Rear Seat Entertainment System (RSES)

- The RSES is available as optional equipment.
- The RSES displays visual images from the DVD player on the rear display. The RSES also outputs audio sound via the speakers or headphones.
- The RSES consists of a 9-inch wide Liquid Crystal Display (LCD), a DVD player located under the roof, and a remote controller.

Air Conditioning

- A multi-zone automatic climate control is used to control the temperatures in three zones: driver seat, front passenger seat, and rear seat.
- This system independently controls the temperature of the upper and lower air blowers for the driver and front passenger seats and independently adjusts the airflow output of the blowers for rear seats to ensure comfort.
- When the outside air temperature is below 5°C (41°F) and the windows are susceptible to fogging, the system automatically switches to the FRESH AIR mode. In the FOOT/DEF mode, the system optimizes the blower volume to the DEF side to ensure visibility.
