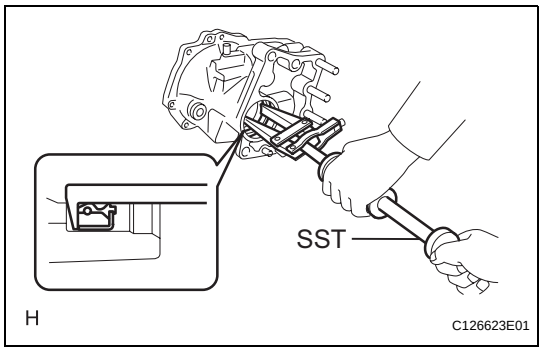
3. **DRAIN TRANSAXLE OIL**
   (a) Remove the filler plug and gasket.
   (b) Remove the drain plug and gasket, and drain the oil.
   (c) Install a new gasket and the drain plug.
   Torque: 39 N*m (398 kgf*cm, 28 ft.*lbf)



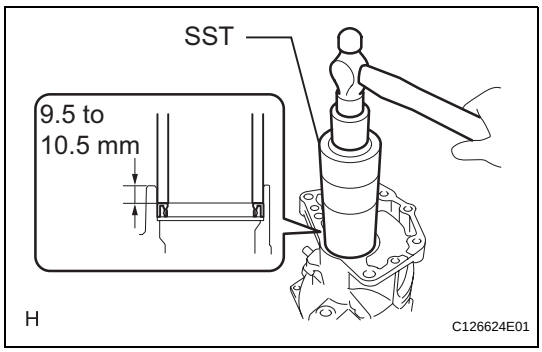
4. **DRAIN TRANSFER OIL**
   (a) Remove the drain plug and gasket, and drain the oil.
   (b) Install a new gasket and drain plug.
   Torque: 39 N*m (398 kgf*cm, 28 ft.*lbf)

5. **REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-3)**

6. **REMOVE REAR ENGINE MOUNTING BRACKET**
   (a) Remove the 3 bolts and mounting bracket.



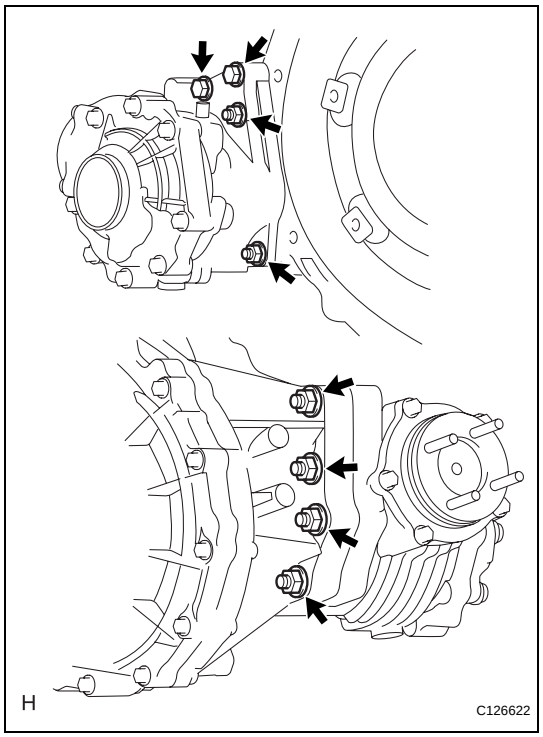
7. **REMOVE AUTOMATIC TRANSAXLE ASSEMBLY**
   (a) Remove the automatic transaxle (see page EM-98).



8. REMOVE TRANSFER ASSEMBLY

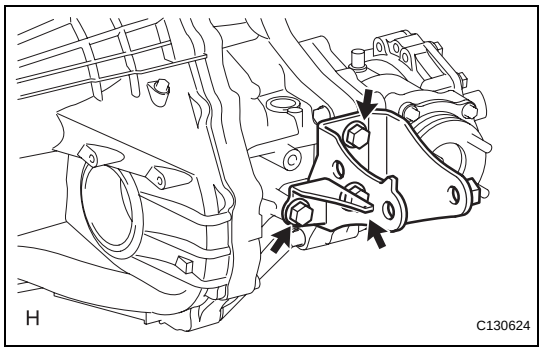
(a) Remove the 2 bolts, 6 nuts and transfer from the manual transaxle.

