FRONT WIPER DEICER SYSTEM

■ DESCRIPTION

The front wiper deicer system uses a heater element in the front windshield glass to help reduce the formation of ice on the front wipers.

- This system is controlled by the air conditioning amplifier.
- This system is activated when the ignition switch is turned ON, and the front wiper deicer button is pushed. The air conditioning amplifier operates to keep the rear window de fogger, mirror heater, and the front wiper deicer ON for approx. 15 minutes.
- The front wiper deicer system is optional equipment for cold area specification models.
