FRONT WIPER DEICER SYSTEM

■ DESCRIPTION

The front wiper deicer system uses a heater element in the front windshield glass to help reduce the formation of ice where the front wipers park.

- This system is controlled by the A/C ECU.
- This system is activated when the ignition switch is turned ON, and the mirror heater button is pushed. The A/C ECU activates to keep the mirror heater and the front wiper deicer ON for approx. 15 minutes.
- The front wiper deicer system is optional equipment for double cab or CrewMax.
