Memory System

The memory system memorizes and retrieves the steering positions, driver seat positions, and outside rear view mirror positions for two drivers at the touch of the memory switch. Even if these positions are changed at the time the driver enters or exits the vehicle, the driver can retrieve the optimal adjustment positions. This system is standard equipment on the Platinum grade and optional equipment on the Limited grade.

Power Outlet

A power outlet is provided in the center cluster, console box, and right deck side trim.
