WIRELESS DOOR LOCK CONTROL SYSTEM

■ DESCRIPTION

The wireless door lock control system is a convenient system for locking and unlocking all the doors, from a distance.

- The wireless door lock control system is available as follows:

×: Standard OP: Option -: Not Available

Item		Regular Cab	Double Cab	CrewMax
Door Lock Control System	With Remote	×	×	×
	Without Wireless Door Lock	OP	-	-

- In this system, the wireless door control receiver performs the code identification process and the Main Body ECU (Driver Side Junction Block) effects door lock control.
- A key-holder type transmitter is used, and it contains the following three switches: the door lock switch, door unlock switch, and panic switch.
- A rolling code system is used, in which the signal configuration changes each time a signal is transmitted by the transmitter.
- Serial communication is used between the wireless door control receiver and the Main Body ECU (Driver Side Junction Block).

Service Tip

When preparing a new transmitter to replace one that was lost, it is necessary to register the recognition code. Refer to see the 2007 TOYOTA TUNDRA Repair Manual (Pub. No. RM04E2U).
