Power Back Door System

- The power back door system with a closer system is provided as standard equipment for the Platinum grade, and is available as optional equipment for the Limited grade.
- The power back door can be fully closed or opened automatically by operating the power back door opener/closer switch in the instrument panel or the power back door button on the transmitter. Also, it can be fully closed automatically through the use of the power back door closer switch installed inside the back door, as shown in the following illustration.
- A PWR DOOR OFF switch that prohibits automatic operation of the power back door has been provided on the instrument panel.
- When the power back door is not operating automatically, it can be opened and closed manually as an ordinary back door.

Electrical Back Door Outside Handle System

- The electrical back door outside handle system is provided as standard equipment on all models.
- This system has a back door opener switch built into the back door outside handle, which electrically unlatches the back door lock when the switch is touched.
