EXTERIOR

Front Design

1. Hatchback Model

- Increasing the size of the front bumper and embedding the radiator grille make the front design to fit with the body. This also creates a flow from the hood panel to the bottom of the bumper, which gives a strong impression of the vehicle's presence.
- The combination of the multi-reflector type reflectors and the see-through outer lenses used in the headlights creates a crystal appearance. The frosted glass is used for the inner lenses of the turn signal lights, giving the headlights a new look.
- The radiator grille is a honeycomb pattern to give a simple yet sporty impression.
- The round front fog lights in the sides of the front bumper are provided as optional equipment.

2. Sedan Model

- The front design gives a sharp and sporty impression through the use of a bumper surface composition with volume and fender lines with an integrated look with the headlights.
- The combination of the multi-reflector type reflectors and the see-through outer lenses used in the headlights creates a crystal appearance. The turn signal lights are located in the lower center area to realize an innovative look.
- The radiator grille gives a sporty impression by combining the horizontal bars with the exterior panel color and a honeycomb pattern.
- The round front fog lights in the sides of the front bumper are provided as optional equipment.