9. REMOVE TRANSFER CASE OIL SEAL



(a) Using SST, tap out the transfer case oil seal.
SST 09308-00010

10. INSTALL TRANSFER CASE OIL SEAL



(a) Coat a new oil seal lip with MP grease.

(b) Using SST and a hammer, tap in the transfer case oil seal.
SST 09316-60011 (09316-00011)
Standard depth:
9.5 to 10.5 mm (0.37 to 0.41 in.)
NOTICE:
Do not damage the oil seal lip.

11. **INSTALL TRANSFER ASSEMBLY**
    (a) Install the transfer with the 6 nuts and 2 bolts.
    Torque: 69 N*m (700 kgf*cm, 51 ft.*lbf)

12. **INSTALL AUTOMATIC TRANSAXLE ASSEMBLY**
    (a) Install automatic transaxle (see page EM-105).

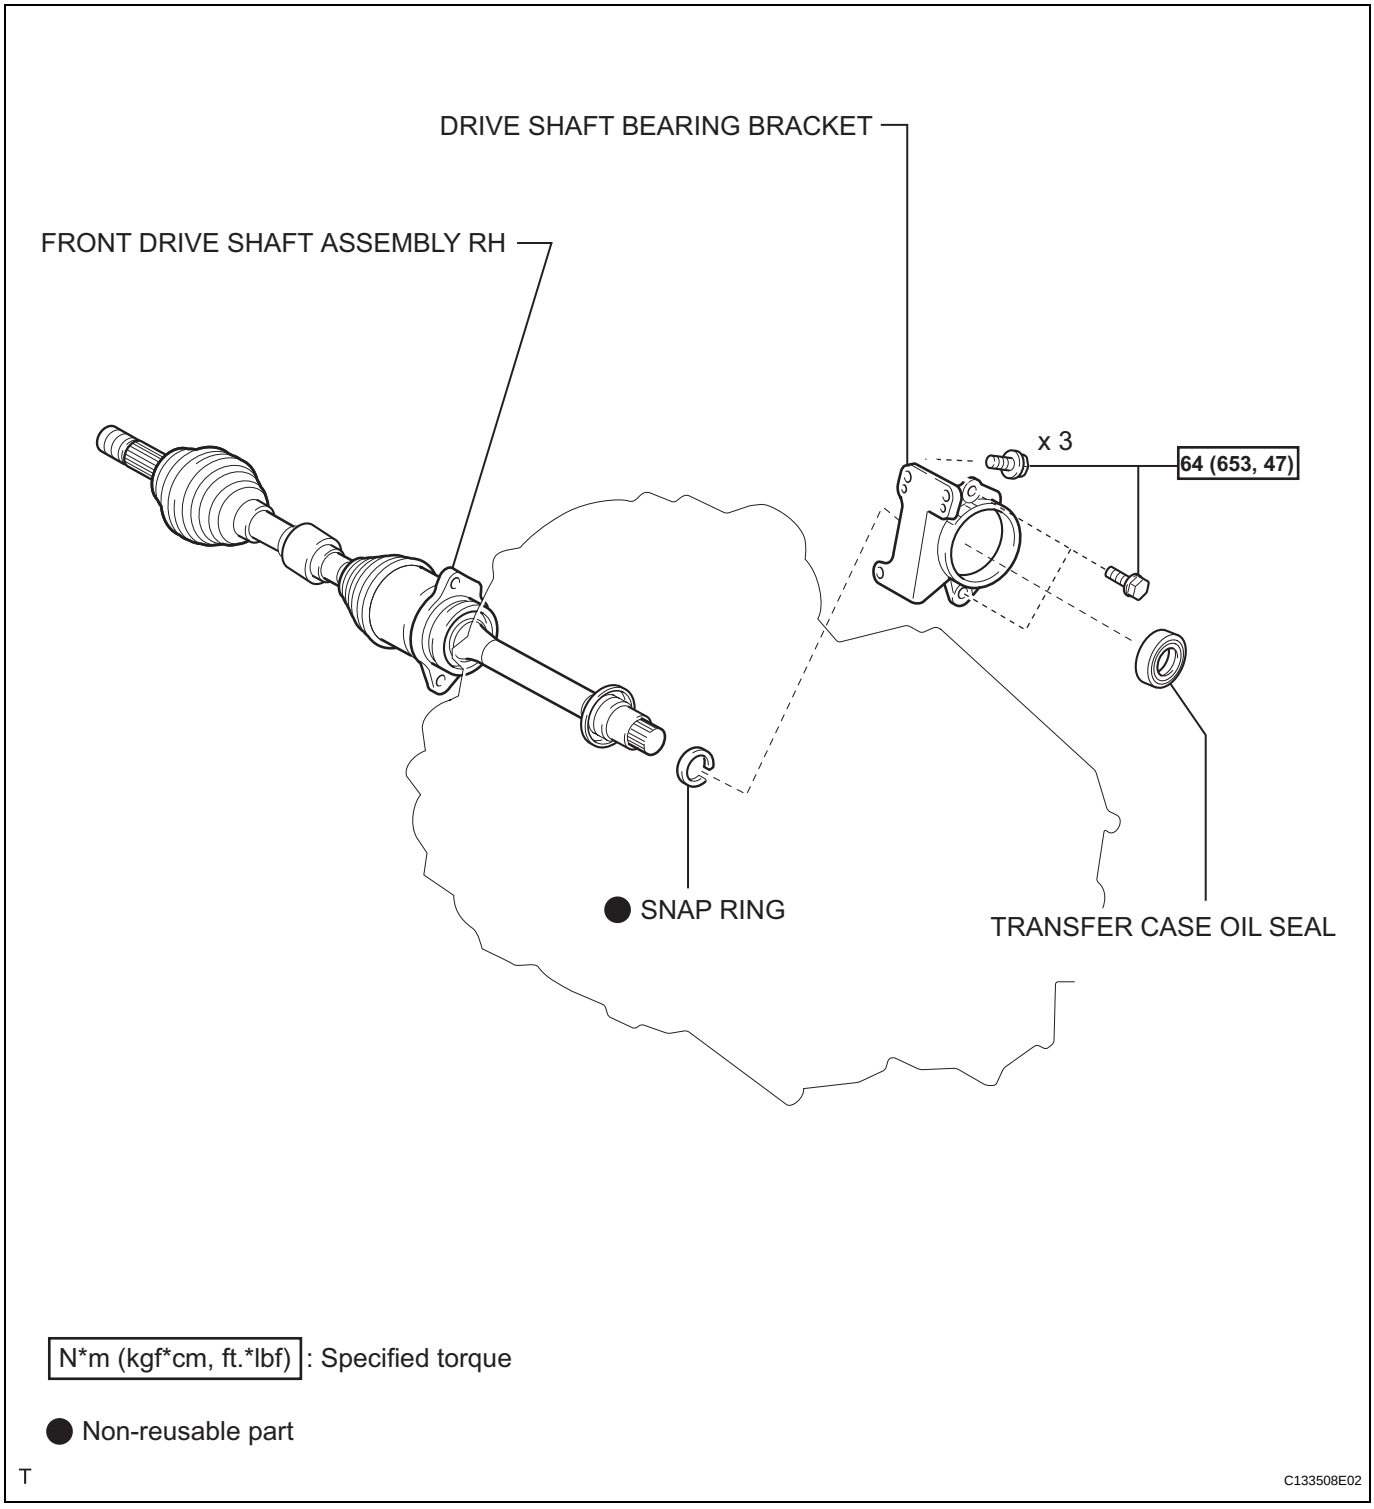
13. **INSTALL REAR ENGINE MOUNTING BRACKET**
    (a) Install the mounting bracket with the 3 bolts.
    Torque: 45 N*m (459 kgf*cm, 33 ft.*lbf)

