Rear Design

1. Hatchback Model

- The shoulder lines running from the body side to the symbol mark provide the rear design an energetic feel, and combining a powerful-looking bumper form with a forward tilting line gives an impression of stability.
- The combination of the see-through type outer lenses used in the stop light and taillight in the rear combination lights and the multi-reflectors creates a crystal appearance.
- A rear fog light in the rear combination light is provided as standard equipment on the Europe and Australia models.

*: A rear fog light takes the place of either one of the back-up lights on the models equipped the rear fog light.

2. Sedan Model

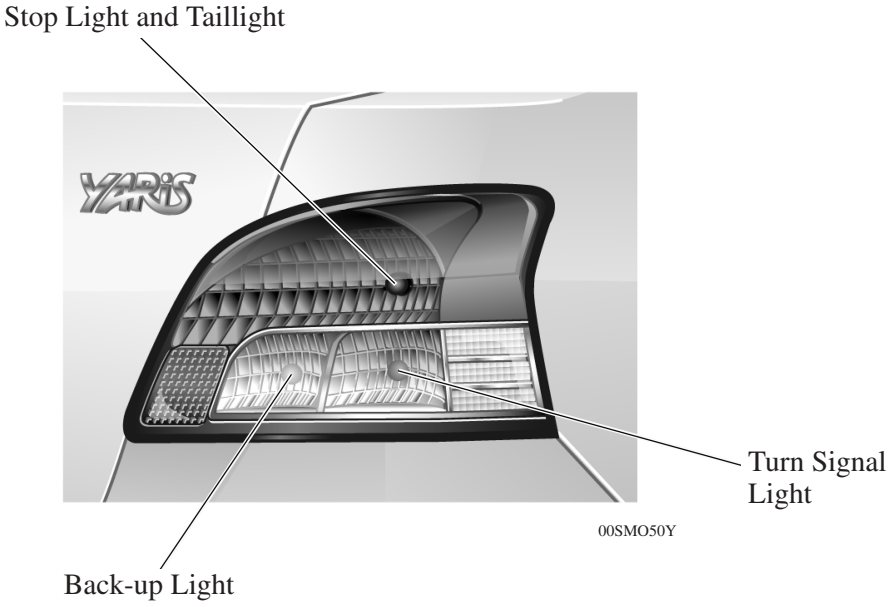

- The rear design gives a wide and stable impression through the use of the rear combination lights located at the corners, the shape of the trunk opening above the bumper, and the shape of the lower part of the bumper.
- The reflector for the clear lens of the rear combination light is made with aluminum deposition to achieve an elegant look.
- The rear spoiler is available as optional equipment.
