DRIVE SHAFT

■ DESCRIPTION

- The front drive shafts for 4WD models use the double offset type CVJ (Constant Velocity Joint) on the differential side, and the Rzeppa type CVJ on the wheel side. Both the right and left have the same length to ensure straightline stability.
- The rear drive shafts for all models use the double offset type CVJ (Constant Velocity Joint) on the differential side, and the Rzeppa type CVJ on the wheel side.