14. **INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY (See page PR-5)**

15. **ADD AUTOMATIC TRANSAXLE FLUID**

16. **INSPECT AUTOMATIC TRANSAXLE FLUID (See page AX-102)**

17. **ADD TRANSFER OIL**



18. **INSPECT TRANSFER OIL (See page TF-45)**

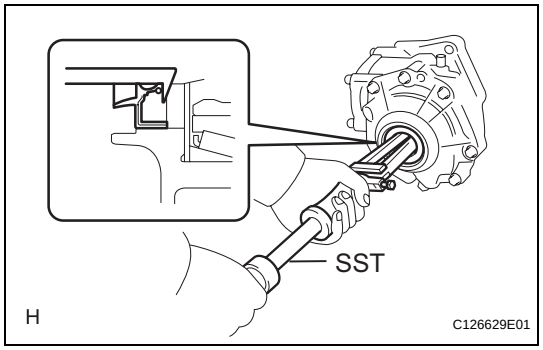
19. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

20. **INSPECT SRS WARNING LIGHT**
    (a) Check the SRS warning light (see page RS-37).

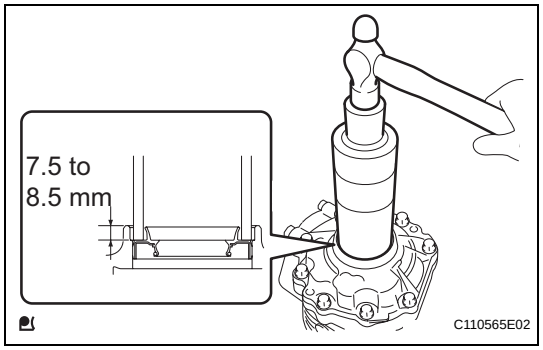
TRANSFER CASE OIL SEAL (for RH Side)

COMPONENTS

REPLACEMENT



1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   NOTICE:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.



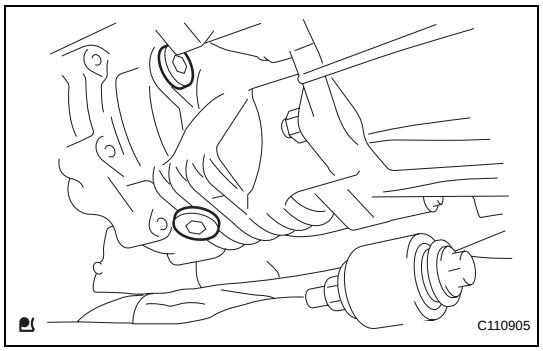
2. **DRAIN TRANSFER OIL**
   (a) Remove the drain plug and gasket, and drain the oil.
   (b) Install a new gasket and the drain plug.
   Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)

3. **REMOVE FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-41)**

4. **REMOVE DRIVE SHAFT BEARING BRACKET**
   (a) Remove the 3 bolts and bracket from the transaxle.

5. **REMOVE TRANSFER CASE OIL SEAL (for RH Side)**
   (a) Using SST, tap out the oil seal from the transfer.
   SST 09308-00010

6. **INSTALL TRANSFER CASE OIL SEAL (for RH Side)**
   (a) Coat a new oil seal lip with MP grease.
   (b) Using SST and a hammer, tap in the oil seal.
   SST 09316-60011 (09316-00011)
   Standard depth:
   7.5 to 8.5 mm (0.30 to 0.33 in.)
   NOTICE:
   Do not damage the oil seal lip.



7. **INSTALL DRIVE SHAFT BEARING BRACKET**
   (a) Install the bracket to the transaxle with the 3 bolt.
   Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)

8. **INSTALL FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-65)**

9. **ADD TRANSFER OIL**

10. **INSPECT TRANSFER OIL (See page TF-45)**

11. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

TRANSFER OIL

ON-VEHICLE INSPECTION

1. CHECK TRANSFER OIL

(a) Remove the transfer case plug No. 2 (for filler) and gasket.

(b) Check that the oil level is between 0 to 5.0 mm (0 to 0.20 in.) from the bottom lip of the case plug (for filler) hole.

If the result is not as specified, add transfer oil.

Oil grade:
GL-5
Viscosity:
SAE 80W-90
Standard capacity:
0.45 liter (0.48 US qts, 0.40 Imp. qts)
NOTICE:
- **When adding oil, pour it slowly.**
- **Too much or too little oil will lead to transfer problems.**

(c) When the oil level is too low, check for oil leakage.

(d) Install a new gasket into the case plug (for filler) and then tighten the plug.

Torque: 39 N*m (398 kgf*cm, 28 ft.*lbf)

2. ADD TRANSFER OIL

(a) Remove the case plug (for filler) and gasket.

(b) Pour oil so that the oil level is between 0 to 5.0 mm (0 to 0.197 in.) from the bottom lip of the case plug (for filler) hole.

NOTICE:
- **When adding oil, pour it slowly.**
- **Add oil a little at a time, waiting several minutes between each addition of oil.**

(c) Wait approximately 5 minutes and check that the oil level has not changed.

(d) Install a new gasket and the case plug (for filler).

Torque: 39 N*m (398 kgf*cm, 28 ft.*lbf)

PROBLEM SYMPTOMS TABLE

(2006/01-)

HINT:
