RSES (Rear Seat Entertainment System)

- The RSES (Rear Seat Entertainment System) is available as optional equipment.
- The RSES displays visual image from the DVD player or an auxiliary player on the rear display. The RSES also outputs audio sound via the speakers or headphones.
- The RSES consists of a 9-inch wide LCD (Liquid Crystal Display), a DVD player that is located under the roof, and a remote controller.

Air Conditioning System

- A multi-zone automatic climate control is used to control the temperatures in three zones: driver seat, front passenger seat, and rear seat.
- This system independently controls the up and down blower temperature for the driver and front passenger seats to ensure comfort.
- When the outside air temperature is below 5°C and the windows are susceptible to fogging, the system automatically switches to the FRESH AIR mode. In the FOOT/DEF mode, it optimizes the blower volume to the DEF side to ensure visibility.
