SEAT BELT REMINDER SYSTEM

■ DESCRIPTION

If the seat belt is not buckled, this system flashes the seat belt reminder light and sounds the multi buzzer as a reminder.

- A seat belt reminder system is provided as standard equipment on all models except general countries models.
- When the power source mode is IG-ON, this system detects the condition of the seat belts based on the signals from the seat belt buckle switches (for the driver and front passenger) and the occupant detection sensor.
- The buzzer sounds when the vehicle speed exceeds 20 km/h (12.4 mph) to emphasize the fact that the seat belt is unbuckled. After 30 seconds, this sound changed to emphasize. This sound sounds during 90 seconds. Once a buzzer begins to sound, it will continue until the seat belt is buckled or the power source mode is selected to OFF.
